PAUL PRY'S ADVENTURS.

I'VE just dropp'd in to make a call,
I hope I don't intrude now,
'Tis but Paul Pry, how are you all?
Pray do not think me rude now:
They say that I've gone out of town,
but that indeed 's a story,
Or how could I appear to make my
handsome bow before ye.

Poor Paul Pry.

Ev'ry body laughs when they behold
Paul Pry.

Because I take an interest in other
people's business,

I'm humped & thumped, & snubbed
& drubbed until I feel a dizziness,

Which makes me vow I'll never do
a kind and worthy action,

For whatsoe'er I meddle in,—I ne'er
give satisfaction:

Poor Paul Pry,

Every body fleers and jeers at poor
Paul Pry.

One night as next the wall I walked,
my way in caution groping,

I spied a ladder next a window plac'd
there for eloping.

I knew this was not *Quite Correct*, so
to the top did clamber,

And as I just dropt in, I saw a man
hide in a chamber,

Poor Paul Pry.

What a situation 'twas for poor
Paul Pry.

Who should the lady's father be but
my friend Colonel Hardy,

I pointed to his daughter's room, &
bid him not be tardy?

He quickly kicked me out of doors,
and called me lying fellow;

But I came back, because I had for-
got my umbrella.

Poor Paul Pry,

Every body's mischief falls on poor
Paul Pry.

This umbrella cost me one-and-nine-
pence in the city;

To lose an article so useful would
be a shame and pity.

I often too forget my gloves, affairs
my mind distract so,

While the people can't forbear from
laughing when they see me act so.

Poor Paul Pry,

Every body laughs when they behold
Paul Pry.

One lucky act has crown'd my life, I
saved a man from marrying,

By *fishing* up some letters that down
the stream were hurrying.

A housekeeper she tried to *hook* her
gudgeon of a master,

But I saved the old bachelor from
such a sad disaster.

Poor Paul Pry,

Every body laughs when they behold
Paul Pry.

They've got me in the picture-shop
they have upon my honour;

I'm next to *Venus*, which they say
quite a libel on her.

No matter, if my friends still smile
their plaudits ne'er denying

To yield them more amusement, w
I'll still continue *Pry-ing*.

Pry, Pry, Pry,

Every body laughs when they behol
Paul Pry.

CHERRY RIPE.

Cherry ripe, cherry ripe, ripe, I cry
Full and fair ones, come and buy.

Cherry ripe, cherry ripe, ripe, I cry
Full and fair ones, come and buy.

If so be you ask me where
They do grow, I answer—there,

Where the sun-beams sweetly smile,
There's the land of cherry Isle.

Cherry ripe, &c.

Where the sun-beams sweetly smile
There's the land of Cherry Isle.

There plantations fully shew,
All the year where cherries grow,—

All the year where cherries grow.
Cherry ripe, cherry ripe, ripe I cry,

Full and fair ones, come and buy.
Full and fair ones, &c.

COUNTY GUY.

AH, County Guy! the hour is nigh,
the sun has left the lea;

The orange flower perfume the bow'r
The breeze is on the sea;

The lark, his lay who trill'd all day,
Sits hush'd his partner nigh:

Breeze, bird and flow'r, they know
the hour,

But where is County Guy?

The lark his lay, &c.

The village maid steals thro' the
shade,

Her shepherd's suit to hear;
To beauty shy, by lattice high,

Sings high-born Cavalier:
The star of love all stars above

Now reigns o'er earth and sky,
And high & low the influence know,

But where is County Guy?

And high and low, &c.

VOX STELLARUM;
OR, A LOYAL
ALMANACK

FOR THE YEAR OF HUMAN REDEMPTION
1827,

Being the Third after BISSEXTILE; and the
EIGHTH of the Reign of His present MAJESTY:

PRINTED FOR THE COMPANY OF STATIONERS,

By Luke Hansard & Sons, near Lincoln's-Inn Fields;
And Sold by **GEORGE GREENHILL**, at their Hall in Ludgate Street.

[Price Two Shillings and Three-pence stitched.]

O TIME! we see thee in thy wide career,
 Driving thy chariot on:—at thy behest
 Fresh objects rise, and others disappear,
 Our Earth, revolving round the radiant sphere
 Of mighty Sol, presents another year,
 Fraught with variety like all the rest.

MONTHLY OBSERVATIONS.

RAIN fallen in January 1825, at Epping, was 1.01 Inches; and at Kendal for the same period 5.932 Inches. At the former place the maximum atmo-

FIRST Qu. 5 d. 17 m. bef. 1 morn. spheric pressure was that of the year in this month.

Rain, or Snow, more or less, may be expected on or about the 9th, 15th, 22d, 25th, and 30th of this Month.

FULL Moon, 13 d. 6 h. 2 m. bef. 1 morn.

COURTEOUS READER,

AT the top of this column, I have given the depth of Rain for each Month in inches, and decimal parts of an inch, as it was found at Epping,

LAST Quar. 20 d. 4 h. 45 m. bef. 1 morn.

Essex, latitude 51° 41' 42" N. longitude 6° 45" E; and at Kendal, Westmorland, latitude 54° 17' N. longitude 2° 46' W. during the year 1825. The number of inches here put down do not specify the quantity of water that

NEW Moon, 27 d. 9 h. 46 m. bef. 1 morn.

has fallen in each month, but only the lineal depth to which it would have attained on an even surface of the

Some lovely Infant opening now its eye,
 In this vast wilderness of grief and gloom,
 Feels its mortality, and heaves a sigh,
 And struggling, quickly breaks the slender tie,
 That binds to earth—then soars beyond the sky,
 Where endless Spring and vernal beauties bloom.

VENUS ♀ will be a Morning Star till October 7 ; then an Evening Star to the year's end.

Alas ! the modest Virgin from her charms
 Is torn by cruel death's relentless stroke,
 The ruddy Youth, whose bosom friendship warms,
 Sinks into dust, and mocks his lover's arms :
 Man still is unconcern'd 'till death alarms,
 Then all his earthly props at once are broke !

to honour, and guide her steps in safety.

One of the Long Robe about this time

Happy alone is he whose hope relies
 On heaven's eternal Lord, who all things made;
 Who bad the Universe from Chaos rise,
 And deck'd with suns, and worlds the spacious skies,
 His vast domains—before whose piercing eyes
 The thoughts of every bosom are display'd.

MONTHLY OBSERVATIONS.

Rain fallen in May 1825, at Epping, was 2.534 Inches; and at Kendal, 4.096 Inches.

FIRST Quar. 4 d. 7 h. 25 m. morn.

Rain may be expected on or about the 1st, 5th, 13th, 24th, and 26th of this Month.

Besides the aspects and configurations of the planets, in this, and some

FULL Moon, 11 d. 8 h. 25 m. morn.

former months, which are now in operation, we have on the 11th an Eclipse of the Moon, in the watery trigon, approaching to an 8 with ♂ in *Gemini*, all which are held to de-

LAST Qu. 17 d. 10 h. 59 m. aftern.

note high disputes, insurrections, and troubles to the countries that are under the signs in which they happen; from these parts we may expect to hear of wars, much slaughter and ruinous depopulations. Whilst ♂ is traversing the horoscope of *London*,

NEW Moon, 25 d. 6 h. 40 m. aftern.

I hope the city will be preserved from any serious disaster pertaining to this martial star.

Many things of great moment are now debated in divers courts of *Europe*;

O Virtue! Goddess of thy native skies,
 Where thou in glory hold'st thy peaceful reign,
 On earth thy sceptre sway—then paradise
 Deck'd in primeval beauty shall arise,
 And grief shall cease her melancholy sighs,
 And war shall vanish with its direful train.

MONTHLY OBSERVATIONS.

Rain fallen in June 1825, at Ep-

FIRST Quar. 2d. 8 h. 53 m. aftern.
ping, was 1.405 Inches; and at Kendal,
6.333 Inches.

Rain may be expected on the 5th,
 10th, 14th, 23d, and 29th of this
 Month, with Thunder storms in va-
 rious parts of the country.

FULL Moon, 9d. 3h. 50m. aftern.

Europe; but notwithstanding the en-
 deavours of those who may wish for
 peace for their own sakes, there ap-
 pears to be very active doings, with
 various reports, and transactions:—

LAST Qu. 16d. 8h. 27m. morn.

great are the people's expectations of
 some considerable mutations in the
 affairs of some neighbouring nations,
 where great military designs are now
 carried on with much vigour and re-
 solution. *Finem respice.*

Those who to Empire by dark paths aspire,
 Seldom in peace enjoy what they desire.

NEW Moon, 24d. 10h. 4m. morn.

Mars having left the ascendant of
London, overtakes *Saturn* in the 9th
 degree of φ ,—this is well, as the
 coincident rays of these malific stars
 are always considered of direful im-
 port; the effects of which, I regret to
 say,

How great is Thy beneficence, O Lord!

Which flows from mercy's vast unbounded sea;

Thy hands innumerable gifts afford,

Seed-time and harvest answer to thy word;

Worthy thou art to be by all ador'd,

Author of goodness and felicity.

MONTHLY OBSERVATIONS.

Rain fallen in August 1825, at Epping, was 2.775 inches; and at Kendal, 4.558 inches.

Rain, more or less, may be expected about the 6th, 9th, 16th, 21st, and 23d. I would advise the farmer

FULL Moon, 7 d. 5 h. 40 m. morn. to observe attentively the motions of his Barometer, as it is likely to require considerable adroitness in housing his grain well at this present season.

LAST Quar. 14 d. 11 h. 48 m. morn. orders of many kingdoms and countries of Europe, whence confusion and ruin follow; but I presume *England* remains quiet, in spite of her greatest enemies; and not only so, but very formidable, and in much grandeur. We may hear of high dis-

NEW Moon, 22 d. 2 h. 31 m. aftern. putes about this time, and those managed with as strong arguments *pro* and *con*; and we know that sudden hopes have oftentimes as sudden disappointments.

Former private councils and consultations begin to be apparent; also many dis- gusts,

18 SEPTEMBER XXX Days.

O may kind Providence protect our Isle—
 This favour'd spot—from all the darts of ill;
 May Royal George enjoy Jehovah's smile,
 May Heaven all his opposers' influence spoil;
 May all th' inhabitants of Albion's soil
 Unite in peace—the Law of Love fulfil.

MONTHLY OBSERVATIONS

Rain fallen in October 1825, at Epping, was 3.711 Inches; and at Kendal, 6.993 Inches.

Rain may be expected on or about **FULL Moon, 5 d. 2 h. 19 m. morn.** the 8th, 17th, and 25th of this Month. This is likely to prove, in a great measure, a fine and pleasant month, the time of year considered.

The aspects of this month (October) appear, in general, of a benevolent nature; **LAST Quar. 13 d. 1 h. 17 m. morn.**

to one of which I wish particularly to call the attention of my fair readers, and especially those who are about to enter the silken bands of Hymen, I mean the ♂ of ♃ and ♀. Let such hasten to the hymeneal altar whilst under the influence of the coincident rays of these benign planets,

NEW Moon, 20 d. 3 h. 47 m. after as the consummation of this happy union at such an auspicious period, may be expected to produce that harmony of sentiment and affection, which renders the married life a continual source of pleasure and delight.

A sly intrigue is about this time in agitation. Something very mischievous will in all probability come to light before long.

This

Bleak winds arise at Winter's stern commands,
 Who from his frozen car his arrows shoots;
 See! foaming billows lash the rippled sand,
 While many a mighty vessel on the strand
 Is wreck'd,—and tempests through the land
 Tear many a sturdy oak up by the roots.

Rain fallen in November 1825, at Epping, was 3.863 Inches; and at Kendal,

FULL Moon, 3d. 5h. 14m. aftern.

10.028 Inches!! This was a very wet and windy period over the greater part of the British Isles: at Epping the minimum atmospheric pressure was in this month, which was 28.46.

Rain may be expected on the 9th, 12th, 20th, and 23d of this Month.

LAST Quar. 11d. 8h. 59m. aftern.

This month's configurations are mostly of a benevolent kind, which promise much satisfaction among the people in general. Many deserving persons, for their trust and loyalty, are honourably preferred and advanced, and some secret negotiations

NEW Moon, 19d. 3h. 19m. morn.

appear going forward for the promotion of peace and tranquillity in many parts of the world; in which negotiations England and some other countries near, appear very active and busy, if we may judge from their

FIRST Quar. 25d. 6h. 18m. aftern.

significators.—Religion about this time seems to have many votaries, and appears to be in great veneration. It is to be hoped it may not be hypocritical.

On

Behold! that brilliant Star, whose cheering light
 In Judah dawn'd, as ancient seers foretold;
 Now approximating its meridian height
 In Albion's skies—long veil'd in blackest night—
 Extends, and shall extend, its beams in spite
 Of hell, till the whole world its rays behold.

NOTE. — That the Moon's Age being observed in the first Column, you find the Time of HIGH WATER at all the Places above mentioned, in the respective Column of Numbers immediately below them. Thus, when the Moon is *One*, or *Sixteen*, Days old, it is HIGH WATER at Candado, Dunkirk, Leith, &c. at 26 Minutes past 12 o'Clock. And so of the rest. — As to the MOON'S AGE, you find it in the Sixth Column on every left-hand Page of the CALENDAR.

A TABLE of the EQUATION of TIME, for regulating Clocks and Watches, for 1827. — *Note, fa. Clock too fast; that is, your Clock, to be set right, must be so much faster than the Sun Dial. — slo. Clock too slow; that is, your Clock must be so much slower than the Sun Dial.*

How to set a Clock or Watch by this Table : — *For Example, Jan. the 1st, I find, by looking into the Table, that a Clock to be right must be 3 Min. 43 Seconds faster than a Sun Dial; therefore I set it so much faster accordingly. And so of the rest. Twelve o'Clock is the best time to set a Clock or a Watch by a Dial.*

Note. — A Sun Dial shows Solar or Apparent Time; but a Clock, &c. should be set to Equal or Mean Time, as the Table directs, to go true.

A TABLE of the Rising, Southing, and Setting of the PLEIADES, or SEVEN STARS, for every 5th Day in the Year; of excellent Use to find the Hour of the Night.

- 1814 Severe Frost; Allied Armies invaded France; Capitulation of Paris; Buonaparte abdicated, and conveyed to Elba; Definitive Treaty signed at Paris; Emp. of Russia, King of Prussia, &c. visited London; Peace proclaimed; Centenary Jubilee, &c.
- 1815 Conspiracy in France; Return of Buonaparte; Murat defeated, dethroned and shot; BATTLE OF WATERLOO; Surrender of Paris to the Allies; Return of Louis 18; Buonaparte exiled to St. Helena; where, on May 5, 1821, he died.
- 1816 Vauxhall Bridge opened.
- 1817 February; new Coinage of Gold and Silver issued.
— June 18. The Strand or Waterloo Bridge opened.
- 1819 March 25. Southwark Bridge opened.
- 1820 Jan. 23. *Died.*] The Duke of Kent, aged 52; and
— Jan. 29. *Died.*] George III. aged 82; both buried at Windsor.
— Feb. 23. A conspiracy to assassinate His Majesty's Ministers discovered; and in May, Thistlewood and others executed.
— March: General Election.—New Parliament met, 21 April.
— Aug. 1. The REGENT'S CANAL opened.
- 1821 The one and two pound Notes withdrawn from circulation; and Gold Sovereigns of 20s. and Half Sov. of 10s. value issued.
— June. The Turks and Greeks at war.
— July 19. His Majesty KING GEORGE IV. crowned; visits Ireland; Hanover; and in 1822, Scotland.
— *Died.*] Sir William Herschel, Astronomer.
- 1823 Counter Revolution in Portugal.
- 1824 Sept. King of France (Louis 18) died, and Charles X. succeeds.
- 1825 South American Independence established.
— Independence of Hayti acknowledged by France.
— June. First stone of the new London Bridge laid.
- 1826 Portugal: Don Pedro IV. issues a New Constitutional Charter.
— June: General Election for Second Parliament of George IV.
— Destructive fire in Huntingdon and Cambridgeshire.

An Account of the ECLIPSES of the Sun and Moon, and other Appearances in the Heavens, in the Year 1827; calculated from the most correct and approved Data. Founded on the Universal Law of Gravitation.

FROM the position of the Lunar Nodes we may expect four ECLIPSES this year, that is, two of the SUN, and the same number of the MOON; but, from our situation on the surface of the globe, only one of these phenomena will be visible to the island of Great Britain, and that is a partial obscuration of the MOON; when the Moon will rise in the E. N. E. part of the horizon, considerably immersed in the conical umbra of the earth.

The first of these appearances is a solar defect on Thursday, the 26th day of April, and, though the Moon's northern latitude is such, as to produce a central Eclipse in latitude $52^{\circ} 35'$ N. longitude $34^{\circ} 26'$ east, yet no part of this phenomenon will be visible to us.—This Eclipse, as to its general appearance, begins at 13^m before our one o'clock in the morning, when it first touches the earth in north latitude 22° , and east longitude $72^{\circ} 51'$; which falls near the city of *Cambay*, or the northernmost part of the gulf of the same name; it now very quickly extends over other parts of *Hindoostan*, and proceeds over *Persia*, *West Tartary*, the *Caspian sea*, when, entering *Russia*, the Sun becomes centrally eclipsed near the city of *Novogorod*. The central track extending northward, passes near the city of *Moscow*, and leaving the continent near *North Cape*, passes between *Spitzbergen* and *Nova Zembla*, thence in its progress over the *Arctic Ocean*, the Sun will be centrally eclipsed when on the meridian near the Pole, in latitude $87^{\circ} 33' 56''$, and longitude $124^{\circ} 59' 6''$ east. The central annulus now making a kind of spiral turn about the Pole, very quickly leaves the Earth, over an inlet leading into the N.W. part of *Baffin's Bay*, in latitude $74^{\circ} 47'$ N. longitude $89^{\circ} 2'$ west. After the annular Eclipse has made its final exit, the Sun will appear partially obscured to *Icy Cape*, and the dreary inhospitable regions lying between *Siberia* and the continent of *America*; but the last indentation caused by the opaque body of the Moon, will be on the Sun's upper limb at his setting, in latitude $48^{\circ} 35' 11''$ north, longitude $159^{\circ} 25' 20''$ west; which will be in the *Northern Pacific*, a few degrees S. E. of the *Fox Islands*, a group, which con-

1827. B 6

stitutes a part of the *N. Archipelago*. The Sun's semidiameter at this time so far exceeds that of the Moon, that even on that part of the central track, where the Sun has the greatest altitude, the annulus or ring of light surrounding the dark body of the Moon, will be nearly $\frac{3}{10}$ of a digit in breadth. This phenomenon, backed by the cerulean azure of the vault of heaven, when seen through a serene atmosphere, must strike those of a contemplative mind with admiration and delight.

The next in order of these Eclipses, is an *invisible* one of the MOON, on *Friday* morning, *May* 11th, and which begins at 47^m after six, arrives at the greatest degree of obscuration at 20^m after eight, and the Moon leaves the shadow of the earth, or the Eclipse ends, at 54^m after nine o'clock that morning; making the duration 3^h and 7^m and the digits eclipsed on the Moon's southern limb, when deepest immersed in the umbra of the earth, 11^d $\frac{4}{5}$ of the lunar diameter, being within $\frac{1}{5}$ of a digit of a total deprivation of her light. At the beginning, the Moon will be vertical in latitude 17° 2' 23" south, longitude 102° 35' 57" west; and she will rise during the Eclipse to *Australia*, *New Guinea*, and the adjacent Isles lying between *Mindanao*, (one of the *Philippines*) westward, and nearly to the *New Hebrides* eastward; but to *Borneo*, *Java*, and the northern part of the *Philippines*, the Moon will not rise till after the Eclipse is over. On the contrary, the Moon will set more or less obscured to a large portion of the *Atlantic Ocean*, the *Cape Verd Islands*, *Brazil*, to *Labrador*, *Newfoundland*, and the northern parts of *Canada*: but the Moon will set a little before the Eclipse begins, to *St. Helena* and the western extremity of *Africa*. This phenomenon will be visible the whole time of its continuance to the greater part of *N. and S. America*, and the *Pacific Ocean*: in the latter extent are included *New Zealand*, the *Auckland*, the *Friendly*, the *Society*, *Gallipago* and *Sandwich Isles*, &c. — At the time of the greatest obscuration the Moon will occupy the zenith in latitude 17° 13' south, longitude 124° 58' west; and at the end she will be directly over latitude 17° 24' south, longitude 147° 20' west; (which falls in that part of *Polynesia* near the Island of *Otaheite*;) having traversed the zenith, from the beginning to the end of this Eclipse, over an extent of the *Southern Pacific* of 2557 geographical miles.

The *third* Eclipse this year is of the SUN, on *Saturday*,

October 20th, in the afternoon, but as the Moon at the time of true \odot has southern latitude, of course it will *not* be visible to *us*, or to any part of our northern hemisphere; although within the antarctic regions the Sun will suffer a central, and probably, a total Eclipse at noon day, about 50 minutes before he sets to the metropolis of *Great Britain*. The central appearance will begin at 2 h. 55 $\frac{1}{2}$ m. in latitude $39^{\circ} 27\frac{1}{2}'$ south, longitude $142^{\circ} 26'$ west; advancing southward it crosses the antarctic circle, when shortly after the Sun becomes centrally eclipsed at the time of his passing the northern meridian, in latitude $69^{\circ} 40'$ south, longitude $65^{\circ} 14'$ west; the central track now shaping its course very nearly along the latter mentioned parallel, leaves the earth in latitude $68^{\circ} 53'$ south, longitude $43^{\circ} 47'$ east, at 57 m. after four o'clock. Hence, it appears, that the line of visible central coincidence of the Sun and Moon, will not pass over any part of the terrestrial surface of our globe, but is wholly confined to a portion of the waters of the *Southern, Pacific and Atlantic Oceans*; yet, nevertheless, this will be a large Eclipse to a chain of Islands called *South Shetland*, to the *Falkland Isles, Terra-del-Fuego, Powell's group*, and the neighbouring Isles.

This Eclipse will also be visible to *Patagonia, Chili*, and the province of *Buenos Ayres*, which division of the Viceroyalty of *La Plata*, may be considered to include its northern boundary over the South American Continent. It will moreover be very large at the *Pole*, and throughout the *Frigid Zone* of the austral regions. Although the apparent horizontal semidiameter of the Sun exceeds that of the Moon at the time of this Eclipse, by about $3''$, yet where the Sun has an altitude equal to, or exceeding 10° on the central track, the Eclipse will be total.

The *fourth*, and last of these Eclipses, is one of the MOON, on *Saturday, November the 3d*, in the afternoon, and will in part be *visible* to the Island of *Great Britain*, should the atmosphere prove clear at the time. According to apparent time, and the meridian of the Observatory at *Greenwich*, this Eclipse will begin at 3 h. 29 m. 34 s. the Moon will rise at 4 h. 45 m. 34 s. the Middle, or time of the greatest obscuration will be at $5^{\text{h}} 7^{\text{m}} 42^{\text{s}}$ and the End at $6^{\text{h}} 45^{\text{m}} 49^{\text{s}}$. At the time of the D 's rising, she will have the northern part of her disc immersed in the shadow of the earth nine digits $48'$ and $36''$; but at the greatest obscuration, the digits eclipsed will be $10^{\circ} 34' 2''$, and the

last section of the umbra will be seen to leave the Moon at $31^{\circ} 57' 45''$ from the vertical point of her disc, agreeably to the following Type.

As the equation of time on the day of this Eclipse, is the maximum of the year, I have adapted the following Table to *mean solar time*, (or that shown by a well regulated clock or watch,) according to the meridians of the respective places.

| November 3rd, in the Afternoon. | Greenwich. | Falmouth. | Dover. | |
|------------------------------------|------------|-----------|----------|--------|
| | h. m. s. | h. m. s. | h. m. s. | |
| Beginning - - - | 3 13 18 | 2 53 8 | 3 18 32 | Mean. |
| Middle - - - - | 4 51 26 | 4 31 16 | 4 56 40 | Solar. |
| End - - - - - | 6 29 33 | 6 9 23 | 3 34 47 | Time. |

With respect to the more general appearance of this Eclipse, relative to other parts of the globe, I may observe that, at the beginning the Moon will rise to the S. W. parts of *Madagascar*, and the eastern parts of *Africa*, she will also rise to some parts of *Turkey*, *Germany* and *Sweden*; at the same time she will set to the *Society Isles*, and when the Moon rises at *Greenwich*, she will set to the *Sandwich*, and some other small Islands in the *Pacific Ocean*. At the end of the Eclipse, the Moon will rise to the Island of *St. Helena*, *Sierra Leone*, and the *Canary Isles*. The whole of this Eclipse will be visible to

Russia, West Tartary, Persia, Arabia, Hindoostan, China, Australia, Borneo, New Guinea, and the Philippine Isles; and the Moon will occupy the zenith during this Eclipse, from near the last mentioned Isles, to the coast of Coromandel; the Eclipse terminating when the Moon is directly over that part of Hindoostan, situated about 100 miles N. of Madras.

Other Celestial Appearances pointed out, chiefly for the purpose of Telescopic Observation.

As the Earth revolves round the Sun in an orbit which is not less than *one hundred and ninety millions of miles in diameter*, we must in the extremes be so much nearer, or further from the superior planets at one time than at another; and to the inferior planets, *Mercury and Venus*, the difference will be equal to the diameter of their respective orbits. Though the diameter of the earth's orbit is a visible line of extension when viewed from the planets, yet if we suppose the eye removed to the distance of the fixed stars, it, with the whole area of the orbicular space, would appear no larger than the point which terminates this sentence!

But now, more immediately, to the subject of this division of my work; I may first inform the reader, that *MERCURY* will be visible in the mornings a short time before sun-rise, on or about *January the 4th, May 3d, August 31st, and December 19th*; and again in the evenings of *March 18th, July 16th, and November 10th*; but of these eastern elongations, that of *March the 18th* will be the most favourable time of the whole year for seeing this small planet.

The best time for viewing the planet *VENUS* with a telescope, will be in the mornings from about the middle of *January*, to near the beginning of *March*; and though during this time she will be moving through the western quadrant of the inferior part of her orbit, yet her altitude above the horizon, will be too small, to render her so striking an object in the heavens as at other times when she attains a greater elevation. Although this brilliant planet will appear a very interesting object to the naked eye, in the mornings, during the spring and summer months; yet she will at this time, or indeed, for the rest of the year, be too far from the earth to admit of a favourable opportunity of seeing her advantageously with a telescope.

40 Meteorological Observations.

The Moon will make a near appulse to this beautiful planet, on the 22d of *February*, in the morning; the visible conjunction will be at 23^m after nine o'clock ap. time, when the northern limb of the *Moon* will be only 1' 29" from the southern limb of *Venus*. This planet is at its greatest brightness, on *January* the 27th.

The planet *MARS* will not be in opposition to the Sun this year, and therefore, a less interesting object for the telescope than if nearer the earth. He will be in ζ with the Sun on the 12th of *July*.

JUPITER will be in opposition to the Sun on *March* 30th, at midnight, hence during the months of *February*, *March*, and *April*, he will be so situated with respect to the earth, as to afford many opportunities for viewing the variable phenomena of his belts, and satellites; the latter of which may be often observed to be eclipsed by the shadow of the planet. The Eclipses of the 4th satellite are much more rare than those of the three interior ones, owing to the great inclination of its orbit; for this reason, there will only be one visible with us in the present year, and that is on the 28th *February*, in the morning, when the Immersion takes place at 2^h 36^m and the Emersion at 3^h 19^m mean time. Conjunction of α and γ in μ , *April* 9th, at 4, P. M.

Although the earth in its revolution round the Sun, does not come into conjunction with the planet *SATURN* during this year, yet in the months of *January*, *February*, and *December*, this singular body with its amazing ring, will frequently prove interesting objects to the telescopic observer. The conjugate diameter of the ring is now gradually decreasing, and will continue to do so for some years, when that, and of course the ring, will appear to vanish with telescopes of only moderate powers. On the 14th of *January*, *Saturn*, whilst moving retrograde, passes very near the star γ in Π , and in his advance arrives at the same again on the 14th of *April*.

METEOROLOGICAL OBSERVATIONS, &c.
Relating to the Year 1825; with some Remarks on the
BAROMETER, THERMOMETER, &c.

COURTEOUS READER,

AS most people feel interested in the various changes of the Atmosphere, especially the Farmer and Husbandman; it is moreover well known that after the usual saluta-

tions, on meeting with a friend or an acquaintance, the weather is generally the next topic of conversation. Since it then appears that this daily phenomenon enters into the feelings, or pursuits of most people, I shall, therefore, without further preface, give my readers a short meteorological review relative to the year 1825.—JANUARY.—The year commenced with a very high temperature for the season, accompanied with wind, and some slight dashes of rain; from the 5th to the 16th fair, though mostly cloudy; and the maximum pressure throughout England, appears to have been about the 9th and 10th of this month. After the 16th, the weather became changeable; there was very little frost or snow during the whole month.—FEBRUARY came in with changeable weather, and which continued till about the 9th. On the 2d, the thermometer at *Epping* was 30° , on the 3d it was as high as 50° , and on the 5th only 25° ; but it is rather remarkable, that at *Carlisle*, on the 2d, the thermometer was 50° , on the 3d, a severe frost commenced, and on the 5th, the thermometer stood at 23° . A heavy fall of snow on the 4th, in the north of England, but with us in the south, there was but little, barely sufficient to cover the surface of the ground. The weather after the 9th was in general fair, though cloudy, with some hoary frosts and foggy mornings.—MARCH was very changeable till near the middle of the month; on the 6th very stormy, with heavy rain in the north, but at *Epping* this was a fine day, presenting \(\circ\), \(\ominus\)—and \(\ominus\), with other intermediate modifications of cloud. The latter half of this month was mostly fair, and in general bright and pleasant.—The first three weeks in APRIL proved dry, the days were bright, and the weather very warm at times: on the 9th, 10th, and 11th, the thermometer was as high as 70° at *Epping*, and De Luc's hygrometer stood at about 50. From the 21st to the end of the month, fine refreshing showers, which proved of great service to vegetation, especially to the late sown spring corn. On the 30th much lightning, and heavy peals of thunder at *Carlisle*, but at *Epping* the day was fair and pleasant.—MAY at the beginning was showery, and on the 6th, in the evening, a most dreadful thunder storm, accompanied with torrents of rain, passed over the city of *Carlisle*; but at *Epping* this was a fine day, the air was sultry, with the thermometer at 76° ; there was lightning in the evening, but no thunder. On the afternoon of the 12th, and morning of the 13th, heavy rains

at *Epping*; but at *Gosport, Boston, &c.* the fall seems to have been but trifling. After this the weather was fair and bright, with drying winds till about the 27th, when we had light showers, and a diminution of temperature for the remainder of the month.—**JUNE**, during four or five days at the beginning, was cold and gloomy, with frequent showers, afterwards the weather was bright and at times hot; at *Epping*, on the 12th, the thermometer was 84° . At the end, the weather was again showery.—**JULY** was excessively drouthy, and at times extremely hot; on the 18th and 19th, the maximum heat at *Epping* was 92° ! at *New Malton, Yorkshire*, 88° , at *Carlisle* 82° , and at *Kinfauns Castle, Scotland*, 80° . At the first mentioned place, the temperature of water in the Sun, at eight inches from the ground, was 105! This was the hottest time since the 13th of the same, 1808; seventeen years ago. Wheat was cut in many places about the latter end of this month.—**AUGUST** came in very hot, for on the 1st, at *Epping*, the maximum temperature was 90° ; after the 2d, till about the 20th, the weather was frequently wet; then fair till the 27th, afterwards rain at times, with sultry heats to the end.—**SEPTEMBER** was unusually warm throughout the month; the first seven or eight days were fair and dry, afterwards changeable to the end. At *Epping*, on the 17th, between one and three, P.M. a heavy shower, during which, at 1h. 52m. an electrical flash darted from the clouds, followed instantly with a tremendous and momentary clap of thunder.—**OCTOBER**. The first half of this month was generally very mild, with heavy rains between the 5th and 10th; afterwards fair and pleasant, till about the 17th, the weather then became cold and stormy, and continued so some days, but at the conclusion of the month it was more calm and pleasant.—**NOVEMBER** proved very variable as to temperature and density; the weather at times was excessively boisterous, accompanied with heavy and sudden falls of rain. Some sharp frosts between the 10th and 13th, in the north of England, with immense quantities of snow on the mountains. During the greater portion of **DECEMBER**, the weather was unusually mild, and damp, with frequent rains. A considerable depression of temperature took place after the 25th, and on the last day of the year the thermometer at *Carlisle* was 20° , or 12° below the freezing point of water, and on the same day at *Epping*, the minimum temperature

was only $26\frac{1}{2}^{\circ}$; but at *New Malton* it was 18° , and at *Kinfauns Castle*, 12° : this was the coldest day of the year in these parts.

Judicium Astrologicum, pro Anno 1827.

VOX CÆLORUM, VOX DEI: The Voice of the Heavens is the Voice of God. — He speaketh in all the Changes of the Seasons, and of the Times.

COURTEOUS READER,

MEDITATING on the various Planetary Positions of this year, and more especially on those Configurations which seem more immediately to relate to the present state of Europe, it brought to my remembrance a portion of a very ancient prophecy, which runs nearly in the following words:—A Star shall rise in *Europe* towards the great House of the North, whose beams shall unexpectedly enlighten the whole world. This shall be in a most desired time, when mortals wearied with wars, shall unanimously desire peace; they shall strive indeed by occasion of a long-lasting *Interregnum*, with various subtleties which shall obtain the reins of Empire. But at last the offspring of the ancient Blood shall overcome, and proceed victoriously by force of arms, until resisted by contrary Fates; for about the same time this Star being set, another coeval Light blazing with more ardent flames of war, shall spread his Empire, even to the coast of the *Antipodes*. But first, *France* shall submit her neck to his yoke, and many shall come in ships to supplicate the protection of *Britain*; *Italy* faintly breathing towards sceptres, so high, shall stretch out to him her languishing hand; but this bright beam before his time, shall, with the vast desire of men, abscond himself in the clouds of the Gods.—After giving thus much of the *Sibylline Oracle*, with deference I submit the same to the impartial consideration of my readers, leaving them to construe its various parts according as time, and the nature of events may seem to justify.

And thou Gog shalt come from thy place out of the north parts, thou and many people with thee, all of them riding upon horses, a great company, and a mighty army, and thou shalt come up against my people of Israel, as a cloud to cover the land.

I SHALL NOW, as has been my practice for many years, conclude this article with an **HIEROGLYPHICAL** Representation alluding to the present Times.

AN ASTROLOGICAL *Judgment on the Four Quarters of the Year 1827, from the Influx and Influences of the PLANETARY ORBS, with respect to the Affairs of the World. And First—*

Of the WINTER QUARTER, called the Brumal Ingress.

THIS Season of the Year is known to begin in our Northern Latitudes when the Sun attains his greatest austral declination, and which at this time happens on *Friday, December 22d, 1826, at 7^h 42^m 58^s* in the morning; when we have 23° of *Sagittarius* on the angle of the ascendant, and 28° of *Libra* on that of the *Medium Cæli*; the *Moon* has just entered this latter sign, and *Jupiter* occupies the 12th degree of the same; both being located in the cadent house of the southern angle. But what is of more importance in an Astrological point of view, is, the partite γ of *Saturn* to the lovely *Venus*, not only from cardinal signs, but from the east and west angles of the horoscope: they are besides both retrograde, and the latter planet is also in ζ with *Sol* in the first

house, both occupying an interrupted sign, as does $\frac{1}{2}$ in the seventh : they are moreover, all three within orbs of a \square aspect with *Jupiter* and the *Moon*, likewise from cardinal signs. These certainly must be considered ominous configurations, and seem to concern *Russia*, *Holland*, *Austria*, and our *East India* possessions, and also the cities of *Constantinople*, *Venice*, and *Rome*. We may expect to hear of new eruptions in those parts of the world, attended with much violence and villany, with fresh and cruel persecutions.

In the north of *Europe* the people are under a fearful excitement, whence proceeds disorder, confusion, and fighting ; contentions and hot debates amongst divers great senators, some of which will, under the specious pretence of redressing grievances, endeavour to protract the good resolutions taken to secure and preserve the public interest ; but their base designs will soon be exposed, and the true Patriots of their country will eventually prosper in their plans for the good of the state. Some important news from the north of the ill success of a treaty, which had been for a long time in debate ; and also great menaces between a northern and southern potentate, about rights and privileges. The prosecution of some religious matters is now carried on with great vigour :—It is wisdom to look to the end of the matter.

Saturn having now left the horoscope of *London*, where he has been for a long time, and in his last retrogradation in that division of the heavens, publick credit received such a shock, not only in this city, but also throughout the country, as will be long felt and remembered by numberless individuals ; and probably, had I mentioned such a circumstance in my former Almanacks, the hint might have passed unregarded by those whom it most concerned. I say the gloomy messenger, *Saturn*, has left the ascendant of *London* ; now *Scotland*, *Holland*, and ye cities of *Constantinople*, *Amsterdam*, and *Cadiz*, look out : he is now coming to salute you, and in a way that will be most unwelcome ; many who have degraded, disgraced, and set aside those whose merits deserved a better fate, will themselves be found fraudulent in their trusts, and guilty of the basest peculation :—Oh you Saturnine rogues, prying ζ has discovered you. The general state of the weather during this quarter is likely to be frosty, accompanied with much snow, with intervals of wind and cold rain.

Of the VERNAL, or SPRING Quarter.

THIS interesting division of the year, when the genial influence of the solar rays loosens the gelid earth, and a general resuscitation of animated nature takes place in our northern hemisphere, is found to begin this year on *Wednesday*, the 21st day of *March*, at 2m. 58s. after nine o'clock in the morning; at which time I find, by astronomical calculations, that the ancient duodecimal division of the heavens, with the places of the planets therein, will be found to agree with the following Scheme, called the Grand Radix of the year's revolutions.

SCHEMA CÆLI.

It will be unnecessary my saying any thing relative to the mundane and zodiacal positions of the planetary bodies, as the reader will readily see by the above figure their situation in the heavens at the time here specified. I shall, therefore, proceed to offer a few remarks, (as far as my limits will allow,) on the most material configurations at this ingress. As *Mercury* is lord of the eastern angle, and *Saturn* that of the *Medium Cæli*, and also of the seventh and eighth houses, these, with the situations of ♄, ♃ and ♋ in the horoscope, leave me to judge, that within the bounds of this quarter, the New Par-

liament will be warmly engaged in many important matters of state, not only as respects the internal affairs of this country, but the critical state of things both in the *East* and *West Indies*, are likely to occupy a considerable portion of its attention. Our cabinet also will be frequently engaged in matters relative to the European confederacy, and messengers will arrive from the different courts bearing intelligence of the greatest moment. The planetary aspects at the entrance of this quarter, seem moreover to import a spirit of uneasiness and discontent in the common people, unhappy controversies and debates amongst mankind, and that about very trivial matters, treachery among friends, or those pretending to friendship, no good understanding amongst persons concerned in publick affairs.

I have reason to fear that the end of the last quarter, and the beginning of this, will prove a very sickly time; melancholy and nervous affections, agues, tooth-ach, pains in the limbs and joints, coughs, convulsions, and consumptive complaints, are likely to be more than usually common. People of delicate constitutions should not by any means expose themselves to the evening or night air, or go too thinly clad; a timely caution in these respects, under the present stellar influences, and season of the year, will be the means of saving many from an untimely grave.

Of the ESTIVAL, or SUMMER Quarter.

ACCORDING to astronomical computation, I find this quarter begins on *Friday, June 22d*, at 22^m 7^s after six o'clock in the morning, when 40' of *Leo* ascend on the eastern angle, and 6° of *Aries* occupy that of the southern; the planet *Jupiter* is found in the third house, near the cusp of the fourth, *Venus* and the *Moon* take up their abode in the tenth, and *Sol*, *Mercury*, *Mars*, and *Saturn*, are congregated in the twelfth; besides, these bodies are within orbs of the following aspects, *viz.* $\odot \propto \♁$, $\odot \odot \♁$, $\odot \odot \♁$, $\odot \propto \♁$, $\odot \mathcal{D} \♀$, $\odot \♁ \♁$, $\square \♁ \mathcal{U}$, $\square \odot \mathcal{U}$, $\square \mathcal{U} \♁$, $\triangle \mathcal{U} \♀$, and $\triangle \mathcal{D} \mathcal{U}$. These are certainly remarkable ecliptic positions, and others at the same time in mundo perhaps still more so. In my judgment on these positions, I have not room to offer much, but it may be observed, that with respect to those \odot 's wherein $\♁$ and $\♁$ intrude themselves, they have always been considered of an evil tendency, or inimical to human nature; but some more so than others, according to the parts of heaven in which they take place. In

general, the effects of these malefics show themselves by violent hostility and force of arms; but much of this quarter will be spent in projects and contrivances that shall be most likely to induce and facilitate the designs in hand: but the execution of them will be delayed till these bodies come to the square of each other, and then you may expect the motion of men in arms, &c. and in some parts intestine broils, insurrections, treason, and murder, stain the land with innocent blood; and as ♃ bears considerable sway in these transactions, we may look for dissensions amongst kings and princes, violence, and contention between magistrates and rulers, and anarchy and confusion amongst the people, with sorrow and desolation; these terminating in the overthrow of states, and in the death of princes.

Of the AUTUMNAL Quarter.

It appears from actual calculation of the solar motion, that this quarter will begin on *Sunday*, the 23d day of *September*, at 23^m 32^s after eight o'clock in the afternoon; when the eighth degree of ♀ will be on the cusp of ascendant, and the fourth degree of ♁ on the *Medium Cæli*; at the same time ♃, ♆ and ♁ in ♀, occupy the succedent house of the *Imum Cæli*, and the ☉, ☽ and ♃ the cadent house of the western angle.

FROM all which, it is apparent, that after many secret cabals and private councils, things seem as if they were now nearly ripe for action, but owing to some powerful influences they may be some time longer deferred. Princes act cautiously, and though of late they have apparently been on friendly terms, now seem to be shy, and to examine and consider past actions. Things are carried with a high hand against a neighbouring power, and affairs in general in the North seem very unsettled; and a certain power is much afraid of its neighbour, and that not without reason, and it is therefore upon its guard. It is moreover not improbable but that we hear of hostilities begun among the *Northern* powers, in which the affairs of the *East* seem to be very much mixed. Some secret counsels are carried on between two very potent Powers, which seem to make their friends suspect the consequence of their daily conferences. Death seems to threaten some great men; and it is very likely that a Person who has for some time been a very great and active minister, may be now unfortunately removed by some unwarrantable means.

POOR SETTLEMENT.—By 6. Geo. IV. Chap. 57, No person shall acquire a settlement in any parish or township maintaining its own poor, by or by reason of settling upon, renting, or paying parochial rates for any tenement not being his or her own property, unless such tenement shall consist of a separate and distinct dwelling-house or building, or of land, or both, bona fide rented by such person in such parish or township, at and for the sum of 10*l.* a year at the least, for the term of one whole year, nor unless such house or building, or land, shall be occupied under such yearly hiring, and the rent for the same to the amount of 10*l.* actually paid, for the term of one whole year at the least; provided always, that it shall not be necessary to prove the actual value of such tenement.

VESTRIES.—By 59. Geo. III. Cap. 85, Any person assessed to the Poor Rates, although such person shall not reside in the parish, may vote in vestry according to the value of the premises rented.

OLD PARR'S MAXIMS OF HEALTH.—Keep your Feet warm by Exercise, your Head cool through Temperance; never eat till you are hungry, nor drink but when Nature requires it.

QUARTER SESSIONS.

- Nottinghamshire* —January 8th, April 23rd, July 9th, October 15th.
Nottingham —January 11th, April 26th, July 12th, October 18th.
Derbyshire. —January 9th, April 24th, July 10th, October 16th.
Leicestershire. —The same as Derbyshire.

TO DISCOVER WHETHER SEEDS ARE SUFFICIENTLY RIPE.—
 Seeds when not sufficiently ripe will swim, but when arrived at full maturity, will be found uniformly to fall to the bottom, a fact that is said to hold equally true of all seeds from the Cocoa nut to the Orchis.

THE RECREATIVE PORTION.

SEDAN CHAIRS—The first introduction of this curious machine into London was in the year 1634, when the sole privilege to use, let, and hire a number of such covered chairs for fourteen years, was obtained by Sir Sanders Duncombe. Dr. Johnson in his Dictionary, conjectures they were originally made at Sedan, a town in the north-west of France. The first seen in England, was in the reign of the First James, and was used by the Duke of Buckingham to the great indignation of the People, who exclaimed, *that he was employing his fellow creatures to do the service of beasts.*

SHOEING OF HORSES.—The practice of shoeing horses was introduced into England by William the Conqueror. Horse shoes, however, are not absolutely necessary. In many countries horses are rarely, and in some never shod even at present. This is still the case in Ethiopia, in Japan, and in Tartary. In the ninth century, horses, it is said, were not shod always, but in the time of frost and on other particular occasions.

Alfred the Great was of so charitable a disposition, that when reduced to his last loaf of bread, he divided it with a mendicant pilgrim.

At Aylesbury, in Buckinghamshire, the inhabitants are celebrated for rearing early ducklings, which is carried to such an extent, that it is said £3,000 have been received in that town for the supply of the London markets in six weeks, usually terminating in March.

GRAPES.—The heat and dryness of the summer has produced an abundance on our vines. In the year 1801, the two celebrated vines of Hampton Court, and Valentines in Essex, are said to have been amazingly productive; the former having yielded 1 ton 6 cwt. 56 lbs weight; and the latter 1 ton 2 cwt. 27 lbs. For one year's crop of the last-mentioned vine, the late Mr. Weltjie near forty years ago, gave the sum of *four hundred guineas.*

CAULIFLOWERS—Half a century ago, a cauliflower was a usual present from England to Portugal, and the person who received it, used to make a great feast; it is now one of the best and most general productions of the Portuguese garden.

The justly celebrated Tillotson, Archbishop of Canterbury, left at his death, nothing to his family but the copy of his posthumous sermons, which afterwards sold for *two thousand five hundred guineas.*

ANCIENT GLUTTONY—Apicius, a noted Roman glutton, is said to have spent in his kitchen the sum of eight hundred and seven thousand, two hundred and ninety-one pounds, thirteen shillings and four pence; and having only fourscore thousand pounds left, he poisoned himself lest he should be starved.

LARGE BOTTLE.—A glass bottle was made at Leith, near Edinburgh, in the year 1747, that actually held two hogsheads.—*Fudge.*

TRUE LOVERS' KNOT.—The ancient custom of making a true lovers' knot which is still retained in presents of love, originated from Nodus Herculanus, or that which was called Hercules' knot, resembling the snaky complication in the Caduceus or the Rod of Hermes; and in which form the Zone or woollen girdle of the bride, in ancient times was fastened, as Turnebus observes in his *Adversaria.*

THE HUSBANDMAN'S PORTION.

TO PREVENT HAY STACKS FROM TAKING FIRE.—When there is any reason to fear, that hay which is intended to be housed or stacked is not sufficiently dry, let a few handfull of common salt be scattered between each layer. This, by absorbing the humidity of the hay, not only prevents the fermentation, and consequently inflammation of it, but add a taste to it, which stimulates the appetites of cattle, and preserves them from many diseases.

One of the most simple and useful discoveries in agriculture, is to mix layers of green or new cut clover, with layers of straw in ricks or stacks. Thus the strength of the clover is absorbed by the straw, which thus impregnated, both horses and cattle eat greedily, and the clover is dried and prevented from heating. The practice is particularly calculated for second crops of clover and rye grass.

THE SCAB IN SHEEP.—This disorder is of the same nature as the mange in horses, and may be cured by the same means, that is, by rubbing upon the diseased parts the following liniment; sulphur vivum, finely powdered and levigated 4 ounce, train oil, from 12 ounce to 1 pint, oil of turpentine 4 ounce, mix well together. This liniment must be carefully applied so as to reach the bottom of the sores, the scabs being previously scraped off with a blunt knife, or any suitable instrument.

PASTE FOR HORSES BROKEN KNEES.—Pipe clay and alum equal parts. Let them be finely powdered, and mixed with water to the consistence of cream. This paste soon gets dry, and requires to have water added to it each time it is applied. It is sometimes necessary to use a stronger application, such as red precipitate and burnt alum. After the wound is healed, apply tar ointment, coloured with lamp black or bole.

BALLS FOR BROKEN WINDED HORSES.—Take of Barbadoes tar, Venice turpentine, and Castile soap, each 2 ounce. Squills in powder 10 ounce, with Calomel 3 drams. Beat them well together, then add nitre, 2 ounce. Aniseeds and carraway seeds fresh powdered, of each 1 ounce. Beat them into a mass with honey and liquorice powder, and divide into 10 balls.

RECIPT FOR CHILBLAINS.—Upon the first symptoms of chilblains appearing, the parts affected, should be frequently rubbed with equal parts of vinegar and cold water, and afterwards dried thoroughly. When the chilblains are decidedly formed, and the itching and irritation very severe, the following lotion applied on linen rags proves very efficacious.

Take alum $\frac{1}{2}$ drachm.—Vinegar, 6 table spoons full.—Spirits of wine, 2 ditto.

SOLVENT FOR PUTTY.—To remove panes of glass from sashes, spread with a small brush, a little nitric or muriatic acid over the putty, and it will soon become soft, and can be removed without injury to glass or frame.

CEMENT FOR BROKEN CHINA, GLASS, &c.—Take quick lime and white of eggs, or old thick varnish, grind and temper them together, and it is ready for use.

Frequent accidents having happened from eating muscels of a poisonous quality, the following method will prove whether any danger exists. Put a shilling in the vessel with the Muscels, and let it continue therein while they are over the fire; when they are removed, take out the shilling, and if it continue of a bright colour, there is no poison, but if it is tinged of a black or dark hue, it is a demonstration that copper is the cause; the muscels being bred on a copperas bed, consequently rendering them poisonous and unfit for use.

AMOUNT OF THE REVENUE SINCE THE CONQUEST.
