[Price One Shilling & Ten Pence stitched.]

# JANUARY XXXI Days.

PALLAS! assist my Muse to soar so high.
To read the Language of the spangled Sky;
Those Starry Orbs that mystic order dance,
And Spheres that roll around the vast Expanse;
Who, by their journeying in their Course sublime,
Disclose by Signs the great Events of Time:

#### Manthly Observations.

RAIN fallen in January 1812, at Carlisle, was One Inch and Four-Tenths. The first Week in this Month was intense Frost, with falls of Snow.

Rain or Snow, more or less, may FULL Moon, 6 day, at 7 more, be expected about the 6th, 22d, 25th, and 28th Days of this Month; the Day before or the Day after, that is, within the short space of Three Days; therefore I name the middle Day.

## LAST Quar. 13 day, at 9 moras

AGAIN, this Year, present my Readers, with the Depth of Rain fallen in the Neighbourhood of the City of Carlisle, in Cumberland, 300 Miles North of London, as it was taken with a very accurate and proper Rain-Gauge, well adapted for the purpose. NEW Moon, 21 day, at 2 after.

It is given in Inches and Decimal Parts of an Inch. Under which, as usual, I have set down some few times in each Month, when I expect either Rain or Snow, more or less, and

FIRST Quar. 29 day, at 2 morn.

#### 4 FEBRUARY XXVIII Days.

God's Works they are, and frustrate no one can, His Will is just, although He punish Man. Great Things the Heav'nly Bodies do presage, To be fulfilled in this latter Age; Great Things are now e'en ready to appear, Within the Verge and Limits of this Year.

#### Monthly Observations.

Rain fallen in March 1812, at Carlisle, was Two Inches Sewen-Tenths. The weather was throughout extremely cold, and much Snow fell there.

#### FULL Moon, 6 day, at 7 morns

Rain or Snow, more or less, may be expected about the 1st, 5th, 15th, and 20th Days of this Month; the Day before or the Day after.

is, in Hay Time and Harwest. They also should attend to the setting in of the Winds.

#### LAST Quar. 14 day, at 2 morn.

NOW follow my Astrological Observations relating to Us and the rest of the World. The event may turn out sconer or later, than in the Month I mention it.

NEW Moon, 21 day, at 9 aftern. Courteous Reader,

WE are again arrived at the beginning of another Year, amidst a variety of Troubles and Commotions, both at home and abroad France and her Confederates have

FIRST Quar. 28 day, at 5 aftern. lately received a great Check; so that the *British* nation will have nothing

Statesmen are busy, in deep Consultation
And high Debate, in ev'ry warring Nation;
Now great Designs they labour to effect,
Nor Night, nor Day, nor Season they neglect.
May Heaven their Projects bless, whose Ends are just,
But Vengeance blast those that betray their Trust.

Monthly Observations.

Rain fallen in May 1812, at Carlisle,

Mars

was One Inch and Seven-Tenths. first week was very cold and ungenial.

FULL Moon, 4 day, at 10 morn. Rain, more or less, may be expected about the 7th, 14th, and 22d Days of this Month; the Day before or the Day after.

The amicable Rays of this Month, denote the Convention of Councils,

LAST Quar. 12 day, at 3 aftern. and the making and renewing of

Treaties, in order to settle the affairs of Europe: And no doubt but Matters of great concern are now under Consideration. The British Parliament will have many Things of Mo-

HEW Moon, 19 day, at 4 aftered

ment brought before them. A variety of affairs are now upon the Some German and Italian Princes under great Consternation. The Turks and Tartars suffer by Insurrections, and the like. And the

FIRST Quar. 26 day, at 8 more.

Affairs of the North, are not in so good a situation as might be expected.

They that their own just Rights shall still oppose,
Ought to be treated as the worst of Foes.
Let Peace at Home echo to Peace Abroad;
That is the way to ease us of the Load
Of Taxes, under which our Shoulders bend:
Let's study for Content, then Times will mend.

	Let's study for Content, then Times will mend.

# Monthly Observations.

Rain fallen in June 1812, at Carlisle, was Five Inches and Eight-Tenths.

#### FULL Moon, 3 day, at 1 morn.

This Month was wet and gloomy, and exceedingly cold for the Season. The Snow on the Mountains was not all gone before the end of June.

Rain, more or less, may be expected about the 6th, 14th, 17th, 21st, 27th, LAST Quar. 11 day, at 4 more.

and 29th Days of this Month; the Day before or the Day after.

The friendly and benevolent Aspects of the Planets incline to Peace, NEW Moon, 17 day, at 12 night.

and that as well between Nations and Nations, as Persons who have been long at odds. Some Agents and Ambassadors now or near this Time are sent from one Prince or Country to another, to mediate for a Reconcilia-

tion of Differences; but, I fear, without much Success, because at the end of this Month, there falls out an Opposition of Saturn and Mars, which is of an evil Tendency to Mankind, &c. What bodes that Northern Cloud that darks the Skies? Things deeply laid, close cover'd from our Eyes: Unwearied Time exposes now to Light Things hidden long in shrouds of sable Night: Ambition's pent-up Thoughts break out in flame; O, what can such ungovern'd Passions tame!

# Monthly Observations.

FULL Moon, 2 day, at 5 aftern. The Rain fallen in July 1812, at Carlisle, was One Inch and Six-Tenths. The Weather was invariably cold for the Season.

Rain, more or less, may be expected about the 2d, 5th, 17th, 20th, and 24th Days of this Month; the Day

LAST Quar. 10 day, at 3 aftern. before or the Day after.

This Month begins as the last ends: The Weather proves hot, so do the Actions of Men; the 8 of the o and h, declares the Soldiers to be very

NEW Moon, 17 day, at 6 morn, active, and that in a little time we may hear of some extraordinary Feats of War performed against the Enemies of the Peace of Christendom.

A Consultation for an Order for a famous Marriage at hand; but there

FIRST Quar. 24 day, at 4 morn.

is like to be great Inconveniencies attend it.

A great Prince is much pleased with the actions and behaviour of his Troops, &c. and rewards a worthy Commander.

# AUGUST XXXI Days.

Jove and Venus in Sextile fit the Season;
Trust not long, but house your Grain, by reason
They oftentimes our Confidence beguile,
And make the careful Farmer cease to smile;
And Saturn too hath Moisture in his eyes,
And often wets much from the cloudy Skies.

## Monthly Observations.

Rain fallen in Sept. 1812, at Carlisle, was Two Inches and Nine-Tenths. This Month, after the 9th day, was rather unfavourable for the Harvest. At Royston, in Hertfordsbire, the weather was very favourable for the Harvest.

LAST Quar. 7 day, at 6 morn. Rain, more or less, may be expected about the 2d, 17th, 22d, 24th, and 29th Days of this Month; the Day before or the Day after.

## NEW Moon, 13 day, at 11 night.

This Month is ushered in with scurrilous and lying Aspersions, vilifying and affronting some Person or Persons in high Stations.

We shall have about this Time, News both good and bad from the

United States of America.

#### FIRST Quar. 21 day, at I aftern.

Many Reports are spread abroad, both various and uncertain, on purpose to amuse the Public.

A great Statesman near this Time will die; but he will not be much

lamented.

32

FULL Moon, 29 day, at 12 moon,

#### OCTOBER XXXI Days.

20

The Crisis of the Year has been at hand,
The three Superiors bearing chief command;
Armies drew near, each other to engage,
In Foreign Parts to act, in Blood and Rage;
Whilst we at Home continued lucky Strangers
To such dire Evils and quotidian Dangers.

# Monthly Observations.

Rain fallen in October 1812, at Carlisle, was Two Inches and Seven-Tenths. This Month was moist and gloomy. The Earometer unusually low; on the 19th the Mercury sunk to 28, 1 Inches.

LAST Quar. 6 day, at 12 ncon.

Rain, more or less, may be expected about the 6th, 18th, 2cth, and 28th Days of this Month; the Day before or the Day after.

#### HEW Moon, 15 day, at 11 morn.

Hard is the fate of Russia, Poland, and some part of Germany, &c. Nor will Ireland be altogether free from Insults and treacherous Designs of our most perfidious Enemies.

France drinks deep of the Cup of Affliction, which she designed for

#### IRST Quar. 21 day, at 9 morn.

others. Holland! Holland! thou art not very well off; Armies may have more fatal Effect upon thee, than that of Waters; a little Time will explain this.

#### FULL Moon, 28 day, at 12 night.

A discovery of some Malpuactices brought to light.

# NOVEMBER XXX Days.

And now behold cold Autumn's Blast beleaves
The shady Arbors of their verdant Leaves;
Mars is now squar'd by Chronus most unkind,
Whence Mortals here unthought-of Sorrows find.
Some Poets call Autumnus Morbifer,
God grant it prove not too much so this Year

Note.—That the Moon's Age being observed in the first Column, you find the Time of High Water at 1 I the Places above mentioned, in the respective Column of Numbers immediately below them. Thus, when the Moon is One, or Sixteen, Days old, it is High Water at Beachy, Candado, Dover, &c. at 26 Minutes past 12 o'Clock. And so of the rest.—AS to the Moon's Age, you find it in the Sixth Column on every left-hand Page of the Calendar.

A TABLE of the EQUATION of TIME, for regulating Clocks and Watches, for 1814.—Note, fa. Clock too fast; that is, your Clock, to be set right, must be so much faster than the Sun Dial.—slo. Clock too slow; that is, your Clock must be so much slower than the Sun Dial.

How to set a Clock or Watch by this Table:—For Example, Jan. the 1st, I find, by looking into the Table, that a Clock to be right must be 3 Min. 49 Seconds faster than a Sun Dial; therefore I set it so much faster accordingly. And so of the rest. Twelve o'Clock is the best Time to set a Clock or a Watch by a Dial.

Note, A Sun Dial shews Solar or Apparent Time; but a Clock, &c. should be set to Equal or Mean Time, as the Table directs, to go true.

A TABLE of the Rising, Southing, and Setting of the PLEIADES, or Seven Stars, for every 5th Day in the Year; of excellent Use to find the Hour of the Night.

# AN ACCOUNT OF THE ECLIPSES OF THE SUN AND MOON,

And other Appearances in the Heavens, IN THE YEAR 1814:

Calculated from New and Improved Solar and Lunar Tables,
Founded on the Newtonian System of Gravitation;
And agreeing with Observations to asurprising Exactness.

All hail, most glorious art, Astronomy! "Tis by thy aid that we ascend on high, And handle subjects far above the Sky.

THE two bright Lamps of Heaven will, within the compass of this year, afford us only Three Eclipses, namely, two of the Sun, and one of the Moon; and they

happen in the following Order:

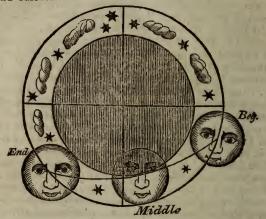

The First will be a great Eclipse of the Sun, and happens on Friday, January the 21st, at 13 minutes past our two o'clock in the Afternoon; but, notwithstanding the Sun is above our Horizon at the time, the Eclipse will be invisible to us, and not to us only, but even to all Europe. The reason of which is, the Moon at that time having only about One Minute of Latitude to the North; so that in these high Terrene Latitudes of our Globe, the Moon's Parallax in Latitude will depress the visible or apparent Place of her Centre more to the South, than is the Space taken up by the Sum of the Semidiameters of the Sun and Moon taken together. But in the Southern parts of the world, this will be a very great Eclipse, for it will be both central and annular, that is, a bright and luminous Circle of Light will appear round the Moon's dark Body, on every Side, beautiful to behold; and this appearance will be precisely (according to my Calculations) at their 12 o'clock at Noon, under 18 degrees 38 minutes of South Latitude, and 33 degrees 19 minutes of West Longitude from London; which Place falls in the great Southern Atlantic Ocean, near the Eastern Coast of the Country of Brazil in South America. This Eclipse, partially, more or less, will be visible to all South America, and may extend itself to some of our West India Islands.

The

The Second, is another great Eclipse of the Sun, on Sunday the 17th day of July, at 26 minutes after our 6 o'clock in the Morning. The Moon's true Latitude at this time, I find, will be about 10 minutes to the North; yet owing to her Parallax in Latitude, which will depress her so far to the Southward, as to render this Eclipse, like the former, invisible to us, especially under the Meridian and Latitude of Greenwich and London. But in the more Eastern Parts of the Globe, it will be a very great Eclipse, insomuch as to be total for two or three minutes, in several parts of Asia; for, by my Calculations, I find in 30 degrees 51 minutes of North Latitude, and 84 degrees 12 minutes East Longitude from London, the Sun will be totally and centrally eclipsed on the Meridian, or precisely at their 12 o'clock at Noon; which Place falls about 156 miles to the East of the Town of Sirinagur, situated in a large rugged Country of the same name, between Hindostan Proper, and Thibet, bounded on the North and North-east by the Thibetian moun-The Sun will be seen eclipsed, more or less, in some parts of Tartary, and to the Southward, as at Calcutta, Madras, and at Bombay on the Malabar Coast.

The Third and last of these Eclipses, is a partial one of the Moon, on Monday night the 26th day of December; and may be seen by us in this Kingdom, if the Air prove favourable; and not by us only, but also by the Inhabitants of all the States and Kingdoms in Europe and Africa, together with the Western Parts of Asia, and the Eastern Parts of America: But in Siam, China, Chinese Tartary, &c. in the Eastern Parts of Asia, the fore part only will be visible, the Moon setting with them before the Eclipse be over, as appears by considering her Position, in respect of those parts of the Earth, during the time of the Eclipse; for, at its beginning, the Moon will be vertical to he Kingdom of Nubia in Africa, among the Sandy Desarts, under 22 degrees 33 minutes of North Latitude; 30 degrees 18 minutes East from London: At the time of the middle, the Moon is vertical to the sandy and burning Desart of Bilma, lying to the North of the extensive Country of Bornon in Africa, 13 degrees 16 minutes East from London; in 22 degrees 36 minutes North Latitude.

At the End of the Eclipse, the Moon possesseth the vertex of that part of the sandy Desart of Zanhaga, in Zahara, whose Latitude is 22 degrees 40 minutes North, and its Longitude 3 degrees 48 minutes West from London. The Moon will rise Eclipsed to the Island of Janaica in the West Indies. The time and manner of Appearance, in respect to us in Great Britain, it is hoped will not greatly derogate from the under-written Type and Calculation.

December 26th	L	London.			York.			inbu

N.B. The Time of this Eclipse will be nearly the same at Royston and Cambridge, as it is at London; both being nearly under the same Meridian. At Oxford, the Time of this Eclipse will be 5 Minutes sooner than at London.

### Other Appearances in the Heavens.

THE beautiful Planet Venus will set very late at Night, during the Month of January; and being at a considerable distance from the Sun, she will make a brilliant appearance in the West, every Evening after the Sun is set.

The Planet JUPITER will come to an Opposition of the Sun, the 24th of February; therefore from the beginning of that Month, to near the end of May, this beautiful Star may be seen every Evening, when the Air is clear, which will afford to the lovers of Astronomy (who have got proper Telescopes) ample opportunities to gratify their curiosity in viewing him with his Belts. and to observe the Configurations of his four Moons or Satellites, which are often beautiful to behold. This large and beautiful Planet Jupiter, is when nearest the Earth, not less than Four Hundred Millions of Miles from us; hence, what a long time would a Cannon Ball, moving at the velocity of Four Hundred Miles in an Hour, be in reaching that Planet from the Earth! Ju-PITER'S Diameter is about Ninety-four Thousand Miles: whilst that of our Earth is not quite Eight Thousand Miles. JUPITER is not less than Four Hundred and Ninety-five Millions of Miles from the Sun; and the Earth whereon we live, is but about Ninety-five Millions of Miles from the Sun: what a wonderful contrast is there between our little Earth and this Planet!! The fixed Stars are at much greater distances; even the nearest of them so great, that a Cannon Ball would spend near Seven Hundred Thousand Years in flying thither, with the same velocity it has at the Cannon's mouth!!

N.B. I saw at Royston, the latter part of the Sun's Eclipse, February 1st, 1813, but it was often cloudy: My Delineation of it appeared to be exactly right. The next Eclipse of the Sun, visible here, will be the 19th of November 1816; a small one in May 1818; and a very large one in September 1820, the largest we shall have until the year 1836.

I also observed the Occultation of Aldebaran by the Moon, the 8th of March, the same year; it was a very fine Evening: I observed the Immersion and Emersion very exact, with a good Telescope, and they agreed with my Calculations to half a minute, or less.

I shall now finish this part of my Almanack, by observing, that People in general (I believe) look upon Stars and Planets only as twinkling Points, to make the Nights pleasant; but this notion of the Stars and Planets is very poor and low indeed, and utterly unworthy so grand and glorious a part of visible Nature.

And cause thou think, poor Worm! those Orbs of Light, In Size immense, in Number infinite,
Were made for thee alone, to twinkle to thy Sight?
Presumptuous Mortal! can thy Nerves descry,
How far from thee they roll, from thee how high?
With all thy boasted Knowledge, can'st thou see
Their various Beauty, Order, Harmony?
If not—then, sure, they were not made for thee.

# METEOROLOGICAL OBSERVATIONS, &c. Relating to the Year 1812:

With some Remarks on the BAROMETER or Weather-Glass

The Year 1812 was a very remarkable one, both for Cloudiness, Wetness, and Coldness. The Summer was such a one as I hardly ever remembered; it was so very Showery and Wet, and so Cold at times, that Fires in Parlours, &c. in June, July, and some part of August, were often necessary: Yet all which time, with respect to Rain, the Barometer was a faithful Monitor; though the Quicksilver stood often high in the Tube, which was owing to the North and North-easterly Winds, and opposite Currents of Air, which in this Climate is sometimes the case, so that People unused to Weather-Glasses, or who at least attend to them but seldom, often deceive themselves, from that very circumstance; for the state of the

Wind must also be attended to, as well as the Surface of the Quicksilver in the Tube, to see whether it is in a rising or falling state; for if it is Concave, the Mercury is in a falling, but if it is Convex, it is then in a rising state; and this circumstance sometimes takes place in the course of a few Hours, which agitation of the Quicksilver always implies uncertain and changeable Weather, as was found often to be the case in the Summer of 1812. The rising and falling of the Quicksilver must always be attended to more than the Words on the Plate: for if in Wet Weather, the Quicksilver appears round or convex, rising higher in the Middle of the Tube, than at the Sides, the pressure of the Air is increasing, and an Interval of fair Weather will commonly follow soon after-If in changeable, or fair Weather, the Surface of the Mercury appears to be concave, or depressed more in the Middle than at the Sides of the Tube; the pressure of the Air is decreasing, and the Weather will (in a wet Season) in a few hours become Cloudy, with Rain or Wind, or both. See my printed Rules given with the Weather Glasses I make and sell; which are only to be had at my own House, as I empower no other Person to sell them.

In the Southern Parts of this Kingdom, part of August, with nearly the whole of September, proved good Weather for the Harvest; which, on account of the wet

Weather, was very late before it was finished.

## Judicium Astrologicum pro Anno 1814.

Vox Calorum, Vox Dei: The Voice of the Heavens is the Voice of God.—He speaks in all the Changes of the Seasons, and of the Times .- Gen. i. Ps. xix.

#### To the Courteous Reader.

My Friends and Countrymen,

WE have for a long time heard of the Sound of the Trumpet, the Alarm of War, the Weapons of the Warrior, and of Garments rolled in Blood! It is one of

the Plagues with which God often visits sinful Nations: and indeed this Scourge has of late fallen very heavy upon some Countries, particularly upon Russia, upon Spain, and upon Portugal; with the Burning and Sacking of Towns and Villages-Witness the dreadful burning of the great City of Moscow in Russia (the largest City in Europe) and other considerable Places in that Country: besides the bloody Battles that have been fought, together with the Climate, causing great destruction of the French Armies, and others; such dreadful Calamities as were scarce ever heard of, and are, I believe, without a Parallel in History, especially in Modern Times. And still great Events keep turning up; for the Flames of War have now extended even to the United States of America-Indeed half the World seems to be still in motion, threatening to alter or overturn (as of late has been the case) the whole current of Political and Civil Affairs, especially upon the Continent of Europe.-We still live in eventful and serious Times, such as England has not experienced for a long series of years; and I hope, when a general Peace is once brought about, my Country may never experience again. --- Another Comet, if not two, have been seen of late, passing at a great distance from the Earth; since that very splendid one of 1811, that made so long a stay, and such a beautiful and grand (yet in an Astrological sense awful) appearance, so that the like had never been seen here, since the remarkable Comet of 1744; on which account, I cannot help making some farther Remarks, as it certainly concerned us as well as other Countries, by informing my Readers, that all Authors who have treated upon Comets, agree that they forebode great Changes and Vicissitudes in Kingdoms and States-witness the late and present Events on the Continent of Europe. Never yet, I believe, did any Comet appear, that was of any size and splendor, but it was the Messenger or Declarer of some Evil; they are ordinarily the Denunciators of great Troubles, Wars and Bloodshed, together with the Death of Great Men, Warriors and Potentates; Distress of the Common People; with Earthquakes, and Tempests both by Sea and Land; all which dire Effects are summed up in the following Verses—

When once a direful Comet spreads it's Train, Contagions, Deaths, and pining Famine reign; Monarchs make Leagues to render Empire sure, Sedition now keeps Gaols and Deaths inure; Countries are sack'd, impetuous Storms arise, And Bodies feel unheard-of Maladies: Slaughter grows bold, Faith seeing this expires, And heated Clouds disclose their inbred Fires, And now by Sympathy in Thunder groan; Th' Earth quakes and trembles at the dismal Tone. Heaven mourns in scorching Drought, and then again, Despairing, weeps in lavish Showers of Rain, &c. &c.

I again present my Readers with another HIEROGLYPHIC,

alluding to these wonderful and troublous Times. I shall omit the deciphering of the Characters, as they relate to a view of Mundane Affairs, but shall leave them to Time and the Curious to construe.

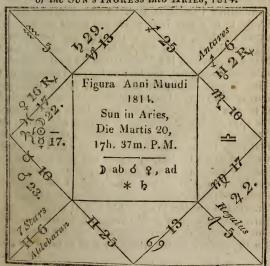

OBSERVATIONS upon the Four Quarters of the Year, deduced from the Influx and Influences of the Planets, and the late Comer operating therein.

Of the Brumal Ingress, or Winter Quarter.

THE Winter Quarter begins when the Sun first touches the Tropic of Capricorn, which that Luminary will do, on Wednesday the 22d of December 1813, at 10 min. past 4 o'clock in the Morning; when 14 deg. of m will ascend in the East, and the first degree of Virgo will be upon the Medium Cœli. All the Planets, I find, are under the Earth, except Jupiter, which will be shining almost full South, and nearly in an opposition of the Planet Mars, posited in the lower Angle of the Figure. The D ad □ & ad vac. 6 ⊙. In taking a view of this Figure and Chart of the Heavens, and considering the Positions, Connexion, and Configurations of the Planetary Orbs, I see there will be in this Quarter, many great Councils and Consultations held in the different Courts of Europe; and perhaps it may be on the subject of Negociation and Peace, and Change of hands, or concerning some Alterations in States and Kingdoms: It this has not been already done, there is great reason to expect something of it, during this ensuing Year; for the Planets are more harmonious among themselves, by Trine and Sextile Aspects, than they have been altogether for some years; which, I would hope, will incline Men's minds to Peace and Concord also. However, 1 expect some Overtures for Peace, from some of the Powers at War, connected with Englind. I expect some great Designs and Actions are now on foot, or may be so in a few Months, upon the Continent of Europe, as in Prussia, Holland, France, Germany, and Spain, with Portugal. The Northern Powers, such as Sweden, Russia, and Denmark, will be included in these Consultations and Designs .- Certainly, there seems something that will be carried on and prosecuted with great Resolution and Vigour; but Time must produce the Particulars. The two Malevolent Planets, Saturn and Mars, will, on the 4th of February, come to a Square Aspect, from the Signs

Signs Capricorn and Arics, which is the worst Aspect during all this Quarter, and may produce some Broils and Discontents; it seems to point at the Russians, Turtars, and some German Princes: And I still say, England has nothing to fear from her implacable enemies the French, if She is but just to herself. It seems also equally true, that BUONAPARTE (the Emperor of France) though he has been harassed and pressed hard on every side. and involved, by the surrounding Powers at war with him, in great Difficulties and Distress, still seems to brave all his Opponents! Yet I think the eyes of all Europe have been a good deal opened within this year or two. insomuch as to cause them to make great Struggles to overcome the Vaunts and Menaces of our most revengeful Foe. The United States of America, - yes, I say, the United States of America, will be much agitated by War, Brooks and Discontents, to the great Prejudice of her Trade and Interest; which, I am sorry to observe, England will also feel in the same way.

A Scheme of the Grand Radix of the Year's Revolution, or the Sun's Ingress into Aries, 1814.

### Of the Vernal, or Spring Quarter.

This Quarter takes place on Monday, March the 21st, at 37 min. past 5 o'clock in the Morning, when 17 deg. of X is ascending, and 25 deg. of 1 will be on the Mid-heaven. The Moon in the ascendant ad vac. & of the Sun, and departing from a Conjunction of Venus, and applying to a Sextile Aspect of the Planet Saturn. The rest of the Planets are posited as in the above Scheme of the Heavens. The first thing I notice, is the Positions of the Moon, the Sun, and Mercury, in the Eastern Angle, the Sun, and Mercury, in Aries, the Ascendant of England, and the Moon soon following; from which I should suppose some Negociations may be going forward, tending to restore to the distracted Countries the Blessings of Peace; yet I am afraid, according to what I can see from the Figure, that the Lust of Ambition and the Rage of Revenge will continue to distract and disturb many Parts of Europe, including ourselves (as connected with the rest of Europe) by the restless Ambition of the French Government, as well as some other Powers at war. This, as former years, is likely to be a very busy year, and many will fall under great Troubles, on account of hasty and rash Proceedings; which I expect will be the case with the United States of America, if a Negociation for Peace has not by this time succeeded, and that under the Influence of the Trine Aspect of Jupiter and Saturn, which takes place during this year. I am doubtful of its being concluded (I mean a general Peace) for some Time yet to come, as the approaching Opposition of Saturn and Mars, from Tropical Signs, will ferment the Minds of Men so much, that their Passions will run high, and will, I fear, not be easily reduced to Reason; which has been too much the case for years back, and have been the occasion of all our Wars and Troubles. Much might be said, had I room, from this Celestial Figure, concerning the general Transactions of the World; but I shall only observe in particular, that some great Changes in several Kingdoms and Countries of the European World are drawing on; the Providence of the Almighty doth so order Celestial Influences. 23

The

Influences, by His immutable Decree, that excessive Tyranny must at last yield to Justice and Moderation. In 1812, BUONAPARTE had operating in his Nativity the Sun to the Parallel of Saturn, and also the Sun to the Parallel of the Moon, and the like; which declared great Danger to his Life, at least great Disasters would befal him, which have taken place, and the effects whereof are not yet quite over; he may yet survive, but his Troubles are not at an end. I rather think he may die a violent Death of some sort, as there are testimonies thereof in his Nativity, if we have got the Time of his Birth quite correct. Some suppose he may now live to his 73d year, but I am persuaded it is a period he will never live to see. My good Friends, bear this in mind.

#### Of the Estival, or Summer Quarter.

This Quarter commences when the Sun enters the Tropic of Cancer, which this year happens on Wednesday the 22d day of June, at 10 min. past 3 o'clock in the Morning; at which Time 15 deg. of are is upon the Medium Cœli, and 21 deg. of II upon the Cusp of the Horoscope. The Dab I 2. Now the Sun's vivifying Power operates through all the Mundane System. The most material Aspects at this Ingress, is an Opposition of Saturn and Mercury, and an Opposition of the two Malevolent Planets, Saturn and Mars, from Tropical Signs; which Oppositions will be of great Importance to those Kingdoms and Cities passive to these Constellations, which I think will be Russia, Sweden, Denmark, with France and England, and some part of Germany, Prussia, and Poland; its effect will also extend itself to Spain and Portugal, and the Southern Parts of Europe; the sting of its effects will also extend Westward, as far as the United States of America. This & of b and & stimulates some mighty Changes and great Alterations in the World, with Broils and Discontents; with great Effusion of human Blood, where Armies are on foot. Holland and Saxony must be careful to suppress Mutinies at home, and to preserve Peace abroad; the Muscovites, Tartars and Turks, are at daggers drawn; and as to France, she is sick of an Ulcer in her own Bowels. The Spirit of God is performing Wonders in all Nations, in order to bring about that great Work of Reformation, which we are now waiting for, and daily expecting. The Opposition of the Sun and Saturn, in July, portends some Troubles to a great Person, or Misfortune to happen to some Prince.

#### Of the Autumnal Quarter.

This Quarter begins, when the Sun enters the Equinoctial Sign Libra, making our Days and Nights equal once more, which will be this year on Friday the 23d of September, at 55 min. past 4 o'Clock in the Afternoon, when 23 deg of a ascendin the East, and 15 deg. of 1 is on the Mid heaven. The Dab of of b. et of 4; et of 3: At this Ingress, or in a few days after, there will happen a Aol b and Murs, and above all a Trine Aspect of Jupiter and Saturn, and just before happened a Conjunction of Jupiter and Murs in Vergo, the Ascendant of France; and what is remarkable at this Time, these Planets are all angular in the West, just above the Earth; but the Moon and the Planet Suturn are in the 12th House of the Figure, in an exact Conjunction, and just above the Earth in the East, in the Tropical Sign Capricorn. Some of these Configurations are of a promising Import, as if Things were drawing on for the better; I wish it may turn out to be so. Some Countries may obtain Peace, and England may gain some great Advantages; but I fear no general Peace is yet like to take place, at least in the Spirit of Peace. This position of Jupiter and Mars shews great Discontents among the Common People, and perhaps the People in general, during the ensuing Winter; for the Political Affairs of the World stand as yet very unsettled, and in a very uncertain posture.

Let us implore Heaven's providential Hand, Which hitherto secured hash this Land From Dangers imminent.—

#### FINIS.
