be in the Office by half past 9 at night
Letters are delivered from the above places every Evening at 7
Letters of the Derby and Western Mails, are received and delivered at the same
time as the Cork &c.
No Mail Bags to London on Saturday, nor any Letters from London on Monday

VOX STELLARUM;
OR, A LOYAL
ALMANACK
FOR THE YEAR OF HUMAN REDEMPTION

1821,

Being the First after Bissextile or LEAP YEAR,
And the Second of the Reign of His present MAJESTY:

IN WHICH ARE CONTAINED

ALL THINGS FITTING FOR SUCH A WORK; AS,

A Table of TERMS and Their RETURNS;

The Full, Changes, and Quarters of the MOON;
The Rising, Southing, and Setting of the SEVEN STARS,
and other Fixed Stars of Note; The MOON's Age, and

A TIDE TABLE fitted to the Same;

The Rising and Setting of the SUN; The Rising, Southing, and
Setting of the MOON; Mutual Aspects; Monthly
Observations; and many other Things, useful and profitable.

UNTO WHICH ARE ADDED,

Astrological Observations on the Four Quarters of the Year,
A Remarkable CHRONOLOGY;—The ECLIPSES;

And other MATTERS both Profitable and Curious;
Observations on the WEATHER and Weather Glasses, &c. &c.

And an HIEROGLYPHIC adapted to the Year.

By FRANCIS MOORE,

London:

PRINTED FOR THE COMPANY OF STATIONERS,

By G. Woodfall, Angel Court, Skinner Street;

And Sold by GEORGE GREENHILL, at their Hall in Ludgate Street.

[Price Two Shillings and Three Pence stitched.]

COLD weather may begin the Year,
 Then fill thy belly with good Cheer;
 Clothe well thy back, keep thy feet warm;
 Advice like this can do no harm.
 Thus treat thyself; and for the poor,
 O! never drive them from thy door.

MONTHLY OBSERVATIONS.

RAIN fallen in January, 1818, at London, was 2,86 Inches.

NEW Moon, 4 day, at 6 morn.

I shall here add, as usual, some particular Times, when according to Planetary influence, I expect more or less of either Rain or Snow, unless atmospherical causes run counter.

FIRST Quart. 11 day, at 2 morn.

I always name the middle Day. January 2d, 10th, 16th, and 19th Days; the Day before, or the Day after.

FULL Moon, 18 day, at 7 morn.

COURTEOUS READER,

AT the Top of these Pages, I have, as usual, put down the Quantity of Rain fallen at LONDON, as it was taken with a PLUVIAMETER or

LAST Quart. 26 day, at 11 morn.

Rain Gauge, and is put down in Inches and decimal parts of an Inch. The Depth thus shewn, is what the Rain would have amounted to in the course of each Month, had it

VENUS is a Morning Star till May 23; and then an Evening Star for the rest of the year.

Now comes the time still called LENT,
 When formerly much fish was spent;
 When men, that cattle well might speed on,
 Nor mutton, pork, nor beef would feed on.
 But now, so chang'd is our condition,
 That many think this superstition.

MONTHLY OBSERVATIONS.

Rain fallen in March, 1818, at London, was 3,97 Inches.

NEW Moon, 4 day, at 6 morn.

Some Rain or Sleet about the 9th, 16th, and 23d Days of this Month; the Day before or the Day after.

FIRST Quart. 10 day, at 9 night.

Hills, Woods, Mountains, the Neighbourhood of the Sea, &c. will often make a great difference. If my Readers will get a good Barometer, with a Thermometer in the same

FULL Moon, 18 day, at 7 aftern.

case, and record their Observations daily, noticing how often there comes Wind, when I say there should be Rain, and note also the Quarter whence the Wind blows, and watch

LAST Quart. 26 day, at 9 night.

the state of the Moon; they will soon find, that what I predict as to these matters, rests upon Principles not to be disputed.

Here

Rough Winter's gone, the Earth hath lost
 Her snow-white robes, worn during frost;
 SOL, with bright rays, warms Flora's lap,
 Cheering the plants with fresher sap;
 The Cuckoo sings, then flies away,
 To welcome in the month of May.

MONTHLY OBSERVATIONS.

Rain fallen in April, 1818, at Lon-
NEW Moon, 2 day, at 3 aftern.

don, was 3,04 Inches.

Rain, if not Sleet, may be expected about the 2d, 10th, 15th, 20th, and 24th of this Month; the Day before or the Day after.

FIRST Quart. 9 day, at 9 morn.

HERE now follow my Observations on Mundane Affairs.

SINCE I last addressed you, Courteous Reader, the Reign of our good old King, GEORGE III, has ended,

FULL Moon, 17 day, at 1 aftern.

and his eldest Son, GEORGE IV, come to the Throne; whom God long preserve! May his Reign be happy, and prosperous, and peaceful! may Plenty prevail throughout the Country, and all Discontent be removed! And when his coronation takes place, may all be joyful!!!

LAST Quart. 25 day, at 8 morn.

Look at the Aspects on the other side, and remember that Nature means something more by them, than merely to set us a-gazing.

During

MAY XXXI Days.

SPRING now is in his sweetest prime,
 The trees are clad, the fields are fine;
 The birds now sing, the lambs now play,
 Cupid this month keeps holiday;
 And Flora spreads abroad her treasure,
 That mortals may exceed in pleasure.

MONTHLY OBSERVATIONS.

Rain fallen in September, 1818, at London, was 3,77 Inches.

FIRST Quart. 4 day, at 7 aftern.
 Rain may be expected about the 2d, 8th, 18th, and 24th Days of this Month; the Day before or the Day after.

Divisions and Controversies not yet at an end. Some Tumults, some Scuffles, great Sorrow unto many. The Rivers under the watery Trigon swell and overflow their Banks. Hurricanes and Tempestuous Storms are likely to happen in the *West*

LAST Quart. 18 day, at 2 aftern.
Indies. I hope there will be no great Fire.

Many Provinces of the *French* Nation much disgusted. This strange People continue just what they were, vain, fickle, monkeyish, polite when pleased, unforgiving when offended;

NEW Moon, 26 day, at 7 morn.
 long will it be before they will forgive the English for capturing Paris. I wish them better.

The

20 OCTOBER XXXI Days.

This Year's uncommon Aspects will dispense
 Plenty of mixt and various influence ;
Saturn ne'er joins with *Mars* without alarms,
 Sickness to some, to some the scourge of arms.
 But God, who made the world, and rules it still,
 Can shield His People from all threat'ning ill.

♌ <i>Leo</i> Heart and Back	♒ <i>Aquarius</i> Legs & Ancles
♍ <i>Virgo</i> Bowels and Belly	♓ <i>Pisces</i> Feet and Toes.

The Names and Characters of the PLANETS,
 With *Dragon's Head and Tail.*

♄ Saturn	} ☉, or the Sun	♀ Venus
♃ Jupiter		☿ Mercury
♂ Mars		☾ the Moon.
♁ Dragon's Head.—♂ Dragon's Tail.		

New discovered PLANETS since 1780.

♅ Uranus. ♀ Ceres. ♀ Pallas. ♁ Juno. ♁ Vesta.

The Characters of the ASPECTS.

♋ Conjunction	} ☿ Opposition	△ Trine
* Sextile		□ Quartile.

Upon the TWELVE SIGNS.

- ♈ The Head and Face the RAM doth always rule :
 ♉ The Neck and Throat are govern'd by the BULL.
 ♊ O'er the Arms and Shoulders still the TWINS preside :
 ♋ Breast, Stomach, Ribs, the crooked CRAB doth guide.
 ♌ The noble LION rules the Back and Heart :
 ♍ The bashful VIRGIN claims the Belly Part.
 ♎ The Reins and Loins the equal BALANCE weigh :
 ♏ The SCORPION o'er the Secret Parts doth sway.
 ♐ The curious ARCHER doth the Thighs affect :
 ♑ So doth the GOAT our bended Knees protect
 ♒ The Legs unto AQUARIUS' Lot do fall :
 ♓ The FISH our active Feet their Portion call.

Common Notes for the Year 1821.

Lunar Cycle, or Golden Numb. 17	Lent begins - - - - Mar. 7
Epact - - - - - 26	FASTER DAY - - - - Apr. 22
Dominical Letter - - - - G.	Rogation Sunday - - - May 27
Cycle of the Sun - - - - 10	Ascension Day - - - - May 31
EPIPHANY - - - - Jan. 6	WHIT SUNDAY - - - - June 10
Sundays after EPIPHANY (Six.)	TRINITY SUNDAY - - - - 17
Number of Direction - - - 32	Sundays aft. Trinity (twenty-three)
SEPTUAGESIMA Sunday Feb. 18	ADVENT Sunday - - - Dec. 2

A TABLE of Terms and Returns for the Year 1821.

Hilary Term begins January 23, ends Feb. 12.

RETURNS, or ESSOIGN Days.	Ex	Re.	Ap.	W. D.
In eight Days of St. Hilary - - - Jan. 20	21	22	23	Tuesday.
to fifteen Days of St. Hilary - - - 27	28	29	30	Tuesday.
On the mor. of the Purif. of the Bl. V. M. Feb. 3	4	5	6	Tuesday.
In eight Days of the Purif. of the Bl. V. M.	9	10	11	Monday.

Easter Term begins May 9, ends June 4.

In fifteen Days of Easter - - - May 6	7	8	9	Wednesd.
From Easter Day in three Weeks - - 13	14	15	16	Wednesd.
From Easter Day in one Month - - 20	21	22	23	Wednesd.
From Easter Day in five Weeks - - 27	28	29	30	Wednesd.
On the Mor. of the Ascen. of our Lord June 1	2	3	4	Monday.

Trinity Term begins June 22, ends July 11.

On the Morrow of the Holy Trinity June 18	19	20	22	Friday.
In eight Days of the Holy Trinity - 24	25	26	27	Wednesd.
In fifteen Days of the Holy Trinity - July 1	2	3	4	Wednesd.
From the Day of Holy Trin. in 3 Weeks - 8	9	10	11	Wednesd.

Michaelmas Term begins Nov. 6, ends Nov. 28.

On the Morrow of All Souls - - Nov. 3	4	5	6	Tuesday.
On the Morrow of St. Martin - - 12	13	14	15	Thursday.
In eight Days of St. Martin - - 18	19	20	21	Wednesd.
In fifteen Days of St. Martin - - 25	26	27	28	Wednesd.

N. B. No Sittings in Westminster Hall on the Second of February, Ascension Day, and Midsummer Day.

The Exchequer opens eight Days before any Term begins, except Trinity, before which it opens but four Days.

Note, The first and last Days of every Term are the first and last Days of Appearance.

KINGS and QUEENS from the CONQUEST.

NOTE.—That the Moon's Age being observed in the first Column you find the Time of HIGH WATER at all the Places above-mentioned, in the respective Column of Numbers immediately below them. Thus when the Moon is One, or Sixteen, Days old, it is HIGH WATER a Candado, Dunkirk, Leith, &c. at 26 Minutes past 12 o'Clock. And so of the rest.—AS to the Moon's Age, you find it in the Sixth Column on every left-hand Page of the CALENDAR.

A TABLE of the EQUATION of TIME, for regulating Clocks and Watches, for 1821.—*Note*, fa. Clock too fast; that is, your Clock, to be set right, must be so much faster than the Sun Dial.—slo. Clock too slow; that is, your Clock must be so much slower than the Sun Dial.

How to set a Clock or Watch by this Table:—*For Example*, Jan. the 1st, I find, by looking into the Table, that a Clock to be right must be 3 Min. 56 Seconds faster than a Sun Dial; therefore I set it so much faster accordingly. And so of the rest. Twelve o'Clock is the best Time to set a Clock or a Watch by a Dial.

Note.—A Sun Dial shows Solar or Apparent Time; but a Clock, &c. should be set to Equal or mean time, as the Table directs, to go true.

A TABLE of the Rising, Southing, and Setting of the PLEIADES, or SEVEN STARS, for every 5th Day in the Year; of excellent Use to find the Hour of the Night.

Years of
Christ.

Chronology
OF MANY REMARKABLE OCCURRENCES.

Years since

1066	WILLIAM (the Norman) conquered England	755
1116	First Parliament of Lords and Commons	705
1185	Ireland conquered by the English	636
1299	Windmills invented	522
1302	The Mariner's Compass invented	519
1304	Edward I. reduced Scotland	517
1330	Gunpowder discovered by a Priest	491
1369	Wickliff first began the Reformation	452
1441	Printing invented by a German	380
1492	Columbus discovered America	339
1521	Engraving on Wood invented by Albert Durer	300
1535	Cannon first used	286
1584	Virginia discovered by Sir Walter Raleigh	237
1590	Telescopes invented by Jansen, a Dutchman	231
1603	A great Plague in London; died 56,570	218
1605	The Popish Gunpowder Plot, November 5.	216
1608	Milton the Poet born; died 1674	213
1610	Jupiter's Satellites first discovered	211
1611	New Translation of the Bible	210
1614	New River brought to London by Sir Hugh Myddleton	207
1616	Shakspeare the Poet died	205
1625	A great Plague in London; died 34,517	196
1632	A great Fire on London Bridge, Feb. 11.	189
1634	Old Parr died, aged 152: he lived in Ten Reigns	187
1641	The cruel Irish Massacre, began October 23.	180
1642	Sir Is. Newton born, Dec. 25.—Edgehill & Brentf. Fight	179
1649	King Charles I. beheaded, Jan. 30	172
1653	Oliver Cromwell made Protector, Dec. 12	168
1655	George Fox, the first of the Quakers	166
1658	Spring Pocket Watches invented by Dr. Hook	163
1658	Oliver Cromwell died Sept. 3	163
1660	King Charles II. restored, May 29	161
1662	The Royal Society instituted	159
1665	A great Plague in London, whereof died 68,586	156
1666	The lamentable Burning of London, Sept. 2	155
1667	Peace with Holland, France, and Denmark	154
1668	Peace proclaimed with Spain, Feb. 13	153
1669	The Royal Exchange (built 1667) first opened, Sept. 28	152
1670	The Prince of Orange arrived at Whitehall	151
1670	Henry Jenkins died, aged 169	151
1672	War declared against the Dutch	149
1672	Halfpence and Farthings first coined, Aug. 16	149
1674	Peace with Holland proclaimed, Feb. 28	147
1677	Prince of Orange married to the Princess Mary	144
1678	The Popish Plot discovered	143
1679	The Habeas Corpus Act passed	142
1683	Penny Post Office (now Twopenny Post) established	138
1684	A great Frost that held 13 Weeks	137

1688	The seven Bishops sent to the Tower, June 8	133
1688	Prince of Orange landed at Torbay Nov. 4	133
1688	King James II. abdicated, Dec. 11	133
1689	King William and Queen Mary crowned, April 11	132
1692	Port Royal swallowed up by an Earthquake	129
1692	A great Earthquake in England, Sept. 8	129
1693	Bank of Eng. established.—Hackney Coaches first licensed	128
1704	Gibraltar taken by Sir George Rooke	117
1707	England and Scotland united, May 1	114
1708	The Pretender attempted to invade Great Britain	113
1713	Peace with France proclaimed, May 5	108
1715	A total Eclipse of the Sun, April 22	106
1715	The Rebellion in Scotland and Lancashire	106
1716	A great Frost; a Fair on the Thames	105
1718	The first Appearance of the Northern Lights in England	103
1727	The great Sir Isaac Newton died, March 20	94
1727	An Earthquake in several Parts of England	94
1739	A hard Frost for 9 Weeks, began December 24	82
1744	Anson completed his Voyage round the World	77
1744	A great Comet appeared in Jan. and Feb.	77
1745	A Rebellion in Scotland	76
1746	The Scotch Rebels defeated at Culloden, April 16	75
1748	A general Peace concluded, October 7	73
1750	Westminster bridge finished, cost £.389,500	71
1750	Earthquakes in London, Feb. 8, and March 8	71
1752	The Style and Calendar altered, September 2	69
1755	Lisbon destroyed by an Earthquake	66
1756	War declared against France	65
1758	A large Comet appeared, foretold by Dr. Halley	63
1762	A great Fall of Snow for 18 Days together, in Feb.	59
1763	A general Peace proclaimed, March 22	58
1764	A great Eclipse of the Sun, Apr. 1	57
1765	Otaheite discovered.—General Warrants declared illegal	56
1770	Blackfriars Bridge finished, cost £.152,840	51
1775	War declared against North America, August 23	46
1776	The Americans declare themselves Independent	45
1778	War against France.—1779, D ^o Spain.—1780, D ^o Holland.	
1781	Georgium Sidus discovered by Herschel	40
1783	A general Peace.—Fiery Meteor passed over Eng. Aug. 18.	38
1785	A great Frost for 16 Weeks	36
1789	D ^o for 3 Months —France revolutionized	32
1792	France a Republic.—King of Sweden shot by Ankerstrom	29
1793	King and Queen of France guillotined	28
1797	Ireland invaded by the French	24
1799	Buonaparte appointed First Consul of French Republic	22
1801	Ireland united to England.—A general Peace	20
1801-2-4,	The Planets Ceres, Pallas, and Juno, discovered.	
1803	War with France renewed.—1804 Buonaparte made Emperor.	
1805	Battle of Trafalgar, and glorious Death of Nelson.	
1807	Copenhagen taken by the English; Treaty of Tilsit; The Portuguese Government emigrated to the Brazils	
1811	A great Comet appeared in September, October, and November.	

- 1812 H. R. H. The Prince Regent assumed his full powers. — War between France and Russia; Battle of Borodino; Moscow burnt.
- 1813 America decl. War against G. Britain; Alliance of England, &c. against France; Revolution in Holland; Pr. of Orange recalled.
- 1814 Severe Frost; Allied Armies invaded France; Capitulation of Paris; Buonaparte abdicated, and conveyed to Elba; Definitive Treaty signed at Paris; Emp. of Russia, King of Prussia, &c. visited London; Peace proclaimed; Centenary Jubilee, &c.
- 1815 Conspiracy in France; Return of Buonaparte; Murat defeated and dethroned; BATTLE OF WATERLOO; Surrender of Paris to the Allies; Return of Louis 18: Buonaparte exiled to St. Helena.
- 1816 Vauxhall Bridge opened.
- 1817 February; new coinage of Gold and Silver issued.
- Nov. 6. *Died.*] In childbed the Princess Charlotte, aged 22.
- June 18. The Strand or Waterloo Bridge opened.
- 1818 Nov. 17. *Died.*] Her Majesty Queen Charlotte, aged 75.
- 1819 March 25. Southwark Bridge opened.
- A beautiful Comet appeared in July.
- 1820 Jan. 23. *Died.*] The Duke of Kent; and
- Jan. 29 *Died.*] George III. aged 82; both buried at Windsor.
- Feb. 13. Duke de Berri assassinated at Paris.
- Feb. 23. A conspiracy to assassinate His Majesty's Ministers discovered; and in May, Thistlewood and others executed.
- March: General Election.—New Parliament met, 21 April.
- June 6. Arrival of Her Majesty Queen Caroline, in London.
- Aug. 6. *Died.*] The Duchess of York, ætâ 53.
- Aug. 1. The REGENT'S CANAL opened.—

THIS laborious Undertaking commences on the north-west of London at Paddington, runs eastward in a tunnel under the Edgware road, passes through the Regent's park, crosses the Hampstead and Kentish-town roads and Maiden-lane in its way to the Whiteconduit fields, where another tunnel commences, which passes under houses in Islington, Islington-road, and under the New River which so plentifully supplies London with water: the canal then passes by the City gardens, indenting itself into capacious basins on each side the City turnpike road, and is led in its course through the Rosemary branch fields and Hoxton, passes Sir George Whitmore's, crosses the Kings-lane road, and so onwards through Haggerston, Hackney and White-chapel roads, over Stepney fields, till at Limehouse it happily unites itself with the Father of Waters even Old Thames, from whose affluent bed and bosom and ever returning and flowing tides, it will easily carry on its smooth and tranquil surface, the products of our coasting and foreign trade, not only to the westward of the Capital on this created canal of 9 miles in zig-zag measurement, and over which there are 37 bridges, but also in uniting itself with the Grand Junction canal, carries Father Thames to the Bristol Channel:—glorious enterprize of persevering man and active capital! of which half a million has been expended; inducing employment to thousands, both in excavating the earth, in building wharfs and warehouses for merchandize, and habitations for man all along its created banks; and in relieving the crowded streets of the Capital from much of their heavy and dangerous loads, and diffusing the products of every clime to the remotest villages, towns and cities.

An Account of the Eclipses.
And other Appearances in the Heavens,

IN THE YEAR

1821 ;

CALCULATED FROM NEW ASTRONOMICAL TABLES,

Founded on the System of Gravitation of the great
SIR ISAAC NEWTON ;—which Tables agree with the
Heavens to a wonderful degree of exactness.

*On the different nature of the ECLIPSES of the
Sun and of the Moon.*

FAR different, Sun's and Moon's Eclipses are ;
The Moon's are often, but the Sun's more rare.
The Moon's do much deface her beauty bright,
Sol's do not his, but hide from us his light
It is the earth, the Moon's defect procures,
'Tis the Moon's shadow that the Sun obscures,
Eastward, Moon's front beginneth first to lack,
Westward Sun's brows begin their mourning black.
Moon's Eclipses come when she most glorious shines,
Sun's in Moon's wane, when beauty most declines.
Moon's general, towards heav'n and earth together,
Sun's but to earth, nor to all places neither.

WHILE SOL this year runs through his annual course,
his motion and that of the Moon do not so agree as
to allow of many Eclipses. Indeed there will only be *two*
Eclipses while the god of day performs his yearly circuit ;
and then, as I have on former occasions told my readers,
they must both be of the Sun : and generally too it happens,
as it will this year, that when there be only two Eclipses,
they are not at all visible in these Northern climes.

The *first* of these Eclipses of the glorious luminary of
day will happen on Sunday the 4th of March, that is, on
Shrove Sunday. The conjunction, according to my tables,
with the latest improvements, will take place at $37\frac{1}{2}$
minutes past 5 o'clock in the morning, Greenwich time.

In longitude $95^{\circ} 58'$ East, and latitude $8^{\circ} 28'$ South, the Sun will be centrally eclipsed on the meridian, at 36 minutes past 5 o'clock of our time. This will be in the Ocean West of Sumatra and Java, near the Nicobar Islands. This Eclipse will be visible in the Southern parts of Africa, in the Indian Ocean, the East Indies, New Holland, and in the Western Islands of the Pacific Ocean. In some of these places the Eclipse will be total. In the land of the Hottentots the Sun will rise totally eclipsed: an awful sight to those poor ignorant creatures, and will doubtless prompt them to some debasing superstition. In England, thanks to the lovers of Astronomy and Astrology, those wonderful sciences! we know better than to bend our bodies like a bullrush, and cut ourselves with bits of flint, because the Sun does not shine. The Sun will set totally eclipsed in the Great Ocean North of the Ladrone Islands. But enough of this Eclipse, since few if any, I expect, of my readers, will go so far from home as to see it. They that *do go*, will not be back, I'll warrant them, time enough for pancake day.

The *second* Solar Eclipse this year, will take place on Monday the 27th of August; but it, like the former, will be *invisible* here. The conjunction will happen at 17 minutes past 3 o'clock in the afternoon, in $3^{\circ} 57'$ of Virgo; the Moon's latitude being then $3^{\frac{3}{4}}$ North. The Sun will be centrally eclipsed on the meridian at 13 minutes past 3 o'clock in the afternoon, of our time, in longitude $48^{\circ} 22'$ West, and latitude $14^{\circ} 43'$ North: this is in the Great Atlantic Ocean, estward of the Antilles. Here, also, if my tables are right, or any thing near right (and I know of none more correct), the Sun about the middle of the Eclipse, will show a beautiful luminous ring of glittering brightness, round the dark, or eclipsed part; similar to what was seen in the great Solar Eclipse last year, in the neighbourhood of Munich, and other well suited places on the Continent of Europe. This Eclipse of which I am now speaking will be visible in North America, and the American Islands, as well as the Atlantic Ocean. The Sun will rise just beginning to be eclipsed in New Mexico. It will rise at the commencement of the *Annular* appearance, in the bosom of the Californian Sea. In the Ethiopic Ocean, between Africa and St. Helena, the Sun

will set just as the ring-like brightness goes off. Altogether this will be a striking and beautiful Eclipse, to those who are lucky enough to see it, and wise enough to enjoy such sights.

Some people, who fancy they know a great deal about Astrology, notwithstanding, are so ignorant as to believe, and to teach, that *invisible* Eclipses do not *concern us* in their effects, or operations. I am not of their judgment; nor is any profound Astrologer whose works I have read, from *Ptolemy* down to *Kepler* and *Tycho Brahe*; from them down to the noted *Gadbury*, *Lily*, *Vincent* and *Tycho Wing*; nor from their times down to the present eventful age in which we live. There is no necessity that the celestial agents, like terrestrial archers, should see the butt at which they aim their darts: they operate by energy and vigour, not by sight; as saith the celebrated *Nostradamus*. The secret magnetism of nature is such that it can penetrate the densest corporeal matter; and there is nothing in Nature but what must yield to *influence*, be it never so gross; like as the air opens a way for the rapid motion of any thing shot into it from bow or gun. No, no: be assured that *invisible* Eclipses have their effects, as well as those which are visible; with this difference, however, that the more visible the deliquium is, the more conspicuous will be its effects, *et à contra*. Therefore, you may conclude, that as *visible* Eclipses of the luminaries betoken great and public actions, so *invisible* ones may be found to predicate private designs and petty contrivances. Fraud and treachery are first plotted, then perpetrated. You may here, also, take notice that Eclipses are not in *themselves* invisible; but to some or other parts of the world, are always visible and apparent; so that the term *invisible* relates only to those parts of this spacious Globe where such and such an Eclipse is not to be seen. It is always found, that the effects of an Eclipse, whether malevolent or benevolent, are *most* experienced where it is best seen. As, however, the two Eclipses this year are not visible in these regions, I need not waste either your time or my own in tracing their tendencies. If the poor *Hottentots* receive any good from the first, or the *Americans* from the second; we shall hear of it, I have no doubt.

*Other Appearances and Occurrences in the
Heavens.*

1. THAT noble Star, the Planet JUPITER, will shine beautifully in the western regions of the Sky as an Evening Star till near the end of March; after which he will be a Morning Star, and present a grand appearance in the East, till the middle of October. At the beginning of the year, the dull Planet SATURN will be considerably to the East of Jupiter, and will set nearly two hours later. They will, however, continue to approach each other till the 19th of June, when these two Planets will be in conjunction, and Jupiter will be only 70 minutes of a degree north of Saturn. The last conjunction of the same two Planets was in July 1802; and the time before that of their conjunction was in November 1782. Within the next 20 years we may expect another conjunction of the same Planets. As for this present year 1821, these two Planets, even after their conjunction, seem unwilling to separate, the change in declination compensating for that in right-ascension. They will gradually separate from June the 17th till September the 12th, when they will be nearly 5 degrees asunder: after that they will gradually approximate again; and at the end of the year, when they will be both Evening Stars, they will not be 2 degrees asunder. Saturn's ring will be seen very finely through a telescope all this year. Other remarkable conjunctions of the Planets, this year will be—

2. Of *Herschell's Planet* and *Mercury*, on the 8th of January, when the two Planets will be only $13\frac{1}{2}$ minutes of a degree asunder.

3. Of *Mars* and *Mercury*, on the 2d of February, when Mercury will be within a degree South of Mars. But this cannot be seen here, because both Planets will then rise nearly with the Sun.

4. Of *Mars* and *Venus*, on the 23d of March, when Mars will be about a third of a degree North of Venus. Both Planets, however, will be too near the Sun for observation.

5. Of *Venus* and *Jupiter*, on the 10th of April, when Venus will be a third of a degree South of Jupiter.

6. Of *Venus* and *Saturn*, on the 17th of April, when *Venus* will be about a degree North of *Saturn*. But in both these cases the Planets are too near the Sun for observation.

7. Of *Mars* and *Jupiter*, on the 26th of April, when the Stars will be only 14 minutes asunder. Still invisible, by reason of proximity to the Sun.

8. Of *Saturn* and *Mercury*, also of *Mars* and *Mercury*, on the 4th of May; and a conjunction of *Saturn* and *Mars* on the 5th of May. Not, however, to be observed.

9. Of *Mercury* and *Venus*, on the 1st of June, when *Mercury* will be less than a degree North of *Venus*. Both Planets again too near the Sun for observation.

10. In August, *Saturn*, *Jupiter*, and *Mercury*, will be stationary. *Saturn* and *Jupiter* in *Aries*, and *Mercury* in *Leo*. In December, *Saturn* and *Jupiter* will be stationary again, and both in *Aries*, as before.

11. On the 1st of October, when *Venus* will be a Morning Star, she will be within a degree of the Star *Alpha* in *Libra*.

12. On the 20th of November, when *Mars* rises about 11 o'clock at night, and comes to the South about 16 minutes past 6 in the morning, the Planet will be little more than a degree from the Star *Alpha Leonis*, or *Lion's heart*.

Such a Year for Conjunctions, to say nothing here of other aspects, may be expected to produce extraordinary events.

METEOROLOGICAL OBSERVATIONS, &c. *Relating to the Year 1819; with some Remarks on the BAROMETER, &c.*

COURTEOUS READER,

THE following Remarks, which relate to the Weather in the year 1819, are principally taken from a correct journal kept in Hertfordshire; but now and then compared with information received from a learned correspondent dwelling near that fertile region, *The Carse of Gourie*, between Perth and Dundee, in North Britain.

January was on the whole a tolerable month for the season. In Hertfordshire, there were 14 days free from rain or snow; in Perthshire 13. Heavy showers on the 9th day; stormy on the 10th, 16th and 17th. The greatest

height of the Barometer was 30.60 inches, the least height 29.25. The Thermometer fluctuated between 58 degrees and 22; the mean being 35.86. In Perthshire the mean temperature was 37.84.

February had 14 fair days both in England and Scotland. Snow on the 2d day, the first this Season. Very tempestuous early on the morning of the 10th. Snow again on the 24th and 25th. Barometer between 30.12 inches, and 29.10. Thermometer between 51° and 18°: mean 39.4: mean in Perthshire 37.78 degrees.

March; 23 fair days in England, 22 in Scotland. Roads in England about the middle of the month quite dusty. It was, however, "March many weathers." Barometer between 30.2 inches and 29. Thermometer between 60° and 29°; mean 48°. Mean in Perthshire 42.53.

April; 18 fair days on both sides of the Tweed. Thunder on the 7th day. On that day and on the 2d, the Thermometer was as high as 68°. Mean of the month, however, about 46° $\frac{1}{2}$; in Perthshire 45.66. With us the barometer was between 30 inches, and 29.4. Some heavy rains.

May; 20 fine days with us, 19 in Perthshire. The Thermometer very high through most of this month. On the 23d day it was at 73°: the mean of this month was 52°: on the 28th and 29th there were frosty mornings in Perthshire.

June; 13 days without rain; and a good deal of warm weather. More than half the month the Thermometer got above 70°. On the longest day it got up to 78°: Mean of the Thermometer in Hertfordshire was 57° 4'; in Perthshire, 55° 43'.

July; a decidedly fine and hot month: 24 fair days. Barometer between 29.27 and 30.2. Thermometer above 85° on the 4th, 5th, 30th, and 31st days. Mean 64° 66 in Herts; 63° 12 in Perthshire. The Rain fell chiefly about the new and full Moon.

August; altogether a hotter month than the last, and 25 fair days. Barom. between 29.2 and 30.3. The 17th was the hottest day in the year. Mean of the Thermometer 65° 88 in Herts; 63° 13 in Perthshire. On the last day there was heavy Rain; and in some places on the Eastern and Northern Coasts, a sharp gale, approaching to a hurricane: much mischief among the shipping.

September; in the whole a fine month, having 20 fair days. On the 20th the Barometer stood higher than on any other day in the year, being 30.5 inches in Herts, 30.4 in Perthshire. The mean of the Thermometer was $54^{\circ} 22$ in Herts: $53^{\circ} 87$ in Perthshire.

October had 17 fine days. There were, however, smart showers; and on the 22d a *heavy fall of Snow*. The mean of the Thermometer in Herts was $47^{\circ} 21$; in Perthshire, $46^{\circ} 68$. More Rain than in any month of the year, except April.

November had 19 fair days. Snow on the 26th; Frost on the 28th. Barom. between 29.18 and 30.04. Therm. between 55° and 21° . Mean in Herts, $39^{\circ} 81$; in Perthshire, $36^{\circ} 7$.

December was a wintery month, with some severe weather. The 10th was the coldest day in the year, wind at N. W. the Thermometer got down to 11° . For more than half the month the Barometer kept about 29.3 inches. Mean of the Thermometer in Herts $35^{\circ} 32$, in Perthshire $33^{\circ} 45$.

☞ I here caution my Country Readers against some sad trash of spurious Almanacks, most of them Sheets, published in the North Counties, and sold *without Stamps*, which is *against Law*, under the titles of *Paddy's Watch*, *Paddy Improved*, *The Poor Man's Diary*, &c. They take the Predictions of the Weather, &c. from my Almanack; and thus attempt to impose upon the Public. But Government will keep a sharp look-out after them next year. If you want a Sheet, buy *Wing*, or a *County Almanack*.

Judicium Astrologicum, pro Anno 1821.

VOX CÆLORUM, VOX DEI: The voice of the Heavens is the Voice of God.—He speaketh in all the Changes of the Seasons, and of the Times.

COURTEOUS READER.

NOT to broach any new Matter of Astrology to the world; but to trace the vestigia of the old and true Astrology, soberly and upon good grounds, as it is left us by the Sages of this worthy Science, now almost

forgotten ; partly by the tyranny of Time, but chiefly by the unjustifiable practice of some mere Pretenders to this Divine skill, who wishing to be thought wiser than ever God and Nature intended Mortals to be, have taken the boldness to skip beyond the lawful measures, and thus disgrace our Mistress URANIA. Not, I say, to abuse either my Readers, myself, or my science, by trading with the contraband wares of such Pretenders, I shall (*Favente Deo*) in my this year's lucubrations, pursue the judgments and opinions of the most learned Astrologians, and duly interpret the wonderful Configurations which Heaven presents.

First, however, let me exhibit another

HIEROGLYPHIC

for Time and the Curious to decypher.

AN ASTROLOGICAL Judgment on the Four Quarters of the Year 1821, from the Influx and Influences of the PLANETARY ORBS, with respect to the Affairs of the World. And First—

Of the WINTER QUARTER; called the *Brumal Ingress*.

AS usual, I begin the Stellar Consideration of the New Year with this Quarter, as all the Quarter except the first 10 days, belongs to 1821. The Quarter commences when *Sol* enters *Capricorn*, the Southern Solstice; which, according to my Tables, he will do on Thursday the 21st of December, 1820, at 52 min. past 8 o'clock in the Evening. If you erect a scheme of the Heavens for this time, you will find $27\frac{1}{2}$ degrees of *Leo* ascending in the East, and 16 of *Taurus* in *Medium Cæli*. *Venus* and *Mercury* are found within half a sign, in *Imum Cæli*, the House of Relations; the *Sun* and *Mars* in the House of Children; *Jupiter* in the Occidental Angle of the House of Marriage; and *Saturn* near the Upper Door, or the House of Death. The Moon is in the House of Friends, and bearing a trine aspect to *Jupiter*, as well as to *Venus*.

This is no usual appearance of the face of the Heavens; nor does it promise well to some Countries. Strange matches, strange births, and signal deaths have taken place, and may be expected to take place again. Happily, the malevolent Planets are far from the Ascendant; and while *Mars* resides in the House of Children, the doleful business of extermination is not very likely to go on. The position of *Saturn* seems to bespeak the Death of some old Man of note, and high, I think, in Ecclesiastical honours. Perhaps the Pope; perhaps some old and honoured Bishop nearer home.

Note.—What I thought was the Pope last year, was evidently the poor Duke of *Berri*, a warm promoter of his Holiness's concerns. *Saturn*'s influence is principally amongst Monks and Friars, or Men or Princes of ancient family.

Of the Vernal, or Spring Quarter.

Below is the SCHEME of the Grand Radix of the Year's Revolution, or the SUN's Return into ARIES, 1821.

Schema Cæli ingressu Solis in Ariete.

THIS Quarter, usually so vivifying to Nature, commences on Tuesday March the 20th, at 9 minutes past 10 o'clock in the Afternoon; at which time the Configurations of the Planetary Bodies will be as above shown. The Moon which is in the *House of Riches*, has just passed from an opposition to *Jupiter* and *Saturn*. The Sun is found in *Imum Cæli*; about half a Sign from *Venus* and *Mercury*, who are near together in the last Sign of the Watry Triplicity. *Saturn*, *Jupiter*, and *Mercury* are seen in the fifth Celestial House, the latter being retrograde. This is a very peculiar ingress, and soon leads to active and momentous doings. The mutual workings, crossings, conjunctions of the Planets during this Quarter are and co.,

very striking; as the Courteous Reader may judge if he looks to my Calendar columns for March, April, May, and June, or to my Summary, at pa. 40. Of these Conjunctions, the most interesting, as they relate to Mundane Affairs, are those of *Jupiter* and *Mars* on the 26th of April, of *Saturn* and *Mars* on the 5th of May, and of *Saturn* and *Jupiter* on the 19th of June: happily, however, their effects will be neutralized in a degree, by the Conjunctions of *Mars* and *Mercury*, and of *Saturn* and *Mercury* on the 4th of May.

When *Jupiter* and *Saturn* were last in Conjunction, in 1803, the effects were felt in the renewal of the War with France. But a Conjunction of ♃ and ♂ has usually been much more serious. Astrologers all noticed the Conjunction of ♃ and ♃ just before the death of Queen Elizabeth. How ominous was the dismal Conjunction of ♃ and ♂ in ♂ in 1644 to Ireland; how doleful the Conjunction of the same Planets in 1646, to Duke Hamilton; how lamentable that of ♃ and ♂ in ♄, A. D. 1650, in consequence of the inundations in Holland, &c. So again, in 1652, there was a Conjunction of these unfortunate Planets in Leo, and the effects in Rome in particular, and in Italy generally, are recorded in the history of those times: and of the celebrated Conjunction in 1658, much was written by the learned Lilly and Edlyn.

It has always been held that such like Conjunctions of the Infortunes are the cause of many eminent accidents to be postvenial; such are, private consultations and active conspiracies against old and deep-rooted Governments, popular murmurings, commotions, dearth, decay of ancient buildings, dynasties, and families, piracies at sea, and robberies by land. Happily for the dwellers in European regions, except Spain and Portugal, whose cup of trembling is not yet full, the contents of this baleful phial may be expected to pour themselves most copiously upon Eastern nations. Let the Grand Turk take care of himself! And if any violent commotions should take place in Persia or China, let us hope it will be over-ruled for good by Him, who "*maketh the wrath of man to praise Him.*" I wish the Emperor Alexander's Eastern dominions may not give him some trouble.

Of the Estival, or Summer Quarter.

THIS Quarter takes its name *ab Æstu*, because of the very great *heat* which the Season often affords; or else it is termed Summer, *Quasi Sunne Mehr*, from the Germans. It begins when the Sun enters *Cancer*, and, according to the Tables which I employ, commences on Thursday the 21st of June, at 40 minutes past 7 in the afternoon. From an accurate Scheme of the Heavens, it appears, that the point of the Ecliptic which culminates is 28 of α . *Luna* has found her way into the House of Riches; but she is too much of a gad-about to stay there long. *Saturn* and *Jupiter* are near neighbours in the House of Brothers; *Mars* is again in the House of Children;—all the better according to my notion. The Sun, *Venus*, and *Mercury* are in the Occidental angle. Some Marriage, I suppose, between a rich beauty, and a dandy vagabond, who cares more for her money than for her. In the course of this Quarter, I fear the appearance of some dreaming Enthusiasts, and some violent Politicians; whose efforts, however, may counteract each other. By the bye, ♃ will be stationary, and deliberate on the mischief he designs. Howbeit, I fear no wars at present to break forth, in which we shall be concerned. God grant, that, notwithstanding the Aspect of the Planets, “*Nations may learn war no more.*” The contingencies in this Quarter will, in all probability, be more benevolent than in the two preceding Quarters; and I think “*the Vallies will stand thick with Corn, and the Fields laugh and sing.*” Whatever may be the troubles in North and South America (where divisions that have been long sown, must spring up into a plenteous crop), there will happen to these Kingdoms much more of weal than of woe during the Sun’s passage through ♄ , ♁ and ♃ .

Of the Autumnal Quarter.

Bright PHŒBUS running his Ecliptic ring,
Doth make the AUTUMN, WINTER, SUMMER, SPRING.

SOL pursuing his undeviating course enters the Sign *Libra*, and thus balances the Days and Nights, and causes the Autumnal Equinox, on Sunday the 23d of September at 39 minutes past 9 in the Morning, 24 de-

grees of Ω are in the Mid-heaven, and $9\frac{1}{2}$ of \mathfrak{m} occupy the Ascendant. I wish that infectious disorders may not prevail. \mathfrak{h} and \mathfrak{U} are both in the Sixth House, and both retrograde. Let them work their way *asunder*, and we shall have less mischief. *Venus* is with the Sun in the House of Friends, and *Mars* lays down his Spear in the House of *Piety*. This, at least, indicates that in the opinion of Soldiers we shall have a long Peace; why else, should so many of them take Orders, as this plainly tells they will do? Well, this a good sign for Old England; and I think for all the World: for if John Bull does not pay the Piper, I suspect there will not be much fighting. Let us all "*fear God, and honour the King;*" and strive to make our fellow-creatures happy; never quarrel about Politics or Religion; but each worship God quietly in our own way, only taking care that we "*worship Him in spirit and in truth.*" So, worthy Reader, I bid thee farewell, with these Lines:—

Remember, Man, that thou art like to grass,
Which, springing up, with scythe may chance be cropt,
Before the Summer of thy age doth pass,
Or Autumn's leaves from fading trees be dropt;
Yet is thy hap, if that thou liv'st so long,
Age, like the Swan, will sing thy dying song.

FINIS CORONAT OPUS.
