## THE PREFACE.

T$\mathrm{H}^{\mathrm{E}}$ Title-page fetting forth fo fully, the fubftance of this Book, it is prefumed that little need be faid in refpect to its contents; yet, as a preface is ufually expected, I cannot well avoid faying fomething relative to its utiiity.

The following Sheets will be found to conrain fuch a Collection of choice, ufeful, and entertaining Matter as never before appeared in print ; and fuch as muft prove a fpring of invention to the ingenious reader; furnifhing him with fuch hints, contrivances, and difcoveries as are ferviceable to the neceffity, convenience, and pleafure of human life. Of all the methods capable of being practifed with A 2 fuciefs,
fuccefs, for cultivating the underftanding, there are none that procure more fure and lafting effects than curiofity.

The defire of wifdom and knowledge to us is as natural as reafon, it exerts itfelf with force and vivacity through every flage of life; but never with more efficacy than in youth, when the mind being unfurnifhed with knowledge, feizes with a peculiar eagernefs on every object that is prefented to it; refigns itfelf to the charms of novelty, and eafily contracts the habit of reflection and attentivenefs,

We might receive all the Benefit this happy difpofition is able to produce, did we employ our time upon fubjects equally ft to engage the mind by pleafure, and fill it with clear and inftructive ideas.

It is by this Book that I propofe to lay open to every eye fuch entertaining extracts as muft tend to make young perfons ferfible of what tieafures the y poffers uneijoyed-and to prefent to their cblervation,
vation, thofe things which inattention, want of time and opportunity, inight have concealed from them.

But as it is not fufficient to give the mind a propenfity to be curicus, by entertaining it with agreeable fubjects, unlefs we likewife teach it to be moderate and cautious in its curiofity, my intention has been not fo much to collect all the deep learning that may be advanced under each particular, but to offer that which feems, in my judgment, moft eafily to prefent itfelf to the firt efforts of reafon, and to be moft adapted to the tafte and occafions of thofe readers, it had principally in view.

As to the mode of the work, 1 have endeavoured to exclude from it whatever might feem difagreeable, and inftead of a methodical difcourfe, or chain of differtations, that frequently fatiate and difgult, I have chofen the A 3
ftile
yi THE PREFACE.
ftile moft natural and proper to engage all forts of readers.

The works to which I have had recourfe, for my own information, and to juttify my remarks, are fuch, I have no doubt, as will meet the good opinion and approbation of my readers; fuffice it to fay, that they are fearce, and not to be found in every library.

The alterations I have made to the matter extracted, are of two kinds, fome only relate to a few expreffions that feemed too negligently touched, while others. regard the fubftance of things, which in fome places it was neceffary to illuftrate, and in others to entirely reform; and upon the whole no pains has been fpared to render this work valuable, and worthy: of attertion.
J. GALE.

## TRUTH'S MORAL EUCEID.

TRUTH in general is, what is: And wh t is, is but in refpen of being confcioufly perceived by $\int$ me Being: For if there was no Being to perceive what is, noihing could exift, fince abfolute imfersefticn implies abpolute Non-exiftence, Hence all trutb, is relative, of refers to other truth, addinfinitum, till we fop at fome original; which proves the neceffary and ab:olute ex ftence if a God; an adorable 'Great Being; to which all "other things, or Beings neceffarily refer: whole own abf,lute perfec:ions refer to his own abfolute immenfity, in which all things are relatively fubfifting and have their being. But how, or in what manner this infinite and aftonifhing Cbain of exiftence depends, our capacities are ignorant, excent in fome very few particulars, confiftent with the nature of our prefent Being. And though the Ways of this Great Being are untearchable, and his Woxders will be. ever puif fill ing out, all intelligent beings can difcern fo much of his per..
fections, by referring to their own confcious perception (the next truth lying open) as at once cominand their profound adoration! anu men, and all beings, may be juftly looked upon as a part connectel with the great whole, which though inconfiderable in refieect of that immenfity, yet for wife caufes cannot be deftroyed; whatever changes all beings (anımate or inanimate) are appointed to undergo. And as the Law of God is written in every man's heart ; or confcioufncfs (which he cannot recede from, or find plea to evade) he is relatively accountable for what he does in refpect of his great oi iginal, and the beings with which he is immediately connected; and therefore this fiandard of confcioufnefs in man, beyond dilpuie, is the truth, to which all his actions muft refer : and even his wolition, or will, according as he is confcious of his intention of gsod or evil, and no farther. And for any man to affert that he is not frec, (notwithitanding his connexion with other parts of the univerfe by which he may he relatively influenced) is the fame in truth, as if he were to affert that he did not exift, when his confrioufnefs is a proof of it to himfelf, and his very denial of his exiftence, a proof of it to the confcioufnefs of others. So likewife he that denies the exiftence of a God, denies his oun exifence. If truth could be fet afide or baffled, as eafy as it is denied by fceptics (who fometimes difallow the Freedom of Human Actions) Humane Laws would be in vain! and the judge, who thould, at laft, afk the Prifoner guilty or not guilty, in order to prove the truth; would himfelf be found guilty of a falfe maxim! When men deny the confcience and fenfe ot things, all argument drops, and there is an end to enquiry after truth, by relation or contiexion of propofitions.

Having cleared the way to truth, (which varioully refers) we wou!d eftablim fome general maxims (referring to the ftandard of cunfcientious right and wrong) as rul-s for Happinefs in the coliduct of human Life. And herein twe are obliged tuthe learned wife and juft maxims of the ancients.

## True Moral Maxims.

1. The end of man's exiftence is propofed for happinefs.
2. General tiappinefs ih uld be propored in the private, in refpect of Society.
3. Men fiould not do unto others what they would not be dome unto, in refpect of contcient ous right and wrong. 4. Virtues and vices in men's fouer, mike rewards and punimments neceiliary, in refpect of fociety.
4. In fome cafes mercy is better than juftice, in reffect of fociety.
5. God is feen in all his works.
6. God is adorable fur his perfections, E゚co

## Propositions.

1. Virtue promotes happinefs, private and public.
2. Vice is deftruetive of happinefs, private and public.
3. Honuar is the reward of virtue

4 Fawn not on a prince, nor trample a beggar under toot. $\mathcal{F}^{2} c$. By which it will be feen l:ow far mor.ility is capable of demonftration, according to the opinion of Mr. Lock, in his Effay on Haman Underftanding, that it is; by an induction of moral propofitions or precepts, in the folution of any moral difficulty, or problem.

## I Proposition.

## Virtue promotes bapfinefs, private and public.

## Dapinition and Demonerration.

As in our introduction concerning truth, we have proved, that every tbing known by the human mind, is but by its reference to, or comparifon with other things, according to conflioss perception; and that nothing is abfolute but God; so virtue sefers to human affion, or difpofitio:a of mind, and the comparifon of each with owe another.

Virtur is the name of fuch moral actions, and diffofition of mind, wherein the bexeft of human fuciety, in general, is comfaioufly intended. If the beweft is reftrained to particular perfons, at the expence of injury to others, it is not moral public gool; which likewife regards the end of fociety linked in government. What promotes moral public good among the wwiole, and in each particular promotes happinefs, private and pub'ic; which is virtue. 2 E.D.
Corollary.

Fience, to act according to virtue, is to act confiftent with the harmony and benefit of the robele, and of eark particulan member of fociety; which is the fame as to act according to reafon, judgment, and morality.

## II. Proposition.

Vice is deftrulfive of haffinefs, private and public.

## $4=$

## Definition and Demonstration:

Vice being the contraf, or opposite to virtue, refers likewise to action, and dit roftio of mind, wherein felffos gratification, and private ends are considered, or consciously intended, to the hurt of particular persons, against the benefit of fuciety. If the ends intended by action, and dirFofftion of mind, were for moral, public geod, they would not come under the denomination of vice; but thor ends are fçmetimes perverted, and intended far public mijckief, in the gratification of private ambition, filet, or refentmene, which is vice of the duepeft dyes As witenofs rebellions in Heaven, and on carib. Yet they always end to deftroy the peace and welfare of tartichlars, and:therein are cieftrutive of that barmoty which found goturfort in the zwbcle; consequently are deftructive of happiness, private and public.
உ E. D.

## Corollary.

Hence; to aet according to wite, is solve mionfiftent with the harmony of the whole, and of each particular member' of society; which is to act according to madnêfy folly and immorality.

## Scbolizion.

The degrees of tirane and wite, ate according to the degrees of the good and ill intention with which they are practiled.
ILL $L$ confegurences may ensure ftombod trefign, and pots effects from ill, purposes, as matters of. fight or Jitter corinequince may proceed from either; wivich actor not the went or demerit af the motive they proceed from. So, bidewifle; conffiongneafs of might and wiroung, each perron's direterh: is the mature of innocence, where neither good nor ill is intended; as it is the measure of every auty and omiffion in human life.

As men arno linked: in society, under che partiothar forms of government, and each member's time part of the public treafure, they are bound by their obligations to God for their Being, and the zobole community for protection, to bear and forbear, with one another, as much as poffible; confiftent with their refpective happiness, and the public emolument; according to the maxim of Epizctus. But difcosening men of treacherous difpofitions, we may Safely be allowed to break off father fuciety with them; as with
the feweft acquaintance there is the leaft hazard of difagreement. And men of the aforefaid difpofitions may be looked upon as pernicious members of fuxiety, by whatfoever veil they appear with fair characters. As it is incumbent on every member of fociety, by nature and reafun, to promote his neighbour's welfare and happineis, fo far as is confiftent with his ozun, and tie happinefs of the wolole; fo is it againft nature and reafon, for the wobole, or any particular number of members thereof, more or lets to diminifh the welfare or happinefs of any farticular, or particulars, belonging to that fociety; the obligations betwixt eacb and the wibole being mutual and reciprocal. Yet, where men wilfully counterplot each other's happinefs, for private lucre, and ambitious views to themfelves, the fatyriff is at liberty, with a moral view, to ufe methods fur reclaiming them, and for reftoring the benevolence of fociety. There are many other unvortby members of fociery. whofe wices are all proper objects of the $\int a t y r i f i s$ ridicule.

Thi preceding profofition proved true, being the two princifal ones in the doctrine of morality, ferving, like 47 E. 1, and 4 E. 6. in geometry, the demonftration of many other propofitions may be deduced therefrom, and the axioms of confcientious right and wrong, and of doing as we would be done by; which axioms are often forgot, or negleeted.

## III. Próposition.

Honour is tbe seward of virtue

## Thi Demonstration

Is very plain from the foregoing inductions; for virtue being benevolent to all, mult needs be applauded and re. warded by many ; bringing reputation and hunour. 2, E. D.

## IV. Proposition.

Fawn not on a prince, nor trample a beggar under foot.

## Demonstration.

To fawn, is to fuffer one's felf to be trod under foot, by courting the infolence of mankind. By which fervility many have paved their way with difficulties, who might have gone fmooth and eafy; which was therefore acting not right. And to treat a beggar as we would not be treated ourfelves, by treading him under foot, is acting againk coufcience, and therefore wrong. \& E. D.

## 

Whe ritero proceed to tay döwn fuch moral propojitions and Wules bf tiappinefs in the conduct of human life, as occur To otr prefent percéption; leaving the demonfration thereaf to be examined hereafter, as we fhall find occafion, in folv'fng 'thoral próoblems retating to right and wirong practifes of mankind: wherein we propore to make difcoveries in the - crooked, and by-ways of human action, fhewing, by Inveltigtion, how to Square and refify the fame.

## Woral Propositions, Rulis, "gீc.

- 1. Fo avoid ill Thoughts, is to be habited and employed In good vines.

2. Converfation with wife men telight and friplire ats with noble fentiments.
3. Evil communication corrupts good imdwners; or ill of roolifh company communicate tKeir eotragion.
4. Azexander the Great learifed His dirinkrin ofs by haffociating with Leonides; and NEro, his cruelty of his barber. 5. Idle jefts, in converfation are the fouibs of witt; and vain compliments, verbal idolatry.
5. Make no figure among cypkers.
6. In the reputation of being wifty, is commonly loit the reputation of being quife.
7. To 'ftudy nature, is to read the' volurimes of the univerfe, lying open to all, but regarded by few.
8. Chufe your books, as you do your friends.
9. Antiftbenes ufed to fay, that letrning was good comfany.
10. Shun ill manters, wherever you meet it.
11. By mucb famitiarity, efeem is lof.
12. If any flanders you, obferve to him that he knows not yotir other faelts, becaufe if he had, The wound fiave mentioned them.
13. Alwatys reprove the terce, but not roproits ofbeperfor.
14. Virtue procures and fecures friends.
15. Be thou bonorim thdiximat, 'G' miagnorum optimus
16. AS all men defire bappinefs, each member of fociety Thưld promote the happinets off his fellow' being, 'turt always confiftent with jufice to himele, and the public community, i. e. for all inen to do as they would be done by. 18. Salf-tove, which is inplanted in us to rerve burfetves, moutd teach us, by our own wants, to ferve others.
17. Bëriefits received lay' us under proportionable obligalions to our bénefactors.

- 20. Injuries done to private perfons fometimes are better Ferented with for givenefs than jultice, in'refpeet of the forgiver's happinefs confequent thereto.

21 . To forgive private injuries and affronts, or to reZurn them with kindnefs and civisties, bames the offender, and may work better effect than exacting juftice.

22 General Satire and moderate juftice reftore the benevolence
volence of fociety, while perfonal reflection, and perfecution, Stir up endlefs hatred and malice.
23. If man is not a free ayent, as fome foptics affert, he has no caufe to complain of injuries received, or of iwhat others can bring upon him.
24. If man is a free agent, as his confctouffiefs fuggefts to fim, 'he is wo: thy of 'rewards or pimithments, or of the favour or difefteem of others, according as the promotes or deftroys the happinef; of his fellote beings, with whom the is linked a mendiè of foclety, by the nature of government.
25. The anly pronf of the freelom and potber of the himan Winc is by man's coincioufiefs of theth.
26. The greateft virtue that can be acquired is the babit of doing good.
27. The greatelt wictetiat ean Be'attaned to the babit of doing evif:
 power, without doing injury to ourfelves, or others, is a proattution of our abilities.

29 To deftroy public happpinefs is the grand quality of the Devil.
30. To promote public happinofs is a kingly virtue.
31. The pajfions, which are the prificipal motives of àtion, ferve to exercife our reafon, which, by conparing confequences, regulates our conduct.
32. The faflons and reafon are rigittly proportioned; though the former become predominant by nabit.
33. Religious faith, agreeing with morality, refines the saffections, and fill, the mfird wifle ferenity and compofare.
34. Hope, by 'religious faith, if trourded on'morality, exales the thind'torgreater trippints tranidets of vituce cth Ho, without faith; becadfe then tray be Arictly moral, Sut, wariting religibh; 'tan bultd ro hopet, on the retwarg of their vitture ff om the Sturamien bing.
35. The ' rational cuftoths'bf rellighous worlhip, wion odf fuperftition, exalt our thoughts to magnanimity attd vifttre.
36. Religion, moral:ty, and happinefs, confequent thereto, are promoted by frequmetiateóntion to thofe two fubjects.
37. Irreligion, immorality, and mifery, are encreafed By a fámiliarity with the monstrous productions of nell in Húmán thape.
38. Offencès and ińjutiès récèived thould be treatéd with cibarity or jüfice ; but nöt with mallce or revenge.
39. 'He that is guilty of lying or deceit, is incapable of friendinip with all botef mèn ; becaure he cannot be depénded upon.
40. 'He that ádvéances a wilfull falfood of ànother in pubtic, by making a falfe quotation, or tranitatiơn (ás Lauder
did of Milton) is as great a crimisal as a falle evidence at the bar of a court of juftice, where matter of property is concerned; becaufe he is equally audacious, and guilty of ill defign !
41. Criticifm is no crime, except attended with evil intention, and zuilful mifrep. efentation.
42. He that accufes another of evil, and evil defigns, and caunot prove his affertinns, the diferves punihment due to that evil, he would make another guilty of.
43. Avarice of fame is attended with numerous evils.
44. The fureft way to fame of any kind, is by indif. ference about it, while the purfjuit is fume public good.

> Vice is a monfter of fo frightful mein, As to be hated, needs but to be feen; But feen too oft, familiar with her face, We firf endure, then pity, then embrace.

Pope's Etbics.

## Corollary.

Hence religion, (not founded on fuperfition) and morality, are found mutual friends to each other. Religion cannot fubfift without morality; and morality without religion, is like a traveller, paffing, by himfelf, over a defert country, and lofing his way.

From prop. 33, 34, 35, 36, (all proved true by a thort induction) appear the great ufe of fetting one day apart in feven for divine contemplation and worfhip, according to the cuftoin of all wife nations, adoring their creator on the jabbatb. By which religious application, Mr. Pope's mafter-paffion, and train of leffer ferpents, lamented in Etbic Epijf. II. V. 101. to V. i50, can be only fubdued.

## Scbolimm

To thofe who may ank what are the importance of the many trifing actions of mankind, to an infinitir biing, during their continuance upon this earthly fpqt? Mr. Addifon obferves, that the happinels of a future life is the natural refult of good habis acquired in this, and not of any merit in us for fuch a fate, except hy thofe habits. Man firft loft his happinefs by an a\&f of dijobedience to his maker, if original tradition may be credited; and if he continues to follow the corruptions of his nature from his

evil choice, mercy, tho imfinite, is fuppefed to wail hith mothing. Though man is dimatei in his bodily capacity, as to appear of a little more confideration than a mite ia tiot univerfal eye, furveying all nature, yet by bis intell cturad conicioufneis, forefig:t, a aid boundlefs contemplation, partaking of the divine nature, his emulation for the highelt atchrevements, and bis defire of immortality, he teems to be defigned hy this maker for no lefs hosour than an Abiciel, Raphaeh, or Michafls defcribed by Milton in his Paraife Loff.

## Moral Obsfryations.

 advite."
2. Spleen, imbudence, and illishanneit, 'ate imintorally日Fed, aind tob oftenimftaken for rit.
3. If you feek fecare, avold the finmorat and vain.
4. "IH cothpanty is Fake a raty, who fouls thore mof whoth the foves beft."
5. Thuft not treãcietry'a fecond time.
6. "cie A tive man it a midn of nafty ideds."
7. Fortratity is no token of fiteridthip.

- B Mainy pedple take more tare to Hide their wifform? than threir folly.

9. Affectation is the afe of fenfe and polite breeting; i.co the ape of dignity.
10. The inguifitive man is a dangerous acquaintanck.
ti. Poputhar pageantiy is' the fof's happintefs.
11. Health, peace, and fufficiency, conftitate the hapo pinets of a suife man.
12. Marriages will be trore trapply, whente whited att Hodre difrett.
 able arts of this age.
13. Science and fiterdty imptovetnents are as much ne-频eted, as they were in the declining fate of the Roman tinpire.
'I6. With all our refision, fall greatly fhort of the romidn virtaes.
Y. If religion is bypotrify, wirtue is tutned out of domes.
14. On ! the valt fountains of happinets that are hut up and reftrained!
15. If each qualfied perfon entearoured to promote the happinefs and welfare of individalals (like the late Dake of Richiniond, of ylortitus' membry) what biefings would foon fow over this land!
16. Shall any neighbouring nation pretend to rival Britain; in ruifdom, trotuefs, 'virtue, learring, and benfictnce's'
17. If

## 

27. If fome had the power to promote public good, as they wifh it, how happy would this nation be!
28. Exemplury praffices among the great, have the moft influencing effect upon the human mind, whether good or bad. If goot, the fcheme propofed by the late celebrated Dean Sivift, for advancement of retigion and virtue, is cer-' tainly the beft that can be thought of.
29. How would it redound to the glory of this nation; and the good of pifterity, to fee it reconded in bifiory, that in fuch a cestury by the united force of men in power, vice and immorality in England received a deadly blow! and the Briti/b ciadem a jewel of ineftimable value!
30. All controverfal argument convinces fo much the more, the more it is moral, and free from ill manners.
31. Abufe in argument, to prove truth, is juft like fweare ing in converfation, to prove courage:
32. Moral ridicule or raillery, in public argument, ferve to roufe the attention of the reffondent, and bearers, alfo lah public infamey, with the fatyrical juftice due to it; but, in perfonal difputes about knowledge, and the fame of it, ridicule and raillery, confined to decency, ferve to affelt underftanding, and filence and abaih the obitinate in error.
33. The fafions (more frong in fome tban otbers) are apt to inflame on any, real or fancied injury received, which the force of reaion can hardly reftrain; yet the will, as prefident, and the rational fowers being fummoned to council, the paffions, thereon becoming obedient, fubmit to order.
34. While there is evil in the world, men will fill be infringing. upon each other: the cri!! firf biought in, and ftill fubfifting among mankind, being the caufe of all the misfortune and mifery attending their being.
35. Evil is fo habitually planted in fome natures, it is not in the power of friends to promote fome men's happinefs, while (like common profitutes) they are ftlll feeking misfortune, and bring it down upon their own heads!
36. Abandoned backncy writers complain of their cruel treament from bookfellers, to whom their ill morals have juftly. rendered them a prey : like proftiutcs for pay; that will oblige and $p-x$ their benefactors at the fame time.
37. "Tbe ferpent lofetb not bis fing, tbougb benumled witb "the froft: tive tooth of the vifer is not broken, though the "cold clofetb kis moutb: rake fity on bis fiate, and be suill "S. Jcw thee bis fpirit : warm bim in tby bofom; and, be will "r requite tbee quitb deatb.")
38. Gcnius may be admired in any, but ill morals muft be hated in all.
39. It is no charity to affift a profitute loft to all hame; and abanconed to mifery of his or ber own feeting.
40. Fie that choofeth a beaf able to bear his burthen thall find reft; but he that carries a Vulture upon his thouldecs thall be pulli=d to pieces, and die, as he lives, miferable.
41. Dirt thrown at a clear charaeter will not ftick.
42. The heart of the hypocrite is hid in his borom, and his bufinefs is to deceive.
43. He works in the dark like a Mote, and fancies him. self fafe; but blunders into day-light; and is betrayed and expofed, with is dirt in his hand.
44. His days are a prepetual conftraint upon him, and his tongue and his heart are for ever at variance.

## OF TIME.

TIME, by it's nature, proceeds with a conftant and equable flux, and therein differs from auration, which is permanest and ftable. The meafure of 7 ime muft therefore be referred to motion, of fome kind or other: lhofe of the heavenly bodies have, by the univerfal confent o' all Ages, been made choice of for this purpofe; efpeciaily of the siun and Moon, which feem to have been intended, befides their other ufes, for perpetual chron meters by the divine architect himfelf; name!y, to diftinguith, and mark out, fenfons, dayse and ycars.

Relative reft we obferve daily in the maffes of 1 felefs matter about us; but abfolute reft in any thing, in infinite fpace, is as hard to be affigned, as the place of an abrolute vacuum, or fpace void of all fubitance whatfoever.

Though the earth's motion from weft to eaft, contrary to the fun's apparent one trom $\varepsilon$. to $W$. is dubeleis the truth; yet forne have queftio ed, whether the fin has only a diurn: 1 rotary motion in the fame fpace, or may be relatively moving contrary to the earth, and other planets, at the fame time, by which the direft, retrograde, and fationary appearances of the neighbouring globes, may without the ufual principles be accounted for (to the greater zififom and clory of the dinine airckitefr!) with all the thining hoft of innumerable worlds attending: not fuppofing the fun to move at fo vaft a diftance, as we now fuppoie, in compleating the annual period.

Aftronomers obferve that days, hours, and minutes are refpectively unequal, and tha:, by the earth flickening her puce, and romatimes quickening it again, in her orbit:

This they infer from, the fun's different apparent Motien. Tberefore to meafure time, or: vefer it to a flandard of uniform moripn, they have fix'd :the length of the tropical or folar year (or that time whexxin the fion andearth finith allt.their poftions, in refpect of each other) to the exact period of $3^{6} 5^{\text {d }} 5^{\text {b }} 4^{8^{\prime}} 57^{\prime \prime} 39^{\prime \prime \prime}, \mathfrak{F}^{\text {c }} \mathrm{c}$. which however, is no munse certain, than obe mean length of a day: Since, in this compatation, they divide the diftance of time betwixt any two diftant Equinoxes oblerved, by the number of perolutions happening between, for the length of this fuppofed permanest folar-period. And 1 have obferved; that Sir Ifaac Ncwoton went no farther back than 20 Years betwixt the two obfervations, which could not bring the meafure of the year to fo. great an. exactuefs, as if he had gone as far back as the fartheft true obfervation that has been made, of the fun's arrival at any point of the ecliptic; and fa dividing the whole time elapfed by the remoteft ob.crvation, whether of Ptolemy, or beioie. The mean trofical year this way determined, would have rendered it near the truth, if there had besn an erior of an kour or more in the firft obfervation; becaufe the error would have been divided into fo many parts by the number of revolutivas as to become of infignificant value in one fingle revolution, or year.
 $\mathcal{E}^{\circ} c .=1^{\circ} \mathrm{O} 9545^{\prime} 40^{\prime \prime} 77^{\prime \prime}$, Esc. the mean diftance moved over by the fun in a common year: According to which the mean diurnal motion in the ecliptic $=59^{\prime \prime} 8^{\prime \prime}$, For $^{\circ}$ whereas the apparent or real motion amourts to $6 \mathrm{I}^{\prime}$ fometimes, but at uther times fcarcely to $57^{\prime \prime}$. And the mean and true times are ever proportional to the mean and true metions.

But, confidering the annual mution of the equinoctial points in anteccdontia, reckoned at the mean rate of 501 by, fome (but different by others) the variation of the ecliftic's obliquity, the different diftances of cbserved Equiroxes, for. determining the length of the folar. period, an uncertain length of the year nuft thence arife: Wherce it follows, that all aftronomical tahles, built on this or that particular lenget of years, muft vary more or efs from truth, in computing by them, according as the precefion admitted, length of the year, excentricity of the earth's orbit, cilifttic's obliquity, and the mean and true motion therelrom, warioully meaiured. Computations hy eacli, of thefe tables will agree with: obfervations. neareft the time when the tables were made, except when errors of one kind come.
penfate

## 13

prifate thofe of another. Mr. Street's Afronomia Carolita Tables, once in great repute for their exact ufe in computing the places of the ceelefials, are fince exceeded by Mr. Flampleed's folar numbers, as Mr. Flamfleed's will very likely be exceeded by Dr. Hailey's, as Dr. Halley's tables will, very likely, be exceeded by others of a ftill newer improvement. Aftronomical infrum nts, exa:ter than thofe uled by Mr. Flamfleed, in Sir Ijaac Newton's time, or Dr. Halley's fince, are now molt commended, and there is no fault now in the eyt of an obferver. And the fet of motions which have been deduced from a fet of obfervations (foreign and domeftic) muft yield to the next more fahionable. Sir IJaac Newton's theory of the moon, at fict io much applauded, has fince, by infallible obfervation, been difcovered to be imperfect. Which is alfo evinced by the reformers of gravity among the Colefiial bodies, like the Corpuficularians, in the praetice of phyfic.

Anotrer gentleman (more indefatigable than any of his predeceffors) has difcovered the aberration of the fixed Stars from the motion of light and of the earth in it's orbit; and has made a curious and unexpected difcovery (in a letter to the Right Honourable the tarl of Macclesfield) of a new motion among the fixed Stars. And woilds, or diftant fyftems, may (prolably) have a relative motion among one another, at the fame time they are relatively moving on in the infinite fpace. The notion of a plurality of worlds has prevailod ever fince the time of the Pytbagoreans, who maintained (as we now do) the probability of the planets being inhabited, and kept in their orbits by natural gravity; each moving like a fone whirled round in a fling, by centripetal and centrifugal forces. Lucretius, taught by Epicurus and Democritus, fuppofed worlds without number poffeffing infinite fpace, and counterpofing each other by rome generallow of gravitation; a:d that if bodies were bounded, thofe within the limit would, by the attraction of one another, ia stifee unite in the middle fpice. And herein it is obfervable, that limits of fpace appear as impoffible (to concepion) as limits of time, or of exiftence; rince there is no thought can imagine when time and exiftence were not; nor can imaxination reprefent a p.mibility when time and exiftence that be no more: Therefore an eternal exiffence is neceflary, and abfolute. But the infinite fucceffion of time, and thofe points of it from whence all new exiftence, of fubtantial forms, or a change of things exifting immediately foring, and receive their aftoniming modes 'of alterstion, who but an infinitely great, osmipotect. and omniprefont, Bcing, can comprehend?

> I can't tell how or why I came to be, Why not before, what mortil yet cou'd fee, I know I am, and that's erough for me. Exifting nature too I can ditcern, And wifdom infinite from thence I learn: Effects and caufes mutually depending, From infinite to infirite extendirg. Sceptics, and critics, by your learned leave, Confcious perception can't the fenfe ceceive.

Py:hagoras obferving the different found of hammets upon a Smith's anvil, difcovered the harmony of mufic by weights fufpended at the ends of mufical chords equally thick, generating tones: which weiglits he found were to one another in a reciprocal jroportion of the fquares of the length of the chords of equal terfion, and producing the fame found refpectively. He thence applied this harmony between weiglts and their diftances of fufpenfion to the cileflial bodies moving, at certain diftarces, about their centers of motion, (celled the harmony of the fpheres) proportioning the gravity, weight, or tenfion of each planet, towards the Sun recitrocally, as the fouares of their reffecive diffances, which aftronomers have not gone beiyond to this day.

The ancient aftronomers firf imagined, that the coleffial bodies had a circular and equal motion round the body which they fuppofed at $r \in f$, but not finding this circular $z_{y}$ ctabef:s to agree with their ol fervation (the Sen fpending near eight dass more in the notthern, than in the touthern fami-circte of the ecliptic) to reconcile appearance better to fuppofition, fixed the earth (or Eun) at reft, 3.450 fuch parts fiom the center of the fuppofed circular orbit, as the radius of it is iceoco, which diftance from the centre is called eccertricity, whence they readily calculated the Sun's place, at any time. This theory, though agreeing pretty well for the place of the Sun, the motion of other planets could not be accounted for by it : therefore it was changed by Kefier, for the elliptical theory; which fuppofes the Sun, in the lower foczs commen to the ell ptical orb ts of all the planets, with a rorary morion only atout his own axis, they circulating round him, and deforibing conftanky equal areas in cqual times (or areas froferticital to the times) by rays drazen frem the Sun, to cach reftective flanet. By the fame hypothefis are reprefented tie moticns of all the fecondary plares tound their prmary onos, piaced in the fous of each fecorciary's orbt: and this tyy otkcfis anfwers to the appearances in the heavens beypnd all others hitherto inverited; theugh Kefler himsfelf at firft doubted whether
fome orbits vary from true Elliffes: Thinking it is not. improbable tant forme mizht have a form like the fection of an egg, by. the force of gravity dilating o:re part of the orbit more than another. But this theory is not ti) be confidered as truth, but a method of adisiting rules to appearances: It is but fothowing the tiack of the - firt eircular theory, which fuppofte the earth (or Sun) at reft in the centre of the phnetary orbiss, and planets moving circularl round them, which muft then deforibe equal areas in equal times, 2a is now fuppofed in the elliptical tbcory.
The Sun's leaft apparent diameter in apoge has been acurately obferved $3 \mathbf{r}^{\prime}=9^{\prime \prime}$, and his greateft in ferige $3^{2}$ $33^{n}$, by which it hhould refll, that the Sun's greateft and lart diftances are as 1953 to 1837 , as 101651 to 9839 (vid. Keil's $\lambda^{\prime \prime}$ irm. $p, 276$ ) and the eccentricity oinly 1065 of furch parti, as the ratius of tie circeniar orbit, fem. trans. (or meain dift) or the elliptical one is iccoon: But the ancient eccentricity 3450 is ahove double 166 r , from whence the circular theory is concluded f.fie. For, admitting but 17,5 ons hilf o the ancient eccentricity, it would beiter agree with tie Sun's apparent diameters obiferved: ber tion would not, fo well as the whole, account for tho appearar.ces of the Sun's unequal motion round the year. And (as, the ancients d.d) making the certre of the circular orbit, the cencie of equal motion, 572 g eccentricity, wit n't account for the aminual inequa'ities: for tie $f$ rogia_, pharefes, o differences between the Sun's moan and true places are thas twice 3 mach as that they will an:ount to wich this haff of mancent eccenericity. This defef of ancient encentricity, of the circular orjit was afterwarids. remedi:d, by placing hali of it each way from the crbit's centre, a:d making the ce itre of eq, 1 motion att ine c ntrare extrene to that where is placed the earth or Sun, wish in the ellipical oriot is fuppof=d, by $W$ ord and $F$ aidialious, fimilar to the center of equal mot on in the c rculat theory. Nr. Street's eccentricity to the prefont tiociy of the earth's motion is 1732, and Mr. Flamfece's's 1692, which make a difference in finding the Sun's true place frum his mean; nor is this difference likely to be adjofted, while fo many obfervators of the calefitiols are like fo many furvepors of a gentleman's eftate ; diffring in their quantities f.on one anether.

It has been obferved by Kepler, that the fouares of the periodical times of recroluing bodies, are as the cubes of tive difances from the ce:tres of the orbits, about wkich they al fuppefed to perform their cqual motions: i. e. as the cubes if sbesir mean diffances frons the body about wbitity thay revoive.

C 2
And

And this univerfal theory of motion, examined and confirmed by Sir Ifaac Neruton, is faid to be orly contradicted: by fuppofing the Sun's motion, and earth at reft.

## THE THEORY OF MOTION OF THE CELESTIAL BODIES, IN OUR SYSTEM.

M in afcending order from the SuN, revolve round him, in the lower focus of their feveral clliptical orbits, according as has been defcribed; which, with the Mcon's motion round the earth, four Moons, or fatellites, moving round $\mathcal{F}$ ufiter, and five round Saturn, at the fame time, conftitute fix pr-mary, and ten fecondary planets in our fyftem; befides comets unnumbered, revolving, in varioully inclined, and very eccentrical and remote crtits, quite crofs the planetary onls; all paying their refpective devairs to their great. Lord, commanding their conftant attendance, while theymotually gravitate, in their amours, acting on each cther. The motion of each body, and particularly that of our earth, round the Sun, the immentely greater body, is thus proved, by philofophical principles. The common centie of gravity between the sun and earth, or of any other: difant body, being fituate in the Sun, the leffer body is compelled thereby to revalve round him..

By the eartb's uninterrupted rotary and progreffive motion, like the motion of a rolling-fione over a bill, carrying its poles nearly parallel, in an obliquity of $66^{\circ} \frac{1}{2}$. with the plane of its orbit, the appearances of Day and Night are naturally accounted for ; as likewife thore of the featons. And the poles of the earth being, again; fuppoled $s 0$ move backward, in a fmall circle, about a degree in 72 years, will account for the preceffion of the equinoxes, or of the fixed Stars departing forward of their longitudes, according to what we experience.

The quantity of motion of the planetary bodies in their feveral orbits, are fet down farther on, according to the obfervations of Dr. Halley: To which tables are made farther additions and improvements, from thofe publifhed. of that celebrated author's.

As to the fixed Stars appearing fo glorious, in a fparkling sanofy round us, preferving, very nearly, the fame pofitions with one another, though at fuch immenfe diftances, they are, probably, Suns to different $. \int j / \mathrm{cms}$, or globes of matter, revolving:
revolving refpestively roind them, but impercept ble to us, at fuch diftances. And thefe worlds, in the unizerfalliace, or Inane, we may, with reafon, fuppofe to be of infurite number, moving together round fome cential world, while each wor!d has its refpective motions; heint moit agreeable to the notion we have of the divire Eeing, filling immenfity, and fupiorting immenje and eternal exifacice.

And as it would be absurd to fuppofe the great Peing unattensed with numberteis beirgs and wer 'ds, till the tins of a creation mentioned by Mef:s, in the fer piures, within fo thort a duration, as about fix thoufand years fince; fo the late creation, there mentioned, can only be tie new modelling of this earth from a chcos, with fome few thec globes put into new form and motion, reinftating and reinfabiting them; from the ruins of an old wortd.

## OFAPYARENT, REAI, AND AESOLUTE MOTIOR.,

A-person carried in a thip under fail in a river, will perceive the motion of outward ibjects, while he perceives not his own motion. And a ball being dropt from the mafthead, at fuch time, will f.ll in the fame place on deck, as If the fhip had no motion, though under the fwifteft way: and that by reafon of the fhip's motion under war, though over fo fwift, was exactly communicated to the ball, when it was dropt by the hand; by which they, and a!l bodies moving together, remain in the fame relative fituation, in motion, as at reft. The earth moving at the rate of 15 miles per minute, and all bodies upon or near its furface moving togeiher prefarve the fame relative Gituation with one another; Birds, Irificis, Fifl, Eic. moving tozether with the atmofphere and the water. As Flies and Infects, Thut up in a mip's cabin, preferve the fame fituation, whether the Mip is at anchor, or under fail; the air in ti: cabin being carried with the Mip. And a perion can leap no farther on a hip's deck, under way, towards the ftern, than with the way the is going; becaufe, being carried with her, in the fame motion communicated, he remaing it the fame relative feruation, as if the fhip had been at $r \in$ it ; except, that he exerts more motion than the thip's, in jumping over-board. Which exertion of motion would te the fame as flying in the air, fwimming in the water, or jumping upon deck, ftill relative or comparative with the thip's motion, and with that exerted by the earth; at folute motion, or reft, being as hard to determine as icichtity of fpace. For admitting a motion exerted by the carth, one. exfrted by the mip, and another by the man jumpirg on

C 3
the deck; yet it is not improhable, that our whole folar fyitem may exert another motion, irdependent of ali the reft, Ecc. wherehy worlds may move together, or move one another.

To outward ffeffators, at reft, a perfon jumping on a hip's deck, under way, towards the fiern, would appear not to move, if he exerted as much motion as the mip had way; but, jumping towards the bead, would appear to have more motion than the fhip. And the retrograle and fationary appearances of the planetary bodies, while their motions really continue forward, are accounted for by the motion of the obferver with thofe bodies, which is another argument of the earth's motion. The motions of the celefial bodies, feen from different furfaces, will. appear very varibus; though, at the fame time, they are, in reality the fame.

## OF THE CAUSE, AND MANNER OF ECLIPSES.

## E

 globular primary and ficordary hody, in our filfem, being Sun, while the back part of it remains ctaque, calfting out a conical Shadow, terminating where the Sun's rays, as tangents to the extreme outer parts of the body's furface next him, interfect each other: All bodies that fall in the way of this hadow, are eclipfed by it, more or lefs. And the different pbafes of the Moon, and the other bodies, appearing torned, gibbous, cickotomized, and full, by having so much of their enlightened parts surned toward the Jpectator, are thence acccunstd for.And hence an eclif $f_{c}$ of the Sun, or rather of our earth, is caufed by the interpofing dark hody of the Moon betwixt. that luminary and the ffectater's fight, fo as to intercept his view of the Sun's light, either in part, or the whole; which can never happen but at nezo Mcon, when the Sum, Moon, and eartb are fo near being in a right line, that the conical fiadow, caft by the Moon towards the earth, falle. more or ltfs upon it
An ecliffe of the Moon is occafioned by the earth coming betwixt her and the Sun's body, and theieby depriving her of hs light; which can never happen but at full Moon, when the Sun, earth, and M:on are fo near being in a tightHine, that the coricui fhatiow caft by the earth towardsthe: Moon, falls more.or lefs upon her.

## 19

In an eclipfe of the Sun, or rather of our eartb, theMoon's fhadow travels at a determinate rate over the eclipfed parts of the earth's furface; and the Moon moving fafter through her orbit, than the earth, through her's, the likewife paffes thoogh the earth's Madow, at a determinate rate, in an eclipfe of the Moon: The dimenfions of which thadows, and their moins, with other requifites concerning eclipdes, we mall now explain.

## Dimensions of the Eartr and Moon's Councis Shadowsin Eclipses.

The inverted luminous cone, terminating the fenumbral. fruftum, next the sun, being equal and fimilar to tiee imbral cone, terminating on the oppofite fide of the interpofing body, (on this. fide, in, or beyond the remote body from the Sun) and the femi-angle at the vertex of either cone being equal to the Sun's apparent diameter: the a'titude of the eartl's gaciozv, and confequently of the Moon's, winl. be thus determineu by trigonometry.
$S_{A Y}$, as the fine of the Sun's apparent fem. diam. at a mean dift. from the earth, (riz. S. I6) is to the fem. diam. of the earth, fo is radius of the earth, to 214,8 femi-diameters of the earth, the beigbt "f the eartb's gaidoz. But as the Swn's apparent diameter is $15^{\prime} \xi^{\prime \prime \prime}$ ar his preateft dift from the tarth, the height of the earth's fhadow, at that time, will come out 217 of the eartb's femi-diameters; being abive three times as great as the mean dirtance of the Moon, but fally mort of the orbit of Mars, and theres fore can involve none of the heavenly bolies but the Mcont

Now the diameter of the earth, te the diameter of the Moon, being as 25 to 7 , fo is 214,8 to $60-\frac{1}{1} \frac{8}{2} \frac{1}{5}$ femi-dia. meters of the eart't, the Eeigkt of the Moon's jhaciow: the conical thadows of the cartb and Moon being both fim lar, becaufe the angle of tile Moon's thadow (and of all fpieres whofe femi-dancters bear no finfible proportio: to their diftance from the Sun) is the fame with that of the eartlo.

Hence, if the Mion's diftance from the earth be great. er than her man diftance, or 60 femi-diameters of the earth, the Mcon's thadow cannotreach the earih, at which time there may be a central eclipfe of the Sun, but cannot be a tot:l one, fur then a bright luminous ring will appear to embrace the Moon's body, then intercepting the dun's. light every where, except abuut the circumference of his dijen

## Naturi of Eclipses.

Ir the Moon's anomaly be lefs than three figns, or greater tian nine, an eclipfe can no where be feen total, the difsance of the Moon from the earth, in both which cafes, being greater, than her mean diftance.

The breadth of the Moon's fhariow upon the earth, at her leaft diftance from it, is likewife eafily computed to be about 220 Englifh miles when it is circular, the Smn being in afogeon at the lame time; but when the Sur, Micn, and eartb are not in a cirect line, and the conical Shadow of the Moon is obliquely divided at the earth's furface, the ecliptical diamters of its fection are determered by the Moon's diftance from the Sun, as if feen from the earth's centre. The quartity of the earth's furface alfo involved in the fenumbra being in feritelicn, the Moon in afogecn, and the iur's appartnt diameter $16.23{ }^{\prime \prime}$ ) will be about 4900 miles over the circular convexity : as in other pofitions of thofe three bodirs, the tranfverfe and conjugate axis of the Moon's fladow on the earth's furf.ce, may be determined. So likewife the breaciti of the eartn's fhac'ow; at the diftance of the $M c o n$, is determined to be about three times the Mcor's dian:eter. From hence it is obfervable, that if the earth's-tociy was equal to, o: bigger than the $\because u n$ 's, that a fhadow would run out behind it into infintesspace, and involve the bodies of Mars, Fujiter, and saturn, com ng in oppofition to the $\Delta u n$, which is never obferved to happen; and therefore the Sun mult be greater than the earth as it is known vafly to exceed it) to terminate the ea: th's fhadow at a nearer diftance than thote oritts. And for the fame reafon, as the diameter of the earth's fhadow, involving the Moon, is lefs than the earth's diameter, the Moon is the efore lefs than the earth.

IT is evident, that if the Moon's latitude from the ecliftuc be greater than the fum of the diameters of ti:e Mcon and eartb's fhadow, the Moen cannot enter it ; and if the Moon's latitude be $\varepsilon$ qual to thofe two femi-diameters, the limb of the Moon will touch the earth's fhadow, but not enter ii. If the M.on's lat tude be lefs than their fum, but greater than the difference, a artial colipfe of the Mcon will happen; but her atitude being lefs than the faid difference, an eclipfe will be total. Hence the ecliptic limits. or Sun's diftances from the Moon's nodes at the time of eclipies, are determined, viz. Eclipfes of the Sun, at rew Moon, always happen when the Sun is lefs than $16^{\circ} \frac{1}{2}$ from the Moon's node; and Eclipfes of the Moon, at full Mioon, when the Sun's diftance Lrom her rode is lefs than $12^{\circ}$.

The limits of the eclipfe of the Sun are hitherto confidered without allowance for the moon's farallax, which is about one degree (ind fometimes more) near the horizon, ca!led the horizental paral!'ax; and diminimes, in all degrees of the Moon's altitude, from the Horizon to the Zenith, where it vanifhes. This farallax being the angle between the true place of the body, as if feen from the earth's center; and the apparert place of it, actually feen from the eatth's furface, or the angle, the femi-diameter of the earth would be feen under from that body, deprefles the true place of it to the apparent, in alt altitudes from the Zenith to the Horizon, by that parallix; fo that the Moon having nort' latitude witio us, it is thereby diminifhed; or fouth latitude with us, it ie thereby encreafed; as the $a_{i f}^{f}$ arert longitudeof the Moon thereby alfo differs from the true: By which the limits of folar eclipfes are variable by a fimall matter, according to each degree of latitude of the places where thofe eclijes are feen.

The Sun being at fuch an immerfe diftance from the earth ${ }_{\text {r }}$. the angle, the femi-diameter of our earth would be there feen under amounts to no more thin $10^{N \prime}$, and therefore in computing the appearances of eclipfes, the Sun may be reckoned without parallax, that would affect the compatation; though the fame femi-diameter feen from the Moon is confiderable, and about a degree when the Moon is at the point of our fenfible Horizon.

Thr Angle under which the femi-diameter of the Moon's dark fhade appears at the earth, when feen from the Moon;is equal to the difference of the apparent femi-diameters of the. Sun and Mcon, feen from the earth; and the apparent. femi-diameter of the Moon's fenumbra, feen from the Moon, is equal to the fum of tine apparent femi-diameters of both Sun and Mcon, feen from the earth; as the earth's apparent. femi-diameter, or that of the earth's dik, being equal to the Mbon's horizontal parallax, as a little consideration will thew the truth of.

The afparent femi-diameters of the Sun and Moon, and alfo the borizontal parallax, being calculated in aftronemical tables to the feveral diftances of the Sun and Moon from the earth, with the lealt, mean, and greatef eccentricitics of the lunar orbit.

## THE DOCTRINE and APPLICATION of MORALITY.

## Of true baptinefs; and bow to obtain it.

WORLDLY happinefs, or what is otherwif c.lled con-: tentmert, might eafily be attained, if we could bridle and reftrain our fenfual appetites. The things receflary to procure tiis great bleffing are few in numb $r$, lie in a little compafs, and are all comprehended in that flort pettion of Ag:r-Giae me neither forevty nor rickes, feci me zuith food conzerient for me. Prov. $x \times x$ 8.-But alas! fuch is the depravity of human nature, that there are $f=w$, very $f: w$, in whom for e predominart paffon doss rot irterpofe her ability to a lude, and gratify her ty:anny over the nobleft part of man, his reafon and liberty ot iefl:tion: fetuc- . ing the po:vers of his foul to an implicit reverence of her inamifterial pervafion. Eetdest tie paufinle preterions, and thearn? addr: $f_{s}$ of this feducer to obtain our favous and eqtea, $h_{h}$ has the afeindant over our very na.ure to conq er our aftect ons.

Nor is he his contemptihle: many people of parts and predence. aze, ard ot erlip or hefide. have been fasgered, and their virtue p't to proof by her all ireme ts : the ruling pation arterdine us in this lifo, throwing os dally ineo Sorse confurion and ciforder so that the epidemic llifeafe of avarice, the immod"rate love of pleafure, and infa iable thinf ef amhition or power, hring us into continual flavery, and plunge wis into tie gulph of infery; wherein aly our thourhte and affeftions are fwellowed up. Did haprinefs confft in the bundance of wealt', fomething mixht he ures.' in favour of the mirr ; hut it is evident to common ferfe. that betwixt the hopes of retine, and the fears of fofing, his mind is kept in a fate of continual amxicty.

There is no paffion fo mean or fordid as avarice; and it does rot appear how it is poffibl for thofe who idolize riches. can be infected with that diftemper without being liable to all the fympto ns with which it is attended; fuch as fricif, irjolerce, and offrefion, nrrulvej and luxury, and all other the inexa:abl: tyraits, of the fo 1 ! as foon therefore as any one gives hirrfeff over to fuch infatiable defire", he gives over all thougits of virtue, and looks uron that only to be juft and honeft which is moft ufeful and advantageous to himf If. When men's minds and manners are thus corrupted, making it their bufinefs to defraud this man of his inheritance, to lay fnares for another, to wheedie a third to make him his heir, to force unreaforable

## $23=$

gain out of every thing, ard to expofe cven themfelves to fale, they entirely difeard that intimate phafure that waits upo innocence, in exchange for t.of tofm yuarr. is and anxieties that icve: berate and fin: $t$ en to the heart.

Neither muft we look for happinefs in couits and palaces. We are much mittaken in the value of a crown. We admire it's brigh:nefs, but forget it's britilenefs, and gaze upon it's glory, ald confider roi it's fraily. But if all the gay things were our own, which we fo:c!ly imagine were really to b: met witirin greatns f , yet we Thall fint on reflection, that they are always puichafed too stear. For it is a ftanding traxim in policy, tiat tbole wobs couct dominion cover orbers, firf become tyrants in the luft of power. Ambition knows no bounds; there is nothing to facred but it will violate; it claims kindred with every vice, and ftoops to take up every fin that lies in it's way; as it is fuch a complicated mifchitf we mould avo.dit in ourfelves, and not be dazzled with it in otiers.

Nor is the fenfual perfon happier than the great, in his rearch of varity, and the difappointmerts he meets with. -For obtaining this ineftimable jewei of happincis, in the firft place it will be neceffary for us to have a thorough knowledge of ourfelves, and to obferve what palfions are moft predominant in our natuie. Then we muft take counfel of our reafon, and follow her dictates -with fteadinefs and refolution, to avoid the dangers into which we are mort liable to be procipitated. Nothing is -more difhonorable and mameful than to fuffer our reafon to be dethroned by every cafual temptation, whereby that 'divine principle which infpects over, and governs univerfal nature, is brought under in man, and made fubject to the yoke. But though reafoin hould ever fit at the h:lm, and govern our paffion, yet it thould not attempt to deftroy them, while it's proper buffers to oppof and coneout them to regulation: not to govern them as fubjects but naves.

A rational conduct does not therefore confift in fruitiefs aufterities and rigorous practices of religion : but in the charitable exercife of confcience and reator, religion and morality, and to act in conformity to the ar juft dictates, if we expect to be happy; which is the true irte, eft of the whole intelligent creation. And $h$ rein confints that glorious refemblance to the fupreme and perfectly happy $b=i n g$, dignifying men and angels, which it duly purfued and imitated, will promote our happinefs througirout all ages.

## - ON THE VICISSITUDES OF STATES AND KINGDOMS.

IT is obfervable, that a fate fubfifts, and flourihes no longer, than whilit it cultivates and impioves the means to which it owed its rife and progrefs. The firft Rommens were plain, hearty, and fincere. They went to the watio with honour, and returned with fuccef, ; and their very enemies reaped the bencfit of their victories, as well as themfelves; for their virtues always protected thofe whom their valour had fubdued. They fought for dominion, but not for tyrinny, and chofe rather to be loved thin feared. This made the provinces chuarful in their fubmiffion, hearty in their contrbutions, and unwavering in the.r -obedience. It is not fo much to $b=a d m . r e d$, that, from fo fmall a beginning, they fhould rife to fuch a ftupendous height of greatnefs, as that fo many qualities, productive of a real greatnefs, fhould be found unted in one people, diffufing themieives with fo exact a tenor throughour every part, as to make up the very life and being of the who!e.

How much the Romans, who lived in the age we are now writing of, were fallen off trom that or.gnai perfection, I leave the reader to imagine. They were grown effeminate, factious, proud, and inconfiderate. The court was become debauched, the camp licentious, and the commona'ity obitinate and mutinous. They were fo far from puining on to new conquefts, that they were not able to maintain their hereditary acquiftions, \&c.

Having lately received a Packet from Dagal Hal Lagal, Emperor of the Moon, with difpatches of the higheft importarce, relating to the government, liws, and cuftoms of the inhabitants of 7 upiter, we here communicate the contents for the forvice of the public.

He firft informs us, that this planet was always governed by Empreffes That the fecretaries of ftate, the priefthood, magiftracy, and all their courts of law confifts of females, who marase the $h=1 m$ of government, deal out divine oracles, difpenie juftce, and plead caufes between contending parties, as firicants and counfellors do with us; but without a fee. the women alfo were chofen governors of all their charitable donations

The men are engaged in employments fuitable to their abilities.

## $=25$

Sbitities. Their criginal form of government was much of the fame nature with ours; but they foo: found it neceffary for the happinefs of the nation, by and with the advice and confent of the whole comnunity, to turn their courtiers into merchants and tradefmen, treir fuperior and inferior clerigy into regiments, to Atrengthen their armies, fight battles, and gairifon frontier-towns.

Their lawyers were changed into pioneers to level mounta nis, drain marfhes, dig canals, make and mend roads, and do all other laborious works for the good of the public ; fo that fraud, opfrefion, cullufion, and colruption, which before reigned among them, by the aforcfaid inverfion ware intirely routed out.

Thfir addrefs to their prefent emprefs run thus in the higheft ftile. To the moft potent, augurt, pious, prudent, juft, merciful, reip!endent, and magnanimous, Adafirea, Roraura, Braru, Liesa Heigbtonba, Zabacktbe Matrix, Emprefs of the folar Syftem; whef: firft favourite at this time, Cinluda E.fbul, is Atiled Cbarmandra. To tieeir metropolitan. To the moft reverend mother in good, Sbebal Drumbauda, high prieftefs of Bonavital, capital of $\overline{\mathcal{F}}$ ufiter. To their judges. To the lady Clif.cifintreftralia, and madam Fuftriftral, \&c. To the inferior clergy, Veravenciral. Their common lawyers are called Annici:aaz, \&c.

Two thirds of the late income of the priefthood is now applied towards the fupport of the army, confiting of parfons and lawyers : And the females, who perform the offices of rel gion, live upon the other third, are contented svith their ftations, and very exemplary in their morals; no pluralities here being allowed.

The ladies of the law, or amicitazz, are mintained ty a tax laid upon folly in general, and all public diverfions, fuch as plays, affemblies, operas, balls, pleaiure-gardens, mafquerades, bagnios, $\underset{G}{ } c$.

A great trade is carried on betwixt the adjacent fat ! llitcs and this orb, by vart fleets of babbernabs, which co tinnally pafs and repafs through the intervening atmo phere. The courtiers by this means are now an ufeful body to the community, and acquire prodigious fortunes, enrichang the empire in general by this and other foreign intercourfe; and her Inferial Majefty in particular. hifomuch, that he:e are no beggars, but all the poor are povided for by trade, or manufacture.

Crimanals are here not put to death, except for murder...
but all tran fiorted to the Moon, where they are kept, in se fate of confinement, to hard latour for life, or thll their thorough reformation and compenfation is made for their ives.

IT is one part of the religion of this orb for the women not to have commerce with the men after their conception till they are delivered. And if any man is found in bed with his wife during the time of her pregnancy, he is brought to trial before madam ffufrifral, and being convicted of having carnal knowledge of her, he is tranf, or ted to the lunar regions for life, like other notorious offenders: The Emir fs having firft approved and figned the fentence, which is only reverfible by the favour and intereft of Clarmanára.

The young women here, cautious of lofing their yirginity, are no: fuffered to enter upon marriage till twenty, befoe the confummation of which they are ftrictly examined by two experienced midwives, called B. mbooz, who report their cliaftity to the prieftefs of the parih, which report the enters in a public regifter, when, and not before, the bride is delivered to her hurband's embraces: But if it appears upion examination that the has loft her maidenhead, the marriage becomes inflantly void, and the bride is banifhed to the planet Venus for a common proftitute; as are likewife the married women here, found gulty of adultery, who are reftrdined from that vice by taking a folemn cath, before the altar, twelve times in a year, of their fidelity to their hufbands.
The phyficians here are in a bigh efteem for their ufefulnefs, and are called the Grando Foquax, being all females; they are obliged to pafs. a public and ftrict examination before they are allowed to practif, before the prefident madam Kilfatrac, the members of clafifux, and a numerous affembly of learned auditors, met in the Regal Kifotal, or next royal ampkitbeatre.

They take no fees, but are paid for preferving the health of the community by falaries illowed them out of the public revenue, and often relieve tie patient who fands in nted of their charity. The current money of this orb is pieces of chryfal, of different colours and fizes, ftampt with the $\epsilon m f r$ res's mark, to fignify the value of each. Goid and filver are here of no worth. The lidies of the faculty keep to coaches, tut vifit their near patients on fo: $t$, and are caried on flamiuks, crea:ures like Engligh affes, to thore at a diftarce. They fpak but little, ard in familiar language,

## 27

linguage, and difcover the nature of difeaf-s withoue any ceremony. 'Their medicines confift chiefly of vegetables, with a few animal and minerial productions, and they chalk down their prefcriptions, with few marks, on a piece of board, which is fent to the kangslab, the neareft puhlic repofitory, where the medicines are delivered by the Jlabber.

Old men are nurfes to the women, and old women nurfes to the men, fo accustumed for the natural tendernefs betwixt the fexes.

Еach lady-phyfician is obliged to deliver to madam Kilfatrac, and the clapfux-members, a journal of her praftice and proceedings upon each refpective patient, to be publicly read and examined in the next Regal Kifotal; and if any lives appear to be loft through mal-practice, or neglect, the is utterly dififualified to piactife for the future ; but if her extraordinary fervices appear in the prefervation of fubjects' l:ves, fhe is then regiftered upon the lift of merit, to be chofen one of her Imperial Majefy's phyficians in ordinary.

The moft flagrant vices reizn in the army, cilled bla blufrax, and in the navy, or sanal labberrabs, whofe people are irreclaimable, notwitiftarding t'le influenceng cxample of the fivardagkaggirs, their principal com? manders.

Backbiters, detracters, t.lle-bearers, fcolds, pernicious liars, profane fwearers, and ftirrers-up of ftrife, have their tonguas cut out for mutes to ferve the government, as in Turkey.

Sodomites are employed as kennel-rakers, chimneyfweepers, and night men, in the cafitol, and are dif. tinguimed by badges from the reft of the fubjects.

Gamefters, if noblem:n, are inftantly degrided; and if commoners, are punifhed by cafting a di:, whether they fball, or fall not, be deprived of their fortunes; which fortunes, fo forfeited, are applied to the ufe of the public, and the offenders employed as common latouras in the ftate, for a mantainance. They have no bridervelis; nor prifons but for holding offenders theral. Dehtors, f tt : fh drunkards, petty criminals, and tiieves, if men, are punifhed by being fent to work.bewis, where they have ro fupport but from what they earn, for a certain time; and for every fuch repested offence, are obliged to fuffer double confinemento

## THE NOTIONS OF SPINOZA, AND ATHEISR CONIUTED.

BDENEDICT Spinoza, or Ffitinza, was born a Jew, at -imferdam, in Hollaed, but made no proiefiion of any raligisn, either jewifh or chrittian. He wrote feveral tooks. in Latin, the mont celebrated wiertof is his Tractatus Tijenlogicy-Politicus, wherein he endeaveurs to owerturn the founation of all rel gion. The bcok thtetiore was as. cordingly cordemned by a puiblic decree of the flates; thongin fince it has been puticly foll, and even reprinted toth in Latin and Frerch in that country, and alfo is $E n_{g} l i f$ at $L$ ondon.
Sf:rcza here infinuates that all rel gions are only political engies, calculted for public good, to render the peopie ohe lie to magiftrites, and to make them practie virtue. and morality.

He does not lay down his notions of the neitry openly; but only fugeefts his orinion. In his Etbics, publ hed amens tis pothamous works, he is more of on and exprefs; mirtaining that Goo is net, as ue ima ine him, an infinte, intellizent, happy, and peifeet beng; but only tont notural virtue and factioy which $s$ diffufed throughout 2 all cacatures.

And the great princirle of this doctrine of Sfirozifm is, that there is nothing propely and abolucly $\epsilon$ xifing but m .tter, and i's modificitions; amorg which are even comprelended thoughts, bitrai and gereal idcas, comparifo:s, riltion, combintions of iclitions, E c.
$S_{f} i, ~ o s i i_{n}$, is a fpecies of naturalifin, fanticijn, or lyletiom, as it :s onttanes cilled, i. e. of the degime, which allows of ro God but nature, or the urive rfe, and therefore makes it, and matter to he Cor!; roticar, long before Sfincza, relt hy many different fees of phileforters emong the Cichecens and Greck: very much iake the opinion of the Stcics and thore who held the netion of an Anima Ifan:ds.

Strato, and fome of the $P_{\text {critatctichs }}$ were of cpinion fomething like it. And though ro ancient feet feems farther remived from Sinsoife than the Platonic, they atribting the greatert fredom to Gon, and carciully diftinguine 1 him from meter, yet fin in lingits proves at large, that Flato gives mit'ei much the fame orgin with siona. But the fect that approached neareft to : $f f i: 0 \sim i j m$, was that which

## 29

Which' taught that a! things were on x , as $X$ enoptanes the Colepbonian, Parmeniaes Melliffus, and eficcially Zero Elecses; whence it obtained the name of the Eleatic fyffom of kitbeifm. To which the opinion of thofe may be reduced, who held the firt mater foi God, as slimaricus and David. of Dinantum. Alfo, the fect of Foe, in China and Jatan; the Seufi in Perfia, and Zindikites in Turkey, philofophize much after the manner of Spinoza.

1. That there is but one fubfance in nature; 2. That this only fubftance is endowed with an infinite number of atributes, among which are extertion and cogitation. 3. That all the bodies in the univerfe are monfications of this fubftance confidered as it is extended; and that all the fouls of men are modifications of the fame fubftance confidered as cogitative. 4. That God is a neceffary and infinitely perfect Being, and is the caufe of all thing; that exift; but is not a Being different from them. 5. That there is but ons Being and one nature, and thus this nature pridues w.t'tin itfelf, by an immanent act, all thofe which we call creatures. 6. And that this berng is at the fame t:me koth agent and patient, efficient caufe, and fubject; but that не produces nothing but modifications of bimfrif.

Thus the deity is made fole agent, as well as faticnt in 2'l evil, both phyfical and moral, that cailed malum palices. as well as malum culpa: A dostrine, fraught with more impieties thian all the heathen poets have publimed concerning their $\mathfrak{F} u$ fiter, Venus, Bacchus, \&c. What feems to rave led Sfinors to frame this fyftem was ti:e difficulty of conceiving either that matter is cternal, and different from Col, or that it could be produced from totbing, or that an ir finite and frce Being could have made a world fucb as this is.

A matter that exifts neceffarily, and which is neverthelefs vord of aElivity, and fubject to the power of ano her $p$ ineiple, is an object that fartles our underftanding! as there feems no agreement between the three conditions.

A matter created out of notbing is no lefs inco:ccitadle, whatever efforts we make to form an idea of an act of the veill that can change what before was nothirg into real fubfance; contrary to the known maxim of phily ophers, ex nibilo nibil fit. In fort, that an infinite, good, holy, free Eeing, who could have made his creatures good and happy, Should rather choofe to have them wicked, and eternilly .aiferable, is no lefs inconprebenfible; and amazingly fo, as

$$
D_{3}
$$

it is fo difficult to reconcile the freedom of man with the= equality of a Being made out of notbing.

These appear to be the difficulties which led Spincze to fearch for a nezv fy $f t \in \mathrm{~m}$, wherein God fhould not be diftinct from matter, and wherein he hould act neceffarily, and to. the extent of all his power, not out of himfelf (ad extra) but withen himfelf. But if this new fyftem refcues us from. fome difncuities it involves in others infinitely greater. sitincza is very full on the fubiect of the autbors of the fcriptires, and endeavours to thew, that the Pentateuch is not the work of Mcfes; contrary to the common opinion both of the Fezes and Cbrifians. And has alfo his particular fentiment as to the authors of the other books; which part of the work has been anfwered by $M$. Huet, in his Demonfratio Avangelica; and by M. Simon, in his Hiff. Crit. du Vieux Tef.

Numbers have undertaken to refute Sfincza's doefrine; but all very weakly, except what we have in Dr. Clark's fermons at: Boy/e's lecture.
To which we fhall acd the opinion of fome modern fcep-. tics, whu ackıowledge God in their actions, yet urge that ALL is GOD, and that all caufes and all effctes ever exifted in one forver, as we fee exerted in nature. That unlefs a canfe could be found to God as creator, the wiftom and power of God canrot be otherwife underfood, than the wiidom and power of one nature; felf-exifting and felfcre:tecl. And demand, by what nectffary, immanent, and wife caufes did one God exift pritr to one univerfal natiure, to be the caufe of it, and that very nature the off caf of his creating power? And likewife how one neceffary, original, felf-exifting, and creating wifdom and power is better underfood than one neceffary, original, felf-exiftirg. and wife nature? Alledeing, that if all nature is not by meceffity, or chance, that the caufe of it, God, muft come by neceff:ty or ckance: Diatolically making the Criatox to he his creation, i. c. all nature, and all.caufes and. effeefs therein produced.

## A NS WER:

TRE FOOLS BAVE BAIDIN THEIR MEART, THERE IS NO GOD.

But, if felf-exifing nattire is as incomprehenfitle as God (as all fceptics allew) and we find wifdom and power difpenfed
dffienfed through the world; it is more rational to give: praife and adoration to one incomprehenfible wife an 1 glorious creator, as the cauie of creared nature, than to. beftow it where it is loft (on nature itfelf) and what cannot. reward us for our duty and gratitude.

Confcioufnefs is the infallible principle of all we know, and ${ }^{\prime}$ by which we come to know any thing. Various are the. effects we confcioufly perceive are produced in nature, by various efficient caufes. And every particular effect we confcioufly perceive is adequate to its efficient caufe, from whence every effect is fingly and immediately produced: Whence it will follow, that the immenfe, infinite, and wife exifence of things that we fee proluced, and operating in nature, together, or in fucceffion, mult proceed by an infinite feries of caufes and effects, from a necessary, original, allewise, all-powirful, universal and infinitecause, continually fupporting and acting upon nature, prior to all natural caufes, which is. GoD from alleternity, and for evermore!

As we are confcious of what is doing well or ill, and of praife or blame due to ourfelves or others, which confcioulnefs proves the diverfity of our being and exiftence, and that all is not one nature, it is amazing that men are fo wilfully obftinate and blinded in their underftandings, as to acknowledge beings of fuperior power and wildom on . earth, whom they adore, and yet refufe to acknowledge and adore a being fuperior to all! Thecause of ale!

I never heard that the moft obfinate fceptics, who refufe to own the free being of a God, ever difputed the free being of their frince, whofe lazus they willingly fubmit to, and are bound to obey, or not have the privilege of his protection. They talk of every thing happening of necefity, and yet ank favours, which thew their doctrine and their confcioufnefs of things to be direct contradiction. They talk of crimes committed by nece/fity, deferving punifhmeut by neceflity; and yet exclaim bitterly againft the offenders! And I have heard them praife what they, approve; though happe ing by neceffity. Some I have known, in great fear of funi/bment for an offence given, ank.fardon to prevent it; which proves they are not confcious of its necefity; bugt will deny God, and his glory for obftinacy, till they come to fear hilf.

And there can be no hirg more abfurd, befides impioufly $d$ ingerous, and diaboficul, than to difpute the free being and exiftence of bim that made the uriverfe, and all things therein,
therein, by ranking himfelf with his work, or making him : infeparable from it. For this nec:fity of a pre-exifting agent, or creator, is infinitely mote probabis than a meceffary nature uncreated. '1 he veice of all nations, and all nature, confent to adore him, as creator and fup. porter of all his glonious works; and ihal the opinions and tenents of a few faltry feeptics we gh aga nit the general fenfe and belief of all mankind ?

Rewards and punifhments here, are fufficient grounds to expdet them in a flate hereafter. We live now but in the davom of exiftence: Where the greatert proof of immortali'y is our continual new defires, and our bopes and expectations of it, which could not be inplanted in us for not'ing. The heatbens, improved in their reafon, 'oubted and difcovered immortality. And Mi. Al ifon, in his $210: b$ Spectator, thews the meannefs and aisurdity of expecting annililation. The fame gentleman alfo, in ipectator 185 , Thews, that Atbeifts are groat zealots and bigots, and their opinions downright nonfenfe. That the creed of this gencration of zuranglers, requires an infinitely greater meafure of the faitb, than any fet of rel cious articies, for the good of mankind, they fo violently oppofs.

## THE ORIGINAL OF POPES AND POPERY.

TH E Author of the Devil's Hifory, fpeaking of the Devil being out of play, for reftorins idslatiy, and finding himfelf at a lofs how to pricced with mankind, in the time of fovian, the Emperor of Rome, who was a good ciriftian, he threw a bone of contention anong the clergy f r primacy', which fully anfwered his purpofe. And de clating for the Roman pontif, in the following reign of the Emperor Mauritius; Buniface, who had long contenied for the title of Supreme, fell into a treaty with Pbocas, captain of the Emperor's guards, that he thesuld murder his mafter the Emperor, and his fons; when Bowifase, countenancing the treafon, fhould declare him Empero:; as Pbocas, in return for the kintnefs done him, thould acknowledge the primacy of the church of Rcme, by declaring Boniface univerfal. Bimop.
By this notable devilifh policy, Satan then got at the head of affairs in the clbrifician World, as well fpiritual as temporal, ecclefiaftical as civil; who never gained a more important point (fays the Author) fince his conqueft over Eve in Paradife, 'till that time.

## 33

The Devil, indeed, allowed to have profpered tolerably Well in his affairs for fome $t$ me before this inater was ac. complifhed, as his intereft aming the clergy hadg t ground, for fome ages; but was alla fecret minagement, carred on with difficulty; fis has fowing difcord and fuction among the people, parplexing the counc ls of thiir Princes, and wheedling privately in with the dignified cler $r_{5} y$.

He had railed abunlance of little church rebellions, by fetting up bereticis of feveral kinds, and railing them favourers am ing the clergy, fuch as Elion, Cerintbius, Pciagius, and others.

He had drawn in the bifhops of Rome to fet up the pageantry of the Key; and while he, the Devil, fet open the gatei if Hell to them all. fet them upon iocking up the gates of Heaven, and givug the Bilopp of Rome the Key; fo gilded over with deiufion, and fo blindly the age received it, that like Gilicon's Epbod, ail the catbolic World went a wholing after the Luol.

The fory of this Key being given to the Bimop of Rome by St. Peter (who, by the way never hal it himf:l) and of its being loft by fomebolly or other , but the Devil never told who) is this: It being ound a a ain by a Lombard foldier, in he army of Kirg Antharis, who attemping to cut it with his knife, was miraculoully fred to direct the knife $t 0$ cut his own throat; which King Arthiris. and his robles feeing, were thereby converted to cbrfatity And that the King fent this. Key, with a:other made like it, to Pelagius, then Bithon of Rome, who thereupon uffumed the power of opening and hiuting heaven's gates; as he afterwards $f$ t a pric:- or toll upon the entrance thereof, as we do for paffigg a turnfike in Engla:d.

These fine things we e fucceffsully managed for fome years (hefore tile compan with Bu:fuce and Pkocas had taken effe $\mathfrak{t}$ ) and t:e Devil gainet a deal of ground; bat when he lad made an uriverfal Rimop, or Pcie, hetrumphed openly, by fetting up a Mu therer upon the temporal t'rone, and a churcb Emperor upon the ecclefiaftical turone, of his own choofing; and fo begun his reftoration.

The Devii's affairs went on fwiminingly, and the clergy brought fo many getuzaws int., their worfhip, ard fuch devilith principles were mixed with tinat hich we alled the chi: Pian fuith, that (rom this time the Binhop of Ruma (now diftinguithed by the nams of Pcpe) commences wbore of Bubylo.

Tiran:y of the worft fort crept into the fontificate, errors of all forts into the profeffion, and they proceeded from one thing to another, until the very Pcpes (for fo the Bifhops of Rome were now called) profeffed openly to confederate with the Devil, and to carry on a perfonal correfpondence with him, at the fame time they took upon them the title of Christ's Vicar, and the infallible Guide of the confciences of cbrifitians.
This we have fundry inftances of in fome merry Popes, . who, (if Fame lies not) were forcerers, magicians, had familiar fpirits, and immediate converfation with theDevil, vifibly and invifibly; by which means they became. what we call Devils incarnate.

The bellifh impofture and wickednefs tranfacted in church-government by the Romifh clergy to this diy, in thofe countries where the Popih authority prevails, are difmal inftances of the corruptions of original chriftianity ; as they are hocking to all true protefants of the reformed religion, who fee, by the infinite mafiacres of all heretics to popery, with what a vengeance the Romijb clergy fhew their authority, whenever they get the upper-hand. So far from their following the mild and pure doctrines of $\mathrm{Cb}: \mathrm{f}: \mathrm{f}_{\text {, }}$, and his apoftes, in bearing a did forbearance, there is nothing fo - wicked or ixbuman, but they will put in praclice to eftablifh their church.tyranny over all men, even Princes themfel: :os, who prefume to dirpute, or doubt its infallibility. This confinteration thould make us charitatle to thofe difenters, profeffing cbrifianity among us, who differ from us: As by that reformation whi h brought liberty and happinefs to Great Eritain, and for which fo many fuffered flames and martyrdom in effecting it, came the feveral differtions among us; wherein it is to be feared that intereft or Party is more the prevai ing frinciple tha: a xeai ior Cbrif's deftrines; even from the fmugglers of the reformed cbriftian religion down to the bawkers and peciars of tal ation; who would be berter ruftiaired by muld authority than by perfecution.
In the times of Fanatical Ufurfation they had but little tendernefs for a true church man, and to this d.iy the itinerant teachers maise a market of the peoples' ignorance, and reproan h our lawful clergy, as if guilty of crimes, whereof themielves are chargeable.

The Scri;ture is ailowed to be the fanding rule of faitb, (not fathers, creeds, catechifins, ©f c.) as the depaiture theretıom is the infallible falling into anticbrifition ap oftacy; bus:

Sut men being allowed to preach the feripture doctrines, and exp'ain them publickıy, without being duly qualified, and legally authorized, excite a frenzy among the pcople, milleading them into grofs errors and fuperffitious, for privaie lucre. For the texts of the fame fur ture, we find are explained into as many different meanings, as fu:t with the intereft of the explainers. And who but the ignorant, faperfitious weak, or the mar;, would run and pay to her fuch entbufiaftic abfurdity, or religious jargon, as are licentiouily preached up and down the countries, at home and abroad, by fanatic difturbers of the people? If no rule be eftablifhed for the preaching and practice of religion, there mult i't time he a many religions, and religious teachers, as there are people of different intereft or party And if the clergy of England, by law eftablifhed, are infuticient for teaching the true religion, thoughout his Majefty's Do. minions, thofe mercenary ftragling teachers, who pretend to correct the church of England's Errors, will be found far lef $\mathrm{f}_{2}$ qualified, and guilty of far greater errors, as well as of contempt of their fovereign, who fits at the head of the true church as Guardian.

Reformation on reformation, and diffention on diffention, will be conftant events where norconformity is prop:agated : So long as a mercenary nonconformift finds it his intereft to Atir up and delude the people.

Read a Book by Benjamin Bennet, intitled, A Memorial of the Reformation; for a farther account of the rife and progrefs of popery, and of the infernal power of the church of Rome; alfo read the Devil's Hifory.

> OF THE JEWISH YEAR; BEGINNING OF THE JEHISH DAY, AND THE MOTIVE OF THE LEGISLATURE.FOR FIXING THE VERNAL EQUI. NOX ON THE 2 IA OF MARCH, INSTEAD OF THE 2Otb, AS IT NOW HAPPENS.

TH.E Jequs, whofe year confifted of lunar montins, begun their month at the Moon's firft appearance, and when it fhould appear, if not clouded, (and not at the Moon's true change) of which proclamation was made in all public places, until their nation had loft its authority; when they had recourfe to Cycles, for determining the day of apfarent change, and the $14^{\text {th }}$ day after, whicn they counted the day of the full Noon; though it really happened the 1 gth day from the true change. And hence

## 36

the 1 5th day of the Moon came to be called the s4eln which was the apparent and real day of full Moon; though rome are apt to think it really happer.s the 14th after the truc change.

The fows always begin their day at sere fotting, about Three fourths of a day before our affronomicai iay tegins. The Arabians, Atheniars, and, in g reral, a lth f E.fern nat.01\%, who regulated their 'minths and years by the couife of the Moon followed ticir example. And this cuftom (of beginn ng the dav) preva led among the ancient Gauls and Cermans, and ftill continues in Lotomia and Pcland, where the clock fribes twen'y-four at sun-fer, and the new cay begins. Regard bei g had to this cufiom feems to be the reafon why the church of Englaria now orders the colleft for any fefival to be read in the cuesing precedin ${ }_{6}$ hat $f$-fival. And the celebrato. of our Ecifir depending on the time of the $-7 e n i: j b$ paffocer, and that on the vorval cquinox, if regard is not had to the commercencr:t of the jearith day, we thall ioncimes tall into the miftake tike nirene ceurcit were fo acitous to avoid, by ketping cur fafchal feafi day of Chi fi's refurrection, at the fame time

Our prefint folitical day berins at midnisht, yet fome compute the vernal eq:inox from the aftonnnical day, beginning 12 hours iater, neither of which commencemerts are fo much to te regarded in $t$ is iffair, as the con:merc:mirt of the Jowifh ciay at Sun fit, preceding both thofe times, for avoding our keeping Fafor woth their fajfirer: For 'f the verral equinox fal's on tie zoth of March (reckening the begnrig fiom mirligitit) fume tme after Sun-ict of that day, and the foll Moon folls later on the fame day, after Stu-fet, but before midnight, which mary ha!pen tote on a Sutarcay, then Easter, (according to the rule for ohferving it, (being or the Suncay ajter thithl Moon wokich, tafjers next after the vernal equit.ox) noovid be keit the next diy, being Staday, or the day after the Fou: fabbath, ending at Sun-fet, but the Fious then begn the 14 th day of their ecciefiaftical manth milan, on the 2 if of their March, or 20 th of our, at Sun-lit, who on that 2 If day following are ty the law of Adfes to celebrae their f.fieser; arid therefore our Ecfer being made to fall with our 2 Ift of March, that coincidence with our commem ration of Chuifts refurcection, is avoided by a Mco:.

It was ordained, at the nirene council, Anno 325 , and firce by the Britis Fariamort, that the vernal equinax
a: 0 :1d

A:ould be confidered as happening on the 2 i $R$, (a day forward of the true) initead of the 2oth of Marcb, (as it then really happened) for avoiding a coincidence of Eafter with the fewifh paljover, which yet is not prevented, if the $\mathcal{f e w i f h}$ method of computing the time of the vernal equinox, and full Moon next happening, is fallacious; whereby the fews retarding a day may yet coincide with us, as in the preceding cafe, of the vernal equinox happening on the zoth: This is a nicety in diftinction cannot always be made with certainty, (on account of their carrying the vornal equinox before the end of our day into the beginning of their next) and therefore the vernal equinox migit as well have been fixed on the 20th of Marcb, as it really happens. For, while we make the vernal equinox on the 21 it, and the Fezvilh, or true vernal equinox to fall on the 20 th of Marcb. Eafter is poitponed a whole Moon, befides the days to Sunday following; whereas it ought to have been kept the Sunday next after the $7 e$ anif paffover, as it mould be kept when the full Moon of the $\mathcal{f}$ ezos happens the day next after their vernal equinox; provided they keep their palfover on that day; which yet is beft determined by aftronomical tables of the Moon's mean motion from the Sun. If the exact true time of the full Moon happening on, or next after, the veral equinox, of $\mathfrak{f e}$ ew and Cbrifitian, were duly fixed for determining Eaftcr, difference will yet neceffarily arif: from the time of that trace and the mean full Moon, often happening on different days in the fame months of Marc. 5 or April. Or from either happening fo near the ind of one day and the beginning of the next, that the true day of happening may not be ealy to affign.

Ye:t, if the legiflature had ordained an exception to the prefent rule for finding Eofier, and made it poffore a week only, inftead of a Mcon and to Sunday, (from its original inititution) in cafes where the $\mathcal{f e z w i f}$ paffover, and that rule fhould happen to coincide, when the full Moon falls ort the 20th of March, (which is the true time of the prefent vernal equinox) though we had differed from the church of Rome herein, it had certairly teen for our bonow; the coinsidence happening fo feldom, would have required little trouble to correct; at the fame time we had thewn our frict adherence to a mattec which the Papifts themfelves acknowledge to be right.

The form of the Fezuif year was lune folar, or a folat year, compofed of 12 lunar montios, befides the iniercalary, or emboli:nean month, veadar. The lunar months were called flemi and cavi, confifting of 30 and 29 days by turns.

## $=3^{3}$

And this artificial lunar month feems to be regarded in oup old calendar, making the Moon to have 30 days when the month has 31, and only 29 when it contains 30. The golden numbers pointing out the ecclefiaftical Noon, (as 'tis called) are there fixed according to this fuppoistion. The embolimean, confifting of 30 days, were added, when neceffary, to keep the lunar year receding from the equinoxes, that the paflover might be kept at the tome afjcinted, making the equinoctial Moon the firf montia.

They ufed a decennowal cycle of the years like our own, of which 12 were common, and 7 embolimean. In the.r civil year they fometimes added, and fometimes omitted a day, to make it correfpond with the year aftronomical; which, when common, contained 354 days, 8 hours and 793 belakim, of 18 minutes each; and the embolimean 383 days, 21 hours, and 589 belakim.

They frictly regarded their tehupha, or cardinal points, correfponding to the equinoxes ard joiffices, as their year by this means was conftantly regulatid, fo as never to require any tuch reformation as the juian form, after a long per.od. For fuch corrections were continually made and required by the conititution and form of their year, as was every way adapted to their fafts and feftivals enjoined by the law.

Bishop Beveridge, diftinguifhes their civil year into deficient, abunciant, and ordinary. In the firft, a day (he fays) is taken from their affronomical year whether common or embolimean; in the fecond, a day is added; and in the third, the aftronomic a computat.on is unalterably obferved. This author alfo takes notice, that they had likewsfe a fular year of the like extent with the julian. See Beveridge's InPitutiores Chronologica.

In the preface to Dean Prideaux's conneEtion tbere is anotker good uccount of tbis fewifb year.

> THE REASONS FOR THE COMMENCEMENT OF THE DATE OF THE YEAR IN JANUARY, AND CORRECTION OF THE BRITISHCALENDAR.

THE Right Hon. the Earl of Macclesfield, in an excellent fpeech made to the Houfe of Peers, on Nicnacy the 18th Day of March, 1750, juitan Atyle, explained to their Lordfhips the reafonatlencis of laving effablin ed in Great Listan;, whe uniferm nethow of reckoning or compliting time,
and of fixing the dates of all matters which may be tranfa ted by the Inhabitants of much the greateft part of Europe. His Lord/hip then thewed the abfurdity of the legal commencement of the year in one part of our kingdom, differing by the face of near three months from the legal com$m=n e e m e n t$ of the year in another part of the fame kingdom, and alfo from the general ufuage throughout the whole. In confequence of which, it was eftablifhed by the legillature. that the date of the year, throughont Great Britair, Ihould commence the year following from fanuary 1752.

His Lordfhip then made appear the neceffary correction our calendar ftood in need of, with regard to the civil year, to make the times of our fixtd feftivals, and datcs of tranfactions thereon depending, as alfo the time of Eafter, and moveable feafis depending on Eafter, accord with the practice of the greateft part of Europe; for the right underftanding and difpatch of bufinefs, as well as the benefit of commerce in general. In confequence of which, it was eftablimed by the legiflature, 1751 , that the third of september 1752, according to the julian ftile, be reckoned the 14 th day, neruftile, and fo on ; and that Eafier-limit Mould fall, and Fafter be determinted as formerly, from the 1 i days fo added; whereby our day of the month, and feftivals, now correfpond in all thofe countries who keep their account according to Pope Gregory's correction of the calendar, in 1582 : Preventing the feafons running back, as in the julian account. See tbe fpeedb, containing many tbings inftructive and curious. See alfo remarks upon tbe folar and lunar years, the cycle of 19 years, commonly called the golden number, the epact, and a metbod of finding the time of Eafter, as it is now obferved in moft parts of Europe; being part of a Letter from tbe Rigbt Hinourable George Earl of Macclesfield, to Martin Folks, Eff; Prefident of the Royal Society, communicated May 10, 1750.

## THE CHRONOLOGY OF CHRIST'S CRUCIFIXION.

OUR Saviour was kept up all Tburfday night (bcfore the Friday, or next day on which he was crucified) in the High Prieft's Houfe, and led away in the morning to Pontius Pilate, (Eee Mattb. xxvii. 1. compared with other Evangelifts) who was then Governor of Paleftine, under Tibcrius the Emperar of Rome. Pontius Piacte firt fent Cbrift to Herod (Luke xxiii.) who fent him again to Pilate,

## 40

who tcok fome time in examining him in the Pretoritis; ard in gring out to confer with the people fanding without doors, le?t they fould be defiled by entering into a Hall, where a he..tien acied as Judge. Sce St. John's Golfel comfared with the reft.

1 t was juft before the fecond Cock-crowing, that Peict denied him, before he was fent to Pilate. And it was atout the third $\bar{y}$ czuijp hour (or our 9 o'cluck) ascording to Sto Mark, when his Crucifixion was ordered or relclved on. For, by Et. Lu'te's Cofpel, he was hure on the Crofs about the fixth hour, (or 12 o'clock as we reckon) as he, as well $^{\text {a }}$ as St. Auattioeve ind St. Mark, mentions a dartnc/s from the fixth to the ninth hour ; and 5 t . Mark telis us, it was alout the ninth hour (which we recken three o'clock paft noon) when he expired.

From whence it is plain, he was condemned about the third $\mathcal{F}$ equifh hour (or $90^{\prime}$ Clock as we reckon) arrived at Golgotka, or Calvaiy, at, or little before, the fixth hour, (or 12 at roon as we reckon) when the ciarinits begun, ard expired at three in the afternoon, when the darknefs ceaied.
Hx did not live long on the crofs, it appears from Pilate's wondering at his being dead fo foun; and that his death was towards Friday evening ( Af ril 3t, Anro 33) is plain, from the care the fervs took to kill the Thieves executed at the fame t me, by breakiñ their legs, (who had broke our Saviour's, if he had not already been dead) left the bodies fhould remain on the crofs upen their Sabbatb Day; Sabbath then hafpening at the time of the $\mathcal{F}_{1}$ cavi $/ 2$ pallover, or in their paffover-week, which was a feftival of feven days; though the paffover was eaten on the firft, according to St. IVotn's Gerpel.

It was alfo the law of Mofes, that all, who were hanged, fhould not remain after Sun fet; and accordingly we find by Et. Mathezu, that St. Fc/epb of Arimatkea buried our Sav:our that Friday Evening, foon after his execut on. The firus always begun their day at Sui-fetting, (before we begin ours at midnight) from whence to Sur-rife thos reckon 12 equal hours, which was the former part of their day (as we recken 12 equal hours from midnight to noon following). The latter part of their day was from Sth-rife to Sur-fettine, in which time they reckoned 12 equal hours more; and their filft hour of sur-rife was about the fame as our fix o'clock; their fixth hour, 1 ke our twelve o'clock or noon; and their tive'fth tour, at Sur-fetting, :bout rite fame as our fix a'clock in the everirg. There twelve houre.

Were called planetary hours: and thofe of the night, though equal among themfelves, were unequal to the planetary or fecuifh hours by day: which were alfo equal among themfelves (being each the twelfth part of time from Sun-rifing to fetting) and at the time of the equinoxes, when the day and night is of equal length, the $\mathfrak{f}$ ewifh hours by day and night are therefure equal.

The Evangelifts have plainly pointed out the exaft time of our Savinur's Crucifixion, as well by the previous as fucn fequent circumftances relating thereto; fo that no perion can be miftaken in determining or fixing the day and hour of Cbrift's fuffering, when they mention a darknifs fpread from noon to three o'clock, according to our reckoning.

This darknefs, by aftronomical tables, is found to be no natural eclipfe of the Sun, as St. Augufin, Origen, Erafmus, and others fuppo'ed; there being no folar eciifjc at that time. The darknefs was not feen at Atbens, or in other remote places; but extended itfelf only in the neighbourhood of Ferufalem. The impoffibility of the Sun's being totally dark in a folar eclipfe, for three hours, evinces the darknefs to be miraculous! The fewifh palfover being at the time when our Saviour fuffered, at the firft full Moon after the verra! equinox, which then wason Friday April 3d, in the year of Cbrift 33, (by aftronomical tables) there could happen oniy an eclipfe of the Moon to the remote parts of the earth, preceding by about three hours, the time of his Crucifx:on. The Moon could not at' Ferufalem hide the Sun's light at Cbrift's fuffering by day, when the was below the horizon, the whole heaven's oppofite; fo that the darknefs, fpoken of by the Evangelifts, murt therefore be miraculous, and no natural eclipie of the Sun.

Dyonyfius, the Areof agitc, then a young man in F.gyft, of about 25 (well verfed in Aftronomy for thofe times) on occafion of this unnatural darknefs, when he faw the Sun hid, and no Moon prefent to hide it, cried out to his friend Apollothanes, Aut Deus patitur, aut vicem paticrtis defict, citber God fuffers, or is mucb concerned for him that fuffirs; as many have thought the remembrance of this incident was a great ftep in his converfion to cbrifianity, as appears by the preaching of St. Paul; (See the AIEs of the Afoffies) and alio the dialogue between Dionyfius and Afollofbaries, (queted by Straucbius and others) as recited by Suidas, in his Lexicon, upon the word Dionyf:us. Pblegon the Trallian (an Heatken writer) fpeaks of this mixaculaus ciarknefs, as of an eclipfe, in thete words:

## $=42$

If the fourth year of the 202d Olympiad there beppened "t tiee ereateat eclipfe that ever was known;" for he tuok this miraculous darknefs for an eclipfe; as in thore times the true caufes of eclipfes were but imperfectly underfood. The Efocila of the Clympiad brgun in the 393 Sth year of the julian period at the calends of $\because y u l y$; theretore the fourth year of the 202d Olymfiad muft be compleated in the 4746th year of the juitan pericd, in the Summer; and t':i, was the year on which our Saviour fuffered, has becn plainly proved by Scatiger, Strauckius, and others; being in the year of our Lord 33, (according to Lionyfus, the author of that Ara) and on Friday the 3d of 1 in:t, by the julian account; which was the 54 th day of the f eweiß month Nifan; for which we have alfo the concurning teftimony of Pbilo, the jow. Tacitus, in the 15 th bock of his annals fays, "I he of firft founder of the Clirifian name zuas ore Cerist, wioo "was put to cleati under the reign of Tiúcrius, by Pintius "Fi'ati, then Covernor of Palefine."

And fofefbus (a well known Jewih hiftcrian) of great authority), in the 5 th chapter of the 18 th book of his Anticuities tells us, that Vitelizzs having advanced his friend Diarcelius to the government of Judea, ordered Filate to return to Rome, to anfwer to the Emperor 7iberius fuch matters as the Jews had objected againft him, and Pilate having governed the Province ten whole years, being obliged to futmit to Vitelizus's orders, fet out for Rome, but before he could reach that City, Tiberius died, fo that Pilate's gou verrment, and I:birius's life terminated in the fame year ; and that Tiberius's deati happened in or about the 4750 th $y$ tar of the $\bar{j}: 1 i \sigma_{n}$ pried, or according to Dienyfius, the year of our Lord 37-fo that Cinift suffered between the years 27 and 37 is plain: which Event muit therefore happen in that. year betwixt the two, when the fafibal full moon happtned on a Friday, which is according to the authority of the Evangelifs, who tell us, that the Crucifixion was on a $p$ ricio, as before obferved. We are alfo tolil, that the day oi our Saviour's Refurrection was on a Sunday, the thind day inclufive from the dayof his fuffering, which was immediately made the Chriftian Sabbath, as from the begining, in the room of the Jewifh Sabbath, before and fince kept on a Enturícij.

Now, there was no other year between the 27 and 37th year of Clrijf inclufive, but the 33d year, on which the Folal full moon could happen upen the $3 d$ day of Atril. This fell out about noon at Londor, and confequently correfpinded to about half an hour after nine o'clock, as we reckon, at firufalem, or about the 16 th hour fiom the be-. ginus

## 43

gining of their fith Feria, or week day, (bagining according to the Jewifh reckoning on the Tburfday after fun-fet) which eftroncurically fet down is April $2 d, 21$ hours and halt, Anno 33, er the fourth hour on Albril 3 d , by the Jewint. reckoning.

Ormer chronological events might be produced for afiermaining the time of our Saviour's paffion; as Caiaftas's high prielthood, St. Luke's account of the time of our Savicur's baptifm, if the teftimonies hitherto advanced to corroborate Pbligon's account of the time of the miracuions darine/s happening at that time (of our Saviour's fuftering) were not fufficient, and the true time of the fajjo:z nut ind.iputably proved.

## THE CONTROVERSY OF PHLEGON'S ECLIPSE, AT CHRISI's SCFFERING, DECIDED.

ACONTROVERSY about Fill:gon's Eclipfc was begu:a by Dr. Sjlies, who endeavoured to fhew, that l'biegon meant a common Ecliffc of the Sun, and because no fuch eclinfe happened the 4 th year cf the 202d olympiad, he wowh have it, that it was the fiett year of that olympiad, and that the numeral $\triangle$, by which the Greeks frgnified 4, was made as by the careleffiefs of tranfcribers, and was at firit probatly an $A$ to denote the fref year; and on this fuppoied chang; of the $a$ into 8 , he found his conje?ure, or zotiat be calis $L$ is procf. But not to mention Whifen's anfwer (who mixes to much chaff with his wheat) alleciging the Apochryphal authority fuperior to that of the beft hifterians, and equal to that of the facred writ i:felf, as to be not worth regardins, Mr...Cbafman, of Cambridge, M. A. tcok up the cudicls againt Mr. Sylts, (who had before writ a repfy to Weifoin ) and makes a nice and critical enquiry into Pblegon's account of this eclipfe, and the ancient authors whohave mentioned it, difinguifhing thofe wio had it it firf-hand from Pliegon, from thofe who bare!y tranforibed from them ; and ia hort does a great deal to cyrohorate Phigen's te:timony... Dr. Syke: replies to this, and Cbapnian's sejoinder puts an.; end to the controverisy.

Frey all agree that the year of Cbriff's paflion was the 4 thof the 202d olympiad, (which has been al-eally proved) and look upon it as paft all difpute ; but they differ in refpect 20. the edipfe, and alfo an eartbquake, mentioned by $P$ blegots
*hich Sykes would have to be in another year of the olympiad, and confequently not thit which happened at out saviour's fafion: Chafman has fully proved it to be the fame, and that the parfige in Pbiegon, which relates to it is ge:suine.
" And in the IVth year of the CCIId ofympiad there was "' an eclipfe of the Sun, the greateft that had been known " [or obferved] before. 'Twas night at the lixth hour of the"s day, infomucl, that the ftars appeared in the heavens. "And there was alfo a great earthquake in Bythynia, which " overthrew a great part of the City of Nice."

To confirm the truth of this paffage, Mr. Cbapman obferves, that there are no lefs than feven ancient writers, tbree Grcek [viz. Eufibius, the author of the Cbronicon Pafcbale, alias Cbronicon Alexandrinum, who quotes this paffage of Pblegon twice; and Foanncs Pbilofonus] and four Latir[viz. St Ferom, Anaftatius, the auchor of the Hiftoria Mif-. cella, and Freculpbus Lexovienfis] who all lived while the works of Pblegon were yet in being, (the lateft of the Greek writers being about the year 600 , and the lateft of the Latins about 824) all quoting or trannating this paffage from Pblegon, and all concurring in one uniform reprefenta tion thereof, and in one reading of a controverted numeral. A number [of writers] very extraordinary and of great weight; there is not, I believe, (adds the learned author) one ancient chronological fragment in a hundred (of thofe which are now extant) fo well attefted and fupported as. this of Pblegon.

Those who have a mind to examine the controverfy relating to this affair, may confult thefe pamphlets, contain.ing arguments on both fides.
" Dissertation of the Eclipfe mentioned by Pblegon,. or an Enquiry whether that Eclipfe had any relation to theDarkuefs which happened at our Saviour's Paffion. By: Artbur AJbley Sykes, D. D. Printed at London, 1732."
"The Teftimony of Pbegon vindicated; or an Account of the great Darknefs and Earthquake, at our Saviour's Paf-; fon, defcribed by Pblegon, including all the Teftimonies, bo h Heathen and Chrigtian, in the very Words of the original Authors, during the firft fix Centuries of Chriftianity, with proper obfervations on thofe Teftimonies. By William. $\boldsymbol{W}$ for:, M. A. London, 1732. .'
" Pblegon examined criticallyand impartially, in Anfwer: to the late Differtation and Defence of Dr. Sykes. To which

## $=45$

is added, a Poffcript explaining a Paffare in Tertullian.sy yoln Ctafman, M. A. Fellow of King's College, in Cambridge. London 1734."
's A second Defence of the Differiation upon the Eclipfe mentioned by Pblegon: Wherein Mr. Clafman's Objections, and thofe of the A. of a Letter to Dr. Sjkes, are particularity confidered. By A. A. Sgkes, D. D. London, 1734."
"A Phlecon re-examined-in Anfiwer to Dr. Sykes's f: cond Defence of his Differtation concerning Pkligon. To which is added, a.Polffcript concerning the Chronicon Pafchaie. By Jobn Ciofman, Fellow of King's College, Cambridge. London, 1735." Ending the Controverfy.

The fix differtations publifhed by William Wiffon, in 1734, need not be regarded, one of which is a reply to Dr. Sykes's Defence of his Differtation. He falls fhort of Cbapman, and has notiting valuable but extracts from fome original autliors, (in which he is fcarcely to be trufed) and the calculations of fome eclipfes, which belp to fet matters sight in the faid controverfy. Cbafman entirely difregards Kim, oppofing no one but-Dr. Sykes, calls in no affirtance, nor refers to Wkifton, or any other.

Puezgon was an heathen, born at Tralles, a City of lydia, and when he grew up, became a Libertus, or Freedman, of the Emperor Adrian, and was much efteemed for his learning and the works he publimed: Among other pieces (of which a catalogue is ftill in being) he wrate one of more note and eminence than the reft, entitled, A Chronological Account of the Victors of the Olympic Games, begiring with the firt Olympiad, and continued down to the 22gth, in fixteen books. Of this iome fragments row remain (of which the paffage in difpute is one) but the whele work was extant in Plosti.s's time, who lived in the nitith century ; for he tells us he had it in his hards, and mate co:fiderable exiracts from it. Cne mayjudge it muat have been a very long and valuable work, and of great ferrice 'owards fetthan many points in ancient chronolosy. We ar find that the whicle work was extant in Suidas's time, who hived about 200 years after Pletias; but when it was lott is uncertain. What we would chitfly cbferve fiom thas is, that r'b'egon did not live at the time of the eclipis be mentions (as fome have fuppoled and argued on that fuppofition) but tranferibed his account of it from the annals of thofe times, which might give a much more paticular account of the eclipfe and earthoguake, that accompanisd it ${ }_{2}$ th:n Pblegon has done, or then perhaps fuited his pur-
pofi to tranicribe. And what pity, that ancient writings are not more preferved, that we might take our piofiects. fiom the thoulders of Giants.

The evidence wanted by fome, of the generality or univelfality of the ea thquake and eclipfe, might poffibly or not pontilly be there found. And thus endeth the fory of an eclipfe and earthquake! being a miraculous darknefs, and miraculous eruption, obferved only in that part of the earth when and where Cbrift fuffered; and for which he came to fuffer as God and Man, for the general redemption and fal_ vation of mankind. Notwithftanding which neceffary event, thofe who were acceffary to his fuffering, or of putting the King of heaven and earth to fo great Pain and Indignity, are doomed to eternal mifery! like Henry the VIIIth, and his abcttors, who were the p:ovidential inftruments of bringing about a Reformation of Religion; but intended only the accomplifhment of their own wicked and villainous defigns.

OF PRIMITIVE AND REFORMED CHRISTIANITY.

T
HE corruptions of Popery, and the Pope's authority, are fometimes confounded with the wholefome doctrines of the council of Nice, every way different from each other.The prefent reformed Church of England owes its authority to that council, not to the Pofib Church of England before the reformation.

OUR church receives and acknowledges the authority of the council of Nice, held Anno 325 , and of the tiree fubfequeit councils. She rejected the errors and corruptions of popery fince crept into the church doftrines, but embraces the decrees and determinations of the Nicene councils, which were all of them held before popery had got footing, and before the Popes ufurped their pretended fupreme authority over all ecc'eniaftical and temporal affairs, and aifo over all chriftian princes.

The council of Nice met only to determine the Arian Controverfy, and to regulate the Feftival of Eafier; for we every Sunday and boly-day repeat that very Creed, which was then firft drawn up, together with the additions made thereto by the following councils; and now keep Eafter according to the decrees of that council, and therein differ: from the cuftom of the ancient Britains.

HENEY

## $=47$

Henry the VIIIth's reformation of the Church of ErgLand fhook off the Pupe's authority, to give a fanction to his adultery, and the more free to exersife his tyranny and oppreffion. He diffolved the monatteries for tise fake of their wealth, though religion and refcrmation were his pretended views. 'Tis certain if he had any religion, (which is much to be queftioned) that he lived and died a l'afift, in all points except the Pope's fupremacy, which he rejected, and perfecuted all that owned it ; except thofe who were as much Papifts as himfeif.

He burnt Pafifts and Proteftants in the fame fire; the former for not acknowledging him to be Pope, and the latter for rejecting thofe fix articles which contained the very marrow of popery.
'Tis true, the fteps, taken towards a reformation in his reign, fac litated it in the next; hut nothanks to him, who intended no fuch thing, and was only accidentally an inftrument thereof, as his wicked actions happened providentially to be productive of future good; or tather he was the wicked tocl by which Providence wrought grod out of evil: So that the reformation ought no more to be afcribed to him than the falvation of mankind to $\mathcal{F} u$ udas the traitor, who was an Enftrument of bringing it about, though he meant ro more, as before obferved, than the accomplifiment of his own willainous defigns.

## THE TEMPLE OF FOLLY:

## A Vision.

THE following Vifionary Scenes, if rightly confidered, convey very innivelive morals: There you have a reat pacture of mankinu furrou:sded with all their Foibles, Vanities, and lmperfetions. A THOUGHT of this kind, fo capable of affording ufelut Hints, and inoffenfixe Admonitions, may not be unentertaining to the Reader, as it is pointed at no particular perfin, but leveled at the gencral depravity of the whole nation.

Falling into a Dream, (after fome late fatigues) I imagined myfelf walingeby the fide of a picafant Grove, meditating upon my own iradvertencics, and contemplatjng the frailties of human natire, Methought, at fome diftance, I obferved a perfon making haftily towards me: By the richntfs of his ditfs I took him for a yourg Hair juit

Entered upon poffefion of his eftate; having fet up a fiplendid equipage to fquander what his frugal father with fo much care and pains had got together. Ciurijfty prompted me to give him the meeting, and to f.lute him in a manner fuitable to his appearance; not doubting but from a compleater view I fiould find greater Scope for fpeculation, which fell out jult as I expected.

Drawing near, I beheld the Hat of this zusnderfu! ferfenage very large, bound with a bioad Gold Lace; his wis was of the laj-kind; his Waiftcoat of various calours, intermixed with flowers of gold and filver; his coart was covered wit! fundry kinds of hierozlyshes, and above the middle, on his back, was afixed a large oval plate of gold, from which a filken line huig down, with a bearded Fiht hook, and about it, on the pist:, was engraven in capitats, NON CAI'IO, NISI CAPIoR. He had wings on his Shoullers, lide a Clow ; in his richt hand he held an inchanted rod, with which he could reider himfelf and others invifible; ia his left hand he held a toy or rattife, refembling that with which nurfes pleafe chidien.

Coming up, he addreffed me with fo becoming an air of complacency, and to cafy and gracefal a negligence, as fhewed him to be educated in one of the politeft courts of Europe.-Wc immediatcly entered into converfation, and he foon made me fenfible, tiat I lad mit with a perfon well worthy of my acquaint.nce : A prifon! who, notwithftanding the oddity of his apparel, wav poffeffed of all the moft amiable qualifications, both of boly and mind.

Having entertainel me for a while with elegant dif. courfes on different fubjects, the diftinguifhing characterifi: of good breeding, he thus proceeded. - "I perceive, fir, "y you are in a ferisis mood, I have for fome time, from a " principle of good manners, co operated with you in "' imagination ; now do you accompany me, for a few " hours and I will place before your eyes the real thing " which you now fancy reprefents the imaginary fcene. " am bigh pricft of the Goddess Fol i. y, and will conduct " you to her Temple, give you a full view. of that fuper" dous edifice, and read you a lecture upin every clafs of " her numerous votarics." I readily accepted of the offered favour, when, waving his magic wand over my head, we were both, as I thought, inftantly raifed from the earth, paffed fwiftly throush the air, and c.me to a delightful plain, or garden, embellifhed with ftatues, cafcades, fountains, grottos, groves, viftas, walks, paterres, and every
other ornamemt of ancient and medern invention. In the centre of this beautiful fpot food the Tample of Folex, a very magnificent and amazing ftructure ! built with $E_{E y p}$ sian marble, curioully wrought, into which my guide now conducted me, by an eafy afcertt. He firft led me up to the emople to his own apartment, firtuated to theright hand of the Grand Altar, over which the Goddees herfelf prefided. Paffing along, I obferved, on each fide, numberlefs little cbapels, dedicated to different idols, and furnifhed with every article that nature and art could produce, in order to captivate the fenfes. When I entered the place of his refidence, he feated me in an eafy chair, oovered with crimfon velvet, laced with gold. Having refrehed ourrelves, he opened the door, walked backwards and forwards, before the grand altar, and floook his rattle for the fpace of a minute, which made a very fbrill, though no inharmonous ecbo ; 'thus declaring himfelf,-"The drefs I now * appear in, which I imagine, fir, hat caufed your fur. *' prize, is the regular babit appropriated to my bigh office. © 6 This rattle you faw me thake, is the fummons to feveral "wotaries to attend their refpective Altars, and perform \$6 the rites thereto belonging. The deities to whom they are "raifed, receive delegated power from the Sovereion ©GODDEss; and this vaft congregation confifts of fych at©s tendants, only, as are inflamed by the objects of foufe, whe "c give a loofe to their inordinate defires, and obey their irre* gular paffions, inftead of the dictates of reaton. Thofe 40 who can judge rightyly of the carfes of action, and diftin. " guifh what ourbt to be defred from what oug be co be avoided, * and put their judgments in pratice, have no buliners here. "The Soviz ifg Goddess prefes no man into her fervice; *f for her attendants are all voluntary, purfuant to the mean. "ing of her motto, 1 bear, Non capion mifs capior.-But the "temple now fills. -Take this wand, go where you will; * none can fee you, invifible-when the coremony is over "return to me."

I Aaid fome time at the altar, where my friend officiated, and took a full view of the Sovercign Goddefs, who was feated in a yellow velvet chair of ftate, under a fatin canopy, - of the fame celour; her complexion was fair, and her features agreeable but much prejudiced by her riediculous geftures, and continual laugbter. On her head was a crown of gold, hung round with little bells, like thofe on a child's coral, which made a continual though no inharmonious, jingling. Her boop extended five yards on each side. Before her Alood a table covered with toys of all forts, the offerings of her devotees, with which the played, and ieemed delighted. Her votaries were all difguifed, looking like a mixed multitude, compofed of all nations upon earth; and were di-
vided into fmall farties, whifpering and fqueezing in a con. fured bum.

Tired of this fation, I took a turn round the Temple, and having obferved the different idols, in each compartment, I went to the Tbeatic, thence the Opera-boufe, and laft of all to the Great rcom, where fome where caricing, fome gaming, fome cavilling, fome wheedling and flattering for intereft, and fome betraying their friends.

Having rambled about for a confiderable time, without feeing one ubject that could aford me true pleaiure, I obferved the Goddefs of Folly to withdraw and her congre. gation difappeared.

I hafted to my friend's apartment, who obferving me more inclined to melancholy than mirth, was pleafed to entertain me with the following difcourfe, on the frange fights that fo lately had appeared before me.

[^1]"' an infatiable thirff for revenge, that opportunity permit-
" ting him to gratify, dire refection may fucceed; while he
" furrenders himfelf into my cufody, and plays the fool by
"furrendering his own quiet and happinefs at the fame " time.
"Ir any are troubled with pride, the attendant of felf. is conceit, and ambition gains. the afcendant over them, I " allure them to adhere to thofe views which entail their " deftruction.
"Ir they delight in pleafing tho palate, or to futifify "their fenfes with drinking, I allure them to exce's and "drunkennefs, that they may play the fool with their con-
" fitutions, their health, and their peace of mind.
"If to pleafe the eye, or the ear, be their favourite in"clination, I allure them to follow obfenity, p'ijs, ora"t torios, mufic meetings, balls, oper.s, atjemblise, g.risins, ©routs, drums, drum-majors, riots, and burrialnes! that "they may hear and fee objects for enhancine their vain "ideas; and inflamatory luftaking poffeflion of them, or " a defire of being diftinguifhed for triflis, 1 caufe them to " fquander their fubftance id!y, and to feel want for their "s not applying it to charitable or ufeful purpofes; who are fo "f great fools as to think of nothing but arual eniojment " with all the fine faces they meet amons tise brili'ant fair.
" You might obferve the idol fabion, peculiarly adored "i by the fair fex, to which they have fo many different "ways of zurphitfing and faceffing. Some you might bele II "pay their devotion in the babits they wear; others, by the "facrifices they make. Some think the $J$ dol is a great lover " of wbalebone, or cane, and therefore I allure the:n to be fo "filly as to wear feveral yards of hoth forts about their legs, " and to cafe their bodies with conts of mail made of the for" mor; fo that their fhapes may be reduced to the form of a "taper tobacco-ftopper. Others, who are inclin'd to think "s that the Idol will efteem them for wearing frizled focep's "beads, or têtes de mouion, I allure them to becoms ridicu${ }^{6}$ louny expenfive, by purchafing bam locks, while nature "has furnithed them with better locks of her oivn. "Thoufands of the co:intry folk I alure with great zeal to " facrifice to this idol f.sibi n, their time, their money, their "quiet, and too often their-reputation.

[^2]
## $=52$

* of Jewdnefs, intemperance and vanities that have ap-
"speared to you at this curfory view, in the Temple of
""Folly; but in general, I, like Circe in the fable, omit no
"arts to allure perfons of all degrees and denominations, and "efpecially firangers."

Here my friend paufed a while, and thus proceeded. ic There are feveral other meanneffes to which I allure man"s kind; fuch as to behold the profperity of others with a a grudging eye; to look upon the afflifted without a $f \mathbf{j m}$ "patbizing concern; to hug refontment, when, by properly "Shewing it, a good underfanding might enfuc; to "S be pleared with the imperfefions of others; to procure "f felf applaufe; to be filent when the caufe of another "c Mould be maintained; and to be guilty of other dijingenui"c ties of the like kind, bordering on pride and envy, are as all objects of my bait. Folly and inadvertency are very " near relations, and my bufinefs is to gain them profelites, " by my various fnares and allurements; and my endea" vours feldom fail of fuccefs.
"Our indulging mankind in their favourite paffions, is - by way of chaftifement. You muft be fenfible, SrR, that " the too frequent repetition of pleafure of any kind "makes it neufeous, and palls the appetite: It is for this "" reafon all that offer facrifices to the refpective idols in "s the Temple of Folly, are obliged to fubmit to corporal "s punifhment, as often as the poddefs thath think fit. "Hence, the devotees grow weary of their duty, and there "" are ferv, but would gladly return to grod babits, which "' we feldom allow.
"BuT, it gives me pleafure to find there is one Ulyyfes, " who can withftand all the charms and allurements he " has had recourfe to." The goddefs now returning to the Tcmple, before ajmultitude of adorers, and the Temple-Bel! founding to worthip, my friend too, teginning to hake his rattle, I ftarted upon my feat whioh awaked me.

## THE PHILOSOPHY OF MANNERS, WITH THE DOCTRINE AND APPLICATION THEREOF TO HUMAN CONDCCT.

THE mifchiefs daily arifing from the common neglect of decency, and good manners, are a proof of the impoltance
of

## $工 53$

of fuch neceffary conduct in our behaviour, as may pr: -at thofe evils.

A Statefman, Lazuyer, Divine, Orator, or Dipputar:, of the greateft talents, require a degree of demeanour and i.ddrefs to engage the attention and bias the inclination of i.is hearers, before he can perfuade them to a right opinion; and therefore too much care cannot be taken to acquire that quality, which muft fet off all the reft; and which ferves to correct thofe folecifms in behaviour which men, either through giddinefs, or a wrong turn of thought, are mort likely to commit to their own difadvantage.

Politenefs is not lefs an ornamental accomplithment tiann a thing neceflary to procure happinefs, connected as ciofely with fmall things as with great; which may be obferved from the crofs-accidents met with relating to trifles: For difquiet is faund a very great evil, let it arife from what caufe it will.

In the concerns of common life, as well as among perfons of rank and fortune, it may be obferved, that numbers are brought into bad circumftances from fmall neglects, more than from great errors in material affairs: For chillings and pence, fo lightly thought of by many people, go to the making up of large fums.

Our duty to our neighbour is not fufficient when we pay our debts, and do him no injury; we owe him farther obligations of civilities, complacencies, and endeavours to give him pleafure, in order to preferve the true relith of life, in reciprocal enjoyments; as alfo in his affection and efteem, procured by means of politenefs done him.

Honorius is a perfon equally diftinguifted for his birth and fortune. His natural good fenfe has been improved by his education. His zvit is lively, and his morals unfpotted, yet he has contracted a notion, that it is beneath the man of true honour to fall below the height of truth in any degree, upon any occafion whatfoever. From this principle, and the habits fallen into, he fpeaks abruptly whatever he thinks, without any regard to the company or place where he is. He read a leCture on female bysoci: f y before a married couple, where the lady was violently fufperted of it. Soon after he fell into a warm declamation on fimsny and prieflcraft before tzuo dignitaries of the church; who is thereforc dreaded mbre than efteemed by his acquaintance.

Prudentius, on the contrary, came into the world under great difadvantages of birth and fortune ; yet by his behaviour

## 54

he has acquired a handfome eftate in the country, on' which he lives with greater reputation than moft of his. neighbours.

His readinefs to do obliging offices gained him the love ands efteem of his infériors; his deference to thafe in high ftation procured him their good-will; and the complacency he ex-preffed towards his equals, and thofe immediately above him, made them efpoufe his intereft with almoft the fame warmth with their own! By which means he rofe to preferment; and affluence has made no alteration in his manners.

Thi fame eafinefs of dijpofition fill attends him in that: fortune to which it has raifed him; wha is, this day, the delight of all who know him; from an art he has of perfuading them that their pleafures and tbsir imterefts are equally dear to him with his own.

Who then, if it were in his power, would refure what: Honorius poffeffes? But whe would not wifh that paffefGon accompanied with Prudentius's talents, and fweet difpofition?

The practice of politenefs does net require, that a mans thould fall jnto a careleffnefs, or contempt of fcience; fincea neceffary ftock of knowledge will diftinguifh every one from the pedant, and adorn his other qualities. Perfpicuify: fhould run through all his eafy difcourfe; and candour and: fircerity appear in all his thoughts and actions.

Religion, which is become the jeft of fools, fhould be: always treated with the utmoft refpect: For what can be: a greater offence, or more thocking to good fenfe and manners than to fpeak ludicrouny, or with contempt of "That. "s worfhip which men, from a fenfe of duty, pay to that "Being, unto whom they owe their exiftence; with all, " thofe bleffings and benofits attending is ?

Aci party-difputes and politics muft be fet afide, and: reflections on men's profeffions; and all expreffions, or behaviour whatfoever, that are any ways liable to give paing, should, with thelutmoft caution, be axoided.

Invektive, ridicule, and raillery, are very offenfive weapons! and dangerous to be dealt with; the playing with which, for diverfion, being fimilar to jefting with thepoint of a naked fword, to infult or wound the perion it is turned againft. A falre ambition, envy, and ill-nature eften prompt the posfeffor to employ thefe weapons, by
making continual war againf the honour and reputation of the more worthy.

A SUDDEN vebemence in difcourfe is not a little fhocking so others, at the fame time it exbaufts not a little the perfon, who puts it in practice; contrary to the rules of good breeding. This defect arifes from impatience at the difference: of opinion, while we are equally guilty in cherifhing the fame' tenacity in ourfelves.

If fubmiffion to others be a thing difagreeable, why thould we expect it ? Trutb can only juftify tenacity of opinion; and if we calmly lay down what is reafonable, it will hardly fail of convincing thofe to whom we fpeak. Heat produces heat; and the clathing of opinions feldom fails to ftrike out fire of diffention. Paffion excites oppofition, and that very oppofition, to a man of tolerable fenfe, hould be the ftrongeft reproof for his inadvertency.

As this foible is more efpecially incident to the fair fex; it may not be amifs to remind them, likewife, that paffion is as great an enemy to beauty, as it is to truth; it difcompofes the fweeteft features, difcolours the fineft complection, and gives the air of a fury to the face of an angel. Whereas, for the ladies to affect what they defire, what can be denied beauty, fpeaking with an air of fatisfaction? Complaifance does all that vebemence would extort; as it is anger alone can abate the influence of their charms! Redundancy in converfation is a fault, pather from carelefnefs than defign; and is the more dangerous the lefs it is congdered.

A person of a loquacious difpofition may efeape open cenfurefrom the refpect due to his quality, or from an apprehenfion in thofe with whom he converfes, that a cbeck would but increafe the evil, and, like curbing a hard-mouth'd horfe, ferve only to make him run a head the fafter; from whence the perfon in fault becomes often rivetted to his error, by miftaking a filent coftempt! for a profound attention.

Converfation thould be looked upon as a fort of bank, in which all, who compofe it, thould have their refpective and proper thares. The man who attempts to exgrofs it trefpaffes upon the rights of his companions in partnermip, and whetrer they think fit to tell him fo or no, he will not of confequence be regarded as a fair dealer.

Converfation differs from other co-partnerfhip in one very material point, which is this; that it is worfe taken if a man gays in more than his proportion, than if he had not
contributed
contributed his full quota; provided he be not too far deficient.

Some of the fair fex, when paft the noon of life, or in the svane of their power, arc apt to difoblige their hearers with topics of detraEion, by which they reduce the light of thofe ftars to gild the hemifphere only, where they once thone with fparkling and refplendent luitre !
Some men are guilty of egotim, or felf-panegyric, to the great leffering of themfelves, and difturbance of others; and is a veaknefs, the bare mention where:f fhews it to be an improper topic to entertain company; yet there are men perpetualiy introducing and recoremending themfelves; who appear amazed at the coolnefs of their auditors, by forgetting that there is fcarce a perfon in the room, who has not as good an opinion of himfelf, at leaff, as of any body elfe.

Difquijtions of this kind, into human nature, properly belong to fages in polite philofophy; the fir $\beta$ principle whereof is not to offend againft fuch difpefitions of mind, as are almoft inteparable from our fpecies; to find out and metbodize which, require no fmall plius and application. Reflections on thefe fort of fubjects will open a fenfe of novelty, which is attended with a moft powerful recommendation.

Taz character of a Marplot, in the affembly of impertinents, fhould be carefully avoided.
Instances might be produced of Major Ramble engroffing. a tedious converfation on his travels, for an hour, in eompany with gentemen that he knew had feen all and more than he defcribed; wherein a defire of difplaying his own parts buried every other circumftance in oblivion. When Doctor Hectic ftarted a fubject on medicinal Batb waters, and tried the company's patience for a confiderable time, without flaying for thrir approbation : Durin'f which time Mr. Mathematics fat filent. But, the moft unaccountable of all, Mr. Papilla, after all there impertinencies, read the company a lecture upon a Medallion, to make them amends for the late queer converfation he had obferved; when every one lofing all patience, took up their hats and went away without fiying a word.
Tsus far the rocks are defribed on which is fplit the bark of good manners, and all thofe pafingers of lite fet adrift who would arrive at the cbarazeer of being agrecable.

Havine conduAted you to the door of the world's great febool, you muft enter and prattice the precepts here hid down, (avoiding all poftivenefs and affectation) and make what forther obfervations your experience can difcover. Your beft way to improve will be from converfation with the Fiir Sex; who, in general, poffers all the accomplifhments of politeneff in an eminent degree, and are qualified to teach the Utile Go Dulci; by whofe means, alone, you may arrive at the fummit of Mount Pleafant.

## OF THE SUPREME*BEING AND CREATOR OP THE UNIVERSE; AND HIS INFLUENCE AND DOMINION OVER ALL HIS WONDERFUL WORKS.

AS we cannot but conceive the univerfe as depending on the firt caufe and cbief mover, whom it would be abfurd, not to fay impious, to exclude from aeting in it ; fo we have fome hints of the manner in which he operates in nature; from the laws which we find eftablified in it. Though he is the fource of all efficacy, yet we find that place is left for fecond caufes to act in fubordination to him; and mecbanifm has its thare in carrying on the great fcbeme of nature. The eftablifhing the equality of action and reaction, even in thofe powers which feem to furpars mecbanifm, and to be more immediately derived from them, feems to be an indication, that thofe powers, while they derive their efficacy from him, are bowever, in a certain degree, circumfcribed zed regulated in theinoperations by mecbanical principles: and that they are not to be confidered as mere immediate volitions of his, (as they are often reprefented), but rather as inftruments made by him, to perform the purpofes for which he intended them.

For example; if the moft ribble pboxomena in nature be produced by a rare elaftic etberial medium, as Sir IJaac Newoton conjectured, the whole efficacy of this medium muft be refolved into his power and will, who is the fupreme caufe. This, however, does not hinder but that the fame medium may he fubject to the like laws as other elaftic fluids, in its actions and vibrations; and that if its nature were better known to us, we might make curious and ufeful difcoveries concerning its effeet from thofe laws. It is eafy to fee that this conjecture no way derogates from the government and influences of the deity, while it leaves us at liberty to purfue our enquiries concerning the nature and operations

## 58

operations of fuch a medium: Whereas, they who haftily refolve thofe powers into immediate volitions of the fupreme caufe, without admitting any intermediate inftruments, put an end to our enquiries at once, and deprive us of what is probably the moft fublime part of philorophy, by reprefenting it as imaginary and fiftitious; by which means they hurt thofe interefis which they appear fo fanguine to promote; for the higher we rifo in the fcale of nature towards the

- Suprene caufe, the views we have from philofophy appear more beautiful and extenfive. Nor is there any thing extraordinary in what is here reprefented, concerning the manner in which the fupreme canfe, acts in the univerfe, by emplofying fibordinate infruments and agents, which are allowed to have their proper force and efficacy: For this we know is the cafe in the common courfe of nature; where we find gravity, attraction, repulfion, EGc. conftantly combined and compounded with the principles of mechanifm. And we fee no reafon why it fhould not likewife take place in the more fubtil and abftrufe pbanomena and motions of the fyftem. It has been demonftrated by ingenious men, that great revolutions have happened in former times, on the furface of the earth; particularly from the phanomena of the firata, which fometimes are found to be in a very regular manner, and fometimes to be broken and feparated from each other to very confiderable diftances, where they are found again in the fame order; from the impreffions of plants left upon the bardeft bodies, dug deep out of the earth, and in places where fuch plants are not now found to grow; and from bones of animals both of land and fea, difcovered fome bundreds of yards beneath the prefent furface of the earth, and at very, great diftances from the
fea.

Some pbilofophers explain thefe ohanges by the revolutions - of comets, or other natural means. But as the Deity has formed the univerfe dependent upon himfelf, fo as to require to be altered by him, though at very diftant periods of time; it does not appear to be a very important queftion to enquire, zubether thefe changes are produced by the intervention of infruments, or by the fame immediate influence which firft gave things their form.
We cannot but take notice of one thing, that appears to have been defigned by the auttbor of nature: He has made it imfoffible for us to have any communication from this earth with the other great bodies of the univerfe, in our prefent fate; and it is highly probable that be has likewife cut off all communication betwixt the other planets and betwixt

## 59

betwixt the different fyitems. We are able by reiefropes to difcover very plainly mountains, precifices, and cavitics, in the Moon; but who tread thofe prec pices, or for what purpofes thofe great cavities (many ot which have a little elevation in the middle) ferve, we know not; and are at a lofs to conceive, how this pianet, without any atmofptere, vajours, or feas, (as it is now the cummon opinion of aftronomers), can ferve for like purpofes as our eartit.

We obferve fudden and furprifing revolutions on the furface of the great planet $\mathscr{J}$ upiter, which would be fatal to the inhabitants of the earth. We obferve in them all enough to raife our curiofity, but not to fatisfy it.

From hence, as well as from the ftate of the moral world, and many other confiderations, we are induced to believe, that our prefent fate would be imperfect without a fublequent one; whercin our views of nature and of its great author may be more clear and fatisfactory. It does not appear to be fuitable to the wijdcm that Mines throughout all nature, to fuppofe that we chould fee fo far, and have our curiofity fo much raifed, concerning the works of God, only to be difappointed at the end.

As man is undoubtedly the ckief being upon this globe, and this globe may be no lefs confiderable, in the moft valuabie refpects, than any other in the folar fyifem; and this fyftem, for ought we know, not inferior to any in the univerfal fyftem; fo, if we thould fuppcie man to perifh, without ever arriving at a more complete knowledge of nature, than the very imperfect one he attains in his prefent - ftate ; by analogy, or parity of reafun, we might conclude, that the like defires would be fruftrated in the inbabitants of all other planets or fyjfems; and that the beautiful fcheme of nature would never be unfolded, but in an exceedingly imperfeet manner to any of them. This therefore naturally leads us to confider our prefent ftate of prefaration or probation for farther advanncement: Which appears to have been the opinion of the mort judicious pbilofotbers of old. And, whoever attentively confiders the conftitution of: human nature, particularly the defires and pafions of men, which appear greatly fuperior to their prefent objects, will eafly be perfuaded; that man was defigned for hightr views than this life. Thefe the author of nature may have in referve, to be opened to us, at proper periods of time, and after due preparation. Surely it is in his power to grant us a far greater improvement of the faculties we already poffefs; or even to endow us with new faculties. [For wue know tkings in our prefent or any fate but according to our

wags of percoption; and our knowuledge and facultiess, in a new Rate, may be different, and tbe prefent be of no ufe. We meg perceive every sbing intuitively, in, vaf plans of ideas, or wuitbout external ideas, by tbe confituticns of things; with a power of not forgetting, and to affume faculties or ways of knowledge, as fuits our purpofe or defign; and of making extenfive comparijons and conciufions; and may exift in a form requiring no nourifbencent or fupply of jubfance, from motion, as in our prefent mortal fate of being. Pal. author.] O\& which, at this time, we have no idea, for penetrating farther into the fcheme of nature, and approaching nearee to himflf, the firft fupreme caufe. We know not how far it was proper, or neceffary, that we thould not be let into knowledge at once; but fhould advance gradually, that, by comparing new objetts, or nezv difcoveries, with what was known to us before, our improvements might be more complete and regular; or bow far it may be neceffary, or advantageous, that intelligent beings thould pars through a kind of infancy in knowledge. For new knowledge does not confift to much in our having accefs to a new object, as in comparing it with others already known; obferving its relations to them, or difcerning what it has in common with them, and wherein their difparity confifts.

Thus our knowledge is vaftly greater than the fum of what all its objects feparately could afford; and when a new objett comes within our reach, the addition to our knowledge is the greater the more we already know ; fo that it increafes not as the new objets increafe, but in a much higher proportion.

## EFFECTS OF BAD COMPANY.

1. Bad company is ruinous to fame and repire ration.
2. Judging men look on others for the company they frequent; according to the old proverb, feew me your company, and Ill tell you the man.
3. Ill company often gives an incurable wound to repu. tation.
4. Revelling with profitutes, and parading with gamblers, wert thou a king, thy reputation could not be fafe.
5. Ill company, like objefts bermeared with filthinefs, befmear all thofe who come near or touch them.
6. Ill company is the suin of youth, and the reproach of Mge.
7. $I f$

## $\Longrightarrow 61=$

7. Ill company is the grand engine with which the devil effects moft of his purpores on mankind.
f
8. Ill cumpany is to be fhunned as deadly foifon, or as a fnare laid for your fafety and welfare.
9. Unavoidable and innumerable mifichicfs and misfortunes attend the keeping bad company.
10. Many men have been good till they were ill affo. ciated.
11. Pure water changes its quality and virtue by paffing through pernicious minerals.
12. When vice runs in a fingle fream or rivulet, it is fhallow and fordable; but. when many of thefe vicious ftreams fall and unite into one large and deep channel, the unnuary are drowned therein.
13. Good and wife affociptes are like princes in offenfive and defenfive leagues againft the common enemy; one is a bullwark for the mutual fafety and protection of the other.
14. Bad companions and affociates, like a jack o'lantbern or mifguiding light, lead the unwary, infenfitly, into . amburcades.
15. Evil companions, like the fyrens, allure men inte: daugerous follies and defructive rices.
16. He, who frequents evil company, requires ftronger ': entidotes carried about him, than are carried by a plyfician, vifiting his infected patients.
17. It is better to have no companion or affociate than to have an ill one.
18.: Acquaintame is fimilar to commerce, or dealing of one tradermen with another; begun by accident, continued by cuftom or inclination, and revocable, on either fide, at 9 pleafure.
18. When a commerce of acquaintance happens between two perfons, and is carried on to mutual confidence; and if through inadvertency, either finds himfelf deceived in his choicfi, by difcoveriug the other to be evil-minded; he, by prudent and fafe meafures, chould thake him off as St. Paul did the Viper.
19. When effecen is forfeited, acquaintance, or even friendinip, is broken.
20. When a viife forfeits her bopour, the forfeits her huiband's efteem: Her dependance is on the law, and her happinef, to feek.
222-A suortby and boneft companion, of either fex, is like a-g.rardiatn angel.l

## miscellaneous and moral observations.

5. HE Tyger kills to fatisfy his hunger ; bet wicked and more cruel man has often be:rayed to mifery his protefior, preferver, and deliverer, for gain.
6. Of so little moment is difference of country for da fining a perfin's true character, that the honeft, tender, and generous fentiments of a wild Indian have been found to furpafs thofe in one of a foliter nation.
7. How weeak the charm', how Bort-lived the triumph of beaury, briended with pride and irfolence! And how powerful and lafting the attrattion of a well-cultivated mind, with a condefcending, chearful, and obliging behaviour!
8. Were men to pay a more general regard to real worth; in their choice of a partner for life, the fair fex would, doubtiefs, be more careful to adorn their minds, inftead of crufting fo much to drefs and the fading charms of thfir perfons.
9. The furce of true wifdom is feen, in the praftices of life, to reftrain or change the worf difpostiots, though ever fe ftrungly feated in the confticution.
10. The generous mind will never value itfelf upon what can make no part of its worth, but as it is worthily employed.
11. How requifite is a liberal education, regular conduet, and a juft fenfe of things, to a Join a great eftate!-Were this rule more generally obrerved, we thoukl not fo ofteri lee meen fpirits, and ruile and riaiculous bekaviour, in men of fortune; whofe wealth ouly ferves the more ftrongly to expoe tliem to contempt and ridicule!
12. It is impofible for a mind, untainted when mean jntcriffed views, not to feel a variety cf emotions, from feeing the worthy anil amiable in deep difirefs.
13. How crucl does that tyrant appear, who arrogates to himfelf a power over the children to which he is guardian; and facrifices to his own grovelling pation, and lucrative views, their real happintes! to promote which happinefs was the real defign and limits of his authority. Yet we' find there are frequent inftances of fuch men having exifted.
14. How hard it is for a bad man to divelt himfelf of his fond conceit of his own abilitics, when employed in a bad caulit! A moderate opinion of ourfelves is perhaps one of the laft virtues we thall attain to.

11 . Of boiv litile v.lue and dependance are the firongeft preicfions of love and friendlhip; in a heart abandoned to
the wild farts of paffion, flying from one extretme to another!
12. It is prudent fometimes to fmother refentment, and even to repay great offences with great benefits. By thefe means we may gain over a powerful and dangerous ene:ny to become a fa thful and furs friend; as well as to enjoy the godlike pleafure of returning good for evil.
13. The bafeft returns for the greateft obligations raife a borror in the hont $\boldsymbol{t}$ mind, fhocking to homan nature! Yet we miy larn, from the exemplary danger of liftening to remptation, how foon it may feduce us to liften to what we moft detefied! For, he who can be falfe to his God, and can make his religion fubfervient to his intereft, is not likely to prove true to his friend.
14. This world, or flate of being, may be likened to an Inn, where one generation is continually paffing off, and another fucceeding.
15. Let none, however infignificant he may think himfelf, imagine that be is neglected ty bis Creator. For every ftation, as far as it is providential, is appointed by the moft confummate wifdom-.

> Who fees ruitb equal eye, as God of all, A bero perifh, or a fparrow fallt Pops.
16. There is fcarce a pafion that gives a warmer glow to the heart than gratitude: It is the foundation of every daty to God.and man; but can ot dwell in contratted fouls!
17. Kind and generous aftions often meet with return? when long forgot by the doer.
18. The ill tendency of feverity to youth, for little faults, ftriking with terror their tender minds, is very obvious; as it puts them upon all kinds of Chifts, or arts of evafion, to prevent punimment: Thereby corrupting their native honefty and fimplicity; which ought, as a firft principie, to be carefully cultivated and fuccoured.
19. Prudence and patience are remedies for the deepe $\{$ afflictions and diftrefs.
20. As we treat cthers, we may one time or other ex. peet to be treated.

2 T . The folly of the bermetic art, and of Aretching life beyond its ufual date, is ridiculous, and contrary to good fenfe.
22. What foliy and impiety appear in fome, who find fault with the appoiatments of infinite wifdom! and would feform the original conftitution of things!
$\stackrel{4}{4}$
23 Mutual dependance of fation is neceffary to preferio the peauty, order, and woll-being of fociety.
24. A compalji nate action carrites its own reward.
25. In the courfe of providence, occurrences, feemingly difadvantagcous to us, prove greatly beneficial in the event.
26. As we know not how we fhould behave in a different fation, it teaches us to be fatisficd with the fation sllotted us.
27. Thofe refrocfs do the moft good, given in the leaft offenfive manner; when, by fome diftant bint, you make the offender his own accufer.
28. As we cannot limit the dizive cminipotence, fo it is fruilifs to bufy ourfelves in fpeculations we can never clear.

29 All that is necefiary for us to know of truth and duty, lics plain before us; and we can have no cortain knowledge bejond our real idicas.
30. : Mr. Adifin 'obrerves in his Sfectator, (a library of uffell know ledge for both fexes) that we are not, at prefent, in a fituation to judge of the counfels by which frovidence aets, fince but little arrives at our knowledge, and even that little we difcern but imperfectly. And thofe events, the fermiffor of which feems now to accufe the divine goolnefs, may, in the confummation of all things; both magnify his goodnefs and exak his wifdom.
31. Moral good and eril are feen to be productive of all the happinefs or mifery in the world.
32. So erroneous is human judgment, that granting our wiffes would, fometimes, be the greateft cruelty done to us.
33. We beliold different nations equally ardent in preying to heaven for each other's defeat or cielruction; infiend of reficning the merit of their feperate cabifes into God's harids.
34. A reliance on divine providence, and afcribing gur fucceffes to Cod's power, is the only fure way to engage his protection; and to gain that frrmefs of mind which nothing elfe can afford. For he, who holds the univerye in dependance and cxiftence; can eafily avert the moft hidden mijckief; and, by urfurcfecn caufes, turn it upon the head of the contriver.
35. To him who formed us all of one clay, it is feen in many inftances that the life of the meaneft flave has the frime protecion as that of the griaiff bero, and is as providentia!ly guarded.
36. The wife author of nature has fo ordered the confitution
fritution of the human mind, for the mutual happinefs and prefervation of the human epecies, that the pure joys of natural affection for our children give us a delight hardly to be equalled. How greatly, therefore, are thofe their own enemies, who fuffer their vicioks paffions to interrupt or totally deftroy thefe folid enjoyments, and thofe of friendMip!
37. One crime, committed with impunity, leads to the commitment of a greater, till the hopes of concealment terminate in remorfe and punifhment!
38. An overbearing and infulent difpofition always deferves and often meets with humbling circumftances.
39. Happy is that difpofition which is brought to a just fenfe of its own demerits.
40. We learn, from vifible inftances, how great an injury thofe parents do to their children, who breed them up in a way they are not likely to fupport.
41. As we know not how foon a reverfe of fortune may fet our inferiors above us, we mould learn frum thence never to behave difdainfully to any.
42. A fixed or weell-grounded efteem often rifes fuperior to ill-ufage; and rejoices at an opportrnity of Chewing iffelf, when the conduct of an ingrate is altered.
43. An infinite difproportion or difference is feen between a tyrant governed by his cruel jealoufies and raging paffions, and a mind tempered with zuiffom and benevolence: The harrors of the one illuft ate, by contraft, the beauty and amiablenefs of the other!
44. The haughty oppreffer is often dealt with deceitfully; his cruelty furnifhes his beft friends with arts to evade his power.
45. Among well-inftructed minds, we fee grandeur make no part of real happinefs.
46. How dreadful a temptation is extreme poverty! bent borne with refolution and patience, innocence is a happy ftate, when compared to any relief of it purchaled by guilt, and the reproach of a bad confcience.
47. What a commanding avse is virtue feen to have over the vicious heart, when it checks the fluthed libertine, in the height of his promifed pleafure, from deftroying virgis innocence!
48. He becomes $\equiv$ viftim to repentance, and a guardian and rewarder of virtue, when he preferves thofe charms be was about to deftroy!
49. From the immorality of fervants, derived from exaxple and negligenes of mafters of families, having the care

$$

of them, flows that irrefiftible torrent of misfortuncs which fpreads through all ranks of life.
50. Old age, by means of ill example and immorality, is oppreffed with beggary; youth are drawn into the commitment of murthers and robberies from the fame evil caufe.
51. If we confider the happinefs which refults from a fatherly conduct of mafters towards fervants under their infpection and notice, it would encourage every moral man to ufe his influence towards their well-doing, inftead of exercifing a libertine behaviour, fo pernicious and frightful in its confequences !

## ON THE ADVANTAGES TO. BE GAINED.FROM

 ANY COMPANY.1. A $s$ the bee fucks honey from every flower, (whether growing in the field, or in the garden, ) from which the ffider alfo extracts his poifon; fo a provident man, let his company be what it will, may gain advantage from it; while the indifcreet and improvident man is worfted by moft converfation.
2. Wife men improve themfelves from contrary qualities : for when vice beats up for recruits, as foon as her uggly form is difcovered, inftead of enlifting, The. frightens her attendants, who fly to virtue's ftandard for refuge, and imsmediately take on in her corps.
3. Every man learns to correct his own faults by feeing how ugly thofe deformities appear in others.
4. A drukken fellow, wallowing in a kennel, would make us believe, at firft fight, that Circe has tranctormed him into a fivine; as the follicers of Ulypfes, in Homer's fables, wavere transformed, on a lilic occafion : Being a leffon of inftruttion, in Homer, agsinft fuch betiality.
5. Choler, palfion, and infolent pride, by being foen, correct thofe deformities in others.
6. Some have imagined, that cruel commaxders will be tranfmigrated into cart-borfes, and whipped by carmen to their duty.
j. Some otherwife have imagined, that the rich popifh clerg $y$, who fleece the poor and diftreffed, as well as the rich and opulent, (freacbiag. up charity, and doinginome,) wiß be tranfris livelihood.
7. Others.

8. Others have imagined, that the great Whonz oi Babylan, dreffed in fcarlet, wi'l be trar fmigrated into a poor firect-rwalher, and proftitute herfilf to every meain filigio for a livelihond.
9. Others, anain, have imagined, that the part of mankind, who proftitute honeft principles, for gain to themfelves, and to the difadvantage of others, will be tranfmigrated into ropbers of different degrees andt denominations.
10. That laveyers will be tranfmigrated into falfe wit. neffes; and that every one who has dimonoured his peofeffion, will be tranfmigrated into a being of a cloff the mof worthy of his demerits.
11. Reafonable men mead by looking ar zice; but trgffigates grow the worfe for the fight.
12. As neither example nor pracept (except in matters of religionl can be an abfolute guide for any man'; conduet, if muft be an experienced and graftical indgement, in the knowledge of men and things, that muft difeet thim in the doublings and turnings of the world.
13. Since, in the itate of man's liff, events are calual for the future, is it impofible that any man can have to his .juccefiars infallible rules to direct them, becaufe he knows not how times and things may alter
14. In fome thiags men will tall thort of thofe who went before them; in wthers they will go beyond them; Sucle imperfeat beings are men!
15. As the induffrious bee gathers honey from different flowers, fo (like men gathering fruit-from all kinds of company) the completes the compofition, by blending together the boney gathered from fever 1 l :
16. It requires care, in converfation, and choice of acquaintance, to diftinguin the real land uloful, from the counterfeit and worthers fort. .This is done by obferving every good and bad talent, without diflike or prejedice to any man.
17. As men cannor pais through' the world, withoat meeting vire in their paffage; 'fo when they'meet it, they hould make the beit ufe of it; that they may avoid being intimate with; or infected by it.
18. The exan:ple of good fociefy may be improved to the doing foriof future goon.
19. When we fall into bad compaby, we may frompthente learn where the rocks rie that we are to flum. - 'zo. As the matiner makes evèry woind. ferve him, for failing: towaids his intended port," everi amidft dangets, Sifficulties, and currents, when he has fedituom ; fo a piudeht mish

man will navigate himfelf into the harbour of fafety and happinefs in any company.
20. As embaffadors from foreign fates avail themfelves of all advantages they are fent to take, fo mankind, fent hither to avall themfelves of the happinefs of a future ftate, thould gain as much empire on that dominion as they can : who, like the fbyficians, by correcting foijor, Thould make it medicable for the mind's' health; which of its own nature, and without fuch neceffary correction, is defiruftive to the human being.
21. The imperfetions and depravities of the prefent buman ftate, with all the different modes of pleafure and pain confidered, are fuch, that the beft and wifeft human being may, with reafon, wifh for a tranlation from this to fome other orb, or fituation of being, among the innumerable worlds, revolving in infinite fpace, either vifible or remote from fight ; in hopes that there is fome ftate amongft them to be found, of more fubftantial and permanent happinefs than what, from experience, can be erjoyed upon this our contracted fpot of earth.
22. If the multiplication of our faculties of perception, and the enlargement of our underftanding, connected with a fubfance firted for fuch a change, (not affetted by bunger, sbirff, beat; cold, fain, \&c.) could be once our enjoyed privilege, without a poffibility of a future death, or a falling from that ftate, ftill advancing in perfection, to what a pitch of happinefs (O infinite and sacred Creator!) thail we then be arrived!

## CHANGE OF ACQUAINTANCE.

# THE DUTY OF MAN INFERRED FROM THE WORKS OF CREATION; OR NATURAL RELI. GION DELINEATED. 

CONTEMPLATING the infinite variety and grandeur of the zuorks of creation, efpecially thofe zuorks which come moft under our obfervation, that concern the fiences to know, will the moft exalt our ideas of the Creator's greatnefs and goodnefs; and the moft excite our gratitude and homage to the autkor of all things, for the powers, faculsies, and benefits we enjoy. To underfand which, is the proper fubject of moral philofophy, and of human happinefs. In the dependance, connexion, fcheme, ulian, larmony, and prefervation of the works of creation is manifeffed the duty of man, in relpect to the Creator of all things, and the isdividuals of fociety.

MEN, like the planes; firft received their heing upon this fpo: of earth, whence they firft knew fenfation, perception, memory, reflection, reafon, and judgement, and all that their faculties comprehend. Who were here firft confcious of their exalted fations above all other created animals, were likew fe made confcious of their power to do giond or hurt, in relpect to each other's pliafure or pain. Whence. it is inferred, that mon were created as inflruments or agents of the divine Providence, to obey his will, and execute the purpofes of creaticm, according to the laws of civil government, (dictated and infpired by God,) under which they are placed; by that divine Providence evidenily prefiding and ruling over kings and kingdoms.

Min, it appears, were created in high and low fubordination, under the divine power and influence, and the direction of one another, to att in mutual concert for each other's dependance and happinefs : in which a deviation from the laws of nature, and the general good of creation, can never be fuppofed, to the diforder, confufion, or de: ffruction of any part thereof, wh ch would be to fubvert and deftroy the peace, order, and harmony of the whole. That fince the beauty, order, and good of the wbole creation is evidently fupported and preferved by the infinite wifdom and power of an almighty Creator, he muft be virtually prefent every where, by bis effence, to direct and inftuence the wibole; or, by his delegated powers and commands to his minifters and agents, in their feveral appointed fations

## 7 I

and fubordinations, amidft innumerable revolving worlds, in the infinite 'fpace, who are directed to regulate and govern under him.

In which feveral appointed ftations and gradations of power and influence, every intelligent bcing created fhould co-operate to the great end or defign of the whole: Wherein the inanimate and fenfitive parts of creation, with the whole fpecies of animals, governed by the laws of nature and inftinet, never deviate. And marl, and other intelligences, by their freedom $0: 1 \mathrm{y}$, can fall of their duty; like the leffer wheels and movements of a grand mactine, always going true to anfwer one main end, except difturbed and made to go wrong, by falling into the hands of wilful mifjuiders.

Hence it alfo appears, that the firt caufe of infinite nature, and of nature's whole fcheme, could have no beginning; therefore the canfe muft be infinite in power and wifdom, which muft be God; who therefore muft exift neceffarily, (independent of creation, or of any power or being, ) and there ore can never ceafe to exift, from eternity to eternity; without a foll:bility of ever changing his exiftence to nom-entity. Who, being able to do all things poffible and confiftent with his own attributes, glory, and perfections to do, yet cannot defiry bimfelf.

Who is the fountain of all life, widdom, power, glory, perfection, and happiners, as well as the caufe and fupport of all created heing, of all material forms, and of every ouher fubftance whatfoever, that can be feen or compre. hended: In and by whom all things ferpetually fubfif; whofe attributes and perfections are infinite and incomprehenfible.

Hence it is inferred, that all thofe intelligent beings, bolding their exiftence and degrees of excellence under him, who are sonfcious of their freedom to act or forbear to aet, and of being fubject to his laws and protection, are by that confciounnefs bound to obey and perform the duty required of them, in each part cular fuperior or inferior ftation of 1 fe , in the fale of fubordinate intelligent being. And thence it is farther inferred, that thofe intelligent beings, who depend on his power and goodnefs in every state, hould not only, in duty, fubmit to and obey his laws, but are bound, in gratitude, to be thankful for his benefits received, with humble proftrations, workhip, and adoration. Whe, if they expeft to be made farther happy, or continued in the happinets they at prefent enjoy, through bis bound-

Iofs favour and bou ty, mould folicit the continuance of his favour,"influend, and fupport, here and hereafter:

Hence it will follow, that mens' religious duty: is founded in the practice of morality, depending on a rational and natu:al rcligisn, (and net on an enthufiaftic fupertition,). improved by true faitb and revelation, in praying, bomage, wormip, adoration, thankfriving, and folicting favour of ; the Giver of all Benefits, and Supreme of all Beings.

This natural and moral relizion, improved by true faith, chiefly confifts in the Love of God and Man; and doing to otlecrs as zoe zoould be done unta; being (as we aie told by the great Example and Saviour of Mfankind) the fum and fubitance of the goftel.

For he who does good or burt to others, fets a forcible example for others to do the like good or hurt to thimflf. Whence, on the one, hand; proceed friendfhip, Yriendly" allaiaces, kindneffes, and the foveral benefies, trom doing:: good to others, that happen to men linked in fociety; as, on the other hand, procted quarrel, hatred, malice, effu. . fion of blood, and al the mifchiets and evilo, conifequent. from doing hurt to others, that beal mankind, in their own, or from other natious: Of which the divine Socrates, (who was an example and tufferer before Cbrift, for hewing men their errors of action) gave us a clear demonftration, as to the effects of moral or immoral conduct.
Acarnst mankind's reffor, and fober approbations, the feyeral impianted rebellous and unruly paflions and affec tions are obierved to be continually making war, and caufing their unhappinefs and mifery. To opyofe andcouquer which paffrons and, affecticns, is the work of a, Philofopher and a Cobifician, and of parents, by an early: education, to perform:

From Nature's chain whatever link you ftrike;
Tenth or ten thowfandth, break the chain atike,
Afpiring to be Gods, it Angels felly,
Afpiring to be Angels, men rebel:
And whatut wimes to invert the laws
Of ouders fips azaingt the eternal caufe.
Pópe's Ethics.

## Curious Recreations.

PARTII.

Previous to tbefe Recreations with the Cards, it avill be necefliry to explain the Metbod of making the Pafs: That is, bringing a certain number of Cards from the Bottom of the Pack to the Iop; as many of thefe Recreations depend on tbat Manazuvre.

H1 OOLD the pack of cards in your right hand, fo that the palm of your hand may be under the cards; place the thumb of that hand on one fide of the pack, the firft, fecond, and third fingers on the other fide, and your little finger between thofe cards that are to be brought to the top, and the reft of the pack. Then place your left hand over the cards, in fuch manner, that the thumb may be at C, (PI. I. Fig1, and 2.) the fore-finger at $A$, and the other fingers at $B$.

The hands and the two parts of the cards being thus dirpofed, you draw off the lower cards confined by the little finger and the other parts of the right hand, and place them, with an imperceptible motion, on the top of the pack.

It is quite neceffary, bsiore you attempt any of the recreations that depend on makins the pa's, that you can perform it fo dextroully that the eye cannot didinguifh the motion of your hand; otherwife, inftead of deceiving others you will expofe yourfelf. ' It is alfo proper that the cards make no noife, as that will occafion fufpicion. This dexserity is not to be attained without fome practice.

## 工 74

It will be neceffary in feveral of the following recreations to have a pack of cards, including one or more that are a fmall matter longer or wider than the reft, a proper method of preparing which will be given in the courfe of thefe recreations.

## Tbe Card of Divination.

HAVE a pack in which there is a long card; open the pack at that part where the long card is, and prefent the pack to a perfon in fuch manner that he will naturally draw that card. He is then to put it into any part of the pack, and muffle the cards. You take the pack and offer the rame card in like manner to a fecond or third perfon; obferving, however, that they do not ftand near enough to fee the card each otherdraws. You then draw feveral cards yourfelf, among which is the long card, and afk each of the parties if his card be among thofe cards, and he will naturally fay yes, as they have all drawn the fame card. You then muffle all the cards together, and cutting them at the long card, you hold it before the firft perfon, fo that the others may not fee it, and tell him that is his card. You then put it again in the pack, and muffling them a fecond time, you cut again at the fame card, and hold it in like manner to the fecond perfon, and fo of the reft.

If the firft perfon thould not draw the long card, each of the parties muft draw different cards; when cutting the pack at the long card, you put thofe they have drawn over it, and feeming to Thuffle the cards indifcriminately, you cut them again at the long card, and how one of them his card. You then huffle and cut again in the fame manner, and how another perfon his card, and fo on: remembering that the card drawn off by the laft perfon is the firft next the long card; and fo of the others.

This recreation may be performed without the long card, in the following manner. Let a perion draw any card whatever, and replace it in the pack: you then make the pafs, and bring that card to the top of the pack, and Thuffle them without loling fight of that.card. You then offer that card to a fecond perfon, that he may draw it, and put it in the middle of the pack. You make the pafs and muffie the cards a fecond time, in the fame manner, and offer the card to a third perfon, and fo again to a fourth or fifth, as is more fully explained further on.

THERE is frequently exhibited another experiment, fimilar to this, which is by making a perfon draw the long card, then
then giving him the pack, you tell him to place his card where he pleaies, and Muffe them, and you will then name his card, or cut the pack where it is. You may alfo tell him to put tie pack in his poiket, and you will draw the card, which you may eafily do by the touch.

## Tbe Four confederate Cards.

YOU let a perfon draw any four cards from the pack, and tell him to think on one of them. When he returis you the four cards you dextrounly place two of them under the pack and two on the top. Under thofe at tie bottom you place four cards of any fort, and then taking eight or ten from the bottom cards, you fpread them on the table, and afk the perfon if the card he fixed on be among them. If he fay no, you are fure it is one of the two cards on the top. You then pafs thofe two cards to the bottom, and drawing off the loweft of them, you afk if that ifhot his card. If he again fay no, you take that card up, and bid him draw his card from the bottom of the pack.

If the perfon fay his card is among thofe you firt drew from the bottom, you mult dextrounly take up the four cards that you put under them, and placing thofe on the top, let the other two be the bottom cards of the pack, which you are to draw in the manner before defcribed.

## The numerical Card.

LET the long card be the fixteenth in a pack of piquet cards. Take ten or twelve cards from the top of the pack, and fpreading them on the table defire a perfon to think of any one of them, and to obferve the number it is from the firft card. Make the pais at the long card, which will then be at the bottom. Then ank the party the number his card was at, and counting to yourfelf from that number to 16. turning the cards up one by one, from the bottom. Then ftop, at the feventeenth card, and ank the perfon if he has feen his card, when he will fay no. You then ank him how many more cards you Thall draw before his card appears; and when he has named the number, you draw the card afide with your finger, and turn up the number of cards he propofed, and then throw down the card he fixed on.

## Divination by the Sword.

AFTER a card has been drawn you place it under the long card, and by fhuffling them dextrouny you bring it to
the top of the pack. Then lay, or throw, the pack on the ground, obferving where the top card lays. A handkerchief is then bound over your eyes, in fuch manner however that you can fee the ground, which may be eafily done. A fword is then put into your hand, with which you touch feveral of the cards, feemingly in great doubt, but never lofing fight of the top card, in which at laft you fix the point of the fword, and prefent it to him who drew it. Two or three cards may be difcovered in the fame marner, that is, by placing them under the long card, and then bringing them to the top of the pack.

## Tle Card tbougit on per force.

YOU fpread part of a pack of cards before a perfon, in fuch mannert ${ }^{2}$ at one of the picture cards only is completely vifible. You then tell him to think on one of thofe cards, ohfervige attentively if he fix his eye on the picture card. When tee lays he has determined, you fhuffle the cards, and turning them up, one by one, you tell him, That is his card.

If he does not appear to fix his eye on the pictured card, or if he fpread the cards in order to fix on another, you: tell him to draw the card he choofes, and then by placing it under the long card you perform fome other recreation. It is "eafy to conceive that this recreation may fail, and that it fhould not be attempted with thofe who are converfant with deceptions of this fort.

## Tibe trarfnutulic Cards.

YOU muft have in the pack two cards of the fame fort, fuppofe the king of fpades. One of thefe is to be placed next the bottom card, which may be the feven of hears, or any other card. The other is to be placed at top. You then Thuffle the cards, without difplacing thofe three cards, and how a perfon that the botom card is the feven of hearts. Then drawing that card privately afide with your finger, which you have wetted for that purpofe, you take the king of fpades from the bottom, which the perfon fuppofes to be the feven of hearts, and lay it on the table, telling him to cover it with his hand. You then Chuffle the cards again, without difplacing the firft and laft card, and paffing the other king of fyades at the top to the bottom, you how it to another perfon. You then draw that privately away, and tahing the bottom card, which will then be the feven of heats, you lay that on the table, and teil

## 工 77

the fecond perfon, who believes it to be the king of fpades, to cover it with his hand.

You then command the feven of hearts, which is fup. pofed to be under the hand of the firft perfon, to change into the king of fpades; and the king of fpades, which is fuppored to be under the hand of the fecond perfon, to change into the feven of hearts; and when the two parties take their hands off, and turn up the cards, they will fee, to their no fmall aftonimment, after having fo carefully obferved the bottom cards, that your commands are punetually obeyed.

## Tbe Tbree magical Parties.

YOU are to offer the long card to any one, that he may draw it, and place it again in any part of the pack he thinks proper- You then make the pafs, and bring that card to the top of the pack. You next divide the pack into three heaps, obferving to put the long card in the middle heap, as that is moft commonly chofe. You then demand of the perfon which of the heaps the card he drew thall be in. If he reply in the middle parcel, you immediately fhow him the card. But if he fay in either of the others, you take all the cards in your hand, placing the parcel he has named over the other two, obferving to put your little finger between that and the middle heap, at the top of which is the card he drew. You then alk at what number in that heap he will have his card appear. If he fay, for example, the fixth card, you tell down five cards from the top of the pack, and then dextrounly making the pafs, you bring the long card to the top, and tell it down as the fixth.

## Tbe inverted Cards.

PREPARE a pack of cards, by cutting one end of them about one-tenth of an inch narrower than the other: then offer the pack to any one that he may draw a card; place the pack on the table, and obferve carefully if he turn the card while he is looking at it : if he do not, when you take the pack from the table, you offer the other end of it for him to infert that card; but if he turn the card, you then offer him the fame end of the pack. You afterwards offe ? the cards to a fecond or third perfon, for them to draw and replace a card in the fame manner. You then let any one Shuffle the card and taking them again in your own hand, as you turn them up one by one, you eafily perceive by the touch which thofe cards are that have been inverted, and
laving the firf of them down on the table, you ank the porion if that card, be his, if he fay $n$, you afk the fame of the fecond perfon, and if he fay $n e$, you tell the third perfon it is his card; and fo of the fecond and third cards. You flould lay the pack on the $t$ :ble after each perfon has drawn his card, and tarn it dextrounly in taking it up, when it is to be turned, that the experiment may not appear to depend. on the cards being inverted.

## Tbe Card difcovercd by the Toucb or Smell.

YOU offer the long card, or any other that you know, and as the perfon who has drawn it holds it in his hand, you pretend to feel the pips or figure on the under fide by your fore finger; or you fagacioully fmell to it, and then pronounce what card it is.

If it be the long card, you may give the pack to the perfon who drew it, and leave him at liberty either to replace it, or not. Then taking the pack, you fecl immediattly whether it be there or not, and fhuffing the cards in a carclefs manner, without looking at them, you pro. rounce accordingly.

## The incompreberfible Tranftofition.

TAKE a card, the fame as your long card, and rolling it up very clofe, put it in an egg, by making a hole as fmall as porfible, and which you are to fill up carefully with white wax. You then offer the long card to be drawn, and when it is replaced in the pack you thuffle the cards feveral times, giving the ege to the perfon who drew the card, and while he is breaking it, you privately withdraw the long card, that it may appear, upon examining the cards, to have gone from tist pack into the egg. This recreation may be renciered more iurprifing by having feveral eggs, in each of which is placed a card of the fame fort, and then giving the perion the liberty to choofe which egg he thinks fit.

Tuss deception may be ftill further diverfified, by having, as mont public per:ormers have, a confederate, who is previoufly to know the egg in which the card is placed; for you n ay then break the other eggs, and fhow that the only one that contains a card is that in which jou directed it to. be.

> Tke Card in tbe Pocket-bcok.

THIS recreation is to be performed by a confederate, who
is previoufly to know the card you have takea from the pack and put in your pocket-book. You then prefent the pack to your confederate, and defire him to fix on a card, (which we will ruppofe to be the queen of diamonds) and then place the pack on the table. You then aik him the name of the card, and when he fays the queen of diamonds, you ank him if he be not miftaken, and if he be fure that card is in the pack: when he replies in the aftirmative, you fay, it might be there when you looked over the cards, but I believe it is now in my packet: then defire a third perfon to put his hand in your pocket, and take out your book, and when it is opened the card will appear.

Experiments of this kind appear as wonderful to thofe who have no idea of a confederacy, as they do fimple and trifling to thofe that are in the fecret.

## To tell the Card that a Perfon bas only once toucbed zuitb bis Finger.

THIS recreation alfo is to be performed by confederacy: You previoully agree with your confederate on certain figns, by which he is to denote the fuit, and the particular card of each fuit; as thus: if he touch the firft button of his coat, it frgnifres an ace; if the fecond, a king, \&ec. and then again if he take out his handkerchief, it denotes the fuit to be hearts; if he take fnuff, diamonds, \&cc. Thefe preliminaries being fettled, you give the pack to a perfon who is near your confederate, and tell him to feparate any one card from the reft, while you are abfent, and draw his finger once over it. He is then to return you the pack, and while you are thuffling the cards, you carefully note the fignals made by your confederate. Then turning the cards over one by one, you directly fix on the card he touched.

## To. name Serveral Cards tbat two Perfons bave drawn from the Pack.

DIVIDE a piquet pack of cards into two parts by a long card. Let the firft part contain a quint to a king in clubs and fpades, the four eights, the ten of diamonds, and ten of hearts; and let the other part contain the two quart majors in hearts and diamonds, the four fevens and the four nines. - The cards may be divided in any other manner that is ealy to be remembered.

Then muffle the cards, but obferve not to difplace any of thofe cards of the laft part which are under the long card.

You.

## $=80$

You then cut at that card, and leave the pack in two parts. Next, prefent the firft of thoie parts to a perfon, and tell him to draw two or three cards, and place the remainder on the table. You prefent the fecond parcel in like manner to another. Then having dextrounly placed the cards drawn by the firft perfon in the fecond parcel, and thofe drawn by the fecond perfon in the firft parcel, you muffle the cards, obferving to difplace none but the upper cards. Then fpreading the cards on the table, you name thofe that each perfon drew; which you will very eafily do, by obferving the cardss that are changed in each parcel.

## Tbe Two convertible Aces.

ON the ace of fpades fix with foap, a heart, and on the ace of hearts a fpade, in fuch manner that they will eafily nip off.

Show there two aces to the company; then taking the ace of fpades you defire a perfon to put his foot upon it, and as you place it on the ground, draw awvay the fpade. In like manner you place the feeming ace of hearts under the foot of another perfon. You then command the two cards to change their places; and that they obey your command, the two perfuns, on taking up their cards, will have ocular demonftration.

A deception fimilar to this is fometimes practifed with one card, fuppofe the ace of fpades, over which a heart is pafted nightly. After thowing a perfon the card you let him hold one end of it, and you hold the other, and while you amufe him with difcourfe you fide off the heart. Then laying the card on the table you bid him cover it with his hand. You then knock under the table, and command the heart to turn into the ace of rpades By deceptions like thefe people of little experience and much conceit are frequently deprived of their money and rendered ridiculous.

## To foufle Cards in fucb a manner as always to keep one certais: Card at tbe Bottom.

A PERSON with a hard hand and ftiff joints fhould never think of playing deceptions with the cards, as clumfy fingers will not do In fhewing tricks with cards, the principal point confifts in chuffing them nimbly, and yet: keeping one certain card, either at the bottom or in fome known place of the pack, four or five cards from the bottom; for by this, you may feem to work wonders; fince it is eafy for you to fee, or take notice of a card;
which
which though you are perceived to do, it will not be fufpeted if you muffle them well together, afterwards, by the method here to be taught, which is this: in fhuffiing let the bottom card be always kept a little before, or, which is beft, a little belind all the reft of the cards; put it a i: tl : beyond the reit before, right over your fore-finger, or elfe, which is the beft, a little behind the reft, fo as the little finger of the left hand may nip up, and meet with it at the firft fhufle as thick as you can, and at laft, throw upon the board the bottom card, with as many more as you would preferve for any purpofe, a litile before or a little behind the reft; and be fure to let your fore-finger, (if the pack be laid before) or your little finger, (if the pick be laid behind) always creep up to meet with the bottom card, and when you feel it, you may there hold it till you have huffled over again, which being done, the card which was firft at the bottom will come there again; thus you may muffle them before their faces, and yet leave your noted card at the bottom; you muft try to be very perfect in this method of huffling; and having once attained it, you may do almoft what you pkafe; for whatever pack you make, though it is ten, twelve, or twenty cards, you may ?̣ill keep it next the bottom, and yet huffle them often, to pleafe the curious.

> To call for ary Card in the Pack. ..

THIS trick, which requires very little practice oriadeed underftanding, to perform, is done in the following manner:

Havisg privately feen a card, put it at the bottom of the pack, then humffe the cards till it comes to the bottom again, then put the cards belind you; and fay here I call for, naming the bottom'card, which jou have feen; and as you hold them behind you, 'tumn the top card with its face upvards, then hold forth the cirds, "and as you hold them you may, fee what the next card i's; then put the cards behind you again, and take the top card, and put it at the bottom, with its face downward's, and turn the next card with its face upwards, and whillt you are doing this, fay, here I call for, naming the card you faw latt; then hold forth the car's again, hewing the bottom card, which will be that you call for; then put the cards behind you again, and proceed in the fame manner as you did before; you may by this method go through them all, and call for all the ca:ds in the pack, to the admiration of tie bchulisis,

## — 82

beholders, who will be furprifed how you could find theme out when you hold them behind you

Howv to make a Card jump out of tbe Pack and run on tbe Table.

TAKE a pack of cards, and let any one draw any card that they fancy beft, and afterwards take and put it into the pack, but fo as you know where to find it at pleafure; for by this time I fuppofe you know how to muffle the cards, and where to find any card when it is put into the pack; then take a piece of wax and put it under the thumbnail of your right hand, and there faften a hair to your thumb, and the other end of the hair to the card; then fpread the pack of cards open on the table: then fay, If yous are a pure virgin tbe card will jump out of the pack; then by your words or charms feem to make it jump on the table.

How to tell wbat Card any Man tbinketb on, and bow to convey the fame into a Kernel of a Nut or Cberry-fione, and the fame again in one's Pocket; and bow to make bim drawo tbe fame, or any Card you pleafe, and all under one device.
TAKE a nut, or cherry-ftone, and burn a hole through the fide of the top of the mell, and alfo through the kernel if you will, with a hot bodkin, or bore it with an awl, and with a needle pull out the kernel, fo as the fame may be as wide as the hole of the Ihell; then write the name of the card on a piece of fine paper, and roll it up hard, then put it into the nut or cherry-ftone, and ftop the hole up with wax, and rub the fame over with a little duf, and it will not be perceived: then let fome fander-by draw a card, faying, It is no matter wobat card you draw: and if your hands fo rerve you to ufe the card well, you thall proffer him, and he fhall receive the fame card that you have rolled up in the nut; then take another nut, and fill it up with ink, and then fop the hole up with wax, and then give that nut which is filled with ink to fome boy to crack, and when he finds the ink come out of his mouth, it will caufe great laughter. By this feat on the cards, many wonders may be done.

> How to let twenty Gentlemen draw twenty Cards, and to make one Card every Man's Card.

TAKE a pack of cards, let any gentleman draw a card, and let him put it in the pack again, but be you fure that you know where to find it again at pleafure; then thuffle
the cards again as you are taught before, and then let another gentleman draw a card, but be fue that you lit him draw no other but the fame card as the other did draw, and fo till 10 or 12, or as many cards as you thitik fit: when you have fo done, let another gentleman draw another card, but not the fame, and put the card into the pack where you have kept the other card, and thuffle them till you have brought both the cards together; then hewing the laft card to the company, the other will thew the trick. By this means many other feats may be done.

## How to cbange a Pack of Cards into all manner of Pictures.

YOU muft take a pack of cards, and paint upon the back-fide of one half of the pack, what manner of figures Shall pleafe your fancy beft; as men, women, birds, flowers, \&c. Then paint the other half of the cards, viz. on that fide where the fpots are on, after the fame manuer you did the other half; fo between them both you will have a compleat pack of all pictures: and when you will periorm this trick, you muft fhew the cards but half-way. This is one of the beft tricks on the cards.

## To make the Conftable catch the Knave.

TAKE a pack of cards, and look out the four knaves; lay one of them privately on the top of the pack, and lay tise other three down upon the table, faying, Here you fie are tibree Knaues got togetber, about no good you may be fure Then lay down a king befide them, faying, But bere comes toc conifuble, and catches tbem togetker: $0 b$, (fays he) lave I cought you togetber? Well, the next time I catcb you tegether, I'll punifi you Severely for all your rogueries. Oh, but (fay they) you fban't catcb us together in baf̂e: for they conclude to run three feveral ways. Well, I'llgo bere (fays one,) fo take one of the knaves and put him at the top of the pack; And I'll go bere (fays another,) fo put him at the bottom; Then I'll go bere (fays the other,) fo put him in the middie; Nay (fays the conitable,) if you run I'll make fure of one, fo I'll follow the firft: then take the king and put him at the top, and let any one cut the cards afunder two or three times, then deal out the cards one by one, and you fhall find three knaves together, and the conftable with them.

Note. This feat would be beft done with a pack of cards that has two knaves of that.fort of which you put one in the midale.

## $\rightleftharpoons 8_{4}=$

## How to make a Card jump out of an Egg.

TO do this wonderful feat you muft have two fticks made boti of one bignefs, and both of a likenefs, to that no perfon can know one from the other; one of thefe fticks mult be made fo artificiaily as to conceal a card in the middle; as thus: you muft have one of your fticks turned hollow quite through; and then an artificial fpring to throw the card in the egg at your pleafure. The operation is thus: take and peal any card in the pack, which you pleafe, and fo roll it up, and then put it into sour falle ftick, and there let it be till you have oecafion to make ufe of it; then take a pack of cards, and let any body draw a card, but be fure let it be the fame fort of card that you have in the ftick already; then let them put it in the pack again, and when you have thuffled them, let that card fall into your lap which the party drew : fo calling for fome eggs, defire the party that drew the card, or any other perfon in the company, to chufe any one of thefe eggs; and when they have chofen one, afk them if there be any thing in it, and they will anfwer, No: then take the egg in your left hand, and the falle ftick in your right, and fo break the egs with your ftick; then let the fpring go, and the card will appear in the egg, very amazing to the beholders! then conceal that ftick, and produce the true one upon the table.

For a Perfon to chufe a Card, you not fuppofed to know what it
is, and then for the Perfon to bold the Cards between bis Finger and Tbumb, to frike them all out of bis Hand, except the very Card be bad taken.

THIS is called the Nerve trick, and is thus performed; having previounly looked at a card, bid the perfon draw - one, taking care to Move that to him which you know; when he has looked at it, let him put it at the bottom; let him fhuffie the cards, then you look at them again, and finding the card, place it at the bottom; then cut them in half; give the party that part which contains his chofen card at the botion, to liold between his finger and thumb juft at the corner; bid him pinch them as tight as he can ; then friking them pretty harp, they will all fall to the ground, except the bottom one, which is the card he had chofen.

This is a very curious trick, and if cleanly done, is real!y aftonining; but may be accounted for fiom the nature of

## 85

the nerves, which are always more retentive when any thing is attempted to be taken either by force or furprife.

## To tell wobat Gard a Perfon thinks upon, thougb you are not in tbe Roon, or wibich Card be bas toucbed, or waved bis Hand over.

TO do this trick you muft lay a wager that you will tell the card the perfon has touched, though you do not fee it : let feveral cards be laid out on a table, $1,2,3,4,5 ; 6$, or any number, then turn your back, or teave the room while the perfon makes choice; on your return you muft inquire what he will lay, having your eye upon the cards laid out: if he fays he will lay fix to one, or ten to one, you muft take the higheft number, as that will, in all probability, be the card he had fixed on. You muft feem to paufe about counting the cards as they lay, and choofing the fartheft off.

How to deliver out Four Aces, and convert them to Four. Knaves.

THIS tritk is one among the many which is effected by a quick مlight; for if it is done in a bungling manner, it may cafily be detected, and the pretender will be liable to con. tempt inftead of applaufe.

To do this, make a pack of eight cards, viz. four aces and four knaves, and let them be laid in this order: an ace and a knave, and fo alternately through all the eight cards; then thuffle them, fo as always at the fecond huffling or at leaft when you have done fhuffling them, one of the aces may be the nethermoft card ; then ufe fome words or device, and putting your hand with the cards to the edree of the table, let out privately a piece of the fecdind cicid, which is one of the knaves; then fhewing to the fanders by the nether card, which is one of the aces; be fure to cover the piece of the knave with your fingers; then draw out the fame knave, laying it down on the taks ; then Thuffle the, cards as before, and you will have two aces at bottom; therefore take off the upparmoft carid, and thruft it into the middle of the pack; do the fame with the nethermoft card, which is one of the aces, then you may Thew another ace as before; and inftead of that lay down another knave; proceed in the fame mathod, till, inftead of the four aceś, you have laid down the four knaves.

The beholders, all the time thinking that they lay four aces on the eable, are greatly deceived when the cards are turned up, and will wonder at the transformation.

## To tell wbat Card a Perfon pitcbes on, wuitbout Jecing tbe Cand till you find it in the Pack.

THE many different tricks which may be done with cards munt have been invented by various perfons, at different periods, as it cannot he fuppofed that any one perfon could be the inventor of all. This trick is done in the following manner: as you hold the cards in your hand, let any one take a card out of the pack, and look at it ? then take the card from them with your eyes mut, and put it'at the bottom of the pack; then Thuffle the cards tidl you know it is come to the bottom again : then putting the cards behind you, make as though you fhuffled them behind you, but let your thuffling be only this; take off the uppermoft card, and put it at the bottom, reckon that two: then take off another card, and reckon that three; then take off as many as you pleare from the top, and put them at the bottom, counting to yourfelf how many.you take off: then bring the cards forth, and hold them with their faces towards you; then take.off one by one, privately counting the number, and fmell to them, as though you found it cut by your nofe, till you come to the right card; then produce it, fying, this is it ; and they will wonder how you found it out.

A mitile practice will ferve to perfect any perfon in this trick. and indeed moft of them depend on practice, as well as all other marual operations.

## To difcover the Number of Points on 3 Cards, placed under tbree different Parcels of Cards.

YOU are firn to agree that the ace fhall tell eleven, the pictured cards ten each, and the others according to their number of pints; as at the game of piqutt. Then propofe to :ny one to chicofe 3 cards, and over each of them to put as niany cards as will make the aumber of the points of that card 15. Suipiof., for example, he choufe a 7 , a 10, and an ace: then over the 7 he muft place eight cards: over the jo , five cards, and over the ace, four. Take the re.. mainder of the cards, and feeming to look for fome card among them, tell how many there are, and adding 16 to that number, you will have the number of points on the three
tfree cards. As in this intance, where there will remain 12 cards, if you add 16 to that number it will make 28, which is the number of points on the three cards *.

## Tbe Ten Duplicates.

TAKE twenty cards, and after any one has muffled them, lay them down by pairs on the board, without looking at them. Then defire feveral perfons to look each of them at different pairs, and remember what cards compofe them. You then take up all the cards, in the order they lay, and place them again on the table, according to the order of the letters in the following words.

| M | U | T | U | S |
| :---: | :---: | :---: | :---: | :---: |
| 1 | 2 | 3 | 4 | 5 |
| D | E | ${ }^{\text { }}$ | I | T |
| 6 | 7 | 8 | 9 | 10 |
| N | 0 | M | E | N |
| 11 | 12 | 13 | 14 | 15 |
| C | 0 | - ${ }^{\text {c }}$ | 1 | + |
| 16 | 17 | 18 | 19 | 20 |

Now you will'obferve that thefe words contain ten letters repeated, or ten pair of letters. Therefore you ak each perfon which row, or rows, the cards he looked at are in; if the fays they are in the firft row, you know that they muft be the feeond and fourth: if in the fecond and fourth rows, they muft be the ninth and nineteenth, and fo of the reft.

## To name tbo Number of Cards tbat a Perfon foll take out of the Park.

TO perform this recreation you muft fo difpofe a piquet pack of cards, that you can eafily remember the order in which they are placed. Suppofe, for example, that they are placed according to the words in the following line;

Seven aces, eight kings, nine queens, and ten knaves.
And that every card be of a different fuit, following each other in this order; fpades, clubs, hearts, and diamonds.

[^3]Then the eight firft cards will be the feven of fpader, ace of cluths, eight of hearts, king of diamonds, nine of \{pades, queen of clubs, ten of hearts, and knave of diamonds; and fo of the reft *.
You fhow that the cards are placed promifcuoully, and then offer them with the backs upward, to any one, that he may draw what quantity he pleare; which when he has done, you dexterounly look at the card that precedes, and that which felliows thore he has taken. After he has well regarded the cards, you take them from him, and putting them into different parts of the pack, fhuffe them, or give them to him to muffle. During which you recolleet, by tho foregoing line all the cards he took out : and as you lay them down, one by one, you name each card.

This is a pleafing recreation for thofe that have a good memory; they that have not, thould never attempt it.

## A Century of different Names being wurote on the Cards, to tell :Ee particular Name wwich any Perfon bas tbougbt on $\dagger$.

ON ten cards write a hundred different names, obferving only, that the laft name on each card begin with one of the letters of the ward, INDROMACUS, which letters, in the order they fand anfwer to the numbers $1,2,3$, \&cc. to ra On ten other cards wite the fame names, with this reftriction, that the firft name on every card muft be taken from the firft of the other cards, whofe laft name begins with I: the fecond name muft be taken from that whofe laft name begins with N: and fo of the reft. Then let any one choofe a card out of the firft ten, and after he has fixed on a name give it you again, when you carefully note the laft name, by which you know the number of that card. - You then take the other ten cards, and after fhuffling them, fhows them to the perfon one by one, and ank if he fee the name he chofe, and when he fays he does, you look to that name which is the fame in number from the top, with the rumber of the card he took from the other parcel, and that will be the name he fixed on. As for example. fuppore he took out the card that had the word Daphnis at the bottom, which is the third card, and that he fixed on the name Galatea, then that word will neceffarily be the third on the other eard.

[^4]t I his is called the Impenetrable Sectet,

Order of the Words on the firft Ten.Cards.

| Firf Card | Second | Tbird | Fourtb |
| :---: | :---: | :---: | :---: |
| Celadon | Pomona | Deucalion | Licas |

| Medusa | Riblis | Orpheus | Silvander |  |

Instiad of ten cards, there may be twenty to each parcel, by adding duplicates to each car!, which will makethe recreation appear the more myfterio k , and will not at all embarrafs it; as you have nothi 1 g to remember but the laft name on each card. Or inftead of names, you may write queftions on one of the parcels, and anfwers on the other.

## Of the Combinations of the Cards:

- THE tables we here give are the bafis of many recreations, as well on numbers, letters, and other fubjects, as on the cards; and the effect here produced by them is the more furprifing, as that which thould feem to prevent any collurion, that is, the muffling of the cards, is, on the contrary, the caufo fromwhence it proceeds.

It is a matter of indifference what numbers are made ufe of in forming thefe tables. We thall here confine ourfelves to fuch as are applicable to the fubfequent recreations. Any one may conftruct them in fuch manner as is-agreeablo to the purpofes be intends they fhall anfwer.

To make them, for example, correfiond to the ninedigits and a cypher, there muft be ten cards, and at the top of nine of them muft be wrote one of the digits, and on the tenth a cypher: Thefe cards muft be placed upon each other in the regular order, the number i being on the firf, and the cypher at bottom. You then take the cards in your left hand, as is commonly done in fhuffing, and taking off the two mp cards, I and 2, you place the twb following, 3 and 4 , upon them; and under thofe four cards the three following, 5,6 , and $7:$ at the top you put the cards 8 and 9 , and at the bottom the card marked 0 . Conftantly placing in fucceffion 2 at top and 3 at.bottom, and they will then be in the following order:
8.9.-3.4.․1.2... 5.6.7.0

Ir you fhuffle them a fecond time, in the fame manner, they will then ftand in tiis order:

$$
6.7 \times 3 \cdot 4 \cdot .8 \cdot 9.1 .1 .25 .0
$$

## 92

Thus, at every new thuffle, they will have a different order, as is expreffed in the following lines:

| 1 | Thuffle | 8.9.3.4.1.2.5.67.0 |
| :---: | :---: | :---: |
| 2 |  | 6.7.3.4.8.9.1.2.5.0 |
| 3 |  | 2.5.3.4.6.7.8 9.1.0 |
| 4 |  | 9.1.3.4-2.5.6 7.8.0 |
| 5 |  | 7.8.3-4.9.12 5.6.0 |
| 6 |  | 5 6.3 4.7.8.9.1.2.0 |
| 7 |  | 1.2.3.4-5:6 7.8.9.0 |

It is a remarkable property of this number, that the oards return to the order in which they were firft placed, . after a number of chuffles, which added to the number of columns that never change the order, is equal to the number of cards. Thus the number of mumes is 7 , and the number of columns in which the cards marked 3,4 , \&c. never change their places is 3 , which are equal to 10 , the number of the cards. This property is not common to all numbers; the cards fometimes returning to the firft order in lefs number, and fometimes in a greater number of Shuffles than that of the cards.

Thovgh the cards are here directed to be Muffled by twos or threes only, yet tables may be conitructed with equal facility for thuffling them by 2 and 5,3 and 4 , or any:other number whatever; obferving that the fewer cards are taken together the lefs liable you will be to err.

Noti, Before you venture to perform thefe recreations, you ihould accuftom yourfelf to thuffe the cards exactly and readily; which will be eafily attained by.practice.

TABLE

## $=96$

TABLEIV.

FOR THIRTY TWO NUMBERE

Order before fhuffing. After sit fhuffie. After the sd. After the 3 d.

Several

Several Letters ibat contain no meaning, being zorote upon Cards, to make them, after they bave been twice 乃uffled, give an Anfwer to a Queftion that fall be propofed; as for Example, What is Love?
LET 24 letters be wrote on as many cards, which, after they have been twice thuffied, fhall give the following anfwer:

## A Dream of foy that foon is over.

First, write one of the letters in that line on each of the cards*. Then write the anfwer on a paper, and affign one of the 24 firft numbers to each card, in the following order:

Next, write on another paper a line of numbers, from 3 to 24, and looking in the table for 24 combinations you will fee that the firft nutnber after the fecond fhuffle is 21, therefore the card that has the firft letter of the anfiver, which is A, must be placed againft that number in the line of numbers you have juft made $t$ in like manner the number 22 being the fecond of the fame column, indicates that the card which anfwers to the fecond letter, D , of the anfwer, muft be placed againft that number: and fo of the seft. The cards will then ftand in the following order:

$$
\begin{aligned}
& \text { OOFSAMNTOIS RHAEO'E } \\
& 12345678910 \text { III21314151617 } \\
& \mathrm{J}_{18} \mathrm{O}_{1} \text { R A A } \mathbf{D} \boldsymbol{Y} \text { T } \\
& 18192021222324
\end{aligned}
$$

From whence it follows that after thefe cards have been twice thuffled they muft infallibly ftand in the order of the letters in the anfwer.

Observe i, You thould have feveral queftions with their anfwers, confifting of 24 letters, wrote on cards: thefe

[^5]cards thould be put in cafes, and numbered, that you may know to which queftion each anfwer belongs. You then prefent the queftions; and when any one of them is chofe, you pull out the cafe that contains the anfwer, and Thewing that the letters wrote on them make no fenfe, you then thuffie them, and the anfwer becomes obvious.
2. To make this recreation the more extraordinary, yow may have three cards, on each of which an anfwer is wrote ; one of which cards muft be a little wider, and another a litcle longer, than the others. You give theie three cards to any one, and when he has privately chofe one of them, he gives you the other two, which you put into your pocket, without looking at them, having difcovered by feeling which he has chofe. You then pull out the care that contains the cards that anfwer to his queftion, and perform as before.
3. You may alfo contrive to have a long card at the bottom, after the fecond thuffle. The cards may be then cut feveral trmes, till you perceive by the touch that the long card is at buttom, and then give the anfwer; for the repeated cuttings, however often, will make no alteration in the order of the cards.

THE fecond of thefe obfervations is applicable to fome of the fubfequent recreations, and the third may be practifed in almoft all experiments with the cards. You fhould take care to put up the cards as foon as the anfwer has been fhewn: fo that if any one thould defire the recreation to be repeated, you may offer another queftion, and pull out thofe cards that contain the anfwer.

Though this recreation cannot fail of exciting at all times pleafure and furprize, yet it muft be owned that a great part of the applaufe it receives arifes from the addreis with which it is performed.

Tbe twenty-four Letters of the Alpbabet being wurote upon fo many Cards, to fbuffe tbem, and pronounce tbe Letters 乃ball then be in their natural Order; but that not fucceeding, ta fouffle tbem a fecond Time, and then 乃bew them in proper. Order.
WRITE the 24 letters on the cards in the following order:

$$
\begin{array}{llllllllllll}
1 & 2 & 3 & 4 & 5 & 6 & 7 & 8 & 9 & 10 & I I & 12 \\
R & S & H & Q & E & F & T & \mathbf{P} & G & U & X & C
\end{array}
$$

Thz cards being difpofed in this manner, fhew them upon the table, that it may appear they are promifcuounly marked. Then fhuffle and lay them again on the table, pronouncing that they will be then in alphabetical order. - Appear to be furprifed that you have failed; take them up again, and give them a fecond fhuffle, and then counting them down on the table they will all be in their natural order.

Several Letters bcing wrote promifcuoully upon 32 Cards, after they bave been once foufled, to find in a Part of them a Queftion; and then fluffling the Remainder a fecond I'ime, $t o$ fberv tbe Anjwer.
SUPPOSE the queftion to be, What is eacb Briton's boaft ? and the anfwer, His Liberty; which taken together contain 32 letters.

After you have wrote thofe letters on 32 cards, write on a paper the words bis liberty, and annex to the letters the firft ten numbers, thus:

$$
\begin{array}{llll}
\text { H I S } & \text { LIBERTYY } \\
\text { I } 23 & 45678910
\end{array}
$$

Then have recourfe to the table of combinations for ten numbers, and apply the refpective numbers to them in the fame manner as in the former recreation, taking the firft column, as thefe are to be Thuffled only once, according to that oider.

> | I B S | L E R T H I |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| I | 2 | 3 | 4 | 5 | 6 | 7 |

This is the order in which thefe cards muft ftand after the whole numbers 32 has been once muffled, fo that after a fecond thuffle they may ftand in their proper order. Next difpofe the whole number of letters according to the firft column for 32 letters: the laft ten are to be here placed in the order above ; as follows,

## 100

Tmerefore, by the firft column of the table, they wift mext fand thus :

ITBRONSCHBOAEAST long ard

$$
\begin{array}{ccccccccccccccccc}
17 & 18 & 19 & 20 & 21 & 22 & 23 & 24 & 25 & 26 & 27 & 28 & 29 & 30 & 31 & 32 \\
\mathbf{I} & \mathrm{I} & \mathrm{~S} & \mathrm{~B} & \mathrm{~S} & \mathrm{~L} & \mathrm{I} & \mathrm{~B} & \mathrm{E} & \mathrm{R} & \mathrm{~T} & \mathrm{~W} & \mathrm{H} & \mathrm{H} & \mathrm{I} & \mathbf{Y}
\end{array}
$$

You muft obferve that the card here placed the 36 th in order, being the laft of the queftion, is a long card; that you may cut them, or have them cut, after the firft fhuffle, at that part, and by that means feparate them from the other ten cards that contain the anfwer.

Your cards being thus difpofed, you fhow that they make no me ning; then fhuffle them once, and cutting them at the long card, you give the firft part to any one, who reads the queftion, but can find no anfwer in the others, which you open before him; you then thuffle them $a$ fecond time, and ghew the anfwer as above.

> To write 32 Letters on fo many Cards, then. Buffle and deat tbem by two's to two Perfons, in fucb Manner, that the Cards of ene fkall contain a Quefion, and tbofe of the otker, an Anfwer.

SUPPOSE the queftion to be, Is notbing certain ? and the anfwer, res, difafpointment.

Over the letters of this queftion and anfwer write the following numbers, which correfpend to the arder in which the cards are to be dealt by two and two.

Then have recourfe to the firft column of the table for 32 numbers, and difpofe thefe 32 cards in the following. orcer, by that column.

|  <br> $18192021222324252627282930 \quad 31 \quad 32$ |
| :---: |
|  |  |

Tма

## IOI

Tre eards being thus difpofed, thuffle them once, and deal them 2 and 2 ; when one of the parties will neceffarily have the queftion, and the other the anfwer.

Instead of letters you may write words upon the 32 cards, 16 of which may contain a queftion, and the re.. mainder the anfwer; or what other matter you pleafe. If there be found difficulty in accommodating the words to the number of cards, there may be two or more letters of fyllables wrote upon one card.

## Tbe Five Beatitudes,

THE five bleffings we will fuppofe to be, 1. Science, 2. Courage, 3. Health, 4 Riches, and 5. Virtue. Thefe are to be found upon cards that you deal, one by one, to five perfons. Firf write the letters of thefe words fucceffively, in the order they ftand, and then add the numbers here ansexed to them.

Then range them in order agreeable to the firt column of the table for $3^{1}$ numbers, as in the laft recreation. Thus:

Next, take a pack of cards, and write on the four firft the word Science; on thie four next the word Courage; and fo of the reft.

Matters being thus prepared, you fhew that the cards on which the letters are wiote convey ro meaning. I hen take the pack on which the words are wrote, and fpreading cpen the firft four cards, with their backs upward, you defice the firft peifon to choofe ore. Then clefe thefe curds, and foread the next four to the fecond perfon; and K 3
fo to all the five; telling them to hold up their cards, leff: you fhould have a conlderate in the room.

You then muffle the cards, and deal them one by one, in the common order, beginning with the perfon who chofe: the firft card, and each one will find in his hand the fame word as is wrote on his card. You will obferve, that after the fixth round of dealing, there will be two cards left, which you give to the firf and fecond perfons, as their words contain a letter more than the others.

## Tbe Cards of the Game of Piquet being mixed togetber, after foufling tbem, to bring, by cutting tbem, all tbe Cards of eacb Suit togetber.

THE order in which the cards mutt be placed to produce. the effect defired, being eftablined on the fame principle as that whicl has been before explained, except that the shuffling is here to be repeated three times, we think it will be fufficient to give the order in which they are to.be: placed before the firft fhuffle.

## Order of tbe Cards.

1 Ace clubs
2 Knave clubs
3 Eight diamonds
4 Seven diamonds. wide card
5 Ten clubs
6 Eight fpades.
7 Seven fpades wide card
8 Ten diamonds
9 Nine diamonds
so Queen diamonds
if Knave diamonds
12 Queen clubs
13 Eisht hearts
14 Seven hearts wide card
15 Ten fpades
16 Nine fpades

26 Knave hearts
27 King clubs
28 Nine fpades
29 King fpades
30 Ace diamonds
31 Seven clubs
32 Eight clubs

Yov then thuffle them carefully, according to the method before defcribed, and they will ftand in the following order.

[^6]

When the cards are by huffing difpofed in this order, you cut them at the wide card, and pronounce that the cards you have cut off contain 66 points, and confequently the remaining part 194. This recreation excites a good degree of admiration, but the applying of thefe cards to the next recreation produces a much greater.

## Tbe inconceivable Repique.

WHEN you would perform this recreation with. thecards ufed in the laft, you muft obferve not to diforder the firtt ten cards in laying them down on the table. Putting thofe cards together, in their proper order, therefore you thuffle them a fecond time in the fame manner, and offer them to any one to cut, obferving carefully if he cut them at the wide card, which will be the ace of hearts, and will then be at top; if not you muft make him, under fome pretence or other, cut them till it is; and the cards will then be ranged in fuch order that you will repique the perfon againft whom you play, though you let him choofe (even after he has cut) in what fuit you fhall make the repique.

## 106

Ir he againtt whom you play, who is fuppofed to be elder hand, has named clubs for the repique, and has taken in five cards, you mult then lay out the queen, knave, and nine of diamonds, and you wil have, with the three cards you take in, a fixiem major in clubs, and quatorze tens. If he leave one or two cards, you mult difcard all the diamonds.

If he require to be repiqued in diamonds, then difcard the queen, knave and nine of clubs; or all the clubs, if he leave two cards; and you will then have a hand of the fame ftrength as before.

Note, If the adverfary fhould difcard five of his hearts, you will not repique him, as he will then have a feptiem in ipades: or if he only take one card: but neither of thereany one can do, who has the leaft knowledge of the game. If the perfon againft whom you play would be repiqued in hearts or fpades, you muft deal the card's by twos, and the game will ftand thus :

## Elder hand.

Ace hearts

If he require to be repiqued in hearts, you keep the quint to a king in hearis, and the ten of fpades, and lay out which of the reft you pleafe: then, even if he fhould leave two cards, you will have a fixiem major in hearts, and quatorze tens, which will make a repique.

But if he demand to be repiqued in fpades; at the end of the deal you muft dextrounly pafs the three cards that are
at the bottom of the fock (that is, the ten of clubs, ten of diamonds, and ace of hearts) to the top, and by that means you referve the nine, king, and ace of fpades for yourfelf: fo that by keeping the quint in hearts, though you fhould be obliged to lay out four cards, you will have a fixiem to a king in fpades, with which, and the quint of hearts, you muft make a repique.

Observe here likewife, that if the adverfary lay out only three cards, you will not make the repique; but that he will never do, unlefs he be quite ignorant of the game, or has fome knowledge of your intention.

This laft Atroke of piquet has gained great applaufe, when thofe that have publicly performed it, have known how to conduct it dextrounly. Many perfons who under\&and the nature of combining the cards, have gone as far as the paffing the three cards from the bottom of the ftock, and have then been forced to confefs their ignorance of the manner iu which it was performed.

## Tbe metamarphofed Cards.

PROVIDE thirty-two cards that are differently coloured; on which teveral different words are wrote, and different objects painted. Thefe cards are to be dealt two and two, to tour perfons, and at three different times, fhuffing them each time. After the firft deal every one's cards are to be of the fame colour: after the fecond deal, they are all to have objects that are fimilar; and aiter the third, words that convey a fentiment.

Difpore of the cards in the following order.

| Order of <br> the cards. | Colours. | Objeets. | Words. |
| :---: | :--- | :--- | :--- |
| $\mathbf{1}$ | Yellow | Bird | I fird |

| 32 | White | Butterfly | 1 long |

The cards thus coloured, figured, and tranfcribed, are to be put in a cafe, in the order they here fand.

When you would perform this recreation you take the cards out of the cafe, and fhow, without changing the order in which they were put, that the colours, objeets, and words are all placed promifcuounly. You then thuffle them in the fame manner as before, and deal them, two and two to four perfons, obferving that they do not take up their cards till all are dealt, nor mix them together: and the eight cards dealt to each perfon will be found all of one colour. You then take each perfon's cards, and put thofe of the fecond perfon under thofe of the firft, and thofe of the fourth perfon under thofe of the third. After which you chuffle them a fecond time, and having dealt them in the fame manner, on the firft perfon's cards will be painted all the birds; on the fecond perfon's cards, all the butterflies; on thofe of the third, the oranges; and on thofe of the fourth, the flowers. You take the cards a fecond time, and obferving the fame precautions, Thuffle and deal them as before, and then the firft perfon, who had the laft time the

## $109=$

the birds in his hands, will have the words in his hand thax compofe this fentence,

Sing, dear birds, I long to bear your encbanting notes.
Thi fecond perfon, who had the laftideal, the butterfics, will now have thefe words,

Of an inconftant lover your cbanges prefent we the image.
Thz third, who had the oranges, will have this fentence, As in my Pbylis, I find in you, beauty and fweetnefs.

Tни fourth, who had the flowers, will have thefe words, Cbarming flowers, adorn the bofom of my foepberdefso

It feems quite unneceffary to give any farther detail, as they who underftand the foregoing recreations will eafily perform this.

## Tbe Repique witb Carte Blancb.

IN the following recreations relating to piquet, we than confine ourfelves to the order in which the cards muft ftand atter they are cut, and ready to be dealt. They who chufe to thuffle them firft (in order to make the performance appear the more extraordinary) may eafily difpofe them in a proper order for that purpofe, by having recourfe to the table of combinations for 32 numbers.

Ir the other player require to be repiqued in fpades, you cut them at the 7 of that fuit, and tell him he is at liberty to deal them by twos or threes*. If he deal them by twos, he is to choofe which hand he will have, without feeing them; you being ftill eldeft.

Ir he keep his own hand, you difcard the nise of hearts; fpades and diamonds, and either of the two queens; and by your rentree you will have a quint major in clobes, quatorze aces, and quatorze kings, with which you make a repique. But if he choofe the cards dealt for the elder, you difcard the feven of hearts, fpades, and diamonds, and any two of the eights; and you will have by your rentree the fame quint in clubs, quatorze queens and quatorze knaves; which will alfo make a repique.

Ir the adverfary deal the cards by threes, and keep his. hand, you difcard the king, eight and feven of hearts, with the nine and eight of fpades; and by your rentree you will have the quint major in clubs, a tierce to a queen in diamonds, three aces, three queens, and three knaves, with which you make a repique. But if he choofe the cards dealt for the elder, you difcard the quaen and nine of hearts, the knave and feven of \{pades, and the ace of diamondd, and you will then have the famo quint in chibs, a tierce to a nine in diamonds, three kings and three tens, with which you will tell 29 points, therefore by playing one, you can in this cafe make a pique only.

An exemplary Cafe at Piquet, wobere you ropique your Adverfari, after giving bim tbe Cboice of baving the Cards dealt citber by Troos or Tbrecs.
TO difpofe the cards in the order neceffary to produce the: effet here required, and in all others where you give the choice of having the cands dealt either by twos er threes, ${ }_{4}$ you muft have recourfe to the following table.

[^9]Carde

This table thews the different hands that refult from the two different methods of dealing the cards; that the eldeft hand has always, in fime order or other, the fix cards placed againft the numbers, 1, 2, $9,13,14$, and 21 : and the younger, the fix cards placed againft 4, 11, 12, 16, 23, and 24. It Chows likewife, that the 12 cards marked $3,5,6,7,8,10,15,17,18,19,20$, and 22 , may be in either hand, fo far as concerns the manner of dealing the cards.

Being therefore certain when you deal, that the cards marked 1, 2, 9, 13, 14, and 21 will always be in the ad. verfary's hand, and thofe marked 4, 11, 12, 16, 23, and 24, will be in your own hand, you muft apply your fix numbers to foch cards, as with the three of the rentree, (which you may choofe as you pleafe) will always make a great hand, and fuperior to the adverfary. The great cards which you are forced to leave, you muft diftribute among the variable cards, in fuch manser that they can have no remarkable effect, when dealt either way.

This method we have obferved in the following example, which we here give for the fatisfaction of thofe who would compofe thefe forts of games themfelves. To the numbers 4 , 11, 12, 16, 23, and 24, annex a fixjem major in hearts, which joined to the three tens of the rentrée are fufficient to make a répique, youngeft hand. But as you muft prevens the elder hand from defeating your point, by having feven cards in any of the other fuits, you are fo to difpofe fome part of each fuit, by the column of variable cards, that he may never have, whether the cards are dealt by twos or threes, any large fequence* : as jou will fee by the following difpofition of the cards.

By this arrangement of the cards you will be fure to fucceed, whether you deal the cards by two's or threes: even though the adveriary, thinking to fruftrate your intention, fhould leave three cards.

Rexmens:There is nodranger that any oftheferecreations at piquet fhould be applied to a bad parpofe, for after the cardo have been once flaulied by bowh players, it wild be inmpolinhle to fucceed in any ore osethem. Thereare; however, tricks: to be playect at this, as at all other games, with the cards; fuch as changing the whole pack, or fome particulap cards, or taking in part, or all the dificard, or making the paff, that is, bringing partopthe cards at bottom to the top, as willbe mere filly explained,' all of which many perfons cant perform fo dextrouffy, that it is impoithaso fot thit ege to difeever them. We foy rothing of the pracite of marking the earits, for of that almoft every one's experience will affird Kuflicient proof. To aggravate the mivoris tunf; it is inderberably certion, that many perfom who are Atriely honeflin ah other relpects, are difionaft-at cards; and that no rank or condition of men, no, nor womet ineither', is entirely free from this vice.

> Several different Cards being foozon to different Porpons, that each of them may fix on onis of tbofe Cards, to nawee that onn zobicb each Perfon fixed.

THERE munt be, as mapy different cards thown to each perfon, as there are pertoris to choofe; therefore, fuppofe there are three perfons, then, to each of them you muft thow three cards, and tolling the frift perfon to petain ane iq bis memory, you lay thofe three cards down, and how three others to the fepopd parfon $n_{x}$ and fo to the third. Yqu, ther take up the firft perfon's catds, and lay them down, one by one, feparately, with their faces upwards. You noxt place the fecond perfon's card over the firft, and in like

## II9 $=$

manner the third perfon's card over the fecond's; fo thit in each parcel there will be one card belonging to each perfon. You then afk each of them in which parcel his card is, and when you know that, you immediately know which card it is; for the firft perfon's card will always be the firf, the fecond perfon's the fecond, and the third perfon's the third, in that parcel where they each fay his card is.

This Recreation may be performed with a fingle perfon, by letting him fix on three, four, or more cards. In this cafe you muft fhow him as many parcels as he is to chuofe cards, and every parcel muft confift of that number, out of which he murt fix on one; and you then proceed as before, he telling you the parcel that contains each of his cards

To name tbe Rank of the Card tbatt a Perfon bas drazun from a
fiqutt Pack.
BY the rank of the card we mean whether it be ace, king, queen, \&c. You are therefore firft to fix a certain number to each card, thus, you call the king 4 , the queen $;$, the knave 2 , the ace 1 , and the others according to the num, ber of their pips.

You then Muffle the cards, and let the perfon draw any one of them: then turning up the remaing cards, you add the number of the firft to that of the fecond, that to the third, and fo on, till it amount to ten, which you then reject and begin again; or if it be more, you reject the ten, and carry the remainder to the hext card; and fo continue till you come to the laft card; and to the laft amount you muft add 4, and fubtrate thit fum fiom 10 if it be lefs, or from 20 if it be more than 10 , and the remainder will be the number of the card that was drawn : as for exame, if the remaincter be 2 ; the card drawn was a knave; if 3 , a queen, \&c.

## To cell tbe Amount of the Numbers of twa Cards that a Perfon bas diawn from a common. Pack af Cards.

THE fmall cards here rell, as bifore, according to the number of their $p$ ps, but each pictured card tells for 10 , Let the perfen'reki is many more cards to each of thore he has drawn, as will make each of their numbers 25 . Then take the remaining cards in your hand, and feeming to fearch for fome card among them, tell them over to yourfelf, and their number will be the amount of the two cards drawn. An example will make this plain. Suppofe the perfon has

## I 20 (

drawn a 10 and a 7 , then he muft add 15 cards to the firf, to make the number 25 , and 18 cards to the laft, for the fame reafon: now 15 and 18 make 33, and the two cards themtelves make 35, which deducted from 52 leaves 17 , which muft be the number of the remaining cards, and alfo of the two cards drawn.

This Recreation may be performed without your touch. ing the cards, thus : let the perfon who has drawn the two cards deduet the numbers of each of them from 26 , which is half the number of the pack, and after adding the remainders together, let him tell you the amount, which you privately deduct from 52, the number of all the cards, and the remainder will be the amount of the two cards. For example, fuppofe the two cards to be, as before, 10 and 7 ; then the peifon deducting io from 26 there remains 16 ; and deducting 7 from 26 there remains 19 ; thofe two remainders added together will make 35 , which you fubtract from 52 , and there must remain 17, for the amount of the two cards, as beiore.

As the number 26 may be thought to lead to a difcovery of the principle on which the Recreation is founded, it being manifeftly the half of the pack, to render it more myiterious you may take any other number lefs than 26, but greater than 10 , as for example 24, and let the party fubtract the number of each of his cards from that ; there. fore, fuppofing the numbers to be as before 10 and 7 , the remainders will be 14 and 17, which make 3t, to which you muft add 4, for the double of the 2 you took from 26, and the amount will be 35, which is to be deducted from 52, 2s before. By this alteration the performance will not only be rendered more abftrufe, but alfo more diverfified, as you may change the number, from which thofe of the two cards are to be deducted, every time you repeat the experiment.

This Recreation may be performed, equally weil, with a pack of piquet cards, and then the numbers of the two cards muft be deducted from 16, which is the half of the pack; or if you chufe to make it more myfterious, from any other number lefs than 16 and more than 10 ; afterwards adding, as in the laft cafe, the double of what that? number wants to make it $16 .{ }^{*}$

To sell the Amount of the Numbers of any tioree Cards tbat a Perfon foall'dráp from tbe Pask.
AFTER the party has drawn his three cards, you ane to caw one yourfelf, and lay it afide; for it is neceffary that the number of the remaining aards be divifible by 3 , which they will not be, in i pack of 52 cards, if only 3 be drawn. The card you drawy yot may call the confederate, and presend it is by the aid of that cand you difcover the ampunt of the others. Then tellshe party to add as many more to each
f his cards, as will make its number 16, which is the third part of the remaining 48 cards; therefore, fuppofe he has drawn a 10, a 7, and a 6 : to the firf he mult aild 6 cards, to the fecond 9 , and to the third 10 , which together make 25, and the 4 cards drawn being added to them make 29. You then take the remaining cards, and telling them over, as in the laft Recreation, you find their number to be 23, which muit be the ampunt of the three cards the pe:fon drew.

Yov may perform this Recreatlon likewife without touching the cands, as thus: after the party has drawn his three cards, and you have drawn one, tet him dedact the number of each of the cards he has drawn from 17, which is one-third of the pack, after you have drawn your card: and let him tell you the amount of the foveral remainders, to which you privately add one for the card you drew, and deducting that minount from 52, the whole number of cards, the remainder will be the amount of the three cards drawn. For example, fuppore the three cards to be 10, 7, and 6, as before; then each of thofe numbers being fubtracted from 17, the remainders will be refpectively 7, 10, and 15, which, added together, make 28, to which the fingle card you drew being aisded makes 29, and that'number deducted from 52 leaves 23 , which is the amount of the three cards the party drew.

Theri is little reafon to imazine any one will difcover why you here make choice of the numbar 17; but if you are defirous of rendering the Recreation ftill more abftruff, and at the fame time fufceptible of greater variety, you may fix on any other number lefs than 17, but more than 10; and afterwards add to the amount of the remainders the double of what that number is lefs than 17; in the fame manner as in the laft Recreation.

This Recreation alfo may be performed with a pack of piquet cards ; but thën you muft draw, or, what will aphwer the fame purpofen deduct 2, in ypur own mind, M
from the whole number 32 , that the remainder may be divifible by 3 ; and let him deduct the number of each of his cards from that fum, which is 10 , and add the remainders together, as before; thus, if his three cards be 10, 7; and 6, he is to deduet each of them from 10, which.is the third part of 30 ; therefore the remainders will be 0 , 3, and 4, which, added together, make 7, and that added to the 2 you deducted from the whole number, makes i, which taken from 32 , leaves 23 , and that muft be the amount of his three cards.

Among the different purpofes to which the doctrine of combinations may be applied, thofe of writing in cypher, and decyphering, hold a principal place, as will appear by the following Recreations.

## To communicate Intelligence by a Pack of Piquet Cards.

THE parties muft previounly agree in what manner the cards fhall be firft placed, and then how they fhall be fhuffled. Thus, fuppofe the cards are to be firf placed in the order as hereafter follows, and then Thuffled by taking off3 3 from the top, putting the next 2 over them, and the following 3 under them*, and to alternately. Therefore the party who fends the cypher firft writes the conteuts of it on a feparate paper, and then copies the firft 32 letters on the cards, by writing one letter on every card; he then Thuffles them in the manner defcribed, and writes the fecond 32 letters: he chuffies them a fecond time and writes the third 32 letters, and fo of the reft. An example will make this plain. Suppofe the letter to be as follows:

I am in full march to refieve you; wïtbin! three days I fáll be witb ycu. If the ene|my in the mean time foould make an affaullt, remember zubat you cwe to your countrily, to your family and yourfelf. Live witb bo|nour or die with glory.

Orter of the cards before the ift huffle.

Ace fpades
Ten diamonds
Eight hearts
King fpades
Nine clubs
Seven diamonds
Nine diamonds

| $\begin{array}{lllll} i & d & d & y \\ a & l & e & u & l \end{array}$ |
| :---: |
| mo |
| $u m$ |
|  |
| $f b m r i$ |
|  |

[^10]

The perfon that receives thefe cards firft places them in the order agreed on, and tranfcribes the firf letter on every card. He then muffles them, according to order, and tranfcribes the fecond letter on each card. He fhuffles them a fecond time and tranfcribes the third letters; and fo of the reft.

- Ir the cards were to be fhuffled the fecond time by threes and fours, the third time by twos and fours, \&c. it would make the cypher ftill more difficult to difcover: though as all cyphers depend on the combination of letters, there are fca:ce any that may not be dec; phered with time and pains; as we thall fhow farther on. Thofe cyphors are the beft, that are by their nature moft free from furpicion of being cyphers; as for example, if the letters were here wrote with one of the fympathetic inks, the cards might then pafs for a common pack.

## Tbe Card diffovered under tbe Handkercbief.

LET a perfon draw any card from the reft, and put it in the middle of the pack. You make the pafs at that place,

and the card will confequently be at top. Then placing the pack on the table, cover it with a handkerchief, and puting your hand under it, take off the top card, and afier leeming to fearch among the cards for fome time, draw it out.

This recreation maty be performed by putting the cards in another perfon's podcket, after the pafs is made. Several cards may alfo be drawn and placed together in the middle of the pack, and the pals then made.

## To ckange tbe Cards that feveral Perfons bdide idravon form' tbe Pack.

ON the top of the pack put any card you pleate, suppore the queen of clubs. Make the pars, and bring that card to the middle of the pack, and offer it a perfon to draw. Ther, by cutting the cardty, bring the queen again to the middie of the pack. Make the pais a fecond time, and tring it to the top, and chuffle the cards without difplacing thofe on the top. Make the pafs a, third time, and bring it to the middle of the pack, and affer it to a fecond perion to draw ; who mult be at a proper diftance from the firit per!'on, that he may not perceive it is the fame card. After the fike manner did five perfons draw the fame card.
 clitis, ard laying down froir otlier cards wht the quireens, alk each ptrion if he fees tis card there. They will the reply $\hat{e}$ e, as the $\bar{j}$ all drew the quén of clubt. Place four of te:ofe cards to the pack; and drawing ehe quecen privatety away; you approach the firft rerfon, and thowitigy tim that card, fo that the others cannot fee it, and ank if that be his card. Then putting it on the fip of the pick blow on is, or give it a froke with your liand, and fhew it in the fance manier to the fecond perfon; and fo of the rett.

## Tbe Four ivjoparable Kingst

WAKE tho four kings, and betind the laft of them place tmo ther pards, fo that they may not be feen. Then fpread opern the four kings to the company, and put the fix cards at the bottom of the pack. Draw one of the king's, and put him at the top of the pack. Draw one of the two cards at the botroin and pht it totwands thie miarlle. Draw the other, and put it at fume diftance from the laft, and then how that these remains a king as bot:om. Then lat

2ny onecut the cards, and as there remained three kings at bottom, they will then be altegstiser in the midule of the pack.

## To tell tbe Number of Cards by tbeir Weigbt.

TAKE a parcel of cards, fuppofe 40, among which infert two long cards; let the firft he, for example, the 1 sth, and the other the 26 th from the top. Seem to Shuffte the cards, and then cutting them at the firt long card, poife thofe you have cut off in your left hand, and fay, "there' thould be here fifteen cards." Cut them again at the econd long card, and fay, "there are here only eleven cads." Then poifing the remainder, you fay, ci here are fourteen cards."

## Te difcover the Card tbat is drawn by the throw of a Die.

PREPARE a pack of cards, in which fix different cards are contaided fix times; that is' in which there are oolly fix forts of cards. Difpofe thefe cards in fuch manner that each of the fix different cards thall follow each other, and let the laft of each fuit be a long card. The cards beiog thas difpofed, it follows, that if you divide them into fix parcels, by cutting at each of the long carda, thofe parcels will an confift of fimilar cands.

Let:a perion draw a card from the pack, and let him replace it in the parcel from wherice it was drawn, by dextrounly offering that part.. Cut the cards feveral times, fo that a long card may be always at bottom. Divide the cards in this manner into fix heaps, and giving a die to the perfon who dreiw the card, tell him that the point he throws Thall indicate the parcel in which is the card he drew; then take up that parcel and fhow him the card:

You thould pur the cards in your pocket immediately after performing this recreation, and have another pack, ready to how, it any one hould afk to fee the cards.

To feparata tbe.trvo Colaurs of a Pack nf Cards by one oute.
THE pack maft be prepared thus: . Alithe cands of one colour muft be cyt fomething narrovèr at one end than the ocher. You thow the cards, and give them to: any aoe that he maychuffie them, then holding thera between your hands,

 race the hearty and diamondà trom the fpades aud clubs.

Tars Recreation is eafy and pleafant to perform, but thould not be repeated: mnefs you have another pack of cards which you can adroinly fubtiturite in thie plate of the formen, and with thern you may feparate the pittured cands from the others, they being prepai ed for that purpote s which will afford a frefh furprize. You may affo write on a number of blank cands certain letter's or words that form z quettion, and on others the anfwer. Several othèr recreations may likewift bo porforimed by thie fame method.

## the sincramoropoboted Carids.

IN the middde of a pack place a card that is fomething windet shan the reftiwhick we will fuppore to bo the knhave of fpadea, under which place the feven of diamonds, and wheter that.tite twin of ciubs. On the top of wie pack put tards femilar to thife, and others on which ant painted (hifforent wijeets, in the inminer following:
tifot'an A.bind
5. A Revotr of diamonds
3. Affert

4 Another fiven of diansoind
5 . A bird
6. Tien of clubs

7 A dower
8. Another ten of ctube

Then feven or eight indiferent cards; the knave of apedes, which is the wide card; the reven of diamondo ${ }_{2}$; the ten of chubsi; and the refl any indifferent cards.
Two perfons are then to draw the tewo cards that are under the wide card, which are the feveri ot ctamonds and the ten of clubs. You then take the pack in ydur left hand, and open it at the wide card, as you ơpén à book, and tel him who drew the feven of diamends.to place it in that eppeing: Ypuithen blow on the canis; and Without. elofing them you inftantly bring the cart which is at top, and on whichia bird is painteds, ovet that Even of tia-tanoads.-Which to do this dortrouffy you toult wet: bbe midd finger of your veft hahd, with which you arte to friots che card to the mildetic of the pacto. You'there ble
the perfon look at his card, mad when he has remsarked tfo change, to place it where it was betore. Then blow on the cards a fecond time, and bringing $t$ e feven of diamonds,女olicist is at the top of the pack, to the opening, you bid hifn look at his card again, when he will fee it is that he drew. You may do the fame with all the otfer painted cards, either with the fame perfons or with him who drev the ten of ctubs.

The whols artifice in this Recreation conififs.in bringing thic card at the top of the pack to the opening in the stiddle, by the wet fiager, which requires no great pratice. You maft obferve not to det the pack ge out of your hands whits you are performing chis Recreation:

## Tbe Cards in tbe Ofera Clafs.

PROVIDE an opera ghas about two inches and $x$ hatr tong, the tribe of which is to be ivory, and fo thin that the light mat pafs throughit. In this tube place a lens of two inches and a quarter focus, to that a card of about three quarters of an inch long may appear of the fize of a common catd. Aitxber bortom of the trifie there is to be sicircle of bacien pafteboard, to which muft be faftened a freall cand with Eigares on toothe fides, by two, threads of filk, in fuch monancer that by elusting the tube cither. fide of the card may be tifitbe.

You then offer two cards in pack to two perfons, which they are to drayy, and that are the fame as thofe in the glafs. After which you fhow each of them the card he has drawn, in the glars, by kurning if to the proper pofition.

THE better to induce the parties' to drato the twot carls, piree therin firf on thie top of the pack, and then, by making the pafy, biting them to the middle. When you can make the pars in a dodetoits mantier, it is 'preftrathy, "ot many:
 the pack frequenely; for otllefwife: ic would be obferved that the fame earid is althays drasion, and doubtlef occalions fufpition.

## Tbe Cardsin Tra-Caddies:

TWO cards being drawn by different perfons, are pat into feparase teacaddies and locked up. The performer changes

## 128

changes the eards withont touching them, or any confe: deracy. -

The caddies are made with a copper flap, which has à hinge at the bottom, opens againg the front, whees i! catches under the bolt of the lick, fo as when the lid is A.ut and locked, the flap will fall down upon the bottom; the performer places two caids that he intends to be chofen between the flap and the front, which being lined with green cloth; reay he handled witlout any fufpicion; he then defires the firft perton to put his card into one of the caddies, taking care it be that which contains the contrary card from: the one that he chore, and the fucond into the other; he then defires they will lock them up, wlich uns locks the flaps, covers their cards, and when c pened, prefents the contrary ones to the view of the company.

Th guefs the Thougbes of any. Perfon, affuring bim tbat yow will zoritz befaresEand on a Piece, of. Paper the Amount of tbt Paxcel of Cards' be ןball bapperi to cbuffe out of tbe two placed on tbe Tabla.

TAKE fome.cards, divide them inta tweo parcels, taking .eare that-ir obe there are only two or chree: fevens, and in. the other feven court cards; call for a pen and ink, and worite on a bitof paper the: fevens; then turn the bit of paper down; that what you have written may not be feen: then tell the perfon to make his choice. . Let him chufe whatever he pleafes, your number will be good, fince if he fhould chufe the greateft parcel, you may frew your paper on which is written the fevens; then defire him to count the number of cards contained in the parcel he kas chofen, and he will find it to be feven, as you had gueffed. This will appear aftonißhing to him and to the company; but they willeafity recover from their furprife, when, on raifugthe other parcel, you will hew it contains only fevens, and confequently: whatever parcel he had chofen, your numper which yqu had fet down was good, fince one parcel contained feven cards, and the other nothing but fevens. - This trick mast not be done twiç, befure the fame company, for then it: would become tirefome.-But generally whenever you do,a trick before a company, you mult never begin it again. before the fame.

## Tho Magic Ring.

MAKE a ring large enough to go on the fecend or thitd finger, in which let there be fet alarge tranfparent fone. to the bottom of which muft be fixed a final! piece of black filk, that may be either drawn afide or expanded by turning the ftone round. Under the filk is to be the figure of a fmall card.

Thin make a perfon draw the fame fort of card as thint at the bottom of the ring, and tell him to burn it in the candle. Having firt hown him the ring, you take part of the burnt card, and reducing it to powder, you rub the foone with it, and at the lame time turin it artfully aboút, fo that the fmall card at bottom may come in view.

## Tbe Card in the Mirror.

PROVIDE a mirror, eifter round, or ovil, the frame of which murt be at leatt as wide as a card. The glafs in the middle puit be mayle to move in the two grooves, and fo much of the quickfitér múf be feraped out, Ls is equial ${ }^{c}$ to the fize of a common card. You will obterve that tffeglafs muft likewifa be xrider shan the diftance between the frame, by at ledft the width of a card.

Thin pafte dves the part wherethe quicknifer is rubbed off, a piece of pafte board, on wfich is a catd, that mult exactly fit the face, which moft at firf be placed bohind the frame.

This mirror muift be placed againft a partition, through which is to go two ftrings, by which an affiftht in the ad. joining room cah eafily move the glafs in the grooves, and confequently mike the card appear or difappear at pleafure.

This Recreation may be performed withnưt an affiftant, if a table be placed againft the partition, and the fring from the glars be made to pars through a leg of it, and communichte with a fmall trigger, which you may eaffly puff down with your foot, and at the fame time be wiping the glass with ycur hindkerchief, that the card may appear the more' conficicuotis. It may alfo be diverffied by having the figure of a head ${ }_{3}$ furrosf that of oome ablent friend, in the place of the card

## 130

Matexes being thus prepared, you contrive to make a perfon draw the fame fort of card with that fixed to the mirror, and place it in the middle of the pack: you then make the pafs, and bring it to the bottom; you then direct the perfon to look for his card in the mirror, when the confederate b-hind the partition is to draw it flowly forward, and it will appear as if placed between the glass and the quickfilver. While the glats is drawing forward you flide off the card from the bottom of the pack, and convey it' away.

Thi card fixed to the mirror may eafily he changed each-: time the experiment is performed. This Recreation may be alfo made with the print that has a glafs before it, and a frame of fufficient width; by making a nit in the frame. through which the card is to pafs; but the effett will not" be fo ftriking as in the mirror.

## Tloe divinating perfpeqive Glafs.

1FT a fmall perfective giafs be made, that is wide enough at the end where the object-glats is placed, to hold a table fimilar to the following.

Tare a pack of cards that conffifs of 27 only, and giving them to a perfon, defire him to fix on any one, then fhuffe them and give the pack to you. Place the twenty-feven cards in three heaps, by laying down one alternately on each heap, but before you lay each card down thow it to the perfon without feeing it yourfelf; and when the three heaps. are finimed, afk him at what number, from 1 to 27 , he' will have his card appear, and in which heap it then is. Then

## 131

Then look at the heap through the glafs, and if the firf of the three numbers which flands againft that number it is to appear at, be 1 , put that heap at top; if the nuinber be 2 , put it in the middle; and if it be 3 , put it at botom. Then divide the cards into three heaps, in the fame manner, a recond and a third time, and his card w.ll then be at the number he chofe.

For example. Suppofe he defire that his card thall be the 20 th from the top, and the firt time of making the heaps he fay it is in the third heap; you then look at the table in the perfpective, holding it at the fame time over that heap, and you fee that the firft figure is 2 , you therefore pu: that heap in the midule of the pack. The fecond and third times you in like manner put the heap in which he fays it is, at the bottom, the number each time beins 3. Then looking at the pack with your glafs, as if to difcover which tine card was, you lay the cards down oine by one, and the twentieth card will be that he fixed on.

You may thove the perfoh his card in the fame manner, without afking him at what number it fhall appear, by fixing on any number yourfelf. .You may alfo perform this Recreation with the magnetical dial, by making the hand point to any number, from 1 to 27, at which you intend the card thall be found.

The foregoing recreations with the cards will be found fufficiest to explain all others of a fimilar nature, that have or may be made, the number of which is very great. Ho pertorm thefe we have defcr.bed requires no great practice; the two pincipal points are, the making the pafs in a dexcrous manner, and a certain addrefs by which you influence a perfon to draw the card you prefent.

Thosz recreations that are performed by the long card are, in general, the moft eafy, but they are confined to a pack of cards that is ready prepared; whereas, thofe that depend on making the pais, may be pexfermed with any. pack that is offered.

> Tbs Dancing Card.

ONE of the company is defired to draw a carl; which the conjurer thuffles again with the others, and then orders it to appear upon the wall; the card inftantly obeys; then advancing by degrees, and according to onders; is afcends in a fitaight Kne, from right to teft; it difappears on the top

## I 132

the wall, and a moment after it appears again, and continucs to dance upon an horizontal line, \&cc. \&ec.

## EXPLANATION.

This trick is fo fimple, that I could have difpenfed with fpiaking of it ; it confifts in the firft place, in ubtaining a forced card drawn, which is eaflly knowi by the card being larger than the reft; after having thuffled it with the others, it is raken out of the pack, the better to impofe upon' the conpany: The inftant it is ordered to appear on the wah, the' compeer or invifibie agent very expertly draws a thread, at the end of which is faltened a fimilar card, which comes out from behind a glafs; another thread drawn very tight, on which it llides, by the means of fome very frall filk rings faftened, running thereon, preferibes its motion and prigrefs.

## Si parwa beit compomere magnis.

## The Card naited to ibe Wall roith a Pyit-fbot.

THE conjurer obtains a card drawn, and. reque tos tbe perfon who has chofen it, to tear off one of.its corners, and so obferve it swelf to knonvit;again; he takes the card. thus sorn and tears it all to pieces, burns. it, and treduces it to athes; ha then gets a piftol loaded with powder, mixed and confounded with the faid afties, and inftead of a lëalen hall, a nail, marked by orre of the company, is put lnto the barrel; then the pack of cards is thrown up into the air, the pitol is fircd, and the barnt card is found nailed ugainf the wal', the piece torn from it is then produced, and found to fit exaluly the phace from whence it was torn, and the nail is acknuwledged to be the fame, by the perfoa whomathed it.

## 

A coninit of the choferr oard ibeing torn, the eonjurer teps into his ctofet, takes a fimilar card and fears a corrier of it exactly in the fame manner; returning, he alks for the choren card, places it fubily upder.the pack, and expertly fubftitutes that which he has prepared, in ordcr to burn it ing its flead, chetshap hys hold of the piftol for the firls.time, under ptecemse of heswing how it hould he cocked, fired, a ant hapded; onf ofthe company is thendefired to lozd the piftol with roeme powder and paper; he feizes this interval so consox the casd to his inyifitie agent, who fecedily nails

## 133

it upon a fquare piece of beard, which ferves to flut up hermetically, a hole made in the partition and the hangings, but which is invifible, being covered with a piece of the fame; by this means the card nailed to the wall or partition does not yet appear ; the piece of tapeftry with which it is covered is nightly faftened on one fide with two pins, and on the other to a thread, the loofe end of which the compeer holds in his hand: As foons as this laft hears the piftol fired, he draws the thread, and rapidly tranfports the piece of tapeftry behind the glaf;, the card confequently appears, and as it is the fams that had been marked with the nail juirt put into the piltol, it is no wonder that this trick, fo difficult to account for, o'stains the applaufe of a numerous affembly: It depends intirely on firft loading the pif. tol with powder, after which a tin tube is covered on the charge of po.vder, the card and nail being rammed down in the tin tube; the piftol being inveited, the tube and its contents fall into the conjurer's hand to convey to his invifible agent.
N. B. Ir any one fhould fufpect that the nail in the piftol has been juggled, his fufpicion is protefted againft, and he is defired to come again the next day to be convinced of his error; then he is prefented with a piftol which is taken to pieces, to hew him that there is not the leatt preparation.

## Tbe burnt Card fout up in a Watcb.

HERE the conjurer prefents the company with a pack of cards, and gets one of them drawn at random; he borrows three watches, which one of the fpectators is defired to fold up in three different pieces of paper; they are then laid on a table and covered with a napkin; the chofen card is burne, and its alhes are put into a box ; hacrtly after the box is opened, but the aihes are gone: the three watches are laid on a plate, and one of the company is defired to choofe one of them and open it, in which he finds under the glais a piece of the buint card, and under the watch-cafe, a fmall card reprefenting in miniature, tuat reduced to ahhes.

## EXPLANATION.

The chofen card is known directly by the difpofition of the pack; the watches well enve'oped in $p$ prare laid on the little trap, which opens aadlets it fill into adrawer; as foon as the comperr is acquainted with the card drawn,
he fretches out his arm under the table and takes one of the watclies, in which he depofits the card, deftined to be produced before the company : the watches hould be covered with a napkin, fuftained by feveral bottles, or fomething fimilar, otherwife the comper's hand would be perceived moving the napkin. The three watches are prefented to a by-ftander upon a plate, with care to turn next to him that which contains the card in miniature, and which is marked by having $a$ little of its corner torn: If the perfon mould be cunning, and waggithly affeess to take the watch next to him, he is defired to mix and contound them well to. gether, under the pretence of embelliming the trick, and the ftratagem is put in execution. The method of caufing the athes of a buint card to dif ppear in a box, confifts in de;ofiting a bit of wood or pafteboard within the 1id, which fills it exacly in length and breadth, and which neverthelefs is loofe enough to fall down into the botion of the box when it is fhut; the piece of wod or pafteboard being of the rame co'our as the infile of the box, forms a double bottom, hides the afhes from the eyes of the dazzied fpectator, who in the fame moment is induced to think that the athes are taken out in order to be combined anew, to produce the card in minature, which is found in the watch.

## The Cards named, dijcovered with the Eyes blinded.

A PACK of cards are caufed to be drawn by fome perfon, A woman arijiving in the room, names all the cards juft drawn, with ut making the leaft miftake with regard to their colour, number, \&c.

## EXPLANATION.

The cards are difpofed as we obferved before. The conjurer having, unioticed, obferved the card drawn, 'ie informs his wife, or agent, even at the very inftant he promifes he will tike particular care ine or he fhall know nothing about it: he fays he will not fpeak a word, while his wif: names the cards, and that th: perfon who hold them thall be confined to fhew theni to the company, by faying thi is fuch or fuch a card, \&c. It is in this laft phrafe he names the card, which is underneat ? ; his wife, who hears him, and who knows by heart the difpofition of the pack, names :he cards which follow it ; that is to fay, for inftance, if he is given to uaderfarid that the 1gth is underneath, The naines the $10 t \mathrm{t}$, the 17 th , ic . Having mentioned the whole pack, her huiband, wl:o, during this time, nevir $\begin{gathered}f_{f} \text { eaks }\end{gathered}$

## $135=$

fpeaks a word, refumes the ufe of his fpeech, and begs of the perion who had chofen them, to alk what are the others that remain un-named; the wife is informed by this queftion, that there is not one remaining, and anfwers accordingly.

## The Card Springing up into the Sir, from the Pack, without being toucbed.

ONE of the cards is drawn, which is afterwards put in, and huffled with the reft of the pack; then the pack is put into a kind of a fquare fpoon, placed upright upon a bettle, which ferves it as a pedeftal, and at the company's pleafure the card inftantly files up into the air.

## EXPLANATION:

In the firft place, a forced card muft te chofen, in the manner defcribed; then the pack muft be placed in the foon, fo that the chofen card may lean on a pin, bent in the form of a hook; this pin is faftened to a thread, and afcending through the pack, leans apon the upper end of the fpoon; then it defcends under the room, through the table: Ir this difpofition, the compeer cannot pull the thread, without draging along with it the hook and card, which caufes it to be perceived as flying in the air: The thread flides upon the blunt edge of the fpoon as eafily as if it run in a puliy.

In order to place the cards in the fpoon quick enough, that the fpectators may perceive no preparation, care muft be taken that another pack is preferited dextereudly on the sable:. The chofen card in the other, with the hook and. thread, mult be previounly prepared as above defcribed.

## The burnt IFriting reftored.

COVER the outfide of a fmall memorandum-book with' black paper, and in one of its infide covers make a flap, to open fecretly, and obferve there muft be nothing over the flap but the black paper that covers the book.

Mix foot with black or brown foap, with which rub the side of the black paper next the flap: then wipe it quite clean, fo that a white paper preffed againft it will not receive any mark.

## 136

Provide a black lead pencil that will not mark withous prefling bard on the paper. Have likewife a fmall box, abnut the fize of the memorandum-book, and that opens on both fides, but on one of them by a private method. Gize a perfon the penc:l, and a flip of thin paper, on which he is to write what he thinks proper: you prefent him the memorandum-book at the fame time, that he may not write on the bare board. You tell him to keep what he writes to himfelf, and direct him to burn it on an iton plate laid on a chafindifh of coals, and give you the afhes. You then go inte another room to fetch your magic box, before defcribed, and take with you the memorandumbook.

Having previoufly piaced a paper under the flap in the cover of the book, when he preffes hard with the pencib, to write on his paper, every ftroke, by means of the fuff rubbed on the black paper, will appear on that under the flap. You therefore take it out, and pat it into one fide of the box.

Yov then return to the other room, and taking a fip of blank paper, you put it into the other fide of the box, Arewing the ames of the burnt paper over it. Then Thaking the box for a few moments, and at the fame time turning it dextrounly over, you open the other fide, and Fhew the perion the paper you firft put in, the writing on which he will readily acknowledge to be his.

There may lakewife be a flap in the other cover of the book, and ypu may rub the paper againft that with red lead. In this cafe you give the perfon the choice of witing either with a red or black pencil; and prefent bim the ploper fide of the book accordingly.

## Tbe Opaque Box rendered Trañparent.

MAKE a tex of three or fcur irches leng, and two or three wide, and have a fort of perfpective glafs, the tottom of which is of the fame fize with the box, and nides out, that you may privately place a paper on it. The fides of this perfpeclise are to be of glafs, covered on the infide with fine paper.

Let a perfon write on a Ilip of paper, putting your memorandum-lock urier it, as in tle Jaft Recreation. Then give him the litt!e rox, and let him put wh at he has wicte into it. In the mean time you put the mencran. dum
dam-book into the prefs, where the perfpective is aleady placed. Your affiltant then takes the paper out of thebook, and puts it at the bottom of the peripective; which you prefenily take out of the prefs, anid direct the perion to put the little box, that contains his paper, under it. You then look in at the top of the perfpective; and feigning to fee through the top of the box, you read what is. wrote on the paper at the bottom of the peifpective.
With this perfpective-box you may perfurm another recreation, which is, by lhaving in a bag twelve or more ivory counters, numbered, which you how to the com. pany, that they may fee all the numbers are different. You tell a perfon to draw any one of them, and keep it clofe in his hand. You then put the bag in the prefs, when your affiftant examines the counters, and fees which is wanting, and puts another of the fame number at the bottom of the perfpestive, which you then take out; and placing the perfon's hand clofe to it, look in at the top, and pretending to fee through his hand, you name the number an the counter in it.

## The Penetrative Guinea.

PROVIDE a round tin box, of the fize of a large finuffbox, and in this place eight other boxes, which will go tae fily into each other, and let the leaft of them be of a fize to hold a guinea. Each of thefe boxes fhould mut with $\boldsymbol{a}$ : hinge, and to the leaft of them there muft be a fmall lock, that is faftened with a fpring, but cannot be opened with.out a key: and obferve that all thefe boxes muft mat fo freely, that they may be all clofed at once. Place thefe boxes in each other, with their tops open, in the drawer of, the table on which you may make your experiments; or if you pleafe, in your pocket, in fuch manner that they cannot be difplaced.

Thin afk a perfon to lend you a new guinea, and defirehim to mark it, that it may not be changed. You take this piece in one hand, and in the other you have another of thefame appearance, and putting your hand into the drawer you fip the piece that is marked in the leaft box, and fhutting them all at once, you take them out. Then howing the piece you have in your hand, and which the company fuppofe to be the fame that was marked, you pretend to make it pafs through the box and dextrounly convey it away.
$\mathbf{N}_{3} \cdots$. . Yaw

## 138

You then prefent the box, for the fpectators do not yet know there are more than one, to any perfon in company, who, when he opens it, finds another, and another, till he comes to the laft, but that he cannot open without the key, which you then give him, and retiring to a diftant part of the room, you tell him to take out the guinea himfelf, and fee if it be that he marked.

This recreation may be made more furprifing, by putling the key inte the fnuff-box of one of the company, which you may do by anking him for a pinch of his fnuff, and at the fame conceal the key, which muft be very fmall, among the fnuff $:$ and when the perfon who is to open thebox alks for the key, you tell him that one of the company has it in his fnuff-box. This part of the recreation may Bkewife be performed by means of a confederate.

## An Artificial Memory.

THE reader muft have obferved, that to perform feveral of the recreations in this book; it is neceffary to have a good memory; but as that is. a gift every one has not from nature, many methods have been contrived to fupply that de-.: fect by art ; the moft material of which we chall here deferibe.

An artificial memery refpeets either figures or words: for the former let the five vowels $a, e, i, 0, u$, reprefent the firft five digits; the dipthengs that begin with the firf four vowels, as au, ea, ie, ou, reprefent the remaining four digits, and let $y$ ftand for an o, or cypher. Let theten firft confonants alfo ftand for the niae digits and the cypher; as in the following table.

| $a$ | $e$ | $i$ | 0 | $u$ | $a u$ | $c a$ | $i e$ | $o u$ | $y$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 0 |
| $b$ | $c$ | $d$ | $f$ | $g$ | $b$ | $k$ | $l$ | $m$ | $n$ |

- Tazn to reprafent any number let the firft letter be a vowel or diptheng, the fecond a confonant, the third a vowel, the fourth a confonant, \&sc. Thus for the number 1763, you write or remember the word akaud. - If there are feveral fums to be retained, you place the words in forms of verfes, which will make them more pleafing to: repeat and more eafy to remember: for example, if you would
would remember the dates of the acceffion of the family of Stuart to the crown of England; the powder plot; the decapitation of Charles I. the Reftoration; the Revolution; the Union of England and Scotland; the acceffion of the Houfe of Hanover; and the laft rebellion, which were in 1603, 1605, 1649, 1660, 1689, 1707, 1714, and 1746, you write as follows, for you are to obferve that in this, and in fimilar cafes, where the firft figure is always the fame, it is unneceffary to write it after the firft time.

> Ahyd hyg hom haun
> hiem kyk kaf koh.

Thrs method is rendered in fome inftances ftill more eary by adding parts of words to dates: thus to remember the date of the acceffion of the monarchs from James I. to the prefent king, you may write as follows, omitting the letter that would ftand for one thoufand.

> Jambyd Charbeg Charbom Jambieg, Willbiom Ankyc Georkaf Sechek Thikeun

WHEN feveral cyphers come together, inftead of repeating y or $n$, you may write $y$ or $n 2,3, \& c$. Thus for 3400 write ify2, and for 256000 write ebun 3 .

To remember any number of words, felect the initial let. ters of thofe words, and to the firft add a if it begin with a. confonant, or $b$ if it begin with a vowel. In like manner add $e$ or $c$ to the fecond initial letter; to the third add $i$ or $d ;$ to the fourth $o$ or $f ;$ and to the fifth $u$ or $g$. So that of the five initials you make five fyllables, which are joined together in one word. Then of the next five initials you make, in the fame manner, another word, and of every two words you make a verfe. For example, fuppofe you would remember the names of all the kings fince the Conqueft, in the order in which they reigned, you then write as follows.

| Wawehirohu | Rajehiefg <br> Ebrehihohu <br> Ebecriholinu |
| :--- | :--- |
| Ebmeedjocu | Cajewiafgu Gage |

OR if you would remember the letters that begin any number of verfes, fuppofe the twentynfinf lines of Pope's Effay on Man, you write as follows.
Abtelitoeg Abacodrotu
Taocedaflu $\quad$ Bafewioffus

## 140

## Tbe Handkercbief marked, cut, torns, and mended.

TWO perfons of the company are defired to ftep forwards ;a handkerchief is given them, which they are tohoid by the four corners; feveral other handkerchiefs are anked from, the company, and as they are received, they are put within the firf, in order to make them a bundle; when there are 2 bout a dozen of them heaped up together, the two perions who hold the bundle, caufe one of them to be drawn at: random, by a third ipectator; this 1 ft is defired to examine its mark and number, if any fuch there be, and to cut off one of the corners, with a pair of fciffars; any one may cut a piece alfo; after that the handkerchief is toin in pieces: The bits and fcraps being gathered together, on which are. poured certain pretended drugs or liquors, all are fulded and: firmly bound with a ribbond, in order to reduce them to a fmall parcel, then they are put under a glafs; a few moments after the handkerchief is taken to be unfolded, and ${ }^{-}$ every body acknowledges the mark, and the fpectators are furprized to fee it has not received the leaft damage in the operation.

## EXPLANATION.

Tars operation which produces fo general an illufion is. very fimple: One of the company with whom the juggler is acquainted, having two handkerchiefs perfectly alike, having previounly depofited one of them in the hands of thecompeer concealed behind the curtain, throws the other upon the fluor to perform the trick with : The operator takes care to put this handkerchief uppermoft in making the bundre, though he affects to mix them together pro. mifcuoully; the perfon whom he defires to draw one of thehandkerchiefs, takes natürally that which cotnes' firft tohand; he defires to thake them again, on pretence to embellith the operation: The juggler having fhaked them over again himfelf, to bring the right handkerchief uppermofts defires fomebody lefs penetrating, whofe mien denotes fim. plicity, and who in putting his band into the bundle, takes without ceremony the firft that prefents itfelf. When the handkerchief is torn and carefully folded up, it is put under a gtafs, on a table placed near a partition; in that part of the table on which it is depofited, is a little trap, which opens, and lets it fall into a drawer; the compeer hid be. hind the curtain paffes his hand within the table, opens the trap, and fubftitutes a fecond handkerchief inftead of thefirf, then thuts the trap, which fits fo exactly the hole itclofes, it feems one and the fame piece with the furface of

the table ; and deceives by this means the eyes of the moft incredulous and penetrating fectator.

## Tbe Artificial Bird, finging at tbe Company's command.

THIS bird perched on a bottle, fings without any preliminary exercife, any tune demanded of him, ever compofed upon the foot, by the mof confummate muficians: He fings equally as well when tranfported from one bottie to another upon different tables: The wind iffuing out of his beak is ftrong enough to extinguifh a candle, and to relight it; this may be done when he is even taken away from the bottle and held in the hand.

## EXPIANATION.

Brinnd the curtain, a part of which covers the partition, are two hollow metal cones, thefe cones which are unequal, ferve the compeer as a fpeaking trumpet, in the fame manner as the fpeaking figure fometimes exhibited in London. Thecompeer imitating the voice of a bird, as the celebrated Roflignol, and follows the tunes which the muficians play by heart, or from a mufic book laid before them ; if the' tune propofed mould be too difficult for the muficians and the compeer to execute, without previous exercife, the company is informed, that to render the trick more furprizing, the bird will begin, by finging fome tune well known, form which it will pafs fuddenly to the tune in queftion: This is done to gain time; fome of the mufici. ans avail themfelves of the interval, by obferving more particularly the mufic, and the compeer makes ufe of the two different echoes, to convey his voice to two different points, according to the table and bottle on which the bird ftands. The bird contains in its belly a little double pair of bellows, like thofe of a ferenatta, and between its feet is a moveable pin which works the bellows; this pin in entering the neck of the bottle, leans on a piece of wood, which cannot be perceived, from the bottle's opacity: This piece laying vertically on the moveatle bottom of the bottle, can eafily move the tellows, and be made to move by the engines placed under the carpet, when the compeer draws the wire concealed in tle feet of the table; hy this means the kellows are moved to extinguifh the candle, and to convince the fiectators that the voice is really formed in the birds throat by the wind that iffues forth from the beak. When the conjurer takes the bird in his hand, he works the bellows hinifelf with his thumb, and the wird extirguiging the candle

## 142

candle, perfuades the company that the bird fings, independent of the machine concealed in the table and behind the partition: The cann'le being but juft extinguifhed, and the wick ftill hot, cann to po fibly approach the bird'sbeak without bei g illuminated; for care is taken to put alittle flower of brimftone in it, which produces the effects. of a match.

Tbe Piece of Money Shut up in a Box, from wbence it efcafcs witbout its being toucbed.

ONE of the company is intreated to hold a box, intowhich a piece of money or a ring is deprfited in his prefence; the conjurer withdraw's from the perfon, and begs of him to thake the box a little, when the piece is confequently heard to rattle within. At the third Thake it is ftill heard, but at the fourth, it is no more in the box, for it is found in the fhoe of one of the company.

## EXPLANATEON.

Eviry conjurer carries a quantity of thefe boxes about for Ale; that which caufed fo much admiration differs from the others only in being a little better made, and belonging to a man who knows how to embellifh his. tricks by all forts of favourable circumftances. This box is made fo, that in thaking it foftly up and down, you hear the piece it contains-but in tiaking it ftrongly in an horizontal direction, a little fpring falls upon the piece, and finders it from founding, which excites the opinion of its being no more therein. He who does the trick, then touches the box, on pretence of hewing how.it hould be fhaken; and though it be locked, the piece drops into your hand, through a little chink, which opens fecretly. He. leaves the box with the fame perfon, and caufes the company to imagine the piece is ftill in the tox, or it is nots: according to the manner in which it is thaken. In fine, he caufes the piece to be found in the thoe of a perfon who is, or is not, in correfpondence with him, and has furnimed him with a fimilar piece; or by fending fome perfon to llip It dexterounly over the floor. In this laft cafe it is found on the ground only, and the perion is made to believe that he let it fall in taking off his thoe.

The Writing concealed in a Snuff Box, from zubence it is takes out, witbout toucbing tbe Box, and found in a Wax Can. dlc.

THE conjurer borrows a fnuff box from one of the company, who he defires to wrate a phrafe of his own choice, on a litttle piece of paper. This writing is put into the box; another perfon foon after takes it out, reduced to athes, and at laft, it is caufed to be found in a wax candle, at the choice of one of the fpectators.

## EXPLANATIOR.

The box borrowed thould be neither gold, flver, nor hinged. A plain round box of pafteboard will fufice, of which the infide is blackifh, and whofe lid may be taken off. While the fpectator writes the phrafe, the lid is conveyed away into the adjacent clofet. It is quickly ! laced there upon a theet of lead, which is cut rourd with a pair of Iciffars, to make a double bottom. It is put into the lid with a little piece of paper, folded up in four, hid underneath it. The conjurer returns, and gets the writien paper folded up, in the fame manner as that concealed in the lid. The fpectator is defired to pot his writing in the $f$ uff box; then it is covered, and the double bottom, which the did contains, falls into tie box, hides the writing and leaves vifible only the other paper. In taking this paper, in order to burn it, the fpectator is duped, for he innocently leaves his writing in the box. Then he is defired to put this falfe paper into a tin Chovel, and to prefent it to the flames, in order to burn it, and to hoid it at a certain diftance to heat nowly. This last circumftarce is only a pretence to gain time, while the conjurer carries the box and the writing to his clofet: he has there a wax candle prepared, of which one end, like thofe of church tapers, is pierced with an iron of a conic form. It is in this hollow cone he puts haltily the writing in queftion, and fills up the aperture with fome warm wax, the better to incorporate with the candle. He mixes and confounds this candle with feveral others, and caufes it to be clofen preferably, by means of the fratagem mentioned before.

The fame means are employed to produce the writing in an orange, a guinea in a calket, or a lemon, \&sc. \&c. .

Tbree Pen Rnives baving been put into a Silver Cup, one of wobic jumps out at tbe Command of any of the Spectators.

THREE pen knives are borrowed from different perfons of the company; they are put into a cup which ftands upon a table; it is fhewn that the table has no communication with the cup, and that this laft contains no kind of preparation; neverthelefs, one of the knives, at any one of the fpectator's defire, jumps upon the ground, and the other two remain motionlefs.

## EXPLANATION.

Wren the cup is laid upon the table, a half crown piece is fipt into the bottom of it, faftened in the middle to a'fmall black filk thread. This thread mounts perpendicularly to the ceiling, and goes to join the hand of the compeer, who draws the thread upon a moment's notice, and dexterouly makes that pen knife jump out of the midd!e, which was the only one placed on the half crown piece; the others fall immediately to the bottom of the cup.

## Tbe Dance of the Egg.

THREE eggs are carried into the room; two are laid upon the the uable; the third is put into a hat. A little cane, or a fwitch, borrowed fr $m$ one of the company, which is thewn, not to have been in any mann r prepared, is laid acrofs the hat; at the fame inftant the hat falls down upon the ground, the egg adheres faft to the cane, as if it were glued to it; then the mufic begins to play, and the egg, as if fenfible of the harmony, nlips in turning from one end of the cane to the other, and continues to move till the mufic ceafes.

## EXPLANATION.

The egg is faftened to a thread, with a little peg, put in lengthways, and which leans tranfiverny upon the infide furface of the fhell. The hole made to introduce the peg, is fopt up with a lit'le white wax. The other end of the thread is fatened to the conjurer's chett of his body, with a pin bent in the form of a hook; the cane paffing underneath till thread, very near the egy, ferve. to fi.piort it. As foon as the mufic hegins the conjurer puites the cane from Jeft to right, or from right to left, and moves his body un-
perceiveable,

perceived, and at firt Aght the esg feems to run along the cane, without any vifible affiftance; but this is only a delufion of the fight, for it is conftantly faftened to the threat; its centre of gravity remains always at the fame diftance from the hook which retains it; it is the cane, which in fliding prefents, fucceffively, its different points to the furface of the egg, as it moves or dances.

## Of tbe Bird's Deatb, and Refurrettion.

THE egg choien out of the three, to dance on the cane, being broken; but prefently changed by the conjurer to the real egg, to fhew that it had not been previoully prepared, the two others left upon the tahle, are taken up; one of which is chofen by a fpectator, and, in breaking, out flies a* living canary bird. A lady of the company is defirid to take the bird into her hand, and foon after it is found to be dead. Then it is taken from her, and laid under a glafs' upon a table; fome minutes after the glafs is takeacef, and the bird flies away.

## EXPLANATION.

Two eggs are emptied, and the half of the thells are taken and adjufted together with two little ftrips of paper, glued in the form of a zone, or an equator. . Being thers prepared, they reprefent an egg, and can contain a little living canary bird, provided a liftle hole be made in it with 2 pin, to permit its free refpiration.

Tre inftant this' bird is delivered into the hands of a perfon who condefcends to hotd it, the comjurer fiffes it by a hard fqueeze between his finger and thumb. It is then put under a glafs, apon the trap before-mentioned, that the compeer may place a living one in its flead.

The Golden Head on tbree Rings, Dancing and Fumping in a
Glafs, to anfwer different Quffions.
TO mow that this head is defolate and void of commus nication, feverat cmown pieces are placed in the bottom of a , glafs; covered with a clofe lid, which notwithitanding; ; does not hindor this head, deforibod to be of mafly gold, to jump into the glafs, to anfwer many queftions propired. At the fame time a bunch of rings, feen in mother glafs at: a kittle diftance, perform the fame motions, as by fxuma-: thy.

## 

A sicord head is put in the place of the firf thewn to the company, and taken off the table on which the operation is to be made: This fecond head is faftened to a filk thread, which, paffing through the table, reaches under the floor to join the compeer, who dances either the rings, or head at pleafure, in order to correfpond properly with the conjurer; and the rings jump in like manner at pleature.

## The Rings paffed on a double Ribbomd.

IN a great number of rings furnithed by the company, two ribbonds are intrcduced, of which the ends are given to two conjple of the fpectators to hold; foon after, without hurting the ribbonds, and without taking off the rings over either of the ends, they are loofed from the ribbons, and returned to their owners

These frings or ribbonds, with the balls, or beads, are fold at moft Toy-Mhops in London, as well as many other commodities for fuch kind of experiments.

Owenam, about a century ince, publifhed, in his mathomatical recreations, the manner of doing this trick ; it is known'by alt conjurers by the name of my grandmotber's beads, from their ufing little batis inftead of rings: To perform this trick with fucceff, firft double one of the ribbonds, fo that the two ends of it touch one another; do the fame with the fecond, and then faften them both together, with a thread of the fame colour round their middle: This being previoully prepared, when you are going to perform the trick, give one of the fpectators the two ends of the firt ribbond to hold, and thofe of the fecond to another, by this neant their exes aro deccived; each thinking he holds in his hand the extremities of two different ribbonds, but it is quite otherwife; for if in this pofition they were ta proll hard enough to break the thread, the ribboads would cenfequently feparate, and the rings fall upen the ground: But to avoid this accident, and to finith the trick with fuccofs, you muft beg of them to approach one another, and alk each of them to give one of the ends they hold; involve them together fo as to make a knot, and render to each, that which ithe other hold. before; by this means each of them

## 

them then hold the extremities of two difforent rimbonas s Soon after the chast can. no longer be perceived, the'ringt which have nover been paffed on boch ribbonds are taken off much more eafily whin the threid is broven, and the Epectator who thought them ren!ly paffed on both, is furprized to fee them difengaged.

## Tbe Sympasbetic Lamp.

THIS lamp is put upon a table; the conjurer gives a Ifgnal to the compeer to blow in a pipe, without direeting the wind to the place where it is laid, and nevertheleft it extingajhes it immodiately, as if fome perfon had blown it ouk.

## EXPIANATION.

The candletick which bears the lamp, contains a pair of bellows in its balts, by which the wind is conveyed ftreight to the fiame through a little pipe. The compeer, under the foor, or behind the curtain, in moving the machinery, sencented upder the table, makes the bollowis blow to ato tinguith the lamp in the moment defied. .

## Tbe Little HuntJmano

IT is a little image atoout the fize of the fitise surk: In holds a bow in ies hand, with an arrow, which is Aot the very inflame the company thinks proper, and ftribes a pafteboard marked and placed on the cop of a coleman This palteboard is divided into feveral circter, which numbered, and the arrow always enters a mamber provioully chofen by ose of the fpectators.

## EXPLANATYOŃ

The action of the fpring, which puthes the arrow ie reo tained for a moment, by a pin, which the compeer takes off at pleafure, in moving the machinery, conceated instie table. When this pin is pumed, the fhaft flies rapidly toswards the paiteboard, as the cock of the piftol frilis upon. the hammer when one draws the trigger.

Is laying the automaton on the table, it mult be placed So, that the arrow points exactly at one of the numbered circles, which will be the eafier done, the lefs this is diftant
frem the mark: To caufe the number to which the dert is pointed to be chofen, forced cards muft be prefented to one of the fpectators, whe maft, acconding to art, choofe the number in queftion. This depends upon a particular addaets of the cenjurer, very difficult to be defcribed by words. However it may be faid in general to confift. frif, In putting the card pitched upon under the pack; fecondly, On keeping it always in the fame place, though one thuffles, or feems to thutfie the cards, to make people think that neither of the cards has been feen. Thirdly, To pafs this cardinto the middle of the pack, the very inftans it is prefented. Fourthly, On making feveral cards pafs before the fpeetator's hand, to caufe him to think he may aboofe either of them indifferently. Fifthly, in making thefo cards pafs rapidly, that he may not have time to take any other. In fine, in flipping dexteroully the card intended into his hand, intreating him at the Came time very civilly, in order to deceive him, to take which he pleafes; for it requires no fmall thare of impudence to perform experiments of this kind.

## Thb Ball tbrown into the little torce dored Hanfe, and iffing from citber at Command.

## EXPEARATION.

As inclined pipe, in which the ball rolls downwards, has in its Jower part, at different heighths, two holes, which are fhut by valves opened by the compeer's playing the machinery under the ftage. Thefe two holes, from tho opening and extremity of ewo other pipes, which reacli the ane to the right, the other to the left, to two different doars ${ }^{\text {s the firft pipe reaches to the middle door. If it be }}$ defired that the ball ghoald iffue from the right hand door, the compeer plays the machinery to open the firt valve which the ball meets in coming down. This valve being open, the ball naturally falls into the eecond tube, which colvives it to the right hand door.
sime it'be defired that the ball mould pafs at the left hand deor; the compeer, by means of another piece of machi. nery, opens the fecond vatve, and the ball paffing over the firf, which is Thut, neceffarily falls into the third tube, which conveys it to the door demanded. In fhort, if it be defired that the ball mould come out at the middle door, the compeer has nothing to do; becaufe the ball runs di-
rectly to it, in following the firft tube; without falling int either of the two others.

Tbeopbraftus Paracelfus; or, Tbe Pigeon killed, by tbe Tbruft of a Sword, given to its Sbade or Image.

THE name of Tbeofbrafius Paracelfus, is given to this trick, becaufe it is pretended that a man to called kifled his brother, by ftabbing his picture with a dagger. ' This anecdote, which undoubtedly is not related by cotemporary hiltorians, nor by eye witneffes, thould be confidered without doubt, as apocryphal. However, the trick in quef. tion confifts in fartening a pigeon by the neck to a double ribbond, drawn very tight, and furtained by two columns; and in cutting off the animal's head, without touching it, in the very inftant the fword is thruft at, or drawn againft the thadow of the bird.

## IXPLANATION.

The two double ribbonds to which the pigeon is faftened, conceal a very Charp little Ateel blade, bent in the form of a fickje. This blade is faftened to a filk ftring; which, paffing between the two ribbonds, and through one of the columus, reaches the bands of the compeer, undermeath the floor. The pigeon's neck thould be controuled by a kind of a' filken ring, to hinder it from advancing or re; treating. He who performs the trick, draws his fword upon the bird's chadow, and at this inftant giving a hard famp with his foot, as a fignal for the compeer to draw the ftring, caufes the fickle, which embraces the pigeon's heck, to cut off its head.'

## Tbe Magic Nofegay; Bloroing at tbe Word of Command.

## EXTLARATIONO.

Tue branches of this nofegay may be made of rolled paper, of tin, or any other matter whatever, provided they be hollow or empty. They mult, in the firft place, be pierced in feveral places, in order to apply to them little matfes of wax, reprefenting fowers and fruits. Secondly, this wax muft be enveloped with fame gummed taffety, or a yery thin gold beater's \&kin. Thirdly, thefe envelopings muft be quickly glued to the branches, 50 as to feem a part of them, or at loaft a prolongation. Fourthly, the

## 150

colours of the fowers and fruits they reprefent, mun be given them. Fifthly, the wax muft be heated, tillit melts, and runs down the branches, and handle of the noregay.

Artir this preparation, if you pump the air through the ftem of the noregay, the envelupings will of courfe contract themfelves, fo as to appear withered, \&cc. and as you blow, the wind penetrating into the ramifications of the branches, the envelopings, like little æroftatical balfoons, dilate themfelves fo as to refume their primitive and blowing appearance.
'To perform this trick you muft begin by twifting and preffing lightly all thefe envelopings, and render them almoft invifible, by making them to enter into the branches of the nofegay: then the nofegay muft be placed in a kind of a bottle, containing a little pair of bellows, and of which the moveable bottom being put in motion, by the machinery in the table, may fwell the envelopings at the moment required.

## The Ring in a Piffol; found afierwards in the Beak of a Turtit

 Dover; in a Box previoufly vijited, and fealed up.1. ONE of the company Is defired to put his ring into a piftol, loaded by one of the fpectators. An empty box is. Ghewn to the company, which is caufed to be fhut by a third perfort, who faftens it with a ribbond, which he feals with fis own arms. Then this box is put upon a table, of which the company never lofes fight; neverthelefs, after having fired the piftols, on opening the box, this fame ring is difcovered in the beak of a dove.

## EXPLANAT.BON.

Or pretence to thew how to handle the piftol, the conjurer lays hold of it, . and dextercunly withdraws the ring, in the fame manner he did the nail fpoken of before. It is carried to the compeer, who puts it direetly in the beak of a tame dove; he then extends his arm to the infide of the table, placed near the partition, in order to open the trap, mentioned before, and puts the bird into the box, of which the botiom opens fecretly. The fealed ribbond which furrounds the box, cannot hirder it from opening, becaure i is done only by one half of the bottom opening, infide infead of outide; and great care is before taken not to make a fecond turn with the ribbond, which crofing the firff, world eppofe the introduction of the dove.

We fhall not mention here the meant for maidig Tmat $x$ box, for it would not anly require a liong difcourfe to ex: plain, fance there is not a Joiner, Ebonift, or Cabinet Maker, of any intelligence, wha does not invent, or know, feveral fecrets of this kind.

Tbe Caffer that opens at Pleafure:
EXPLANATION.
THIS coffer contains a puppet, whofe carcafe forms a kind of a pudding fpring, i. e. a wirt wound up in a fpiral form; thus the liskle image, though higher than the coffer, may ftand upright therein, when it is chut ; as its body is contracted by preffure. The coffer leans upon the machiaery, which bas a communication with the bolt of the lock, and the centre of the table. When the bolt is difengaged from the ftaple, the above fipring finding no other refitance than the weight of the lid, farces it eafily to rife. This the invifible agent can always perform in concert with the conjurer.

The Watab pounded in a Mortar. .
A WATCH is borrowed from one of the companys which is immediately put into à mortar: Some moments after, another perfon is defired to break it, the wheels, the fufee, the spring, and the barsel are thewn cruithed and fractured:. Finally, in a few minutes after, the watch is returned to the lender aninjured, who acknowledges it to. be his own.

## EXPEANATIONF。

Is order to fucceed, and produce an illuation in doing this trick, care muft be taken to put into the mortar a fecond watch, whofe hands, chain and trinkets, refeinblein fome meafure thofe of the firft, which is not very difficult; becaufe we may be acquainted with the perfon who. lends the watch, or addrefs ourfelves to a perfon, whofe watch we have bad an opportunity elfewhere to examine.

Artex having replaced the fractured watch in the mortar, the company muft be amufed an inftant with a new trick, while all the pieces are gathered out of the mortar, and the firft watch placed in their room.
ne mital toidod with Pomoder and Ball, and nifobirgied are any Profan, who dexteroufly reccives the Ball on the Point of a

THE conjuror prefents one of the company with a common piftol, fome powder, and a real lead ball to load. The conjurer then, at the diftance of fix yards, defires the perfon to cock the piftol, and difcharge it at trim, who holds a knife immediately, directed to the mouth of the piftol, and thus catches the ball on the point of the faid knife.

## Explanation.

Trx fratagem in the latter end of a former experiment, is alfo ufed in the above, in which a ball is fixed inftead of a nail, excepting that the conjurer has a double-bladed knife; on one of which blades is previoully fixed a ball, which is concealed by his hand; and the moment the piftol is fired, this ball is expofed to the obfervance of the audience, as if inftantaneoully caught from the faid piftol's difcharge.

## Tbe Myfical Dial.

ON a piece of fquare pafteboard ABCD (Plate I, Fig. 3.) draw the circle EFGH, and divide it into twenty-fix equal parts, in each of whith mult be wroteo ne of the letters of the alphabet.

On the infide of this there muft be another.circle of pafteboard, ILMN, moveable tound the center $O$, and the exaremity of this mart be divided into. the fame nember of equal parts as the other. On this alfo muft be wrote the letters of the alphabet, which, however, need not be difpofed in the fame ordec. The perfon with whom you correfpond mult have a fimilar dial, and at the beginning of your lettef you muft pat any two botters that answor to each ocher when you have fired the dialis

## Exampif.

Suppofe you would write as followss:

> If you will come over to ws you ball bave a penfion, aund you may fill make a fam oppofition.

You begin with the letters Ma, which fhow how the dial is fixed; then for \&f youn you write $u n j u c$, and to for the reft, as you will fee at the botiom of the flate.

Tni fame intention may be anfwered by a ruler, the upper part of which is fixed and the lower part made to fide : but in this cafe the upper part muft contain two alphabets in fucceffion; that fome letter of that part may conftantly correfpond to one in the lower part. The divifions ftanding directly over each other in a fraight line wis be much more obvious than in the circumference of a circle. Or two ftraight piects of pafteboard regularly divided, the one containing a fingle and the other a double adphabet, would anfwer exactly the fame purpofe. In this cafe. a blank fpace may be left at each end of the fingle alphatiec, and one or two weights being placed on both the pieces will keep them fteady.

TARE two pieces of pafteboerd or fiff paper, through which you muft cut long fquares, at different diftances, as you will fee in the following example. One of thete'pieces you keep yourfelf, and the other you give to your centef pondent. When you would fend him any fecret intelfigence, you lay the paftoboard upon a paper: of the famb fize, and in the fpaces cut out. you write iwhat you wound have underfood by him only, and then fill up the intermes diate fpaces with fomewhat that makes with thofe worth a different fenfe.

Ithall be mach obliged to you, as reading ajonef engages my attention at prefent, if you will lead me any one of the oight volumes of the Spectator. I hope you will excuft ehis freedom, but for à winter's evening 1 dorit know a better entertainment. If I |fail to retarn it foon, never truft me for the time to come

A papier of the fortmay be placed four different whys, either by putting the bottom at top, or by turning it over, and by thofe means the fuperfluous words may be the miore odifly adapted to the feufe of the others.
Tnis is a very eligible cypher, as it is free from furpicion, but it will do only for fhort meflages: for if the fpaces be frequent
frequent it will be very difficult to make the conceated and obvious meanings agree together; and if the fenfe be not clear, the writing will be liable to furpicion.

## Tbe Mafical Cypber.

THE conftruction of ths cypher, is fimilar to that of the myfitical dial. The circle EFGH (Ptate II.) is to be divided into twenty fix equal parts, in each part there muft be wrote one of che letters of the alphabet: and on the inerior circle LiMM, moveable powad the center O , there is to be the fame number of divifions: the cinoumfetence of the inner circ'e muft be ruled in the manner of a mufic paper, and in each divifion there is to be placed a note, different either in figere or pofition. Latriy, within the mufical lines place the three keys, and on the outer circle, the aguwe that are conmonly wied to donote the time.
Them provide gnourcelf with a ruled paper, and place ope of the keys as fuppore that of gc re fol, aguina the timos cwoufourthe at the beginniag of the paperg wrich will inform your correefpandeat how to Ax his circule. You theo capy the motran shey mafwer to-the foveral ketcers of the wowds yeu ineond to write, in che mannar. expreffed ot the bottom

A cypher of this fort may be made more difficult to diftover by frequently changing the key, and that will not in the
 mark * or b to the note that begins a word, which will make it mert enfy to read, mint ne the fame time give thie mulic a more natural afpee. This cypher is preferthble to that of the myftical dial, as it may be encloied in a lot4ar about comman affairs, and pafs unfurpected: uniefs it mould fall inte the hands of any one who underfancs conpasifion, for he would very likely furmife, from the ould difpofition of the notee, "t that more is meant than meets the ear. ${ }^{\circ}$
 bim the Number by: robich:tbs Sume of abofo Nuabters: is divifible.
PROVIDE a fmall bag, divided into two parts : in oné part put feveral tickets, on each of which is wrote a number divifible by three; as $6,9,-15,36,63,120,2330$ gog, 86. and in the other part put tickets marked with
I55

The number 3 only. From the firft part draw a handful of tickets, and after thewing them, put them in again; then open the bag, and defire any one to take out as many tickets as he thinks proper; fhut the bag, and when yeu open it again offer the other part to another perfon, telling him to take out one ticket only: you then pronounce that ticket to contain the number by which the amount of the other numbers is divigble. For each of thofe numbers being divifible by 3, their fum alfo, mult be divitible by the fame number.

## It find the Difference between two Numbers, the greateft of wabich is unknown

TAKE as many nines as there are figures in the fmalief number, and fubtraet that fum from the number of nines. Let another perfon add that difference to the largeft num. ber, and taking away the firit figure of the amount, add it to the laft figure, and that fum will be the difference of the two numbers.

For example : Matthew, who is 22, tells Henry, who is older, that he can difcover the difference of their ages; he therefore privately deduets 22 from 99 , and the differ. ence, which is 77 , he tells Henry to add to his age, and to take away the firt figure from the amount, and add it to the laft figure, and that laft fum will be the differente ot their ages, As thus:

Then by tating amay the firntigine 1 and adding it
so the laft figure z, the fum is
Which mdded to Mmothew? 6 age
Gives the age of Henry, which is

To sell by tbe Dial of a Whatc, at what Hoin ahy Perfon ina rends to rife.
LET the perion fot the band of the dial to any hour he pleafe, and tell you what hour that is, and to the number
of that hour you add, in your mind, 12. Then tell him to count privately the number of that amount upon the dial, beginning with the next hour to that on which he propofes to cife, and counting backwards, firf reckoning the number of the hour at which he has placed the hand. An example will make this plain.

Suppose the hour at which he intends to rife be 8, and that he has placed the hand at 5 . You add 12 to 5 , and tell him to count 17 on the dial, firf reckoning 5 , the hour at which the index ftands, and counting backwards from the hour at which he intends to rife, and the number 17 will neceffarily end at 8 , which fhews that to be the hour he chofe.
That the hour at which the counting ends muft be that on which he propofed to rife, will be evident on a little reflection; for if he had begin at that hour and counted 12, he would neceffarily have come to it again; and calling the number 17, by adding 5 to it, only ferves to difguife the smatter, but can make no fort of difference in the counting.
A. Perfon cburing angr twoo, out of feveral given Numbers, and after adding them togetber, Alriking out one of tbe Figures from the Amount, to tell jou whbat tbat Figure wass.
SUCH numbers muft be offered as are divifible by 9 ; and when any two of them are added together there muft be no cypher in the amount : the figures of that amount, moreover ${ }_{2}$ muft make either 9 or 48. Such are the numbers following; 36, 63, 81, 117, 126, 162, 207, 216, 252 , $261, \ldots-306,315,360$, and 432.
These numbers muft be wrote on cards; and when any tivo of them are added together, if a figure be fruck out of the fum, it will be what would make the other figures either 9 or 78 . For examplés; if a jerfon chofe 126 and 252 , their fum will be 378 ; tremin whick he ftrikes out the 7, the remaining figures 3 and 8 arill manke 21, to which 9 müff be added to make 18 .

Truo Perfons chufing trua Numbers, and multiplying tbem togetker, ly knowing the laft Figire of the Produt to tall the otber Figures.
If the number 73 be multiplied by the numbets of the \&ellowing arithmetical progrefions, $3,6,9,12,15,18$, 21,

## 157

21, 24, and 27, their products will terminate with the nine digits in this order, $9,8,7,6,5,4,3,2,1$; the numbers being as follows, $219,438,657,876,1095,1314,1533$, 1752, 1971; therefore put into one of the divifions of the little bag, mentioned in a former Recreation, feveral tickets marked with the number 73, and in the other part of the bag the numbers $3,6,9,12,15,18,21,24$, and 27.

Then open that part of the bag where are the numbers 23, and defire a perion to take out one ticket only, then dextrouffy change the opening, and defire another perfon to take a ticket from that part, and when you have multiplied their two numbers together, by knowing the laft figure of the product you will readily tell them by the foregoing feries, what the other figures are.

## Tbe Magical Century.

IF the number in be multiplied by any one of the nine digits, the two figures of the product will always be fimilar. As follows:

Peace a parcel of counters on a table, and propofe to any one to add, alternately, a certain number of thote counters, till they amount to a hundred, but never to add more than 10 at one time. You tell him, moreover, that if you ftake firf he fhall never make the even century, but you will. In order to which you mult firft ftake 1 , and remembering the order of the above feries, $1 t, 22,33, \& c$. you conftantly add, to what he ftakes, as many as will make one more than the numbers of that feries, that is, as will make $12,23,34$, \&c. till you come to 89 , after which the other party cannot make the century himfelf, or prevent you trom making it.

Ir the other party has no knowledge of numbers, you may ftake any number firf, under 10 , provided you take care to fecure fome one of the laft terms, as $55,67,78$, \&c.

This Recreation may be performed with other numbers; and in order to fucceed, you muft divide the number to be
attained, by a number that has one digit more than what you can ftake each time, and the remainder will be the number you muft firf fake. Obferve, that to be fure of fuccefs, there muft be always a remainder. Suppofe, for example, the number to be attained is 52 , making ufe of a pack of cards inftead of counters, and that you are never to add more than 6 ; then divide 52 by the next number above 6 , that is, by 7 , and the remainder, which is 3 , will be the number you muft fake firft; and whatever the other ftakes, you muft add as much to it as will make it equal to the number by which you divided, that is, 7. Therefore if his firt flake be $x$, you muft ftake $6,8 c$. fo that your recond ftake will make the heap 10, your third fake will make it 17, and 50 on, till you come to 45 , when as he cannot fake moie than 6, you muft make the number 52 .

In this, as in the former cafe, if the other perfon have no knowledge of numbers, you may ftake any number firft under 7; or you may let him fake firf, only taking care to fecure either of the numbers 10, 17, 24, 31, \&c. after which he cannot make 52 , if you conftantly add as many to his ftake as will make it 7 .

## Tbe Confederate Counters.

PRESENT to three perfons a ring, a feal, and a fnuffbox, of which defire each perfon to chufe one, privately. The three perfons you difcriminate in your mind by the letters $A, E, 1$, and by the fame letters you diftinguifh the ring, the feal, and the box. Provide 24 counters, of which give the firft perion $A, 1$, the fecond perion $E, 2$, and the third perfon I, 3. Put the 18 remaining counters on the table, and let him that has the ring take as many counters more as he already has; him that has the feal take twice as many as he has, and him that has the box four times as many. While they are taking the counters you retire out of fight, and when they have done you return, and cafting your eye on the table, take notice how many counters are left.
The remaining counters will be either $1,2,3,5,6$, or 7 , which you are to refer to the vowels in the fyllables of the following verfe:

## 159

If there be but one counter left, the two vowels in the fyllables par fer denote that the firft perfon has the ring, to which you have affigned the letter A; the fecond perfon has the feal, to which you have affigned the letter E ; and confequently the third perfon muft have the box. In like manner, if there be fix counters remaining, the two vowel; in the fyluables $f i$ grand, thew that the firft perfon has the box, denoted by the letter I; the fecond perfon has the ring, to which the letter $A$ is affigned; and confequently the enird perfon has the feal : and fo of the reft. For the three articles can be taken only fix different ways. Now each of thefe ways neceffarily changes the number of counters to be taken by the three perfons: from whence it follows, that the counters remaining on the table will alfo be of fix different numbers; the vowels in the fyllables of the verfe ferve only to aid the memory in difcovering the manner in which the three articles are taiken.

## 2:effion.

THERE's a hundred apples and one bafker, ranged in a frait line at the diftance of a pace one from another; the queftion is, how many paces mult he walk that pretends to gather the apples one after another, and fo put them into the bafket, which is not to be moved from its place?

Ir is certain, that for the firt apple he muit make 2 paces, one to go and another to return; for the fecond 4, two to go and two to return; for the third 6, thiee to go, and fo on in this arithmetical progreffion, $2,4,6,8,10$, \&c. of which the laft and greateft term will be 200, that is, double the number of apples. To 200 the laft term, add 2 the firt term, and multiply the fum 202 by 50 , which is half the number of apples, or the number of the nultitude of the terms; and the product 10100 will be the fum of all the terms, to the number of paces demanded. And if i pace be called I yard, the diftance or fpace gone over is equal to 5 miles 3 quarters all but 20 yards.

## Several Dice being tbrown, to find the Number of Points that arife from them, after fome Operations.

SUPPOSE three dice thrown upon a table, which we thall call $\mathbf{A}, \mathrm{B}, \mathbf{C}$; bid the perfon that threw them add together all the uppermoft points, and likewife thofe underneath of any two of the three: For inftance, B and C, A being fet P 2 apart apart, without altering its face. Then bid kind throw: again the fame two dice, $\mathbf{B}$ and $\mathbf{C}$, and make him add to the foregoing fum all the points of the upper faces, and withal the luwermoft points, or thofe underneath of one of them, $\mathbf{C}$ for inftance, B being fet apart near A without changing its face, for giving a fecond fum. In fine, order him once more to throw the laft dye C , and bid him add to the foregoing fecond fum the upper points, for a third fum, which is thus to be difcovered. After the third dye C is. fet by the other two, with rut changing its poiture, do you come up, and compute all the points upon the faces of the three dice, and add to their fum as many 7 's as there are dice, that is, in this Example 21, and the fum of there is what you look for; for when a dye is will made, 7 is the, number of the points of the oppofite faces.

To exemplify the matter; fuppofe the firf throw of the three dice, $\mathrm{A}, \mathrm{B}, \mathrm{C}$, brought up $\mathbf{1}, 4,5$; fetting the firf i apart, we add to thefe 3 points $1,4,5$, the points 3 and 2 that are found under or opposite to the upper points 4 and 5 of the other two dice; and this gives me the firf fum 15 . Now fuppofe again, that the twe laft dice are thrown, atid phew uppermoft the twe points 3 and 6 , we fet that witt the three points apart, near the dye that had before, and add to the foregoing fum ( 15 ) the fe twe points 3 and 6 , and. withal $s$ the point that is found lowermoft in the dye that is fill kept in fervice, and add 6 for its face at this throw; mus we have 25 for the fecond fum. We fuppofe at laxt, cinat this third and laf dye being thrown a third time, it comes up 6, which we add to the fecond fum 25, and fed make the third fum 31. And this fum is to be found oui by adding ${ }^{2}$ to 10 the fom of the points $1,3,6$, that appear upon the faces or uppermoft fides of the three dice. then fet by.

## Iwoo Dice being tbrown, to find tbe apper Points of eacb Dyd quitbout freing tbem.

MAKE any one throw two dice upon a table, and add 5 to the double of the upper points of one of them, and add to the fum multiplied by 5 , the number of the uppermong points of the other or the fecond dye; after that, having anked him the joint fum, throw out of it 25 , the fquare of the number 5 that you gave to him, and the remainder will be a number confinting of two figures; the firfe of whichta the left reprefenting the tens, is the number of the uppa foints of the firt dye and the fecond figure to the righ

## 161

## peprefenting units, is the number of the upper points of fecond dyes

WI will fuppofe that the number of the points of the firt dye that comes up is 2, and that of the fecond 3 ; we add 5 to 4 , the double of the points of the firf, and multiply the fum 9 by the fame number 5 , the product of which operation is 45 , to which we add 3 , the number of the upper points of the fecond dye, and fo make it 48 ; then we throw out of it 25 , the fquare of the fame number 5 ,* and the remainder is 23 , the firft figure of which 2 reprefents the number of points of the firlt dye, and the fecond 3 the number of points of the fecond dye.

Another way of anfwering this problem, is this: Afk him who threw the dice, what the points underneath make together, and how much the under points of one furpals thofe of the other; and if this excefs is, for example, 1 , and the fum of all the lower points is 9 , add thefe two numbers I and 9 , and fubtract the fum 10 from 14 ; then take 2. the half of the remainder 4 , for the number of the upper points of one of the dice; and as for the other dye, inftead of adding the excefs 1 to the fum 9 , fubtract it out of 9 , and take the remainder 8 out of 14,6 is the remainder, the half of which, 3 , is the number of the upper points of the fecand dye.

A third way is this: Bid the perfon who threw the dice, add together the upper points, and tell you their fum, which we here fuppore to be 5 ; then give him orders to multiply the number of the upper points of one dye by the number of upper points of the other dye, and to acquaint you in like manner with their product, which we here fuppofe to be 6: Now having this product 6, and the pre. ceding fum 5, fquare 5, and from its fquare 25 fubtract 24. the quadruple of the product 6, and the remainder is 1 : Then take the fquare root of the remainder, which in this cafe is 1 , and by adding it to and fubtracting it from the foregoing fum 5 , you have there two numbers, 6, 4, the halfs of which 3,2 , are the numbers of the upper points of each dye.

## Upon tbe Tbrow of tbirec Dice, to find the upper Points of eacb Dyc; witbout fecing tbew.

ORDER the perfon that has thrown the dice, to place them near one another in a ftraight line, and akk. him the fum of the lowermoft points of the firtt and fecond dye ${ }_{2}$.

[^11]I 3
which

## $=16.24=0$

Wh we here fuppofe to be 9\%. then Makim thenfim of the points underneath of the fecond and third, which vive bere: fuppofe to be 5 ; and at laft the under points of the firft and third, which we pat 6 . Now, having thefe numbers given you, $9,5,6$, fubtract the fecond number 5 from 15, the fum of the firft and third, 9 and 6 ; and the remainder 10 from 14; fo there remains 4 , the half of which ${ }^{2} 2$ is the number of the upper points of the firft dye. To find the number of the upper points of the fecond, fubtract the third number 6 from 14, the fum of the two firt 9 and 5 ; and the remainder 8 from 14 again; fo you have a fecond remainder 6, the half of which, 3 , is the number de-: manded. At laft for the third dye, fubtract the firft num ber 9 from 11, the fum of the fecund and third, 5,6 , and the remainder 2 from 14 ; fo you have a fecond remaindey 12, the half of which, 6 , is the number of the upper points of the third dye.

## To fund a Number theugbt of by awotber.

ORDER the perfon to take $I$ from the number thought upon, and after dou'sling the remainder, to take 1 from it, and add to the laft remainder, the number thought upon. Then afk him what the fum is, and after adding 3 to it, take the third part of it for the number thought of. For example, Let 5 be the number, take 1 from it, there remains 4 ; then take 1 from 8 , the double of that 4 , and the remainder is 7 , which becomes 12, by the addition of 5, the pumber thought of; and that 12 , by the addition of 3 ; makes 15, the third part of which, 5 , is the number thought of.

Another way is this: After taking I from the number thought of, let the remainder be tripled; then let him take 1 from that triple, and add to the remainder the number thought of. At laft, ank him the number arifing from that addition, and if you add 4 to it, you will find the fourth part of the fum to be the numberthought of. Thus 5, bating i, makes 4, that tripled makes 12, which lofing 1 , finks to 11 , and enlarged by the acceffion of 5 ; comes to 162 which, by the addition of 4 is 20 , and the fourth part of that, vix. 5 , is the number thought of. .

A curious and agrecable Wager, wbich you are fure of winning.

ADDRESS fome perfon in the company, and fay, Madam, of Sir, have you a watch, a ring; an etwee, or any other a trinket?
trinket? Boging by examining what has been given you, int order to form an idea of its value, fince you are to lay your bet confiderably under the intrinfic value of the trinket, to akoid being duped.
. Suppose what has been offered to you is a watch, you are to propofe a guinea as a wager againft it : faying to the lady or gentleman, I lay a guinea that you do not fay three thenes, my watch: when it is put on the table, and your wager is accepted, afk the perfon, prefenting him his watch, what is that ; he will not fail to anfwer, it is my match.

Present him afterwards another object, making him the fame queftion: fuppofe the object you prefent to be a pen, a piece of paper, or any other thing. If the perfon names. the object you prefent, he has loft; if on the contrary, he is on his guard, and antwers, my watch, he muft cer-: tainly win; but if I lofe, what will you give mes the pora: fon, being always on his guard, will anfwer again, my watch : then, appealing to his own words, you will take the wate hand leave him the ftike.

> Metbod of MKeting Steel, and ro fee it liquify.

MAKE a piece of fteel quite red in the fire; then bolding if with a pair of pinchers or tongs, take in the other hand a ftick of brimftone, and touch the piece of fteel with it; immediately after their contact, you will fee the fteel melt. and drop like a Kiquid.

## To pull 'off any Perfon's Sbirt, witbout yndre/fing Borm, or bav. ing Occafion for a Confederate.

THE means of performing this trick are the following: only obferving that the cloaths of the perfon whofe thirt is ta be pulled off be wide and ealy.

Begin by making him pull off his ftock and unbuttoning Fins fhirt at the neck and fleeves, afterwards tye a little fring in the button-hole of the left fleeve; then, paffing your hand behind his back; pull the fhirt out of his breeches, and flide it over his head; then pulling it out before in the fame manner, you will leave it on his fomach: after that, go to the right hand, and pull the neeve down, fo as ta have it all out of the arm : the fhirt being then all of a heap, - as well in the right fleeve as before the ftomach, you are to make ufe of the little ftring faftemed to the button-bote of the

Ieft feeve, to get back the feeve that muft have Aipt up; and to pull the whole thirt out that way.

To hide your way of operating from the perfon whom you unthirt, and from tae atifembly, you may cover his head witi a lady's cloak, holding a corner of it in your teeth.

In order to be more at your eafe, you may mount on 2 chair, and do the whole operation under the cloak.

## How to diffofe two little Figures, fo tbat one fall ligbt a Candie, and the otber put it out.

TAKE two little figures of wood or clay, or any other: marerials you pleafe, only taking care that there is a little hole at tie inourh of each. -Put in the mouth of one a few grails of bruifell ennpowder, and a little bit of photphorus in the mouth of t're other; taking care that thefe preparations are made befurehanc.

Then take a lighted wax candle and prefent it to the: mouth of the figure with the gunp iwder, which aking fire will put the candl- out: then prefent your candle, having the fin ff ftill hot, to the other figure; it will light again imemediately, by means of the phofphorus.

You mav propofe the fame effect to be produced by two Ggures drawn on a wall with a pencil or coal, by ajplying. with a little farch or w.fer, ai w grais:s of truifed gunpowder to $t$ e meuih of oiie, and a bit of phofphor us to the mouth of the oth:r.

## Oftical Illufons.

ON the bottom of the veffel A B C D, (PI. III. Fig. 3.) place three $p$ eces of noney, as a thilling, a half-crown, and crown; tiv: firft at $E$, the fec. nd at $F$, and the laft at G. Then place a peifon at $H$, wnere he can fee ro tarther into the velfel than 1: and tell him that by pouring waterinto the veffel 0 ous will make him fee tarte different pisces of money; bidding hiin obierve calcfully whether any. money goes in with the water.

You muft either pour it in very gently, or contrive to fix the pieces, that they may r.ot move out of their placea Dy the moticn of the water.

Wuss the water comes up to $K$, the piece at $E$ will become

become viritie ; wher it omes up to L , the pioces at E and F will appear; and when it rifes to $M$, all the three pieces will be vifible.

From what has been faid of the refraction of light,* the caufe of this phenomenon will be evident: for while the veffel is empty, the ray HI will naturally proceed in a fraight line : but in proportion as it becomes immerfed in water, it will be neceffarily refracted into the feveral direc. tions NE, OF, PG, and confequently the feveral pieces muft become vifble.

## Optical Augmentation.

TAKE a large drinking glafs of a conical figure, that is, fmall at bottom and wide at top ; in which put a fhilling, and fill the glafs about half full with water: then place 2 plate on the top of it, and turn it quickly over, that the water may not get out. You will then fee on the plate, a piece of the fare:of a balf crown; and fomewhat higher up, another piece of the fize of a milling.

THis phenomenon arifes from feeing the piece through the conical furface of the water at the fide of the glars, and through the flat furface at the top of the water, at the fame thee: for the conical furface dilates the rays and makes the ploce appear larger; but by the flat furface the rays are only rofraded, by which the piece is feen higher up in the glafs, but Aill of itt naturat fize. That this is the caufe will be farther evident by filling the glafs with water, for as the milling cannot be then feen from the top, the mrge piece; only will be vifible.

Astrit you have amufed yourfelf with this remarkable phenomenon, you may give the glafs to a fervant, telling. him to throw out the water, and take care of the two pieces F mopey; and if he have no forpicion of the deception, he widl be mot a little furprifed to find one piece only.

## Optical fubtraltion.

AGAINST the wainfcot of a room fix three fmall piecen of paper, as A, B, C, (Pl. III. Fig. 2.) at the hcight of your eye; and placing yourielf directly before them, at a few yards diftance, thut your right eye and look at them with the left; when you will fee only two of thofe papers: fuppofe $A$ and $B$; but altering the pofition of your eye you.
will then fee the third and one of the firt, fuppore A; and by altering your pofition a fecond time, you will fee B and C; but never all three of them together.

Thi caufe of this phenomenon is, that one of the three pencils of rays that come from thefe objects, falls on the op. tic nerve at D ; whereas to produce diftinct vifion it is necelfary that the rays of light fall on fome part of the retina $E, F, G, H$. We fee by this experiment, one of the ufes of baving two eyes; for he that has one only, can never fee three objects placed in this pofition, nor all the parts of one object of the fame extent, without altering the fituation of his cye.

## Tbe Camera Obfcura, or dark Cbamber.

WE thall here give a fhort defcription of this optical invention : for though it is very common, it is alfo very pleafing, and though almoft every one has feen it, every one knows not how to conftruct it.

Make a circular hole in the mutter of a window, from whence there is a profpect of the fields, or any other objeft not too near; and in this hole place a convex glafs, either double or fingle, whofe, focus is at the diftance of five or fix feet. The diftance fould not be lefs than three feet; for if it be, the images will be tio fmall, and there will net be fufficient room for the fpectators to ftand $\mathbf{c}$ nnveniently. On the other hand the focus fhould never be more than 15 or 20 feet, for then the images will be obfcure, and the colouring faint. The beft diftance is from 6 to twelve feet. Take care that no light enter the ro m but by this glafs : at a diftance from it, equal to that of its focus, place a pafteboards covered with the whiteft paper; this pap-r mould have a. black border, to prevent any of the fide rays tiom difturb. ing the picture; let it be two feet and a half long, and eighteen or twenry inches high: bend the length of it inwards, to the form of part of a circle, whote diameter is equal to double the tocal diftance of the glafs. Then fix it on a frame of the fame figure, and put it on a moveable foot; that it may be eafily fixed at that exact diftance from the clafs where the objects paint themfeives to the greateft perfection. When it is thus placed, all the objects that are in the front of the wind we will be painted on the paper; in an inverted pofition, this inverted pofition of the images may be deemed an imperfection, but it is eafnly remedied: for if you ftand above the board on which they are received,

## 167

and look down on it, they will appear in their natural po'frtion : or if you ftand before it; and placing a common mirror againft your biceaft in an oblique direction, lonk down in it, jou will there fee the images erect, and they will receive an additional luftre from the reflection of the glaf; or place two lenfes, in a tube that draws out; or, lafty, if you place a large concave mirror at a proper diftance before the piature, it will appear before the mirror, in the air, and in an erect pofition, with the greateft regularity and in the moft nataral colours.

Ir you place a moveable mirror without the window, by turning it more or lefs, you will have on the paper all the objects that are on each fide of the window.

THERE is another method of making the dark chamber, which is by a fcioptric ball, that is, a ball of wood, through which a hole is made, in which hole a lens is fixed: this ball is placed in a wooden frame, in which it turns freely round. The frame is fixed to the hole in the hutter, and the ball, by turning about, anfwers, in great part, the ure of the mirror on the outfide of the window If the hole in the window be no bigger than a pea, the objects will be reprefented without any lens.
Ir inftead of placing the mirror without the window you place it in the room, and above the hole (whicn muft then be made near the top of the fhuter), you may receive the reprefentation on a paper placed horizontally on a table; and draw at your leifure, all the objects that are there painted.

Nothing can be more pleafing than this recreation, efpecially when the objeets are ftronly enlightened by the fun: and not only land pro'pects, but a fea-port, when the water is fomewhat agitated, or at the fetting of the fun, prefents a very delightful appearance.

This reprefentation affords the moft perfect model for painters, as well for the tone of colours, as that degradation of hades, occafioned by the interpofition of the air, which has been fo juftly expreffed by fome modern painters.
Ir is neceffary that the paper have a circular form, for otherwife, when the center ol it was in the focus of the glafs, the two fi es would be beyond it, and confequently the image weul b: confured. It the frame were centrived of a $f_{i}$ heric. fi. ue, and the glats were in its center, the regrefeniation whuld be full more accurate. If the ojject

Object without be at the dißance of twice the fecal length of the glafs, the image in the room will be of the fame magnitude with the object.

The lights, thades, and colours in the camera obrcurá appear not only juft, but, by the images being reduced to a smaller compars, much fronger than in nature: add to this, that thefe pittures exceed all others by reprefenting the motion of the feveral objects : thas we fee the animals walk, run, or fly, the clouds float in the air, the leaves quiver, the waves roh, \&c. and all in frict conformity to the laws of nature. The beft frtuation for a dark chamber is directly north, and the beit time of the day is noon.

## To fow the Spots on the Sun's dif, by its Image in the Cemere Obfiara.

PUT the object-glafs of a ten or twelve foot telefcope into the fcioptric ball and turn it about till it be directly oppofite the fun. When the fun is directly oppofite the hole the lens will itfelf be fufficient: or by means of the mirror on the outfide of the window, as in the laft Recreation, the lens will anfwer the purpofe at any time. Then place the pafteboard, mentioned in the laft Recreation, in the focus of the lens, and you will fee a clear bright irnage of the fan, of about an inch diameter, in which the fpots on the fun's furface will be exactly deferibed.

As this image is too bright to be feen with pleafare by the naked eye, you may view it through a lens, whofe focus is 6 or 8 inches diftant, which at the fame time that it prevents the light from being offenfive, will by magnifying both the image and the fpots, make them appear to greater advantage.

To magnify frall Oljects by means of the Sun's rays let it into a dark Cbamber.

LET the rays of li ht that pafs through the lens in the Thutte be thrown o a large concave mil ror, property fixed in a trame. II en take a dip, or $t$ in plate ot glats. and flick in aty fmall object on it, hold it in the incident rays, at a lit 1. mole than $t \in$ tocal diftarce fiom the mirror, and you wal fee, on tie opt ofite $w$ all anoidft therefitéted 1 ays, the inage of that bject, very large, and extremely clear and breght. I his experiment itwert tails to give tie fpectator tixe hugheft fatistaction.

## 169

## Tbe Magic Lantern.

THIS very remarkable machine, which is now known over all the world, caufed great aftonifhment at its origin. It is fill beheld with pleafing admiration, and the fpectator very frequently contents himfelf with wondering at its effects, without endeavouring to inveftigate their caufe. The invention of this ingenious illufion is attributed to the celebrated P. Kırcher, who has publified, on various fciences, works equally learned, curious, and entertaining.

Thz defign of this machine is to reprefent at large, on 2 cloth or board, placed in the dark, the images of fmall objects, painted with tranfparent colours on plates of glars.

Its conftruction is as follows. Let ABCD (Pl. III. Fig. 3.) be a tin box, eight inches high, ten long, and fix wide (or any other fimilar dimenfions.) At the top muft be a funnel $E$, of four inches in diameter, with a cover $F$, which, at the fame time that it gives a paffage to the fmoke, prevents the light from coming out of the box.
$O_{N}$ the gide $A C$ there is a door, by which is adjufted a concave mirror G, of metal or tin, and of five inches diameter; being part of a fphere whofe diameter is eighteen inches, this mirror muft be fo difpofed that it may be purhed forward or drawn back by means of the handle $H$, that enters the tin tube 1 , which is foldered to the door.

In the middle of the box muft be placed a low tin lamp K , which is to be moveable. It Mhould have three or four lights, that muft be at the height of the focus of the mirror G.

Is the fide BD, and oppofite to the mirror, there muft be an aperture of three inches wide and two inches and a half high, in which is to be fixed a convex glafs L, of the fame dimenfion. I prefer this form for the glafs (fays M. Guyot) that the picture thrown upon the cloth may have the fame form, which is much preferable to a circular aperture, through which the figures can never be completely feen but when they are at the center of the glafs. It $i$ i, furprifing that th's imperfection has been fuffered to continue fo long, when it is fo eafily remedied. The focus muft be from four inches and a half to five inches, fo that the lamp may be placed both in its focus, and in that of the concave mirror.

On the fame fide place a piece of tin MN, of four inches

## 170

and a half fquare; having an opening at the fides of about four inches and a haff ligh, and a quarter of an inch wide. Through this opening or groove are to pafs the glaffes, on which are painted the figures that are to be feen on the cloth. In this tin piece, and oppofite the glais $L$, let there be an aperture of three inches and a quarter long, and two inches and 3 quarter high, to which munt be adjufted a tubie (), of the fame form, and fix inches long. This tute is to be fixed into the piece MN. Another tube, fix inches long, and moveable, muft enter that juft mentioned, in which muft be placed two convex tenfes, $P$ and $Q:$ that of $\mathbf{P}$ may have a focus of about three inches, and that of $\mathbf{O}$, which is to be placed at the extremity of the tuhe, one of ten or twelve irches. The diftaice beiween thefe glaffes is to be regulated by their 'oci. Between the ele glaffes there moft be placed a paftetioard $R$, in which is an aperture of an inch wide, and 4-5 ths of an moch high. By placing this tube farther in or out of the other, the images on the cloth svill appear larger or fmaller.

From what has been faid of the preceding machines, the confluciaion of this will be eafily underftcod. The foci of the concave mirror, and the lens L , metting in the flame of the lamp, they togetier throw a tirong 'ight on the figures painted on the glaffe that pafs through the gioove MN, and by that means renc'er their col:urs diftinet on the eloth The rays ficm thole glaffes paffing through the letis $P$ are collected by the ajerture in the paftelcard $R$, and

- conveyed to the lens $Q$, ty which they are thrown on the cloth.

The lantern being thus adiufted, you muft provide plates of clear glafs, of twelve or fitteen inches long, and three inches wide, which are to be placed in thin frames, that they may pals freely through the groove $M N$, after being painted in the manner we fhall now defcribe.

## Metbod of Painting tke Glofles for the Lantern.

Deaw on a paper the fubject you irtend to paint, and fix it at each end to the glars. Provide a varnim with which you have mixed tome black paint, and with: fire pencil draw on the other f.de of the glais, vith very light toucl:es, the defign drawn on the paper. If getiare cefirous of making the painit: :: s ferfect as peffible, jcu thoulc draw fome of the outhinc: in their preper colours, previded they are the ftrongef tints of thofe colours that are ufed. When the

## 171

outlines are dry, you colour the figures with their propes tints or desradat ons; and thoie colours will not peel off, if you temper them with a ftrong white varnifh All thofe coloure that are not terreftrial, as pruffian blue, carmine, calcined verdizris, \&c. may be ufed to advantage, when tempered with a proper varnifh. You are then to Male them with black nixed with the fams varni!h, or white biftre, as you find convenient. You nay alfo leave ftrons lizatsian fo ne parti, without any colours, in order to prodace a more ftriking effect Obfarve, in priticular, not io ufe more than fo ir or five colours, fuch as blu:, red, green and yellow, Yoa foould employ ho vever a great variety of tints, to give your painting a more natural air, without which tiey will reprefent vulgar objects, which are by no means the more pleafing becaufe they are gaudy.

When the lampin this lantern is lighted, and by diawing out the tube to a proper leingth, the figures painted on the glafs appear bright and well defined, the fpeetator cannot fail of being highly entertained by the fucceffisu of na tural or protesque figures that are painted on the glaffs.

This piece of optios may be rendered much more amur. fing, and at the fame time more maryellous, by preparing figures to which different natural motions may be givent There are in the Philofophical Effays of M. Mulchenbroek, different methods of perfarnaing at thero various movements" by Gme mechanical contrivances that are not difficult ta exegute, which overy one may parform according to his ask tafte i either by mopements in the figures themfelves, ar by painting the Subjedt $\rho$ ' two glaffes, and paffing them at the fame time through the groove,

## Hozy to rub out tiveenty Cbalhs at five Timẹs rubbivg aut, every Time an odd one.

TRICKS of this kind are mare generally the diverfion of low mechanics, who, have ftudied what is trifling, more than what is ufeful, fancy themfelves conjurers, and not a little proud, often affront and infult thofe of fuperior knowledge, always ready to lay wagers, when in their cups, offer five to one, ten to one, or any odds that come up. permof, that none can do the like but themfelves; yet fametimes thefe cunaing men find themfelves at a lofs, when they meet with a perfon who is equally knowing, who makes their pockets pay for their boasting. From
thefe fort of wagers arife quarrels; for if one is not equal to another in point of calculation, he thinks he may be in point of manhood; a challenge is given and accepted; and the combatants, fierce as bull-dogs, begin throwing their athletic arms at each other, the fones are rammed deeper with their falls, the noify attendants make confufion athamed with their vociferous clamouring. "Well ftruck Dick, that was a nice one Tom, at him again, under his ribs, darken his day-lights, mind your points, find out his bread-bafket, tip him Slack's favourite, give him a crofsbuttock, and come Ben Rofle over his jaw-bone. Huzza! huzza! huzza!" Then the valiant heroes, encouraged by their friends, the tatble, bruife one another's flefh, and at laft, the victor, perhaps, gains fur his triumph, a black eye, bloody nofe, and diflocated jaw, and all his comfort is, that his antagonift has the fame fort of honour doubled. After all this, a few tankards of porter make them friends; but their wives and families are the greatert fufferers, who are at home pining in rags and want, while their hufbands are lofing their time and abufing themfelves.

Thy following trick is one of thofe moft in practiee among them.

To do this trick you muft make twenty chalks or lons. ftrokes upon a board, as in the margin.

Then begin and count backwards, as 20, 19, I18, 17, rub out thefe four, then proceed faying, 2$16,15,14,13$, rub out thefe four, and begin again, 12, 11, 10, 9 , and rub out thefe, and proceed again, 8, 7, 6, 5, and rub out, thefe, and laftly fay, 4, 3, 2,1 ; when thefe four are rubbed out, the whole twenty are rubbed out at five times, and every time an odd one, that is, the 17th, 13 th, 9 th, 5 th and 1 ft.

This is a trick, which, if once feen, may be eafily retained; and the only puzzle at firft, is it not occuring immediately to the mind, to begin to rub them out backwards. It is as fimple as any thing poffibly can be, and might do very well when people are focial and good-humoured together; but when they are fumed with liquor, and fractious by nature, I advife all thofe who love peace and quietnefs, not to be curious to $3=$综际 , 1011 -12$13=$ 1415 16 11 18-1520 know what they cannot directly comprehend, as one word brings on another, and the confequences may be what is difplayed in the preface to this trick.

## $\geq 173$

To cut a Looking.glafs, or Piece of Cbryfal, let it be ever fa tbick, wuitbout the Hc!p of a Diamond, in the fame Sbape as the Mark of the Drawing made on it wuith Ink.

THIS remarkable operation unites utility with amufe. ment. For being in the country, or in a place where there is no glazier nor glassman to be had, the following means will anfwer the purpofe without their help.

Takr a bit of a walnut-tree, about the thicknefs of a candle, and cut one of its ends to a point; put that end in the fire, and let it burn till it is quite red. While the ftick is burning, dravy on the glafs or chryftal with ink, the defig. or outline of the form in which you mean to cut it out. Then take a file or bit of glafs and feratch a lietle the phict where you mean to begin your fection; then take the wood red hot from the fire, and lay the point of it about the twentieth part of an inch, or thicknefs of a guinea, from the marked place; taking care to blow always on that point in order to keep it red; following the drawing traced on the glafs, leaving, as before, about the twentieth part of an inch interval every time that you prefent your piece of wood, which you mutid take care to blow often.

Afrer having followed exactly the outlines of your drawing, to feparate the two pieces thus cut, you need only pull them up and down, and they will divide.

> To cbange tbe colour of a Rofe.

NOTHING more is wanting to change the colour of a rofe, whether it is on its fta!k or not, but to burn fome fulphus under it; which will make it tum white, and it will not regain its primitive colour in lefs than two hours.

## Blind Abbefs and ber Nuns.

A BLIDD abbefs, vifiting her nung, who were equally diftributed in eight cells built at the four corners of a fquare, and in the middle of each fide; finds an equal number of perfons in each row or fide containing three cells: At a ficond vifit, the finds the fame number of perfons in each row, though their number was enlarged by the acceffion of four men : And coming a third time, the fill finds the fame number of perfors in each row, though the four men were then gone, and had carried each of them a nun with them.

TO refolve the furl cafe, when the four men were got iqto the cells, we muif conceive it fo, that there was a man in each corner cell, and that two nuns removed from

## 174

thence to each of the middle cells: At

| 3 | 3 | 3 |
| :--- | :--- | :--- |
| 3 |  | 3 |
| 3 | 3 | 3 | this rate, each corner cell contained one perfon lefs than before; and each middle cell two more than before. Suppofe then, that at the firft vifitation, each cell contained 3 nuns; and fo , that there were nine in each row, and twenty-four in all; at the fecond vifit, which is the firt cafe in queftion, there muft have been five nuns in each middle cell, and two perfons, vix. a man and a

vifit, and each nun in each corner cell; which ftill makes nine perfons in each row.

To account for the fecond cafe, when the four men were gone, and four nuns with them; each corner cell muft have contained one nun more than at the firft middle cell two fewer: And thus, according to the fuppofition laid down, each corner cell contained four nuns, and there was only one in each middle cell: which ftill make nine in a row, though the whole number was but twenty.

## To find the Number remaining after fome Operations witbout afking any Queftions.

BID a perfon add what number you will to the number thought of, and multiply the fum by the number thought of; for if you make him fubtract the fquare of the number thought of from the product, and tell you the remainder, you have nothing to do but to divide the remainder by the number you gave him to add before; for the quotient is the number thought of. Thus 4 added to 5 (the number thought of) makes 9, which being multiplied by 5 , makes 45 ; from which take 25 , the fquare of the number thought of, and there remains 20 , which being divided by 4 , you have 5 in the quotient.

Or elfe, bid the Perfon that thinks, take a certain leffer number from the number thought of, and multiply the re. mainder by the fame number thought of ; for if you make him take the fquare of the number thought of from the product, and tell the remainder; by dividing the remainder

By the number you ordered to be taken from the number thought of, you have the number thought of in the quotient.

Bur of all the ways of finding out a number thought of, the following is certainly the eafreft; make him take from the number thought of what number you pitch upon that is lefs than it, and fet the remainder apart ; then make him add the lame number to the number thought upon, and the preceding remainder to the fum, for a fecond fum ; which he is to difcover to you, and the half of that fum is the number thought of. Thus 5 being thought of, and 3 taken from it, the remainder is 2 ; and the fame number 3 added to 5 makes 8, and that, with the preceding remainder, 10 , the half of which, 5 , is the number thought of.

## To find the Nusmber thougbt of by anotber, witbout afoing any Quefions.

BID the other Perfon add to the number thought of its half if it be even, or its greatef half if it be odd; and to that fum its half or greateft half, according as it is even or odd, for the fecond fum, from which bid him fubtract the double of the number thought of, and take the half of the remainder, or its least half, if the remainder be odd; and thus he is to continue to take half after half, till he comes to an Unit. In the mean time you are to obferve how many fubdivifions he makes, retaining in your mind for the firf divifion 2, for the fecond 4, for the third 8, and fo on in a double proportion remembering ftill to add 2 every time he took the leaft half; and that when he can make no fubdivifion, you are to retain only 1. By this means you have the number that he has halved fo ofien, and the quadruple of that number is the number thought of, if fo be he was not obliged to take the greateft half at the beginning, which can only happen when the number thought of is evenly even, or divifible by 4 ; in other cafes; if the greateft half was taken at the firt divifion, you muit fubtraet 3 from that quadruple; if the greatert half was taken only at the fecond divifion, you fubtra\&t but $2: 2$ and if he took the greateft half at each of the two divifions, you are to fubtract 5 from the quadruple, and the remainder is the number thought of.

For example, let 4 be the number thought of, which by the addition of its half, 2, becomes 6, and that, by the addition of its half 3 , is 9 ; from which, 8, the douhle of the number thought of, being fubtracted, the rej
mainder

## 176

mainder is 1 , that admits of no divifion; and for this; $r$ rafon you netain only in your mind, the quadruple of which, 4 , is the number thought of.

AGAIN; let 7 be the number thought of ; this beins odd, ehe greateft hale of it, 4, added to it mages in, which is odd again; and fo to the greater half of It added to in, makes 17, from which we take 14 , the double of the number thought of, and fo the remainder if 3, the leaft half of which is 1 , than admits of no further divilion. Here there being but one fub-divifion, we recain 2,y and to that and if for the leaft hadf taken, fo we have 3 , the quadrupla pf which is 8.2. But becaufe the greateq mpiety was takon both in the fire and fecond divifion, we murt fubtract 5 from 12, and the remainder 7 is the number thought of.

## To find out Two Numbers tbougbt of by any one.

BID a perfon multiply the two numbers 5,3 , together ; and then multiply the fum of two numbers 8 by the number you want to find, whecher the greater or leffer, and fubtract the product of the two numbers 15 from that produet (which is 40 , if you want the greater, and 24 , if you look for the leffer number) and tell you the remainder, 25 , or 9 , the fquare roots of which fatisfies the demand:

WHEN the loaft of the two numbers doas not exceed $\rho$, it is eafier to find them out after this manuer: Let $x$ be added to the triple of the greateft (of the two numbers thought Qf, the triple of that fum, and the total fum difcovered; from which you are to take off 3 , and then the right-hand fogure is the leaft, and the leftehand figune the greateat number thought of. Thus 3 times 5 , more, 1, and the triple of that 48 added to 8 , the fum of the two numbers, makes 56 , which loofing 3 , is $58 ; 3$ the rightathand figuse being the leaft, and 5 on the left the greateft number thought of. Or to 9 , times the greateft number add the fum of them both then, is the left -hand figure the greateft and the right hand one the lopitt $;$ thus. 9 times 50 is 45 , to which add 8, the fumis 53 .

## Strange Tricks perfarmed by Eleatricity.

AMONG the wonderful difcoveries of human nature, civere is hardiy any thet rank higher than electricity,

THis, phenomenon, like many others, was found out merely by accident; yet has proyed not ouly a fource for various
various experiments, but likewife extremely beneficial to mankind.

The great Dr. Franklin has improved more in this branch of knowledge than any other perfon; he even contrived to bring lightning from tlie clouds by means of conductors; thefe conductors are of great fervice, when fixed to churches: and other public edifices, to preferve them from the dreadful effects of the rapidnefs of elemental fire.

Whin electricity is made ufe of phyfically, it is of great utility, and has been known to relieve, and fometimes en. tirely cure, various diforders; it is very ferviceable in the rheumatifm, and other chronic diforders.

On e circumftance I fhall mention, which I received* from a gentleman who has been dead fome years, but whofe character as an artift, and an ingenious perfon, will be a long time remembered; 1 mean Mr. Benjamin Rackftrow, of Fleet-Atreet.

Hs told me, that having fome company one day to fee his mufeum, and his electrical experiments, they were ra-. ther fearful of undergoing the thock; when a perfon who: was much given to inebriety, being in the room, and rather. intoxicated, voluntarily offered to let the experiment be tried on him. This was agreed to, upon which he received it pretty fmartly three or four times, and thought no moreabout it at that time. A few days afterwards, he had ocsafion to go to Chichefter, in Suffex, and being rather low. in circumftances, was obliged to walk.

This man had been affected for many years with a rupture, which was extremely troublefome, but on his journey. he had not the leaft fymptoms of it ; on which he wrote $a_{1}$ letter to Mr. Rackftrow, informing him of this agreeable eircumftance, and imputing it entirely to his receiving the frock from his electrical apparatus; the man lived to confirm this by word of mouth; and what is really extraordinary the rupture never returned, which is fufficient to eftablifh its phyfical confequence. It is of farther fervice in palfies and contractions; and is performed by fparks, drawn by friction from tue machine.

Irs real ufe being thus eftablifhed, we may now, without offending, be a little merry with other circumftances, which have, and may happen again, by means of electricity.

Some ladies and gentlemen coning to Mr. Rackftrow's, brought with them a negro fervant, who had not been long in Encland. After they had feen his natural and artificial curiofitios, they defired to fee fome of his electricat. experimgnts, and gave him a hint to pliy a trick or ${ }^{\circ}$ two upon poor mungo. Mungo was not a little fura. prifed at the thocks he received, but could not guefs from whence they came; but whien the room was darkened, and fire made to comz out of his finger ends, he roared out like a mad hill, crving, the dovil! the devil! and in endenvo:aring to get out of the rooms, overfat the fkeleton of a Rhinoceros, run his head againft a cafe full of butterflies, and broke all to pieces a fine buit of the Marquis of Granby; and having once more gained day-light, made a fudden fpring into the fireet, and run immediately hoine; to the no fmall diverfin of his mafter and famity:
 mended to be electrified. She accordingly went to a pper. feffor in that way, who afked her if fhe could bear a pretty hard fhock ? 0 yes, 8 ir, faid the, as hard sit you pleafe, and as often as you pleafe, I am very fond of being foocked; the man, by this, fuppofed the had before undergone the operation, and was not fparing to give her, what he flemed fo well to underftand; but alas! he wound up his inftument too high; fo that he not only overfet his patient, but aftually conveyed har into a celiar, where they fold oxcheek, and peas-foup; down went the framing pan fuh. of favory brath, and off few her monument of a cap int the other boiling cauldron.

The cook reddened like a heated poker, the cuftemers rofe from their feate, and confúfion took place in this fubterraneous abode.

Aci culinary bufinefs was at and for the prefent i the eleotrical doftor came running to the affiftance of his pationt ; but as foon as the caufe of the difalter was explained, the occupier of the place dechared the damagas. Thould be made good; her pas of leg of boef was entirely left : ber peas-foup fooiled by the powder and pomatum of the lady's head-drefs; the doctor was the caufe of a! 1 , and he foould pay for all; but he declared he would fooner than pay a farthing, electrify the houfe till it fell about their cars.

A $\quad$ laft the lady, however, having adjufted herfelf in the beft manner the could, gave the good waman a crown, and

## 179

fo compromifed the matter; however, it cured her of her tympany, for he never went to the doctor afterwards.
Many are the tricks played by means of an electrifying machine; a perfon in the city had one in his Mop, which was not feen by the paffers by; he hung at the door an old fteelyard, which, from its make, feemed to be very ancient; this attracted the notice of many, who no fooner went to examine it, than they received the fhock: thofe who knew what it was only fimiled, and went on; others tared and could not guefs from whence it came.

A DRONKEN pniter being called one day, and anked what he wothd trave to carry the Iteelyard to a certain place, went to examine it, but he no fooner touched it than he felt a blow ; and turning round, with an oath, decl.red if he knew who it was, he would pay them well for their impudence. He then returned to freak about his job, and received another thock, and another after that, till, irritated by the fuppofed affaults, given by be could not tell who, he ftripped in buff to fight all that came in his way, till the got a mob of boys and dogs at his heels, and was glad to get away at amy rate.

Such tricks are not recommerded as proper to be practifed, for they are reatly dangerous: a frange perfon might on finding the truth, break the viindows, or keep it in his mind, and do the electrifying getitleman an injury, which might make him repent of his experiments.

Smaie electrical machines are often introduced in com:pany, and create not only mirth, but pro uce real rational amufement; fuch can aever be idiagreeable, but muft give fatisfaction to all who have any idea of philofophical knowledge, and wifh to improve their minds by mathematical experiments; to all luch we may fafely recommend the electrical apparatus, which will be both ufeful and profitable.

Magnetifm.

## DEFINITIONS.

1. MAGNETISM is the fcience that explains the feveral properties of the attractive and repellant powers in the magnet or loadifone.
2. The magnet is a rich, heavy, iron ore, of a hard fubftance, a duiky grey colour, witil fome mixture of a red. difh brown, and fparkling when broke.

$$
\text { 3. } \mathrm{T}_{\mathrm{H}} \mathrm{I}
$$

3. The magnetic virtue is called the third fpecies of attraction; gravity being the firt, and electricity the fecond.
4. Thi two ends of a magnet, when it is properly formed, are called its poles; and when it is placed on a pivot, in juft equilibrium, one end will turn toward the north, and is called its north pole, and the other end the fouth pole. The poles of a magnet are found by holding a very fine thort needle over it; for where the poles are, the needle will ftand upright, but no where effe. The exterior parts are then to be filed or ground off, and the two extremities which contain the poles, to be made quite fmooth.
5. Waxn the two poles of a magnet arefurrounded with plates of fteel, it is faid to be armed.
6. Ir the end of a fmall iron bar be rubbed againft one of the poles of a magnet, it is faid to be touched, and is then called an artificial magnet.
7. Ir fuch a magnetbe fupported on a pivot, it is called a magnetic needle; one end of it turning toward the north, and the other toward the fouth.
8. The difference between the pofition of the needie, and the exact points of north and fouth, is called its de. clination.
9. A needle which is touched will incline toward the earth, and that is called its inclination or dipping.

## APHORISM8.

1. Thi magnetic attraction is produced by effluvia emitted by the magnet, and paffing from one pole to the other. The direction of the magnetic effluvia is hown by the following experiment. Let A B, C D, (Plate IV. Fig. I.) be the poles of a magnet. Round every fide lightly frew fteel filings, on a theet of white paper; the particles of the filings will be fo affected by the effluvia of the ftone, as to Show the cour:e they takc every way. In the middle of each pole, between A B and C D, they appear to proceed in lines nearly ftraight ; toward the ends they are more and more curved, till at laft the lines from both fide:, ccinciding with each other, form numberlefs curve's round the fone, which are nearly of a circular figure, as in the plate. This experiment feems to thew that the magnetic effluvia iffuing from une pole, circulates to the other.
2. One

## $=18 \mathrm{I}$

- 2. Onz pole of a magnot will attraet iron, and the ocher repel it, bat no other body. The property of the magnot to attract iron has been known many ages: but thofe of ics polar direction, and of its communicating that property to iron, was not difcovered till the 14th century.

3. Thr magnet attracts iran as well in vacuo, as in the sir.
4. Tne magnetic attration will be conkinwed through Several pieces of iron placod contiguous to each other.
5. The magnetic effluvia pervades all bodies.
6. Thi magnetic attraction extends to a confiderable difance. The learned Mufchenbroek made a number of experiments, with great care and affidalty, to determine the extent and progrefs of the magmetic attrpation, bex was never able to difcover any regular proportion between the force and diftance; but merely that the fonce mereafod is the iron approached the magnet. Nor does there feem to be any profpect of eftablifhing the proportion of attraction to the diftance, till a method is found, if it can be found, of feparating the attracting from the repetting parts. A needle has bren known to be attratted by ao inow bar at the diftance of eight or ten feet.
7. Tre north pole of one magnet will attract the fouth pole of another: and the fimilar poles will repel each other. If a magnet be gently cut through the middle of its axis, each piece becomes a complete magnet; for the parts that were contiguous become poles, and even oppofite poles. So that the end of each piece may become a north or fouth pole according as the fection is made neareft to the north or fouth pole of the large magnet. Upon culting a magnet longitudinally, there will be four poles, in the fame pofition as before the cutting. Sometimes a ftrong ftroke with a hammer will bring all the magnetic power from one end of a needle to the other; fometimes make it more ftrong where it was before, and at other times totally deftroy it.
8. The end of a needle touched by the north pole of a magnet will turn fouth, and that touched by the fouth pole will turn north.
9. The declination of the magnetic needio is different in different parts of the earth, and in the fame part at different times, The declination of the needle at London, in the year 1580 , was 11 degrees 15 minutes eaft. In the year 3657, there was no declination, that is, the needle foood
exadly rooth and fouth. "At prefents the declination more than 22 degrees weftward.
10. The inclination of the needle is not always the fame in different places, nor at the fame place at different times, The inclination of the needle when it was firft obferved, in the year. 576 , was found to be 71 degrees 50 minutes: at prefent it is between 74 and 75 degrees.

To prevent the dipping of the needle in the common compars, the end that is not touched is made fomething heavier, by which it is kept in equilibrio. Under the equator the needie has no inctination, being equally attracted by the two poles of the earth.
81. The ftrength of natural magnets differs in thofe of differentmagnitudes, but not in proportion to their magni: sudear The 'rmalleft magnets have generally the greateft spower, in proportion to their bulk. A large magnet will deldom take up more than three or four times its own weight $;$ whereas a fmall one will frequently take up more fthan ten times its, weight. A magnet that weighs fcarce ahree grains, and that a gentleman wears in his ring, will cake up 746.grains, or 250 times its own weight. A mag: netic bar made by Mr. Canton, according to the method we fhall hereafter defcribe, and that weished ro ounces 12 pennyweights, took up fomething more thin 79 ounces; fand a fiat femicircular feel magnet that weighed an ounce -and'in pennyweights, lifted an inon wedge of 90 ounces. - Z
. 12. THE ftrength of a natural magnet is confiderably increafed by its being armed. There are various ways of apming magnets; the mof eligible feems to be that of placing two pieces of fteel againft the two poles, fo that they may come down belowithe botton: of tise Rone, and binding them on with one or more pieces of brifs; the twoends of the fteel pieces then become the poles of the magnet. To determine the quantity of fteel to be applice, try the magnet with feveral itecl bars, and the greateft weight it takes up, with a bar on, is to be the weight of its armour.

Thaugh an armed magnet have a great degree of force, it may pe eafily counteracied. If an oblong piece of inon Te furfended by one of its pules, and the pole of a different denomination of a weaker and unarmed magnet be.placed sinder the iron, if will quit the firftmagnet and adhere to the other. In like manner when a reedle hargs by its point to a magner, if a cormon bar of iron be applied to the head of the needle, it will directly quit the magnet and ad-
here

## 183

There to the bar: but if it hang by its head to the magnet; neither the iron, nor a. weak magnet, will difengage it! Though the pole of an armed magnet have great power; yet if an iron bar of great length be placed under it, the magnet will not appear to have any force whatever.

If a magnet, by laying a long time unufed, have loft part of its power, it may fometimes be recovered. An armed magnet that weighed 14 ounces and a half, and would take up 16 times its own weight, by laying by fome years loft one-fourth part of its power. But as much weight being appplied to it, as it would then take up, and being futfered to hang to it fome weeks, it would then take up an additional quantity; and the quantity being continually in. creafed, at different periods, for the fpace of two years, it would then take up more then 20 pounds; whereas, before its virtue was impaired, it would not take up 15 .
13. Iron acquires a magnetic power by being continually rubbed in the fame direction. From hence files, augurs, and fuch like tools, have always fome magnetic power.
14. Iron bars become magnetic by ftanding a long tima nearly upright. Therefore pokers, tongs, and other itous, that always fand with the fame end downward, are confantly magnetic; and the continual friction they receive, in keeping them clean, contributes much to this. Some bars acquire feveral magnetic poles, alternately North and South.

15: The magnetic virtue may be communicated by electricity. When the eleftric mock is very ftrong it winl give a polarity to needles; and fometimes it will reverfo their poles.

- 16. A strong blow at the end of a magnetic bar wid give it a magnetic power. If fuch a bar or a pair of pincers, be fruck hard, or thrown forcibly againft a ftope floor, they will manifeftly attract a fmall needle that floats upon the furface of the water in a glafs.

17. Fire totally deftroys the power of magnets, as well , matural as artificial.

## Metbod of making Artificial Magnets.

PROCURE a dozen bars; fix of foft fteel, each three inches long, one quarter of an inch broad; and one twentieth of an inch thick, with two pieces of iron, each half the length of one of the bars; but of the fame breadth and
thicknefs; and fix of hard feel, each five inches and a fialf long, half an inch broad, and three twentieths of an inch thick, with two pieces of iron of one half the length, but the fame breadth and thickness as one of the bard bars; and let all the bars be marked with a line quite round them at one end.

Then take an iron poker and tongs (Plate Fig.) the larger they are and the longer they have been ured, the better; and fixing the poker upright between the knees, hold to it near the top, one of the foft bars, having itsmarked end downward, by a piece of fewing fik, which muft be pulled tight with the left hand, that the bar may not fide: then grafping the tongs with the right hand, a little below the middle, and holding them nearly in a vertical pofition, let the bar be freked, by the lover end, from the bottom to the top, about ten times on each fide, which will give it a magnetic power fufficient to hft a fmall key at the marked end; which end, if the bar was fufpended on a point, would turn toward the north, and is therefore called the north pole, and the unmarked end is, for she fame reafon called the fouth pole of the bar.

Four of the foft bars being impregnated after this manner, lay the other two (Fig.) parallel to each other, at the diftance of about a quarter of an inch, between the twa pieces of iron belonging to them, a north and a fouth pole againft each piece of iron: then take two of the four bars already made magnetical, and place them together, fo as to make a double bas in thicksefs, the north pote of one even with the fouth pole of the other; and the romaining two betigg put to thefe in fuch a manner as to have two north and twe fouth pcles together, feparate the worth. from the fouth poles at one end, hy a large pia, and place them perpendiculariy with that end downward, on the middte of one of the parallel bars, the two north poles towards its fouth, and the two fouth potes towards its morth end: Ahide them backward and forward, three or four times, the whole length of the bar; and removiag them from the middle of this, place them an the middle of the other bar as before directed, and go over that in the fame manner: then turn both the bars the other fide upwards, and repeat the former operation: this being done, take the two from between the pieces of iron, and placing. the autermof of the touching bare in their rexm, ke the ather two be the outermoft of the four to towch thefe with:and tbis procefo being repeated till each pair of bers have baen couched thres os feys times. ayer, which, will give

them a confiderable magnetic power, put the half dozen together after the manner of the four, Fig. 4. and touch with them two pair of hard bars, placed between their irons, at the diftance of about half an inch from each other: then lay the foft bars afide, and with the four hard ones let the other two be impregnated, Fir. 5. holding the touching bass apart, at the lower end, near two tentits of an inch, to which diftance let them be feparated, after they are fet on the parallel bar, and brought tozether again before they are taken off. .

This being obferved, proceed according to the method defcribed above till each pair has been touched two or three times over. But as this vertical way of touching a bar will not give it quite fo much of the magnetic virtue as it will receive, let each pair be now touched once or twice over, in their parallel pofition between the irons, Fig. 6. with two of the bars held horizontally, or nearly for by drawing at the fame time the north of one from the middle over the fouth end; and the fouth of the other from the middle over the north end of a parallel bar: then bringing them to the middle again, without touching the parallel bar, give three or four of thefe horizontal ftrokes to each fide. The horizontal; touch after the vertical, will make the bars as ftrong as they can poffibly be made: as appears by their not receiving any additional ftrength, when the vertical touch is given by a great number, and the horizontal, by bars of a fuperior magnetic power. This whole procefs may be gone through in about half an hour; and each of the large bars, if wel! hardened, may be made to lift 28 troy ounces; and fometimes more. And when thefo bars are thus impregnated, they will give to an hard bar of the fame fize, its full virtue in lefs than two minutes; and therefore will anfwer all the purpofes of magnetifm in navigation and experimental philofophy, much better than the loadftons, which is well known not to have fufficient power to impregnate hard bars. The half dozen being put into a cafe, Fig. 7, in fuch manner, as that two poles of the fame denomination may not be together, and their irons with them as one bar, they will retain the virtue they have received. But if their power thould, by making experiments, be ever fo far impaired, it may be reftored without any foreign affiftance in a few minutes. And if, out of curiofity, a much larger fet of bars thould be required, thefe will communicate to them a fufficient power to proceed with, and they may in a chort time, by the fame method, be brought to. their full ftrength:

## 2tbe Maguetin Perfpecfive Glafso

PROVIDE an ivory tube, about two inches and a half: leng, and of the form expretied in Plate V. Pig. 1. The fides of this tube muft be thin enough to admit a confiderable quantity of light. It is to open at one end with an fcrew: at that end there muft be placed an eye glafs $A$, Fig. 2. of about two inches focus, and at the ocher end: any glaifs you pleafe.

Have a fmallmagnetic needle, like that placed on a com-. pars. It muat be frongly touched, and ra placed at the bottom of the tube that it may turn freely round. It is tos be fixed on the center of a fmallivory circle C , of the thicknefs of a counter, which is placed on the object glafs $D$, and painted on the object glafs D , and painted black on the fide next it. This circle muft be kept faft by a circular. rim of palteboard, that the needle may not rife offits pivot.. after the fame manner as in the compals. This tube will . hus become a compars fufficiontly tranfparent to fhow the morions of the needle. The eye-glafs ferves more clearly: to diftinguith the direction of the needle; and the glafs at. the other end, merely to give the tube the appearance of a common perfpective.

Ir will appear by aphorifm 8, that the necale in thistube, when placed over, and at a fmall diftance from as magnet, or any machine in which it is eontained, will neceffarily place itfelf in a pofition directed by that mignet, and confequently how where the north and fouth pole of it is placed. The north end of the needle conftantly pointing. to the fouth end of the magnet.

Tris effect will take place though the magnet be inclofed in a cafe of wood, or even metal, as the magnetic, effluyia: penetrates all bodies. You muft obferve, however, that. the attracting magnet muft not be very far diftantfrom theneedle, efpecially if it be fmall, as in that asfe its induence extends but to a mort diftance.

This tube may be differently conftructed by placing the: needle in a perpendicular direction, on a fmall axis of iron;on which it mult turn quite freely, between twa mall.plates. of brafs placed on each fide the tube: the two ends of the peedle fhould be in exact equilibrium. The north and fouth ends of this needle will, in like manuer, be attracted by the fouth and north ends of the magnetic bar. The: former confruction, however, appears preferable, as it is more
more eaflly axcited, and the fituation of the needie moil zrose eafily diftinguifted.

## Ybe magnetic Tablo:

UNDRR the tep.ef a commpn table place a magnet that surns on a pivot, and fax a board under it, shat nothing: may appear. There may alfo be a drawer under the table, which you pull out to fhow that there is nothing concealed. At one end of the table there muft be a pin that communieates with the magnet, and by which it may be placed in different pofitions : this pin muft be fo placed as not to be: vifible by the fpectators. Strew fome fiteel flings, or very fmall nailt, over that part. of the table where the magnet is. Then afk any one to lend you a knife, or a key, which will then attract part of the nails or filings, in the fame manner ${ }^{26}$ the imon attracts the needle, as may be feen in 12 th aphorifm. Then placing jour hand, in a carclefs manner, on the pin at the end of the table, you alter the pofition of the magnet; and giving the key to any perfon, yope defire him to make the experiment, which be will then not be able to porform. You then give the key to angther perfop, at the fame time plecing the maynet, by meanc of the ping. in the firft pofition, when that perfen will jmmadiately perforcu:the experiment.

## The communixative Creaum.

TAREE a crown piece, and bore a hole in the fole of it: in which place a piece of wire, or a large needie well po:Hihed, and Atongly toucbed with a magnet. Then clofe the hole . with a fmall piece of peewter, that it may not be: perceived. Now the needje in the magnetic perfpativa. (before defcribed,) when it is Brought near to this piece of money, will fix itfelf in a direction correfgondent to the. wire or needle in that piece.
Drsiar any perion to knd you a crown piece, whichis you dextrounly change for one that you have preppared asi above. Then give the latter piece to another perfon, and leave him at liberty either to put it privately in a fnuff-box, or not; he is then to place the box on a table, and you are: to tell him, by means of your glafs, if the crown is or is not in the box. Then bringing your perfective clofe to the box, you will know, by the motion of the needle, whether it be there or not; for as the needle in the perfpective win always keep to the north of itfelf, if you don' $t$ perceive it bas any motion, you conclude the crown is not

If the box: It may happen, however, that the wire in the coovn miy be placed to the north, in which cafe you will be deceived. Theref re to be fure of fuccefs, when you find the needle in the perfpective remain ftationary, you may make fome preteace to defire the perfor to move the tbox ineo another pofition, by which you will dertainly know if the crown piece be there or not.
You munt remember that the needle in the perfpective muft here be very fenfible, as the wire in the crown cannot poffibly have any great atiructive force.

The Magician's Mirrors.
IN the wainfoot of a room make two overtures, of a foot: high and ten inches wide, and about a foot diftant from each. other. Let them be at the common height of a man's head ; and in each of them place a tranfparent glafs, furrounded with a frame, like a common mirror.
Behind this partition place two mirrors, one on the outward fide of each overture, inclined to the wainfoot in an angle of forty-fivedegrees; * let them be both aighteen inches fquare: let all the- ppace between them be enclofed by boards or patteboard; painted: black, and welt clofed,' that no light may enter; let there be alfo two curtains to cover them, which may be drawn afide at pleafure.
$\mathbf{W h x N}^{\mathrm{N}}$ a perfon looks into one of thefe fuppofed mirrors; iuftend of receing his own face he will perceive the object that is in the front of the other; fo that if two perfons pre. fent themfelves at the fame time before thefe mirrors, inftead of each one feeing himerelf, they will weciprocally fee each other.
Note. There fhould be a fconce with a candle placed on each fide of the two glaffes in the wainfcot, to enlighten the faces of the perfons who look in them, otherwife this experiment will have no remarkable effect.

This Recreation may be confiderably improved by placing . the two glaffes in the wainicut, in adjoining rooms, and a number of perfons being previoully. placed in one room, when a ftranger enters the other, you may tell him his face is dirty, and defire him to look in the glars, which he will naturally do; and on feeing a ftrange face he will draw back : but returning to it, and feeing arother, another, and another, like the phantom kings in Macbeth, what his furprife will be is more eafy to conceive than exprefs. After

* Every fquare or right angle is 90 degrees, half of which is 45, and -is readily formed by making the 2 angles equal.

## 189

this, a real mirror may be privately let down on the back of the glafs, and if he can be prevailed to look in it once more, he will then, to his farther aftonifmment, fee his own face; and may be told, perhaps perfuaded, that all he thought he faw before was mere imagination.

How many tricks. lefs artful than this, have paffed in former times for forcery; and pafs at this time, in fome counories, for apparitions:

- Note. When a man looks in a mirror that is placed perpendicular to another, his face will appear entirely deformed. If the mirror be a little inclined, fo as to make ars angle of eighty degrees (that is one ninth part from the perpendicular) he will then fee all the parts of his face except the nofe and forehead. If it be inclined to fixty dogrees (that is, one thind part) he with appear with three nofes and Gle eyes: in thort, the apparent deformity will vary at each degree of inclination; and when the ghaf comes to fortyItve degroes, (that is, half way down) the face will vanif. If inftond of placing the two mirrors in this fituation, shey are fo difpofad that their junAtion may be vertionl, their difforent incliaations will produce echer effeats ; at the fituasLien of the cheedt relative to thefe mirrors is quito divirenc. The effects of thefe mirrers, though remarisable enough, cocofiens but litcle farprive, as there is no method of cone cealing the cavic by which they ave geoduced.

## Polcmofrepen.

BY the term pelemofcope is manat any fefrument, Whether cmoptric or dioptric, by which you may fee what paftes in another place, withovt being feen from thence. The machines contain one or more phin mirrors, which comvey by reflection the image of the objelt to the eye of the fpectatar. Thore sue fmall intruments of this hind. made in the form of an epern-ginf, by whicly, while you feem to look frait forvard, yeu fee what pafies on one fide, and by that meaas gracify your curiafity without theappearance of incivility.

To the conftruaing of this fort of polemofcope nothingmore is neceffary than to fix in a common opera-glafs a finall mirror inclined to an angle of forty-fiye degrees, and adjuft a proper object-glafs. This glafs at the fame time may anfuver its common ufe, by adding an object-glafs, and fo contriving the frall tube that is may remove the mirror at plearures,

## 190

The tube of a polertofcope may be placed againft a walf; the inclined mirror being a little above it, and turned outwards, by which means you will difover what paffes on the other fide, without being feen yourfelf. An initrument of this fort would be of ufe in fieges, where there is danger without the wall from the fire of the enemy, and on other occafions. This inftrument may be alfo fo conftructed, that the tube may turn round, and the mirror be elevated or depreffed, that you may fee fucceffively and at pleafure, all the objects that you would perceive if you were at the top of. the wall againft which the inftrument is placed.

## The Artificial Rainbow:

OPPOSITE a window into which the fun thines direct, fufpend a glafs globe filled with water, by a ftring that runs over a pulley, fo that the fun's mys may fall on it. Thern drawing the globe gradually up, when, it comes to the height of about forty degrees, you will fee, by placing yourfelf in a proper fituation, a purple colour in the glafs, and by drawing it, gradually uph higher, the other prifmatic colours, blue, grees, yellow, and red, will fucceffively appear ; after which the colours will difappear, till the globe is raifed to about fifty, degrees, when they will again be feen, but in an inverted onder, the red appearing. firft, and the blue or violet laft: and when the glote comes up to little more than fifty-four degrees they will totally vanim.

These appearances ferve to explain the phenomena of natural rainbows, of which there are frequently two; the one being about eight degrees above the other, apd, the -order of their colours is inverted, as in this experiment, red being the uppermont colour in the lower bqw; and violet in the other.

The raitiow is not in the clouds, but in the falling rain, and always oppofite the fun. The different order of the colours in the bows arifes from their different reffections; - thofe of the under berw being caurod'by two reftactions and -one reffection, and thofe of the upper, by two refractions and two reflections, and therefore the colouts of enis are lefs bright than the other, their ftrength being diminimed by every reflection..

Now, it has been proved by repeated experiments, that forty degiees forms the greateft angle by which the muft.refrangible rays can, after one reflection, be refracted to the eye; and that fomething more than forty-twa degrees forms the greatert angle, under which the leaft refnangible rays
can:
conn come to the eye after one reflection. Therefore all the colours of the lower bow muft lie in the fpace of lefs than twa degrees. In like manner it has been proved, that fifty degrees make the leaft angle under which the leaft refrangible rays can be vifible to the eye after two reflections; and that about fifty-fout degrees will be the leaft angle under which the molt refrangible rays can come to the after two reflections. Therefore all the colours of the upper bow muft be in lefs than four degrees.

Ir follows from what is here faid, that all rainbows are of a circular form and equal magnitude; and as they are al. ways oppofite the fun, the parts: we fee of them muft be in proportion to his height above the trorzon: when his altitude is for ty degrees, only the upper rainbow can be vifible; and when it is fifty-four degrees there can be no rainbow: but as the fun's heigbt, during the winter half year, is ne:ver equal to forty degrees, there may be always then two bows vifible.

## By the Means of twó, plain Looking-Glafes to make a Face agpear under different Forms.

HAVING placed one of the two glaffes horizontally, raife the other to about right augles over the firft; and while the two glaffs continue in this pofture, if you come up to the perpendicular glafs, you will fee your tace quite 'deformed and imperfct, for it will a;pe r without forehead. eyes, nofe, or ears, and rothing will he feen but a moutb andla a chin raifed bold. Do but incline the glafs never fo little from the perpendicular, and your face will apt pear with all its parts excepting the $: y$ yes and the for=head. Stoop it a little more, and you will fee two nofes and faur eyes; and then a little further, and you will fee thrce nofes and fix eyes. Continue to incline it ftill a little more, and you will fee nothing but two nofes, two mouths, and two chins; and then a little further again, and you will fee o:e nofe and one mouth At laft incline a little further, that is, till the angle of inclination comes to be 44 degrees, and your face will quite difappear.

If you ircline the tiwo glaffes the one towards the other, you will fee your face pertect and intire ; and by the differert inclinations, you will fee the reprefentation of your face, . upright and inverted alternately; \&c.

By the Means of Water to make a Cownter appear, tbat wbike the Voffel was empty of Water was bid from tbe Eyc.
TAKE an empty veffel and put a counter in it at fach a diftance from the eye, that the beight of the fides of the veffel keeps it hid; you may make the eye to fee phis counter without alecring the place of either the eje, the veffel, or the counter, viz. by pouring water into it ; for as fight which is performed in a ftraight line, does upon encountering a thictere medium refract towards a perpendicular, 5 in this cafe the water poured into the veffed being a thicker modium than the air, will make the rays darted from the eyes to reffala towards the line that is porpendicular to its surface; and fo the eye will fee the counter at the bottom of the veffol, which without that refraction could mot be freen.

> To knozv wbich of swo different Waters is sbe ligbteft, zoitbout any Scoles.

TAKE a folid body, the fpecific gravity of which is lefs than that of water, deal, or firwood, for inftance; and put it into each of the two waters, and reft affured that it will fink deeper in the lighter than in the heavier water; and fo by obferving the difference of the finking you will know which is the lighteft water, and confequentiy the wholfom. oft for drinking.

## To contrive a Caf to bold tbree different Liguors, that may bp drawn unmixed at onc and tbe jame Tap.

THE caAk (Pl. V.Fig.3.) mut be divided into three parts or cells, A, B, C, for containing the three different liquors, as red wine, white wine, and water; which you may put into their refpective cells at one and the fame bung, thus ;

Put into the bung a funnel $D$ with three pipes, $E, F, G$, each of which terminates in its refpective cell. Upen this funnel clap another funael H with three holes, that many anfwer when you gill the orifices of each pipe ; for thus, if you turn the funnel H fo ac to make each hole anfwer fucceffively to its correfponding pipe, the liquor you pour into the funnel $\mathbf{H}$ will enter that pipe, it being ftill fuppofed that when one pipe is open, the other two are fhut.

Now to draw thefe liquors without mixing, you muft have three pipes, K, L, M, each of which anfwers to a cell, and a fort of cock or fpigot IN with three holes anfwering the throe pipes, and fo turning it till one of the holes

## 193

hbles fits its refpective pipe, you draw the refpe Etive liquor by itfalf.

## To know if a fufpicious Piece of Money is good or bad.

IF it be a piece of filver that is not very thick, as a crown or half a crown, the goodnefs of which you want to try : Take another piece of good filver of equal balance with it, and tie both pieces with thread or horfe-hair to the fcales of an exact balance (to avoid the wetting of the fcales themfelves) and dip the two pieces thus tied in water; for then if they are of equal goodnefs, that is, of equal purity, th:s will hang in equilibrio in the water as well as in the air : but if the piece in queftion is lighter in the water timan the other, it is certainly falfe, that is, there is fome other metal mixed with it that has lefs fpecific gravity than filver, fuch as copper; if it is heavier than the other, it is likewife bad, as being mixed with a metal of greater fpecifie gravity than filver, fuch as lead.
If the piece propofed is very thick, fuch as that crown of gold that Hiero, king of Syracufa, fent to Archimedes to Hoow if the goldfmith had put intoit all the eighteen pounds of gold that he had given him for that end; take a piece of pure gold of equal weight with the crown propofed, viz. eighteen pounds; and without taking the trouble of weighing them in water, put them into a veffel full of water, one after another, and that which drives out mof water, muft neceffarily be mixed with another metal of lefs fp:cific gravity than gold, as taking up more fpace though of equal weight.

## To find the Burden of a Sbip at Sea, or in the River.

IT is a certain truth, that a thip will carry a weight equat to that of a quantity of water of the fame bignefs with itfelf; fubtracting from it the weight of the iron about the fhip, for the wood is of much the fame weight with water ; and fo if it were not for the iron a fhip might fail full of water.

Tre confequence of this is, that, however a mip be loaded, it will not fink quite, as long as the weight of its cargo is lefs than that of an equal bulk of water. Now to know this bulk or extent, yot muft meafure the capacity or folid ty of the hip, which we here fuppofe to be 1000 cubical feet, and multiply that by 73 pounds, the weight of .a cubical foot of fea water; for then you have in the pro-
duct 73000 pounds for the weight of a bulk of water equal: to that of the fhip.

So that in this example we may call the burden of the thip 73000 pounds, or $3^{6}$ ton and a half, reckining a ton 2000 pounds, that being the weight of a ton of fea water. If the carse of this ship exceeds 36 ton and a half the will fink; and if hertoading is juft 7300 clb . The will fwim very deep in the water upan the very point of anking; fo that the cannot fall rafe and eafy, unlefs her loading be confiderably Short of 73000 pounds weight. If the loading comes near to 73000 pounds, as being, for example, juft 36 ton, the will fwim at rea, but will fink when the comes into the mouth of a frefl water river; for this water being lighter than fea water will be furmounted by the weight of the veffel, efpecially if that weigl:t is greater than the weight of an equal bulk of the fame water.

Whber two Veffels or Cbefs are like one anotber, and of equal Weigbt, being filled witb different Metals, to difinguifb the one from tbe otber.

THIS is eafily refolved, if we confider that two pieces of different metals. of equal weight in air, do not weigh equally in water; becaufe that of the greateft fpecific gravity takes up a leffer fpace in water, it being a certain truth, that, any metal weighs lefs in water than in air, by reafon of the water the room of which it fills. For example, if the water weighs a pound, the metal will weigh in that water a pound lefs than in the air. This gravitation diminimes more of lefs according as the fpecific gravity of the metal is.greater than that of the water.
W. $x$ will fuppofe then two chefts perfettly like one arother, of equal weight in the air, one of which is full of gold, and the other of filver; we weigh them in water, and that which theu veeighs down the other muft needs be the gold cheft, the \{pecific gravity of gold being greater than that of filver, which makes the gold lofe lefs of its gravitation in water than filver. We know by experience, that gokd lofes in water about an eighteenth part only, whereas fitver lofes near a tenth part: fo that if each of the two chefts, weighs in the air, for example, 180 pounds, the chert that is full of gold will lofe in the water ten pounds of its weight; ard the cheft that is full of filver will lofe eighteen; that is, the cheff full of geld will weigh 170 pounds, and that of filver only 162.

## $195=$

$\sigma_{2}$, ff you will, confidering that gold is of a greater fpeeific gravity than filver, the cheft full of gold, though fimilar and of equal weight with the other, munt needs have a leffer bulk tham the other. And therefore, if you dip fepa rately each of them into a veffel full of water, you may conclude that the chert which expels 1 :fs water, has the leifer bulk, and confequently contains the gold.

## To meafure tbe Deptb of the Sea.

TIE a"greit weight to a very long cord, or rope; and let it fall into the fea till you find it can defcend no farther, which will happen when the weight toucles the bottom of the fea, if the quantity or bulk of water, the room of which is taken up by the weigtet, aud the rope weighs lefs than the weight and rope themfelves; for if they weighed more, the treight would ceafe'to defcend, though it did not touch the bottom of the sea.

Tmus one may be deceived in meafuring the Rength of a rope let down into the water, in order to dotermine the depth of the fea; and therefore to provent mintakes, you had beft tie to the end of the fame rope another weight heavier than the former, and if this weight does not fint the rope deeper than the other did, you may reft affured that the length of the rope is the true depth of the fea: if it does fink the rope deeper, you mult tie a thind weight yet heavier, and fo on, till you find troo nveighte of umoqual gravitation that run juft the fame kength of the rope, upon which you may conclude that the length of the wet rope is certainly the fame with the depth of the fea.

## To wake a Deaf Man bear the Sound of a Mufical In-Arument.

IT matt be a Atinged inftrument, with a neck of fome lengch, as a lute, a guitar, or the like; and before you begin to play, you muft by igns direct the deaf man to take hold with his teeth of the end of the neck of the inftrument; for. then if one ftrikes the ftrings with the bow one after anod ther, the found will enter the deaf ma:n's mouth, and be oouveged to the organ of hearing through the hole in the pabate: and thus the deaf man will hear with a greas deal of pleafure the found of the inftrument, as has been feveral times experienced. Nay, thofe who are not deaf, may make the experiment upon themfelves, by fopping thicin ears fo as not to hear the inftrument; and then holding the
end of the infrument in their teeth while another tourshes the ftrings.

## To make an Egg enter a Vial viitbout breating:

LET the neck of the vial. be never fo fraight, an egg. will go into it without breaking, if it be firf fteeped in very 3trong vinegar, for in procefs of time the vinegar does fo foften it, that the fhell will bend and extend lengthways without breaking. And when it is in, cold water thrown upon it will recover its primitive hardnefs, and, as Cardan fays, its primitive figure.

## Ti Eold a Glafs full of Water with the Mautb downy.fo as that the Water ßall not run out.

TAKE a glafs full of water, cover it with a cup that is a little hollow, inverting the cup upon the glais; hodd the cup firm in this pofition with one hand, and the glafs with the other, then with a jerk turn the glafs and the cup upfide down, and fo the cup will ftand upight, and the glafs wif be inverted, refting its mouth upon the interior bottom of the cup. This done, you will find that part of the water ccutained in the glafs will run out by the void fpace between the bottom of the cup and the brim of the glafs; and when that fpace is filled, fo that the water in it reaches the brim of the giafs, ail paffage being then denied to the air, fo that it cannot enter the glafs, nor fucceed in the room of the water, the water remaining in the glats will not fall lower, but continue fufpended in the glafs.

If you would have a little more water defcend into the cup, you mult with a pipe or otherwife draw the water out of the cup, to give paffage to the air in the glafs; upinwhich part of the water will fall into the glars till it has ftopped up the paffage of the air afrefh, in which cafe no wire will come down; or, without fucking out the waterin the cup, you may incline the cup and glafs fo that the water in the cup hall quit one fide of the brim of the glafs, and fo give paffage to the air, which will then fuffer the water in the glafs to defcend till the paffage is ftopped again.

This may likewife be refolved by covering the brim of the glars that is full of water, with a leaf of ftrong paper, and then turn the glafs, as above; and without hodding your hand any longer upon the paper, you will find it as it were glued for fome time to the brim of the glafs, and during that time the water will be kept in the glafs.

The Myferious Watch. *: ?
YOU defire any penfon to lend you his watch, and alk him if he thinks it will or will not go, when it is laid on the table. If he fays it will, yon place it over the end of the magnet, and it will prefently fop. You then mark with chalk, or a pencil, the precife point where you placed thy watch, and moving the pofition of the magnet, you give the watch to another perfon, and defire him to make the experimert, in which he not Pucceeding, you give it to a third:perfon, at the fame time replacing the maghet, and the will inmitiately perforin the experiment.

## The Magnetic Dial.

PROVIDE a circle of wood or ivory, of abolut five or rix. inches diameter, as Pl. V. Fig. 4, which muft tiurn quite Free on the feand $R$, in the circular border $A$ : on the ciil cie muft be placed the dial of pafteboard C , whofe circumfe-- tenoe is to be divided into twelve equal parts; in which muft be infribed the-numbers from one to ewelve, as an a common dial. There muft be a fmall groove-in the circular frame A, to receive the pafteboard circle; and obferve that the dial muft be made so tum fo.free, that it may go round without moving the circular border in which it. is sphaded.

Between the parteboard circle and the bottom of the frame, place a fmall artificial magnet E, Fig. 5, that has a hole in its midule, or a fonall protuber ance. On the outfice of the frame place a imall pin $P$, which ferves. to thew where the magnetic needle 1 , that is placed on a pivot at. the cemar of the wialt, is to fop. This noedie muit turn yuite free on its pivot, and its swo fides. fhould be in coskt. equilibtio.

Then provide a fimall bag, that has five or fix divifions, like a lady's work -bag, but fmaller. In one of thefe divifions put fmall square pieces of parteboard, on which are wrote the numbers from one to twelve; and if you pleafe you may put feveral of each number. In each of the other reivifions you mat put twelve or intre ifte pieces, oblervthg that all the pieces in each divifion:muft be mapked whe the fante mataber.

Now the needle being placed upon itspipot, and turned: quickly about, it will neceffarily fop at that point where the north end of the magnetic bar is placed: and which you
previoully,

## 198

wrevionfly know by the fituation of the fmall pin in the ciro cular border.

You therefore prefent to any perfon triat divifion of the Bag which contains the feveral: pieces on which is wrote the number oppofite to the north end of the bar, and tell him to draw any one of them he pleafes. Then placing the needle on the pivot, you turn it quickly about, and it will neceffarily foop, as we have already faid, at that particular number.

ANOTHER may be made with the fame dial, by defiring two perfons to draw, each of them, one number out of two different divifions of the bag, and if their numbers, when added together, exceed twelve, the needle or index will fop at the number they exceed it: but if they do not amount to twelve, the index will fop at the fum of thofe two numbers. In order to perform this, you muft place the pin againft the number five, if the two numbers to be drawn from the bag be. ten and feiven: or againt' nine, if they be feven and two.

Ir this be made immediately after the former, as it eafily may, by dextroully moving the peb, it will appear soill. the more extraordinary:

## Tbe Intelligent Fly:

AT the center of a box about fix inches fquare and ono inch deep (Pl. VI. Fig. I.) place a pivot. Have a touched needle L , three inches and a half long, and at the end of: it that is touctied fix a fly made of enamel: the other end of the needle muft be fomething heavier, to keep it in equilibrio. This needle is to be placed on the pivot.

On a piece of fquare pafteboard that-will juft go into the hox, draw a.circle, ABCD, three inches and a half diameter; and another at a fmall diftance, concentric. with the former. The part within the laft circle muft be cut outaThis pafteboard circle is to be plaoed about half an inch from the botton of the box, and divided into ten equal parts, in-which are to be wrote the detters A; E, I, O, U, $\mathbf{D}, \mathbf{G}, \mathbf{L}, \mathbf{N} ; \mathbf{R}$, as in the figure.

Piaci a glars about half an inch above the circle, and cover it, with a circle of paper $C$, large enough to hide the needle, and leave only the fly vifible: on this paper you : may paint fome allegoric figures, that its ufe may not be-furpected. You muft pext write on 24 cards the following. queftionsa.
queftions. There cards are to be packed and muffed, fo that they may be in the order thequeftions are here placed.

## Quefion's.

1. Whice is the land of liberty ? 2. Which is the firft city in the world? 3. Whom do many men defpife, though they have not half his merit? 4 Who is the pooraft man in the world ? 5. Who is the meaneft of all mankind ? 6. For what do all young women long ? 7. Whio, by ftation, is the moft miferable of all beings? 8. By what doesa man difcover his. weaknefs? 9. What would every married woman do if the could? 10. In what does a man hew his pride and folly? I1. What makes a woman cry more than the lofs of her hufband? 12. How does a man talk who has nothing to fay? 13. What moft refembles.a fine lady? 14. What frequently reminds us of a great lofs, without giving difguft ? 15 . What makes a young woman in love with an old man? 16. What does the poet want to cover his empty ikull ? 17. What fhould a man never take from the woman ha loves? 18. What muft thatsman be who would gain the entem of all? 19. Whe is-he that foeks a man's company when his money and friends are all gone? 20. What gains the good will of the phyfician, the lawyer, and the harlot? 21. What do good men revere and knaves abufe? 22. What does a man depend on whenhe trufts to his friends for fupport? 23. What can he be fure of who leaves his.affairs to another ? 24. What makes as great a difference almoft; if net altogether, between this man and that, as between that and a brute ?-

Artir you have ranged the cards in the manner beforementioned, you place them on the table, and ank any perfon which of them, in the order they then ftand, mail contain the queftion to which the fy fhall give him'the anfwer. If he fay, for example, your confederate, who has the following copy of the anfwers, will make- the needle, at the end of which the fly is, fuceeffively point to the letters that. compofe that word: then counting the cards over till you come to the 2oth, you will find that word anfwer the queftion.

Anfwers.

1. Engländ. 2. London. 3. A dog. 4: A niggard. 5. A liar. 6. A ring. 7. A nun. 8. Anger. 9. Rule. 10. A duel. 11. An onion. 12. Loud. 13. An angeL 14. A dial. 15. Gold. 16. A laurel. 17. A denial. 18. Generous. 19. A dunn. 20. A guinea. 21. Religion. 22. A reed. 23. Ruin. 24. Learning.

##  <br> 200

MaNy others may be performed by this intelligent fly by numbers, cards, zec. fimilar to thofe we have already explained on other occaftons, and which, to avoid the appearance of repetition, we fhall not here defcribe.

To hreak a Pole or Cylindrical Staff, the extremes of wbich foall be laid upon two Glafles, witbout burting the fuid Glaffes.

- TAKE two equal tumblers, or wine glaffes, whith'fill with water, and place them at fuch a diftance that the ends of the ftaff may juft reft upon the edges of the glafs, then with another ftaff, ftrike the one furpended betwixt the two glaffes juft in the middle, and the ftaff if not vety frong will be braken, whilft the glaffes remain unhurt.

## The real'Apparition

BEHIND the partition AB (PI:VE. Fig. 2) place, in 3 pofition fomething oblique, the conctive mirpor'EF, which muft be at leaft ten inches in diatrreter, and its idifance. from the paftition equal to three-fourthis of the diftance of. its cefter.

IN the partition make on opening offeven areightinches, either fquare or circular : it mult face the mirror; and beiof the farne height with it. Behind this partition placea Arong: light, fo difpafed that it mayy not be feen at the epening, and may illumine an object placed at C, without throwing xny light on the mirror.

Beniata the aperture in the partition place the objoct: C, that you intend fhall appoar on the outficte of the partition, in an inverted porition; and whioh we will fuppefe. to be a flower. Before the partition, and beneath the a. perture, place a little flower-pot $D$, the top of which. fhould be even with the bottom of the aperture, that the eye, placed at G, may fee the flower in the fame pofitipn. as if its ftalk came out of the pot.

Take care to paint the fpare between the back part of: the partition and the mirror black, to prevent any reffections of light frem being thrown on the mirror; in a word, fo difpofe the whole thatit may be as little enlightoned as. poffible.

When a perfon is placed at the point $G$, he will perceive the flower that is behind the partition, at the top of the pot.
at $D$, but on putting out his hand to pluck it, he will find that he attempts to graip a chadow.

## OBSERVATION.

Tre phenomena that may be produced by means of concave mirrors are highly curious and aiftonifhing. By their aid fpectres of various kinds may be exhib.ted. Suppofe, for example, you were to tell any one, that at fuch an hour, and in fuch a place, he fhould fee the apparition of an abfent or deceafed friend (of whofe portrait you are in poffeffion.) In order to praduce this phantom, inftead of the hole in the partition AB , in the. laft figure, there muift be a door, which opens into an apartment to which there is 2 confiderable defcent. Under that door you are to place the portrait, which muft be inverted and ftongly illuminated, that it may be lively reflected by the mirror, which muft be large and well polifhed. Then having introduced the incredulpus fpectatur at another door, and placed him in the proper point of view, you fuddenly throw open the door at $A B$, when to his great aftonimment, he will immediately fee the apparition of his friend.

It will be objected, perhaps, that this is not a perfect apparition, becaufe it is only vifible at one point of view, and by one perfon. But it hould be remembered, that it was an eftablifhed maxim in the laft centuries, that a fpectre might be vifible to one perfon and not to others. So Shakerpeare makes both Hamlet and Macbeth fee apparitions that were not vilible to others, prefent at the fame time. It is not unlikely, moreqver, that this raxim took its rife from certain apparitions of this kind that were raifed by the monks, to ferve fome purpofes they called religious; as they alone were in poffeffion of what litte bearning there then was in the world.

Trisiz is one phenomenon we muft not here omit; for the' it be common enough it is alro pleafing, and eary to be performed. If you place yourfelf bef,re a concave mirror and at a proper diftance, your figure will appear inverted, and if you ftretch out your hand toward the mirror, you will perceive another hand that feems to meet and join it, though imperceptible to the touch. If intead of your hand you make ufe of a drawn fword, and prefent it in fuch manner that its point may be directed toward the focus of the parallel rays of the mirror, another fword will appear, and ieem to encounter that in your hand. You are to obierve, that to make this experiment fucceed well, you muk
have a mitror of at leaft a foot in diameter, that you may foe yourfelf in part. If you have a mirror large enough to fee your whole perfon, the illufion will be much more ftriking. This phenomenon, with which fo muck parade has been made by fome modern experimental philofophers, wwas defcribed by Baptista. Porta moré than 200 yoars fince.

## A Solar Sonate.

IN a large cafe, fuch as is ured for dials and foring clocks, the front of which, or at leaft the lower part of it, muft be of glass, covered on the infide with gaufe, let there be placed a barrel organ, which, when wound up, is prevented from playing, by a catch that takes a toothed wheef at the end of the barrel. To one end of this catch there mult be joined 2 wire, at the end of which there is a flat circle of cork, of the fame dimenfion with the infide of a glafs tube, in which it is to rife and fall. This tube muft communicate with a refervoir that goes acrofs the front part of the bottom of the cafe, which is to be filled with fpirits, fuch as is ufed in thermometers, but not coloured, that ?t may be the better concealed by the gauze.

Tars cafe being placed in the fun, the firits will be Sarefied by the heat, and rifing in the tube, will lift up the catch or trigger, and fet the organ in play; which it will continue to do as long as it is kept in the fun; for the fpirits cannotr run out of the tubie, that part of the catch to which the circle is fixed being prevented from rifing beyond a certain point, by a check placed over it. Care muft be tak en to remove the machine out of the fun before the otgan runs down, that its fopping may be evidently effected by the: cold.

WhIN the machine is phaced againf: the fide of a roons -on which the fun fhines grong, it may confantly remain in the fame place, if you inciofe it in a fecond cafe, made of thick wood, and placed at a little diftance from the other. When you want it to perform, it will be only neceffary to throw open the door of the outer cafe, and expofe it to the fan.

Bur if the machine be moveable, it will perform in all -feafons by being placed before the fire; and in the winter it will more readily fop whein removed into the cold.

A machiny of this fort is faid to have been invented by Cornctios Dreble, in the bat century. What the confructiva

- tion of that was we know not; but might very likely be more complex, bui could fcarce aufiver the intention more readily.

## An Automatous Harpficherds

UNDER the keys of a common harpfichord let there be fixed a barrel, fomething like that in a chamber organ, with ftops or pins correfpanding to the tunes you would have it play. There ftops muft be moveable, fo that the tunes may be varied at pleafure. From each of the keys let there go a wire perpendicular down; the ends of there wires muft be turned up for about one.fourth of an inch. Behind thefe wires let there be an iron bar, to prevent them from going too far back. Now, as the barrel turos round, its pins take the ends of the wires, which pull down the keys, and play the harpfichords The barreland wires are ta be all enclofed in a cafe.

In the chimney of the fame room where the harpfichord ftands, or at leaft in one adjacent, there muit be a fmoke jack, from whence comes dowe a wire, or cord, that, paffing behind the wainfcut adjoining the chimney, goes under the floor, and up one of the legs of the harpfichord into the cafe, and round a fmall wheel fixed on the axis of that firft mentioned. There fhould be pullies at different diftances, behind the wainfoot and under the floor, to facilitate the motion of the cord.
: This machinery may be applied to amy other keyed in-永rument, as well as to chimes, and to many other purpores where a regular continued motion is required.

An inftrument of this fort may be confidered as a perpefual motion, according to the common acceptation of the term, for it will never ceafe going till the fire be extinguifhed, or fome parts of the machinery be worn out.

## Tbe Nocturnal Reviilleur.

AGAINST the wall of a room, near the cieling, fix a wheel of 12 or 18 inches diameter; on the rim of which place a number of bells in tune, and, if you pleafe, of different fizes. To the axis of this wheel there fhould be fix ed a fly to regulate its motion; and round the circumference there muft be wound a ropes, to the end of which is hung a weight.

Near to the wheel let a fand be fixed, on which is an uprihgt
upright piece that holds a balance or moveable lever, on one end of which refts the weight juft mentioned, and to the other end muft hang an inverted hollow cone, or funnel, the aperture of which is very fmall. This cone mult be graduated on the infide, that the fand put in may anfwer to the number of hours it is to run. Againft the upright piece, on the fide next the cone, there mult be fixed a check, to prevent it from defcending. This fland, toge ther with the wheel, may be enclofed in a cafe, and fo contrived as to be moved from one room to arother with very little trouble.

It is evident from the confruction of this machine, that when a certain quantity of the fand is run out, the weight will defcend, and put the wheel in motion, which motion will continue till the weight comes to the ground. If the wheel be required to continue longer in motion, two or more pullies may be added, over which the rope may run.

The fize of the bells thould be adapted to the fomniferous difpofition of the party they are intended to ronze: or if you pleafe, a drum or tabor may be added, the ftick to which may be fixed in the fide of the room, by a fwivel that gaes through the middle of it; and one end of it being lifted up by teeth placed on the circumference of the wheel, the other end will alternately frike the drum.

To make Water in a Glafs feem to boii aud fparkle.
TAKE a glafs nearly full of water or other liquor, and fetting one hand upon the foot of it to hold it faft-turn nightly one of the fingers of your other hand upon the brim or edge of the glafs (having before privately wet your finger) and fo paffing foftly on with your finger preffing a littlethen the glats $w: l l$ begin to make a noife-the parts of the glafs will fenfibly appear to tremble, with notable rarefaction and condenfation-the water will thake, feem to boil, calt itfelf out of the glafs, and leap out by fimall drops, to the great aftonifhment of the obfervers, if they are ignorant of the caure-which is only the rarefaction of the parts of the glafs, occafioned by the motion and preffure of the finger.

## INSTRUCTIVE

## QUERIES, PARADOXES,

## ANAGRAMS, \&c.

PART III,

## Parador.

All men will readily agree, that no one can tranfmit A title to pofterity he never enjoy'd-and yet A certain honorable man, a baronet, was born, Altho' his father ne'er was one !-nor laugh my tale to fcorn When I affirm the title came by lineal defcent-. But ftrive to reconcile the fame, for no deceit is in't.
Anfwer.

A Baronet, living in Wefininfter city, Whofe father refigning his breath
Before the old grandfather, was (which is pity)
Born after his grandfather's death;
Who, a baronet being, the infant became
Heir both to his title and pelf,
The minute when born, tho his father the fame
Had never enjoyed himfelf.

## Erigma.

## Ladies $\ddagger$ Gentlemen,

I AM come to tell you in plain profe, that I am a very great poet: Dactyles and Spendees are familiar to memany of the moft elegant productions of the age are indebted to me for no fmall thare of their merit-I fmooth their rugged numbers, and fupply vacancies of wit.

Somitimes 1 am a fidler and confequently fomebody of note.

I opin the balls at court, and lead up the ragged regiment of St. Giles's. Your Giardini's and Gerniniani's without me are lefs fignificant than the poor blind feraper of Bedlam. I prefide over your concerts, and always make one with the four-and-twenty.

Iv phyfic more renowned than the High German Doctor. Let ftupid drones ftudy-I practice. Without a word of Hypocrates I have done wonders-where the whole ftiffrumped faculty have falled. It ftands on record that I have cured the fever; and for a certain diftemper that thall be namelefs, am a moft amazing fpecific.

As a dancing mafter, I as much excel the red-heeled petits maitres of the age, as roart beef and plumb pudding are beyond foupe maigre les grenovilles fricaffees. Avaunt ye minuet-mongers! No more of your coupees and your ballances! I teach without the clog of rules, and my pupils learn by inftinct. I have taken an aukward bumpkin, without a grain of mercury in h.m, and led him like a tame bear through all the modes and attitudes of dancing; thus realizing the poet's fiction, and making beafts dance after me.

Nor do I want activity myfelf as a dancer: I have hopped you many a hornpipe and rigadoon upon the tight rope.

I served my time with a fawyer, and there I learned-fee-faw! My mafter was defperately enamoured of Mifs K-Gripes, and ufed me as a fpokefman-I managed matters fo well with her, that many's the good time and often I have mads the flut's guts wamble again. Offering once to falute her with greafy lips, the nymph was ftruck fpeechlefs at the affiont-and my mafter in a pet difcarded poor Pill Garlic.

Anfwer.
A Fiddiestick.

## Anfwers.

If from sIX ye take nine, and from IX take ten; And from XL take fifty, then SIX does remain : A cypher and VI, with a D, when right fram'd, Shews the poet's name Cvin, in ancient times fam'd

## Query

Wuxnce arofe the cuftom of fmoaking tobacco in England, and how long fince?

## Anfwer.

The cuftom of fmoaking tobacco in England, arofe about the year $158 \%$, in the 27th of the reign of Quetn Elizabeth; when one Mr. Ralph Lane, a military man of note, and a Captain Philip Amides, returned to England from the inland Roanoke, at the mouth of Albemarle Sound, Mr. Lane and his company carried heme fome tobacco, the firf (Mr. Camden thinks) brought into England. Sir Watter Raleigh then in high vogue, and much efteemed by the gay, as well as gallant world, foon brought this odoriferours plant into much efteem ; that many ladies as well as noblemen, made no fcruple fometimes to take a pipe -and which the Queen did not fail to encourage; and, fome fay, ufed it herfelf.
Query.

Wainci arofe the cuftom of frying pancakes on ShroveTuefday, and how long fince?

## Anfwer.

Ony Simon Eyre, a thoemaker, being chofen ford mayor of Löndon, made a pancake feaft on Shrove-Tuelday, for all the apprentices in London; and from that it became a cultom.
$\mathrm{H}_{\mathrm{z}}$ ordered, that upotinging of a bell in every parifh, thę apprentices thould leave work, and fhut up their Ohops, for that day-wbich being ever fince, yearly obferved, is called the pancake bell. He made them a large feaft of pudding-pies and pancakes, and what remained when all had dined, was given to the poor. Then after in that year (1446) he built Leadenhall.

## 2yery:

Who was the firft man that introduced coaches into Eng-land-and how long fince?

## =209 $=$

Anfwer.
Conches were firt introduced into England in the year 2;89, and hackney coaches in the year 1693. The firt fatefman that ever fet up this equipage, was John de Laval de Bois Dauphin; who could not travel on horfebazk on account of his enormous bulk. Queen Elizabeth, as we find by hiftory, ufed to go even to the Parliament Houtic on horfeback.

> Paradox.

I have twelve times feen biffextile, pray tell how that can be,
Since twelve times four make forty-eight, and I am but forty-three?

Infzuer.
Ir a perfon be born on the $25^{\text {th }}$ of February, and travel weftwards the globe about, he may fee twelve bifextile Ftars before he be completely forty-four years of age, if he was born in a biffextile year.

Parailex.
Ory and two, when they're wrote down fair, Will make one hundred I declare.

Anfzuer.
Tine figure 1 and two 00's will make $1=0$.

## Paradox.

Taki one from nineteen, the remainder you'll fee, Is twenty exactly - Pray how can this be ?

> Anfwer. ; ;

XIX makes nineteen, from which take $r$, there will remain XX.

Paradox.
Comx tell to me what figures three,
When multiplied by four,
Make five exact, 'tis truth in $\mathrm{fact}_{2}$
This unto me explore ?
Anfiwer.
In decimals 8.25 is $\frac{1}{4}$, which being mutitiplied: by 4, the. product is 5 .

## Parados.

The fum of four figures in value will be, Above feven thoufand nine hundred and three; But when they are halfved, you'll find very fair The fum will be nothing, in truth to declare.

> Anfwer.

The four figures are 8888, which by draving a line thro ${ }^{2}$ twe middle of the fame thus ofogo the fumwill be eight $0^{\prime}$ \% 5 nothing.

## Paraidfx:

Srx hundred and fixty fo ordered may be, That if you divide the whole number by three. The quate will exactly in numbers exprefs, The half of fix hundred and fixty not lefs.

## Anfwier.

If the tails of the fix's in the faid number be revers'd she fum will be 990 , thë third of which is 330 equal.to half of 660.

## Paradoxs:

Thy fum of nine figures; a numbor will make, From which if juft fifty you're pleafed to take, One third of that number remains fill behind, This number young Tyro be pleared to find ?

Anfwer.
Reverse the figure fix and it till bectome 9 and writt the figure 3 in the tens place, which will prefent $30-10$ which add the eight digits, their fum will be 75 , from Which take 50 , remains 25 ; being the third of 75 -

Paradoss:

Fis fign likewife, 'tis not the fwan:
Ceme tell this landlord's name and fign,
That John majy know to call and dine.
Anfwer.
Tan man's name was Mark Noble; who lived at the figa of the angel.

Parados:

## Pdradox.

A truss of hay weighing but half a handred weight ins a fcale, weighod two hundred weight fuck tipon the end of a fork carried on Hodge's hhoulder: How could that be ?

Anfwer.
Tuz fork was as the fleetyard-Roger's houlder as the fulcrum fuftaining the burthen between the two powers, acting at both ends of the fork.

## Pivadors.

How can a mechanic file a fquare hole with a sound file ? and fill up an oval hole with a round ftopper?

## Anfwer.

A pirez of pliable metal being doubled, by applying 2 round file to the double edge, and filing a half fquare gap, on opening the metal, a fquare will appean Again, if two corners and an edge, at the end of a mifer's iron cheft, be sled away, with a round or any othier filt, there may be anexact fquare hele left. And further, if a cylindrical body being cut obliquely, the plane of the fection will be an pval ; and confequently, a round body, fituated obliquely: in an oval hele will completely fill it.

> 2pery.
-

> Yx lovely fair, the truth decliresp Do blufhes more difpenfe A mark within of confcious fin. Or fpoterfs innocence?

## Answetr.

Thz rofy cheek more frequently does thine From innecence, than from a fenfe of crime. The man who knows no honour, knows no tharte; And he that's loft to'truth, is loft to fame:

A dizacacy peculiar to the fair, has often been obferved' to produce a bufh, when impropriety fo far prevails as to introduce an immodeft fubject; and it is no uncommon thing for a perfon to blufh on heing difcovered in an error of any kind; and farther, diffident and very delicate people will blum when fpeaking to their fuperiors, \&c. In either care a crime cannot be implied, On the other hand, abfervation
obfervation convinces us that the hardened wretch, when before a difpenfer of juftice, and indubitably guilty of flagrant crimes, does not even change countenance. Hence a blufh cannot be confidered as an imfallible criterion of either innocence or guilt, but much more frequently the former than the latter.

## 2uerys

Yx Iovely fair who every heart engage, Whofe learn'd productions grace many a pagey Inform me, what is love ?-that foft regard Which you create, you only. can reward.

> Anfwer.

LOve is a tender fondnefs, a frong defire, An ardent with, an unextinguifh'd fire; A longing foul, a chare imploring mind, To share thofe charms we in another find.

- Prthagoras fays, " Love breaketh the brain, but is never bruifeth the brow; confumeth the heart, but "never touches the $\mathbf{i k i n}$; and maketh a deep wound to be * felt before any fcar be feen. ${ }^{22}$

## An Aritbmetical Paradox.

IN an Arabic manufcript was found this remarkable decifion of a difpute. "Two Arabians fat down to dinner: " one had five loaves, the other three. A ftranger paffing. ${ }^{6}$ by, defired permiffion to eat with them; which they " 6 agreed to. The ftranger dined, laid down eight pieces" of money and departed. The proprietos of the five " loaves took up five pieces, and lefe three for the otherg. is who objected, and infifted for one half. The caufe came" before Ali (the magiftrate,) who gave the following judg" ment: Let the owner of the five loaves have feven "pieces of money; and the owner of the three foaves, " one." $=$ Query the juftice of this fentence.

## Anfwer.

Airis fentence was juft. For fuppofe the loaves to be divided each into three equal parts, making twenty four parts in all the eight loaves, and each perfon to eat an equal or eight parts. Therefore the ftranger had feven parts of the perfon who contributed five loaves, or fifteen parts,

## 2I3

and only one of him who contributed onjy three leaves, which make nine parts.

## Query.

Take a cup of coll water filld up to the brim, Then one after t'other hip ten Mhillinge in; When this you've perform'd, I'd have you difcover What is the reafon the cup won't run over.

Anfruer.
Ir is a natural quality of all dry fubfances, to reffift water in a fmall degree. Hence the top of the cup being fuppofed to be dry, the hillings, or any other fmall thing being not to great as to overcone the refiftance, and nipped in with a feady hand, the water will rife above the dry edge, without running over, till fo many are put in, as to caufe the Weight of the heaped-up' part to overcome the repulion of the dry efige.-The troth of this propofition may be proved various ways; blat by note more frmple and eafy, than by dipping your fingér in the water and wetting the edge of the cup with it, opon' whiteh st watef which is above the rim of the cup wilh run over.

## $\alpha$ Paradox:

Ninthematicions aftim that, of atl bodies contained undér the fame fuperficies, a fohere is the mioft capacious: Hut furely they have nevei confidered the amazing capaciournefs of a body whore name is now required, and of which it may be truly affirmed, that fuppoing it's greaten lenzth 9 iniches, gréatéft bréadth four inchies, änd greateft depth three inches, yet under thefe-dimenfions it containis a folld foot.

Query.
Modesty and bathfulnefs are often fpoken of indifcriminately; what is their diftiction?

Anfwer.
Modesty is an emblem of chaftity and humility, and is very becoming: it is decent without being forward, and can affume a modeft affurance, without diffidence. Whereas bathfulnefs is childifh, and ruftic, auk ward and unbecoming ; and is moftly caufed by fear, or diffidence, or the want of keeping company.
Query.

Ingenious nymphs, if e're you with to chare The joys connubial, and defire to wear The pledge of love, its origin declare;
Say from motive firft the cuftom fprung,
And why on the fourth finger always hung?

## Anfwer.

The cuftom was introduced by the ancients, who ufed to prefent their miftreffes with a ring, meaning thereby to exprefs, as a ring has no end, fo there fhould be no end of that love which is neceffary to conftitute connubial felicity. And it was put upon the fourth finger of the left hand, becaufe anatomilts affirm that there is a vein in it having a direct conveyance to the heart, which is the fource of lave and affection.

## Query.

Wrat fyftem of phifofophy gives the moft convincing and demonfrative proof of the immortality of man ?

## Anfrver.

It max be frid, without incurring the imputation of atheifm, that no fyftem of philofophy gives us either convincing or demonftrative proofs of the immortality of man. Perhaps metaphyfics bids faire\&t to anfwer the conditions of the query.-Inferences may be drawn from anatomy, and even from botany; but every argument drawn from philofophy feems to be weak; and it is from infpiration only that we have convincing proofs of the immortality of man.

Query:
$\Longrightarrow 215=$

## Query.

The orgin of Valentines declare,
From what it fprung, from whom, and when, and where.

## Anfwer.

It is fuppofed that the origin of Valentines was from one Valentine a prieft, who lived in the thind century, and who, upon his being difappointed of a bifhopric, forfook the chriftian faith. He publifhed that there were 30 gods and goddeffes, 15 of each fex, whom he called aones crages, and taught that our Saviour, like another Pandora, fprung from their correfpondences, and farther affirmed that he paffed through the Virgin Mary with a body be brought out of heaven, as through a pipe or conduit, and that all men thould not rife again. His followers who were unmarried, afually met together on the 14th day of February each year, and each chofe one of the oppofite fex, who were to inftruct and advife each other on religious and other affairs, during the following year.-But fome perfons are of opinion, that it had its origin from the obfervation of the birds, who chufe their mates about this time of the Year.
Query.

Requred an explanation of all the leters on a Guinea.

$$
A_{n} f w e r .
$$

The infcription on a Guinea runs thus:
GEORGIUS III DEI GRATIA, M. B. F. ET. H. REX, F. D. B. ETLDSR.I. A. T. ETE.

That is, Geargius Tertius, Dei Gratia, Magne Britannix, Francix et Hibernix Rex, Fidii Defenfor, Brunfwicii et Lunenburgi Dux, Sacri Romani Imperii Archi-Threfaurarius et Elector.

## In Engijb.

George the 3d by the Grace of God, King of Great Britain, France and Ireland, Defender of the Faith, Duke of Brunfwick and Lunenburgh, Arch. Treafurer and Elector of the Holy Roman Empire.

Paradox:
I'm neither man, beaft, fifh, nor bird, Infect or reptile none;
Yet live and breath, tho' (on my word) My origin was bone.

## 216

> A.s foon as you have found my name, All doubt will difappear ;
> Tren fail not to reveal the fame
> :Unto us without fear.

Anfwer.
The bape that's meant, if right I hit, Has often try'd men's charpeft wit; Since, with woe from man's fide it came, Woman theretore is its name.

Paradox.
I was to morrow, buṭ am not to-dạy ; Yet fhall be two days paft : my name difplay.

Anfrocr.
Yesterday's part which once was call'd to-morrow; This fome perhaps do find unto their forrow.

## Paradox.

FAM'd arborift difplay your pow'r, And hhew how I may plant a bow'r With verdant fir and yew:
Twelve trees of each IPd fain difpofe, And only eight and twenty rows, Four trees in each to view.

## Anfwer.

First make a circle, (Plate VI, fig. 3) which divide into eight equal parts, and infcribe two geometric fquares, is each of which draw two diagonals; then draw the lines A B, A C, \&cc. from all the angles of both the fquares; after which draw the parallels, as per figure, and it will anlwer the conditions of the problem.

## Query.

By what motive is a lady, who has feveral admirers, induce to place her affections on that man who is the leaft anxious to obtain her favour; and difregard him, the difintereftednefs and ardency of whofe paffion is confpicuous in every part of his conduct: when from the former, nothing but coldnefs and indifferency, if not an averition to her, is to be expected after the marriage-knot is tied: but from the latter the moft affectionate, endearing, and
indulgent tendernefs, on every emergency, to the latoat period of life ?

## Anfwer.

A man who has a real efteem for a lady, approaches her with fear and diffidence, which appears in his whale behaviour: this, though the greateft proof of real efteem,* the lady from a thoughtlefs gaiety defpifes him : for whilf a man is indifferent about obliging a lady, he can behave with eafe and gaiety (I might add with affurance) this being more adapted to the gay difpofition of a lady, the is taken with it. The ladies are certainly more apt to be governed by their own airy inclinations than by their better judgments.

* "Every paffion, but fond love,
"C Unto its own redrefs will move;
"But that alone the wretch inclines,
${ }^{*}$ To what prevents his own defigns:
$\because$ Makes him lament, and figh, and weep,
* Diforder'd, tremble, fawn and creep;
"Tortures which renders him defpird

## Query.

Why does the generality of mankind incline more to ebriety than fobriety ?

> Anfoer.

Ali mankind, at fome time or other, are involved in care and trouble ; and as drinking plentifully is thought to be an antidote againft it man feizes with too much eagernefs the much loved-habit, and frequent cuftom draws him on more to ebriety than fobriety.

> Query.
> WHY is every hang-man called Jack Ketch?

> Anfwer.

Probably from the dog Harpalus (in Englin catch or ketch as vulgarly written) mentioned by Ovid, and Jack 2 word of derifion.

> Query.

Why may news be faid to be the true and genuine food of the mind?

$$
\mathrm{U} \quad \text { Anfwer. }
$$

## 218

## Anfwer.

That every thing novel pleafes the mind we allow, even though it is in itfelf tragical; variety is alfo found to be pleating. News is variety, and confequently may be faid to te the genuine food of the foul.

## Query:

Which is fupremeft in woe, a king without the love of his fubjects; or, fubjects without the love and the fayor of their king ?

> Arfwer.

Whin tinat reciprocal love and affection is broken, which ought to fubfift between the prince and people, it is indeed very difficult to point out which is in the worft ftate. The one is filled with tears and apprehenfions, and the other full of coubts and anxitty. The prince who confiders himelf as the common tather of his people, muft undoubtly wear a crown of thorns, if his fubjects prove froward and difobedient chidren, and theietcre will ftrive to hold their hearts in his be fom; but when that faiherly affection is left, what are the fubjecis but wretched or pr-ans, void of the protection they had a tight to expect? They wander up and down defpair ng and defpifed, w thout power of redrefs, or ho pe of enjoyment Uh!wretched ftate of both! But oh, how bleft the fate when kings are lerved through love, unawed by fear. It is hard to fay however, which is the fevereft fate, but I humbly imagine the fub. jects muft be the fupremeft in woe.

## Query.

Teil me yefons of freedom, what mutt bs The only thing to make us all agree.
s"
Anfwer:
$Y=$ fons of freedom fure muft be, The only thing to make us all agree.

## Query.

Wuether is love or hatred moft prejudicial ?

## 219

Anfwor.
If taken in a fcriptural fenfe, hatred muft certainly be bioft prejudicial, but taken politically, love may fometimes be productive of more prejudice than hatred.

## 2ury.

Whether is the mifer or the fpendehrift the greatef enemy to themfelves, and the moft hurtful to public fociety?

> Anfwer.

The injury fuftained by a fpendthrift is generally confined to a few indivi luals, but the mifer is fuperlatively wretched, being a profeffed enemy to God, his neigibour, and himfelf.

Paradox.
Wren life and breath forfake body, what doth that lady ftand is need of ?

And if I guefs right, and right can remember, It muft be near the end of the month September.

> Query.
$\alpha$ Is there not an appointed time to rman mpon eareh suv

> JOB.

Anfwer.
Trax infinite power of the All-wife Creator has, and does modoubtedly fix an appointed time for every being of the divine
đivine fecies here on earth. Nothing can remain a fecree to him, as the holy Job jufly intimates, that there was an appointed time for him to fuffer his affictions, 'ill called to the heavenly manions of eternity.

## Quers.

Wry was the human, and other animal rpecies, created with two ears and but one tongue ?

## Anfwer.

Thi human, and other animal fpecies, were created with two ears, that various and oppofite founds hould not lofe their ftroke or effect. Whereas, if each animal liad been furnifh'd but with one ear, the founds propagated on the contrary fide of the head would have failed in their effect. Dangers among all could not fo well have been avoided, or other notice fo diftinctly conveyed; and mufic and conver. fation among the human kind had fallen thort of their prerent power to delight and inftruct. One tongue is fufficient to act in obedience to all the organs of fenfation and reflexion from the human fpecies to the brute, and to aid the conveyance of the food of all animals into the ftomach.

Maniind may infer from their having two ears and but one tongue, that they fhould hear more than they fpeak.

## Query.

Mr. Woolatton fays, in his Religion of Nature delineated, that all perfons living beyond their circumftances, at the expence of others, live a Lie: Who are thofe, in every ftate, that live, indulge, and thrive by more palpable impofition?.

## Anfwer.

Perniciovs petty-foggers in a nation, who live by the plunder of mankind, in ftirring up ftrife, indulge and thrive by palpable impofition. And thofe who live beyond their circumftances, running in debt to fupport ambition and vanity, though they appear what they know theyare not, and never defign to pay, are yet as honeft as the former.

## Query.

St. Paul faith [r Cor. xiii. 13.] "And now abideth "Faith, Hupe, and Charity, even thefe three; but the greateft
greateft of there is Charity." Why is this latt glorious principle fo little exemplified among fome of our Reverend teachers ; and for what puri ofe muft Reifon, the gift of the Great, Creator, be made fubfeivient to incomprebenfible faith ?

## Anfzeer.

Itare Charity to fignify love and benevolence, as well as almfgiving, which I hope arc as much exemplified among our regular clergy, as among the laity. We are told by aitefted Revelation, that the Great Creator (whofe Word is Truth) has enjoined our faith to affent to things above our comprehenfion, with an intent that, where our reafon falls, faith thould affift us in our duties to himf If and man. For men may be ftrietly moral toward each other by the ufe of reafon, while they remain vicious in themfeives, by acknowledging no duty to their Maker. But faith lifts the mind to God, and influences the thoughts and paffions to habits fuitable for divine contemplation. Hope (a friend to all, and without which all men would be miferable) is likewife increafed by faith more than hy reafon or morality : fo that our reafon is thus ufefully and beneficially fubfervient to faith, in what we ought to believe, with refpeet to Gad and his Providence. Faith not glounded on reafon is fuperftion, which however, in many different modes may be innosent and ufeful, while it ferves to bind the will and the paffions, and direct the mind to God.

Mr. John Cotton, reflecting on the greatnefs of the Creator, and his fecrets of Providence, to the latter part of this Query, fpeaks of man's frailty and faith, as follows:

God's AEss which are to be-fhall human fieft defcry ? Or thall proud duft pretend his will to prophecy ?
We may prognofticate, as far as fancy roves,
The juft in faith thall be blefs'd, as the margin proves, *
All thall converted be into the faith of Chrift, $\dagger$
Free from idolatry-ne'er mind the Popich priefl. $\ddagger$
Let us hold falt our faith, Death when it will may come, And whilft our way is good, who minds the faith of Rome ?

[^12]
## Query.

What are the chemical ingredients in the compofition of a modern Mathematician: and how is the method of procels performed for tis extraction?

Anfwere

With the profoundef refped to the noble Science of Mathematics, and afier fo mach unweariod diligence, we have ventured to lay before the public the Grand Sreanam, interefting all nations, conftituting a modern Marhematician! firft having confulted our own and foreign Univerfities, the Royal Society, the Commiffioners of the Longitude, the College of Phyficians, the murderers of Dr. Halley's Tables, and all ot er venerable and academical focieties, foreign and domeftic, who could give us the leaft af. fiftance in a work of fuch vaft importance as the following. compofition.

Haif a pound of earth lying two feet deep, perpendicular from the furface where the body of Sir Ifaac Newton is depofited; two fciuples of imperceptible atoms; twelve ounces of demonftrations, three hundred important problems unfolved, and forty-one folved; fonr ounces of fluxions, five ounces of caput mortuum of common fenfe, nine ounces of precipitated reafon; of fablımated cyphers, fubquintuplicated reciprocal ratios, fpiderial, re€atrical curves, and hyperbolifms, each a fcruple; plufes, minufes, multiples, radices, dividendas, equals, poftulatas, datas, inveftigations, theorems, corollaries and fcholiums, each a drachm; crooked pattin-rings, a pair; fix of Heath's logarithmic exponential equations; all Demoivre's; Muller's, and Simpron's Difputes, with his late whole doctrine and application of Fluxions; the 70 enormous aftronomical tabular blunders, in the mathematical digefts; a Lady's-Diary, and Palladium ; Mother Whifon's Chronology, and half an ounce of dry converfation: put thefe ingredients into a retort, fitted with a bult-head, hermetically fealed, and let them all calcine tugether, in a tandheat, for three days; when cool, break the bolt-head, take out the powder, and fop it clofe in a large long-necked bottle, for uff.
Wit half anounce of this powder made into an ointment, .with a quantuin fufficit of hog's-lard, rub well he intended artift's breaft and fomach, and ahout his navel, before a fire made with chips of mathematical inftruments. This done, let him walk feven times round the Rov.ll Ohfervatory, at Greenwich, in a fpiral curve. Then fix him oris his back, upon a :noveable axis, in the m dulle of a tobaccohogihead, headed up, with its poles palfing through the centre of both eads. The circles of the fphere beine chaiked out about him, and light a mitted at circula; holes, each half an inch radus, round the echptic and æquinoctial, he muft
wuit roll down Greenwich-Hill, by the force of gravity, to comprehend the earth's motion, and aterration of light. Being come to the bottom of the hill, the hoginead muft be ftaved, and the artift fet at liberty. Then he muft take of filence, felf-conceit, and ftiffnefs, each half a fcruple, made into a bolus with the electuary of technical terms, wafhing it down with a pretty large draught of ill-manners.

Thus, he will inftantly become a famous Mathematician, fit to be made profeffor of Geometry, Aftronomy, Algebra, Fluxions, Gunnery, and Fortification : likewife fit to be admitted an Uranographical Surveyor, Stock-jobber in Change-Atley, Star-gazer, Almanack-maker, or Secretary to a Regius Profeffor.

## Query.

What is the ratio of the length of time part, to that which is to come? And the ratio of each to the leaft and greateft time of a man's life of 100 years ?

> Anfwer.

On a boundlefs line, contrarily extended, reprefenting each eternity, from the prefent point of time, there can be no diftance of time paft greater than that which is to come; nor any diftance of time to come, greater than that which is paft; whence the ratio of time paft, to that which is to come, will always be of equality: And the limited time of thungs reprefented by the intermediate diftances betwixt the two oppofite boundlefs extremes, will be nothing in refpect to eternity, paft, or to come.

Hynci, the leaft time of a man's life to the greateft of 100 years, will admit of no ratio in refpect of eiernity, or no other than 0 and 0 , to an infinite quantity; but with refpect to the intermediate diftance of 100 years duration of iife, the leaft diftance of time to the greateft, on that fcale, will be as 1 to an infinite quantity.

With refpect to the limited life of beings, their times are in proportion as their different fucceffions of perception : for trme, more or lefs, perceived by all heings, depends on the life of fome being to perceive fucceffion of perception ; without which perception time could not be ; fince abfolute imperception implies abfolute non-exiftence.

## 229

To inanimates there is no time, while time or fuccefion of perception, appears to every being of fenfe that can perceive fucceffion, or change of place; though we are ignorant of the different degrees of perception, cogitation, and forefight, with which the Great-Creator has endowed different fpecies of created beings.

The quantity of duration perceived by each being is according to the fiviftefs or flownefs of its fucceffions perceived (i. e. according to the number of fucceffive perceptions) whereby a fuperior Being, having as many fucceffions in a day, as any man has during his whole life, may be said to live that man's life in a day. And hence men of -quick parts and penetration may be faid to live more than men of dull faculties, in the fame time. And by the fame rule, the life-time of a man is indefinitely greater than the life-time of a reptile, \&c.

Dweiling on a fubject of entertainment, by which the attention is diverted from obferving fucceffion, makes time appear Shorter than it really is; as does forgetfulnefs of what is paft. On the other hand, by every mpment of Succeffion counted, when we endure pain, time then appears longer than it is; fo that an age of pleafure is not fo long as a few years of pain, with refpect to the beings that :enjoy and fuffer them.

The Eternal Now, fo called by fome authors, as the property of the Divine Perception, is as incomprehenfible as time without beginning, or as the attribute affigned the Divine Being, of doing any thing, when it is evident he cannot deftroy himfelf, nor yet the fucceffion of time. If time was to be no more, according to the cuftomary phrafe, no thinking being could then exift, nor time be perceived. Moreover, if God perceives all that ever was, or will be, in one valt idea, as prefent, yet we cannot truly affirm, that he actually faw Chrift upon earth till he came; and therefore he muft fee by fuccefiion through the whole courfe of nature, though infinitely fuperior to the ways of human perception.
Query.

Whetere it would not be vafly ferviceable to this kingdom In general, to have public regifters of debts erected in every county, as well as in Middlefex, and one part of Yorkhire ? And whether courts for the recovery of fmall debts Mould not likewife become general, as well as in

London and Middlefex, to prevent the impofition of tricking.pettyfoggers, bailiffs, and their followers.

## Anfover.

Public regifters of debts, in every county, would prevent fraud, and extravagance, and inculcate the principles of honefty, and good ceconomy amongft us; as well as put an end to the pernicious practice of double and treble mortgages on the fame lands; and guard againft lending money on bad fecurity.

Incumbrances upon mof confiderable eftates in this kingdom being already known, the difcovery thercof can be no objection tu the paffing an act for regiftering debts in every county, as it would-promote the welfare and tranquillity of the nation; whilc other political courts of Europe, are endeavouring to reduce the number of their lawyers, and retrench their exhorbitant fees.

If courts for the recovery of fmall debts were general, they would be of general advantage by their eafy expence, fpeedy itfue, and fectrity of the plaintiff's money, not being paid into the hands of fuch (vermin of the law, and enemies to juftice and mankind) as commonly withhold the beft part of it.

## Query.

How is the Scripture doctrine of fmiting one cheek, and turning the other, and giving your cloak to him who takes your coat, to be reconciled with the conduct of the Right Reverend and Reverend Teachers of the age, fo tenacious of their own property, and ready to refent injuries? And -why fhould not precepts be preferred to example?

## Anfucr.

This doEtrine of fmiting one cheek, and turning the other alfo, was probably firft taught in the infancy of chriftianity, to propogate the Gofpel, and the principles of patience and forbearance, among individuals; at a time when converts were few, and when refentment would have heightened tieir punifhment from their powerful perfecutors: for it never was.a doctrine betwixt different nations, repelling force by force. And to reconcile this doctrine, with the general conduct of the chriftian part of the fame nations at this day, feems to be as difficult as it would
be to prevail with refpective individuals, or thofe undert different governments, to unite in the fame form of worMip. If what Mr. Dryden obferves be true,

$$
\text { Tbe Priefts of all Religions are tbe fame, } 7 \text {. }
$$

we thall find that the teachers are more revengeful, and refractory than the hearers. An inftance of which appears in the news from Paris of the $5^{\text {th }}$ of Jan. 1750-51. N. S. A few days ago an extraordinary council was held at . Verfailles, on the affair of the clergy, many of whom thew * perverfe fpirit and infift upon principles and facred im. munities, and talk as though they were ordained to draw the wealth of the nation to themfelves, and contribute nothing towards it's expence. This is a fpecimen of the fubmiffive behaviour of the Catholic priefthood; who, in this point, I confefs out-do thofe of our countty. For, though no perfons living are more tenacious of their own private property than the Proteftant clergy, yet, they never fcruple to pay their proportion of taxes to the public. And however hark this text may found in an age of rapine and plunder, where property feems fo precarious, the doctrine before us, of fmiting one cheek, and turning the other alfo, was certainly well calculated for the peace and welfare of fociety in government ; and to prevent petty quarrels, and litigious controverfies about trifles.

And where example is fo rare, the precept chould be preferred as far as it will bear.
\&uery.
Which of thefe tradefinen, a Bookfeller, Print-fellet, Printer, Copper-plate Printer, or Publither, have the moft honefty?

Anfwer.
Thougn the employments of Letter-Printer, Bookfeller, Publither, Plate-Printer, or Printfeller differ, yet they are members of the fame body, and confequently are poffeffedin fome degree, of the fame principles, fubject to the fame temptations, and tainted with the fame crimes. By comparing their refpective artifices, the reader will the better judge of the truth and juftice of our decifion, with refpect to their feveral integrities.

The Letter-Printer, originally, had an undoubted title to the free exercife of all the five branches of bufinefs, but as the number of hands encreasted, and trade grew more ex-
tenfive, they came to be divided into their prefent different claffes. The Letter-Printer was reduced to a ftate of dependency, whofe fituation with the Bookfeller, is like the Bailiffs with the Pettyfogger. They mult keep their mafter's fecrets, be acceffary to their frauds, and fubmit to their will and pleafure, or elfe ftarve. Self-intereft, as well as felf-prefervation, is implanted in our natures, and if one will not do dirty work for gain, anôther will.

Tas Plate-Printer has two mafters to ferve, the Bookfeller and Printfeller, who can hardly be fuppofed to ferve both with integrity. We might as well expect he fhould be able to ferve God and Mammon at the fame time.
$\mathrm{T}_{\mathrm{H}} \boldsymbol{z}$ Bookfeller and Printfeller are the grand corruptors, who communicate the infection thircugh the whole tribe. Thefe are wilfully fraudulent, whereas the others are only by compulifion.

ThE Bookfeiler preys upon Authors, as the Printfeller docs upon Engravers, whom they purfue, as the Dolphins do the Flying-FiM, either inftantly to devour, or to drive them aloft, that they may drop into their mouths. For, if any. Author refufes the"price offered him for his copy, he is fure to have his work run down by the whole fociety. If, to fecure his property, he hazards the printing and publifhing his own performance, the fale of 1 t is prevented; for fuch book being fent for out of the country, all orders are returned ignoramus, and àjury fummoned thereupon to fupprefs it. - They pretend to a vaft fund of learning, but on enquiry, ycu will find it all fuperficial, confifting in Title Pages. And they generally keep fome poor pedant under their thimbs through whote eyes thity fee, and by. whofe judgment they are determined.

The Printers are the tools they work their wonders withal, without which they can perform nothing. Into thefe the'y' early inculcate the doctrine brid down in'the parabte of the unjuit feward, and for every hundred fheets they woik off; bld them fit down quickly and write fifty; then commend their integrity, and fay theyi have done weifely. In chort; it is hard to find fuch a ruling thing as confcience among the fraternity. All moral duties mufteruckle under to intereft; nor will they make any foruple of invading the property of a ftranger, of a neighbour, or even their own brethren.

Tha Publither is a fort of Bookfeller in miniature, bat goilty of greater extortiom: He neither ailvances any money,

## 233

money, nor runs the leaft hazard, and yet is hardly fatis: fied with 301 . per cent. per month, for vending another's property. Upon the whole, as we are not able to dificover the leaft tincture of any one virtue in above one out of twenty Bookfeller:, Printfellers, Letter-Printers, PlatePrinters, and Publifhers, the fmall thare of common tonefty to be found in more than that number, we affign it to the Letter-Printer.
N. B. The foregoing is not intended to refiect upon any of the worthy gentlemen in trade, whom we know to be men of integrity.

Whether Britih authors, in general, fhould not feek out Foreign patrons, to accept of their Dedications, feeing theit endeavours to promote ufeful knowledge mect with no encouragement at home ?

## Anfwer.

As prudence direCts every artificer to fend his manafacture to the beft market, I think no author fhould hefitate a moment about dedicating his labours to any forcigia Macenas (whether commoner, pear, prince, or potentatel

- from whom he has reafon to expeet the mort encouragement, or reward; whether he refides in Europe, Ailia, Africa, or America.
In the 188th Spectator, it is obferved, "That nothing can occur more monftrous than to fee perfons of ingenuity addrefs their fervices and performances to men no way addicted to liberal arts: in which cafes the praite on one hand, and the patronage on the other, are equally the objects of ridicule. Dedications, to ignorant men are as absiurd as any of the fpeeches of Bulfinch in tae Droll: fueth an ad-drefs one is apt to tranflate into otiler words'; and when the different parties are thoroughly confidered, the pancgyric generally implies no more than if the author mould fay to the patron; My very good lord, you and I can ndiver underftand one another, therefore I humbly defire we may be intimate friends for the future.
"Thi rich may as well afk to borrow of the poor, ap the man of virtue and merit hope for addition to his character! from any but fuch as timfelf. He that commends quother engages fo much of his own reputation, as he gives to that perfon commended; and he that has nothing laudable in

## $\rightarrow$ <br> 234

nimfelf is not in ability to be fuch a furety. The wife Phocion was so renfible how dangèrous it was to be touched with what the multitude approved, that, upon a generat acclamation made when he was making ah oration, he turned to an intelligent friend that ftood near him, and afked, in afurprized manner, of What Mip have I made :"
Quers.

WOUn. not the licenfing of public brothel houres in Britain, as well as in other chriftian countries, be of advantage to the public and prevent.difeales, rapes, robheries, murders, and the ruin of many families? And whether it would burt the Proteftont religion more than the Catholic?

## Anfwen

Propze. fitwis pertittied in this nation, would doubden be of fervice to the government by the tovenue arifitg therefrom, and would be a means of bringing more fubjects inte life. and of preventing the difmal effects of many lewd pernicious praetices. And, though they might:be looked upon es novel fchemes for the enconaragemient of debauchery, and seftructive of the Proreftint religion (becaufe not habitual among the Catholies) yet if confidered under their train of advantiges, fuperior to the difadvantages attending theit teleration, they are preferable.to the prefent praltices, by. tis much as regulated vice or paffion is fuperior to a ftate of. abandoned out-rage, farther confidering that trumal infir-. mities don'tadmit of perfect curo:

- Query.

As in a married ftate a man is obliged by the live to lay.道 prifon for debts contracted by his wife, without his Enowledge and confent, is it not fit he fhould have power. to imprifon her for his own fecurity; being not able tos raife money on a jointure, but by her own confent? And, how is matrimony in this cafe confiftent :with reafon andis equity?

## Anfuect.

It might be thought incredible for any woman to fuffer, 3.rer hufband to farve in prifon, and her children to live in:a. Atate of fervility, when it-is in her power to prevent both'. liad we not dally inftances of fuch barbarity. And when the wife is the aggreffor, and the haiband blamelefs, as it forintimes lixpeent, the barbarity is. fill tuore theoking:-
and wherein our laws are greatly defective in not providings a remedy. And a man's confinement in prifon can anfwceno other end than to gratify the fpleen or revenge of his oreditors, who are fometimes his feducers, in hopes of gaining profit by his ruin. Reafon and equity call aloud for a reftraint upon the wife in cafes of jointure, and running her humband in debt. The marriage-inftitution is not herein blameable; but the evils attending marriagt-fettlement, made previeus to the marriage itfeft.

Whiniver an unreafonable jointure is mande on a moderate eftate, and three or four ehaddren happen to be pravided for, experience mows, what fuch lands are commonly alienated in the fecond generation. And 1 have often wondered that na better expedient could be found out for paying infolvents debts than by lofs of liberty,

> Quety.

What would have been the rellgion of the late archbiniop Tillotion, if he had been born and lived a few years: at Pekin in China, and the reft of his days at Conftantinople in Europe? And which has the beft title to falvation, the Jew, Mahometan, Pagan, Papif, Methodift, Muggletonian, Lutheran, Calvinift, Quaker, Prefbyterian, Independent, Anabaptift, or the followers of the pious Mrs. Henly?

Anfwer.
Had the great prelate, fpoken of, been born at Pekin in China, and continued there doring his minority, doubtefs lim would have imbibed the Paran primciples: for the prejudice of edocation belog fo forong, mate the Henction post obforve,

Quo femel eft imbota recens fervabit odorem
Tefta diù.
After which, Mahomet would have worked no more effect uporn him in Turkey, than if he had gone from England to refide there, at the fame age for the reft of his life.

As no religion cen entitle a man to falvation but by the right ufe of it, men may mifeariy by all religiors, and therein one religion not have preference to another; as fome cannot be happy living under any government. But if.we compare religions to governments, by which they are fupported for ends of happinefs, we fhall find that the reformed chriftian religion is as preferable to other religions,

## 236

as the chriftian government fupporting it, is preferable to all others. As to Mr. Orator Henly's piety, it is equivalent to that of his conftant hearers; of a piece with his modefty and truth.

> Query.

Ir to Apollo's fmiles you've juft pretence, And claim from him your boafted influence, O tell a doubtful and enquiring fair, The reafon why her fex fo open are ? Why fecrets in their breafts no fafety find ? And why their vows are fleeting as the wind?

## Anfzeer.

Your outward beauties inward thoughts betray, As men thro' curtains fee the breaking day, Bat fure, you fometimes keep the vows you make, And men accufe you by a grofs miftake. Your faults are doubled by your being fair, White cloth fhews fpots much larger than they are And flaws, moft deep, in brighteft gems appear.
Query.

Why are the blacks in Guinea woolly-headed, and with Aat nofes, when they are not fo in other places?
Answer.

Finst, in aniwer to that, why the blacks in Guinea are woolly-headed ? It is fit to obferve, that by the help of the microfcope, it has been found that hair and wool differ ooly in bignefs, being otherwife made up quite after the fame manner, and every fingle hair confitting of feveral other fmaller, wrapped up as it were in bark, and that the number of thefe minute hairs in wool is leis than it is in what we properly call hair. -It remains then only to find out fome reafon why the hair of blacks does confift of a lefs number of thefe minute hairs than that of other nations, and it may yery well be fuppofed that this difference pruceeds from the Imallnefs of the pores of the fkin, out of which they are bred and receive their encreafe.
2. As to the flatnefs of their nofes, if they come fo into the world, it may eafilv be accounted for, by the likeneis we fee generally, chi dren bear to their parents. But I foould raiher be induced to beleve, that it being reckoned a
piece

## 237

piece of beauty amonget them, thev artificially form themfelves into that fhape, and that may eafily be done in new born infants, fince what we call the bridge of the nofe is then only of a cartilaginous or foft grifly fubftance.

Query.
Yov merry fons of god Apollo, Who this refponding bus'neff follow, And can refolve in fuch a trice, Our queftions difficult and nice. Pray tell me what you do opine Of that fame frite, or thing divine; Which did in danger often give,Old Socrates a tug by the flecve? And why the dremon did not twitch, When he efpous'd.that bitter bitch?

## Anfwer.

Ingenious fir, we maft confeft, We like your humour and addrefs; Therefore without defign to flatter, We'll tell you what we think o'th' matter: That demon, frite, or what you pleafe, Which was fo kind to Socrates, Was wifdom, and right reafor join'd, Which gave'found dietates to his mind: There only fail'd him when he chofeThat fiend Zantippe for his Ipeofe, Which fliews if mateches are the careOf heaven, the fage no fiend had there:

## Siretyo

Sumposivo I have a chaltenge fent me to fight, and I am unwilling to do it, fince it' is againnt the laws of God and man. How thall I behave myfelf fo as to fave my honour?

## stawor

- Anticuity prefents us with a memorable paffaye concerring two foldiers in Cxfar's army, whio upon a very hot contention, agreed upon this expedient to decide the quarrel, namely, vigorouny to attack the common enemy, and vindicate their diwt by their country's honour. Thei refoJution taken, ane of them, araulted the thickert fquadrans,

## 238

drons, and had like to have faved his reputation at the expence of his liberty: but the other reviewing the danger of his antagonift, flew after him with a generous emulation, beavely refcued him from his furrounding foes, and glorioully overthrew him by a prevention of his overthrow. Apollo is a ftrange admirer of fuch genuine bravery, and therefore prefingly recommends fo noble an experiment.

> Query:

Since you are mathematical, and refolve cafes belonging to chance, you will oblige me to let me know whether there is any odds in playing at even or odd, if there is any, it feems very odd to me?

## Arfwer.

Thoven you feem merrily difpofed, and to have fent this queftion for the fake of a pun, yet there is more in it than perhaps you imagine, for the greatef number of pieces that you can grafp, is either an even number or an odd one : if it is an even number, then in this number, and all the numbers inferior to it, there is as many even numbers as odd ones, and therefore it is equal which is taken; if the greateft number of pieces you can grafp is odd, then there is advantage in gueffing odd; for in an odd number, and the inferiors to it, there is one odd number more than there are even ones; and therefore, upon the whole, there is an advantage in taking odd preferably to even; we do not know whether this reafon can convince you, but whether it does or no, we may affure you (to return pun for pun) that it is even fo.

## $Q^{2 u e r y}$.

$W_{H} \mathbf{Y}$ is it, that fo very few are qualified with juft and fublime notions of friendihip?

Anfwer.
WI conceive the chief reafon to be, the corruption of our minners; the generality of people, living a life of fenfe, and not of rearon, of which friendichip is the off-fpring.

> Query.

Orf-spaing of Phoebus, fons of Delian fire, For fo we judge you by your parts and fire,

## 239

Tell us, why thofe, the vulgar call the wife; Bo wit, and witty men, fo much defpife ?

## Anfzer.

The man of wit, and not of judgment too;'.. Is juftly nighted by the wifer few; But when both join, and in one center fall, That man, like thee, commands refpect fromail.

> Query.

Why are fome perfons fo chill, even to thaking, as in an ague, after eating ? Your folution will oblige your humble fervant, lris.

## Anfwer.

The digeftive faculty of the ftomach attracts fo mach heat to it for concoction of the food, that the reft of the body for a while is left without a fufficient quantity to invigorate the tendons, \&cc. to perform their oftices; but is a fign of healthful conftitution.

## Query.

Iearnit Apollo, tell me why So little wool, fo great a cry.

> Anfwer.

A Question taken in anfwer's ftead, Why fuch fmall brains, fo great a head?

## Query.

Why does caltration hinder the voice breaking; and if maturity alters the voice at fuch an age, why fhould it not have the fame influence upon women?

> Anfwer.

Thy breaking of the voice is canfed by the heat of the body, which dilates the aipera arteria, or wind-pipe: now caftration diminimeth the heat of the body, and confequently prevents fuch an alteration; and the conftitution of the female fex being naturally colder than that of men, preferves their vaices inrill and tunable.

> Querys

## 2ery:

Tecl me ye learned offspring of Apollo, Why after riches avarice does follow, When the poffétor ought by reafon juft, With widdom to employ fo. great a truft.

> Anfwer.

WzALTH with magnetic force attracts the mind Toffordid earth ungeneroully confign'd. Thence in proportion to its larger ftore, . We need not wonder, if it draws the more. But tho' this loadfone fix the iron fonl, The golden genius mounts without controul.

## Query.

I dierre your opinion of that paffage in the CommonPrayer, (viz.) Give peace in our time, O Lord! Becaufe there is none othre that fighteth for us, but only thou, $\mathbf{O}$ God! For why fhould we defire peace when He fights for us, and we own his-omnipotence?

## Anfwer.

Since a true and folid peace ought to be the aim of all our fightings, and is the profperous iffue of a fuccefsful war, to whom fhould we addrefs ourfelves for fo important 2 bleffing, but to that God who fights our batties, and upon whom alone we.can.depend for to glorious a conclufion of them?

> Query.

In what femfe are thefe words to be expounded in I Pet. 4. 6 . For this caufe the gorpel was preached alro to therm that. are dead ?

$$
A n y w e r .
$$

Tus perfons here defigned were Gentiles, to whom the gofpel was preached as well as to the Jews. And from the ift chapter to the Romans we may clearly fee, that the Centiles were dead in a fpiritual fenfe, dead in trefpafice and fins.

## Query.

Wry, when any thing isburnt too, is it Caid the Bimop's. foot has been in it?

## $241=$

Anjwer.

We prefume it is a proverb that took its original from thofe unhappy times, when every thing that went wrong, was thought to have been fpoiled by the bifhops.

## Conundrums.

z. What is placed before gentlemen's houfes, with what grows in their gardens.
2. What pleafes when in the air, and what a horfe cannot abide.
3. Half a carman and a whole country.
4. The gift of heaven and the motion atterding it.
5. The half of a privaie entertainment, and a part of a goofe.
6. What Goliah carried to bittle, and the head of the nation.
7. An animal common in Wales, and what is very common in England after marriage.
Anfwer.

Wailflower, larkfpur, and likewife a carnation, Snowdrop and jonquil, for five gives explanation; Kingfpear, and monks'-tap are next two no doubt, The laft one is goat-rue, and now the fecret's out.

> Qucry.
——Pray which wou'd you chufe?
A wit without beauty, or a beauty without wit, When each is endorfed with a deal of conceit.

Anfzer.
Were I from thefe to chufe a mate, The wit I'd love; the beauty hate: For in the witty head is fenfe Which ever will chace folly thence: But beauty, with conceited brain, In folly ever will remain.

Query.
Whice deferves the greatef punifment; the foul or the body, for the committing of fin? and which is the moft guilty ?

Anfzuer.
The foul of man is a paricle of the deity; and when firft infufed into the body was fo perfect, had fuch lively $\mathbf{Y}$ characters
characters of the deity impreffed upon it, as were fufficient to enable it to repel the tempter, maintain its integrity, and obey the injunctions of its great original; which the body could not do, being only its receptacle, a place of refidence for the foul to act in, and taken from the duft: Confequently the foul is more culpable, and juftly merits a greater degree of punifhment than the body.

## Query.

Whether do thofe monopolizers, who contrary to law buy up corn, \&c. with an intent to fell it at an advanced price; or thofe, who encouraged by law buy up the fame for exportation, contribute the mof towards diftrefling the pcor, by raifing the price of provifions?

## Anfwer.

Botn parties, it is certain, diftrefs the poor greatly ; and it is hard to fay which does it the moft. Now the monopolizers oft make a fcarcity in: the midft of plenty, 'tis true ; yet they help the poor to corn, though at an extravagant price : whereas when it is exported, it can yield no relief to the peor at any rate, being quite gone: Wherefore I think thefe lant diftrefs the poor moft; for certainly it is better to have corn at any advanced price, than to have none at any rate.

## 240 yo

Whence did the cuftom firt arrive, Of ringing bees unto their hive ?

## Anfwet.

This cuftom, proceeded at firf from obferving that inftinct in thefe fagacious infeets to return to their hives, when they are out at labor, at the approach of a ftorm : the air at that time undergoing a very fenfible change in its denfenefs, they are undoubtedly apprehenfive of the approaching danger, and immedjately repair to their caftle of fecurity. The tinkling of a mortar has fomewhat a fimilar effect on them, as it in fome meafure condenfes the circumambient air, fo far as the found extends: but the fugitives then baving no place of retreat, being driven from their hive by the old fwarms, are obliged to feek fecurity on whatever they find any way conyenient for them.

## 243

## 2uery.

Wro firt found oat the hot-wells at Bath? and how long fince?
Anfiver.

The firft difcovery of the hot-wells appears to be of a very ancient date. In the king's bath at Bath, is a itatute of king Bladud (whon Mr. Cam'de'l calls the foo hiayer) with an inferip ion under it, importing t'at he difiovered the ufe of theie baths three hundred years before Chrilt.

## Paradox.

Ir was at my houfe, but the other day, The following kindred a vifit did pay: Two grandtathers; two grandmuthers, They wore the firt that cane; Next fuar fifters, and two mothers (Tho' fome were blind and lame) Two hurbands, and two fathers next, That happen'd to come there, Two wives, and then two mothers came, But did not clufe the rear:
Two uncles, two aunts, with th' reft came to dine, Four daughters, two fons, to tafte of my wine:
Two grand-daughters came along with the rett, Two neices two coufins, drefs'd up in their beft: This catalogue of kindred mentioned here Are only fix; and all from inceft clear: How their kin is grounded I wou'd have you fhow And you'll a favor great, on me boftow.

## Aifwer.

Tni father and his fon, married the mother and her caughter. The fatier married the daughter: the fon married the mother; and they had each of them a girl.

Query.
Wextaza porerty impeacheth or faineth nobility ?
Anfwer.
Ricnes are an ormament, not the caufe of nobility; and many times we fee more worth ander a thread-bare cloak, and within a thatched cottage, than the richeft robs and fatelieft palace.

## 244

## Query.

Wrat paffion is the moft that can Prevailing be o'er mortal man?
Arffwer.

Since, whatever way a man's mind is bent, it is influenced by love, with refpect either to good or evil; love is always the rule of the ref of the pafions. Hence,

The moft prevailing p?ffion, that I know, Is love, the fource of all our joy or woe!
Query.

Ir a man fhould throw himflelf from the top of a high tower; doh he fall to the ground by attraction, comprcfion, or gravitation?

Anfwer.
Whatever is projected from the earth, if the body that projects refts upon the earth, the motion of the earth is conmuricated to it: Hence the man's fall is by gravity in particular; and by compreffion, gravity, and attraction in conjunction.

## Peradox.

A man that was young at threefcore and ten, He gave it me in and wrote it down then, His friend was more old at twenty and two, (You may think it falfe; but 'tis certainly true); Ingenious wits, this fecret now unfold; For old died young, and young he died old.

## Anfwer.

Thi young was nam'd old, and the old was nam'd young, So a paradox from that odd circumftance fprung.

Query.
What is content?

## Anfwer.

Contint is that fate of the mind, when it is not only, free from all amxiety and uneafinefs; but poffeffes a ferenity, and even a pleafure in itfelf, which proceeds from a confcioufnefs of the rectitude and uppightnefs of its intentions: For

For I dare venture to affirm, that no man with bad interntions ever at that time experienced real content. On the contrary, while a manknows he does to the utmot of his power and capacity, acknowledge his prefent and future. dependance on his creator; and endeavours at the good of all about him, he cannot be far from a contented mind. At leaft, this mutt be allowed to be the beft method to procure one.

## Query.

What is ridicule? and from whence does it fpring?

## Anfwer.

Ridicuie, in matters of literature, is that fpecies of writing which excites contempt with laughter. Whence, in the examination of fuch kinds of writing the mind naturally calls upon it to aid argument and reafon; when its impreffions on the imagination are confiftelit with the nature of things: but when it frikes the fancy and affec. cions with fetitious images, it becomes the inftrument of deceit. But however ridicule may imprefs the idea of apparent turpitude, or falfehood, in the imagination, yet aill reafon remains the fupreme judge or touch-ftone of cruth

## Query.

Who firt ty'd the gordian knot ?
Can you tell-or can you not?
And for what reafon ?-let me know
And you'll oblige a friend at Stow.
Anfwer.
Goznian knot, a knot which one Gordirus a Phrygian, who being raifed from the plough to the throne, hanging up his plough and furniture in the temple, tied up in fo very intricate a manner, that the monarchy of the world wras promifed to him that untied it; which Alexandor the great, after feveral effays, not undoing, cut with his fword. Whence the reafon is evident, that the perfon whe had fkill and penetration fufficient to untie it, thould be deemed (after performed) capable to rule and govern the whole earth, from his great underfanding and judgment, if any fuch could be found out.

## 246

## 2uery:

Wro are they that defpife what they moft do admire $f$ Dear gentiemen, tell me,-no more I require.

## Anfwer.

Since it is fo, that you are defirous to knowr.
Who defpife what they moft do admire ;
Be it known to your fex, who delight to perplex,
When you've fet our affections on fire :
For if you can't gain us, you then will difdain us;
And rail at us all that you can :
like the fox by the grapes, are thofe leaders of apes,
Who raye when they can't get a man!
Query.

Ye witty bards, indulge a youth, To know the umder written truth; In doing which, you'll give relief: Pray, how do tears affuage one's grief?

> Anfwer.

Thedefinition of grief is trouble, forrow, and vexation of heart ; and that of tears, a drop of water diftilled frome the head, and paffing through the eye, \&ic. Now when and where grief: happens, it feizes upon and affects the animal fpirits, which are fluid, and belong to the brain. Therefore fometimes, when grief happens, it falls withe fuch an heavy preffure upon the animal fpirits, as does not admit of, or produce any agitation therein; then the apparent fymptoms are nothing but an heavy groaning, or deep fighing, as of one in fore affliction, or mifery. But when grief comes with an effervency, fo as to produce an agitation, and thereby a fermentation, of the animal fpirits; it affeets fome one or more of the animal function, (which. Dr. Quinfey, in his Lexicon Phyfico-Medium, fays thelearned Boerhaave defines to be twelve); which caufes an. cbullition, whereby the tears are diftilled, and flow from the head through the eyes, as it:were the firits dropping frop the beak of an alembeck; and thereby may be faid to: give eare in, or affuage grief. A fudden furprize of joy, fometimes may caufe, and be the production of tears, and thereby prevent a fyncope, which fometimes happens; but in that cafe it cannot be faid to be an eafing of grief, \&c.

## 247

## Query.

What methods are moft proper for the ladies to adopt, to induce the men to enter into marriage ?

## Anfwer.

Tre only method is to be virtuens, good natured and not too forward: to make the moft of prudent affabillity; free from the least degree of affectation.
Query.

Whether the marriage act has done good or harm to the ftate.

## Anfwer.

Thi reftraint under which fome muft neceffarily be laid by this act of parliament, may feem little burdenfome to their minds; but as the great good of a nation depends principally upon the number of its inhabitants; and as experience daily proves, that there is no power can bind the profigate and licentious in a proper degree ; it is plain that more hurt than good has followed from it.
Query.

Why does drefs and adulation attract the fair fex more than known plainnefs and fincerity?
Anfzer.

Dress certainly has a great effect upon female minds, who are too apt to be pleafed with externals. But why it Should be more attractive than honeft plainnefs and fincerity, I know not, (thoughtit is a daily experienced truth) unlefs we account for it by the force the different fenfes have on different objects. For we often fec two ladies who thall be pleafed and difpleafed with the fame object at the fame time; and that object at a diftance, I mean a man.

## Query:

Wно are they that defpife what they are known mof to admire ?

Anfwer.
Prudes, who affect to hate like the fox in the fable what is out of their reachs

## 2uery.

Why are fome forts of diverfions, though extremely laborious, efteemed pleafure more than bufinefs?

## Anfwer.

Business was a talk impos'd on man ; Freedom, alone, was his unbounded plan; Pleafure would be painful-his natu re fuch, And enfe a trouble-if he had too much.

## Query.

Whice is foonett reconciled to his misfortune, a mifer chat has loft his gold, or a lover who has loft his flame?

Anfwer.
A despaining lover is a very wretched being, but yet there may be fome hopes he'll return to himfelf. Other objects may entice or friends advife. But the mifer who makes gold his god, and having loft it, gives up all comfort ; and perifies like him, who the apoftle says, dies without hope.

## Paradox.

Diar Sirs pray believe me, I'll make it appear
That the fum of two numbers their difference are.
Anfwer.
Bоти *latitude and longitade, $\dagger$ When on either fide they lie, Will anfwer well the paradox, 1'm fure you can't deny.

- Different fide of the equinoctial.
$\dagger$ Different fide of the firt meridian

## Paradox.

B, and C, own brothers be, Own brothers to their mother $\mathrm{D}_{\text {; }}$ And uncle to each other are; Own coufins too, 'tis very clear. Their pedigree, I pray, make out, Engenious wits, and ckear each doubt.

Are the hrolin, w, re pedigre: traced- no doubs
Will infalli ly make the affinity out.

$$
Q^{\prime \prime e r y}
$$

It is faid Britain was di covered to be an Illand about the year go. Whe was the d.fcoverer pray ?

$$
A_{n} f w_{1} .
$$

As to the name of Britain, there is no certainty of its original in hiftory ; that which paifed for current in former times, when moft nations pretended to be of Trojan race, was, that Brutus, the fon of Silvius, grand-chiid of Encas the third king of the Trojans, having after a long voyage, and many wanderings, fell upon this Inand, and conquered the race of Giants; and having given it the name of Britain, left the foveroignty to hie pofterity.

## Query:

## Why do immodert Lawyer's wear $^{\text {Len }}$

 Habits of clergy? make appear.
## Answer.

Therx is no reafon why Lawyer's wear the habit or uniform of Clergy, except from cuftom; or, that the former (which indeed is moft likely) are adminiftrators of juftice, the latter of truth : and 1 think, might be termed brotherhood.

## 2uery.

$W_{\text {Hr }}$ is the language of a foold
Moft moving, Sirs? I pray unfold. And for what reafon ? tell me then, No more I ank, Sirs, from your pelt.

> Anfzer.

The reafon why the language of a fcold is moft moving is, becaufe no man that is in his fenfes will ftay to hear it.

## Query.

What is the caufe of certain luminaries, if a cat is froked in the dark ?

The fkin of a cat which nourimeth the hair, is impregnated with an oily fubftance, with friction, or rubbing in the dark, there feems fiery fparkles to proceed therefrom, \&ec.

$$
Q_{u c r y .}
$$

Kind gentlemen pray clear this doubt, And tell the man who firft found out The Antipodes; and in what year? Ingenious wits, this point pray clear.

Anfwer.
In the year 571 before Chrift, Pythagoras of Samos difcovered the Antipodes: he was the firf among the antients who affumed the name of philofopher (by way of modefty) as condemning the pride and arrogance of others, who would be called wife men.

Parados:
To plant a grove I would difpofe
Of fifteen trees in fifteen rows;
So that each row may three contain And now the methed pray explain.

## Anfreer.

Thus as you fee, (Plate 6. fig. 4) you may difpofe Of fifteen trees in fifteen rows; And, in each row are three contained, (Adepts) the method I've explained.

## Query.

Waat is the true reafon, philofophical, mathematical, or natural, why an egg, with its end placed horizontally againft the palms of the hands, cannot be broken with the greateft human preffure?

## Anfwer.

The reafon proceeds partly from all three caufes mentioned in the query. I. The air within it, not only fupports the ambient air, but alfo the two abutted elliptical domes. 2. Thofe elliptical domes bear a preffure equal to arches. (every way) on this construction, which cannot be force

## 251

forced together, fo long as the materials laft ;-therefore 3dly. The hands being of a fofter texture than there materials cannot break it.
Query.

What were crowns originally ? and who may be faid to have wore the firlt gold one?

## Aufwer.

Crowns are defigned to be an ornament, \&ec. and as fuch, I find they were originally ufed; as may be feen Exodus 25.5 , 11. where a golden crown was to ornament the Ark, \&c. and verfe 25 , the fame ornament for the table, \&c. (and per query) "' and who may be faid to have. "wore the firft gold one." If we compare the 3oth. verfe of the 29th chap. of Exodus, with the 6th. velfe of the 2 g th. chap. it will appear that Aaron was the firf that wore a gold crown, \&c.

> Query.

Wry do haddocks, as well as fome other frefh fim, When hung up in dark places, appear to reflect a ftrong light.

> Anfwer.

Some are of opinion that the caure of light fought in this query, proceeds from the quantity of phlojifton contained in this as well as other kinds of phorphoric. And others opinion is, that all bodies no fooner partake of death, but they inftantly (in fome meafure) fall under the ftate of putrefaction (though at firf unperceivable to our fight, cafte or fmell) this caufes, in a little time a violent fermentation; and all bodies under this ftate, containing lucid particles, will by that means be difcernable in the dark.

Paradox.
Nay prithee fay no more, I'll plainly prove,
'Tis happinefs to be in debt, or love.

## Anfwer.

In love, or in debt, both, or either to be, Is happinefs always to Ben;
For when I can't pay, I away to the fea, And enjoy both my pipe and my can.

Query.
Of all human inventionc, which may be faid to be mott Cerviceable to mankind.

> Anfwer.

Or all buman inventions I hope you'll allow There's none of more fervice to man than the plough.
Query.

Who is the happy man?

> Anfwer.

The man who keeps the golden mean, Who calmly fteers his bark between The rocks of hope, and gulphs of fear, Makes piety his only care, And whore pure life and confcience faith He thali be happy after death.

Paradox.
IAttest it for truth,
A miftrefs that's kind, Be fhe ever fo ugly, I beautiful find.
Anfwer.

Amorensis 'tis true three long years I've been blind,
Not the leaf glimpre of light can I fee;
Tho' ugly my miftrefs appears to your mind,
When kind Ihe is handfome to me.

## Paradox.

- Tis true I proteft with an abfolute breath, That what is called life is natural death.

## Anfwor.

When we receive our breath
We enter upon death;
Tis theriore plain, that we each moment die;
For life and death go hand in hand; and why? Death tho' the foe of Jife, with us was born; Tho' life fo often makes of death a feorn.

$$
\begin{array}{r}
253: \\
\text { Paradox. }
\end{array}
$$

How is it, to you I appeal, (my friend ranger) That the pleafanteft life's to be always in danger?

> Anfwer.

Whin danger's expected,
And ftill is neglected
What pleafure attends on the thought !
The good and the brawe Defpife death and the grave,

Tho', certain-fo you and I ought.
Dangers feen from a far,
Or in ficknefs or war,
But enliven the flame of the foul;
Virtue cries with delight
'Tis noble to fight,
And pleafant thefe foes to controul.
Had virtue no foes
No not one to oppore,
No paffions to conquer below:
ISike a fool that ftands ftill, Without reafon or will,

We could not fubfift here you know.
Paradox.
Ev'ry true wife
(Indeed 'tis true)
Is falre; and I can prove it too.
Aiffucr.

How a wife can be falfe and at fame time be true,
Paradoxical really mult be ;
They fometimes approve of what fometimes they rue,
And are falle.to themfelves and not thee.

## Paradox.

I have read (and pray tell me, Sirs, how it can be) To imprifon a debtor is to fet him free ?

Anfwer.
If t'imprifon a debtor, Sir, Yets him quite free;
From bailiffs and duns, fure the meaning muit be:

## 254

Parados.
Pray tell me what that man intends, Who afferts that our enemies are our beft friends?

## Anjwer.

Our enemies a mirror be, By which our fmaheft faults we fee, Friends feldom fo fincere will be.

## Paradox.

-Ler who will love for me,
I ne'er will fight a duel,
No not for any fhe
The kindeft is moft cruel.

> Anfwer.

TuE harlots in the ftreet,
Moft lovingly appear ;
If fome you chance to meet, A cruel devil's there.

Paradax:
A sholar boafting of his ikill, Was met one day by country WillDetermin'd now to poze the clown, Ank'd him how far to yonder town, If in a right line now it ftood, ${ }^{\prime}$ Twixt him and yon adjacent wood. The ruftic thinking how't cou'd be, Thought in himelf F 'll puzzle thee ; And faid 1 little undertand, But hope you'll anfwer out of hand: Say two from one can you fubtract, And three remain to be exact? -The fcholar now no more could fay, But walked off, and bid good day, Hoping fome friend will anfwer find, To clear the vapours of his mind.

## Anfwer.

A woman delivered of two children.
Paradox.
Some fay fuch a thing as a cuckold has been, I deny it.-A cuckold has never been feen.

## $\Longrightarrow 255=$

## Lifforer.

Somi fay men are born, To be cuckold's and horn'd
But one I yet never could fee:
Therefore why Thould I, Believe by the bye,
That fuch a thing ever can be.

## euery.

What are the chemical ingredients in the compofition of a modern phyfician ? And what is the method of procefs for his extraction?

## Anfwer.

A GOOD Jikely young fellow, valet de chambre to fome gentleman who has travelled abroad; make him member of a druggifts and apothecaries club in London; where let him endeavour to get by heart the names of the principal drugs, medicines, difeafes, and technical terms.
$\mathbf{W}^{-}{ }^{-1 N}$ he is well verfed in the exercife of the faid terms and has got the Greek Alphabet by heart, with twelve felect lines of the Schola Salernitana (to avoid breaking Prifcian's head) he mult fuffer himfelf to be fufpended naked in an Hippocrates's fleeve, filled with Elixir Salutis up to his chin, which being filterated, and only himfelf and the faces left, be muft repeat, without hefitation, all the faid names and technical terms, the whole fociety thall think proper, and alfo the Greek alphabet before he is fuffered to come out : and for every Greek letter, or technical tersa he miffes perfectly pronouncing, he fhall receive a fmart lick through the flannel on his pofteriors, with a large long liquorice fick, and be obliged to repeat the fame till lie fays his leffon perfect, to the fatisfaction of the audience.

Then he and the faces muit be fuddenly tumbled out together (by cutting open the bottom of the bag) upon a btanket, held underneath by four luity druggifts or apothecaries, who are to tors him, together with the freces, till he begins to grow fick. Then, let him be wrapt up in dry flannel, put into a hell of a coffin, (cautioning him againft dealing death) and carried to Haddock's Bagnio, near Charing Crefs, to be there (weated, and his k in well mundified; where he may, if he pleafes, lleep for that night. This done, he muft be dreffed, and carried from thence in a chair to Mqnmouth-freet, and Middle-row, Holborn, to

## 256

be equipped with a fecond-hand fuit of black, 2 tye wig, large fnuff-box, and thort imall fword. Thence he is to be carried (by the fame conveyance) to Batfon's, and the chairman to receive his left off cloaths for their fare.

A diploma being next procured him from Edinburgh, Glafgow, or Leyden, he is to attend on the faid fociety of druggifts and apothecaries, at their next meeting, and deliver the fame, kneeling on a cufhion, upon the table, to their prefident for the time being ; who, after reading it aloud, dubs him doctor, by waving a gold-headed cane three times over his head', and then delivers it into his hands for a prefent. At which time, all the members fianding up, ura voce, muft cry out, Long live the noble Efculapius! and the prefident repeat, by whom the moft obftinate and inveterate diforders, whether acute or chronical, thall quit their latent receffes, tremble at his fagacious nod, and fly before his awful fiat.-_Proceed to profper-feel the larijes pulfes, dive into family.fecrets, infinuate your infallibility, augment your prefriptions, evactuate our hops, and rarify the people.

N. B. The fees to be paid down on this adimifion are 20 guineas to the fociety, befides the whole expence of that meeting, in an clegant fupper and treat; for which the doctor hall be allowed to vifit at each of the member's shops gratis, and afk as many queftions about the names and nature of drugs, and medicines, as he chufes-and have ocular demonstration of the fame-Likewife thall have liberty to feel Mamma's or Mifs's pulfe, to bring his hand among the ladies, for fo fmall a prefent as a diamond ring -and thereby making himfelf acquainted with the femalt anatomy and diforders, he may.foon after commence mannadwife if he pleafes.
Query.
$r$ God faid, "let there be light, and there was light," be'fore the fun was created; whether then light is not a fluid fubftance, diffufed through fpace, and oi her fuid fubfance, totally different from the fubftance of the fun, requiring the prefence of his fiery rays to make it confpicuous? In like manner, as light is confpicuous by the prefence of the fiery rays of a candle, il uftrating air or fpace in the fun's abrence? And how are the fun's fiery rays (em.ting heat and colour to fenfation) whi h are continually exhaufted in int-

257
menre quantities, from that fountain of fire, naturally fupplied ? Alfo, whether colouss are real, or only apparent accidents, in refpect of fenfation; it being not certainly known, whether the animals difcern colours and objects alike, or in all refpects as they appear to human recep: tion?

## Anfwer.

Ir all the light were in the furr, Then in his abfence would be none. But yet we find, that flame by night, As well as he, produces light. Before the fun, if light was made, The light from him can't be convey'd. The fiery particles are fuch, As rouze the fluids by a touch : So lovers touches caufe furprize, And make the virgin's blufhes rife! Attraction and repulion join'd, In the fame body we do find; The fun attracts from ev'ry Sphere,
As he repels, when acting near:
Exhaufts his vigour and reftores,
Like a young rover in amours.
So beauty with a fmile invites,
But with a fudden frown affrights.
Apparent colours frike the eye, More than our fenfe reality.
To diffrent fenfes objects fuit,
As well in man as in the brute.
Thefe are fuggeftions from my quill, Referr'd to critic Anfer's mikil.
Suéry:

What is chance in nature, and what defign? And how is the prefent exiftence of things governed in refpect of both: thofe diftinctions?

## Anfwer:

Drsices is a faculty of the human mind, by which, according to intellectual forefight and volition, things are executed herealter; whereas chance or accident are things $o c$ curring without any previous perception of the fame. And things are governed in both thefe refpects by infinite caules. of which man comprebends but few.

## $25^{3}$

## 2uery.

An actirg caufe implying a co-exiftence of effect, the Creator having no beginning, how could there be a begin. ning to creation, or a time when things were not, or not as they are now ? feeing, that a neceifary general exiftence of all things, ab origine, under the various mutations of forms, is as comprehenfible as a firft neceffary abfolute exiftence, endowed with powers, and qualities to create a: fucceffive order of exiftence, in the infinite fpace? And, that being all whatfoever (diftinguifhed by abfolute fpirit, fpirit: and matter, or mere matter.) is comprehended in the living and liftlefs forms of fubttance, variounly modified and fup-ported in fpace; and alfo, that original rpace and fubPtance, exifing neceffarily, ab sterno, being, to concepception, as utterly incapable of annihilation, as abfolute fpace, and the models of prefent fubftantial forms, per-ceived exifting : the laft appearing only fubject to mutation, with the fame quantity of fubfance in fpace, always exifting. And how does living exiftence appear neceffary at all, or that any being thould exift more neceffarily than, or before, another.
N. B. Subftance is a general fignification for material, or immaterial forms.

## Ainfwer.

The Creator, from the beginning, might create particu. lar worlds and beings, nearly cootxiftent with himfelf, and* yet not create our prefent fytems of things till after a certain period, during whofe eternal exiftence a facceffion of new wo rids and beings might decline, and again receive exiftence, alternately, according to the nature of fucceffion obferved in plants and animals. 2. The Sceptics argument, that a general wife exiftence of all things might, of itfelf, as necefmarily be ab origine, as an original Infinite Creator, of himfelf, ab origine, to produce them, is thus anfwered, and confuted-Taking with us our confcious perception, we find that all things act, and are produced by a feries of caufes, which therefore refer backward to fome firft orig.nal, x h ch is God. 3.There is neither abfolute frace, abfolutefpirit, abfinte matter, not abfolute any thing, frace the originat caufe, to which all effects, and their caufes, prosuced, muft refer, is of itfelf rhe only abfolute exiftence, filling immerfity, and fupporting all being: fo that it is an abfolute impropriety to mention annihilation of abfolute space, and abfolute forms of living and lifelefs fubtance. For, though we fee forms, compofed of matter fubject to continual mutarion; yet it is not certain that the fame quantity

quantity of matter always exifts, fince the particular fubflance, of which matter is sconftituted, may be varied by the Creator, fo as to be infinitely redaced, orextended in its capacity. - 4. Seeing all things that can poffibly be, muft be, if any exiftence, can be perceived at all (as it is evident we do perceive) living exiftence will thereby appear neceffary; and as one being may exift before, or after another, fome beings muft neceffarily exift before, or after, another.
Query:

What is the difference betwixt religion and morality ?

## Anfzer.

Reision confifts in faith, and the obfervance of certain ceremonies, or modes of wormipping a fuperior Being, to inculcate acts of morality. Whereas, morality of itfelf, is independent of all religious forms; and, abftracted from all fa:th ${ }_{2}$ is productive of human happinefs, by its united and univerfal principles of benevolence to fociety. Hence it appears, that morality is as the fun, confpicuous to all, and religion as a lanthorn to give light in it's abfence.
Query.

What is the beft method for preventing the frequent robberies in and about London, and throughout the kingdom?

## Anfwer.

The firft and beft method to prevent frequent robberies in and about London, would be by mending the morals of the common people. In order to which they muft be difarmed of gaming, and the pernicious ufe of drams, whereby the morals and health of a people are made corrupt. For there is nothing so bafe or inhuman, that a proftitute to drams, diftraged in mind and rearon, would fcruple to commit.

Ideiness and gaming are two endeared companions, and the grand feducers to madnefs and ftupidity, fpreading wider and wider. And by the prefent practices in vogue, (the miftrefs teaching the fervant-maid, the matter the footman, and the preacher the people, by precious example) it is difficult to find a difcreet acquaintance uncorrupted with cards and drams:-For they are all gone aftray, and there is pone that doeth good, no not one.

Deam-drinking, like the pox, enervates, corrupts, and! deftroys the famina of the human race; as gaming deftroys every great and good quality of the mind; rendering the nobility of a nation inferior to the beggars they are placed. over to govern.

Drams, like opiates, or a mifer's comfort, affuage pain, for the prefent ; but, in the end, produce gouts, and torments of mind infupportable!

Drams and gaming abolifhed, the next fep to ridding the nation of thieves and robbers, would be by encouraging innocent and virtuous amufements; and alfo finding proper employment for the lazy; idle, and neceffitous.

## Query.

Why fhould any under the fame government fligmatizeothers for their country, or place of nativity? And why thould the name of Irimmsan, or Scotiman, be more odious than that of Englifhman?

## Anfwer.

National reflection proceeds from want of national morals, for diftinguifhing the honeft man, who, according. to Mr. Pope, "6 is the nobleft work of God."-Let him come from what corner of the earth he will.
Query.

Whice way, and how, might good be expected from a sencral naturalization ?

## Anfzer.

Thy good that might be expected from a general naturalization is from the encreafe of ufeful fubjects, and confequently of induftry, trade and commerce; (Mr. Addifon obferving that each fubject's 1 fe is worth fo much per day to his fovereign) for the lazy could hardly be expected to ftir from home for advantage, who already have too much neglected their own intereft. Pretended friends might. hereby find opportunity of becoming fnakes. in our bofom.

## Query.

How many fubjects poffeffed of ten thoufand pounds per annum, in land and houfes have we in England, Scotland, and Ireland, refpectively ?

## 261

## Anfzuer.

A ceest cafuift in national affairs, known for expatiating on his own infallibility, affirms, that there are exactly ten fubjects, and no more, in Fingland, Scotland, and Ireland, poffeffed of ten thoufand pounds a year clear of anl incumbrances; and farther affirms, that there are ten times ten that number reputed to be worth as much, or a great deal more.

## Query.

Whether affurance and impudence are not often im" puted to merit, and ftrength of fpirits ?
Anfwer.

Assurance and impudence are confidered by fome as the fame quality, though they differ as effentially as knowledge and ignorance.
Quiry.

How is an offenfive adverfary in converfation, beft anfwered?

## Anfwar.

An offenfive adverfary in converfation is beft anfwered in terms of refpect and friendinip; as taking pleafure at all he fays, is the only means to prevent flame, and extinguifh fire. Sometimes leaving his company may be the beft way to anfwer him.

## Query.

Whetare the reafon commands the ruling paffinn, or the ruling paffion the reafon? And whether the will exerts itfelf as an ally, or defpotic ruler, in refpect of eithes ?

## Anfwer.

Reason commands the ruling paffion no other ways than as a judge and admonifher. As far as the ruling paffion and reafon co-operate to one end, our will is determined to act : but we find the ruling paffion fo often defpotic, and powerful in refpect of the reafon, that it biaffes the will to act againft it.

The ruling paffion not only feduces the reafon to compliance with the will ; but pleads excufes for the urgency of its tryanny over us.

Or from a judge turn pleader to perfuade, The choice we make, or juftify it made.

> Pope's Eflay on Man.

As appear from the vices and follies more confpicuous than true probity in the actions of mankind.

Men daily acting againtt their experience and conviction, have no remedy but from help implored of the Divine Being; which hews the neceffity and good of religion to mankind.

The will, by which men act, in their feveral ftations, right or wrong, in refpect of their prefent and futare connexion with God and their fellow-beings, is neither a firm ally, nor defpotic raler ; but a paffive proftitute to both, though commonly a volunteer in the fervice of the latter.

The paffions conftituting the various modifications of the effentials of living beings, are thofe fecret and dreadful fources from whence the moft remarkable actions and events recorded in hiftory proceed.

Two principles in human nature reign,
Self-love to urge, and reafon to reftrain;
Nor this a good, nor that a bad we call,
Each works its end, to move or govern all;
And to their proper operation ftill,
Afcribe all good to their improper ill.
Self-love, the fpring of motion, acts the foul,
Reaion's comparing balance rules the whole :
Man but for that, no action could attend,
And, but for this, were active to no end.
Pope's Effay on Man.
Foz a further account of the reafon and Paffions; reat: Eebic. Epifle II. throughout from this quatation.

## Query.

Wyo was he that firf gave the name of Pope to the Bifhop of Rome, and no one elfe ?

## Anfwer.

Gregory the feventh was the firf that commanded the name of Pope thould peculiarly belong to the Bimop of Rome, and no one elfe.

## $=263$

## Paradox.

Th:s is a truth (tho' the number's even) The half of twelve's exactly feven ?

Anfwor.
1
Tre half of twelve will feven be, Cut thro' the middle, as you fee."

## Query.

A law at Tarentum, as ftrict as Pope's bul, Forbids importation of filks and of wool; A merchant, and one for the law who had voted, Five hundred fat heep in his next thip imported. Sir Gravity Quiddity, where is the flaw, is the fault in the merchant, or clfe in the law?

## Anfwer.

Mr good Mr. Squa,
The faults in the law.
The merchant's a knave, If the truth you will have, Or he ne'er had thus fneer'd, (When the fheep he had Thear'd,) At the laws which were made For the advantage of trade.

## Query.

Whetrir is the bed moft adorn'd by the nuggard, 2 full tankard by the drunkard, or money by the ufurer ?

## Anfwer.

The ufurer his money he moft doth adore; He hoards up his pelf, and he ftarveth the poor, Whilf the fluggard will rife and a penny will give :
The drunkard will fpend it and let the poor live;
So I think that the ufurer is the worft of all three ;
I have pafs'd my opinion;-if fo we agree.

## Paradox.

Ingenious artifts how may I difpole, Of five and twenty trees in juft twelve rows,

- VII

## 264

That every row five lofty trees may grace, Explain the fcheme, the trees compleatly place.

Accept this method if you pleafe, And like the drawing, plant your trees: They'll form a pleafant cool retreat; And thade you from the fummer's heat, As you fometimes may to them go When tir'd with buftle, noife and how.

## 2ucry.

It is obferved that the kidney bean and convolvulue, with fome other plants follow the fun's motion in their growth, or twine round a pole from eaft to weft, whilft on che other hand hops and honeyfuckles, with many others, turn the contrary way. Can this difference be accounted fot?

Anfwer.
This difference is one of thofe operations of nature, which doubtlefs, will never be accounted for; though probably effected by attraction and repulfion; but in what manner?-We obferve that the fun-flower generally keeps turning its bloffom toward the fun; we behold with admiration the phenomena of the fenfitive plant, and venus-flytrap, but when we would enquire the caufe, our reafon is at a ftand, and we are left to lament the circumfcribed ftate of human knowledge.

## Query.

I have often obferved certain animals, exactly refembling horfe-hairs, fwimming to and fro in fmall rivulets; now the country people in many places, affirm that they are the hairs of a horfe's tail, animated by lying a confiderable time in the water; and that this has long been the current report, appears from a paffage in one of the Marvell's poems,

## 265

Fooms, where he defcribes horfes kicking at their talls, which had by a flood, been transformed to leeches. Is this a volgar error ? if fo, what are thofe animals ?

## Anfwer.

These feem to be the fpecies of worms called by Linnæus, Gordius aquaticus pailidus, with black extremities; though I have feen fome thoufands of them entirely black; but as he fays they are bred in clay, it is probable that they change to a pale colour foon after coming into the water. Merrett, in his Penax Britannicarum, calls them feta aquaticus, and mentions the fame thing of their being valgaty taken for animated horfe-hairs: his words are, "! Vulgo creditur "s oriri, ex feta caudre equinze aquis immerfa." He bas not taken notice of their colour.

What is the difference between "e to loofe" and "to " unloofe?"

> Anjwer.

Sound the $r$ in unloofe foftly (as in loofe morais) and the myftery will vanifh : fo then unloofe morals will be good morals, and unloofe will fignify to be tyed.

## Query.

What is the reafon that dead bodies fooner rot in a dry than a moift church-yard ?

## Anfzeer.

A BODY will keep longer in moift ground than in dry, becaufe in the former cafe the air is more excluded than in the latter.
Qধry.

Are not children naturally ambidextrous?
Anfwer.

I ELiEve, experience teaches that when children begin to make ufe of their hands, both are ufed indifferently, which perhaps would be the cafe when grown, did they remain in a ftate of nature, -The preference given to the A a right -

## 266

right hand was certainly owing to cuftom, for it does not fectin to depend on the predominancy of any natural impulfe.
Query.

Wuy does an object, when viewed with a magnifying lens, feem farther off than when viewed with the naked eye?

## Anfwer.

Ir has been a mateer of difpute among optical writers, whether an object when viewed through a magnifying lens appears farther off, or nearer, than with the naked eye; but the following experiments, I think, will clear up the point.

1. Bring a fmall object nearer the eye than the limits of diftinct vifion, then if a lens of a fufficient magnifying power be properly placed between the eye and object, it will be feen diftinely; -here it is evident that it feems further off now wiewed through the lens, for before we thought, and which was true in fact, that it was too near.
2. Taki the tube of a common refracting telefcope, or any other tube in one end of which is fixed a magnifying lens, through this look at the infide of the tube and it will appear wider and longer according to the magnifying power of the lens: And the reafon is this,-every object feen dif. tinctly through the lens is magnified in length as well as breadth, and therefore a imall object placed in the tube muft feem further off than it would at the fame diftance if we viewed with the naked eye, confequently, in any cafe, if we confider the fpace between the glafs and object as a zube, this experiment fufficiently determines the matter in queftion. Hence it follows that the parts of an object when fen through a magnifying lens, cannot appear, with refipect to each other in their natural fituation.

## Query,

What is the reafon that a body moving forward uron rollers, moves twice as faft as the rollers themfeives ?

## Anfwer.

When a tody moves upon rollers the diameters of the rollers becomt as perpetual radii to the body moved, and the motur of the tody is as thofe radi: ; but the motion of the rollers is as their perpetual radii, therefore as the former

mer radii are double of the latter, the motion produce from them muit be fo too.

## Query.

What are we to underfand by the two daughters of the horfe-leach, which cry, "give; give ?" Prov. xxx. 15 .

## Surfoer

Accordino to father Calmet, the horfe-leach in this place fignifies luft, its two daughters are avarice and ambition, which are never fatisfied. The fiptuagint fay three daughters inftead of two. Bochart is of opinion that the Hebrew word Halukah which the feptuagint and vulgate, tranflate horfe-leech, fignifies defting; and the two daughters of this deftiny are hell and the grave, which neve: $\mathrm{Kl}_{2}$ it is enough.

## Query.

Is thersany practical method that will actually prevent the growth ef human bair, or, totadly eradicate that already' grown ?

## Anfwers

Ir is not eafy to give a fatisfactory anfwer to this Query; fome mentions the bood of a bat has been ufed and recommended as a preventative; and feveral receipts may be found in Wecker, Portay and others.

## Querg.

Whether have laws been upon the whole favourable of detrimental to the propagation of the human fpecies ?

## Anfwer.

If all laws were at once to be abrogated, the confequence would be, that each perfon would be content with as much land as he coukl cultivate; and having no artificial wants to fatiate, nor luxurious appetites to gratify, a much fmaller quantity of ground would be fufficient for him than at prefent, and therefore there would be much more room for the multiplication of the fpecies: befides man being naturally a more humane and induftrious animal, would have much ftronger motives to labour for himfelf than to take from another; and there would then be none of thofe inhuman and extenfive wars which now depopulate whole

$$
\text { A. a. } 2
$$

sountries,
coumtfies;' and 'are infmitely' more deftruckive than any little trifling private murders, that might chance to happers if there were no laws, which murders, \&c. never could be more numerous than thofe which happen at prefent, in defiance to ah prodibitions: to the contrary; and which indeed munt happen, as they are the unavoidable confequences of the laws themfelves: moreover it is allowed by the greateft and moferttenuous advocates for legal government, that the poor (which are incomparably the moft numerous) have very little benèfit from the laws in. general; and therefore it may be affirmed, if not withcertainty, at leaft with great probability, that laws have upon the whole been detrimental to the increafe of the buman fecies.

## Query.

Whither ia an impudent, or an hypocriticat rogue the. mont detertable ?

Anfwer.
Applarancz is not always reality; if the lawis if general be good, the hypocritcal regue can have no claim to merit for paying only an appareni refpect to them, at the time he really infringes them; if they borbady the has the additional villany of giving his fanction to what is evil; befides ufing them as a ftalking horfe to conder his knavery mare fucceffful: in other refpets the two regues. are equal, and therefore upon the whole, the hypocrite is the moft to be detefted.
2uery.

Whetrer the fouls of men departed are privy to our actions, and can appear or difappear to human figbt?

## Anfwer.

Tre expectation of a retribution hereafer to compenfate for the miferies and inequalities on earth feems to te the grand argument of thofe that maintain the opinion of a future frate; but this proves the beafts to have fouls as much as it does man; and if this dogma has not prevailed, it has perthaps been for no other reafon but becaufe beafts have not been able to maintain a fet of clergy. As to the dull mafs of Egendary ftories about apparitions and ghofts, recorded by priefts and monks; we have no reafon to believe a word of it, fince it was their intereft to deceive the

## $=269$

world, and they have likewife folemnly affirmed and perticolarized the exiftence of fairies and witches, that are now univerally acknowledged to be abfurdities, fit only to impofe upon fools and to be credited by ideots. However begging the queftion and allowing that there aftually may be fuch things as ghofts, and that they can can appear and difappear, yet I think we may confilently affirm that the $y$ are no: privy to our thoughts, nor to fuch of our actions as were unknown to them before death; for on perufing fome hundred fpeeches made (as they fay) by ghoits. I have been. tempted to think, that if ever they had any fenfe in. their lives they muft bave loft it at their deaths; and that they were fcarce privy to their own actions, much lefs to ours, their difcourfes were fo completely ftupid.

## Query.

Mirton in his Paradife Regained, fays, "And sither " tropic now 'gan thunder, and both ends of heaven,' What is meant by both ends of heaver?

> Anfwer.

What can the Poet mean. (I do declare,)
But certain parts in the celeftial fphere;
Either the: Poles of our terreftial world;
There from the tropics, lightening fooin was hurl'd:

## 2ucry

In the account of the Deftruction of Sodom and Go. morrah it is faid, that Lot's wife was turned into a pildar of. falt. Is this to be underftood litcrally?

## Anfwer.

The expreffion "Lot's wife" was turned into a pillar of falt. Is this to be underitood literally and according to the very letter of the text. For the plaineft interpretation of fcripture words is always the beft ; the louked back difobedient and unbelieving, and ftrack with the fulphureous fire from heave $0_{2}$ : was killed and became a pillar of falt; therefore.a lafting memorial to many generations. Joíephus mentions to have feen it himfelf, and Mr. Maundrell's guides told him that fome remains of the monument were ftill extant. And as to the difficulty of falt continuing undifolved in the open air fo long, it is well known to natu. salifts, that rocks of falt are as lafting as any otier rocks, may more fo; $^{2}$ and that houres are buik of them.
A. 3

Qul

Ir is well known that foffil thells, petrified fifh, and other marine productions are found in great quantities on the mountains in the inland parts of America. How is this to be accounted for ?

## Anfzuer.

Thzigeneral deluge, or earthquakes, or both might have been the two great caufes mentioned in this phoenomena:

## Query.

What is the meaning of the expreffion "Proteftant: "s fail," fo often in fongs and poems about a century and a half ago ?

## Anfwer.

This expreffion feems to mean any inftrument in the hands of a proteftant, wherewith to lath and fatirife his anagonift.
Query:

Oln Gobboin the Merchant of Venice ufes the foolifh eath; " by gods fontis." What does he mean by " fontis ?":
Anfiver.

Evil genii, on wicked, evil, blameful or hurtful perfon. For the word fenticus, ured adjecively, fignifies wicket; cvil, blameful, hurtful, \&c. but. \{abftantively, a wicked: perion, \&c. \&c.

> Query.

From whance does the whitenefs of fnow proceed?
Anfwer.
From the componency of its parts; for though fingly tranfparent, yet muft appear white when mixed together; as do the parts.of froth of powerful glars, and other tranfparent bodies whether foft or hard."

Query.

[^13]How is this to be accounted for? And why does the rifing of the quick filver indicate fair weather, and its finking foul weather, fuch as rain; wind, and fo forth ?

## Anfzeer.

$I_{T}$ is proved by experiment that mercury in the barometer fettles as the barometer is removed upwards, which is occafioned by a fmaller degree of denfity in the atmofphere. In a warm climate the eafterly and north_eafterly winds mixing with the air that is more expanded gives it a greater denfity, and the contrary when blowing foutherly, which wind continually blowing generally produces much rain. Why the mercury falls againft rain, wind and fo forth, feems to proceed from fimilar caufes. In fine weather the clouds are ob. ferved to be fituated very high in the air, at other times falling in rain to the earth, which produces changes in the barometer, in effect the fame as if the barometer was removed upwards or downward in the atmofphere.

## Query.

From whence came the cuftom of putting laurel; box; holly, \&c. in churches and houfes at Chriftmas; and what: is the fignification thereof?

## Anfwen

When the fon of God (according to the Prophecy of: Zachary) made his public entry into Jerufalem, the peo. ple frewed the way befove him with ever-green palm: branches, in token of the perpetuity and triumph of his kingdom : hence arofe the cuftom, and this the fignification. of adorning our houfes and churches with ever-greens ati Chriftmas.

## Query

Thy Grafshopper fings all the fummer awnay, With his chirping noife-kow he makes it I pray?

> Anfwer.

Prez Grafshopper is called in Latin, Cieada, from finging. with a little fkin upor his fide, againht winich he yubs the thick part of his leg, and fo makes that noife whecewith be to difturbs the lleepy haymakers.

## Query.

What is the caufe of that phoenomenon called the Aurora Borealis (or northern lights) and why is it now morecommon in our climate than formerly ?

## Anfwer.

Elicticicity feems to be the caufe of the northern lights, which are freams of the electric fluid difperfed through a certain fpace of the xrial expanfe. And this fluid may now more abound in our region than heretofore, or has altered its former, and taken a new direction.

## Query.

How is it that during a total eclipfe of the moon, we can notwithftanding perceive the moon as a light body, and fee her diftinctly, though the is at the fame time acknowledged to be in herfelf dark, and is eclipfed by theearth's fhadow, the diameter of which is fo much larger than the moon herfelf ?

## Anfwer.

Ir has been proved that the earth is furrounded with at fphere of air, called the atmofphere, of about 47 miles in height, which has fuch a refractive power, that it turns the rays of the fun out of their way when it falls upon it, and makes them enter the conical thadow, which therefore will illuminate the moon as well as other bodies with a faint Hight, and make her vifible to the eye when the is even in the midft of the earth's fhadow.

## Qury.

Have the Cicindelo or Glow-worm, a natural power or not, to raife and extinguifh its native light according to the direction of its will ?

## Anfwer.

The Glow-worm has certainly a natural power to raife and extinguin its native light, but then only to be perceived in the dark, its akin being a kind of an electrified coat, which in the dark, appears as firs out of the Rinin of the Cicindelo
$\Longrightarrow 273=$

## 2 trery

Many people are fo ftrongly fortified againt the pafions as not to thed tears for their own misfortunes, nor by fympathy for the misfortunes of others.) Are people in general with this feeming infenfibility void of pity and humanity ?

> Anfroer.

When and where grief happens, it feizes upon and affects the animal fpirits, which are fluid, and belong to the brain; but fometimes when grief happens it falls with fuch a heavy preffure upon the animad fpirits, as does not admit of, or produce any agitation therein; then the apparent fymptoms are nothing but an heavy groaning, or deep fighing, as of one in fore afflittion, or mifery. In our opinion they have as. much pity and humanity of more fo, than thofe which faed tears abundantly.

## Query.

Requiezd the reafon and cuftom of having the frgures of lions, goddeffes, ece. at the head of haips.t

## Anfwer.

Tras ingenious traveller Mr. Bruce, who tell us that according to the Abyfinian hiftorians, the famous Sphinx, which Itands near the Pyramids, is the figure that was at at the head of the Ark petrified; hence it $i$, probable the moderns derived the cuftom of having the figures of lions, guddeffes, \&c. at the head of their Mips:

## 2uery:-

Yz learned pray fay (who darks myftrice unfold, ) Why razors cut better with hot water than cold ?

## Anjwer.

Every kind of knife or razor is a fine faw, though we cannot poffibly fee it with the naked eye; and on all the eiges of thofe fine polifh'd tools, there clings or fticks.a kind of a refinous or gummy fubftance, which when put into warm water takes off the fame, and makes the razor: cut more eafy and free.
Query.

In common brafs-cocks that turn with a key, the liquor will gow to the top of the key-hole, and alihough it may
be emptied, it will flow again to the fame height and not sun over, although the liquor may at the fame time be one or two feet higher in the cafk: Requir'd the reafon of this ?

## Anfwer.

Becaviz the air being a fuid body, preffes upwards againft the liquor, and in that hole is much greater preffure downwards, and therefore will prevent its running out. See Martius Phila P. 2662

## Raradose.

Mr wife and I $\begin{gathered}\text { id difagree, }\end{gathered}$ And for to part we both were free; She fet off eaft, and I fteer'd weft, Believe me Sirs, it is no jeft ;
When each had gone miles fifty three,
Wife was not twenty yards from me;
And tho' it was bad ftormy weather, We all that time travel'd together :
How can this be, pray clear all doubt,
Tell how we made this different rout ?

## Anfwer:

On thip board my wife and I did difagree,
I to th ${ }^{\circ}$ helm, to th' other end of th' Mip walk'd the ;

- Tis true we travell'd fifty miles together, On the fame fhip, not minding wind or weather: Yet all that time, upon my word and life, I was not twenty yards frow my dear wife.

## Pyradox.

Dice Guzzez in cue I heard him to fay He owed twenty thillings, had not it to pay; Ye fages in numbers, he'd have you explore, How that debt thall be paid with nineteen and no more.

Anfwer.
$\operatorname{TaE} \frac{1}{2} \cdot \frac{1}{3}, \frac{1}{4}$, and $\frac{1}{19}$ of 19 s are $9 s 6 \mathrm{~d} \pm 6 s 4 \mathrm{~d}$. $+352 d^{2}$ and $t$ is od $=20 s=11$.

## Paradox.

Ingenious artifts pray difpofe
Twenty-fow trees in twenty-eight rows,

Three trees I'd have in every row, A pond in the midft I'd have alfo, A plan of it, I fain would have, Which makes me for affiftance crave.

> Anfwer.
-
 -
A plan here is drawn, In the fcheme it is mown, Will fuit the curious requeft, You may fit if you pleafe, And view the fweet trees Or fifh if it pleafes you beit.

## Paradox:

I thrash'd ten quarters of fine wheat, I eat juft thirty pounds of meat,
Befides a calf that weighed eight fone1 eat the whole, pick'd every bone;
Yet more-my appetite to fatisfy, Eat three roaft pigs-which made me dry; Drank fixteen pints of cherry-brandy, Then eat five pounds of fugar-candy: All this I did-all in one day :
it's true I affure you what I fay.

## Anfwer.

Neat the poles fuch a wonder as this might appear, Where one day and one night make upthe whole year.

## Paradox.

A GENERAL he had a fmall army of men Which form'd a long fquare of juft twelve timesten;

## $=276=$

But fill withou: having his number increas'd
In twal e equ.] rows he would have them plac'd;
Juft eieven men he would have in every row
Himfel: equal ditant from each tow alfo,
How he muft place them, I gladly would know. $\}$
Anfwer.
To place the rmall army, I thought I would venture, - In a dodecagon therefure, and himfelf in the center.

> Paradox by a Lady.

One fummer evening as I was abroad taking my plearire, I heard the voice of fomciorly behind, calling to me; 1 turned back, and faw it was a companion of mine at the diftance of 400 yards, wanting to overtake me; we moved each of us 200 yards with our faces towards each other in a direct line, yet we were ftill 400 yards afunder-How caw this poflibly be?

> Arifzer.

The Lady moved 209 yards backwards with her face towards her companion's, and her companion 200 yards forward with his face towards her.

## 2uery.

Is hope or fear the greateft fpur to action?

## Anfwer.

Hope and fear are the two moft predominate paffion of the human mind, the hope of enjoying fome geod, or the fear of fuffering fome evil is the fpring of almoft every action we perform, and it is difficult to fay, which is the greatert fpur to action, but we rather think thope is, at leaft it is the moft noble, paffion of the two.

## Query.

-Wher language is the beft. impart To gain a virgin lover's heart ?

> Anfwer.

Tre language of cupid's dart Will win and fix the virgin's heart.

## Query.

When, and by whom, was England divided into Pa. rimes?

> Arifwer.

As Mr. Afton tells us (fuppofed from his Dictionary) that Alfred divided the kingdom into mires and hundreds; and by referring to the faid Diftionary, may be feen who divided the kingdom into parimes.
. 2uery.

What is the meaning and language of Crom aboo, the motto of the Duke of Leinfter ?

> Anfiver.

Crom aboo, fuppofed to be an Anagram, being an unknown language, makes Aboo crom by tranfpofition; which, by corruption, may fignify the Abercromby family of Scotland, from whence might fpring the Duke of Leiniter's family, and thence the motto. For dean Swift difcovered, that the Greek and al other languages may be derived from the Scotch: thewing us, that the North.Brituns are part of the original people.

> Query.

Whethir the Conception of the bleffed Virgin Mary, on December 8, is not placed wrong in the Calendar; feeing that the birth of Chrift was on the 25 th of that month ? Or how is the time of the conception and birth of Chrift reconciled, as fix'd by our ecclefiaftical Chrono!ogers ?

## Anfwer.

Had the conception of Chrift been placed an the 2 th of March, or on what is ufually called Lady-Day, and the Birth of Chrift on the 25 th of December following, about nine months afunder, between the conception and the birth, according to what is obficved to happen in the production of the human 「pecies, (to which nature Clurift was tranilated from the Divine effence), the time of pregnancy would have appeared more confiftent with the other parts of the Gofpel. But why the conception thould be placed on the 8 th of December, and the birth on the 25 th of December, following or preceding, (who can tell us which ?) making 77 days, or a year wanting 17 days, in the time of B b
the pregnancy, our divine legation: A s, and alterers of Greek from its original propriety, muft refolve, as their province of unfolding profound myfteries.

## 2ucry.

Whether an invalid (or invalidated) underftanding, or weak hody (according to the Scotch phrafe) is the more to be pitied ? or whether folly or ignorance is the greater misfortune?

> Anfwer.

An invalidated underftanding, and a weak body (in the Scotch phrafe), imply the iame fort of poor things! and are therefore alike to be pitied! like a Charity-School teacher, and a finatterer in mathematics, weak enough, through vanity, to criticife works of eminence, they never underftood; like the Danmonium, (as he riled him. felf), and Libraty-Hall profeffors, Exonienfis, \&e. As to folly, (feparately confidered), it is a greater misfortune than ignorance, by itfelf, which would often reft fatisfied; but, being firred up by folly in the fame perfen, it is prompted to affume a falfe eminence, which is attended with contempt, ridicule, and difgrace; and fo folly becomes a greater misfortune than ignorance to the fame owner. To be ignorant and innocent are pitiable ! to be ignorant and vain, defpicable!

## Qutry.

Whetrer giving a man what he wants is (in a grammatical fenfe) not taking that want entirely away? And whether want or thame, in another fenfe, may not be given him, contrary to the fenfe of taking want or hame away from him?

> Anfuecr.
$\mathrm{On}_{\mathrm{n}}$ the fubject of lying, Hudibras fays to Sidrophe!, (Lieroical Ep.fle, 1. 105), as follows.

Alas, that faculty betrays
Thofe fooneft it defigns to raife;
And all your vain renown will fpoil,
As guns o'ercharg'd the more recoil ;
Though he that has but impudence,
To all things has a fair pretence;

And put among his wants but thame, To all the world he may lay clain. But all impoftors, when they are known, Are patt their labour, and undone.

Giving truth to a perfon who wants it, is taking fo much of his error away from him, that he before had. Now, fuppofe you put hame among his wants, (want of truth, ability, \&c.) according to the text ; fo that hame may be one of his wants, and by his poffeffing impudence, the may then lay claim to any thing. In this fenfe, contrary to the for:ner, by giving him thame among his wants, you furnifh him with want of thame; and he having no Shame, you furnith him with a negative, inftead of taking one that he had (want of Mame) aw..y.

## $2 \cdot 1 y$.

At a place called Catfgrove, near Reading, in Berks, is to be feen a natural curiofity, not noticed by Camden in his: defeription of that County : where aze different ftrata of earth, and, among the reft, beds of fea fand; from which the workmen, belonging to a Limekiln on that fpot, dis up perfect oyfters, firm and unopened, and thew the:n to travellers. Without recurring to that general fea, for all difficulties of this fort, Noalh's Flool, it is required to to: known, if the fpor, whereon the town ftands, was ever recorded in hiftory to have been overaowed by the fei, frone an earthquake, or any other caufe.
Anfiver.

The oyfters, and other fubfances, dug up at Catianue, near Reading, in Berk/hire, are, in my opinion, the con. fequence of fome fubterransous eruptio:, (as are ti: wariety of frata in other parts) whereiny the fea has thifted its place and boundary, aud left the diverity of feaftratia, oyfters, and other marine fubftance, as they are fiound and appear from the frid milting caufe, which caufe is the change of fituation of the fea; overfowing valt tracts of dry ground, and leaving others, that were covered with rea, to unbofom its variety of foffils, or textures of an earthy fubitance; or elfe to be covered with verdure, as the feeds of vegetables, fcattered up and down the fubftance of the whole earth, and the impregnating air, took effect.

> Query.

Tha word ref (meaning the remaining or remainder) is fet down in Dr. Johnfon's Diftionary both as a fubftantive
and as an adjective. It will not ftand the teft of an adjec. tive, becaufe it will not be coupled with a known fabitantive (fuch as things) and make fenfe by fuch a conjunctive, the reft things being nonfenfe; and it fcarce appears to be a fubstantive for thefe reafons: 1. Becaufe fume fubstantive feems underftood to belong to it, which is not named : 2 . As it cannot be ufed in the fingular number, (as equivalent $t 0$ remainder, a known futfantive) the reft $i$, being a folecifm; and laftly, as there would then he no word that exactly correfponds with the Latin word teliquus or reliqui. Quere, then, whether it bea fubstantive or'an adjective? or fometimes ome and fometimes the other?

## Anfwer.

The word refidue retains the fame fenfe as the word reft, or remainder ; therefore it certainly is a fubftantive $;$ and no adjective, like refidual.

## Query.

Bigher Lowth, among other of his ingenious and criticas remarks on Englith fi lecifins, animadverts on the following expreffion-Who do you think me to be ?-and condemns it for a fault. He will have us fay, Whom do you think me to be? Now, the queftion is, whether in this we are to follow the analogy of the Latin and Greek languages, which agree in putting the fame cafe before as after the infinitive mood!-as, quem credis me effe? or whether we are to examine the merits of the cafe by a tranfpofition $;$ which is a good method of explanation, and prefents us with this feemingly uncouth expreffion, Do you think me to be whom? In a word, whether the appofition of cales ought here to predominate over that known rule, that newter verbs require a nominative cafe after them ?

## Anfwer.

Accordinc to cuftom, in the Englim mode of feech, which is the greateft authority, BiMop Lowth is got into a dilemma here, betwixt the Englifh and Latin cuftoms of fpeech, where the Englifh cuftom, by the rule of tranfipofition, ought to be predominate : Do you think me to be who ? or, Who do you think I am? fomebody or noe body ?

## Query:

UPON what part of the terraqueous globe has a thip the l:aft priffere ufon the water?

## 281

$$
A_{t} \text { Fwer. }
$$

Any where on the fea, under the equinodial, or at the equator; for there the power of gravity is lefs than at the poles, where the diameter of the earth's oblate fpheroidal figure is the fouteft, and confequently attraction greateft.

## Qus y.

We read in Herodotus, (Erato), that, when it was objected to Demaratus, King of Sparta, by his rival Leutychides, that he was not the ion of Arifton, his reputed father, buta fuppofitous child, he conjured his mother, to revea the truth: who, in anfiver, obfersed to him, that his enemy framed the objection merely becaulf he was born befure the expiration of ten months; but that the infinuation was fuggefted by ignorance; for women, the remarked, were not always fo late in their delivery; fome children having been born at the end of 9 months from their. conception, and fome even at feven. - From this fory, be it true or falfe, it appears that a child of nine months was judged an early vifitant in Greece; at leaft, by the Hifto-rian.-Query, Are the women of any country (particularly in that part of the world) known generally to exceed that term, or nat?

## $A_{n}$ /ver.

When men lived to a greater age in ancient times, the time of a woman's pregnancy (to periect a more durable birth) might be greater than at prefent, nine mmuths. Some children have been born at the end of feven or cieght months in England, but feldom lived long, or n:ot fo long as thofe born at their full time. However, nine Calendir months, of thirty days and a half each, making about two hundred and feventy-five days, are not much unequal to ton months of twenty-eight days each, making two hundred and eighty days; fo that a difference of near a mouth, in the time of a woman's pregnancy, will arite from the different way of reckoning the time of one month; froin whence the miftake of a month in the time of pregna:cy, (ten for nine months), by Leutychides, might proceed.

Most animals (except mankind) have ftateri feafons for procreation. The females go with young rome a ionger, fome a fhorter time. Mares go from elven to twelve months; cows and binds go nine month, the fame as

$$
\text { हैt } 3 \text { women; }
$$

women; foxes and wolves five months; bitches go only Sevon weeks; cats nine weeks; and rabibits thirty-one days. Moft birds are hatched in twenty-one days; the Ca -nary-birds, and fome others, are hatched in thirteen or fourteen days. Hence there appears to be endlefs variety in the time, as well as in the manner, of the generation of nimals.

## Query.

Y: lovely fuir, ye foft encharting maids, That love the town, and haunt the rural thades. . Say, if you can, when kifing firt arofe, That mark of love, and foft'ner of our woes; Say, if you can, inform your faithful fwains, And you thall have a hundred fur your pains.

## Anfwer.

When Adam firlt beheld his partner Eve,
Bleft with more charms than we can well conceive,
A warmth unufual glow'd within his breaft, He kifs'd his bride, and own'd that he was bleft.

## 2ery.

Derinx the diffrence of what your may call A confcience that's large, and no confcience at all.

## Anfwer.

A country woman begg'd a boon
Of a rich merchant, here well known-;
Who, generous heart ! quite free to all, Of pack thread haxded down a ball, That meafur'd twelve-fcore yards-to grant-
And bid her take what fine might want.
She talk'd-roll'd off,-totire your patience,-
At laft faid, 'Here's enough in confcience.'
The Merchant fmil'd,-and faid, ' let's fee

- What may a woman's confcience be!

He found it forty yards in all ;
If he'd had none, she ta'en the ball!

## Query.

A heavy body, being funk to the bottom of any fluid; will it require more or lefs weight than itfelf to ralfe io up?

- Henfuer.

## Anfwer.

By the laws of Hydroftatics, a lef's weight than itfelf wiil raife it up; but in a ftagnant or confined fluid, or one that has a great degree of tenacity, or if the body be in clofe contact with the bottom of the containing veffel, \&c. it may require more weight than itfelf to raife it up. .

## Quiery.

Pray give your opinion low the fifhes can refpire air in the fea?

> Arfwer.

There are many forts of fifh endued with lungs; as whates, fea-calves, dolphins, with others: and thefe are generally obferved to fwim near the furface of the water, and receive pure air, never remaining long in the bottom: But in thofe fifhes that are without lungs, 'tis prefumed the gills perform the office of lungs; and that the sereal particles are admitted through the pores into the numerous veffels there inferted, asd thence again expired

## Query.

Wrin were guineas firt coined in England? and why were they fo called?

## Anfwer:

In King Charles the Second's time, when Sir Robert Holmes, of the Ine of Wight, brought goid.duft from the Coaft of Guinea, a guinea firt received its name frome that country.

## 2uery-

If whatever is, is right, in the natural worlid, (according to Mr. Pope's Ethics, in his Effay on Man), and God has formed nature and her operations, in all refpects for the beft, why is rain, or elementary weather, prayed for in churches? or why is any thing prayed for, by the human fpecies, of deftetive judgment, (according to the wife Socrates), that God would grant fuch things as are fit for us, and keep away fuch things as are not fit, in refpect of particular and general good ?-And why are not curfes banifhed all catholic and ckriftian churches, if God and his Providence can award juitice to criminals, without the imprecations bestowed from man's pitiful, partial, and weak judgment, in this refpect; whofe whole irregular race, governed by $a$
lawlefs.
lawlefs will, feems to be greatly favoured by a gracious and good God, in not being long ago extirpated from the face of the whole earth, for the erormous trefpaffes of the greater part of them, committed againft their Maker and one anocher ?

## Anfwer.

To pray for rain in churches, or elfewhere, appears to be the fame as to pray for fnow, dry weather, or funchire, and for fuch things as people's fancies or wrong judgments, or different views and vain imaginat ons, fuggeft to them. For, the operations of nature are fLppofed to be univerfally carried on every where for the good of the whole; and if it be true, what Mr. Pope fays, in his Ethic Epifte, there can be no error in nature :

In fpite of pride, in erring rearon's ípite, One truth is clear, whatever is, is right:

To which may be fubjoined.
Except man's will, exempt from nature's laws, In fipite of doubt, our good or evil draws.

Penspns of the fame or different occupations and interefts pray for different elementary weather at the fame time and place. So different armies pray to God for different fucceffes, or deftructions. And how is it confiftent for God to oblige both parties ?

If God's will be done on earth as it is in heaven, (prayed for in the Lord's Prayer, in churches), there is little occafion for other folicitations of the divine power and goodnefs, fince afking what may be unfit for us will prove a hurt inftead of benefit; as the farmer, in the fable, refigned the weather into Jupiter's hands again, when he had enjoyed what weather he afked for, and found his crops worfe than his neighbours.

One part of the Scripture teaches to blefs them that curfe you, and pray for them that derpitefully ufe you, li-bellers, \&c. againft the church doctrines of curfing our fellow beings! But though the texts of Scripture feem to clafh with each other in different places as the flatute laws in different acts of parliament differ fo much as fometimes to require an adjuftment, (like a Hadley's quadrant), yet the divine and human commands, in general, are reconciled by a general obedience to morality and religion, and an abftinence from. vice and injuftice.

The irregularities of man's race require to be put under laws and government, as is evident from their various and irregular propenfities and inclinations: yet the deviation of thofe wills from equity and juftice, with refpect to their conduct towards one another, is fuch, that fometimes no force or punimment, by cutting them off, is able to reftrain their irregularities and keep them in order.

The infinitely wife Being, permitting men's irregularities, (for experiment or probation), to anfwer the ends of his glorious creation, he can difpofe of them here, or remove them from this to another ftate of being, as he fees beft fit. And fince all created beings are within the grafp of the divine power, to do with them the way moft fuitable to his pleafure, therefore to fubmit, (by refigning to his providence) is the right humtan wifdom.

Yet the race of mankind (corrupted as it is) is certainly at liberty to afk of God to grant what is fit and good for their happinefs; and, while they ank, to beg that he would avert or refufe what is againft their happinefs, or hurtful to them, though aked.

## Querg.

Sacaciove friends, inform me whence arife Thofe Northern lights that fream along the \&kies?

> Anfzer:

The caufe of the Northern lights is from a thin, nitrous, fulphurous vapour, soifed in our atmofphere, confiderably higher than the clouds. This vapour by fermentation taking fire, the explofion of one portion of it kindles the next, fo the flames (of the Aurora Borealis or Northern lights) fucceed one another, till the whole quantity of vapour within their reach is fet on fire. See Rowning's Natural Philofophy, ${ }^{2}$, 158.

It is alfo faid that the Northern lights proceeds from the vapouns afcending by exhalation.
Query.

What became of the ark of the Lord, containing the two tables of ftone, after being depofited in Solomon's Temple, as mentioned in the 8th Chapter of the ift Book of Kings? The Jewin opinion is, that, when the Temple was dcftroyed, the earth opened and fwallowed it.
Anfwer.

## 286 <br> Anfwer.

No doubt but the ark of the Lord was burnt with the Temple; which may be a fufficient reafon for the extreme grief of the Jews; for, as Jofephus emphatically expreftes it, they lifted up their heads and wept.
Qucry.

W'нy are thofe two months, March and Oetober, reputed to be the beft to brew in?

## Anfwer.

Because in thofe two months the medium fate of the air between the extremes of heat and cold, is moft favourable to a due carrying on the procefs of fermentation; on the proper management of which, it is well known, that the perfection of malt liquors depend.

> Query.

By whom, and about what time were blifters made of cantharides introduced into medical practice?

Anjwer.
Blisters made of Cantharides were firf introduced Into medical practice by Aretieus, a Greek phyfician and medical writer; about so years before Chrift. See Le Clerc's Hiftory of Phyfic.

## Querge

Why does the horizon appear to our fight larger than any part elfe of the bemifphere ?

## Anfwer.

Nothano can come within the compafs of our eyes fo well, becaufe the earth on plane of the horizon, is decorated with trees, herbs, plants and grafs, which makes it appeaf of a fine azure green, and exactly fuitsour fight, better than any other colours under the creation; and therefore lets the eyes comprehend more of the horizon than any part elfe of the hemifphere.
Query.

What branch of natural philofophy affords the moft convincing arguments of the exiftence of a fupreme Being $P$

Anfwer.

$$
\begin{gathered}
287=\text { A的 } \\
\text { Ancr. }
\end{gathered}
$$

Astronomy, for it is impoffible for any man to look tound him and view that amazing orb the fun, thist loud herald of his ma'ien's prife, from whofe benign agency nature receives her beauteous features; the moon which when the fun goeth cown ligtits up her filver lamp to biefs mankind; thofe planetary worlds which run their rapid courfes round the fun; or thole bright fpangles with which the empyreum arch is decorated, but he muft be convinced that thefe are the works of a Being infinite in power, im. menfe in wifdom, and unbounded in goodnefs.
Q:ery

What is the reafon that the thells of crabs and lubfters on being boiled, turn red ?

Anfwer.
The deep purple inclining to blacknefs is only a fuperficial covering on the calcareous earth compoing the thells of crabs, lobfters, \&c. and when its cenfity is atte suated by heat in the action of boiling, the light reflected from the twhite fubstance of the thell is tranfmitted more copiouny through this film and gives it the appeatance of red, \&c.

## Query.

Why is King Henry the eighth always (or generally) drawn with a cap on, inftead of a crown ?

## Anfwer.

Hxnry the eighth received from the Pope, the title of Defender of the Faith, for having wriven againt Luther, and prefented him a Cardinal's cap, in which he is generally delineated.
Query.

How long has the title of Lord Mayor been given to the Mayor of London, and on what occafiop was it firft conferred ?

Anfwer.
In the hiftory of England it is recorded, that about the year $13^{81}$, or 1382 , (in the reign of Richard II,) when William Walworth, the then Mayor of London, had nain
the rebel Wat Tyler; the King knighted Walworth, and ordered that the Mayor of London chould ever after beat the title of Lerd.

## Query.

As black is no colour and confequently reflects no rays to imprefs any colour on the retina of the eye; how comes it that bodies that are black are as vifible as any other object?

> Anfwer.

When bodies which are black are placed upon, or furrounded with bodies of any other colour, 'tis the coloured rays reflected from fuch bodies around the margin of the black that defines its Imape.

## Query.

CAn love exift without jealoufy ?

## Anfwer.

Whoever confiders that what we love we always fet a high value upon, will not think it an unreafonable confe.quence that we fhould be afraid of lofing it; befides, what appears lovely to us, we are apt to think does fo to others, which would naturally make them endeavour after the por- feffion of it as well as ourfelves, and therefore gives us no fmall uneafinefs for fear of being difappointed. And even ruppofing the beloved perfon to be virtuous and confant, yet a great paffion will be apt to fuggeft that it is not impoffibla, but an alteration may happen, either through fome dillike or by the intervening of a more worthy object; fo that it is contrary to the nature of love to be free from jealouly before marriage; but after, where the perfons are good and generous, it feldom or never happens.

## 2uery.

What is the origin of heraldry ? And how remote is its antiquity?

Anfwer:
Ir feems very difficult to determine how long heraldry has been in ufe as it now is, but its origin is of very an. cient

## = 289

cient date. The earlieft account we have is in facred writ, in the 2 d . chap of Numbers, when we have an account that each tribe of the Ifraelites had their particular fandard, and there is no doubt but each ftandard had fome particular mark or figure, and later Jewihn writers inform us, that thefe figures were characteriftic of the tribes; Judah had a lion on their ftandard; Dan a ferpent; lfachar an afs, \&ec. whether thefe were of divine appointment originally, or borrowed from the Egyptians, who were famous for their hieroglyphics, is not certain. But after that time flandards were ufed in war, and are to this day, each Regiment having its peculiar ftandard or colours; and as thefe formerly had figures of birds and beafts that were thought emblematical or ominous by the general or leader, the fame figure was engraven on a feal, with which the general or chief ftampt all his orders to his inferior officers, and the defeendents of fuch chiefs afed thofe figures painted or engraven on their mields, \&cc. as a family diftinction; and is thus ufed to this prefent day. It maly farther be remarked, that the varioses tribes of Indians in North America, to this day ufe the figure of fome bird ot beaft to diftinguifh them from other tribes. See Cajrain Carver's Travels.

## Query.

Wнy is the thick part of the leg called the calf?

> Anfaver.

The calf of the leg feems to have had its name from two cimbric words, cal, ftout for large, with refpect to the other parts of the legs, and lef, always bent, or of a bending form (vid. Goropius Becamus) and from thence the Dutch name kalf, from this the Englifh is evidently borrowed.
Query.

When a piece of iron is heated red hot and immediately cooled in water, it becomes harder, but if left to cool in the open air, fofter: Can this be accounted for ?

## Anfzoer.

When a piece of iron is heated red hot and cooled in the open air, its bulk b:comes greater, or, it occupies more fpace, and therefore the particles compofing it are at 2 greater diftance from each other than before, and confe"quently the whole is lefs compact and fofter; but the con..

Cct trary

## 290

trary happens if cooled in water ; for in heating, a great part of the air it contained is excluded by that operation, on account of its expanfion and rarefraction; then fuddenly plunging it in water, the air is thereby prevented from infinuating itfelf into the metal while it cools, and fo the particles, having more room fall nearer together, whict evidently muft render it of a firmer texture.

## Query.

Whetrin a practical geometer can execute the firf problems of geometry mueft with great or fmall diftances?

## Anfwer.

Probifms in plain geometry can be drawn more. exaft with great diftances than with fmall, becaufe all points and lines inpretice are of fome breadth, and fuch breadths will hold a lefs proportion with great than with fmall diftances, and confequently the errors in drawing will be lefs in ufing long lines than mort ones: To explain this, fuppofe the circumference of a circle, whofe diameter is one tenth of an inch, is to be divided into 1536 equal parts by lines drawn from the centre, this we will fuppofe to be done by a continual bifection of the cords, now when we come to the laft divifions, we fhall find that the lines which are to divide the cords will be as broad as the cords are long, though perhaps the inftrument may be as fine as poffible ; but this would not be the cafe if the diameter was two or three yards.

## Query.

Wuencr proceeds the faltnefs of the fea, -and is it more fo now than formerly ?

## Arfrwer.

According to fome naturalifts it is oxing to the mines of falt gem in the tow els of the earth wafhed down by the rains :-admitting this, the fea muft grow continually falter, becaufe the water raifed by evaporation is frefh. On this fuplofition Dr. Halley propofed a theory to determine how long the world has fubfifted; but as obfervations have not bleen made of the degree of its falmefs at diftant periods of time, it munt be left to the determination of the curious in future ages.

## 291

## Query.

Ingenious artifts make appear,
How long fince hats firft came in wear.

$$
\dot{A}_{x r} \mathbf{w}_{\mathrm{wer}}
$$

Fatrie Daniel relates, that hats becams in ufe in the time of Charles II. about 1449; but the Dictionnaire des Origines which is more to be depended upou, tells us that they were not worn till the time of Charles VI. when they were ufed by the nobility when they rode a hunting.

> Query.

Ip a perfon breathes upon the blade of a new knife, razor, \&cc. the nroifture immediately flies off. What is the reafon of this ?

## Anfwer.

Taki 2 razor or knife and heat it till it is 25 warm as the breath, and then the experiment fails; the reafon is obvious ; as the breath contains mitch moifture, when it meets with a body colder than itfelf that moifture is condenfed, and this is the caufe why the breath is fo difcernable in froity weather; now if we breathe upon any fine polifhed, reflecting furface colder than the breath, the moifture thereby condenfed becomes a kind of cover and confequently vifible; this cannot be the cafe when the body is fufficiently warm, for then no condenfion can take place. The evaporation of fo very fmall a quantity of moifture maft be performed almoft fuddenly, may be eafily conceived by a comparifon with Dr. Halley's experiments, who found that the common evaporation of water amounts to about one fifth of an inch per diem, and we may fafely affirm that the evaporation in queftion would not exceed that quantity, were it to continue for the fame face of time. This circumftance muft alfo happen if we breathe upon bodies not polifhed, but that is the very realon why we do not perceive is

## Paradox.

One evening as I walk'd to take the air I chanc'd to overtake two ladies fair; Each by the hand a lovely boy did lead To whom in courteous manner thus 1 faid:

## 292

Ladies, fo far oblige me as to thew How near a kin thefe boys are unto you?
They finiling quickly made this dark reply
Sons to our fons they are we can't deny :
Though ir feem.Arange they are our hufbands brothers.
And likewife each is uncle to the other :
They toth begot and born in wedlock were
And we their mothers and grandmothers are, Now try if you this myftery can declare.

## Anfwer.

Two widow ladies married were
Each to the others' fon;
And they both ptegnant did appear
E'er one full year was run.
The confequence of which did prove
To each a charming boy :
This did cement their hußband's love.
And added to their joy.
By this event likewife its plain
They did commence grandmothers:
And that their htrbands did obtain:
Two young delightful brothers.
A brother you may juftly call
Each to the others father ;
Uncles they were reciprocal
You eafily may gather.
Paradox.
Two fav'rite fields near to my dwelling lie,
Their foil the fame in depth and quality.
The furthert diftance, twenty acres mearures;
The neareft ten, but fraught with latent treafures ; For, till'd alike, this yields me as much grain
As does the finft, though full as big again.

## Anfwer.

Because corn and trees always grow perpendicular to the horizon, an hemifpherical hill of twenty acres furface, will bear no more of either, than a level field of ten acres. furface, being equal to the horizontal and circular bafis, which the faid hill ftands upon. And no more pales are required to fence over any hill than would be required to fence over the level bafis of the fame, were the hill intirely. uemaved
smoved, i. e. both palings being carried over the fame horizontal direction.
Query.

There is a fquare piece of land containing 25 acres, de. Gigned for the reception of 24 poor men and their governor, who are each to have a houfe fituated in his own ground, the governor's in the centre. How many people's land muft the governor pafis through, before he gets to the outfide of the whole ?
Arfzer.

2 for the ground being a fquare, it will confilt of 5 tow: each 5 acres, as per figure.

Ir a fervant fees any ill actions, or ill practice, of a mant or his wife one againft the other; fuch as adultery, or the like, which tend to the ruin of each other. Ought not fuch a fervant to difcover the fame to the party injured? And if upon fuch difcovery the man and his wite do part-Which is truly, properly, and equitably the caufe of fuch feparation, the informer, or the crime and criminal ?

## Anfuaro. 1

So important a difcovery ought never to be made without mature deliberation; if not, the advice of a faithful triend. For in many circumftances the injured party may be more happy in the fuppofed innocence of their adulterous mate, than under the torture of fo ungrateful a difciofure. But if upon a prudent difcuffion of the matter, yeus liave reafon to conclude, that your difcovery will prevent the ruin of one fo heinoufly abufed, you are under a ftrict obligation of performing fo charitable an office. And if upon to neceflary a difcovery a feparation thould enfue, the injured party is the efficient, thel criminal the formal, the intormer tre infrumental caufe of fuch a feparation.

## $294=$

2ury.
How old, and from whence is the cuftom of throwing at cocks on Slirove Tuerday ?

## Anfwer.

There are feveral different opinions, concerning the original of this cuftom-But we are moft inclined to give credit to one Cranenftein, an old German author-who fpeaking of the cuftoms obferved by the Chriftian nations, gives us the following account of the original inftitution of the ceremony.

Wher the Danes were marters of England, and lorded it over the natives of the ifland, the inhabitants of a certain great city, grown weary of their flavery, had formed a fe_ cret confpiracy to murder their mafters in one bloody night, and twelve men had undertaken to enter the town-houfe by a ftratagem, and feizing the amms, furprize the guard which kept it; at which time their fellows, upon a fignal given, were to come out of their houfes and murder all oppofers:but when they were putting it into execution, the unufual: crowing and fluttering of the cocks, about the place they attempted to enter at, difcovered their defign, upon which. the Danes became fo entaged, that they doubled their cruelty, and ufed them with more feverity than ever: foon after they were forced from the Danifh yoke, and to revenge: themfelves on the cocks, for the misfortune they involved: them in, inftituted this cuftom of knocking them on the head, on Shrove-Tuefday, the day on which it happened :This fport, though at firit, only practifed in one city, in procefs of time, became a natural divertifement, and has continued ever fince the Danes firf loft this ifland.

> Query.

Whitnir fage of virtue infufed, be mere wholerome than Indian-tea?

## Snfrwer.

Вонгa-tea has the pre-eminence, as corroborating the ftomach, helping the concoction of aliments and cholic pains, in the expelling of wind. Green-tea helps the fuppreffion of urine, in the free excretion of it; which are much more efficacious properties than are in fage, \&c.

## 295

## Query.

Wry Jefus Chrift is faid to be of the feed of David, and to what purpofe is the genealogy of Jofeph given, wher Mary conceived before the came at hum ?

## Anfwer.

To the firft queftion we reply, that Jefus Chrift is therefore faid to be of the feed of David, becaure born of the Virsin Mary, who proceeded from David by lineal defcent.

In anfwer to the fecond, we affign the following reafons of Jofeph's genealogy, but founded on this neceflary preliminary, that St. Matthew wrote his gofpel primarily for the Jews, to whom in the genealogy, he has a peculiar regard.

1. Thi Jews looked upon Jofeph as real father to our Bleffed Lord. If therefore they have fufpected Jofeph to have defcended from' any other line, this would have prejudiced their minds againft the Gufpel-difpenfation. St. Matthew therefore, to remove this mighty rock of offence acquainted his country-men, that in cafe Jefus Chrift had been really the fon of Jofeph, he had, on that account, been of the family and lineage of David.
2. St. Matthew, by tracing fofeph's anceftry, informed the Jews, that as Jefus Chrilt was naturally the fon of David by his mother's, to ne was legally fo by his reputed father's five. And it would be no fmall fatisfaction to them to behold their Meffiah doubly the fon of David, both by natural and imputative defcent.
3. A motner's family was reputed as no family amons the Jews, and therefore our Lord could be no otherwife in. rolled, than under Jofeph's pedigree Very pertinent was it then to give the Jews to know, that in one fenfe he would appear as the fon of David in their public regifters.
4. Josiph and Mary were both of the fame family : and this could not be unknown to the Jews, for whom St. Matthew yrote. While therefore he prefented them with Jofeph's genealogy, at the fame time he acquainted them with that of Mary's, and he chofe to give them Jofeph's rather than Mary's, when either would fuffice, in compliance with the received cuftom of his country, which
which (as is faid above) made no account of the mother's family.
5. From the premifes we may aver, that St. Matheve deduced Jofeph's gene :logy, with defign to fhew that Jefus Chrift was every way the fon of David ; that as he came to fulfil all righteouinefs, fo he would evidence every punctilis of royal derivation.

> Query.

When a man upon his trial, fays, he will be tried by God and his country, the clerk fays, culprit, God feud you a good deliverance: Pray what is the fignification of culprit?

## Anfwer.

The Athenians have given fome account of this; we are of opinion, that when the perfon pleaded not guilty, and. put himfelf upon God and his country, for a trial, the clerk pronounced thefe words, Qu'll le paroit, let it ap. pear fo: i. e. Let it appear to God and your country, that you are not guilty of the crime you ftand charged with; fo that culprit appears to be a corruption of qu'il le paroit.

## Query.

Whether a perfon that has compounded with his crea ditors, is not fo ftrongly concluded by the above rule, as to be incapable of performing any act of charity accepiable to God, before he has fully difcharged the debis he compoundcd?

## Sinfwer.

That ads of charity may be aeceptable to God, they ought to be done with all the fimplicity and fincerity of heart imaginable, out of a juft fenfe of the duty we owe, and the dependance we have upon him, and not from our being ftruck with the mifery of an object.

In the next place, what is fo given ought to bertrictly our own, which a perfon that has comprunded with his creditors, ought not to think fo, till he has fatisfied all their juft demands upon him; fo that to make his charity acceptable to God, he mult come up to thefe rules. For though his creditors may give him a legal difcharge for his
compo-

## 297

compofition, he can never be difcharged in confcience, till he has paid the laft farthing : but divines allow a liberty in. fma'l acts of charity, which can be no damage to crediturs, and where we may prefume upon reafunable men.
Query:

Whether perfons. who murder themfelves, may poffibly be faved; and if fo, why are they denied cirifia:n burial?

> Anfaver.

That thofe guilty of fuicide, may be faved, we are extremely willing to hope, becaufe 'tis prefumed that nothi:1g but a deprivation of reafon could make a chriftian guily of fuch an action; agreeable to which, is the favourable opinion our courts of juftice entertain in fuch cafe, where the perfon is generally brought in non compas mentis. And certainly people deprived of reafon, will never be accountable for actions done contrary to it.

That they were denied chrifian burial by the faw; might. be to deter others from fuch actions, fince laws of that na-. ture have been always made in terrorem.

## Query.

Is it poffible for mankind to attain to perfection ? if not, why fays our Saviour, Be ye therefore perfect, as your Father, which is in heaven is perfeet ?

Anfzuer.
Sure man can never be fo perfect as his Maker, fince undeniable are thofe words of Eliphaz, Behold, he putteth no truft in his faints; yea, the heavens are not clean in his fight. When therefore, our bleffed Lord commands to be perfect, as our Father, which is in heaven is perfect, he propofes God as a pattern of perfection, which we fhould endeavour as accurately to imitate, as our frail mortality will permit. And while in this fenfe we fet the Lord al. ways before us, we thall be daily provoked to make nearer advances to the ftill diftant object of our conftant imi. tation.

## Query.

Wustuta a man can properly be faid to take cold?

## Anfwer.

He may properly be faid fo to do, becaufe the air being received in full draughts through the mouth into the Afpera Arteria, Bronchia and Veficles of air, belonging to the lungs, doth there encounter the blood, rendering it too thick, cold and clammy ; whereupon, from the over-cooling of the blood, proceed coughs, catarrhs, \&c.

## 2uery.

How comes gaping to be catching ?

## Anfwer.

Gaping or yawning is infectious, becaufe the fteams of the blood being ejected out of the mouth, doth infect the ambient air, which being received, by the noftrils, into another man's mouth, doth irritate the fibres of the hypogaftric inufcle to open the mouth to difcharge by expiration, the unfortunate gueft of air infected with the fteams of blood as aforefaid.

## Query:

Whice is moft to the advantage of a general, to end a war glorioully, or have it continue ?

## Anfwer.

Thi word Advantage in the query, appears to be dreft in an ambiguous mantie: if it is meant that fordid intereft which we diftinguif by the name of gain, it is undoubtedly that way, the advantage of a general to continue the war as long as poffible; but we believe, the querift would be fatisfied if the glorious ending of a war is not more honorable to a general, than a continued bickering? And to this we anfwer in the affirmative. For if the war itfelf, be juftifiable, it muft certainly be the higheft pitch of merit in a general, to watch every opportunity, and bravely fcrew the fortunes of his country to the elevated height of an illuftrious victory.

## 2uery.

Whether it is not a fin to fay thofe words in the marriage ceremony, "With my body I thee worhip:" fince it is promifing in the fight of God, to be guilty of idolatry ?
Anfrees.

## $299=$

Anfever.
There are two forts of workhip, a religious, and a civil wormip. And as the one fignifies that homage, which we incommunicably pay to God; fo the other implies that refpect, which we pay to man. Hence feveral magiftrates are ftiled worfhipful. When the man therefore fays to the woman, "I thee worßip," he means no more than I thee honour.

## 2uery.

Pray how came crooked men by the title of my lord?

## Anfwer.

Among feveral probable accounts of this cuitom, the following appears moft rational.

In the firt year of the reign of king Richard III. commonly known by the name of Crookt back, fix perfons, unhappily deformed in that part of their bodies, were made lords, as a reward for feveral fervices they had formerly done the king ; the novelty whereof, occafioned the whole nation to make merry with thofe fort of people, by advifing them to go to court, and receive an honour which nature feemed to have defigned them for: 'tis from this, we prefume, the mock title of my lord has been ever fince, peculiar to fuch perfons.

> Query.

I Havz read in Jude, that Michael contended with the devil about the body of Mofes. Pray inform me of the reafon of their difpute.

> Anjwer. `

It is the opinion of fome, that Mofes was trannated, like Elijah, into lieaven, and that the devil contended with Michael, that he ought not to be thus trannated, in that he had been guilty of murder, in flaying the Egyptian. But as Mofes' tranfation has no other dependance than Jewifh tradition, it is contrary to Deuteronomy xxxiv, 5, 6. "So Mofes, the fervant of the Lord, died in the land of Moab, according to the word of the Lord." And he buried him in a valley, in the land of Moab. But fince it immediately follows, no man knoweth of his fepulchre to this day; and the reafon why his fepulchre was bid, was probably, left the
the Jews (a people exceedingly prone to idolatry) mould workip the body of fo renowned a law-giver : we may therefore not unreafonably fuppore, that the devil would have difcovered the concealed fepulchre, but was prevented by the arch-angel Michael, whence might arife that memorable contention mentioned by St. Jude.

> Qucry.

Whice is the moft noble employment of a rational being, love or friendhip ?

> Anfwer.

Friendhip certainly is the moft noble employment of a rational foul. Love feems only the diverfion of the mind; but friendnip is its bufinefs. The firft, in fome meafure, leffens the dignity of human nature ; the latter raifes and ennobles it, even to fimilltude of the Deity himfelf, for it gives us a tafte of thofe joys. which are only to be found in his prefence, namely, a mutual defire of pleafing and raifing the felicity of each other. But we ought to fpend no time in the proof of this, if we did but rightly confider, that friendimip is the child of reaion, love but the fonding of the paffions.

## Query.

What is the caufe of little white fpots, which fometimes grow under the nails of the fingers? And what is the rearon they fay they are gifts?

## Anfwer.

Those little fpots are from white glitering particles, which are mixed with red in the blood, and happen to re. main there fome time. The reafon of their being called gitts, is as wife a one as that off letters; winding-heets, \&c. in a candle.

## Qnery.

Whetrer in admiring and meditating the lives, hiftories, humours and fayings of men, the moft excellent, we do not run the hazard of lofing our own natural advantages? For thinking to accord our humours to other mens examples, 论 forget, or night all that is our own, and fcarcely ever do the other with a good grace.

## Anfwer.

There is fcarce an excellence but what munt be guarded with warinefs and caution. And therefore as imitation is excellent in its kind, fo it munt be managed with wigderful circumfpection. Too nearly to copy after the fayings of other perfons is to be parrots, and not men ; to accommodate ourfelves to their humours in the grefs, is to ape, and not imitate. When therefore we fet before us the moft eminent examples, we muft not be a fervile herd, as the poet expreffes it; we muft feparate the ore from the drofs; we muft not fuffer any coin to be current among us, merely becaufe it bears the image of the perfon we admire : in the moft excellent of men, we muft diftinguifh between their virtues and vices, their excellencies and defects; we muft weigh the difference of conditions, of geniuffes, of times, of places, and thofe other accidental circumftances, which may entirely alter the nature of an action. We muft endeavour accurately to know ourfelves, that we may be thoroughly fenfible, whether that be not aukward in us, which is graceful in another. But, above all, we muft not over-look our own talents, but muft exert our faculties in refining, in improving, in inventing. And if we thus prudently direct our imitation, we fhall make gond that common fimile, of a dwarf fet upon a giant's fhoulder.

> Query.

Some mens fipirts are vifibly mafters over thofe of others. The queftion is, Whether this does proceed from the excellency of education, or mens diverfity of fortunes, or the real priority of fouls?

## Anfwer.

What propriety there is in the innate faculty of fouls, human reafon is incapable of judging; fince whether thofe faculties be equal or unequal, a difference in the actual exertion of them may arife from the caufes you have mentioned, to which we may prefix another.

1. That the natural contextures of our bodies may caufe no inconfiderable difference in the aetings of our fouls, is undeniably evident from undoubted inftances. The capacities of ome have been wonderiully impaired by accidental alterations in their bodies: and there have not been wanting thofe, who, though of very eminent endowments, have yet, by fome acute diftemper, been unhappily reduced
below the very level of common men. And this is further proved from the different geniuffes in different countries, acuerding to the difference in the nature of the climates.
2. Thy difference arifing from education is fo very palpable, that we need not infift upon it. Sonse men, who for natural abilities were once looked upon as of a common fize, have by induftrious application, and the beft opportunities of improvement, arrived to a quicknefs of under-- ftanding, and been in great efteem not only for their ftudied acquirements, but alfo for the uncommon reach of their great capacities.
3. That the difference may arife alfo from the diverfity of mens fortunes, we have a noted inftance in the poer Ovid, who juftly attributes the want of that fprightlinefs of thought, he had formerly been mafter of, fo confpicuous in his laft compofures, to his very unhappy circumftances, which ftrangeif enfeebles the natural vigour of afpiring fouls.

## Qucry.

Is it not better never to contract a frien!'hip than to hreak it, and if the uneafinefs of the lofs of a friend, be not gieater than the fatisfaction we find in having a friend.

## Alfwer.

Friendship feems to be the fupremeft felicity of the foul, as to its converfation in this life, and, confequently, the pleafures which arife from it are above expreffion, where it is fincere, and placed on a deferving object: the breaking fuch a friendmip therefore, mult be the greateft uneafinefs that can happen to any perfon. But as we ought never to take up a fricnelhip, without the greateft conflderation, and perfect knowledge of one another, fo ought we never to break it, unlefs the greateft defects appear in the object; for the breaking fuch a friendfhip gives us a double wound, in depriving us of the good offices we expected from a friend, and arraigning our judgment, which made foilla choice. Therefore the uneafinefs of thofe reflections mult be greater, than the fatisfaction which fuch friendihip could bring us.
Query.

Why is it, when the mind is oppreffed with extreme forrow, it oiten incliises the aflicted peifon to fleep; whereas
the vital parts being depreffed it Mould rather obfiruct is peacelul an exercife:

## Anfiver.

Extreme forrow has ufually the contrary effe?. Bett as it muit be allowed, that it fometimes has the ctle? you mention, fo thefe difierent effects arife from the cithounce in conftutions. For as neep is generally owing to the want of fuch a quantity of animal $f_{i}$ irite, as are futiocion to diftend the nerves, fo in mon confitutions exteme for row fo irritates the blood as to fupply the nerves with a lirge fore of animal fpirits, whence confequently proceds watchfulnefs. But in fome conftitutions the fame degree of forrow has a greater influence on the nerves to ditfipate the animal fpirits, than on the blood to occafion proportionalile fupplies. But as our bodies are not at all times alike affected, fo the fame caule may produce different effects in the very fame perion at different times.

## Query.

mave been taught, that if the product of any two f.:ctors be divided by either of thore factors, the quotient wit be the other. Now if 2 is multiplied into 0 , the product will be o, therefore o being divided by o, the quotient, which feems abfurd, will be 2. Again, if infinite be multiplied by 2, the product will be infinite; thercfore infinite being divided by infinite, the quotient will be 2 , which feems as abfurd as the other; pray be fo kind as to expla:n this to me ?

$$
A \because f w e r .
$$

You have explained it yourfelf very well, at leaft you have proved that it muft of neceffity be fo, for when the two premifes of an argument are true, the conclufion mult alfo be true; yet as there is fome difference between knowing that a thing is true, and having a clear idea of the truth of it, we will try whether we can fo explain it, as to make you conceive it clearly. Be pleafed therefore to obferve, that 0 is the term from which all quantities begin; now imagine that two mobiles fet out from the fame term, and that one of them moves with a velocity double to that with which the fecond moves, it is certain, that in all the inftants of time, that which moves with a double velocity, has defcribed the double fpace of the other; therefore confider what has happened in one minute, and in half a mi-
nute, then in a quarter of a minute, and fo on, till you. come to the very inftant of the beginning, you will have two progreffio:s, whereof each term of one will be double to each correfponding term of the other; therefore the very beginning of one is double to the beginning of the other, that is, 0 in one cate is double to 0 in the other, now if o may be double to 0 , $i t$ is no abfurdity that $o$ divided by $o$ is equ:l to 2; likewife, if the proportion ioc confidered the other way, it is evident, that one infinte will be double to the oth:r, therefore it is no abfurdity, that infinite divided b) ataiste, is equal to $a^{2}$.

## Query.

Whether we are not obliged to ftand, when we praife. God; or to be in a ftanding porture, when we fing pfalms, efpecially fince many of the pfalms ufually fung contain expreffions of prayer and praife; and it being likewife the cuftom to rife and ftand, when we fing, Gloria Patri? And further, whether ftanding at finging was not cuftomary. in the primitive times?

## Answer.

In what manner foever we are praifing God, ftanding no. doubt is the moft agreeable poiture. And therefore we fuppofe the cuftom of fitting, when the pfadms are fuag, tohave proceeded from carelefinefs and inadvertency. Though yet there are many pious and confiderate Chriftians, who always ftand at fo divine an exercife. And this pofture is punctually obferved at St. Peter's, Cornhill, introduced, as. we imagine, by the late pious Bifhop of St. Afaph. And that the fame porture obtained among the primitive Chrif. tians we have no reafon to doubt, fince they were ufed to ftand at a lefs devotional employment.

## Query.

What natural caufe do we affign to that Atrange difturbance in the fleep, which occafions perfons to walk, and. perform in many cafes, as if awake ?

Anfwer.
The animal fpirits running through fuch paffages of the brain, as they find open to their admiffion, and confequent.

## = 305

Iy, throush the fam: paffares, they were ufed to pafs, excite, fimilar fenfations in the foul, which difpofes us to fach actions in our heep, as while awake, we were accultomed to perform.

## 2uery.

What is the fin againft the Holy Ghoft; it being mentioned, but not told what it is?

## Anfiver.

We cannot fay, that we are not acquainted with the n.ture of this unpardonable fin ; fince the context gives us fo clear a light into it. The Pharifees had maliciounly and obAtinately afcribed that wonderful power of God's holy ipirit, whereby our Lord was enabled to caft out devils, to an impure, to an infernal agency. As therefore he reproves their inexcufable wickednefs, fo alfo he denounces an irreverfible punifhment. Does it not therefore plainly and naturally follow, from the common modes of fpeech, that fo terrible a denunciation has a particular regard to that in, that virulent fin of the Pharifees, which gave cocaffon to it, but fince after this our bleffed Lord vouchifafed to promite the fame delinquents that important fign of his refurrection from the dead; fince upon the crofs he condefcended to implore their pardon at his father's hands; fince we read, that the Holy Ghof was not yet given, that is, the public difpenfation of that bleffed Spirit which was not then commenced; fince St. Peter, in fome meafure excufed their condemning the Lord of life; therefore fome learned and judicious divines have not irrationally concluded, that the unpardonablenefs of thus blafpheming the holy Spirit, was not to take place till the day of Pentecont, th that fignal time, when God fet, as it were his laft feal to the doctrine of his beloved Son, in. whom he was well pleafed.

## Query.

In Gen. 1. we find that beafts were made before men; in Gen. 2. man feems to have been made before beaftos. Your reconciliation of the matter ?

## Anfzuer.

The facred hiftiorian obferves the order of time in chapter 3. but treats of things more promifcuoully in tie 2d. When

$$
D d 3
$$

therefore

## 306

therefore it is faid, at ver. 19. Out of the ground the Lord: formed every beaft, \&c. and brought them unto Adam, the meaning is, that he firft formed every beaft, and after that Adam was created; brought them to him.

## Query.

Wheri is hell fituated?
Anfwer.
Tnx fituation of trell, or as it is called, a local hell; may juftly be numbered among the fecrets of Providence, which are undifcoverable by man.

> Query.

Dozs the punifhment of hell confift of a real fire, or of only the privation of the fight of God?

## Anfwer.

Thoven it Mould not confift of a real fire, it will yet bemore than a bare privation of the fight of God. For a confcioufnefs of fin (however for a feafon it may be lulled a deep) is naturally and irrefpectively a very exquifite tormentor. But though we cannot be pofitively affured, that the holy penmen intend any more by the mention they make of fire, than to reprefent the torments of hell under the moft terrible refemblances (when yet they may infinitely exceed the images made ufe of) fo neither can we fay, that their expreffions are not literally to be underfood, fince our bodifs, as well as our fouls, will be grievounly tormented, which may be fo ordered by Omnipotent difpleafure, as to.be al. ways burning and yet never burnt.

Paradox.

- I did exift, and ever fiall

But how I don't exift at alla.
Anfwer.
Tre * inftant that we prefent call; Did once exift, now, not at all.

[^14]

## Query.

Supposx one eye to be difpofed as to reprefent a man with his heels upwards, and that of the other to remain in its true pofture. I ank, what idea would an intent looking on the man with both eyes frame in my mind ?

## Anfwer.

Thi eye that would reprefent the man with his heels upwards, would, or would not, be fo difpofed, as to have the fibres of its optic nerve fo correfpondent to the fibres of the optic nerve of the other eye, as that an object reprefented by both may produce but one image in the brain. If the latter, you would betoold a duplicate of the fingle object; the one in a right pofture, the other in an inverted one. That the object would be reprefented double, we learn from a common obfervation. For when we fo prefs one eye, as that the rays emitted from an objeet, fall not on the correfpondent fibres, each eye diftinctly and feperately exhibits the image of it to the perceptive faculty. If the former be fuppofed, the object would be reprefented to us in fo indiftinet and confured a manner, that we fhould be at: a lofs to know, what to make of it.

## Query.

What is the reaion that infants, hardly a week old, fmile, no human object being, in meo judicio, capable ta, induce fo merry an humour ?

> Anfwer.

Smiles arife not always from an impreffion made on the mind by out ward objects, but fometimes from internal caufes, viz. from a perfect flate of health, \&c. which difpofeth the mind to alacrity, of which fmiles are one effect, and may the rather be expected from children, not only from their never having fuffered under any indifpofition, but alfo from their not being fenfible of the troubles of hu. man life, to allay their natural alacrity.

> Query.

Pray, your reafon, why a cat when the falls, or is thrown from a houfe top, or any other place, always alights directly upon her fet?

THEY are commonly, but not always obferved to light on their feet; and it is chiefly due to their tail, which they fan the air withal, whereby the fwiftnefs of their defcent is fo far retarded that they are enabled to prepare themfelves in fuch a manner for their fall.

## Øuery.

Why religion mould make people ill-natur'd, and parfecute one another, or whether it has not been the occafion of. moft of the barbarities in the world ?

## Anfwer.

That religion has been the occafion of the moft barbarous and inhuman practices, both the Heathen and the Chriftian world afford us undoubted teftimonies. That Paganifm hould oblige its profelytes to fo cruel a: belaviour, we muft forbear to wonder, fince the great deftroyer, the grand adverfary of mankind was the object of their worhip; but.if it be enquir'd. (as we fuppofe it is by the Querift) why the profeffors of chriftianity, though the Prince of Peace, though that great preferver of men, be the author and finifher of their faith, fhould yet be guilty of fuch barbarous proceedings, as though their mafter came to deftroy, and not to fave mens lives; to. this enquiry we fubjoin a very noted axiom. The beft.things, when cor. rupted, become the worft.

## Query.

The godfathers and godmothers, when an infant is bap.. tized by a minifter of the church of Englard, fulemnly promife and vow to God, in the name of the faid child; or infant, that he or the fhall live, and be perfect from fin all the days of its life; I think the ordinance of baptifm imports thus much, yet the members of the faid church, generally, in difcourfe, arguc againft perfection, without, at, or near the point of death?

> Anfzuer.

The godfathers and godmothers do no where, in the office of baptifm, promife for the infant, a perfeet, an unfinning obedience. 'T is true, indeed, they promife, that the child mail conform to that, which if it accurately and punctually conform to, it will not fall hort of abfolute perfection.

## 309

perfection. But then this conformity, they promife, is totake its eftimation from the meafures of fincerity, and not from the fandard of perfection, that is, they promife in the child's name, that it fhall fincerely endeavour to comply with the whole law of God, as far as frail mortality will permit. The promife therefore of godfathers and godmothers is to be taken in the fame fenfe with that excellent petition in the Lord's Prayer, Thy will be done en earth, as it is in heaven. For it is not fuppofeable, that men can be as perfect as angels; men encompaffed with duft and athes, as perfect as thore difencumbered, thofe unbodied fpirits. When therefore we put up that addrefs to the throne of grace, we no more than implore our heavenly Father, that he would enable us to come as near to thofe pure, to thofe fpotlefs beings, as the neceffary condition of our mortality will admit.

> Query.

Wiy do we throw cold water in a man's face when'he fwooneth ?

## Anfwer.

Cold water thrown into the face, caufes a contraction of the pores, furprizes the fpirits, and recalls them to their wonted emanations, and reftores the blood to its due: circulation.

## enery.

Say Britifh youths, who with exalted heads,
Setting next Pinda on fublime Parnaffus, Receive the laurels due to your great worth.
-Why does the forelling Nile, thro' fertile plains, Which runs tumultuous, overflow its banks? And with its fat'ning flime rejoice the fwain, Who with his Tharp'ned fickle, comes to reap: A golden harveft; part, fruit of his care, And partly caus'd by th' overflowing tide ?

## Anfwer.

When the warm fun from $^{\text {Athiopian lands; }}$. Remits the fervour, and bids winter reign, Succeffive fhow'rs o'er diftant mountains fmoke, And falling thence, in rapid torrents rcll,

## $310=$

Tearing, as thro' the delug'd lands they fly,
The muldy bottom of up-rooted sarth,
And thick'ning with fat oil their rrowing ftreams :
Hence 'tis, that cov'ring with rich nime a ground,
Which the hot fun had burnt to fand tefore,
Egyptian plenty does with Nilus flow,
And by his fall, foon feels a fure decreafe.

## Query:

## Wry does a drunken man fee double ?

## Anfwer.

The fumes of the liquor, he is intoxicated with, may be fuppofed fo to diforder his eyes, as that the reprefentation of the object cannot fall uporthe correfpondent fibresof the optic nerves. Whence it becomes impoffible, that the two-fold image exhibited by the two eyes fhould ever founite, as to produce but one refemblance in the brain.

## 2uery.

I desire you will pleafe to let me know, what fex the devil is of?

## Anfwer:

By his roughnefs one would take him to be of the mafculine gender, but fince he fo often appears in petticoats, we have more reafon to believe him an hermaphrodite.

$$
Q^{\prime} \text { iery: }
$$

$W_{H Y}$ doth a dog fweat only on the tongue, and not on the fkin?

Anfzer.
Oor opinion then is, that the dog's tongue doth not fweat, but we rather fuppofe the humour dropping from it in their pantings, to be faliva: And that the natural conftriction, or ftraituefs of their pores, prevents the perfpiration af humours through their Ikins.

## 311

## Query.

Why thunder turns beer, ale, \&c. four ; and whether aron preferves or not?

## Anfwer.

Thundfr is apt to turn beer, ale, \&c. four, hy the violent anitation ard new fermentation it caufeth in thofe liquors, by which their firituous parts are in a ereat meafure diffipated or depreffed, and their tartarous parts ex.haled. heveral grounded, as they pretend, upen experience, will afirm, that iron hath that peculiar property to prevent that eff © ; hut others will tell gou, that it does it only by rea on of its weigit and preffure upon the vellil, and that any other pond rous body will have the fame virtue, which laft opinion feems more probable than the firt, and may be confirmud only by repeated experiments.

## Qucry.

Why is the nine of diamonds called the curfe of Scotland ?

## Anfzeer.

Diamonis, as the ornamental jewels of a regal crowr, imply no more in the above-named proverb than a main of moyalty, for Scotlard's kings for many ages, were objrrud, each ninth to he a tyrant, who hy civil wars, and ail the fatal corifequences of intertine ditcord, plunging the civided kingcom into firange diforcers, gave occafion, in the courfe of time, to form the proverb.

## Query.

From whence derived the origin of the word Dun?

## Anfwer.

Some fahely think it comes from French, where don-. nez, fignifies give me, implying a demated of fomething due; bu: the true origin of this exprefion owes its bith to one Joe Dun, a famous bailiff ot the town ot Lincoln, fo extremely active, and fo dexterous at the manazement of his rough bufintes, that it became a proverh, wher a ran tefufed to paylis debts, 'Why den't you dun him ?' ihat

## $\Longrightarrow 312$

Iis, why don't you fend Dun to arreft him; hence it grew - a cuftom, and is now as old as fince the days of king Henry VII.

> Query.

Why fifh, though bread in Salt water, are yet frefh ?

## Anfwer.

The folution of the queftion naturally follows from the neceffary altowance of thefe undeniable propofitions. Y. That the whole body receives its nourihment from the blood. 2. That the nutriment, we take in, cannpt be fecreted into the blood, till rarified by the heat of the fomach. And 3. That falt is incapable of fuch a rarefaction.

## Query.

Whether water, if drank from youth, would not be more agreeable to the man than any artificial liquors.

## Anfwer.

The drinking of water may be beneficial to fome conftiitutions, but deftructive to others : and more efpeciatly to thofe, who inhabit cold countries; nor do we find it agreeable in the hotteft countries; for there the tranfpirations are fo great, that the ftrongeft liquors are fcarcely powerfis enough to fupply the great expence of fpirits.

## Query.

Acknowiedging, that all dealings with the devil is abominably finful, I defire to know, whether it is lawful to apply to thofe who pretend to fortune-telling.

## Anfwer.

As the having recourfe to fuch pretenders is too epidemical a diftemper, fo the folution of the queftion may be of public ufe. But we may draw a very cogent argument againft it from your own acknowledgment For what af. furance can you have, that the perfons you apply to, have no dealings with infernal firirits? And if they themfelves imagine, that they have nothing to do with them, yet you know not, but thofe fubtle agents may have intercourfe with them, as it were incognito, and influence their pro-

Ceedings, though unknown to them. To this purpofe we. would prefent you with an authentic ftory. A gentleman, that ufed to bufy bimfelf that way, and from the fchemes he had drawn, foretold feveral events; but perufing afterwards his fchemes, and finding them notorioully talfe, ho was ftrangely furprized, that true confequences fould folluw from fallacious premifes. Whence fearing the concurFence of an infermal agency, he wifely bid adieu to that
fufpected art.

But let us fuppofe nothing in the cafe but the rules of art; pray, what art or fcience can acquaint us with the defigns of Providence, with the intention of our all-wife difpofer? What refearches can make us know the mind of the Lord, can qualify us to become his counfellors? And could human learning enable us to perform fuch wonders, what warrant have we to dive into the fecrets of the Almighty, to invade our fovereign's prerogative, and toldly intrude upon thofe things, which the Father hath referved in his own breaft, and you know withal, who has faid, it is not for you to know the times and reafons-take no thought for the morrow, for the motrow fhall take thought for the things of itfelf; fufficient for the day is the evil thereof. And the fame divine perfon is fo far from allowing you to pry into futurity, that he commands you to pray only for your dailv bread. And fince God has forbid you the defire of knowing what thall be hereafter, you may well conc!ude, that it is beft for you not to know it ; that fuch knowledge, as it is too wonderful for yon, fo alfo it is fuch as you cannot, without prejudice to yourfelf attain unto.
UNDER fo unlawful a preterifion we may include palmiftry, phyfiognomiftry, \&c. with the unwarrantable proceodings on St. Agnes's, and other days, which are the unchriftian relicts of Heathenifh fuperftition. Let therefore this ufeful fintence reftrain io unjuftifiable a praitice, Commit your way unto the Lord, and he thall bring it to paifs.

## Query

What occafions that numbnefs, and pricking paia, which fometimes happens in the hands or feet, (commonly called their limbs aneep) whereby the part. fo affected, ars for fome time rendered incapable of fecling or motion?

Aififuer.
That numbeefs, or pricking pain, generally follows the compreffion, or conftriction of the parts fo affected; $E$ E whertby

## 3 3r4

whereby the courfe of the animal fpirits through the nerves is ohitructed, and cinkquently, the fenfe of feeling in a great maafure diminifhed.

## Query.

Is a man, in poins of confcience, obliged to marry a woman whofe affection he hath gained, if her father will not give her the fortune he hath promifed, as 'tis cvident he will not in the cafe of your humble Querift, who defires to know, whether the breach of his promife doth not difengage me of mine, the ons being fo much the caufc of the other, that without it, it never had been?
Arjwer.

If your contraft was conditional, undoubtedly the lady's father, breaking his part of the obligation, muit of coulfe difilse your own; but if your circumftances will convenicntly allow it ; it would be an act of honour and generolity to marry notwithitanding that, the object of your former courthip, for we find by your confeffion, you have gained hei love, and in obtaining that, we muft believe you have made other proteftations, than that you valued her for what the was to bring you.
Q:zery.

Is there a paffage from the nofe to the brain, by which the brain might be injured by taking of finuti ?

## Anfwer.

That there are paffages from the brain to the noftrils, is moft certain, viz. the perforations of the Os Cribrofum, through which the nervous fibres defcend, but they are io fmall that finuff powders cannot be intermitted, or afcend throush them to the brain: Yet may the overmuch ufe of fuch powders fo fur and clog that bone, that the difcharge of excrementitious humours may he hindred, and the brain confequently very much injured thereby.

Query.

Faom whence did that faying arife, of nine ta:lors mak. ing a man ?

> Anf.uer.

It happened (it is no great matter in what year) that eight taylors having finithed contiderable pieces of work, at a certain perfon of quelity's houfe, (where name authors have thourht fit to conceal) and receiving ala the mus:y due for the $f$ :me; a Virago fervant maid of the houts, obferving then to be but tlender bu-lt anim..ls, and in their mathemstical poltures on their fhop-ioard, appzaring trise fo many pieces of men, refolved to encuunter and piliage them on the road; the beiter to compais her defign, the procured a terribic great black-pudding, which, (having way-laid them) the prefinted at the bitalt of the foremnit; they miftaking this prop of life for an inftrument of death, at leaft for a blunderbufs, readily yitided up their monn; ; Gut the not contented with that, fevertly difciplined the:a with a cudgel me carried in the other hand, all which they bore with a philufophical refignation. Thus, eight ret being able to deal with one woman, by confequetice, could not make a man, on which account a ninth is added. It :s the opinion of cur curious virtuofo's, that this want of cultrage arifeth from their immoderate eating of cucumbers, which too much refrigerates their blood. However, to their eternal honourbe it fpoke, they have been often known to enciunter a fort of canabals, to whofe affaults they are often fubject, not fictitious, bur real man-e.ters, and that with a latice, but two inches long, nay, and allhough tiacy go armed no farther than their inidule finger.

## Quers

Whether the fun goes round the carth, and the earth fland ftill; or whether they both move, and how they move?
Affuer.

We agree with the heft modern aftronomers, that the fup is an immoveable centre, round which the p!ancts (of

$$
\text { Ee } 2 \text { which }
$$

## $=316$

which the earth is one) move by different revolutions. Bat the figure, which the earth annoally defar.bes, is not circular, but elliptical; which is the reafon, why the does not continue equidiftant from the fun. But as once a year the travels round the fun, fo in the compafs of 24 hours the moves round her own axis; whence arife the alternate fucceffions of night and day.

> Query.

Way, do we deep better on the right fide, than on the left?
A.fwer.

Yoor neeping better on the right fide than on the left is no general rule ; fince fome neep as well or better on the left than on the right, it being chiefly owing to cuftom: But if you ank why 'tis more wholefome to fleep on the right fide, it may be anfwered, that fuch a pofture is moft convenient for the paffage of the chyle through thepylorus, or nether orifice of the fomach, into the guts and clyliferous veffels and confequently moft proper for digeftion.'

## Query by a Lady.

What benefit dotk one receive by kiffing? And whe was the inventor of it?

## Anjwer:

Aн! Madam, if you had ever had a lover, you would not have required a folution, fince there is no difpute but the kiffes of a mutual lover give infinite fatisfaction and pleafure, above defcription. As to the invention of it, 'tis certain nature was its author, and that it begun with the firft courthip.

## Query.

Whence arofe the cuftom of drinking healths? and why is the queen's drank before the church's?

## Anfwer.

The drinking of healths, probably, took its rife from the time of the Danes in this inand, it being cuftomary with the Danes, whilit an Englifhman was drinking to take that opportunity of ftabbing him. The Englim, upon this, entered into combination, to be mutual pledges of fecurity for each other whilft drinking, fo drank to each
o hers health and prefervation. From thence alfo came the cuftom of pledging. The queen being head of the churct, he: health claims precedence.

> Qucry.

What are the excellencies and prejudices of Coffe?

## Anfwer.

Corfee is a very great deficcative, it comforts the brain. dries up crudities in the fomach, and tireughits alcalious property, is wonderfally beneficial in fornpiulous and fecirbutical habits of body. Nor can we oant its inconvene:nces in refpect to fome particular conficutions, as being fuhject to fur the itomach, engender onderuct:ons, a di to catie, rather than cure, (as fome will have it) fplencical and bypochondrical diftempers.

> Anfwer.

It is caufed by the cuil fifpofition of the animnt firrite which being burthered with beteroceneous particles, and at length irritated, attempt an explonion thertof, but being thick and vifcous, and confequently more thacious, are thut up within the flefhy filies, and the longer deamined in the expanfion: Or it may be imputed to the conitriction or ill conformation of the tendors, wherehy the rexiux of the fpirits from the mufcular fibres is obitructed.

> Qufy.

[^15]David Lloyd, a Welmman, kept an ale-houfe in the town of Hereford, and had a kind of monftrous fow, with fix legs, which he fowed to cuftomers, as a valuable: rarity.

This David's wife would often ufe to make herfelf quite drunk, and then lie down to feep an hour or two, that the might qualify herfelf for the performance of her bufinefs. But one day, the houfe was full, and the could find no other place to flecp in, but the hog-ftye, where her hurband kept the fow above named, on clean ftraw, fo the very orderly went in and fell aflecp by her harmonious companion. But the fow no fooner found the door upon the jar, but out the flipt, and rambled to a confiderable diftance from the yard, in joy for her deliverance.

David had that day fome relutions come to fee him, who had been againft his marrying, and to give them an opinion of his prudent choice, he took occafion, to inform them, he was forry, that his wife was abroad, becaufe he would have them feen her. For (fays David) furely never man was better matched, or met with a more honeft ${ }_{2}$ fo ber wife, than I am bleft in.

They enngratulated his good fortune, and were; after. a fhort time defired by David, to fee the greateft wonder of a faw, that ever had heen heard of in the world. He led. them to the hogftye-door, and opening it to its full widerefs, the firft thing they faw was his good wife in fuch a pofture and condition, as upon her ftarting up, and calling David hurband, gave occafion for a bearty fit of laughter. and the proverb you have mentioned.

## Queryo

Dorn the law of God, or the law of this land forbid coufin germans to marry? if fo, why is it ever allowed of ? if not, why is it generally faid, that they never live happily. and profperoully together ?

## Anfwer.

The marriage of coufin germans comes not within the prohibition preferibed us by our Englith laws. Nor can we fay that it is forbid by a fuperior power, fince not inchuded in the catalogue of unlawful marriages, and fo fully reprefented in Lev. IS. As for the ufual faying, that fuctro marriages
marriages never profper ; fince it is the vulgar opinion, that the nearnefs of the kindred thould forbid the banes, the notion therefore may proceed from hence, namely, that more notice may be taken of an unproperous, than of a profperous match. But however that be, this muft be allowed, that the rule is not without exceptions. But after'all, we think it more eligible to forbear, fince, as it would be thought generous to pay a deference to fo common an opinion, fo it may be accounted difcreetly done, not to venture upon the very firft remove from fo notorious an imo piety as that of incert. And therefore, though we would not impofe any reftraint upon the coup.e fpecified, we would yet acquaint them, that though, if they marry, they may do well, yet, if they forbear, they will do better. We therefore think it more advifeable, to refer the cafe to that apoftulical affertion, All things are lawful for me, but alt things are not convenient.

## Query.

## Was the Vingin Mary a perpetual virgin?

## Anfower.

The argument drawn from that expreffion, Thy mother and thy brethren fand withour, \&.c. To difprove her a perpetual virgin, carries no manner of conviction with it fince it was cuftomary with the Jews, to reprefent near relations under the endearing ftile of brethren. And yet, had there been no fuch cuftom, they might have been Iofeph's children by a former wife. If to this it be replied, that, as Joreph was the elder line, fo his children were nearer to the crown than Mary's, and confequently her fon could thave no title to be king of the Jews; we anfwer, that God indeed made a fure oath unto David, that his feed mould fit upon his feat for ever, but never piomifed the fuoceffion to the elder line. And this reply is the more confirmed, in that the Son of David was so be a fpiritual, not a temporal king; in that the prophecy, he thail have dominion alfo from rea to rea, was to be fulfilled in a myftical intend. ment, agreeable to the profefion of that very Son of David, my kingdom is not of this world. And as this is a conflutation alfo to that fimilar objection, which may be farted in defence of the other fice, namely, that Joleph never knew his wife, becaufe his ctilltren by her muft have been prefered to the Bleffed Jefus; as, what has been already faid, is equally a confutation to this objection alfo, fo we
may confider too, that Jofeph might have known his wife without any neceffity of having children by her; that, if Mary would have naturally borne him children, yet fince chilluren are a gift, that cometh of the Lord, that God, to whom, as the Jews exprefs it, the key of the womb belongs, might have purpofely reftrained her natural fertility, and, as it were, have fuid to the beffed Virgin, thus far, (namely to the birth of the Holy Jefus) thus far halt thou go, and no further.

Somz alledge, that thofe expreffions, Jofeph knew her not, till the had brought fourth her firft born fon, plainly in imates, that he knew her afterwards. To which others (among whom is the excellent bifiop Pearfon) make (as they think) a very clear reply, namely, that from parallel expref. fions in the fcriptures it appears, that there is no neceffity for fuch an intimation. But we beg leave to obferve, that in the varions inftances, they produce, there is not one paraliel to the cafe before us. For if in them no fuch intimation prefents itfelf, it is, becaufe there is an obvious, an apparent reafon for it. To give you a fpecimen. In I Samo 15. 35. we read, And Samuel came no more to fee Saul until the day of his death. Now, fince the paffage fignifies; that Samuel came no more to fee Saul, as long as he jived, there is a palpable reafon, why it cannot be intimated, that he cimme to fee him afterwards; namely, becaufe it was imporfibie he fhould: whereas no impofibility can be ahedjed in joleph's care.

Our Lord, fay fome, is called the firt.born fon of Mary; and the mention of a firf (fay they) implies a fecond; bus this objection is readily confuted by the fcripture ufage of the phrafe, as may appear from Exod. 13.2. Sanctify to me all the firt-born. For they, who had but one child, were from that command obliged to fanctify him to Gud.
A. Ifarned man concludes it at leaft improbable that Jofeph thould fo lon $\boldsymbol{f}$ cohabit with his wife without the knowledge of her, fince we no where read, that God had enjoyned him fo fevere an abfinence But to this we anfwer, that we no where read, that Jofeph was commanded to abitan, till the had brought forth her firf-born fon. And therefore the argument proves too much, fince it froves withal, that he did not abftain, till he had brought forth he firtt-born fon. And yet this is contrafy to the text.

## 321

We need not wonder, that the ancients were of opimion, that Mary was a perpetual virgin, fince they exalted virginity to fo high a pitch. Nor that Origin was fo Arenuous, a defender of that opinion, fince he fo gronly mifapplied a fentence of our Lord's concerning virginity. Nop that the Romanifts are of the fame mind with the ancients, fince they look upon a marriage-ftate as not fufficiently pure for holy orders.

As we may be ready to conclude, that the semained a virgin, while we confider her high prerogative, as mother of our Lord, as having been overhadowed by the Holy Ghoft; fo this confideration is wonderfully enfeebled by thefe fuggeftions ; namely, what the was afterwards reflects nothing upon what the was before: that marriage is. honourable and the bed undefiled; that that holy itate is dignified with being an emblem of Clarift's union with the church.

And thus we have thought it proper to examine the arguments on bowh fides, and propofe the objections, they are liable to, rather than determine the matter in debate, as thinking it beft to follow the great St Bafil's advice, and leave fo controverted a point adhuc fub judice, fince it is of fmall concern to the myftery of our redemption.

## Suery.

May Pilate be accufed of confenting to the death of Chrift

## Anfruer:

Can we doubt of this, when the text expresfy fays, He delivered him to be crucified? 'Tis true, indeed, he pronounced him innocent, but therefore inexcureable, fince inithe court of his own confcience he muft be thence impleaded, of knowingly, or wilfully hedding innocent blood. We cannot theretore fufficiently admire at the prepofterous behaviour of this unjuft judge, who had the confidence to wafi hís hands and declare himfelf guiltefs of the very blood he was going to fpill. But if the man was fo ftrangely fupid, (for it is of the nature of fin to infatuate the finner) as that his heart condemned him not, God was greater than his heart, and knew all things. For vengeance overtook him with an unwelcome fpeed : for Vitellius, (governor of Syria) depofed him from his government, and fent him to Rome, to anfwer before Tiberius to the charges that
were laid againft him. And though Tiberius died befors his artival, yet the guinty wretch received not his pardon from the new emperor, but was banithed by Caligula to Vienna in Gaul; where being wearied out with the emperol's perfecutions, he became his own executioner, and difpatcied himfelf. As Judas had done the fame before, fo the betrayer and condemner of our Lord, in compenfation, as it were, both betrayed and condemned themfelves. He who delivered up the Son of God, rather than be fufpeeted as not a friend to Carar, found an enemy in himfelf, and in Cxfar too. That very method ( $O$ the wonders of an over-ruling Providence!) whereby it was his defign to promote his welfare, became unfortunately, (but juftly) the occation of his falling.

Thev, (fays our Lord to Pilate) who delivered me unto thee, have the greater in. Whence we have at once Pilate's Gn plainly intimated to us, and are made acquainted $\mathrm{rOO}_{3}$ that injuftice, when proceding from fpite and malice, is more criminal, than when proceeding from any other.caufe. And this may fure engage us to put away the old leaven, tie leaven of malice and wickedneft, the leaven of the Pharifees, (as our Saviour calls it) of thofe very Pharifees, who delf.ered Chrift to E'late; to put away that old leaven, and eat the unteavened bread of fincerity and truth.

## Qxerym

I DIsire to know the meaning of the third heawn, 2. Cor. Xii. 2.

## Anfwer.

Thzaz is a number frequently made ufe of to denote 2 Auperiority of degrees. Thus ter falix, thrice happy, fignities no more, than very happy. And therefore the third heaven is defigned by the apoitle to exprefs the highers heaven, the place, where the Ihechinah, or divine prefence, difplays itfelf to the bleffed angels. Not, that from hence we can gather any thing of the fituation of heaven, or a local heaven, fince this may be no more than a conde. fcenfive accommodation to human capacity.

## Query.

Thy Chinefe give an account for 500 years (or thereabouts) before our bibie. Now, if their account be true,

## 323

ours muft be falfe, which I am well fatisfied in myfelf is not, but that won't do in argument; fo I beg the favour of you to help me out.

## Anfiwer.

The Divine Providence, for the confirmation of believers and the conviction of infidels, has fo wifely, (and give us leave to add) fo mercifully, contrived the matter, that the Chinefe hiftorians ftand felf-condemned, and are confuted by themfelves. And this is obfervable in remarkable particulars.

1. They fpeak of a memorable conjunction of the five planets in one of their figns, while the fun and moon were alio in conjunction, during the reign of their fifth monarch Chuenhio. Which obfervation a celebrated aftronomer, by a nice calculation, has, without danger of being objected to, placed about 500 years later than the tenor of their relations does infer.
2. They fay alfo, that in the time of their feventh emperor YaO, the winter folftice was about fifty degrees from the place, where it was a few years ago. Whence altionomers acquaint us, that the phenomenon, (if the obfervation was accurately taken) muft have receffarily occurred near the forementioned number of years later than as reprefented in their chronojogy.

We infift not on the argument drawn from the common period of human life in the reigns of their eariy monarchs, tince that depends upon a comparifon with fcripture hiftory, whereas we are confuting thofe, who deny the authority of the bible. And indeed we have no occafion tor the argument, when furnimed with two fo indifputable, as thofe above.

To point out the original of the Chinefe miftake, it is a more than probable hypothefis, that they (as did alfo the Egyptians) reckoned fome ancient Collateral princes in a fucceffive liae. For there are remarkable paffages in their hiftories, that evince, not only, that this obfervation of a great chrorolorer has a probable foundation, but alfo, that it is impoffibie it fnould be otherwife.

And now, fince thofe oppofers of our accounts do yet plead for us, and our very enemies (though unwillingly,
nay, perhaps unknowingly) are at peace with us, fhall we. not believe the fcriptures with a fteady, and unfhaken mind; and learn, for the time to come, not to be ftartled at feeming difficulties.

## Query: <br> Do Spirits fee, or are they blind ?

## Anfwer.

They neither fee, nor yet are blind. But then we muft underitand fight as the natural effects of corporeal fenfation. For fpirits have undoubtedly fomething analogous to it. But though we know little of immaterial fubfances, hut by way of negation, yet we may form fome imperfect idea concerning the object of the queftion, from what metaphyficians acquaint us of the fenfation of reeing. For they tell us, (and that very rationally too) that the eye is but the inftrument of fight, whereas it is the foul that re-. ally fees. But as that incomparable member is the vehicle by which embodied fpirits enjoy the benefit of vifion, to in what manner unbodied ones enjoy the fame benefit, we thall ever be at a lofs to know, till difengaged from thefe ficfiny tabernacles.

## Qurc:

Why are the rocks on which Sir Cloudenly, in return from his fuccefsful expedition to Thoulon, was caft away upon, commonly called the Bimop and his Clerks ?

> innfoer.

A fleet of merchant hips in, their return from Spain about two hundred years ago, were flipwrecked on thofe fatal rocks, among whofe miferable numbers none were faved but three, Mites Bifhop; James and Henry Clark preferved miraculoufly on a broken maft; 'twas thence the feene of their misfortune took the name it bears at pre, fent, and bas ever fince that memorable accident, vulgarly been known by.

## Query.

A. Сомmirs a fecret murder, for which he flew from jpftice, and in his exile comes acquainted with B. who in five or fix years acquaintance, expreffes great friendihip to
A. with

## 325

A. with fignal and repeated obligations, till within this month, A. for a trifie highly difobliges B. who is fo enraged to find himfelf fo affronted, protefts that his mifdemea. nor to B. Thall coft him his life, for that he will difcover the refidence of the faid $A$. to the relations, of the diceafed, $f_{0}$ that A. may be brought to juftice.

Now, the fact being true, and the relation alfo impartial, Whether it is a crime in B. to fulfil his proteftations, and although it is coherent to the laws of the land, yet in the fight of the Almighty, whether it may be proper for men to imagine it ipfo facto murder, fince it is not done for the fake of juftice, but to facrifice A. to the refentments of the ocher, of what nature and degree you think the crimes?

## Anfzer.

Since the blood of a murdered perfon crith unto God for vengeance, and unlefs pacified, defileth a land, our dury both to God and our country, lays on us an indifpenfible obligation to detect, if in our power, the inhuman actor. Were not B. previounly obliged to make a difcovery of A. his proteftations could no ways engage him to the purfuit of his revenge, fince nothing can oblige us to an unwarrantable action. When Herod had rafhly fwom to twhat involved him in no fall perplexity, he fhould have feared, not his oath, as the murder of the innocent, and have penitently bewailed his ramnefs, in that he had made perjury to become neceffary. The boft therefore, nay the only advice we can give to $B$. is to repent of the proteftations he has made with fo wicked intention, to diveft himfelf of any tevengeful thoughts, to put on the chriftian towards his offending brother; and yet at the fame time, by a neceffary difcovery, to offer him upa facrifice to his country, to his God. But if he refufe to make this atonement for the deceafed, he does in a manner repeat the language of the jews. His blood be upon me, and upon my children.
Query. ... . . .

Why is it common in our church to fit, when a chapter' is read out of any evangelifts, and yet to ftand, when the gofpel for the day is read?

Anfwer.
Ir was the cuitom in the primitive church to ftand, when any thing was read out of the evangelifts: And

Ff thercfore
therefore it is remarked by an ecclefiaftical hiftorian as an unprefidented tling in an Alexandrian bihop, in that he ufed not to rife at the reading of the gofpels. But why we rife to the gofpel for the day and nor to the fecond leffon, we prefume to be, becaufe the former is introduced with Glory be to thee, $\mathbf{O}$ Lord! Which as being an hymn of praife, is proper to be repeated in a flanding pofture.

## Query.

I desire to know why the mafculine gender, is genesally faid to be the more worthy gender, notwithftanding all or moft virtues are of the feminine, by which man feems to have nothing to do with virtue?

## Anfwer.

Though the virtues are of the feminine gender, yet men being, by their labours, ftudies and applications, marters of thoie virtues, the mafculine gender is more worthy than the feminine; the poffefor being more worthy thin the poffeffed.

## Query.

Why have beatts the faculty of moving their ears and not men ?

## Answer.

Brcause feveral beafts have mufcles, conflituted for that end, which men have not, and may be called erectors and depreffors, which move the ears upwards and downwards, though fome beafts.want them, as well as men.

> Query.

In what refpect is Noah called the-eighth preacher of righteoufnefs, 2 Pet. 2. 5. feeing in the genealogy of the Patriarchs, Gen. 5. he is reckoned the eleventh (inclufively ?)

> Anfwer.

As Noah is not the eleventh, but the tenth, in the genealogy you mention, fo the ordinal eighth in St. Peter is joined to perfon, not to preacher of righteoufnefs; and relates

## 329

lates to the number of thofe, who were faved in the ark from perifhing in the deluge, as the text evidently fhews. But becaure the fyling of Noah the eighth perfon of thofe that were refcued from the flood, may feem to denote him the laft of the eight, whereas he was the firft. We mult know, that the phrafe may always fignify one in eight, or that Noah, with feven more was faved from that common calamity, a propriety of fpeech to be found alfo in prophane authors.
Query.

Why does a feed taken from a flower of one colour produce a flower of various colours ?

## Anfwer.

The diverfity of colours proceeding only from the different, either figure or pofition of ithofe particies, which con@litute the furface of a body, by making a different refledion asol refraction of the rays of light falling upon them; ta prow. duce a variety of colours in a glower, nothing more is requifite, than that fome alteration be made in the fituation of thofe parts, out of which its ruperficies is compofed, which may be eafily effeeted, by forme frhall difference in its matrictous juice, or by the ambient ait.

## Query: <br> From whence rain firf came?

## Anfwer.

ThE rain firft proceeds from the vapours attracted from the earth and waters, which. meeting together condenfo into clouds, and becoming at length too pondrous to be fufpended in the air, break, and Bower down again upon the earth and waters.

## 2uary.

Whetrer the howling of a dog under the chamber of a fick perfon, is any prognoftic of the mortality of the patient's difeafe? If fo, how you imagine thofe creatures thould be fenfible of it? The Querift was induced to give you this trouble by fome very particular obfervations.

$$
\mathbf{F} f 2
$$

Anfwer.

## Anfwer.

Whetrer the dog's howling may be a fatal prognoftic or no, we cannot determine, but 'tis probable, that out of a fenfe of forrow for the ficknefs or abfence of his marter, or the like, that creature may be fo difturbed: An eminent infance whereof may be found in Dr. Lee's Nat. Hift. of a dog, that, during his mafter's illnefs, conftantly attended him, and after the gentleman was expired, and his corpfe moved, the dog every moment entered the room, making a mournful and whining noife, and profecuted his refearches for feveral days, through all the rooms in the houfe, but in vain; then he retired into his kennel, where, refufing all manner of fuftenance, he died; a greater fenfe of forrow could not be fhown by any creature whatcrer.

## 2uery.

Pray demonftrate that ruke in fpecious arithmetic, that to take away an affirmative quantity, is to add a negative, and to de.

## Anfwer.

An affirmative quantity denotes the poffeffion of fuch a fum, but a negative quantity implies the abrence of it, or a - debt of fuch a value. As therefore, when from my poffefs fion of rool. the poffeffion of 60 . is taken away, 1 am then worth 401 . fo when to my poffeffion of 100 l . is added a debt which I mult pay of 601, I am then worth the fame 401 .

2ury.
Why frings in fummer are more cold, Than winter, pray the caufe unfold?

## Anfwer.

Thosz limpid fireams, retrieve their heats, From earth's reclufe fulphureous feats; Which winter time, preferves retire, And which in fummer time perfipie.

## 2uer.

$W_{H y}$ is an egg fo hard to break the length way, and yet - eafy the other?

## - 329

## Anfuer.

Becavse the two ends of the egg are fo globular, that the ftrefs of the preffure declines towards the cohefion of its parts. Which is the reafon why an areh will bear more weight than a flat.

## 2uery.

I dmise your opinion of the following paffage of faripmare, Luke maii. $360^{\circ}$ He that hath no fword, let him buy one.; which feems to contradiet the other paffage in Matth. xxvi, 52. They that take the fword, fhall perith wich the Gword?

## Anfwer.

As the tatter hews us, that the true fpirit of the gorpeli is abborrent of the leaft tinsture of revenge, productive of mother fruits than the peaceable fruits of righteoufnefs; to the former is a kind of emblematical command, which hieroglyphically, as it were, pre-fignifies the terrible perfecutions that were approaching, fo terrible indeed, that it would be neceffary for the Chriftian to purchafe a fword at the expence of his very garment, would his religion but permit the ufe of it.

## Query.

Whetrex the invention of Gun pewder has done moft good or hurt?

## Anfwer.

Most good undoubredly. For as it is very ufeful on reveral accounts, without any mifthieveus effects attending it ; fo in war itfelf, where it is moft deftructive, it is rather a preferver than deftroyer of men, fince in our modern accounts, we mett not with fuch propurtional numbers nain in battle, as we read of in ancient hiftorics.

## Query.

Condescend, I befeech you, to give me your opinion Whether the violent paffion of love, very in-mreated, does nots. confequently, turn to hatred i.

$$
F_{f} f
$$

## Anfwer.

Not confequently, for it much oftener produces defpair: But we fee different effects of that ungovernable paffion, according to the different conftitution of thofe it feizes。
Query.

Admit a perfon to fee any inacceffible object fituate acrofs a river not too far off, and wifhing to know the exact diftance thereof-Required by what means he may find thefame; he having no inftrument, ufual for that purpofe, at that time, about him.

## Ansver:

Thi line to be meafured muft not be extravagantly long otherwife 'twill be hard to meafure it exacty; for the leaft failure of a juft aim, or departure from an: upright pofition, would make very fenfible errors in the meafure of a very long line, efpecially if the ground is fomewhat uneven.

To meafure then the line A B (Plate VI. Fig. 5.) acceffible at the extremity $A$, fuppofe the breadth of a fmall river he who pretends to meafure, muft fand very ftrait at the extremity A, and fupport his chin with a little ftick, refting upon one of the buttons of his coat, fo as to keep his head feady in one pofition, Thus pofited, he muft pull his hat dowa upon his ferehead, till the brim of his hat cover from his view the inacceffible extremity B of the line to be meafured AB; then he muft turn himfelf to a level uniform piece of ground, and with the fame pofition of his hat obferve the point of the ground where his view terminates, as C ; then meafuring with a line or chain the diftance. $\mathrm{A} \mathbf{C}$, he has the length of the line propofed, A. B.

## O P T I C S.

THERE being feveral tbings in Optics qubich are caly to be underftood. and not generally known; we 乃all bere add a - ferv, and firft of all tbe

DTEIN1TION8.

1. WHATEVER grants a paffage to light is called a medium.
2. By rays of light is underfood its leart parts, either fucceffive in the fame lines, or cotemporary in feveral lines.

It is clear that light confifts of parts both fucceffive and cotemporary, becaufe in the fame place you may ftop that which comes one moment, and let pals that which comes immediately after. The leaft fenfible part which may be ftopped, or fuffered to proceed, is called a ray of light.
3. Refrangibility is that difpofition of a ray of light to be refracted, or turned out of its courfe, when it paffes out of one medium into another.

When a ray of light paffes out of a rarer medium into a denfer, Sir I. Niwton fuppofes that it is refracted by the fuperior attraction of the denfer medium, and by that means drawn out of its courfe.
4. Reffexibility is that difpofition of a ray of hight to be reflected, or turned back into the fame medium from any ether medium upon whofe furface it may fall.

Sir I. Newton fuppofes that light is not reflected by impinging upon the folld parts of the body, but by fome power of the body which is evenly diffufed all over its furface, and by which it acts upon the ray and impels it back without immediate contact.
5. Infleftion is that difpofition of a ray of light to be turn:ed out of its courle when it paffes very near to the edges of bodies.
6. The angle of incidence is the angle which the line defcribed by the incident ray makes with the perpendicular to the reflecting or refracting fuiface at the point of incidence.
7. The angle of reflection or refraction is the angle which the line defcribed by the reflected or refracted ray makes with the perpendicular to the seflecting or refracting furface at the point of incidence.
8. Any parcel of rays diverging from a point, confrdered as feparate from the reft, is called a pencil of rays.
9. A lens is a medium bounded by two fpherical, or one plain and one fpherical furface; and the line joining the centers, or which paffes perpendicularly through each furface, is called the axis.

## 332

There are 6 lenfes, a double convex, a double concave, 2 plano-conrex, a plano-concave, a concaro-convex and a menifcus.
10. The focus of ray is that point from which.they diverge, or to which they converge.

The focus of parallel rays is called the principal focus.
The fun's light confifts of rays of different colours and diffarenthy refrangible.

For if the fun's rays be admitted into a dark room through $a$ fmall hole in a window fhutter, and be refracted through. a prifm, the image is not round, but a long figure with parallel gides and femicircular ends, the length of which is: about five times its breadth; that end which has fuffered the leaft refraction is red, and that which has fuffered the greateft is violet. The whole image confifts of fever diftinet colours, lying in the following arder, red, orange. yellow, green, blue, indigo, vialet ; the red is the leaft refrangible, and the others more in their order. Thefe are called primary colours, all others colours being only different combinations of thefe. Each colour forms a diftiact image of the fun, which images, in this experiment, running into each other, make a gradual change of colour in the image. But if a convex lens be placed before the prifm, each image will be diminifeed, and by that means they will be feparated and each rendered diftinet.

If two coloured images be formed with two prifms, and thrown one upon the other, then if that image be looked at through a prifm, the images will be again feparated.

The primary colours cannot be reparated inte other coLours by any refraction.

For if in the laft experiment all the colours but ome be ftopped, for inftance, the red, and that be again refracted by a prifm, it fuffers no alteration in colour. By fuffering the colours to pais in fucceffion, from the red, each pree. ferves its colour, but the quantity of refraction keeps increafing. The image of each colour is perfectly circular, which flows that the light of each colour is refracted regularly without ang dilatation of the rays; it is thereforeincompounded, os homo-geneal.

If the breadth of each colour in the fpecarum. formed bythe prifm be meacured, it will appear that the breadth of

## 333

the red, orange, yellow, green, blue, indigo, violet, are as the numbers $45,27,48,60,60,40,80$, refpectively.

If the circumference of a circle be divided into $45^{\circ}, 27^{\circ}$, $48^{\circ}, 60^{\circ}, 60^{\circ}, 40^{\circ}, 80^{\circ}$. and the refpective fectors be painted red, orange, yellow, green, blue, indigo, violet, and the circle be turned fwiftly, it will appear nearly white. For the ideas we have from the impreffion of light remain for a thort time, and thus the colours excite the fame fenration as if they all entered the eye collected together.

If the direct image of the fun through a fmall hole be received upon a fkreen perpendicular to the rays, and the tays be then intercepted by a prifm and fall perpendicularly on the firft fide, if the diftance from the place of the direct image to the neareft edge of the red and fartheft of the violet be meafured, they will be the tangents of the angles of deviation, and the radius of which is the diftance from the point where the rays emerge to the place of the direct image.

The angle of incidence on the fecond fide of the prifm equal the refracting angle of the prifm, to which add the deviations of the two extreme colours, and we get the two angles of refraction, the fines of which will be to the fines of incidence as 77 and 78 to 50 . Hence if the difference between 77 and 78 be divided in the ratio of the breadth of each colour, it gives for the fines of refraction, the common fine of incidence being 50 ; that is, the fine of incidence: the fine of refraction of the red rays :: 50: not lefs than .77 nor greater than $77 \frac{1}{8}$, the boundary of the red; and the fame for the reft.

Candle light is of the fame nature as the light from the fun.

For rays from a candle may be feparated into all the different colours, and they lie in the fame order as in the light from the fun.

The fun's light confifts of rays which differ in reflexibility, and thofe rays which are moft retrangible are mort refiexible.

For after forming a coloured image, as before, with a prifm, by turning the prifm about it axis, until the rays within it, which in going out into the air were refract. ed at its bafe, become fo oblique to the bafe as to hegin to be totally reflected thereby, thofe rays become firft re-

## $\Longrightarrow 334$

Hected, which before at equal incidences with the reft had fuffered the greateft refraction.

According to Sir I. Newton, the colours of natural bodies arife from hence, that fome refiect one fort of rays and another fort more copioully than the reft.

For every body looks mort fplendid in the light of its own colour, and therefore it refleets that the moft copioully. Befides, by reflection you cannot change the colour of any fort of rays; and as bodies, are feen by refiection, they muit appear of the colour of thofe rays which they reflect. This is the opinion of Sir I. Newton. But Mr. Delavar accounts for the colours of natural bodies in a manner different from this. See the Mancbefier Memoirs, Vol. II.

Thin tramparent fubftances, as glafs, water, air, \&co exhitit various colours according to their thicknefs.

For a very thin glafs bubble, or a bubble of water, will appear to have concentric colours : the bubble blown with water, firf made tenacious by difolving a little foap in it, continually grows thinner at the top by the fubfiding of the water, the rings of celours dilating llowh, and overfpreading the whole babble. A convex and concave lens of neariy the fame curvature being preffed clorely together, exhibit rings of cotours about the point where they touch. Between the colours there are dark rings, and when the giaf: fes are very much compreffed, the central fpot is dark. Sir I. Newror, to whom we owe all thefe difcoveries, found the thiclmefs of the air betweenthe glaffes where the colours appeared to be as $1,3,5,7,9,8 c c$. and the thicknefs where the dark rings appeared to be as $0,2,4,6,8,8 \mathrm{c}$. The coloured rings muft have appeared from the reflection of the light, and the dark rings from the tranfmiffion of the light The rays tharefore were tranfmitted when the thicknefs of the air was $0,2,4,6,8,8 x c$. and refiected at the thickneffes 1, 3, 5, 7, 9, \&c. Sir I. Niwton therefore fuppofes, that every ray of light in its paffage through any refraeting furface is put into a certain conftitution or ftate which in the progrefs of the ray returns at equal intervals, and difpofes the ray at every return to be eafily tranfmitted through the next refracting furface, and between the retuins to be eafily refected by it. Thefe he calls fits of eafy tranfmiffion and reflection.

## LIGHT AND HEAT TWO DISTINCT BEINGS.

THF following propofitions relating to tbe natute of fire, and the following laws of its motion, are taken from Dr. Hillary's book upon tbat fubject, and are fo curious, tbat a copy of them will, I believe pleafe many of our readers. Tbey are as follow:

> PROPOSITION
I. FIRE is a being which exifts in all places, or in every part of fpace in the whole univerfe.
II. Pure fire is a real body, and confifts of the mort fimple, folid, hard, fmooth, and fmalleft elementary particles of all matter yet known.
III. Pure fire is one and the fame being in all places. Or there is but one fpecies of fire exifting in nature.
IV. Pure elementary fire penetrates, pervades, rarifies and expands all other bodies in the univerfe, both folid and fluid, which fall under the obfervation of our fenfes And this power is peculiar to fire only, and to no other body, that we yet know.
V. Pure fire is a body without gravity; and has no more tendency to any one part of fpace, than it has to any other.
VI. Pure fire exifts in a ftate of equilibrium and reft in every part of fpace, till that ftate is changed by the motion of other bodies, or by the directing power of the fun : And thofe ceafing to act on it, it reftores itfelf, by its repulfive power, to the fate of equilibrium and reft again.

## I A W.

I. Fire is attracted and collected by the motion and attrition of all other bodies.
II. The elementary particles of fire are in a conftant ftate of repulfion to each other: And the nearer they are brought to contract, the greater is their repulfive force from each other.
III. Fire is put in motion in parallel right-lines by light emited from the fun, and caufed to move with force, and produce heat and more light.

Thefe propofitions and laws the doctor proves by many curious experiments as well as arguments; and he concludty; that fire and light are two different and diftinct be-
ings, which he likewife proves by experiments as well as argument. One of the former fort of proofs he gives us as follows:
" Firft, It is evident, and univerfally acknowledged, that the moon is a body which has no light but what it receives from the fun."

Then let us place a concave fpeculum, as that of Villet's (with which the experiment has been made) oppofite to the moon when the is at the full, in a ferene cold night, and the light which the moon receives from the fun will be reflected from it upon the fpeculum, and from thence into its focus, where a moft refplendent and refulgant light will be feen, almoft equal to that received and refiected by the fame fpeculum from the fun, only a little paler: Then place a thermometer, which is eafily moved, by the leaft degree of heat or fire, as that of Drebbellius, in that reful. gant focus, and we fhall find that the air in the thermometor will not be in the leaft expanded or moved; and fhews that there is no more fire in that focus than there was before the refplendent light was collected there, or was then in the circumambient air, through fo great a quantity of light was in that focus at the fame time. This experiment demonftrates that a great quantity of very bright refulgent light may be collected, and can exift alone in a given fpace, without any addition of heat, or any increafe of the quantity of fire. It alfo flaws, that this light, which comes from the fun, is, when thus reflected from the moon, fo changed in its power of acting on fire, that it has totally loft its power of putting the preexifting fire in motion in parallel right-lines, and producing heat. The fame experiment being made, though with a much lefs fpeculum, within the torrid zone; where fogreat a quantity of fire exifted in the common air, where the experiment was made, that it caufed the mercury in Fabrenbeit's thremometer to rife as high as 80 degrees; yet the reflected light from the moon, which was fo refulgent in the focus of that glafs fpeculum, did not in the leaft act on that pre-exifting fire, fo as to put its particles in motion, nor produce the leaft increafe of fire or heat. Hence it is evident, that as this great light, neither acts as fire, nor produces the fame effects which fire does, it confequently is not fire.".
