# FEBRUARY XXVIII Days.

4

THESE lengthening days the approach of Spring presage, Though clouds roll o'er, and bleak the north winds rage: The thrush and wood-lark chaunt their matin lay; Now buds are seen; some plants their flowers display: The great Conjunction works,—which Mexico, Greece, India, Russia, Saxony, will show!

## 18 SEPTEMBER XXX Days.

This month comes in with weather bright and fair, And lovely flowers perfume the gentle air: From rolling wains the sounds of "*Harvest-home*" Arrest our ears, if in the fields we roam: Some favourable news now reach our land; E'en foes become our friends at Heaven's command.

# 24 DECEMBER XXXI Days.

Now, mounted in his car, the hoary Sire Arrives in storms, and dims the solar fire; Decks in bright crystal robes the naked boughs, And rolls along the plains his drifting snows. 'Tis *Christmas* now,—and Heaven's Redemption-plan Should teach us kindness to our fellow man!

#### THINGS TO BE BORNE IN MIND.

In JANUARY. That the 5th is a Transfer day at the Bank. That before the 8th, Fire Insurance policies, due at Christmas, must be paid. That Hilary Term begins on the 11th, ends on the 31st. That most of the Quarter Sessions are held in the first week of this month.

In FEBRUARY. That the 3d is Bishop Blaise's holiday, the 14th St. Valentine, and the 24th is St. Matthias, and is a Holiday at several of the Public Offices.

In MARCH. Remember St. David's and St. Putrick's days. Municipal assessors appointed on the 1st; also, that Overseers are to be appointed on the 25th, and the old Overseers verify their accounts within fourteen days.

In APRIL. Returns relative to the Assessed Taxes are delivered early in this month. Transfer day for several of the Public Funds, the 5th. Fire Insurance due at Lady-day, must be paid before the 8th. That Easter Term begins on the 15th. Quarter Sessions, 1st week in this month.

In MAY. That Easter Term ends on the 9th, that the hop-duty is collected on the 15th, that the 24th is the QUERN'S birth-day. And remember." round about the May-pole" from the 1st to the 13th, if the May-pole is falling, subscribe for another, or apply to the Lord of the Manor, and see what he will do.

In JUNE. Overseers, on the 20th, to fix on the church doors notices as to persons qualified to vote for counties; persons on the register need not inake a new claim, unless the qualification has been changed. Drink the Queen's health again on the 20th. Trinity Term, which began May 23d, ends the 13th of this month. So farewell to the Lawyers until November. *Quarter Sessions*, the last week.

In JULN. Transfer day again on the 5th, and Fire Insurance premiums paid before the 8th. Appraisers' licences (who are not auctioneers) to be taken out on the 5th. The 20th is the last day for sending in claims as county voters. Before this day, also, parliamentary electors, in efficient and boroughs, must have paid poor's rates and window tax, or lose their votes for the next year. Lists of Electors to be made out on the 31st. St. Swithin is an old deceiver; do not regard him.

In August. The 7th and 14th, being the 1st and 2d Sundays, Borough and County Lists to be affixed on church-doors. Hawkers's and Pedlars' licences taken our on the 1st. All taxes and rates due March 1. must be paid on or before the end of this month by persons claiming to be enrolled as Burgesses. — Mun. Corp. Act.

In SEPTEMBER. 4th and 11th. Lists of objections to the county electors to be affixed on church-doors. Burgerss Lists to be made out by the 5th. On the 22d, lists for the selection, by the Justices, of Highway Surveyors to be prepared.

In OCTOBER. Transfer day, Oct. 10. Burgess Lists to be revised between the 1st and the 15th. Michaelmas Fire Insurances must be paid before the 13th. Bankers' Licences taken out on the 10th. Quarter Sessions in the first week after the 11th.

In NOVENDER. 1st. Borough Councillors to be elected. The 1st a Holiday at some of the Public Offices. 9th. Mayors and Aldermen to be elected. 15th. Hopduty collected, and Attorneys' certificates to be taken out. Don't let Allhallows day be quite forgotten; but forget; if you safely can, that Michaelmas Term begins on the 2d and ends on the 25th

In DECEMBER. Forget not the Christmas festivities; nor neglect to ascertain how affairs stand with regard to your accounts, your families, your bodies, your souls. TIME is the most irresistible of all immovators; but if you have built on a right foundation for eternity, you need not fear him.

The Months in the above Table are calculated at only Twelve Months to the Year. If the yearly Wages be Guineas instead of Pounds, for each Guinea add one Penny to each Month, or one Farthing to each Week. Thus, Six Pounds per Year are Ten Shillings per Month; but, if the Wages be Six Guineas, add one Penny for, each Guinea, that is, Sixpence, and it will then be Ten Shillings and Sixpence per Month. In like manner, by adding Six Farthings to each Weck, the Wages will be Two Shillings and Flve-pence per Week.

 $Note_{-}$  — Fa. means Clock too fast; that is, your Clock, to be right, must be so much faster than the Sun Dial — slo. that your Clock must be so much slower than the Sun Dial.

To set a Clock or Watch on any Day by means of this Table: — Take out the number of Minutes and Seconds which stands against that day, and make your Clock or Watch so much laster or slower (according as the Table is marked *fa*. or *slo*.) than the time on a good Sun Dial. Thus, on January 1st, the Clock must be set 3m. 51s faster or before the dial: on the 1st of October, it must be set 3m. 51s faster or before the dial: on the 1st of October, it must be set 3m. 51s more the set 3m. 51s or 4 o'clock. Noon is not best, no near Sun-rise or Sun-set.

Note. — The Sun's risings and settings, in this Almanack, are still given in Solar Time, as best fitted for my numerous country friends. See also p. 27. Almanack for 1838.

On the POWERS OF TELESCOPES necessary for observing different Celestial Objects.

Comets may be advantageously seen with a power of about 15. The sun, moon, and nebula, with powers of from 45 to 60. Jupiter and his moons, from 80 to 130; but for estimating the brightness and apparent magnitude of the satellites, a lower power than 180 will not do well. The bells of Jupiter are scarcely discernible in a one-foot achromatic, but may be seen with an 18-inch of 1 and 3-10th aperture, and power of 40; and are beautifully seen in a two-feet achromatic, with an aperture of 1 and 6-10ths, and a power of from 40 to 60. - Note. The 3d satellite is considerably larger than any of the rest; the 1st is a little larger than the 2d, and nearly of the size of the 4th.

The phases of Venus may be seen with a power from 40 to 60; a still higher power is advisable for the phases of Mercury and Mars. These are interesting

power is advisable for the phases of Mercury and Mars. These are interesting objects; and to watch these planets changing like our moon is very instructive. The best powers for Saturn generally are from 130 to 200. To view him with full effect, he should not be more than two, or, in very fine nights, three hours from the meridian. The phenomena most worthy of observation in this planet are the following: — his beits; the singular compression at his poles, his doubte ring ; the shudow of the ring upon the planet, and of the planet upon the ring ; his seven satellites. The ring may be seen in an 18-inch telescope, with a power of 40; but, for observing the division of the ring, its shadow upon the planet, &c., a less power than 200 will scarcely suffice. As to the sutcllites, the visibility of those minute and exceedingly faint objects depends more upon the penetrating than upon the magnifying power of our telescopes. The satellites of Herschel's planet, or Uranus, were discovered with a power of

157. But magnifiers of from 300 to 600 are necessary to trace those remote bodies with full effect.

Double, triple, and quadruple stars require powers from 200 to 400 or 500. It is a curious fact, that a faint star, in the neighbourhood of a large one, will often become very conspicuous while the observation is directed to the large one; but will disappear, as if blotted out, when the eye is turned full upon it.

#### AN ACCOUNT OF

### THE ECLIPSES OF THE SUN AND MOON,

### And other Appearances in the Heavens, in the Year 1842, the Result of careful Calculations from the most correct and approved Data relative to the Celestial Bodies.

SOLAR and Lunar Eclipses are phenomena which have, in all ages of the world, excited the attention of mankind. The accuracy with which they are now predicted by astronomers must convince the most sceptical of the truth of those mathematical and physical principles by which they are enabled, with the assistance of complicated calculations, to arrive at such pleasing and unerring results. Turning to these matters, as they relate to the present year, I find there will be *five* Eclipses, that is, *three* of the Sux, and *two* of the Moox; when one of each luminary will be visible in this country.

1. The first Eclipse of this year will be an annular one of the Sun, on Tuesday, the 11th of January, in the afternoon; and as the Moon has considerable austral latitude at the time, this eclipse will be confined to the southern hemisphere, and of course be invisible to us in Great Britain. This eclipse will commence at 1h. 52m. 0s., in the *Partic Ocean*, latitude  $44^{\circ}$  40' S., longitude 159° 4' W. The Sun will rise centrally eclipsed at 5h. 51m. 42s., also in the Pacific Ocean, latitude 65' 9' S., longitude 160° 5' E. The central Eclipse passing thence to latitude 88° 41' S., and longitude 57° 28' W., where the Sun becomes centrally eclipsed at noon; and, in consequence of the Moon being near her apogee, or greatest distance from the earth, she will appear considerably less than the sun, so that there will be a beautiful annulus, or ring of light, around the moon's dark orb; similar to what was exhibited to the northern parts of England, and in Scotland, on the 15th of May, 1836. The central eclipse, after leaving those unknown regions of perpetual frost and snow, where no human being exists, passes along the bosom of the briny deep, where it terminates with the setting sun, at 5h. 19m. 24s., in latitude 44° 2' S., and longitude 54° 50' E. The penumbra now rapidly decreasing, finally quits the earth in the South Atlantic Ocean, at 6h. 59m. 6s., latitude 18° 27 S., and longitude 5° 4' W. This eclipse, amounting to about 3 digits, will be visible at Cupe Horn; and to the extreme southern parts of Africa, the Sun will appear more or less eclipsed. At the Cape of Good Hope the eclipse begins at 58 minutes past 5; the

## ECLIPSES, &c.

greatest obscuration 57 min. past 6, when 9 digits are eclipsed on the Sun's southern limb, and the eclipse ends at 55 min. past 7 P.M. mean time at the *Cape*.

2. The second in the list of these phenomena is a partial and risible eclipse of the Moon, on Wednesday, January 26th, in the evening; when the times of its different phases, according to the meridians of the respective places therein mentioned, will be found to agree with the following table:—

B and	Declipsed, Jan. 26th, P. м.	Greenwich.	Durham.	Manchester.	Yarmouth.
and the same same and the	Beginning Moon rises Greatest obscuration End	$\begin{array}{rrrrrrrrrrrrrrrrrrrrrrrrrrrrrrrrrrrr$	4 11 12 4 19 45 5 37 18	4 26 9 5 34 58	4 24 36 4 29 5 5 50 42

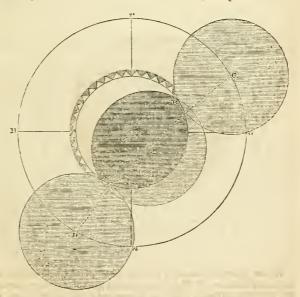

In the above delineation v is the vertex, and Ct ac centre of the earth's shadow; R M E the apparent path of the moon during the time the eclipse is visible at *Greenwich*; the moon rising at R 5 dig. 5½ eclipsed; attains her greatest obscuration at M, where she will be 9° 30' 14" eclipsed on her northern limb; and on her arriving at E., the vanishing point of the earth's shadow will be found to leave the moon at 6° 5' 30" to the left

PRINTED FOR THE COMPANY OF STATIONERS.

36

of her vertex, and the eclipse is at an end. At the beginning of this eclipse the Moon will be vertical in lat. 18° 52' N., and long. 117° 46' E.; which falls in the *Chinese Sea*, very near the western coast of *Luconia*, the chief of the *Phillipine* islands, not far from where *Mr. Anson* took the rich *Acapulco* ship, the treasure whereof he brought to *England* in the year 1744. At the termination of the eclipse the moon will be in the zenith, in lat. 17° 55' N., and long. 76° 26' E., a little to the north-east of *Visiapour*, a city of the *Hilher Peninsula* of *India* in *Asia*. Hence this eclipse will be visible not only to the extensive continent of *Asia*, but also to nearly the whole of *Africa*, to the various nations of *Europe*, and will extend itself to *Nova Zembla*, and to the *North Pole*.

5. The third is a total Eclipse of the Sun, on Friday, the 8th of July, early in the morning; and, agreeably to my announcement at page 57. of my almanack for 1840, will prove very large throughout Great Britain, and total in the southern parts of France, &c.

This eclipse commences at Greenwich (July 8.) about one hour after the sun has risen there, that is, at 4h. 55m. 20s.; attains the apparent visible 0 at 5h. 46m. 12s.; arrives at its greatest obscuration at 5h. 46m. 22s.; and the moon leaves the

sun's disc, or the eclipse ends, at 6h. 42m. 54s. The greatest obscuration will be 9° 42′ 50″, on the southern part of the sun, agreeably to the TYPE at the bottom of page 57., which may serve tolerably well for any part of *England*, excepting in the magmitude of the eclipse,—increasing to the south, and diminishing to the north from *Greenwich*. Here we have v n, a vertical, and H O, a horizontal line, passing through S, the sun's centre; C M D, the curve described by the moon's centre; B the point where the dark body of the moon makes the first visible impression on the Sun's periphery, or the eclipse begins, and E, the same where it ends; the former is 60° 1′ 53″ to the right from the sun's vertex. The following instants are given in mean or clock time according to the respective meridians.

⊙ eclipsed, July 8th, A.M.	Beginning.	Middle.	End.	Magnitude.
	4 33 30		h. m. s. 6 17 54 6 34 0	

At *Dublin*, the moon makes the first impression on the sun at  $68^{\circ}$  from his vertex; and at *Edinburgh* at  $70^{\circ}$  from that point to the right.

As Francis Moore always takes an annual trip to France, he deems it right, for the information of his friends there, to give them some particulars of this eclipse for Paris, Marseilles, &c. At Paris the eclipse will be much larger than at London, and at Orleans still larger. At the city of Marseilles, on the borders of the Mediterranean, the eclipse will be total for at least two minutes, like that which took place in the south of England on the 22d of April, 1715, and was carefully observed by the Rev. John Flamstead, the astronomer royal at Greenwich ; by Dr. Halley, and other scientific gentlemen in London, who spake of the darkness impressing "a sense of horror on the minds of the spectators." At Paris the eclipse begins at 4h. 58m. 18s.; middle 5h. 52m. 24s, when 10° 30' 43" of the solar disc will be obscured, and the end 6h. 50m. 24s., mean time at Paris. The first impression of the moon on the sun's periphery will take place at 55° to the right of the sun's vertex. At Marseilles the eclipse begins at 5h. 2m. 47s.; total darkness commences at 5h. 56m. 40s.; least distance of the centres of the sun and moon (18".5) at 5h. 57m. 42s.; termination of totality at 5h. 58m. 45s.; end of the eclipse, at 6h. 57m. 1s.: the moon's first impression on the solar disc will be at 50° 47' 18" to the right of the sun's vertex. The inhabitants of this place and neighbourhood, after having beheld the lovely orb of day arise in all his glory on the summer scene, shall see him appear to sink back into the arms of night, while the stars of

heaven resume their twinkling; they will realize the truth of the following quotation: ---

"The sickening sun shines dim, and in the sight Of gazing crowds, resigns his waning light; Mark, how he labours with relapse of night! How his diminish'd face a crescent seems, Like Cynthia newly silver'd with his beams: But as in full eclipse his light expires, Back to its source our gelid blood retires; Chill'd with surprise our trembling joints unbrace, And pale confusion sits on every face : The bleating flocks, no more the shepherd's care, Stray from those folds to which they would repair : Home to his young the raven wings his way, And leaves untasted yet his bleeding pry : While towering larks their rival notes prolong, And drop benighted in their morning song."

The general Eclipse will commence at 4h. 32m. 6s. A.M. in the Great Desert of Africa, to the south-west of Aguree, latitude 27° 55' N., and longitude 10° 50' E. The sun will rise centrally and totally eclipsed in the North Atlantic Ocean about 120 miles south-west from Lisbon. The central eclipse now passing through Portugal, Spain, France. and Hungury, will enter the Russian Empire, where I find the sun will be centrally and totally eclipsed at noon-day, in lat. 51° 47' N., long. 77° 27' E.; which falls to the south-east of Tobo'ski, not far from Lake Tchani, near the banks of the great river Irtish. Thence this phenomenon will pass over into the Chinese Empire, and will, at the setting of the sun, quit the globe, at 8h. 38m. 6s., in lat. 14° 52' N., and long. 147° 54' E., among the Ladrone Islands, in the Pacific Occan,so called, by their first discoverer, Ferdinand Magellan, in consequence of the natives pilfering some of his goods, when, in the year 1520, he touched at Guam, one of the most southerly of those islands, for water and fresh provisions. Along the track of the central eclipse, and for some distance on each side of it, the darkness will be such as to render the stars visible, which will be no small terror to those spectators who are unacquainted with the principles of astronomy. The conduct of the Chinese, &c. on these occasions is correctly described in the following lines; --

> "Thus, when the infant moon her circling sphere Wheels o'er the sun's broad disc, her shadow falls On earth's fair bosom; darkness chills the fields, And dreary night invests the face of heaven. Reflected from the lake, full many a star Glimmers with feeble languor. *India's* sons, Affrighted, in wild tumult rend the ain. Before his idol god, with barbarous shriek,

The Brachman falls; when soon the eye of day Darts his all-cheering radiance, from the gloom Emerging. Joy invades the wondering crowd, And acclamations rushing from the tongues Of thousands, that around their blazing pile Riot in antic dance and dissonant song,"

The last portion of the moon's penumbra leaves the earth, and of course the eclipse terminates, at 9h. 59m. 12s. A. M. in lat.  $5^{\circ}$  17' N., and long. E. from *Greenwich* 128° 31'. The sun will be more or less eclipsed on the north limb in *Barbary*, *Arabia*, *Persia*, *Hindostan*, &c.; and on the south limb in *Denmark*, *Sweden*, *Norway*, &c.

4. On Friday, the 22d of July, in the morning, the Moon is again partially cclipsed; but the whole of this phenomenon will be invisible to us, and every part of Great Britain, in consequence of the moon being below the horizon. I find the moon will first touch the earth's umbra at 9h. 44m. 36s.: the middle of the eclipse will happen at 10h. 47m. 24s., when  $3^{\circ}$  27' will be obscured on the moon's southern limb; and the eclipse will end at 11h. 50m. 12s. At the middle of this cclipse the moon will be directly overhead in latitude 19°O' 44", and longitude 160° 55' W. Hence the eclipse will be visible to the Friendly, the Society, and Sandwich Isles; to the western parts of America; and also to Van Dieman's Land, New South Wales, New Hebrides, &c.

5. The fifth and last eclipse of the current year is an annular one of the SUN, on Saturday, December 31st, in the evening and night, and will prove not only invisible to England, but also to the whole of Europe and Africa. This eclipse enters upon the earth at 9 min. past 4, in lat. S. 15°, and long. W. 158° 4": the central and annular eclipse commences at 15 min. past 5, in lat. S. 18° 17', and long. W. 175° 54': the Sun will be centrally and annularly eclipsed at noon-day at 1 min. past 7, in lat. S. 55° 18', and long. 104° 21' W., in the great South Pacific Ocean. The central eclipse terminates at 55 min. past 8, in lat. N. 0º 3', and long. W. 42° 55'; and the moon's penumbra quits the earth, and of course the eclipse ends at 59 min. past 9, in lat. N. 5° 22', and long. W. 60° 17'. This eclipse will be seen at New Zealand, &c.; and after traversing across the wide ocean, will enter on the western shores of South America, to the whole of which the sun will appear more or less eclipsed.

#### LUNAR OCCULTATIONS.

The Moon, owing to the short periods of her orbitical revolutions, with the constant retrogression of her nodes, will necessarily occult many of the stars in the course of the present year; but, in

looking over the list of these, I find only three, which I consider of any particular importance to my readers.

The first occultation is of Ela Tauri, a star of the third magnitude, and one of the brightest of the Seven Stars, and will take place on the 22d of January, in the morning. The immersion will be at 1h. 38m., and the emersion at 2h. 31m.; the star disappearing at I, and re-appearing at E, according to the annexed type.

Note.—During the same morning the moon will eclipse b, c, d, h, and f, Pleiadum, stars of about the fifth

The next occultation worthy of notice is of *Della Geminorum*, on the 1st of *September*, in the morning, when the star will immerge at I, at 2h. 57m., and will emerge at E, at 3h. 56m., according to the accompanying figure.

On the 7th of November, the Moon will occult the beautiful planet Jupiter ; and though the phenomenon

happens in the day-time, yet I think the planet may be seen by the naked eye, the moon being a good guide for finding it. Jupiter will immerge behind the dark limb of the moon, at 67° to the left of her vertex, and will emerge from the bright limb, at 106° to the right of the moon's uppermost point: the former takes place at 36 minutes past 3, and

the latter at 59 min. past 4 o'clock in the afternoon, mean time.

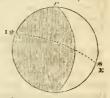

#### CELESTIAL PHENOMENA.

The Times when the Planets are in the most favourable Positions for Telescopic Observation; together with other interesting Particulars pointed out relative to these Celestial Bodies.

 $\heartsuit$ . The planet MERCURY, in consequence of his nearness to the Sun, is not often to be seen: the most favourable times for observing him, this year, will be in the evenings, about the 15th of *February* and the 11th of *June*; and in the mornings, about the 29th of *July*, and the 17th of *November*. The mean motion of Mercury in his orbit is about 30 English miles per second of time.

 $\mathcal{Q}$ . VENUS, the most brilliant star in the heavens, comes to a  $\mathcal{O}$  with the Sun on the 5th of *March*; attains her greatest eastern elongation on the 8th of *October*, and arrives at her in-

ferior  $\mathcal{O}$  on the 19th of *December*. This planet will not be a very striking object this year: the best time for observing her will be in the evenings of *November*, and the early part of *December*, when, through a proper telescope, she will appear a beautiful crescent, like the moon when two or three days old. The mean motion of Venus is 25 miles per second.

 $\mathcal{J}$ . MARS will not be in  $\mathcal{J}$  to the Sun during this year, and on that account less favourable for observation. He will be seen in the evenings of *January*, *February*, *March*, and *April*: and in the mornings of *September*, *October*, *November*, and *April*: and in On the 16th of *September* he will be in  $\mathcal{J}$  with *Regulus*. Mars moves in his orbit at the rate of 15 miles per second.

2. The planet JUPITER will be in opposition to the Sun on the 10th of July. Hence, from the beginning of June to the middle of November, this noble planet and his four satellites may be frequently observed to advantage. The mean orbicular motion of Jupiter is about 8 miles per second.

h. SATURN is visible in the evenings during the summer and the autumnal months, and appears but a few degrees to the west from Jupiter; during which period his fine ring will be an interesting object to the telescopic observer. His mean motion in his orbit is 6 miles per second.

#### METEOROLOGICAL OBSERVATIONS, ETC.

### Relating to the Year 1840; with some Remarks on the BAROMETER, THERMOMETER, ETC.

COURTEOUS READER,

Most people feel interested in the various changes of the atmosphere, especially the farmer and husbandman : it is, moreover, well known that, after the usual salutation with a friend or acquaintance, the weather is generally the next topic of conversation. Since, then, it appears that this daily phenomenon enters into the feelings or pursuits of most people, I shall, without further preface, give a short meteorological review relative to the year 1840. JANUARY commenced with a very high temperature for the season. from the 5th to the 14th some sharp frosts; afterwards often rainy and warm, with strong gales from the S.W. FEBRUARY came in with wind and rain; the easterly winds set in on the 17th, bringing dry frosty weather, which continued through the month, and the harometer during that period always stood above 30 inches. MARCH was dry, clear, and frosty: from the 25d to the 27th, in the neighbourhood of London, we had squally weather, with frequent showers of snow. APRIL was bright and clear; hoar frosts frequently occurred in the mornings, but the days were warm and pleasant: during the last week, the thermometer frequently rose above 70°; on the 26th it reached 74°.

MAY and JUNE were often showery and cold: on the 20th of the former month, a hoar trost at sun-rise. JULY was cold for the season : the chilling westerly winds shrivelled up the leaves of the trees in many places, and thereby greatly marred the summer scene : the thermometer at Greenwich on the morning of the 14th was down at 45°. Accust, upon the whole, was warm and pleasant, and suited the harvest in the southern parts of our island. SEPTEMBER was very cold, and often showery : early on the 18th the grass was whitened with frost. OCTOBER was unusually cold : the first part was dry, the latter often showery. NOVEMBER was mild and wet : the 26th, 27th, 28th, and 29th, however, were very frosty, and frequently attended with foggy weather. DECEMBER was exceedingly cold, especially the latter half: much snow on the 16th and 17th, which remained on the ground under a severe frosty atmosphere until the 30th, and great quantities of ice accumulated in the Thames. The weather, though very severe in Germany and France, and the south of England, was comparatively mild in the north, and in Scotland: and it is remarkable that, while the mean temperature of this month at Greenwich was scarcely 52°, it was full 39° at Aberdeen.

Judicium Astrologicum, pro Anno 1842. VOX CŒLORUM, VOX DEI: The Voice of the Heavens is the Voice of God. He speaketh in all the Changes of the Seasons and of the Times.

#### COURTEOUS READER :

So manifest are the Divine power and wisdom in the material world, that the most uninformed of our species must admit the positive existence of God, the Creator and Governor of all things. His footsteps may be truced in all the ample fields of nature; and the effects of his wonder-working hand may be seen in every leaf of the forest, or grain of sand on the pebbly shore. No wonder then that the magnificent concave, the stary heavens, should have, in all ages of the world, arrested the attention of man, and have led him directly to the GREAT FIRST CAUSE.

> "Who turns his eye on nature's midnight face, But must enquire — what hand behind the scene, What arm almighty, put these wheeling globes In motion, and wound up this vast machine ? Who rounded in his palm these spacious orbs?' Who bowl'd them flaming through the dark profound, And set the bosom of old Night on fire, Peopled her desert, and made horror smile? Nature's Controller, Author, Guide, and End 1"

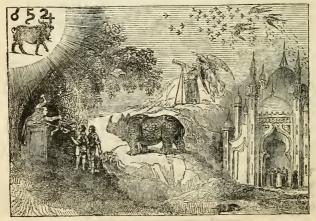

When we consult the pages of Sacred Writ, we are informed that

the orbs above have influence on things beneath; that they were designed to be for signs, and for seasons, and for days, and for years. We also read of Mazzaroth in his season, — of the bands of Orion, and the sweet influence of Pleiades; — and also of the stars in their courses fighting against Sisera. The Psalmist tells us that the Almighty appointed the moon for seasons, &c.; and we know by experience, that Night's fair Queen exercises her powerful sway over the ocean's wide domains :—

" And with song Unceasing wooes the waters as she goes, That, like a faithful lover, follow on To catch the smiling aspect of her eye."

If such be the attraction of the lunar orb on the mighty deep, the air must also be under its influence, and all organized bodies connected with the atmosphere. Observation has shown that when the planet Saturn passes out of one sign into another, that the weather is more or less turbulent and unsettled. But it is not the weather only, nor the inaninate part of creation alone, that is affected by the influences of the sun, moon, and planets; for we find they operate upon the human species, and upon all animate nature, in every part of the globe : therefore, There is no speech nor language where their voice is not heard, —their line is gone through all the earth, and their words to the end of the world. My limits forbid further observations of this kind : let me then call your attention to the Hieroglyphic, and request you to look out for time to unravel its interpretation.

## MOORE 1842.

## ASTROLOGICAL PREDICTIONS.

An Astrological Judgment of the Four Quarters of the Year 1842.

#### Of the WINTER QUARTER, called the Brumal Ingress.

THIS frigid quarter of the year, so trying to the invalid, the aged, and the destitute, begins on Tuesday the 21st of December, 1841, at 10h. 56m. P.M., when 19° of mp will be on the ascendant, and 16° of 1 on the Imum Cali, or fourth mundane angle of heaven. Again, at this ingress  $\mathcal{D}$  and  $\mathcal{D}$  occupy the third house;  $\mathcal{O}$ ,  $\mathcal{U}$ , and  $\mathcal{D}$ , the fourth;  $\mathcal{J}$  the fifth, and  $\mathcal{H}$  and  $\mathcal{D}$  the seventh. Just before the commencement of this quarter, the great, benevolent, and fortunate planet 24 passed into VP, the night-house of b, where, with that direful planet, he is in d, on the 26th of January, the effects of which will be powerfully felt before the termination of this quarter; when contentions of various kinds will be experienced, not only in Europe, but also in other parts of the world. France, Italy and Greece, are uneasy. Turkey is in a tottering condition, notwithstanding all our exertions to prop up that falling despot, whose power before long must crumble, or fall to pieces like a rope of sand. In fact, the fate of Turkey is already sealed; for there are elements in that country, which are likely to work some important changes in its civil institutions, much to the advantage of the people at large.

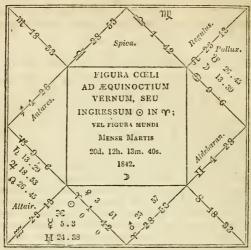

#### Of the VERNAL, or SPRING Quarter of 1842.

Stern Winter's sky no more with tempest lowers, To Arctic climes rough Boreas steals away; And vernal breezes, with refreshing showers, Are now companions of the lengthen'd day: The modest snowdrop, harbinger of Spring, Now greets the eye with robes of virgin white; With joyful notes the birds begin to sing, At peep of dawn, to hail the new-born light: Pleas'd with young life, the sportive lambs are seen Striving in mimic race with guileless mirth; Kind Nature now prepares her garb of green, To clothe her flowrets teeming into birth: At this sweet season let not man be sad, When bounteous Heaven makes all around him glad.

THIS interesting quarter of the year commences on Monday, the 21st of March, at Oh. 13m. 40s. in the morning, at which time the signs and planetary bodies will be found to agree with the following mundane scheme of the heavens: —

## ASTROLOGICAL PREDICTIONS.

### SCHEMA CŒLI.

In this radix of the year, the reader will see that the ) alone is above the horizon, near the cusp of the eighth house, and that all the erratics are below the same; it is also found, by an investigation of their configurations, that they will at this ingress form the following zodiacal aspects, viz. 8 D h, 8 D 4, and the ) approaching to a  $\Box$  with  $\mathcal{J}$ . These are certainly ominous positions, and on that account we may expect to hear of wars and bickerings amongst states and neighbouring nations : nevertheless, it is to be hoped that the prudence of our ministers will prevent our being drawn into the vortex of contention and strife, at the present critical state of affairs in Europe, and some other parts of the world. The system of Louis Phillippe seems now wound up to its utmost streich; and, therefore, some great change may shortly be experienced in France, much to the dismay of many crowned heads and regal despots. A convulsion in that country, at the present time, might shake thrones, and topple their occupants to the earth; consequently, every political movement there is watched with the greatest anxiery by those in power. In spite of John Bull, and the Holy Alliance, France will again astonish the world by its prowess in arms, and the celerity of its movements. All is not right in Spain, Italy, and other places which I could name, that are sighing for a more liberal form of government.

#### Of the ESTIVAL, or SUMMER Quarter.

IT appears, from the result of careful calculation, that this quarter will begin on Tuesday, June 21st, at 9h. 22m. in the afternoon; at which time also 18" of VP will be on the ascendant, and 23° of m on the mid-heaven. It may, however, be further remarked, that 24 is located in the 1st house, H in the 2d, 3 and the () in the 6th, 2 and 2 in the 7th, the D in the 11th, and h in the 12th. From the whole I infer that this will, most likely, be a quarter in which many deliberate councils and sober consultations will be held, concerning the affairs of nations, such as relate to laws, customs, religion, &c. Also new plans will be proposed for carrying on philosophical experiments, both at home, and abroad :- many shall run to and fro, and knowledge shall be increased. Some important discoveries will, at this time, be made in Meteorology; a useful, but long neglected, science. through which the farmer and grazier especially will be benefited. The Northern Bear growls, and wishes to set his foot upon the British possessions in India; but will he not repent the attempt? He has already a region too large wherein to range-how irrational to covet more ! Jonathan, on the other side of the water, seems inclined to show hostilities to John Bull, who must induce him to manifest a better spirit, without the aid of warlike instruments. I hope the new President will act with prudence and wisdom. The planets promise something good for our nation towards the end of this quarter : - may it all be realized !

#### Of the AUTUMN Quarter.

This quarter is known to commence at the time of the Sun's entrance in the sign Libra; which, this year, will be on Friday, the 23d of September, at 26 min. past 11, in the forenoon; when 29° of m will be on the ascendant, and 25° of mp on the southern angle. From the planetary positions at the ingress of this quarter, I infer that it will be a period of great excitement, both in our own, and other countries, arising from the combination of good and evil, each operating with considerable power. Many things will turn up, which will lead the thoughtful mind to serious reflection. One man meets with another of his own species, and for the purpose of robbing him of a trifle of moncy, kills him on the highway ! Another man, clad with the robes of royalty, rigs out a fleet of ships, furnished with instruments of destruction to take life in the wholesale way, for no other motive than to add to his own possessions, or to gratify some whim, fanned up by ambition or pride! The former is called, and that justly, a murderer; but the latter is styled brare, noble, or great ; and the laurels of fame are to be placed on his brows, to exhibit his glorious achievements! The philosopher, musing PRINTED FOR THE COMPANY OF STATIONERS.

upon these strange things with wonder and grief, and, perhaps, while he is directing his telescope, on one of these fine autunnal evenings, to view the rolling orbs of heaven, among the rest, the splendid planet Jupiter, he feels as though he should like to visit that remote globe, to ask the inhabitants these questions :---

> " Sit all your executioners on thrones? With you can rage for plunder make a god, And bloodshed wash out every other stain?"

Gentle Reader !- Would they not ask him if he were mad, or beside himself, that he should propound such extraordinary questions, not knowing that our world is the "bedlam of the universe?" But a period is approaching, when wars, and rumours of wars, according to the predictions of Holy Writ, shall no more arrest the sickening ear; when man meeting with his fellow man, though in the wilds of Africa, shall salute him as a brother. In that day they shall beat their swords into ploughshares, and their spears into pruning-hooks: nation shall not lift up sword against nation, neither shall they learn war any But that period is yet at a distance. more, Micah, iv. 3. The night of superstition, bigotry, &c., must first be dispersed by the light of knowledge and the beams of the Sun of Righteousness. During our day, however, conflicts, oppressions, wars, and calamities will exist; yet, notwithstanding the toils of our present terrene abode, there is another and a better world, to which we may all be admitted, if we will : therefore, I conclude my Almanack for this year with the same words I did the one for 1817. Let us -

> " Secure an interest in the other world, And let this as it may be toss'd and hurl'd; He's great and rich enongh, who well doth die, And can with joy expect eternity : This, Reader, is the best news I can tell, Think on't, and practise it, and so farewell."

#### FINIS.

Suprus creatus Sunday Eab 16	Sondays after Trinity (twenty-four)
obrioAdesista Sunday Feb. 12	ADVENT SUNDAY Dec. 3

#### THINGS TO BE BORNE IN MIND.

IN JANUARY. That the 5th is a Transfer day at the Bank. That before the 8th, Fire Insurance policies, due at Christmas, must be paid. That Ilidary Term begins on the 11th, ends on the 31st. That most of the Quarter Sessions are held in the first week of this month.

In FEBREARY. That the 3d is Bishop Blaise's holiday, the 14th St. Valentine, and the 24th is St. Matthias, and is a holiday at several of the Public Offices.

In MARCH. Remember St. David's and St. Patrick's days. Municipal assessors appointed on the 1st; also, that Overseers are to be appointed on the 25th, and the old Overseers verify their accounts within fourteen days.

In APRIL. Returns relative to the *Assessed Taxes* are delivered early in this month. Transfer day for several of the Public Funds, the 5th. Fire Insurance due at Lady-day, must be paid before the 8th. That *Easter Term* begins on the 15th. *Quarter Sessions*, 1st week in this month.

In MAY. That Easter Term ends on the 11th, that the Hop-duty is collected on the 15th, that the 24th is the QUER's birth-day. And remember "round about the May-pole" from the 1st to the 13th; if the May-pole is falling, subscribe for another, or apply to the Lord of the Manor, and see what he will do.

In JUNE. Overseers, on the 20th, to fix on the church-doors notices as to persons qualified to vote for counties; persons on the register need not make a new claim, unless the qualification has been changed. Drink the Queen's health again on the 20th. Trinity Term, which began May 25th, ends the 15th of this month. So farewell to the Lawyers until November. Quarter Sessions, the last week.

In Junx. Transfer day again on the 5th, and Fire Insurance premiums paid before the 6th. Appraisers' licenses (who are not auctioneers) to be taken out on the 5th. The 20th is the last day for sending in claims as county voters. Before this day, also, parliamentary electors, in cities and boroughs, must have paid poor's rates and window tax, or lose their votes for the next year. Lists of Electors to be made out on the 31st. St. Swithin is an old deceiver; do not regard him.

In August, Expect shouling stars about the 9th. The 7th and 14th, being the 1st and 2d Sundays, Borough and County Lists to be affixed on church-doors. Hawkers' and Pedlars' licenses taken out on the 1st. All taxes and rates due March 1, must be paid on or before the end of this month by persons claiming to be enrolled as Burgesse.—*Mun. Corp. Act.* 

be enrolled as Burgesses.—Man, Corp. Act. In SEPTEMBER. 4th and 11th. Lists of objections to the county electors to be affixed on church-doors. Burgess Lists to be made out by the 5th. On the 22d, lists for the selection, by the Justices, of Hishway Surveyors to be prepared.

hist for the selection, by the Justices, of Highway Surreyor to be prepared. In OCTOBER. Transfer day, Oct. 10. Burgess Lists to be revised between the 1st and the 15th. Michaelmas Fire Insurances must be paid before the 13th. Bankers' licenses taken out on the 10th. Quarter Sessions in the first week after the 11th.

In NOVEMBER. 1st. Borough Councillors to be elected. The 1st a Holiday at some of the Public Offices. 9th. Magors and Aldermen to be elected. 12th. Look out for shooting stars. 15th. Hop-duty collected, and Attorneys' certificates to be taken out. Don't let Allhallows day be quite forgotten; but forget, if you safely can, that Michaelmas Term begins on the 2d and ends on the 25th.

In DECEMBER. Forget not the Christmas festivities; nor neglect to ascertain how affairs stand with regard to your accounts, your families, your bodies, your souls. Tixe is the most irresistible of all innovators; but if you have built on a right foundation for eternity, you need not fear him.

PRINTED FOR THE COMPANY OF STATIONERS.

The Months in the above Table are calculated at only Twelve Months to the Year. If the yearly Wages be Guineas instead of Pounds, for each Guinea add one Penny to each Month, or one Farthing to each Week. Thus, Six Pounds per Year are Ten Shillings per Month; but, if the Wages be Six Guineas, add one Penny for each Guinea, that is Sixpence, and it will then he Ten Shillings and Sixpeuce per Month. In like manner, by adding Six Farthings to each Week, the Wages will be Two Shillings and Five-pence per Week.

Note.—Fa. means Clock to be fast; that is, your Clock, to he right, must be so much faster than the Sun Dial.—slo. that your Clock must be so much slower than the Sun Dial.

To set a Clock or Watch on any Day by means of this Table :--Take out the number of Minutes and Seconds which stauds against that day, and make your Clock or Watch so much faster or slower (according as the Table is marked 7a. or elo.) than the time on a good Sun Dial. Thus, on January 1st, the Clock must be set 3m. 43s. faster or before the Dial: on the 1st of October, it must bo set 10m. 1ls. slower. Correct the Watch when the Dial marks just an hour, as 9, 10, 11, 1, 2, 3, or 4 o'clock. Noon is not best, nor near Sun-set.

Note.—The Sun's risings and settings, in this Almanack, are still given in Solar Time, as best fitted for my numerous country friends. See also p. 27, Almanack for 1838.

How to ascertain in what PERIOD any PLANET and the EARTH return to the same POINT of the HEAVENS.

Find, from a Table of their mean motions, a number of years agreeing to a complete number of revolutions of the planet. According to M, de la Lande, Mercury, in thirteen years (of which three are bissextiles) and three days, makes fifty-four revolutions, and 2 degrees 55 minutes; in the same time, the *Earth* makes thirteen revolutions, and 2 degrees 49 minutes over; therefore, in this period, the *Earth* and *Mercury* return to, very nearly, the same relative situation in the heavens. *Venues*, after a space of eight years, is found within 1 degree 32 minutes of the same place, and the *Earth* within 4 minutes. In seventy-nine years and four days (supposing there are twenty bissextiles). *Mars* returns to the same situation within 3 degrees 39 minutes, and the *Earth* within 3 degrees 39 minutes, and the *Earth* within 3 degrees 41 minutes. *Saluen*, in fifty-nine years and the *Earth* to situation in the heaven such as the same of the same point, and the *Earth* situation of the same of the same point, and the *Earth* situates. *Saluen*, in fifty-nine years and two days, returns to the same to within 1 degree 43 minutes. Jet 1830 (thirteen years hack), he will find the planet *Mercury* with regard to his superior and inferior conjunctions with the sun, and his greatest elongations from that luminary, to agree very nearly with the Spring, and a morning star in the Autum), if eight, sixteen, thenty-four years, &c., be subtracted from, or added to the same similar planenes of streen, so for my Almanacks of cerver yearly with the sheat the fourth when *Cenus* is a splendid object (being an evening star in the superior and similar planets).

Norg.—On February 11, 1524, Venus, Mars, Jupiter, and Saturn, were very near each other, and Mercury not above 16 degrees from them; on November 11, 1544, Mercury, Venus, Jupiter, and Saturn, were within the space of 10 degrees; on March 17, 1725, Mercury, Venus, Mars, and Jupiter, were so near each other as to be all seen through the same telescope without changing its position.

- eb. 10, Queen m. to Prince Albert.
- overeignty of New Zealand claimed by England.
- ay 5, A Fire at Hamburgh, destroying one-third of the City and three Churches.

#### AN ACCOUNT OF

#### THE ECLIPSES OF THE SUN AND MOON,

And other Appearances in the Heavens, in the Year 1843, the Result of careful Calculations from the most correct and approved Data relative to the Celestial Bodies.

> ASTRONOMY! hail, Science heavenly born! Thy schemes the life assist, the mind adorn, Thy aids the heavens' scaled volumes wide impart; It taught the seaman first his useful art; Gave changing seasons their determined space, And fixed to hours and years their measured race.

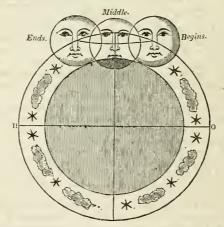

This most delightful, this noblest of the sciences, subjects, as it were, the economy of the universe to our contemplation : it enables us to obtain a nearer acquaintance with the most numerous, the most stupendous and magnificent scenes in the whole creation; to trace out their mutual intercourses, their certain and determined motions, their regular returns, their stated periods: to discover the inviolable laws which regulate the heavens, and the admirable harmony which pervades the universe: while we are thus engaged, while we are permitted to scale the etherial towers, and freely range through the celestial fields, is it possible that we should not be impressed with a sense of the unlimited power, unbounded wisdom, and infinite goodness of the adorable Creator and Governor of the mighty fabric of Nature ?

On carefully examining the motions of the Earth and Moon, I find that the shadow of the latter will twice pass over certain portions of the surface of the globe, and the Moon will be once partially immersed in the umbra of the Earth, within the limits of the present year. Hence there will be *two* Eclipses of the Sun, and *one* of the Moon.

1. The first of these phenomena is an annular Eclipse of the Sun, which happens on *Tuesday*, the 27th of *June*; but no part of the lunar penumbra will pass over *Great Britain*, and of course the eclipse will be *invisible* to us; the nearest approach of its boreal boundary being within 39° of north latitude. For the earth generally, this eclipse begins at 4h. 27m. 18s. P.M. in latitude 3° 1' S., longitude 154° 52' W., which falls in the South Pacific Ocean, not far from Christmas Island. The central appearance commences at 5h. 30m. 36s. in lat. 8° 55' S., long. 168° 8' W., which point is over the South Pacific, in the vicinity of Navigator's Isle. The eclipse now spreading itself over a great extent of the sea above named, the central annulus will, at 7h. 21m. 18s. P. M., come to the meridian over these waters, in lat. 5° 30' N., long. 109° 41' W.

having entered on the western coast of South America, will leave the earth in lat. 23° 33' S., long. 55° 48' W. to the north-east of Assumption, a city of Paragnay, which happens at 9h. 2m. 36s. r. M.; but the eclipse does not finally disappear till 10h. 5m. 54s., at which time it will have reached lat.  $17^{\circ}$  49' S., long. 68° 44' W., when the last segment of the penumbra leaves our globe with the setting sun, to the east of Arica, a port town situate in the province of Los Charcas in Peru, among the Audes mountains, the summits of which are capped with perpetual snows! This eclipse will be visible to nearly the whole of South America. A very small obscuration on the sun's lower limb may be perceived on the western shores of the Falkland Islands.

2. The second Eclipse is a small, partial, visible one of the Moon, about midnight, on Wednesday, the 6th of December. The following representation for Greenwich will serve, without sensible error, the whole island of Great Britain.

Eclipse of the Moon, Dec. 6th, P. M.	Greenwi	Margate.		York.			Liverpool.			Falmouth.

Digits eclipsed on the Moon's southern limb = 2 dig. 25' 26". PRINTED FOR THE COMPANY OF STATIONERS.

At the beginning of this eclipse the Moon will be vertical in lat. 23° 28' N., and long. 7° 51' E., which falls between Tabooand *Ensala*, to the south-west of *Tripoli*, in *Africa*. At the middle she will be overhead in lat. 23° 28' N., and long. 4° 58' W., in the Sahara or Great Desert of Africa ;- a region so destitute of water, that the caravans of camels which pass over it from Morocco, to traffic with Negroland, are half-loaded with water and provisions. As it produces scarcely anything to sustain life, there are no towns in it, but a sort of people like the Arabs, who live in tents; and being acquainted with the few springs which there are, wander from one part of the country to the other, as they expect to meet with water and food for their eattle. They are not black, but of an olive complexion: their language Arabic, and their religion Mahometanism, supposed to be the descendants of those Arabs who subdued Africa soon after the death of their prophet Muhomet. At the termination of the eclipse, the Moon will be in the zenith, in lat. 23° 29' N., and long. 17° 47' W., in the North Atlantic Ocean, between the Canary and the Cape Verd Islands. This eclipse, therefore, will be visible from beginning to end to the whole of Africa and Europe; and will extend beyond the Atlantic, to all South, and the eastern and northern parts of North America. At Paris, this eelipse begins at 11h. 27m. 22s.; middle at 12h. 20m. 28s., and the end at 13h. 13m. 34s. This I add, to gratify my numerous kind friends in that splendid city.

3. We now come to the third and last Eclipse of the present year, which is a total one of the Sun, on Thursday the 21st of December, long before sunrise, and of course invisible to us. This eclipse enters upon the earth at 2h. 28m. 36s. A. M., in lat. 12° 42' N., long. 57° 55' E., in the Arabian Sea. The central and total eclipse commencing in the midst of Arabia, between Mecca and the Persian Gulf (lat. 23° 29' N., and long. 47° 12' E.), quickly passes from thence across the ocean ; it enters upon Cape Comorin, its course is continued along the northern coast of the island of Ceylon, over the Bay of Bengal, across Malucca, the most southerly part of the Further Peninsula of India in Asia; and I find that the Sun will be totally and centrally eclipsed at noon-day, at 5h. 8m. 18s. in lat. 8° 27' N., and long. 102° 26' E., which falls in the middle of the Gulf of Siam. The central eclipse, directing its course from thence over the Chinese Sea, and Luconia, one of the principal of the Philippine Islands. enters the Pacific Occun, where, at 6h. 32m. 24s. in the morning, according to Greenwich mean time, it leaves the globe, in lat. 34° 18' N., and long. 154° 19' E. The obscuration now gradually becomes less and less, and at 36 min. past 7 A. M. the solar circle is again complete, and the eclipse is no more seen.

From the above calculations, it is evident that this eclipse will be very large throughout Ceylon, at Madras, the Nicobar

Isles, &c. The colipse will be visible at Bombay, in every part of Sumatra, Borneo, the island Formosa, &c.

#### LUNAR OCCULTATIONS.

Sweet is night's cloudless face, when scarce a breeze Disturbs the silent surface of the seas ; Then let my wondering soul with rapture gaze, And read thy works, Creator, with amaze ! Cast off awhile the load of earthly cares. And view the Eternal in yon round of stars. Yonder the Moon in borrowed brightness glides, Illumes the earth, and elevates the tides: Thousands of starry worlds bestow their light, And, twinkling, beautify the face of night : Worlds amid worlds round suns most distant roll; The thought perplexes, but uplifts the soul.

It is not unreasonable to suppose, considering the great distance of the fixed stars from our carth, that any one of them is

at least a million times larger than the moon, notwithstanding they seem only like twinkling points, scattered through the wide fields of immensity, while the moon appears a large and mighty orb :---This, my friends, you are aware, arises from the *nearness* of that luminary to our globe, which exceeds that of every other celestial object. Hence the Moon, in her orbitical motion, not

only occults or hides from view the fixed stars, but also the planets of our own system. The following are the principal occultations that will occur during the revolution of the present year :---

The first occultation that claims our notice is of the star e in  $\Omega$  : it happens on the 20th of January, in the morning, when the immersion takes place at 5h. Om., and the emersion at

6h. 1m., the star disappearing behind the light border of the moon, 79° from her vertex, and reappearing at the dark edge 59° from the said point, agreeably to Type 1 on this list.

The next is of the planet Saturn, on the 25th of February, in the morning ; immersion at 6h. 33m.; emersion at 7h. 53m.

IX

The planet enters on the light border of the moon when 98° from her vertex, and leaves at the dark edge when 91° from the same, as exhibited by Fig. 2.

On the 27th of *February*, in the morning, the planet *Mercury* is occulted; immersion at 6h. 28m., and emersion at 7h. 22m.; the former happens at  $142^{\circ}$ , and the latter at  $123^{\circ}$  from the moon's uppermost point. See *Fig.* 3.

On the 16th of *March*, early in the morning, the star e in  $\Omega$  is again occulted;

immersion at 0h. 52m., and emersion at 1h. 58m., the star vanishing at 117° from the moon's vertex, and becoming visible at 87° from that point, according to the above type.

Note.—The moon being about the full, a good telescope will be necessary to see the star.

The last-mentioned star is again occulted by the moon on the 9th of May, in the evening; immersion at 8h. 39m.; and emersion at 9h. 39m. The star enters the moon's border when  $86^{\circ}$  from her vertex, and leaves it when  $43^{\circ}$  to the right of the same, as may be seen in the diagram annexed.

The next occultation is of the star Zeta in  $\Pi$ , and happens on the 12th of November, very early in the morning. The im-

mersion takes place at 0h. 16m.,  $107^{\circ}$  from the moon's upper limb; and the emersion at 1h. 21m. 20° from the vertex, as exhibited by the last of these types.

The last of these phenomena is another occultation of e in  $\Omega$ , in the morning of the 17th of *November*; when the star immerges at 52 minutes past 4, and emerges at 54 minutes after 5.

Note.—The preceding computations are made for the latitude and meridian of the Royal Observatory, *Greenwich*. I. in the types implies the place of immersion, and E. that of emersion ; V. the moon's vertex, or uppermost point.

#### CELESTIAL PHENOMENA.

The Times when the Planets are in the most favourable Positions for Telescopic Observation; together with other interesting Particulars pointed out relative to these Celestial Bodics. Also some Remarks on the Constellations, &c.

> The system rolls entire ; from the dark bourne Of far Uranus, wheeling wide his round Of eighty years ; to Mercury, whose disc Can scarce be caught by philosophic eye, Lost in the effulgence of the solar blaze.

> > PRINTED FOR THE COMPANY OF STATIONERS.

39

§. MERCURY, the nearest known planet to the sun, may be seen near the western horizon soon after sunset, on or about January 30th, May 24th, and December 31st: the same to the eastward a little before sunrise, on July 12th, and October 31st.

This planet will appear very near Venus on the 12th and 13th of *July*, and near *Saturn* on the last day in the year.

Q. VENUS, though the most brilliant star in the heavens, is not well situated for observation this year: the best times for viewing her by unassisted vision will be in the mornings of January, February, and July; and in the evenings of the last two weeks of December. This planet will be in conjunction with Saturn on the 28th of February and the 26th of December, and with Jupiter on the 24th of March. Through a good telescope Venus will appear a fine large crescent in January, and in December exhibit the appearance of a little full moon.

**3**. MARS may be seen in the mornings in the early part of the year, and the evenings of the Autumn months. He will be at his least distance from the earth in *June*, when he will appear with a large and ruddy dise, near the south-eastern horizon; arresting the attention of my country friends, who may happen to be in the open air late in the evenings at that delightful season of the year. This planet may be seen in  $\delta$  with Saturn on the 17th of October, and with *Jupiter* on the 1st of December.

2. JUPITER will appear very splendid, even to common observers, in the evenings, from the middle of *August* to the end of *December*. During which period his belts and satellites will be interesting objects to the young astronomer.

> For signal honour made, behold ! afar, Four radiant moons surround the imperial star ; Full-orbed or crescent, their soft silver light Gladdens his regions in the gloomy night : Nor this the fancy of deluded eyes; Marked are their periods through sublimer skies : Oft does the astronomer his tube display, And view them in eclipse with pleased survey : To this the curious their discovery owe, And light's swift motion, and its measure know.

b. SATURN will be in opposition to the Sun on the 15th of July; therefore, his situation in the heavens, with respect to the Earth, will be advantageous for observation during July, August, and September: at the same time, if the telescope be a good one, and will bear a considerable power, this planet, and its extraordinary ring, will present rather a novel sight to those who may not be accustomed to observations of this kind.

H. URANUS is in opposition to the Sun on the 24th of September. The greatest semi-diameter of Mars this year will be 10"; that of Jupiter, 23"; and that of Saturn, 8". The

greatest horizontal parallax of Mars = 19"; that of Jupiter, 2"; and that of Saturn, 1'. Hence the earth must appear very small from the last-mentioned planet.

ARCTURUS, a large star in *Bootes*, of a reddish hue, somewhat like *Mars*, is due south on the 24th of *May* at 10 o'clock at night, and on the 8th of *June* at 9 in the evening : on the 31st of *December* the same star is on the meridian at half-past 7 in the morning.

SIRIUS, a bright white star in *Canis Major*, the Great Dog, is due south on the 15th of *January* at 11 o'clock, and on the 14th of *February* at 9 at night. This star, and the splendid constellation *Orion* near it, greatly beautify the southern skies in the winter season. The notable northern constellations, *Ursa Major* (the Great Bear), called in *Yorkshire* and other counties *Charles's Wain*, and *Cassiope* (Lady in the Chair), appearing like the letter W., are visible every clear night throughout the year. I mention these matters to those of my readers who are just beginning to think about astronomy.

> Watch with unmoving eye where Cepheus bends His triple crown, his sceptered hand extends; Where studs Cassiope with stars unknown Her golden chair, and gems her sapphire zone: Where with what convolution Draco holds The ecliptic axis in his scaly folds; O'er half the skies his neck enormous rears, And with immense meanders parts the Bears; Onward the kindred bears, with footsteps rude, Dance round the pole, pursuing and pursued.

There are several persons who are pleased with many of the remarks which astronomers make respecting the constellations of heaven, &c.; yet when they speak of the stars being probably suns, and consequently the centres of planetary worlds, they are ready to raise a variety of objections, and almost deem the thing impossible: to such I would say.—

Come forward then,—yon azure round survey, And view those lamps which yield eternal day : Bring forth your glasses—clear your wondering eyes, Millions beyond the former millions rise— Look further—millions more burst from remoter skies! And can those everlasting founts of light, Bodies immensely great, divinely bright, Serve for no end at all, or but to blaze Through empty space, and uscless spend their rays? Consult with reason,—reason will reply, Each lucid orb that glows in yonder sky Informs a system in the boundless space, And fills with glory its appointed place ; With beams unborrowed brightens other skies, And worlds, to you unknown, with light and life supplies.

#### METEOROLOGICAL OBSERVATIONS, ETC. Relating to the Year 1841; with some Remarks on the BAROMETER, THERMOMETER, ETC.

COURTEOUS READER:

THE following summary of the weather is chiefly taken from a correct journal kept at *Greenwich* in *Kent*, and from another kept at *Thwaite*, in the county of *Suffolk*.

JANUARY came in with a trifling thaw, of short continuance ; on the 3d, about seven o'clock in the morning, Greenwich and neighbourhood were visited by a tremendous storm of thunder and lightning, attended with wind and hail :-- the thunder was extremely loud, and resembled a discharge of a park of artillery, and the flashes of lightning were frequent, and extremely vivid; during the raging of the storm, Streatham church in Surrey was struck by the electric fluid, and set on fire; also the beautiful spire in Spitalfields, London, was much injured by the same powerful element. This storm was severe at Windsor, Muidstone, and various other places -- a very unusual phenomenon in the depth of winter; and was immediately followed by severe weather, with snow at times, and thick rime for several days, beautifying the trees in an unusual degree. On the morning of the 8th, an external thermometer elevated five feet from the ground, was down to 6° at Thwaite; at Greenwich, the minimum temperature at that time was 10°. Early on the morning of the 9th, the outdoor thermometer at both Greenwich and Thwaite was as low as 4°; at Kensington it was at 1°; and at Epping, on the snow, it was at zero! Towards midnight, and early in the morning of the 10th, much snow and wind at Greenwich ; also heavy snow, with the wind easterly, on the 13th and 14th. On the 16th, a rapid thaw took place, which caused great floods, and loss of life, &c. After which, changeable weather (though often frosty), to the end of the month. FEBRUARY, to the 11th day, was attended with severe frost and piercing gales from E. and N.E., during which period the thermometer never once got so high as the freezing point : at that place much snow fell on the 1st, 2d, and 4th ; but at Thwaite, heavy falls of snow on the 3d and 8th. On the 9th and 10th the river Thames abreast of Greenwich was, at the time of high water, completely covered with large masses of ice. The latter half of the month was mild, and introductive of spring. MARCH began rather stormy, but after the 5th it was unusually warm and fine, with brilliant sun for many days. At Thwaite on the 9th, the thermometer was at 6410; on the 15th and 16th, 67°; and on the 25th and 26th, 66° in the shade. Maximum emperature for the month at Greenwich occurred on the 26th, which was 65°; the mean temperature of the month at that place was nearly 47°! Some thunder-storms, in different parts of the kingdom, happened about the time of the equinox, and

the month ended cooler. APRIL was at times showery, but generally fine, and often very warm; the 27th, 28th, and 29th were remarkably bright and hot; thermometer at Thwaite, 80° in the shade! but at Greenwich it did not exceed 73°. MAY, at Greenwich, was at times squally and showery, at other times, warm and pleasant. On the 2d, heavy showers, with thunder. The afternoon of the 27th was hot, the thermometer reaching 79°; very much lightning from 8 p. s. till midnight, and loud thunder at intervals : heavy hail in Berkshire during the same night, which caused much damage by breaking windows, destroying plants, &c. At Thwaite, this month was beautifully fine, and extremely hot, with little intermission throughout, particularly during the last ten days ; the thermometer on five days rose up above 80°, and on the 28th reached 86°!! JUNE commenced with pleasant weather; but after the 4th, a period of extremely cold northerly winds with a winterly-looking sky set in, which continued until the 17th day. On the morning of the 16th ice was seen on the ponds in the neighbourhood of *Epping*, in Essex; the minimum temperature at that place on the 7th was 36°; on the 13th, 33°; and on the 14th, 35°; but at Greenwich on the same days, it was about 7° higher. The last ten days were attended with squalls from the S. W., and frequent showers of rain. On the 19th, 24th, and 27th, thunder at Greenwich. JULY was remarkably cold, considering the season of the year ; was generally wet, the rain often descending in torrents, which greatly damaged the hay in Kent and Essex, and other districts. Thunder-storms at Greenwich on the 9th and 15th ; on the latter day frequent heavy showers of rain and hail; on the afternoon of the 29th small hail without thunder, which showed the extreme coldness of the atmosphere; on the same day, in the mountainous parts of the west of Yorkshire, snow was observed to fall. Hail and thunder at Thwaite, on the 31st, when we had  $\Box \odot \delta$ . August was showery to the 15th day, after which it was chiefly fine and warm to the end; on the 27th the maximum temperature at Thwaite was 85°, but at Greenwich only 79°; again on the 29th, at the former place, it was 82°, at the latter, 81°. SEPTEMBER commenced fine and warm ; the 3d was unusually hot, with thunder in the afternoon ; and in the evening, thunder, with vivid lightning and heavy rain, in the neighbourhood of London, &c. Thunder also on the 24th. The 4th and 5th were very cold; the former day was windy and rainy; the morning of the 6th was frosty. From the 10th to the 20th clear bright weather, and often very hot; favourable for the harvest in the northern parts of the kingdom. Maximum temperature on the 12th, at Thwaite, 81°, at Greenwich, 79°. After the 21st, very heavy rains to the end. On the 25th, a fine halo appeared round the moon, and two mock-moons were seen; the Aurora Borealis appeared at various times during the evening and night,

when the magnetic needle was disturbed in a very extraordinary manner, both in declination and dip. The barometer was very low on the 29th, being at 29.15 inches. OCTOBER was extremely wet throughout: the rain often fell in torrents, and flooded the low lands, where the farmer was unable to sow the winter wheat ... On the 1st, a thunder-storm at Ipswich at 1 P. M., after which a water-spout made its appearance. On the 11th Dartmouth, Plymouth, and Fahnouth were visited with a tremendous storm of thunder, awful lightning, hail, and heavy rain. On the 21st, a great fall of snow in Lancashire, Derbyshire, &c., and the Welsh, the Westmorland, and the Cumberland mountains put on their wintry garb. On the 22d, a sharp frost; the thermometer at Greenwich was down to 299. On the 23d, a heavy gale at Portland, &c. NOVEMBER was, from the 2d to the 12th, dry and pleasant, afterwards variable, and at times winterly. Snow on the 14th and 18th : on the 17th, the thermometer at Greenwich was 12° below the freezing point. The last ten days were often boisterous, with heavy falls of rain. DECEMBER came in mild, with the temperature high ; some heavy rain on the 3d and 6th ; on the 18th, 19th, and 21st, hard frosty weather, with showers of snow; minimum temperature at Thwaite 24°, at Greenwich 21°. The last week was very changeable ; sometimes frosty, at other times rainy; the wind on the surface of the earth W. and S. W. and sometimes S., but the clouds all moved from the N., showing that the wind at a short elevation from the earth blew from that quarter.

#### Judicium Astrologicum, pro Anno 1843.

VOX CELORUM, VOX DEI: The Voice of the Heavens is the Voice of God.—He speaketh in all the Changes of the Seasons and of the Times.

#### **COURTEOUS READER :**

WE live in eventful times, —which must awaken in every reflecting mind very serious thoughts, as well as painful sensations. Our own country pressed with a heavy debt, and burthened with taxes: —involved in a protracted war with the *Chinese*, and just emerging from the slaughter and destruction of human life in *India* !—the great losses sustained by our merchants, and other persons, by the late awful conflagration of *Hamburg* :—our working classes suffering under great privations from the want of employment; for how distressing to the feelings of those who are anxious to gain an honest livelihood by the sweat of their brow, but cannot succeed in their very reasonable desires ! Add to these the unsettled state of the *French* people, and the dissatisfaction of the inhabitants of *Spain*, and other nations under heaven. It appears that the Almighty has a controversy with the kingdoms of the earth, and is about to bring some great and important changes, which, for a season, will involve great suffering, but in the long run will produce a better state of things, leading to the fulfilment of that prophecy of sacred writ, "Righteousness shall cover the earth as the waters the face of the deep."

"God moves in a mysterious way, His wonders to perform ; He plants his footsteps in the sea, and rides upon the storm ; Deep in unfathomable mines of never-failing skill He treasures up his bright designs, and works his sovereign will."

#### THE HIEROGLYPHIC.

ASTROLOGICAL PREDICTIONS.

#### Of the WINTER QUARTER, called the Brumal Ingress.

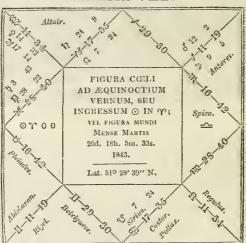

This begins when the Sun enters the first scruple of the tropical sign, Capricorn, and which that luminary will do on Tuesday the 22d of December, 1842, at 55 minutes past 4 o'clock in the morning, when 22° of M will ascend in the cast, and 13° of W occupy the cusp of the Medium Cali. The moon in Q, near Regulus, will be seen diffusing her borrowed lustre in the south-west, and &, not far from Spica MP, in the south-eastern skies, will exhibit his sanguine orb. The rest of the celestial wanderers are all below the horizon, in the second mundane house. Though there is nothing particularly striking in this ingress, vet, upon the whole, I think it will prove a season of general struggle and anxiety. The New Tax of the memorable 1842 will begin to show itself to the oppression of honest individuals with large families, &c., whose income just rises within the reach of its talons; whilst its claws will drag out the treasures of those who plead poverty to elude their just creditors, their reasonable claims. This winterly season pinches the poor, whom the rich ought to remember !- Man is so constituted by his Maker

that he can only, properly speaking, receive good by doing good: hence sordid minds are not happy, and with all their self-seeking they have no real regard for themselves: this may seem a paradox, but, nevertheless, it is a fact. True self-love prompts to the cultivation of our minds, and the rectification of our hearts, the result of which is as follows:---

> Self-love but serves the virtuous mind to wake, As the small pebble stirs the peaceful lake : The centre moved, a circle straight succeeds, Another still, and still another spreads:— Priend, parent, neighbour, first it will embrace ; His country next, and next all human race : Wide, and more wide, the o'erflowings of the mind Take every creature in of every kind; Earth smiles around with boundless bounty blest, And Heaven beholds its image in his breast.

#### Of the VERNAL, or Spring Quarter of 1843.

This quarter takes place when the Sun enters the equinoctial sign Aries, which happens this year on *Tuesday*, the 21st of *March*, at 6h. 5m. 33s, in the morning, at which time the signs and the planetary bodies will be found to agree with the following figure.

The reader will see from the above that  $23^{\circ} 40'$  of  $\neq$  will be ascending, and  $29^{\circ} 30'$  of  $\neq$  will occupy the mid-heaven. At this ingress he will also see that the sun, although below the cusp of the ascendant, yet, raised by atmospheric refraction, will just be beginning to display his radiant glories in the orient horizon, and that all the planets are above the earth; the moon, near the cusp of the 9th house, which is

#### SCHEMA CŒLI.

occupied by the body of 3; 1: in the 11th, and 9, 2, \$, and H, all in the 12th; the two former (viz. Q and Z), within orbs of a zodiacal & in my. From the whole, I should infer we shall have some good intermixed with the evil, which will soothe the minds of many, and help them to bear up under crosses and disappointments; and hope, cheering hope, will point to better days and lovelier scenes. Some important marriages will be - consummated, and several matters of an ecclesiastical kind will be looked into. and, I hope, some things connected therewith that are oppressive to Christian liberality will be abolished. During the early part of this season the weather is likely to be changeable, and trying to persons of weakly constitutions and sensitive nerves. Towards the close of this quarter of will be in perigee, or at his nearest distance from the earth; in which position of this planet it has been observed that murders are more frequent, and of a more atrocious nature than at any other time. At the time of the murders of Marr and of Williamson, and also when Chennell murdered his own father at Godalmin, and Hussey destroyed Mr. Bird and his housekeeper at Greenwich, & was in or near his perigee. The reader will keep in mind whether similar atrocities will take place at this period. I hope, however, that much of this evil will be counteracted by the benevolent planet 24, that is approaching (though not very near) his perigee at the same time.

#### Of the Estival, or Summer Quarter.

How mildly morning blushes o'er the hills, And all the scene with sweet enchantment fills ! Wide o'er the meads, the dales, and verdant ground, The lavish zephyrs waft their fragrance round : Full to the rising son the purling streams Reflect their banks, and sparkle to his beams; Each fluttering songster warbles from the spray, And exultation greets the rising day: The restless steed swells with luxuriant health, The herds, the flocks, carouse in nature's wealth: Where in gay wreaths the honeysuckle meets; One flowery rapturous scene adorns the land, Which wanton nature gives with luxish hand.

THIS quarter dates its beginning when the earth has acquired her greatest deviation southward of the equator, and touches the first point of the tropical sign v?, and presenting the inhabitants of our northern hemisphere with the greatest portion of day;-when the sun, that glorious lamp of heaven, comes nearest to our zenith, and, according to appearance, enters the tropic of S; which happens this year on Thursday, the 22d of June, at 3 minutes after 3 o'clock in the morning; when 19° of II will cut the eastern horizon, and 13° of m the southern angle ;- the moon will be in  $\Box$  to D, and hastening to a \* with  $\mathcal{L}$ ; and, what is remarkable, all the planets at this juncture, excepting Q and H, are retrograde ! Hence we may infer, notwithstanding the general fineness of the weather, and the enchanting beauties which Flora and Ceres unfold to our view,that the political and moral departments in many of our neighbouring states, will wear a gloomy and winterly aspect. Mars seems, by his sauntering backward and forward, and standing still, in the dominious of I, to be plotting some mischief with that skilled archer; and if His Holiness, the *Pope*, should hear the whizzing of one of his arrows over his head, let him bless his stars that the direction of the destructive weapon had not been of lower altitude ! I expect at this time, however, there will be nuch contention, if not bloodshed, in *Spain*, and other popish states, the people are sighing for greater liberty: Oh! may they gain all that is reasonable without the interposition of WAR, that fell monster! There is something so dreadfully eruel in war, that I cannot find language to express my horror at it.

> Shepherds unskilled in war's accursed trade, Torn from their cots, and human butchers made; Peasants, with hearts revolting at the sight, Compelled to wield the spear, and dare the fight; Till war's infernal craft and wizard spell, Transforms them, saints of light, to fiends of hell !

#### Of the AUTUMN Quarter.

THIS quarter commences when the sun enters the equinoctial sign a, and which I find, from careful calculations, to take place this year on Saturday, the 23d of September, at 10 min. past 5 in the afternoon; when  $6^{\circ}$  of  $\Xi$ will occupy the cusp of the ascendant, and 21° of \$\$ the mid-heaven. Mars, at this ingress, has made his entry into v?, and is directing his course to old Saturn, and what may we augur will follow the & of the two malefies, which is considered to be particularly evil, and to threaten the most serious consequences? Undoubtedly we shall hear of dreadful losses by fire, thieves, treachery, and fraud ;- of fierce battles by land and sea ;--of elemental war, such as thunder, lightning, and tempest, &c.-especially from those regions under the horned goat, such as India, Greece, Mexico, Saxony, Muscory, &e. In Egypt, complaints will probably arise from the deficiency of the waters of the Nile, which are supplied from the rains that fall from the mountains of Abyssinia; and these, I am led to think, will descend on other tropical districts this year. Let the intelligent Pasha of Equpt ponder on these important matters. The dark cloud which I named in 1841, as hanging over Turkey, is now rapidly increasing in opacity, and must shortly burst on its devoted head. Surrounding kingdoms are looking towards France, expecting, more than ever, some great political movement there. May the great Disposer of all events be pleased to direct the affairs of our own Nation to the good of the community at large, and bless and preserve our beloved Queen, &c. I now conclude my remarks on this quarter, and the year also, by giving my friends and countrymen the certain signs of prosperity :-

> Where spades grow bright, and idle swords grow dull, Where gaols are empty, and where barns are full; Where church-paths are with frequent feet outworn; Law court-yards weedy, silent, and forlorn; Where doctors foot it, and where farmers ride; Where age abounds, and youth is multiplied; Where these signs are, they clearly indicate A happy people, and well-governed state.

A HIEROGLYPHIC ADAPTED TO THE TIMES.

MOORE,

### FRANCIS

4

PHYSICIAN.

LONDON: PRINTED FOR THE COMPANY OF STATIONERS, by G. WOODFALL AND SON, ANGEL COURT, SKINNER STREET; AND SOLD BY GEORGE GREENHILL, AT THEIR HALL, LUDGATE STREET.

PRICE SIXPENCE, STITCHED.

# 2 JANUARY XXXI Days.

ALL hail! my friends—another year begins, Oh! at this time let us forsake our sins; And seek that mercy Heaven designs for those Who turn from evil, and obey his laws; With this new year let us new lives display, Adore our God, and walk in Virtue's way.

#### THINGS TO BE BORNE IN MIND.

In JANUARY. That the January dividends at the Bank are payable on the 8th. That before the 8th, *Fire Insurance* policies, due at Christimas, must be paid. That *Hilary Term* begins on the 11th. ends on the 31st. That most of the *Quarter Sessions* are held in the first week of this month.

In FEBRUARY. That the 3d is Bishop Blatse's holiday, the 14th St. Valentine, and the 25th is St. Matthias, and is a Holiday at several of the Public Offices.

In MARCH. Remember St. David's and St. Patrick's days. Municipal assessors appointed on the 1st; also, that Overseers are to be appointed on the 25th, and the old Overseers verify their accounts within fourteen days.

In APRIL. Returns relative to the Assessed Taxes are delivered early in this month. Dividends due April 5th are payable on the 8th. Fire Insurance due at Lady-day, must be paid before the 8th. That Easter Term begins on the 15th. Quarter Sessions, 1st week in this month.

In MAY. That Easter Term ends on the 8th, that the hop-duty is collected on the 15th, that the 24th is the QUERN'S birth-day. And remember "round about the May-pole" from the 1st to the 13th: if the May-pole is falling, subscribe for another, or apply to the Lord of the Manor, and see what he will do.

In JUNE. Overseers, on the 20th, to fix on the church-doors notices as to persons qualified to vote for counties; persons on the register need not make a new claim, unless the qualification has been changed. Drink the Queen's health again on the 20th. Trinity Term, which began May 22th, ends the 12th of this month. So farewell to the Lawyers until November. *Quarter Sessions*, the last week.

In JULY. Midsummer dividends are payable on the 8th, and Fire Insurance premiums paid before the 8th. Appraisers' licences (who are not auctioneers) to be taken out on the 5th. The 20th is the last day for scading in claims as county voters. Before this day, also, parliamentary electors, in cities and boroughs, must have paid poor's rates and window tax to the 5th of April preceding, or lose their votes for the next year. Lists of Electors to be made out by oversecrs on or before the 31st. St. Swithin is an old deceiver; do not regard him.

In August. Expect shooting stars about the 9th. The 4th and 11th, being the 1st and 2d Sundays, Borough and County Lists to be affixed on church-doors signed by the Overseers Hawkers' and Pedlars' licences taken out on the 1st. All taxes and rates due March 1, must be paid on or before the end of this month by persons claiming to be enrolled as Burgesses. — Mun. Corp. Act.

In SEPTEMBER. On the lst, Lists of objections to both county and borough electors to be affixed on church-doors. On the 22d, lists for the selection, by the Justices, of *Highway Surveyors* to be prepared.

In OCTOBER. Dividends due Oct. 10th are payable on the 14th. Revising Barristers to hold their courts between Sept. 15, and Oct. 31. Michaelmas Fire Insurances must be paid before the 13th. Bankers' Licences taken out on the 10th. Quarter Sessions in the first week after the 11th.

In NOVEMBER. 1st. Borough Councillors to be elected. The 1st a Holiday at some of the Public Offices. 9th. Mayors and Alderman to be elected. 12th. Look out for shooting stars. 15th. Hop-duty collected, and Altorney's certificates to be taken out. Don't let Allhallows day be quite forgotten; but forget, if you safely can, that Michaelmas Term begins on the 24 and ends on the 25th.

In DECEMBER. Forget not the Christmas festivities; nor neglect to ascertain how affairs stand with regard to your accounts, your families, your bodies, your souls. Time is the most irresistible of all innovators; but if you have built on a right foundation for eternity, you need not fear him.

The Months in the above Table are calculated at only Twelve Months to the Year. The Moiths in the above Lable are calculated at only 1 werve atomics to the Teat. If the yearly Wages be Guineas instead of Pounds, for each Guinea add one Penny to each Month, or one Farthing to each Week. Thus, Six Pounds per Year are Ten Shillings per Month; but, if the Wages be Six Guineas, add one Penny for each Guinea, that is, Sixpence, and it will then be Ten Shillings and Sixwebce per Month. In like manner, by adding Six Farthings to each Week, the Wages will be Two Shillings and Five-pence per Week.

Note. — Fa. means Clock to be fast; that is, your Clock, to be right, must be so much faster than the Sun Dial — slo. that your Clock must be so much slower than the Sun Dial. See p. 27., Almanack for 1837. To set a Clock or Watch on any Day by means of this Table: — Take out the

To set a Clock or Watch on any Day by means of this Table: — Take out the number of alignets and Seconds which stands against that day, and make your clock or Watch so much faster or slower (according as the Table is marked  $f_a$ . or slo.) than the time on a good Sun Dial. Thus, on January 1st, the Clock must be set 3m. 35s. faster or before the dial: on the 1st of October, it must be set 10m. 26s. slower. Correct the Watch when the Dial marks just an hour, as 9, 10, 11, 1, 2, 3, or 4 o clock. Noon is not best, nor near Sun-rise or Sun-set.

Note.—The Sun's risings and settings, as well as all other astronomical matters in this Almanack, are now given in Mean Solar or Clock Time, as best fitted for my numerous friends.

#### On KNOWLEDGE, and its great UTILITY, &c.

If knowledge, in its advance, dispels the darkness and perplexity of error, and you wish to expatiate with freedom and safety in the light of truth,—pursue it, If knowledge, united with uprightness, bring esteem and confidence, and you love to be esteemed and confided in, - pursue it. If knowledge is power, and you love power and influence, - pursue it. If knowledge carry in its train extended love power and infinitence, - pursue it. In *knowledge* carry in its range extended usefulness, and you love to be extensively useful in your profession and in the world, - pursue it. If *knowledge*, as it becomes augmented, enlarges its own power of expansion; if the mere consciousness of progression makes your progress more continuous, and you feel the delights of a daily advance in knowledge, -pursue it. If it he heaven upon earth to have a man's mind move in charity, which be added to a progression the pole of forth and sound knowledge in its rest in Providence, and turn upon the poles of truth, and sound knowledge in its various streams leads to this exhibitrating confluence of good, -- pursue it. If knowledge, rightly conducted, and directed to right ends, bring you nearer to the fountain of knowledge, and thus makes you more happy, while it enlarges your capacity of conferring happiness upon others, and you live to be happy, and to confer happiness, — pursue it. But while you pursue it, let me entreat you to avoid most carefully the great error of mistaking or misplacing the ultimate ob-ject of knowledge. For many, says Lord Bacon, have entered into a desire of hearning and knowledge. learning and knowledge ; some upon an inbred and restless curiosity ; others for ornament and reputation; others for contradiction and victory in dispute; others for *lucre* and living; *few* to improve the gift of reason given them from God, to the benefit and use of man. As if there were sought in knowledge a *conch* whereupon to ease a restless and searching spirit; or a terrace for a wandering and variable mind to walk up and down in, at liberty unrestrained; or some lofty tower of state, from which a proud and ambitious mind may have a prospect; or a fort, and commanding ground for strife and contention; or a shop for profit and sale; and not rather a rich *storehouse* for the glory of the Creator of all things, and the relief of man's estate.

1630 June 26, GEORGE IV. ducd, aged 68; 1689 William & Mary crowned, Apr. 11. 1693 Bank of England established. 1704 Gibraltar taken by Sir Geo. Rooke. 1707 England & Scotland united, May I.
 Intion at Brussels.
 Intro at Brussels.
 England. 1745 A Rebellion in Scotland. 1746 Battle of Culloden, April 16. 1759 Westminster Bridge finished. 1752 Style and Calendar altered, Sept. 2, 1832 March 21, General Fast on account 1755 Lisbon destroyed by an Earthquake. of the Cholera.
 1765 General Warrants declared illegal.
 1832 Reform of Parliament Bills passed. 1775 American War declared, Aug. 23. 1776 Americans declare their Independ. 1778 War against France. 1779 War against Spain. 1779 War against Holland. 1780 War against Holland. 1782 A Ceneral Peace. -- Fiery Meteor 1835 Sept. Municipal Corporations Act. 1838 A Ceneral Peace. -- Fiery Meteor 1835 New Marriage Act passed. 1836 New Marriage Act passed. 1784 Establishment of Mail Coaches. 1792 France a Kepublic. — King of Swe-1838 Jan. 10, Royal Exchange burnt. den shot by Ankerstrom.
 1833 June 28, Queen Vicronia crowned.
 1793 King & Queen on France guillotined. 1840 Feb. 10, Queen m. to Frince Albert.
 1766 Great Earthquake at Lisbon.
 1841 Sovereignty of New Zealand claimed [1793] King & Queen of France guindingal, for feer for the training and the second seco 1798 Battle of the Nile, Ang. l. 1799 Buonaparte made First Consul. 1801 Union with Ireland — General Peace.
1801 1802, 1804. The Planets Ceres, Pallas, and Juno, discovered.
1803 War with France reuewed, after a peace of 14 months.

34

- 1804 Buonaparte made Emperor.
  1805 Battle of Trafalgar.
  1805 Deaths of Mr. Pitt and Mr. Fox.
  1807 English take Copenhagen; Treaty of Tilsit; Portuguese govern-of Tilsit; Portuguese Reseite. ment emigrate to the Brazils; Gas Lights instituted.
- 1809 Jan. 16, Battle of Corunna.
- 1812 Moscow burnt.
- 1813 War with America; Revolution in Holland; Pr. of Orange recalled.
  - Capitulation of Paris; Buonaparte abdicated, & went to Elba; Emperor of Russia, King of Prussia, &c., visited London; Peace proclaimed.
- 1815 Buonapartercturned to France; BAT-TLE OF WATERLOO; Surrender of Paris; Return of Louis X VIII.; Buonaparte exiled to St. Helena, where he died May 5, 1821. 1816, 1817, 1819, Yauxhall, Waterloo, and Southwark Bridges opened.

  - 1820 GEORGE III. died, Jan. 29.
  - 1825 South America independent.

  - 1827 Battle of Navarino, Oct. 20. 1828 Repeal of the Test and Corporation
- 1830 July, Algiers taken by the French. 1830 July 27, Revolution in France; ab-dication of Charles X.; the Duke of Orleans declared King; Revo
  - installed King of the Belgians.
- 1831 July 21, Emperor of Brazil abdicated.
- 1831 Aug. 1, London Bridge opened ; first stone laid June 1, 1825.
- 1833 Prince OTHO, of Bavaria, chosen King of Greece; Don Pedro in-waded Portugal; Miguel's Fleet taken by Captain Napier; Slave
- 1837 WILLIAM IV. died June 20.

  - and three Churches.
- 1843 Feb. 8 & 9. Most destructive Earth-quake at St. Domingo, Guada. loupe, and other West India Islands.

#### AN ACCOUNT OF

## THE ECLIPSES OF THE SUN AND MOON,

## And other Appearances in the Heavens, in the Year 1844, the Result of careful Calculations from the most correct and approved Data relative to the Celestial Bodies.

THE sciences of Astronomy and Philosophy are studies, next to that of curselves, the most worthy of cultivation, on account of the grand scenes they display, and the lofty ideas they transmit, of the power, the wisdom, and the goodness of the great Creator. These sciences have, in all ages and countries flourishing in arts and politeness, engaged the attention of the curious, employed the pens of the most elequent orators, and embellished the writings of the poets of the most elevated genius.

As to the first of these sciences, the Astronomer has for the subject of his speculations the whole universe of material beings; he considers the nature of matter in general, and inquires by what laws the several parts of it act upon each other : but his thoughts are more particularly employed in investigating the nature of those great bodies that compose the visible system of the universe, which in common speech are comprehended under the appellation of the Sun, Moon, and Stars .- Those unacquainted with this sublime science have no greater ideas of the stars than as a multitude of bright spangles dropped over the ethereal blue. They conceive no other of these fine appearances, than of their being so many golden studs, with which the empyrean arch is decorated. But studious minds, that carry a more accurate and strict inquiry among these celestial lights, bring back advice of the most astonishing import concerning their beautiful order, and the laws which govern them; which loudly proclaim the infinite wisdom of the divine Architect, in thus disposing of the matter with which the universe is composed. Any further introduction is unnecessary : I find, on the sure principles of Astronomy,-

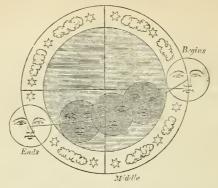

> The Queen of night, illumed by solar ray, Three times shall pass before the Orb of day, And twice through Terra's shade shall roll her sphere, Within the limits of this fleeting Year.

1. The first of these phenomena is a total Eclipse of the Moon, on Friday, the 31st of May, in the night, and consequently visible in these parts of the globe. The following representation

PRINTED FOR THE COMPANY OF STATIONERS.

в 6

for Greenwich will serve, without sensible error, the whole island of Great Britain.

The following are the Mean Times of this Eclipse, according to the respective meridians of the places here mentioned : ---

Eclipse of May 31:	the Moon t, р. м.	Greenwich.			Dover.			York.			Ma	ter.	es-	Plymouth.

Digits eclipsed on the Moon's northern limb = 15 dig. 55' 26''.

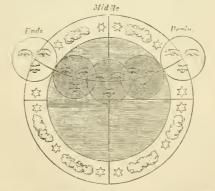

At the beginning of this Eclipse the Moon will be vertical in lat. 22° 25' S., and long. 41° 1' E., which falls in the Mozambique Channel, between the Island of Madagascar and Cape St. Sebastian, on the eastern coast of Africa. At the commencement of total darkness she will be overhead, in lat. 22° 28' S., and long. 26° 2' E., nearly due north from Lattakkoo, in the unexplored regions of Africa. At the middle of the Eclipse she will be in the zenith, in lat. 22° 29' S., and long. 16° 48' E., in the Descrt of Coneritan, not far from Fish River, near the western border of Africa. At the termination of total darkness the moon will be in the zenith in lat. 22° 50' S., and long. 7° 54' E., which falls in the South Atlantic Ocean ; and at the end of the Eclipse she will be overhead, in lat. 22° 52' S., and long. 7° 25' W., about 500 miles S. of St. Helena, an island about 21 miles round, consisting of one stee, high rock, which gives it the appearance of a

castle in the middle of the sea. This island is said to have been discovered by the *Portuguesc*, on the festival of the Empress *Helena*, mother of the Empror *Constantine* the *Great*, whose name it still bears. The remains of *Buonaparte* were interred here, in 1821, and afterwards removed to *France*. This Eclipse will be visible to the principal parts of *Europe*, to all *Africa*, and some portions of *Asia* and *America*.

2. The second is a solar defect, on Saturday, June 15th, when the ecliptical conjunction of the Sun and Moon takes place, at about 26 min. past 12 o'clock at night, consequently invisible to us. This Eclipse begins on the earth generally at 10h. 4m. p. M. Greenwich mean time, in lat.  $38^{\circ}$  1' S., and long.  $158^{\circ}$  56' E., and ends on Sunday morning the 16th, at 2h. 22m. in lat.  $45^{\circ}$  50' S., and long.  $149^{\circ}$  47' W. This Eclipse will be visible in the South Pacific, and Great Southern Oceans, and, where greatest, will amount to about 9 digits.

5. The third is another partial Eclipse of the SUN, on Sunday, the 10th of November, but invisible to us and all Europe. The ecliptical 0 of the luminaries happens at 9h. 56m. A. M. This phenomenon commences on the earth generally at 9h. 12m. A. M., in lat. 60° 12' S., and long. 84° 36' W., and terminates at 10h. 50m. A. M., in lat. 72° 52' S., and long. 172° 55' W. This Eclipse will be visible to only a small portion of the Great Southern Ocean, and will not, where greatest, exceed one-ninth part of a digit.

4. The *fourth* is another total Eclipse of the Moon, in the night of *Sunday*, the 24th of *November*, and visible to us and all *Europe*. The following is an accurate type of this phenomenon as it will appear at *Greenwich*, and will answer tolerably well for any place in our *island*.

The following are the Mean Times of this Eclipse, according to the respective meridians of the places here mentioned : — PRINTED FOR THE COMPANY OF STATIONERS.

Eclipse of the Moon Nov. 24th, P. M.	Greenwich		ich.	Dover.			York.			М	anch te <b>r.</b>	es-	Plymouth.

End of Eclipse	13	39	24	13	44	40	13	35	0	13	30	24	13	22	54

Digits eclipsed on the Moon's southern limb = 17 dig. 13' 12''.

At the beginning of this Eclipse the Moon will be vertical in lat.  $20^{\circ}$  57' N., and long.  $28^{\circ}$  27' E., which falls to the west of the Arabian Gulf, near Dongola, in Nubia. At the middle she will be overhead, in lat.  $21^{\circ}$  5' N., and long.  $0^{\circ}$  59' E., near Taudeny, in the Great Desert of Africa. At the end of the Eclipse the Moon will be in the zenith, in lat.  $21^{\circ}$  9' N., and long.  $27^{\circ}$  9' W., in the Atlantic or Western Ocean, not far from the Cape de Verd Islands. This Eclipse, therefore, will be visible to the whole of Europe and Africa, to the western parts of Asia, the eastern parts of South and North America, and round the North Pole. — Note. The Moon will be visible during the whole time she is immersed in the shadow of the earth, appearing of a dull red or copper colour: the Earth's atmosphere

> Refracts into the shade the solar light, Which renders visible the orb of night.

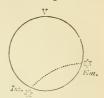

We now come to the *fifth* and *last* Eclipse of the present year, which is a partial one of the SUN, on *Monday*, the 9th of *December*; but as the ecliptic  $\bigcirc$  takes place more than four hours after sunset, this phenomenon, of course, must be invisible to the inhabitants of *Great Britain*. This Eclipse begins on the earth generally at 6h. 19m. P. M., in lat. 44° 25′ N., and long. 162° 10′ W., and ends at 9h. 44m. P. M., in lat. 44° 57′ N., and long. 82° 52′ W.; therefore it will be visible to the *North Pacific Ocean*, and the greater part of *North America*. The defect, where greatest, will be about 8 digits.

### LUNAR OCCULTATIONS.

February 6th, the Moon occults e in Q, a star between the fourth and fifth magnitudes; immersion at 11h. 50m., and emersion at 12h. 58m. in the night. — March 15th,  $\pi$  Sagittarii, also between the fourth and fifth magnitudes; immersion at 4h. 49m., and emersion at 5h. 41m. in the morning. — April 1st, e in Q again; imm. 6h. 41m., and emers. 7h. 55m. in the evening. — April 20th, the Moon occults the planet Mars; imm. 3h. 59m., and emers. 5h. 14m. afternoon: but in consequence of the planet eing then at a great distance from the earth, and so much in

the rays of the sun, the phenomenon will be invisible even to those who are in possession of good telescopes. — September 5th,  $\iota$  in  $\bigotimes$  is occulted : immersion at 0h. 51m., and emersion at 1h. 47m. in the morning. — November 25th,  $\iota \bigotimes$  again; imm.

10h. 50m., and emers. 11h. 56m. in the night. — December 25d,  $\zeta$  in  $\mathfrak{H}$ , being a star of the third magnitude. I here insert a type of this occultation: —Im. the place of immersion, which happens at 9h. 10m.; and Em. that of emersion, which takes place at 10h. 17m. in the night. — December 51st, one more occultation of e in  $\Omega$ ; the star immerges at 3h. 49m.; and

re-appears from behind the moon, 5h. 5m. in the morning.

### CELESTIAL PHENOMENA.

The Times when the Planets arc in the most favourable Positions for Telescopic Observation; together with other interesting Particulars pointed out relative to these Celestial Bodies.

The reader will see, according to my usual plan, at the head of the right-hand pages of the calendar, that I have given the times when the planets are in  $\mathcal{O}$  with the moon; and as the latter is an excellent guide, he will by that means easily become acquainted with the planets of our system; and it will also be well for him to notice the weather at those times, for  $\mathcal{V}$  in  $\mathcal{O}$  with the  $\mathcal{D}$  is considered to produce cold cloudy weather, with rain in summer, and snow in winter;  $\mathcal{U}$  with the  $\mathcal{D}$ , fine mild weather in general; and  $\mathcal{O}$  with the  $\mathcal{D}$  to produce thunder in summer, and at all times a warm, pestilential, unwholesome air.

 $\emptyset$ . MERCURY will be at his greatest eastern elongation from the sun January 15th, May 5th, September 1st, and December 27th, when, should the atmosphere prove favourable, an opportunity will occur, one or two evenings previous, and succeeding, of viewing this planet without the aid of instruments. The other planets of the system are constantly presenting themselves for observation, with the exception of a short space of time about the period of their  $\emptyset$ ; but this messenger of the gods just appears, as if in haste to discharge his commission, and returns again to lose himself in the solar beams. Mercury may be seen in the mornings near the south-eastern horizon, at daybreak, about the middle of October.

**Q. VENUS** will be a striking object in the west during the evenings of *February*, *March*, *April*, *May*, and *June*, but especially in *April* and *May*; she will in these months rise high in the heavens, and having at the same time a very considerable elongation, must render her more than usually resplendent. The best time for observing her with a telescope will be from the

latter end of May to the beginning of July, about the time of sun-setting, and again in the morning during August, September, and the early part of October. Her greatest brilliancy will be on June 16th, and August 28th. This planet will be in  $\mathcal{J}$  with  $\mathcal{Y}$ January 25th, & March 25th, and with & again on the 26th of November. Her greatest eastern elongation is on the 14th of May, and that of her western October 5d. She will be visible in the mornings from the end of July to the termination of the year. - This beautiful planet has always excited the most enthusiastic admiration in every clime and age of the world : it was the first star in the heavens that became the object of idolatrous worship of the eastern nations; lovers still pledge their vows beneath the mild lustre of its beams, and poets still sing of its splendour and sweet influences: Homer, Hesiod, and Isaiah, among the ancients, and all the celebrated poets of the present and preceding age, have the most lovely allusions to this beautiful gem, whether shining on the brow of eve-the bright forerunner of a thousand stars that ornament the midnight canopy, or glittering in the dewy morn - the herald of the rising day. This planet received its name from the Greeks and Romans, in honour of Venus, the goddess of love and beauty.

 $\mathcal{J}$ . MARS does not come to an opposition with the Sun this year, and therefore is not so favourably situated for common telescopes as if that had been the case : as it is, the most proper times for observing him will be in the evenings at the beginning of the year, and in the mornings at the end.

2. JUPITER with his be'ts and satellites will appear to great advantage in *August*, *September*, and *October*: he will be a splendid object in the evenings of the autumn and beginning of winter.

k. SATURN will be in  $\delta$  to the  $\odot$  on the 26th of *July*; therefore the best time for viewing his interesting ring will be during that month and the two following.

### THE GREAT COMET OF 1843.

This Comet, which appeared in the month of March last year, with such a splendid nucleus and immense train, to the West Inaia Islands, to the Cape of Good Hope, Bombay, Madras, &c, was only partially seen in England, the tail appearing to cut the horizon so soon as the sky in the evening was sufficiently dark to render it visible. On the 17th of March, at 8 p.M., at Epping in Essex, the train was noticed to reach from the horizon about 5° south of the west to within a few degrees of Sirius, a distance of about  $55^\circ$ ! — This was the most remarkable comet ever seen; it passed nearer the sun when at its perihelion than any upon record : the rapidity of its orbicular motion at, and near, this point, was truly astonishing, describing an angle of 180° in

the course of a few hours! It is now launched off into space, and from the great eccentricity of its orbit we may not expect it to return for many generations yet to come.

If we give credit to the opinions of Dr. Herschel respecting the formation of the sun, it does not seem impossible for a comet to pass within the luminous atmosphere of that body, and yet from its great centripetal force be prevented from being drawn upon the nucleus of the sun. The nucleus or true sun may be very small compared with the luminous body we call the sun, and therefore a comet moving with a prodigious velocity might pass through a portion of this luminous globe, and yet not touch the true sun. The curve of the comet's orbit may have been a little altered by its approximation to the centre of attraction; and that may probably be the cause why the elements are so discordant : the wrong adjustment of the elements, and more bkely the error of the assumed curve, may have been the cause of uncertain results. Why ! you will say, these are visionary notions! Suppose after all, when we get more distant observations from the perihelion, and re-compute the elements from them, that that point should still pertinaciously fall within the orb of the apparent sun; then I trust you will not deny there may be some truth in your old friend's remarks! But enough of this you will say, so I have done.

## METEOROLOGICAL OBSERVATIONS, ETC.

Relating to the Year 1842; with some Remarks on the BAROMETER, THERMOMETER, ETC.

#### COURTEOUS READER :

THE following extracts are from a minute journal of the weather kept at *Thwaite* in *Suffolk*, and relate to the charming year 1842.

The year 1842 was remarkable for its general fineness, but more particularly for the extraordinary heat of the month of *August*, and the general splendour of the summer.

JANGARY was dry and very frosty throughout, with considerable snow on the 5th, 22d, and 25th. The thermometer was at 17° on the 7th, and  $15\frac{1}{2}$ ° on the 24th. FERBUARY and MARCH were mild and stormy, but often pleasant; and on the 28th of the latter month the thermometer was at 61°. APRL was very dry, with parching easterly winds, but after the 19th very hot at times. The maximum temperature on the 24th was 78°, and we had a severe thunder-storm on the same day. May was a fine growing time, but little rain until the 24th. The thermometer was 75° on the 50th and 31st days. JUNE was dry, and extremely hot at times. On the 12th and 14th, the maximum thermometer in the shade reached 86° and 87° respectively.

Heavy thunder-storms on the 20th, and in the night of the 50th. JULY was variable, with fruitful showers, but in general a fine seasonable month. The thermometer was at 80° on the 11th, 18th, 19th, and 24th days. Severe thunder-storms on the 20th and 27th in some places. August was a most splendid month, remarkably hot and dry to the end; and from the 3d to the 27th the heat was excessive, beyond any instance on record, in its continuance, in these parts. By 9 A.M. of the 10th the thermometer was at 82° ! and soon after noon it reached to 90°, and at High Wycomb 96°! On the 14th, 15th, 16th, 18th, and 25d it again range 1 from 87° to 893°. At Uckfield, Sussex, it was at 94° on the 18th! At Thwaite, in the sun, it was at 147°. 4 feet from the ground, and water became heated to 104° at 5 feet elevation, in a leaden vessel, open at the top! Awful thunder-storms on our Suffolk coast on the 24th, 25th, and 29th; and on the last-mentioned day two persons were struck dead at Stowmarket. SEPTEMBER was chiefly fine and hot till the 18th day. The thermometer was at 79° on the 2d : much lightning all night on the 7th; and on the 10th two persons were struck dead near us in a storm. After the 18th very showery. OCTOBER was fine till the 18th, afterwards very storiny. November was mild and rainy. DECEMBER was uncommonly fine and mild, and vegetation was proceeding as in spring ! - Note, the coldest day was January 24th, and the hottest the 10th of August; yet the 14th of June, and the 15th, 18th, and 23d of August, were nearly as hot.

To the above I shall now add a few remarks taken from correct meteorological journals kept at Greenwich in Kent, and Epping in Essex. 1st, Greenwich. January 15th, very snowy, with S.E. squalls : on the 25th, at 5 A.M., heavy snow, wind S. : minimum temperature on the 24th was 20°. April 24th, between 2 and 4 P. M., a tremendous storm of thunder, lightning, rain, and hail. June, from the 10th to the 14th, the thermometer every day ascended above 80°; on the 12th it reached 85°. Thunder-storms on the 14th, 19th, and 21st. July, from midnight of the 27th to 7 A.M. of the 28th, constant thunder and lightning with heavy rain. August 11th, at 1 A.M., a very awful thunderstorm. The maximum temperature on the 3d, was 83°; 4th, 82°; 10th, 85°; 14th, 85°; 15th, 87°; 16th, 85°; 18th, 89°, and in some parts of Greenwich above 90°! and at midnight even at 75°! The maximum on the 22d was 85°, and on the 25d, 80°. On the 29th, between 4 and 6 r. M., nearly two inches of rain fell at Somerset House, London, while it was fair at Greenwich ! September 7th, much thunder and lightning in the evening. October 20th, minimum temperature 29°; 21st, 28°; 22d, 27°; and on the 26th much snow fell at Leeds, &c., in Yorkshire. December was exceedingly mild, with a high temperature. About the middle of the month the weather was so remarkably

fine that spiders crept about, and gnats played in the *bright* sunbeams, as in *July*: the lawns on *Blackheath* were covered with cobwebs, which, spangling in the solar rays, gave a singular appearance for the season of the year: the song of the thrush was quite musical; and the little death-watch (*Atropos pulsatorius*) was heard ticking freely as in summer.

2d, Epping. Between noon of June 30th and July 1st, 1'161 inch of rain fell. Again, on July 20th, in the afternoon, in two thunder showers, there fell 1.479 inch ! and the same evening a fine oak in the forest was struck by the lightning; it was nearly denuded of its bark, and riven from top to bottom. The 10th of August was particularly close and sultry. Two observers of nature noticed the thermometer in the shade, at 10 A.M., as high as 81°, and by noon it reached 90°! In the afternoon a pleasant breeze arose, which mitigated the heat, yet they found in the shady forest (where they spent the afternoon), the thermometer stood considerably above 80°: towards evening thunder clouds appeared in the southern horizon, along the summits of which vivid lightnings rapidly played; these soon spread over the sky, and at sunset, along the road between Weald Gullet and Epping, the phenomenon became awfully grand; the electrical fluid seemed to rush from every part of the heavens with remarkable brilliancy, while the incessant thunder peals were almost deafening, but the descent of rain was not great. The fierce storm, however, was soon over, and tranquillity restored about 8 P.M. The coldest day was January 24th, when the morning minimum on the snow was 14°, and between 7 and 8 P.M. 13°. This day proving bright while the sun was above the horizon, the effects of different-coloured eloth when laid on the snow was tried ; and after the pieces had laid about 4 or 5 hours, the white and yellow had made little or no impression in the snow; on the contrary, the dark, and particularly the black pieces, caused the snow to dissolve under them to a great depth, and of the exact shape of the pieces of cloth. This, of course, you will say " is nothing new." Nevertheless, sometimes trifles may be turned to good account, - here for instance, as to the colour of our dress, &c.

Judicium Astrologicum, pro Anno 1844. VOX CELORUM, VOX DEI: The Voice of the Heavens is the Voice of God. He speaketh in all the Changes of the Seasons and of the Times.

### MY WORTHY FRIENDS,

Ir we feel disposed to contemplate the inexpressible greatness and majesty of God, let us but look up and survey the heavens, which are stretched out like a curtain; "they declare the glory of God, and show forth his handy work." They visibly show it

forth to the rude and illiterate; but the mind which is fraught with the comprehensive study of Philosophy may for ever expand itself in the immensity of the prospect. Accordingly, on contemplating the aspects and other configurations of the planetary orbs relating to the coming year, my mind has been deeply affected on seeing that there are yet the signals of war and rumours of war; that nations are still disposed to rise up against nations, and kingdoms against kingdoms. For man to take the life of man, or for one company of human beings to destroy another, is an outrage upon reason, to say nothing of Christianity, and the principles of its sacred Founder, who said that he came not to destroy men's lives but to save them. A certain philosopher, speaking on the subject of war, says - " A hundred thousand mad animals, whose heads are covered with hats, advance to kill or be killed by the like number of their fellow mortals covered with turbans. By this strange procedure they want at best to decide whether a tract of land, to which none of them lays any claim, shall belong to a certain man whom they call Sultan, or to another whom they call Czar, neither of whom ever saw or will see the spot so furiously contended for; and very few of those creatures who thus mutually butcher each other ever beheld the animal for whom they cut each other's throats! From time immemorial this has been the way of mankind almost all over the earth. What an excess of madness is this! and so deservedly might a Superior Being crush to atoms this earthly ball, the bloody nest of such ridiculous murderers,"

How much of this kind of infernal work will be going on in one part of the earth or another, time will unfold to view. I need not tell the reader that it is the opinion of the most celebrated astrologers, that the appearance of a comet (especially if of any considerable magnitude) betokens wars, earthquakes, famines, &c.; and certainly the comet of last year, in those parts of the earth where it was fully developed, was one of extraordinary splendour; therefore, depend upon it that many and very ominous events will follow as in the wake of its ethereal course.

> When fiery comets o'er these nations rise, And splendid lightning gilds the upper skies; When round their vortex they in fury roll, They fright with dire alarm each guilty soul; As omens certain of a labouring state, Of bloody battles and a hostile fate : They shake with dreadful awe the ponderous mass, And desolation make where once blest order was.

The great wise Disposer of all events rides upon the storms, and has his way in the whirlwinds, so that many of his designs are dark and mysterious :

> All nature is but art, unknown to thee; All chance, direction which thou canst not see; All discord, harmony not understood; All partial evil, universal good.

## MOORE 1844.

## THE HIEROGLYPHIC.

Of the WINTER QUARTER, called the Brumal Ingress.

The silver ponds now shine in glittering mail. And frozen clouds discharge the pattering hail ; A coverlet of fleecy snow o'erspreads The towering hills, and clothes the naked meads : No warblers now chant forth their sprightly strains, Nor with soft notes divert the listening swains : No pleasing object entertains the sight. Nor rural walks, nor sylvan shades invite : No more we trace the muses of the grore. Though once our calm retreat, and seat of love : But now with brisk wood-fire and nut-brown ale, In friendly social mirth ourselves regale.

land, and the ecclesiastical contentions in Scotland, and also in our old mother-church. Something seems to be hatching in France; and Spain is far from being tranquil, nor will she be till her political institutions are thoroughly purged of the dross of centuries; and if her proceedings are not interfered with by any of the despots of Europe, there will ere long arise in the horizon of Spain the bright star of liberty, the harbinger of salvation to the struggling population of this beautiful country. Our Parliament, now assembled, will have plenty of work. It is to be hoped, among other matters, that they will not overlook the cruelty and sufferings experienced in workhouses, prisons, coal-mines, &c. by the poor classes. It is to be hoped also that, while fashion disports herself in the metropolis in all the galaxy of her costliest trappings, a thought will now and then be bestowed on the mass of suffering from which that splendour sprung ! The changeable state of the weather towards the end of this quarter will be the cause of many diseases; amongst the rest, that contagious and debilitating complaint the influenza, which will be severely felt by the police and others exposed to the weather, particularly during the night. The best treatment of this disorder is purgatives and diaphoretics in the early stage of the complaint.

## Of the VERNAL or SPRING Quarter of 1844.

This quarter commences when the sun enters the equinoctial sign  $\gamma$ , which he will do this year on *Wednesday*, the 20th of *March*, at 11 h. 53 m. 59 s. in the forenoon; at which time the celestial signs with the planets, and certain of the fixed stars, will be found as exhibited in the following figure.

It will be unnecessary to enter into particulars relative to the positions of the planets and signs with respect to the mundane divisions of the heavens, as the whole is here presented to the reader's view : hence it only remains for me to inform him that the zodiacal contigurations are as follow: -- & 莫4, 6 ①提, 8 早日, \*3 草, \*D 九, \* 2 4, and \* 8 4. These all being conjunctions and sextiles, are, of course, of a friendly nature, and from the whole we are led to infer that during this quarter many changes will take place amongst rich and poor, old and young, learned and unlearned, through which many of our own countrymen will be benefited. I trust our Parliament assembled will feel disposed to lend an attentive ear to the cries of suffering humanity. The corn laws and free trade will be brought upon the carpet; also our affairs in India, China, and other remote regions will be the subjects of long speeches. Important news from distant shores will frequently arrive. Many marriages in high life will take place, connected with the church and army. In fact, Venus seems to be very busy throughout the spring ; therefore ye thoughtless maidens beware, for she will give buoyancy to the wings of Cupid, and poignancy to the wounds of his gilded arrows !

## Of the ESTIVAL or SUMMER Quarter.

This division of the year dates its commencement in our northern hemisphere at the moment of the sun's centre arriving at its greatest boreal declination, which, in this instance, will be on Friday the 21st of June, at 8h. 46m. A. M., when we have the 26° of Q on the angle of the ascendant, and the 14° of 8 on the Medium Cali; at the same time the D occupies the 1st house, h the 6th, 4 and H the 8th,  $\delta$  the 10th, the  $\odot$  and  $\delta$  the 11th, and  $\circ$  the 12th; forming with respect to the earth, the following aspects:  $- * \bigcirc \mathbb{D}, \square \mathbb{D} \heartsuit, * \mathbb{D} \heartsuit,$  $\mathcal{S}$  h  $\mathcal{Q}$ , and  $\Box \odot \mathcal{Y}$ . These do not exhibit anything particularly striking or important. It is true that h in his own house m, which governs Tartary, Russia, Denmark, &c. in & to & in Q, the ascendant of Italy, France, &c., implies contention among these nations, in which Cupid will be busy. In our own nation, though things are taking a turn for the better, there is, notwithstanding, great dissatisfaction expressed : in fact, we are always complaining of one thing or another, forgetting that the principal cause of miscry is in ourselves : yes, the fault is in every man's heart, poor and rich. Look into your Bibles, and you will see a command given, which, if attended to, would set all things right; and do you say, what is it? It is this - " Thou shalt love the Lord thy God with all thy heart, mind, soul, and strength, and thy neighbour as thyself." If conformity to this law were general, our parliamentary gentlemen, instead of cavilling about trifles, would direct their attention at once to important matters - the real happiness of the nation; the wealthy in their splendid carriages would reach ont the hand of sympathy to their distressed neighbours; and the great landowner would feel a pleasure in dividing his vast estates into numerous small farms, that more hands might be employed, and in consequence the ground would be better tilled, and would yield a greater supply of food. No one with an eye to the duty above-mentioned can say, as a certain influential individual said a short time ago, when asked why he allowed so much waste land to remain so near his abode — that he could not bear to see a number of labourers in the immediate vicinity of his mansion! Now your old friend, the antiquated physician, *Francis Moore*, points out the only true medicine that can cure the general moral maladies of man. Are you willing to attend to his advice? This is not the first time he has spoken in this way.

> No radiant pearl which crested fortune wears, No gem that twinkling hangs on beauty's ears, Nor the bright stars which night's blue arch adorn, Nor rising sun that gilds the vernal morn, Shine with such lustre as the tear that breaks For other's woe down virtue's manly cheeks.

## Of the AUTUMN Quarter.

Taking into consideration the precession of the equinoxes, and the perturbations of the planetary bodies, I find that our globe will enter the first point of Y, in the present year, on Sunday, September 22d, at 10h. 56m. P. M., when we have the 16° of so on the eastern angle, and the 15° of  $\mathcal{H}$  on the meridian; at the same time  $\mathcal{Q}$  is in the 2d house,  $\mathcal{J}$ in the 3d, the  $\odot$  and  $\heartsuit$  in the 4th, the  $\mathbb{D}$  and  $\mathbb{I}_2$  in the 8th, and 24 near HI in the 10th. The zodiacal aspects near this time are \* ) III,  $\mathcal{B} \mathbb{D} \mathcal{L}, \Delta \mathbb{D} \mathcal{V}, \mathcal{B} \overline{\odot} \mathcal{L}$  and,  $\Delta \overline{\odot} \mathfrak{h}$ ; and from these, those of my readers, who have studied Astrology, can judge what the result may be. I find that the 8 of 3 in my to 4, in October, implies bloodshed arising from religious differences, in which Turkey will be involved, as m governs the whole of the empire, both in Europe and Asia; probably another exhibition of cruelty like that which took place last year, at Kerbela, where the Turkish troops put to the sword six thousand Persians, who had fled for refuge to the Mosque of Hessein. The planet 24 in X casts a smile on the evenings of these declining days, and seems to promise us some good. At the end of the quarter this benevolent star is making its way towards Y, the ascendant of England; and I trust better feelings will be experienced amongst mankind - that the principle of selfishness will give way, and men will consider that the Divine Creator of one flesh and blood made all the people of the earth, and that in consequence man should find nothing in man but that of a friend and a brother. To teach our enemy his duty, the Scriptural way is this - " If thy enemy hunger, feed him; if he thirst, give him drink, &c." Conduct like this is calculated to soften the most furious temper into kindness.

# 2 JANUARY XXXI Days.

ANOTHER year takes place while Winter dire Binds Nature's realm, and<sup>5</sup> dims the solar fire; Say, doth this season show your present state, And do you mourn the hardness of your fate? Let not despair sit brooding on your breast, The flintiest rocks dissolve at Heaven's behest.

# MARCH XXXI Days

THOUGH the rough winds of *March* should blow awhile, *May*, robed in vernal beauty, soon shall smile: And thus the toil-worn Christian meets the rude And angry blasts of death with fortitude; In hope that he, through Christ, th' immortal King, Shall rise to enjoy one ever-blooming spring.

# APRIL XXX Days

Lo! April now with smiles and frowns appears, The ficklest of the months that form our years: In it our state on earth is well portrayed, Alternate joy and grief, sunshine and shade: But they who here through grace their duty mind, Shall afterwards unchanging pleasures find.

## AUGUST XXXI Days.

16

The reapers are, on mountain brow and plain, Ready to mow and house the ripened grain; By which we 're led to muse on things sublime,— On that great harvest at the end of time! Our wisest plan, as men with reason blest, Is to prepare, while here, for endless rest!

## 24 DECEMBER XXXI Davs.

OLD Winter in his ermine mantle comes, The bleak north wind through every crevice hums: Do penury's chill blasts your path surround? Is every pleasing hope strewed on the ground? Cheer up, my friends, for sunshine follows rain, Though Winter frown, the Spring will smile again.

SEPTUAGESIMA Sunday			ADVENT SUNDAY		

### THINGS TO BE BORNE IN MIND.

In JANUARY. That the January dividends at the Bank are payable on the 8th. That before the 8th, *Fire Insurance* policies, due at Christmas, must be paid. That *Hilary Term* begins on the 11th, ends on the 31st. That most of the *Quarter Sessions* are held in the first week of this month.

In FEBRUARY. That the 3d is Bishop Blase's holiday, the 14th St. Valentine, and the 24th is St. Matthias, and is a Holiday at several of the Public Offices.

In MARCH. Remember St. David's and St. Patrick's days. Municipal assessors appointed on the 1st; also, that Overseers are to be appointed on the 25th, and the old Overseers verify their accounts within fourteen days.

In APBL. Returns relative to the Assessed Taxes are delivered early in this month. Dividends due April 5th are payable on the 8th. Fire Insurance due at Lady-day, must be paid before the 8th. That Easter Term begins on the 15th. Quarter Sessions, 1st week in this month.

In Max. That Easter Term ends on the 8th, that the hop-duty is collected on the 15th, that the 24th is the QUERN's birth-day. And remember "round about the May-pole" from the 1st to the 13th; if the May-pole is falling, subscribe for another, or apply to the Lord of the Manor, and see what he will do.

In JUNE. Overseers, on the 20th, to fix on the church-doors notices as to persons qualified to vote for counties; persons on the register need not make a new claim, unless the qualification has been changed. Drink the Queen's health again on the 20th. Trinity Term, which began May 22d, ends the 12th of this month. So farewell to the Lawyers until November. Quarter Sessions, the last week.

In JULY. Midsummer dividends are payable on the 8th, and Fire Insurance premiums paid before the 8th. Appraisers' licences (who are not auctioneers) to be taken out on the 5th. The 20th is the last day for sending in claims as county voters. Before this day, also, parliamentary electors, in cities and horoughs; must have paid poor's rates and window tax to the 5th of April preceding, or lose their votes for the next year. Lists of Electors to be made out by oversets on or before the 31st. St. Swithin is an old deceiver; do not regard him.

In August. Expect shooting stars about the 9th. The 3rd and 10th, being the lst and 2d Sundays, Borough and County Lists to be affixed on church-doors signed by the Overseers. Hawkers' and Pedlars' licences taken out on the lst. All taxes and rates due March I, must be paid on or before the end of this month by persons claiming to be enrolled as Burgesse. — Mar. Corp. Act.

In SEPTEMBER. On the 1st, Lists of objections to both county and borough electors to be affixed on church-doors. On the 22d, lists for the selection, by the Justices, of *Highway Surveyors* to be prepared.

In OCTOBER. Dividends due Oct. 10th are payable on the 14th. Revising Barristers to hold their courts between Sept. 15. and Oct. 31. Michaelmas Fire Insurances must be paid before the 13th. Bankers' Licences taken out on the 10th. Quarter Sessions in the first week after the 11th.

In NOVEMBER. 1st. Berough Councillors to be elected. The 1st a Holiday at some of the Public Offices. 10to. Magors and Aldermen to be elected. 12th. Look out for shooting stars. 15th. Hop-dury collected, and Attorneys' certificates to be taken out. Don't let Allhallows day be quite forgotten; but forget, if you safely can, that Michaelmas Term begins on the 2d and ends on the 25th.

In DECEMBER. Forget not the Christmas festivities; nor neglect to ascertain how affairs stand with regard to your accounts, your families, your bodies, your sculs. That is the most irresistible of all innovators; but if you have built on a right foundation for eternity, you need not fear him.

The COMMONWEALTH, under Cromwell and his Son, lasted from Jan. 30th, 1649.										
to May 29th, 1660; or 11 years 3 months 29 days.										
It was not until the reign of Elizabeth that the principle, that "The King never.										
dies," was admitted; that of hereditary right, from November, 1272. The three longest reigns were those of Henry III., Edward III., and George III.										
Richard I.'s bo	dy wa	s burie	d at Fe	ontev	rault,	his he	ad at 1	Roue	en, a	nd his heart at
des," was admitted; that of hereditary right, from November, 127. The three longest reigns were those of Henry III., Edward III., and Gorge III. Richard I.'s body was buried at Fonterrault, his head at Rouen, and his heart at Charron, agreeably to his own directions. H. VI. dep. in 1461, d. in 1471. John was crowned four times, viz. on May 27th, 1199; on Oct. 8th, 1200; on March 25th, 1201; and on April 14th, 1202.										
March 25th, 1201; and on April 14th, 1202.										
richty All, was crowned twice: viz. Oct. 20th, 1210; and May 17th, 1220.										
A State in the AAAA	Edward III. was King of France from January 1340 to May 1360.									

Edward III. was King of France from January 1340 to May 1360. Some legal documents between July 5th & 17th, 1553, refer to Jane [Grey] as Queen.

	TABLE TO CAL	CULATE WAGES						
Pr. Yr. Per Month. £ £ s. d.	Pr. Weck. Per Day. £ s. d. s. d.	$\begin{array}{c c} Pr. Yr. Per Month. \\ \hline \pounds & f. s. d. \end{array}$						
$\begin{array}{c ccccccccccccccccccccccccccccccccccc$								
The Months in the above Table are calculated at only Twelve Months to the Year. If the yearly Wages be Guineas instead of Pounds, for each Guinea add one Penny to each Month, or one Farthing to each Week. Thus, Six Pounds per Year are Ten Shillings per Month; but, if the Wages be Six Guineas, add one Penny for each Guinea, that is, Sixpence, and it will then be Ten Shillings and Sixpence per Month. In like manner, by adding Six Farthings to each Week, the Wages will be Two Shillings and Five-pence per Week.

Note. — Fa. means Clock to be fast; that is, your Clock, to be right, must be so much faster than the Sun Dial — slo, that your Clock must be so much slower than the Sun Dial. See p. 27., Almanack for 1837.

than the Sun Dial. See D. 21., Amanaces for 1857. To set a Clock or Watch on any Day by means of this Table : — Take out the number of Minutes and Seconds which stands against that day, and make your Clock or Watch so much faster or slower (according as the Table is marked fa or slo.) than the time on a good Sun Dial. Thus, on January 1st, the Clock must stoper. Correct the Watch when the Dial marks just an hour, as 9, 10, 11, 1, 2, 3, or 4 o'clock. Noon is not best, nor near Sun-rise or Sun-set.

**Note**, - Cole and a set of the s

#### TEN INTERESTING QUESTIONS FOR MY READERS TO CONSIDER.

 Suppose you were cast upon an island inhabited by savages who were poor and indolent, though their soil and elimate were good, what would be the first means you would take, in order to render a native most benefit? Would you teach him to play the fiddle or to dance? or would you show him the use of an axe, or a saw, or a spade, and so on?
 Will you not explain to yourself or your neighbour the various ways in which

 Will you not explain to yourself or your neighbour the various ways in which knowledge would be advantageous to an apprentice, to a common sailor, to a common workman, to a clerk, &c.?

3. What is the difference between a man who carries on a trade understanding all the principles of the process, and one who carries it on without kuowing any thing about the principles ?

4. Can you mention the name of any persons, besides Sir Richard Arkwright, Smeuton, and Dr. Franklin, who have risen from inferior situations, to great eminence, simply by knowledge and by their own exertions? Do you *know* any such? Is it not well to imitate them?

5. What should you think of any persons, poor or rich, who were opposed to schools?

6. Suppose there were two men, equally strong and equally healthy; one of them well fnformed and clever, knowing how to do many things; the other ignorant, and not knowing how to do any thing but the simplest labour; which of them would earn the highest wages? and what would be the difference in a year?

7. Is it not well for a boy to be sent regularly to school, that he may stand a hetter chance of good earnings when he becomes a man?

8. What opportunity has an ignorant man of rising in his trade or profession, and of becoming a rich man or much respected ?

9. If a man be vicious or dishonest, though he be ever so intelligent, can be expect to succeed, or will he ever be happy?

10. What do you think of the fceling which some persons have, that labour is disgraceful and idleness genteel?

#### HOLIDAYS AT THE BANK.

There are now only four, viz. Christmas Day, Good Friday, May 1., and Nov. 1. Of these the first two only are observed at the Dividend Office.

### MOORE 1845.

# Chronology

# Years Christ.

OF REMARKABLE OCCURRENCES. 1805. Battle of Trafalgar. 1066 Norman Conquest. 1116 First Parliament of two Houses.

- 1805 Deaths of Mr. Pitt and Mr. Fox. 1185 Ireland conquered by the English.
  - 1807 English take Copenhagen; Treaty of Tilsit; Portuguese govern-ment emigrate to the Brazils; Gas Lights instituted.
- 1584 Sir Wal. Raleigh discovered Virginia 1809 Jan. 16, Battle of Corunna.
  - 1812 Moscow burnt.
  - 1813 War with America; Revolution in Holland; Pr. of Orange recalled.
  - 1814 SevereFrost; Allies invadedFrance; Capitulation of Paris; Buona-parte abdicated, & went to Elba; Emperor of Russia, King of Prussia, &c., visited London; Peace proclaimed.
  - 1815 Buonaparte returned to France; BAT-TLE OF WATERLOO ; Surrender of Paris; Return of Louis XVIII.; Buonaparte exiled to St. Helena, where he died May 5, 1821. 1816, 1817, 1819, Vauxhall, Waterloo,and
  - Southwark Bridges opened.
  - 1820 GEORGE III. died, Jan. 29.
  - 1825 South America independent.
  - Battle of Navarino, Oct. 20.
     Battle of Navarino, Oct. 20.
     Repeal of Test & Corporation Acts.

  - 1829 Apr. 13, Catholic Relief Bill passed.
  - 1830 June 26, GEORGE 1V. died, aged 68; Accession of WILLIAM IV
- 1683 Pr.of Orange land, at Torbay, Nov.4.
   1830 July, Algiers taken by the French.
   1684 King James II. abdicated, Dec. 12, 1330 July 27, Revolution in France; ab-dication of Charles X.; the Duke dication of Charles X.; the Duke of Orleans declared King; Revolution at Brussels
  - installed King of the Belgians.
  - 1831 Aug.1, London Bridge opened ; first stone laid June 1, 1825.
  - 1832 March 21, General Fast on account of the Cholera.
- 1752 Style and Calendar altered, Sept. 2, 1832 Reform of Parliament Bills passed.
- King of Greece; Don Pedro invaded Portugal; Miguel's Fleet taken by Captain Napier; Slave 1780 War against Holland.

#### AN ACCOUNT OF

# THE ECLIPSES OF THE SUN AND MOON,

### And other Appearances in the Heavens, in the year 1845, the Result of careful Calculations from the most correct and approved Data relative to the Celestial Bodies.

THERE is indeed no part of the Creation but what displays the wisdom, goodness and power of the great First Cause to an *attentive nind*: but the *Heavens* in a most emphatical manner "declare the glory of God," and are nobly eloquent of the Deity, as well as the most magnificent heralds of their Maker's praise; so that in this divine book of creation the most unlettered may find enough to excite their admiration and praise.

By a little knowledge in this pleasing and wonderful science, we are enabled to contemplate that magnificent economy which poised the stars with such inexpressible nicety, and meted out the heavens with a span; where all is prodigiously vast, surprisingly various, yet more than mathematically true. By Astronomy we also learn to consider those golden huminaries in the heavens, which appear but as twinkling flames, to be in fact prodigious bodies, and as many suns to so many systems, each accompanied with its particular planetary equipage; therefore what a multiplicity of mighty spheres and worlds, unknown to us, must be perpetually running their various rounds in the immense regions of space, yet none mistake their way, or wander from the paths assigned them ; and though they travel through trackless and unbounded space, yet none fly from their orbits into extravagant excursions; none press in upon their centre with too near an approach, but all their revolutions proceed with eternal harmony, keeping such time, and observing such laws, as are most exquisitely adapted to the perfection of the whole.

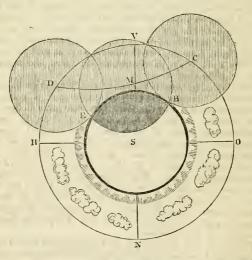

Without further introduction I shall now hasten to describe the ECLIPSES, and other astronomical phenomena of the present year. As respects the former they are *four* in number; that is, *two* of the sun, and *two* of the moon, when *one* of each luminary will be *visible* in this country.

The *first* Eclipse is a partial and visible one of the Sun, and will happen on *Tucsday*, the 6th of *May*, in the forenoon. The following Instants are given in Mean or clock time, according to the respective meridiaus : —

Eclipse of the Sun May 6th, A. M.	Beginning.	Greatest Obscuration.	End,	Magnitude.
Greenwich Edinburgh Dublin Paris *	h. m. s. 8 31 18 8 20 36 8 1 24 8 41 24	h. m. s. 9 36 48 9 29 12 9 8 12 9 43 24	h. m. s. 10 47 6 10 42 36 10 20 30 10 50 30	dig.' " 4 37 55 5 50 38 5 37 41 3 49 41

\* As I know that my Almanack is circulated in Paris, I insert this for the use of my friends there.

The following Type represents the Eclipse at Greenwich; here we have V N a vertical, and H O an horizontal line, passing through S the Sun's centre; C M D the curve described by the Moon's centre; B the point where the dark body of the Moon makes the first visible impression on the Sun's periphery, where the Eclipse begins, and E the same where it ends; the former is  $34^{\circ}$ , and the latter  $53^{\circ}$  from the Sun's vertex.

With respect to the general appearance of this Eclipse, I find that it will enter upon the Earth at 7h. 49m. in lat.  $27^{\circ}$  13' N., long.  $36^{\circ}$  55' W., which is to the west of the *Canary Islands*, in the *North Atlantic Ocean*. The central eclipse will commence at 9h. 58m. in lat.  $66^{\circ}$  43' N., long.  $103^{\circ}$  39' W., and terminate at 10h. 20m. in lat.  $72^{\circ}$  39' N., and lon.  $136^{\circ}$  58' W. After this the penumbra rapidly contracts till it becomes a point, to

the north-west of Karakum, in the Chinese Empire, when at 0h. 29m. P. M. in lat.  $48^{\circ}$  6', and long.  $101^{\circ}$  9' E., the Eclipse finally leaves the Earth, and is no more seen. This Eclipse will be visible more or less to some parts of North America, to all Europe, and some portions of Asia; and where central, will not be total, but annular, for a ring of solar light will surround the Moon's dark body on every side, beautiful to behold; but this phenomenon will be confined to a very small portion of the earth, in high north latitude.

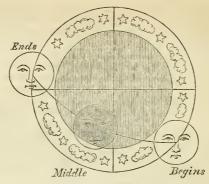

The second is a total Eclipse of the Moon; it happens on *Wcdnesday*, the 21st of *May*, in the afternoon, but invisible to us, the Moon being below our horizon at the time she is crossing the section of the Earth's shadow. This Eclipse begins at 2h. 17m. 6s., the Immersion takes place at 3h. 31m. 18s., the Emersion at 4h. 16m. 30s., and the end of the Eclipse at 5h. 30m. 35s.

At the middle of the Eclipse, which is at 3h. 53m. 54s., when the Moon is immersed into the earth's shadow  $13^{\circ}$  8' 24" from her Southern limb, she will be in the zenith in lat. 19° 56' S., and long. east of *Greenwich* 120° 39', which is between the island *Lucon*, one of the *Philippine Islands*, and the island *Formosa*, in the *Chinese Sea*. Hence the Eclipse will be visible to the Japan, Ladrone, Feejee Islands, &c. It will also be visible to *New South Wales, Hindostan, Persia, China*, and many other portions of the earth.

The third is an annular Eclipse of the Sun, which happens on the night of Thursday, the 30th of October, and of course must be invisible to us. For the Earth generally, this Eclipse begins at 9h. 32m. in lat. 19° 37' S., and long. 117° 59' E., near the north-western coast of Australia. The central appearance commences at 10h. 55m., in lat. 43° 53' S., and long. 88° 22' E., in the Great Southern Ocean; and ends at 12h. 47m., in lat. 67° 37' S., and long. 68° 48' W., in the same abyss of waters, far beyond Cape Horn. The Eclipse finally leaves the Earth at 14h. 10m., or at 2h. 10m. in the morning of Friday the 31st, in lat. 45° 17' S., and long. 112° 10' W., which falls in the South Pacific Ocean. From the above it is evident, as it regards the habitable parts of our globe, that this Eclipse is limited to Australia and New Zealand.

The *fourth* and last Eclipse that will happen this Year, is a partial one of the Moon, on the night of *Thursday* the 13th, and the morning of *Friday* the 14th of *November*, and will be visible from beginning to end throughout *Great Britain* and *Ireland*. The following Type of this Eclipse for *Grenwich* will, without sensible error, serve for other parts of the kingdom.

Digits eclipsed on the Moon's northern limb, at the middle of the Eclipse= $11^{\circ} 1' 41''$ .

I shall now give my Readers the Mean Times of this Eclipse, according to the respective meridians of the places here mentioned :-

Eclipse of the Moon, Nov. 13. P. M. and 14th A. M	Gre	enw	ich.		York	•	Edi	nbu	rgh.	D	ubli	n.
Beg., 13th day, night -												s. 50
Mid., 14th day, morn												
End, ditto	2	28	24	2	24	0	2	15	40	2	3	2

At the beginning of this Eclipse the Moon will be vertical in lat. 17° 40' N., and long. 7° 50' E., which falls to the north-east of Houssa, near the river Guin in Africa. At the middle she will be overhead in lat. 17° 49' N., and long. 16° 6' W., not far from the entrance of the river Senegal, on the western coast of Africa. At the end of the Eclipse the Moon will be in the zenith in lat. 17° 58' N., and long. 40° 3' W., in the Atlantic Ocean, between the Cape de Verd and the Caribbee Isles. This Eclipse, therefore, will be visible to the whole of Europe and Africa, to the western parts of Asia, to the West India Islands, and the principal parts of North and South America.

#### LUNAR OCCULTATIONS.

Em

The only occultations worthy of notice this year are those of the star Epsilon in Taurus on the 18th of October, and on the 15th of November. The annexed Type exhibits the former. Im. the place of immersion, which happens at 7h. 49m., and Em. that of Emersion, which takes place at Sh. 43m. in the evening :- V represents the Moon's uppermost point .- The last-named occultation In happens in the morning: immersion

6h. 22m., and emersion 7h. 6m.— A telescope of some sort will be necessary to observe this star, owing to the brightness of the Moon, the star being only of the fourth magnitude.

### CELESTIAL PHENOMENA.

The visible TRANSIT of the Planet MERCURY over the Sun, and the Times when the Planets are in the most favourable Positions for Telescopic Observation; together with other interesting particulars pointed out relative to these Celestial Bodies.

TRANSITS are celestial appearances of rather rare occurrence, as it is now 13 years since a phenomenon of this kind was visible in this country! In the present instance, *Mercwry* will be seen projected upon the Sun's face, in the form of a circular welldefined black spot, from about a quarter past four in the afternoon to the time of the setting of the Sun. The times, angular distance of the point of ingress from the Sun's vertex, &c., for the Royal Observatory, Greenwich, are as given below : —

. May 8th, 1845.	Mean or Clock Time,	Positions.
First contact of limbs Sun's centre sets Middle of the Transit Last contact of limbs	$\begin{array}{c} 7 & 32 \\ 7 & 34 \end{array}$	$58^{\circ} 5' 39'' \begin{cases} \text{arc from the Sun's vertex} \\ \text{towards the left-hand.} \\ 9' 12'9'' \begin{cases} \text{distance of Mercury's centre}, \\ \text{tre from the Sun's centre}. \end{cases}$

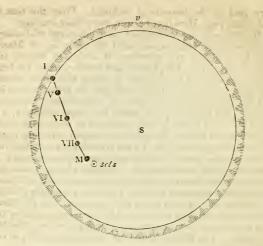

The duration of the whole Transit will be 6h. 31m. 43s.; semidiameter of the Sun = 15' 51'3'', and that of Mercury = 5'8''.

In the following Type I is the place of the Sun's periphery, where the centre of Mercury enters, which is a triffe further from v (the Sun's vertex) than where the first contact of the limbs takes place, but the difference is not worth notice. V represents the planet on the solar disc at 5 o'clock; VI at six, and VII at seven o'clock. M the middle, or nearest approach of Mercury to the Sun's centre (S). Other matters explain themselves.

. Let me advise my Readers not to look at the Sun without the interposition of a dark glass, or a piece of clear window-glass smoked on one side over the flame of a candle; for those who neglect this precaution may have to regret their temerity. Let this advice also be attended to in viewing the Eclipse of the Sun.

The transit may be very agreeably shown by receiving the Sun's image, as transmitted by a telescope upon a sheet of writing paper held a few inches from the eye-end of the same; and by regulating the focal distance accordingly, you will then

# CELESTIAL PHENOMENA.

see the planet very distinctly. This method is very convenient when a company wish to see the phenomenon, and is preferable to looking through the telescope, as in that case a change of adjustment is often necessary.

This Transit will be visible, for a greater or less time, to a large portion of the Earth's surface. The Ingress will be visible in Great Britain and Ircland, Norway, Sweden, Russia, Germany, France, Italy, Portugal, Spain, north-western part of Africa, and North and South America. The egress will be seen in North America, the north-castern extremity of South America, Australia, the Chinese Empire, Kantschatka, and Siberia.

At the time of ingress the Sun will be vertical in the Caribbean Sca, near Porto Rico, in the West Indies, lat. 17° 17′ N., and long.  $65^{\circ}$  41′ E.; and at the egress it will occupy the zenith of lat. 17° 21′ N., long.  $163^{\circ}$  38′ W., which falls in the Pacific Ocean, not very far from the Sandwich Islands.

Q. MERCURY will be visible in the evenings about the 1st of January, appearing below the planet Saturn; also about the 27th of September. He may also be seen after sun-set on or near the 17th of April, and December 10th. He will appear in the mornings, near the eastern horison, about an hour before sun-rise, during the last week of September.

**Q**. VENUS will be splendid in the mornings of *January*, and in the evenings of *November* and *December*; especially those of the latter month.

 $\mathcal{J}$ . MARS will appear in the mornings from the beginning of the year to the end of *July*. In the month of *August*, being near the earth, he will appear large, and like a flame of fire, in the

sonthern part of the heavens at midnight. From this time to the end of the year Mars may be seen every clear evening.

2. JUPITER will appear brilliant in the evenings of January, and continue visible after sun-set until the beginning of March. He will be bright in the mornings of July and August, and throughout the nights of September and October, when his belts and satellites may seen to advantage by those who are in possession of good telescopes. Jupiter will gild the evenings with his bright beams throughout the months of November and December. - In tracing the history of this planet to remote antiquity, it is supposed to be the heavenly body dedicated to Ham, on his deification, this name bearing the same signification with that in the Greek for the king of the gods. By the Hebrews it was called Gad, also Khokhabzedec, star of Justice, and probably consecrated to Mclchisedcc, whose name signifies a righteous king; it was also known among the ancient people by the denomination of Mazal, and its influence supposed to be very great in promoting fruitfulness. Jupiter was called by the Egyptians the star of Osiris; among the three hundred deities of this name, recognised by the Grecian mythology, that appropriated to this planet, was Phaëton, or brightness. The Chinese name for this planet is Mo, wood, and Cui, a year.

 $\frac{1}{2}$ . SATURN will be visible in the evenings of the first week of *January*; in the mornings of *May*, *June*, and *July*; and in the evenings from thence to the end of the year :—he will be in conjunction with *Mars* on the 2d of *June*. These two planets will continue within 13 degrees of each other till *October*; in the middle of *September* they will be only 7 degrees apart.

H. URANUS will be in opposition with the Sun on the 1st of October, and from that time to the end of the year will be favourably situated for telescopic vision. On the 31st of December he will be within a degree of Mars; so that a telescope which has a large field of view will exhibit both the planets at once. This, I know, will be interesting to those of my readers who are fond of astronomy, but never saw this distant orb of our system.

#### METEOROLOGICAL OBSERVATIONS, ETC.

Relating to the Year 1843; with some Remarks on the BAROMETER, THERMOMETER, ETC.

COURTEOUS READER:

In addition to the monthly depth of rain for 1843, I here offer some remarks on the weather of that year; for it is by looking on what is past that we are assisted by experience in judging of the future; and it would be better if more strict observers could be found than even at present exist, though their number of late has been considerably increased. I, moreover, give these remarks to show how far the weather agreed with what I had predicted for the same year; and I trust that my countrymen will find some truth in my annual predictions by carefully comparing them with the said remarks, and that this will be accepted as an apo logy for occupying so much space upon the past.

The following observations are from a correct journal, kept at *Thwaite* in *Suffolk*.

JANUARY was very mild and stormy, with some thunder, during the former half, in many places. On the 13th a tremendous gale from S.E., and S.W., and the barometer lower than for 21 years past. At this place it was at 28.33 inches, but at Uckfield, Sussex, 27.94! Very little frost all the month. The thermometer on the 28th was up to 561°! FEBRUARY, from the 3d to the 19th, was attended with seasonable winter weather. Much snow from the 3d to the 7th, and on the 14th, 15th, and 18th. The thermometer on the 15th was down to 18°, the close of the month was stormy and unsettled. MARCH, to the 10th, very cold, and heavy snow on the first four days. The middle of the month bright and very warm, and the thermometer 66° on the 18th: very bright, with parching easterly winds to the end. APRIL, during the first week, was showery and warm ; but the second week was cold, with heavy snow and hail on the 13th day. After the 14th very fine, bright, and pleasant to the end. Thermometer 76° on the 20th, and some thunder on that day. MAY was mostly very rainy; and on the 27th and 28th violent storms of thunder, lightning, and hail. JUNE was showery to the 13th, after which no more rain fell at Thwaite to the end. Some very bright weather about the 16th, 17th, and 27th, with cooling breezes. A fine hay-time in these parts. JULY was chiefly very hot and sultry to the 19th, and on the 5th the heat was excessive. The thermometer at noon, out of doors in the shade, was at 90°! on the 17th it was 80°; but after the 20th, unsettled with showers to the end. August was remarkable for awful thunder-storms, and great hail, to the destruction of much property in many parts of England; the chief of which occurred on the 3d, 4th, 9th, 15th, and 20th ; and on the 8th, 9th, 15th, 16th, 17th, 18th, and 19th, the heat was exceedingly great. Thermometer from 81° to 86° in the shade. A great and sudden rain on the 24th, equalling two inches in depth,-then again sultry to the end. SEPTEMBER, from its commencement to the 24th was most splendid, with constant brightness and excessive heat. The thermometer for eight days rose above 80°! The heat at Thwaite was the greatest on the 16th, 17th, and 18th; but at Uckfield on the 1st, when it was 90°! At Thwaite 85° on the 16th in the shade, but in the sun 133°. The last week was stormy and suddenly cold. An alarming thunder-storm at Ipswich on the 10th at noon, with great darkness and a deluge of rain, but the month was very dry on the whole. OCTOBER was warm and pleasant at the beginning, for some days: the thermometer was at 71° on the 1st. After the 7th generally rainy, with some cold frosty nights at times. NOVEMBER was showery and mild to the 25th; then fine, with a high barometer. DECEMBER was a most notable month for dryness, mildness, and constant high state of the barometer, throughout. No rain fell except on the 16th, and very little frost all the month. Note—The coldest day this year was the 15th of February, and the hottest, July 5th; but the 19th of August and the 16th of September, were comparatively nearly as hot.

To the preceding I shall now add a few remarks taken from correct meteorological journals kept at Greenwich in Kent, and Epping in Essex. 1st. Greenwich. January 13th, in the morning thunder: Barometer at its minimum at 1 P.M .= 28.18 inches! On the 28th, the Thermometer reached 56°. February 3d, 18th, and 26th, heavy snow. April 13th, morning very snowy: on the 22d, thunder with hail. May 6th, snow and rain; thermometer at 1 P.M. at 39°! 29th, thunder-and hail: on the morning of the 30th, a hoar frost. July 5th, the thermometer reached 88°! Many thunder-storms in August : on the night of the 23d, 2.67 inches of rain fell at Greenwich, while at Darlington the night was fair throughout. September was very warm and clear; the mean temperature for the first 20 days was 65°! October was cold and wet. December was very warm and dry: temperature on the 23d, 55°. 2d. Epping. The month of January was remarkable for the very low state of the barometer, especially on the 13th, at about 11 P.M., when its minimum altitude was 27.836, its temperature 42°, and that of the external air 41°; the wind was S.S.W., and very strong. The Barometer has not been so low since December, 1821. In February, some very sharp frosts : the thermometer was two or three times at 14° or 18° below the freezing point. Taking the mean temperature of each month for the last 23 years as a general mean, it appears that January 1843 was greater than the general mean by 103°: on the contrary, February was less than the general mean by 72°. March, greater by 7°. April greater by 39°. May less by 21°; and June less by 60°. July greater by 2°. August greater by 63°. September greater by 111°: this month proved very warm. On the contrary, October was colder than the general mean by 85°. November was 11° warmer; but December exceeded the general mean by 114°?- This was an extraordinary elevation of temperature for this month. The 5th of July was very warm and dry at Epping, the thermometer at 1 P.M. nearly 90°! There also were some warm days in September, the temperature sometimes ranging between 70° and 80° in the shade. December 24th, maximum temperature in the shade 53°; in the sun 60°, —this was a mild and pleasant day. Note. —On November 18th a thunder-shower with hail.

Judicium Astrologicum, pro Anno 1845.

VOX CŒLORUM, VOX DEI: The Voice of the Heavens is the Voice of God. He speaketh in all the Changes of the Seasons and of the Times.

#### COURTEOUS READER,

In this my annual production, I have a long time sounded the above important truth in your ears, and I trust not in vain. It is, however, to be lamented that there is a great deal of infidelity upon the face of the earth, and even no small portion thereof cleaves to the skirts of Britannia, notwithstanding the light and knowledge she possesses! That wonder-working Hand, which placed each mighty orb, either as a sun in the centre of numerous planets, or as a revolving world, peopled with beings of various orders and intelligences, is clearly manifest in our earth in the changes of seasons, of day and night, of rain and fair weather, &c., by which provision is made for man and beast, and seed-time and harvest continue. Let those who are disposed to deny the existence of Divine Providence reflect on these words of Holy Writ, respecting the lower orders of creatures, "Not a sparrow falleth to the ground without the notice of your heavenly Father." And respecting the children of men, consider these expressions, "The very hairs of your head are all numbered." Besides this there is a retributive providence in operation, and which will be seen and acknowledged in numerous instances during the revolution of this year, as it has been made known in all ages of the world, in empires, kingdoms, nations, families, and individuals, that mankind, singly or collectively, may see and perform their duty to one another, and also see that it is an evil and bitter thing to sin against God. A man may plot an injury against another, but he will not come off scot-free himself : he may in the haughtiness of his mind think that the object of his wrath and eruelty is a worthless and insignificant creature ; not so, in HIS eye, who is God over all, and of one flesh and blood made all mankind that dwell upon the earth :---

> "All are but parts of one stupendous whole, Whose body nature is, and God the soul; That chang'd through all, and yet in all the same, Great in the earth as in th' ethereal flame; Warms in the sun, refreshes in the breeze, Glows in the stars, and blossoms in the trees. Lives through all like, extends through all extent, Spreads undivided, operates unspent; Breathes in our soul, informs our mortal part, As full as perfect in a hair, as heart; As full as perfect in vile man that mourns, As the rapt Seraph that adores and burns: To Hix no high, no low, no great, no small, He fills, he bounds, connects, and equals all."

Respecting Divine Retribution, I would add a word or two more, because I know it is a subject too much overlooked in our day. Read carefully 2 Samuel, chap. 11 and 12, and also the

16th chapter of the same book. David was well convinced of this truth, when he said, with regard to Shimei, "Let him curse, for the Lord hath said unto him, curse David."

> " Pure from the blood of Saul, in vain He dares not to the charge reply; Uriah's doth the charge maintain, Uriah's doth against him cry: Let Shimei curse, the rod he bears For crimes which mercy had forgiven; And in the wrongs of men reveres The av(al righteousness of Heaven."

My limits forbid further observations of this kind; but I wish you to keep in mind the foregoing remarks, and look out for the unravelling of the Hieroglyphic before you.

# THE HIEROGLYPHIC.

Astrological Judgment of the Four Quarters of the Year, 1845. Of the WINTER QUARTER called the Brumal Ingress.

Notwithstanding the sun is three millions of miles nearer the earth at this ingress than on the longest day, yet the great obliquity of his rays at this season of the year, in our northern latitude, has a much greater effect in diminishing his caloric power than his nearness has of increasing it; hence the cold in winter must prevail. But more immediately to the subject in hand:— I find that this quarter begins on Saturday, December 21st, 1844, at 4h. 31 m. P.M., when 10° of  $\Xi$  is ascending upon the angle of life, and 6° of  $\Xi$  is enthroned upon that of honour.

At the same time all the planets are direct; 24 and H are located in the 10th mundane house of heaven; the Moon is near the cusp of the 12th ; Q and  $\mathcal{J}$  are in the 5th,  $\odot$  in the 6th, Q in the 7th, and old saturn in the 8th, in  $\times$  to H.  $\mathcal{Y}$  is dignified on the mid-heaven in  $\times$ , beholding  $\mathcal{G}$  with a friendly  $\Delta$ , and in X with D. These latter aspects and positions are good; and I hope will prevail over those of an opposite nature. Our Parliament assembled this quarter will have plenty of work, and be almost at their wits' end how to act; but I trust they will ultimately hit upon something which will prove a benefit to the nation.  $\mathcal{U}$  traversing over  $\gamma$ , the ascendant of England, during the latter part of this quarter is a favourable omen to us. In France much uneasiness prevails : Louis Philippe is not a general favourite. If he would take my advice, he would notice what way the wind blows, and in his political voyage sail accordingly. The day is gone by, especially in civilised states, for kings to govern with a rod of iron. The Porte is doing this in a conspicuous way at Constantinople about this time. My readers will recollect the sudden and arbitrary measures pursued in that tottering state last year :- and though our government may wish to keep the Mahometan despot on his throne, nevertheless his final overthrow may ere long be expected; when a better form of government will be established in that empire, more in unison with the laws and institutions of well-governed Christian states.

## Of the VERNAL or SPRING Quarter of 1845.

This quarter begins when the sun arrives at the first point of  $\Upsilon$ , which, according to astronomical computation, happens this year on *Thursday* the 20th of *March* at 44 min. past 5 in the afternoon; when the twelve mundane divisions of heaven, with the positions of the planets, and some of the most noted fixed stars therein, will be found to agree with the following scheme.

### MOORE 1845.

### SCHEMA CŒLI.

state of things. Could we suppose the short visit of the Czar of *Russia* to this country would have the effect of softening his heart, then we might expect, or hope, that in future he would treat the poor *Poles* as human beings; but we fear that little is to be expected on that score.

#### Of the ESTIVAL or SUMMER Quarter.

This delightful quarter of the year begins on Saturday the 21st of June, at 2h. 42m. P M.; at the same time it will be found that 8° of m will be on the *Imum Cali*, and 28° of  $\Delta$  on the horiscope. The Moon is in the 3rd house, 3 and h are in the 4th, and within orbs of their late direful d. H is near the cusp of the 6th; 24 in the 7th house, \$\vee\$ in the 8th, and lastly \$\vee\$ et \$\vee\$ are in There does not appear to be any very striking the 9th. planetary aspects at the time of this ingress ; nevertheless, before the quarter is half over, many important configurations will ranspire, that will affect both our own nation and those that surround us.  $\Im$  will be in  $\Im$  to  $\bigcirc$ , and also at his least distance rom our planet, in August ; when we may expect to hear of wars ind rumours of war abroad; and at home, malignant fevers, udden death, murders, and the like, as well as dreadful fires, nd loss of property, both by land and water, together with great evolutions in some kingdoms and states. Let the Emperor of lustria, who considers himself responsible by law to no one, ike care lest, by continuing to issue despotic laws, he may ultimately find that he has gone too far in his egregious insults with respect to the consciences of his better subjects, and repent when it is too late. Why is no Catholic subject in his dominions allowed to embrace the Protestant religion without permission from him or his government? Is this doing to others as we wish they should do unto us? — Spain continues to be oppressed by her blood-thirsty rulers; but she will, in the end, turn the tables upon her tormentors, as it is not possible to suppose that the Spaniards will long endure the joint and accumulated evils of political and religious tyranny.

#### Of the AUTUMN Quarter.

Calculation informs us that this year the earth will enter the first point of  $\gamma$ , and the Sun that of  $\Delta$ , on Tuesday the 23rd of September, at 4h, 53m. A. M.; when we shall have 19° 40' of mp on the eastern angle, and 16° 30' of II on the Medium Cali. The most important positions or aspects at this ingress are, 9 in the 2nd house within orbs of an 8 to 4 in the 8th; and 3 et b still within orbs of their d, and posited in the 5th house, by which we judge concerning the success of messengers, ambassadors, or plenipotentiaries, or respecting the ammunition or internal strength of a place besieged, &c : and as we have the two malific planets in this house in m, we shall most probably hear of some disagreeable or uncalled-for war or disturbance in Russia and Denmark; and perhaps in Lower Sweden something unpleasant may occur. I hope, however, England will steer clear in this respect, and stand aloof from war, that banc of nations ! - Ah ! what has been the result of our American and French wars? why an enormous debt, the interest of which cripples industry, and will in the end bring much trouble and distress upon the nation. Again, what have we obtained by our late marauding expedition in Affghanistan? which is said to have cost fifteen millions sterling, and the sacrifice of thirteen thousand lives! and what --reader-do you suppose was the most prominent trophy ? whytruly - A PAIR OF OLD GATES !!! - See my Hieroglyphic for 1844.

I am afraid that, ere this season terminates, the poor will have much to contend with both from sickness and distress. O ye rich and great ones, in our land ! the Almighty has given you the opportunity of doing good, and, as stewards of his bounty, you ought to dispense his blessings, according to his directions : and if I can read the signs of the times, I trust you are attending to your duty, from a conscious sense of your true position, as links in the wonderful chain of Providence. Ye poor, pursue the paths of sobriety and industry; and accept with gratitude every favour of Heaven, and you shall surely see better days.

# 24 DECEMBER XXXI Days.

Now on our island wintry storms descend; This year doth to its termination tend; Happy is he whose Maker is his friend, And can look forward to a peaceful end, And to a place beyond this vale below, A region where unceasing pleasures flow.

#### **REGULATIONS RESPECTING ELECTIONS.**

1846.—Notice to receive claims for Votes must be given by Overseers on June 20. —Lists of Electors must be made by July 31. — Persons objecting to claims for Votes must give notice by Aug. 25. — Barristers must hold their Revision Courts between Sept. 15. and Oct. 25. — Lists to be copied into books, and the books to be; delivered by Oct. 31.; and such books to be considered the Register of the Electors.

# MOORE 1846.

#### COMMON NOTES for the Year 1846.

#### THINGS TO BE BORNE IN MIND.

In JANUARY. That the January dividends at the Bank are payable on the 8th. That before the 8th, Fire Insurance policies, due at Christmas, must be paid. That Hilary Term begins ou the 11th, ends on the 31st. That most of the Quarter Sessions are held in the first week of this month.

In FEBRUARY. That the 3d is Bishop Blase's holiday, the 14th St. Valentine, and the 24th is St. Matthias, and is a Holiday at several of the Public Offices.

In MARCH. Remember 2t. David's and St. Patrick's days. Municipal assessors appointed on the 1st; also, that Overseers are to be appointed on the 25th, and the old Overseers verify their accounts within fourteen days.

In APRIL. Returns relative to the Assessed Taxes are delivered early in this month. Dividends due April 5th are payable on the 8th. Fire Insurance due at Lady-day, must be paid before the 8th. That Easter Term begins on the 15th. Quarter Sessions, 1st week in this month.

In Max. That Easter Term ends on the 8th, that the hop-duty is collected on the 15th, that the 24th is the QUEEN's birth-day. And remember "round about the May-pole" from the 1st to the 13th: if the May-pole is falling, subscribe for another, or apply to the Lord of the Manor, and see what he will do.

In JUNE. Overseers, on the 20th, to fix on the church-doors notices as to persons qualified to vote for counties; persons on the register need not make a new claim, unless the qualification has been changed. Drink the Queen's health again on the 20th. Trinity Term, which began May 22d, ends the 12th of this month. So farewell to the Lawyers until November. Quarter Sessions, the last week.

In JULY. Midsummer dividends are payable on the 8th, and Fire Insurance premiums paid before the 8th. Appraisers' licences (who are not auctioneers) to be taken out on the 5th. The 20th is the last day for sending in claims as county voters. Before this day, also, parliamentary electors, in cities and horoughs, must have paid poor's rates and window tax to the 5th of April preceding, or lose their votes for the next year. Lists of Electors to be made out by oversers on or before the 31st. St. Swithin is an old deceiver; do not regard him.

In AUGUST. Expect shooting stars about the 9th. The 2d and 9th, being the 1st and 2d Sundays, Borough and County Lists to be affixed on church-doors signed by the Overseers. Hawkers' and Pedlars' licences taken out on the 1st. All taxes and rates due March 1, must be paid on or before the end of this month by persons claiming to be enrolled as Burgesses. — Mar. Corp. Act.

In SEPTEMBER. On the 1st, Lists of objections to both county and borough electors to be affixed on church-doors. On the 22d, lists for the selection, by the Justices, of *Highway Surveyors* to be prepared.

In OCTOBER. Dividends due Oct. 10th are payable on the 14th. Revising Barristers to hold their courts between Sept. 15. and Oct. 31. Michaelmas Fire Insurances must be paid before the 13th. Bankers' Licences taken out on the 10th. Quarter Sessions in the first week after the 11th.

IN NOVEMER. 1st. Borough Councillors to be elected. The 1st a Holiday at some of the Public Offices. 10th. Magors and Addermen to be elected. 12th. Look out for shooting stars. 15th. Hop-duty collected, and Attorneys' certificates to be taken out. Don't let Allhallows day be quite forgorten; but forget, if you safely can, that Michaelmas Term begins on the 23 and ends on the 25th.

In DECEMBER. Forget not the Christmas festivities; nor neglect to ascertain how affairs stand with regard to your accounts, your families, your bodies, your souls. TIMF is the most irresistible of all innovators; but if you have built on a right foundation for eternity, you need not fear him.

The Months in the above Table are calculated at only Twelve Months to the Year. If the yearly Wages be Guineas instead of Pounds, for each Guinea add one Penny to each Month, or one Farthing to each Week. Thus, Six Pounds per Year are Ten Shillings per Month; but, if the Wages be Six Guineas, add one Penny for each Guinea, that is, Sixpence, and it will then be Ten Shillings and Sixpence per Month. In like manner, by adding Six Farthings to each Weck, the Wages will be Two Shillings and Five-pence per Week.

MOODT TOUG

Note. — Fa. means Clock to be fast; that is, your Clock, to be right, must be so much faster than the Sun Dial — slo, that your Clock must be so much slower than the Sun Dial. See p. 27. Almaneck for 1837.

Than the Sun Dial. See p. 27., Almanck for 1837. To set a Clock or Watch on any Day by means of this Table : — Take out the number of Minutes and Seconds which stands against that day, and make your Clock or Watch so much faster or slower ("ccording as the Table is marked fa. or slo.) than the time on a good Sun Dial. Thus, on January Ist, the Clock must be set3m. 50s. faster or before the dial: on the 1st of Octover, it must be set 10m. 15, slower. Correct the Watch when the Dial marks just an hour, as 9, 10, 11, 1, 2, 3, or 4 o'clock. Noon is not best, nor near Sun-rise or Sun-set. Note.—The Sun's risings and settings, as well as all other astronomical matters

Note.—The Sun's risings and settings, as well as all other astronomical matters in this Almanack, are now given in Common Clock 'Fime, such as will be shown by well-regulated public clocks.

TWELVE INSTRUCTIVE AXIOMS FOR MY READERS.

 Whatever your profession is, endeavour to acquire merit in it; for merit is esteemed by every body, and is so precious a thing that no person can purchase it.
 Of this be certain, that no trade can be so bad as none at all, nor any life so tiresome as that which is spent in continual visiting and dissipation. To give all one's time to other people, and never reserve any for one's self, is to be free in appearance only, and a slave in effect.

3. Though your profession should not lead you to study, love and respect people of letters ; and if you are not learned yourself, esteem those who are so.

4. Be easy of address, and courteous in conversation, and then every body will think it a pleasure to have any dealing with you.

5. Have the same regard for all the world that you would wish them to have for you.

6. By honesty and integrity you will gain credit every where, and your word will be thought more valuable in any business you may be concerned in than all the lawyers' bonds in the world.

7. You will find no greater enemy than yourself, if you suffer your passions to govern you.

8. Receive your relations and friends with a smiling and engaging air; if you do otherwise, you lose the pleasure of seeing them.

9. Never make confidants of any but such as are distinguished for their merit, sense, and probity. Look upon them as the only stars capable of lighting you through the darkness which the alfäirs of the world will spread over the various incidents of your life. Consider all others as wandering stars, which make a great show, but fall alt once.

10. Modesty in your furniture, equipage, and words, will show that your mind is well regulated, and your heart free from passion.

11. If you wish to be happy in the world, and esteemed by every body, fear God, be faithful to your sovereign, and live according to the strictest rules of honesty and probity.

12. If a man advance three steps to do you a kindness, fail not to advance six to testify your gratitude.

#### AN ACCOUNT OF

## THE ECLIPSES OF THE SUN AND MOON,

## And other Appearances in the Heavens, in the year 1846, the Result of careful Calculations from the most correct and approved Data relative to the Celestial Bodies.

ALMIGHTY POWER ! amazing are thy ways, Above our knowledge, and above our praise : How all thy works thy excellence display, How fair, how great, how wonderful are they. Thy hand yon wide-extended heaven uprais'd, Yon wide-extended heaven with stars emblaz'd; Where each bright orb since Time his course begun, Has roll'd a mighty world, or shin'd a sun : Stupendous thought ! how sinks all human race, A point, an atom in the abyss of space !

ALTHOUGH the Earth and the Planetary Bodies of our Solar System perform their respective periods round the Sun in nearly equal times, yet nevertheless, from the elliptical figures of their orbits, and their mutual attractions, their motions are far from being equable; and when these bodies are viewed from the Earth, this inequality becomes still more apparent, as in that case they are sometimes direct, sometimes stationary, and at other times retrograde. But as regards our satellite the Moon, her nearness to the Earth renders her orbitical inequalities more apparent than that of any other of the heavenly bodies; she has besides a considerable parallax, which causes her place in the heavens, as seen from the surface of the earth, to be very different from that in her orbit, or when viewed from the centre of our globe. For these reasons, the computations of Solar Eclipses and Occultations of the Stars are attended with considerable labour and difficulty.

In reference to the present Year, I find there will be only two Eclipses, and both of the SUN; they will be central in the tropical regions, but in very high latitudes no privation of light will be observed; yet in one of these conjunctions a portion of the Moon's penumbra passes over the islands of *Great Britain* and *Ireland*, causing a small obscuration on the southern part of the Sun's disc.

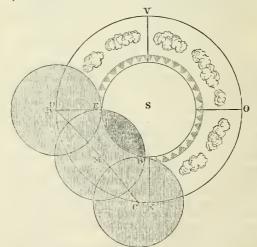

The first of these Solar defects is the visible Eclipse alluded to, and will happen on *Saturday* the 25th of *April*, in the afternoon. The following Instants are given in Mean or clock time, according to the respective meridians :—

35

# ECLIPSES, &c.

Eclipse of the Sun April 25th, P. M.	Beginning.	Greatest Obscuration.	End,	Magnitude.		
Greenwich Edinburgh Dublin	h. m. s. 5 31 42 5 19 18 5 3 42		h. m. s. 6 54 0 6 30 36 6 26 36	dig.' " 3 19 26 2 16 48 3 7 12		

The following Type represents the Eclipse at *Greenwich*: here we have V N a vertical, and H O a horizontal line, passing through S the Sun's centre; C M D the curve described by the Moon's centre; B the point where the dark body of the Moon makes the first visible impression on the Sun's periphery, where the Eclipse begins, and E the same where it ends: the former is  $174^{\circ}$ , and the latter  $89^{\circ}$  from the Sun's vertex towards the left.

Note. — Those of my readers who are not provided with telescopes, having dark glasses for viewing the sun, will find a piece of common window-glass, smoked over the flame of a candle or lamp, an excellent and safe medium, through which to observe this phenomenon.

As respects the more general appearance of this Eclipse, I find that the penumbral shade will first touch the surface of our globe in the South Pacific Ocean, considerably to the west of the Gallapagos Isles, in lat. 6° 15' S., and long. 119° 40' W., at 2h. 2m. F.M., mean time at Greenwich, while the Sun is in the horizon of that part of the world. The obscuration, now rapidly

extending itself over the illuminated disk of the Earth, will at 3h. 3m. produce a central eclipse, in lat. 2° 11' S., and long. 135° 51' W., in the same abyss of waters. The central line, now making its way eastward, enters on the continent of America, near Mexico, and winding its way across that region arrives at the western boundaries of the North Atlantic Ocean, near the West India Islands : and in lat. 25° 21' N., and long. 74° 31' W. of Greenwich, the Sun will be centrally eclipsed at noon-day, but not totally; a very narrow rim of solar light will, for a moment or two, encompass the Moon's dark body on every side. This takes place, according to our time, at 4h. 56m. p.M. The central tract, next, after passing through the Canary Islands. enters Africa, near the coast of Morocco, and soon afterwards leaves the Earth with the setting sun, in lat. 24° 56' N., and long. 3° 43' W. at 6h. 38m. But the Sun will continue to be partially eclipsed till 39 min. after our 7 o'clock in the evening, when the last portion of the penumbra will become a tangent to the Earth, in the North Atlantic Ocean, near Cape Blanco, a promontory of Africa, 180 miles north of Senegal River, lat. 20° 52' N., and long. 20° 4' W.

The second and last of these Sclar Eclipses is another annular one, on the morning of Tuesday, the 20th of October, but invisible to us. The general Eclipse begins at 4h. 47m. A. M., in lat. 9° 50' N., and long. 16° 21' E., near the southern borders of Negroland in Africa; but the central obscuration will not touch the Earth till 5h. 52m. A.M., which will be the time of sun-rising in lat. 6° 44' N., and long. 0° 32' W., towards the south-west of Benin, near the coast of Guinea, in Africa. Leaving this point, it passes through Africa, and across the northern parts of Madagascar, into the Indian Ocean, where, at 7h. 50m., in lat. 19° 22' S., and long. 58° 41' E., the Sun will be centrally eclipsed on the meridian. The track of central appearance, tending easterly, enters on the western shores of Australia, in lat. 26° S., and passing on, I find it leaves the Earth at 9h. 39m. A.M., Greenwich mean time, in lat. 23° 51' S., and long. 126° 5' E. After this the penumbral shade gradually becomes more and more contracted, and at 10h. 44m. it finally disappears with the setting sun, in the Indian Ocean, in lat. 20° 47' S. and long. 109° 6' E.

#### LUNAR OCCULTATIONS.

From the retrogression of the Lunar nodes through the ecliptic, the Moon's apparent position becomes such, with respect to the Stars and Planets which lie near her path, combined with her diurnal situation relative to the different parts of the Earth, as at times, under the co-operation of these circumstances, to hide such stars and planets from our view. The following are the most important occultations of this kind that will happen in *England* during the present Year.

The first of these occultations that I shall here notice is of the star *Epsilon* in *Taurus*, and which happens in the afternoon of the 8th of *January*; the Immersion taking place at 5 o'clock exactly, and the Emersion of the star from behind the Moon will be at 6h. 4m.

The next occultation is rather an interesting one of the planet

Mars: it happens in the night of Sunday, February 1st; and if the air be clear at the time, the appearance at Greenwich, and places near, may be expected to agree with the annexed Type, where the point of Immersion is at I, and that of Emersion is at E; both to the left of V, the vertex of the Moon's periphery. Immersion of the planet behind the dark border

of the Moon at 10h. 3m., and Emcrision from her light edge at 10h. 23m.

The third occultation is of Epsilon in Taurus again, a star of

the fourth magnitude, and happens on the 5th of *February*. Immersion 1h. 7m., and Emersion 1h. 53m. morning.

The fourth is an occultation of *Beta* in *Scorpio*, a star of the second magnitude, and takes place on the 19th of *February*, soon after the Moon enters on her last quarter.

Immersion 5h. 14m., and Emersion 6h. 27m. morning. See fig. 2. on this page.

The next occultation is of Beta in Scorpio, again ; and hap-

pens on the 12th of May, very early in the morning. Immersion 36 min. before one o'clock, and Emersion 1h. 18 m. — Note. Through a good telescope this appears a pretty double star. Fig. 3.

The sixth occultation is rather a remarkable one of that bright star of the first magnitude, in Virgo, called Spica Virginis, or the Virgin's Spike,

and takes place on the evening of July 2d, when the disappear-

ance of the star on the dark border of the Moon will be at Sh. 13m. ; and the re-appearance of the same, from the light edge of the Moon, will be at 9h. 28m. Fig. 4.

The seventh occultation which I shall record is of a star of the fourth magnitude, called Nu in Scorpio, and happens July 5th,

in the night. Immersion 10h. 55m., and Emersion 11h. 36m. The eighth is a star of between the third and fourth magni-

tude, called Beta in Capricornus. on the 23d of November, in the evenin . Immersion 5h. Thus, and Emersion 6h. 29m.

The nin.h and last occustation is of Delta 1st in Taurus, a

# MOORE 1846.

star of the fourth magnitude, and happens on the 29th of *December*, in the evening, when the star vanishes at the Moon's eastern edge at 6h. 55m., and becomes again visible at the western limb of the Moon at 7h. 44m.

#### CELESTIAL PHENOMENA.

The Times when the Planets are in the most favourable Positions for Telescopic Observation; together with other interesting particulars pointed out relative to these Celestial Bodies.

Ø. MERCURV, of all the known Planets, is the nearest to the Sun, its angular distance from that luminary never exceeding 29 degrees. For this reason, and the smallness of its disc, it is but seldom seen, and then only when at or near its greatest elongation. Accordingly, I find we may expect to have a sight of this fickle planet in the evening, when near the western horizon, about March 30th, July 28th, and November 22d, and in the morning, near the eastern horizon, about January 18th, May 16th, September 10th, and December 31st.

 $\hat{\Psi}$ . VENUS will be a striking object in the west during the evenings of January and the first half of February; and through a telescope will appear a beautiful crescent, like the Moon a few days after the change. From the beginning of July to the end of September she will deck the eastern part of the heavens with her brilliant rays before sun-rise. On the 7th of July this planet will be in conjunction with Jupiter, and on September 14th with Regulus.

3. MARS is to be seen in the evenings of the first five months of this year, and in the mornings of November and December. He will appear very near Jupiter on the 16th of February, the Pleiades on the 19th of March, Spica Virginis on October 31st, Alpha in Libra on the 4th of December, and on the last day of the same month will appear in the neighbourhood of Beta in Scorpio. This planet is distinguishable from all others by his sanguine appearance.

4. JUPITER is a splendid object in the evenings of January, February, November, and December, and in the mornings of August, September, and October. At these times, through a powerful telescope and clear atmosphere, the belts of this planet, its moons, with their configurations, eclipses, occultations, transits, and other phenomena, must prove highly gratifying to the young astronomer.

h. SATURN will be in opposition to the Sun on the 20th of *August*, and from that time to the end of the year he will be favourably situated for telescopic observation. Indeed, this planet, owing to his great distance from the Sun, undergoes but little change in his apparent diameter from the variable position

of the earth in its orbit : the difference between  $\mathcal{S}$  and  $\mathcal{J}$  being only 31". Hence, at any time in the absence of the Sun, and not too near d, with a sufficient elevation above the vapours of the horizon, he may be satisfactorily observed with a good and powerful telescope. - The ancient name of Saturn was Chronos, time; so named from the slowness of his motion : he was also called Phænon, shining or appearing, which denomination is rather singular, Saturn not being the most brilliant of the planets. This name may be accounted for from the ancients, who regarded this planet as of evil omen, from its leaden hue and remote situation: their custom was to propitiate the smiles of fortune, by giving flattering names to those influences they deemed prejudicial. Among the Jews this planet is supposed to be the one referred to in the sacred writings as Chiun, or "Remphan, the star of your God." Saturn is also called Remphan in the Persian language ; and among the Chinese, Tu, or *Tien*, earth ; a reference, probably to his inferior brightness.

H. URANUS will be in opposition to the Sun on the 5th of Oclober, and from that time to the end of the year may be observed in the evenings, by means of a good telescope. On the 1st of January he is in  $\bigcirc$  with Mars, appearing less than a degree to the south of that planet.

The Sun, with his surrounding planets, and the rest of the shining host of heaven, together with the phenomena of nature in connection with our interesting globe of earth and water, in its diurnal and orbitical motions, give us exalted conceptions of the Divine Creator !

> Thus, Lord, the wonders of earth, sky, and air, Thy boundless wisdom and thy grace declare: Thou, high in glory and in might serene, See'st, and mov'st all—thyself unmov'd, unseen: Should men and angels join in songs to raise A grateful tribute equal to thy praise, Yet far thy glory would their praise outshine, Though men and angels in the song combine. For though this earth with skill divine is wrought, Though wondrous far beyond the reach of thought; Yet in the spacious regions of the skies, New scenes unfold, and worlds on worlds arise; There other orbs round other suns advance, In ether float, and lead the mystic dance: And yet the power of thy Almighty Hand Could build another world from every sand !

# METEOROLOGICAL OBSERVATIONS, ETC. Relating to the Year 1844; with some Remarks on the BAROMETER, THERMOMETER, ETC.

COURTEOUS READER,

I HOPE that the hint I offered in my last year's Almanack, relative to the utility of regarding the past, may have had its effect in rendering the following as acceptable for the like purpose, and

whereby my readers may judge how far the predictions held good.

Extracts from a Meteorological Journal kept at Thwaite in Suffolk : ---

JANUARY proved a very seasonable month, with snow on the 1st and 10th days, and sharp frosts on the 2d, 3d, 15th, 16th, 17th, and 25th: the remainder of the month variable, with little rain :-- lowest state of the thermometer, 24°. FEBRUARY was frosty nearly throughout, and sometimes severe, with rimes; and very little rain till after the 23d. On the 13th, thermometer 20°; and on the 23d, 22°. Much snow on the 4th, 21st, and 23d; and heavy rain on the 25th. The month ended stormy, with thunder and hail on the 26th, and the barometer fell to 28.76°! MARCH was exceedingly stormy to the 24th, with gales and rain, and occasional frosts ; much snow and hail from the 6th to the 12th. A most striking change after the 24th ; fair and bright to the end, commencing the remarkable drought. Thermometer on the 28th and 29th at 61°. APRIL was a truly magnificent month; constant sun and summer skies throughout, and the heat unusually great at times. On the 2d and 4th the thermometer was at 70°; on the 10th, 74°; and on the 26th, 78°! Some thunder on the 4th and 26th in the evening. MAY was also very dry and parching, and at times very hot: on the 8th, thermometer  $77^{\circ}$ . Some cooling gales from N.E. towards the end. The pastures suffered much for want of rain. There was a remarkable haze (like that of the hot summer of 1783), producing a cream-coloured sky, during the former half of May 1844, and the sun's rays appeared of a rusty red upon all objects ! JUNE was intensely hot, and severely parching to the 25th day, and the heat on several days was even beyond what is common in our climate! On the 13th, thermometer 87°; on the 23d, 89°; and on the 24th at 92°! This was succeeded by a thunder-storm in the evening, and great hail, with serious damage ; and on the 25th a very great rain, which was a needful supply after the severe drought of 13 weeks past! JULY was close and sultry, with refreshing showers during the former half, and severe thunder-storms on the 18th day. From the 20th to the 29th very fine, bright, and excessively hot ; the thermometer chiefly above 80°; and on the 22d, 85°: on the three following days nearly as high ; and the month closed with more growing showers. This month was the giver of all comforts upon our lands, and so rapid a change was scarcely ever seen as was effected at this time by the bountiful showers after a long drought. AUGUST was unsettled and showery till the 15th, and thunder on the 3d, 4th, 5th, and 12th, in many places : afterwards very fine for the harvest, which was abundant and well secured. The last week of the month very bright and hot. Thermometer 77° on the 29th day. SEPTEMBER came in

very hot and clear : thermometer 80° on the 1st, and 79° on the 6th. Again, on the 8th it was 781°. Much vivid lightning and thunder on the 5th and 8th at night. To the 16th mostly fair and close. Severe thunder-storms on the 17th, and showers to the 23d; afterwards again fair and hot. OCTOBER was very warm, and chiefly fine, to the 14th day; the thermometer 68° on the 3d, and 64° on the 13th ; then rainy to the 26th ; afterwards fine to the end. NOVEMBER began fine, with a dry east wind; but from the 2d to the 13th very wet, afterwards very fine, and mild for the season. On the 26th it became frosty, introducing the severe winter which followed. DECEMBER was very cold throughout, with dry easterly winds and continued sharp frost. The roads were dusty and the fields dry the greater part of the month. A little snow on the 3d, 9th, 11th, and 13th. Thermometer 22° on the 6th day, and often nearly as low. Note. - The 13th of February and 6th of December were the coldest days in the year; and the hottest were the 23d and 24th of June; but some days in July were nearly as The heat, at Thwaite, was the greatest this year (1844) hot. that had been known there for 36 years!

To the preceding I shall now add some remarks taken from a journal of the weather kept at Epping in Essex: -- Though January was not, on the whole, a very cold month, yet we had some very low temperatures at times; for instance, on the morning of the 3d the minimum was 15°, and again on the morning of the 16th it was at 19°. Between the 12th and 13th there fell 1.34 inch of rain. February was cold, with a considerable fall of snow in the early part of the month, - minimum temperature 16°; the barometer was also very low at times: thunder on the 26th. March, about the medium temperature of the month: some snow and sleet as usual. April was dry and warm, the thermometer sometimes between 70° and 80° in the shade. May was also a dry month, and on the whole about the mean temperature : on the morning of the 18th there was ice of considerable thickness! June: there were some warni days this month; on the 23d, at 8 A.M., 70°, and at the same hour on the 24th, 76°: the maximum for the month about 84°. July: the mean temperature of this month about 1° above the mean of the same for the last 24 years. August was nearly 3° below the mean daily temperature for the month, and the extremes not great. The wheat was heavy in the ear, and the harvest was soon finished, though some interruptions from showers. September was rather above the mean temperature of this month for the last 24 years. The farmers busy with their second crop of hay; the first being very short from the dryness of the spring. Rain heavy on the 17th, with hail and thunder. October was in general very wet: between the 15th and 16th there fell 2.026 inches of rain ; thunder on the former

# MOORE 1846.

day : on the 8th, in low and damp situations, some dahlias were cut down by the frost: minimum temperature  $34^\circ$ . November was very wet during the first half of the month; the latter part mostly dry and cold : minimum temperature on the 27th and 28th as low as 23°. December was very cold, the thermometer being near the freezing point on most days, even at its maximum. The minimum on the 6th was 13°, 7th 18°, 8th 20°; besides there were other low minima. The mean temperature of December, at 8 A.M., for the last 24 years =  $37.7^\circ$ , in the present year =  $31.337^\circ$ !

Depth of Rain at Epping in Quarterly periods.

Traches

					menes.
From Dec. 25th, 1842	, to	March	23d, 1843,	or	
Christmas Quarter	-	-	-	-	3.934
Lady-day Quarter [184	3]	-	-	-	10.293
Midsummer Quarter	Ĩ.,	-	-	-	6.555
Michaelmas Quarter		-	-	-	9.076
				_	
From Dec. 25th, 1843,	to L	ady-day	, 1844	-	8.483
Lady-day Quarter	-	-	-	-	0.984
Midsummer Quarter	-	-	-	-	8.510
Michaelmas Quarter		-	-	-	8.773

The most striking difference in these quarters of the two years is the Lady-day quarter; that of 1843 exceeding the same in 1844 by 9:309 inches. Hence there fell in the Ladyday quarter of 1843, 3899:373, or nearly 3900 hogsheads, more rain per acre than the same quarter of 1844!

Judicium Astrologicum, pro Anno 1846.

VOX CŒLORUM, VOX DEI: The Voice of the Heavens is the Voice of God. He speaketh in all the Changes of the Seasons and of the Times.

MY WORTHY FRIENDS AND COUNTRYMEN,

HE, who rules the hosts of heaven, telleth the number of the stars, calleth them all by their names, and appoints them for signs and seasons, and to operate on all organised and unorganised bodies, —does by his all-wise, all-gracious, and all-mysterious Providence direct human operations in such a way as to bring about his own purposes and designs, so that he causes both the virtues and vices of mortals to exhibit his glory; at the same time leaving man a moral agent, or accountable for his actions, whether good or bad. This is hard to be believed by *infidels*, I know; and also by some, who are called *Christians*; —nevertheless it is supportable by Scripture, which ought in these matters to be our only guide, and not the opinions of men. Read the account of *Pharaoh*, in the book of *Exodus*, and also take notice

of St. Paul's remark, — For the Scripture saith unto Pharaoh, Even for this same purpose have I raised thee up, that I might shew my power in thee, and that my name might be declared throughout all the earth. Rom. ix. v. 17.

What I named last year will not be overlooked by you this year. In casting your eyes over nations and empires, you will have cause to acknowledge Divine Retribution in many striking instances ere 1846 is numbered with the years for ever gone.

> Yet while on earth triumphant vice prevails, Celestial Justice balances her scales; With eye unbias'd all the scene surveys, Oft close pursuing at his trembling heels, The man of blood her awful presence feels; Oft from her arm, amidst the blaze of state, The regal tyrant, with success elate, Is forc'd to leap the precipice of fate ! Or if the villain pass unpunsih'd here, 'Tis but to make the future stroke severe ; Or soon or late eternal Justice pays Mankind the just desert of all their wars !

I now present my annual Hieroglyphic : its interpretation is in the womb of Time.

# THE HIEROGLYPHIC.

Astrological Judgment of the Four Quarters of the Year, 1846. Of the WINTER QUARTER, called the Brumal Ingress. From accurate computations of the orbitical motion of the earth, I find that this Quarter begins on Sunday, the 21st of PRINTED FOR THE COMPANY\_OF STATIONERS.

44

December, at 27 minutes past 10 o'clock at night, when the 13th degree of mp will be on the angle of the ascendant, and the Sth degree of  $\Pi$  that of culmination: at the same time we find that Luna will be in the first mundane house, Sol and Mercury in the fourth, Saturn and Venus in the fifth, Mars in the seventh, Jupiter and Uranus in the eighth; forming the following zodiacal aspects:  $- \mathscr{O} \mathfrak{P} \mathfrak{h}$ ;  $\Box \odot \mathscr{J}$ ;  $\Delta \odot \mathscr{U}$ ;  $\Box \odot \mathfrak{D}$ , and  $\mathscr{E} \mathfrak{D} \mathscr{J}$ . With respect to this dull quarter of the year, I may just remark, that it is clear that there will be not much of novelty as to matters of state, at least in this country. People in general will be cutting and contriving means to support thenselves and their families, and to meet the demands of the tax-gatherer. We were told that our glorious victories would in a great measure relieve us from the latter burden ; nevertheless we have since found out that these, and many other promises, were mere delusions, propagated for the purpose of flattering our vanity, and thereby rendering the means more easy for raising money to carry on a contest, solely in favour of regal dignity. I have also to observe, that while old gloomy Winter with tardy steps moves along, many a deed of darkness will be perpetrated, notwithstanding the outward displays which will be made in favour of virtue, and the boast which some people will make of their religion : but if their's be not the religion of the New Testament, what will it avail them? Religion, alas! is too often used as a cloak for vice! The greatest exhibition of wickedness is to render evil for good. An old author very justly remarks, -To render good for evil is God-like ; to render good for good is man-like; to render evil for evil is beast-like; to render evil for good is devil-like.

Of the VERNAL or SPRING Quarter of 1846.

Hail, welcome Spring !— For thee the fragrant zephyrs blow, For thee descends the sunny shower'; The rills in softer murmurs flow, And brighter blossoms gem the bower.'

The vernal quarter of the present year begins on Friday, March 20th, at 11h. 46m. 5s. P. M., at which time I find, from accurate computations, that the face of the beavens, as regards the positions of the planetary bodies, the signs, and some of the most noted fixed stars, will be according to the following delineation, in which I have also inserted the principal aspeets: —

If we may judge from planetary configurations, &c. at this ingress, it does not appear that any very striking incidents are likely to take place in the political world during this quarter; nevertheless I augur that the affairs of Europe are not in so calm and quiet a position as they have been for some time past;

## ASTROLOGICAL PREDICTIONS.

and great endeavours will be made tending to a pacific disposition. The sovereigns of this quarter of the world seem pretty well contented with the present state of affairs; and whilst they can raise supplies from their subjects, that they and their minions may roll in splendour and wealth, surely we have just reason to suppose, that the peace of the world will not, for the present, be disturbed by the conflict of armies!

'SCHEMA CŒLI.

# $\begin{array}{c} \begin{array}{c} \begin{array}{c} & & & & \\ & & & & \\ & & & \\ & & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ &$

Several denominations of religion are now active. One party at this time is busy in diffusing, by publications and otherwise, telling us that we are on the last crumbling sands of time, and that the second appearance of Christ is at hand, though HE himself has told us, But of that day and hour knoweth no man, no, not the angels of heaven, but my Father only. Matt. chap. xxiv. v. 36. They, however, have nothing to fear who worship and adore their Maker, and live at peace with all mankind.

#### Of the ESTIVAL or SUMMER Quarter.

1 find that the Sun will this year reach the apex of his northern spiral of declination on *Sunday*, the 21st of *June*, at 31 min. after 8 in the evening, at which time this quarter begins; when  $4^{\circ}$  of  $\gamma_{2}^{\circ}$  is on the cusp of the ascendant, 10° of  $\mathfrak{M}$  on the southern

PRINTED FOR THE COMPANY OF STATIONERS.

46

angle. Moreover the planet b occupies the sign X, which is wholly included between the cusps of the 2d and 3d mundane houses; H is in the 3d house, 9 the 4th, 24 and D the 5th, ¥ and ⊙ the 6th, and ♂ in the 7th. Also I find at this ingress the sun in  $\mathcal{O}$  with  $\mathcal{O}$ ; and the latter in  $\Delta$  with  $\mathcal{V}$ , while  $\mathcal{V}$  is in  $\triangle$  with  $\bigcirc$ . The Moon is separating from a zodical  $\square$  of b, and d with  $\mathcal{U}$ . — There does not appear to be any thing particularly unpleasant at this Ingress, so far as our own nation is concerned. Nevertheless it will prove to be a season of much excitement from one cause or another. The 2 of 3 and h in August will be the cause of much contention, as well as affliction, of many European nations, which are under the dominion of g and m, such as Bohemia, France, Russia, Denmark, Lower Sweden, &c. In some of these kingdoms the signal of war will be exhibited, though, it is to be hoped, no blood will be shed. Italy is much threatened with approaching calamities in matters of state and religion ; the infallible Pontiff of Rome is at his wits' end how to act; he both fears and feels his impending fate; his power over the minds of the people daily declines. The Jesuits, the main prop of Popery, are becoming a scandal and reproach in all nations. Nothing is more certain, than that all the civilised powers of Europe are destined sooner or later, and that at no very distant period, to receive a mitigated form of Government. The Sovereigns of Europe will act wisely, if they will make a compromise with the spirit of reformation which animates their people; for if they attempt to extinguish it, the consequence will, in many States, be an immediate and ruinous explosion.

## Of the AUTUMN Quarter.

The results of accurate computations show that this division of the year, in the present instance, begins on Wednesday, the 23d of September, at 31 min. after 10 o'clock in the morning; at which time 19° of m will be on the ascending cusp, and 8° of mp on the point of culmination. h, lord of the 3d mundane house, is posited therein ; III is in the 5th, 24 is in the 7th, the glorious planet Venus, lady of the 6th and 11th houses, is on the cusp of the mid-heaven; O, Q, and Z are also in the 10th, and D in the 11th, very near the cusp of the 12th. Under these circumstances we have  $\mathcal{U}$  and  $\mathcal{O}$  in  $\Box$ ; ) having passed a  $\Delta$  aspect with  $\mathcal{V}$ , and approaching the  $\mathcal{X}$  of  $\mathcal{Q}$ . The reader will perceive that the aspects at this quarter's entrance are only few, but are chiefly of a friendly and peaceable nature; therefore we may hope, that many of our fellow-countrymen, who have suffered distressing privations, and around whose heads clouds and darkness have rolled for a long period, will now behold brighter days, and their sorrow will be turned into joy. But what means this singular position of four planets near the mid-heaven? 9 is there giving honours

and preferments by women's means! Surely our young and gracious Queen is planning some great benefit for our nation. But what is  $\eth$  doing in  $\mathfrak{M}$ , in the 10th house? I trust, not brandishing the sword of war: he forms, however, no aspect with  $\mathfrak{Q}$ , and being *now* distant, his influence is not strong.

Britons, I trust, will stand aloof from war, If other nations are inclin'd to jar; Our pondrous debt, if nothing nobler urge, Declaims against the use of war's infernal scourge!

The year is now gliding fast away, so are our lives, and the end must come. Locke, that great philosopher and metaphysician, once said to a friend, and his words ought to be regarded by every one of us, "This life is a scene of vanity, that soon passes **away**, and affords no solid satisfaction, but in the consciousness of doing well, and in hopes of another life. This is what I can say from experience, and what you will find to be true when you come to make up the account." I now conclude, wishing health and happiness to my friends and countrymen; and praying that Heaven may bless our Queen, direct our national affairs, and protect from all the darts of ill our native land.

> Oh, wave, HYGEIA! o'er BRITANNIA'S throne Thy serpent-wand, and mark it for thy own; Lead round her breezy coasts thy guardian trains, Her nodding forests, and her waving plains: Shed o'er her peopled realms thy beamy smile, And with thy airy temple crown her Isle!

## TO THE READERS.

For a century and a half the Almanack of Francis Moore has enjoyed a popularity without example in this kingdom. Although its price has been from time to time enhanced by the imposition of stamp duties, till it arrived at two shillings and three-pence, even this failed to do it any serious injury, because the price of all almanacks was similarly increased. When the tax was taken off in the year 1835, the Stationers' Company immediately reduced the price to sixpence, and the sale advanced beyond that not only of any other almanack, but of any contemporary publication. This unvarying public favour must be chiefly attributed to the remarkable consistency of its principleshaving been ever a firm supporter of Religion, Loyalty, and Peace. To make any change, therefore, in the contents of such a work, would be but an ill return for the long continued patronage of the British Public ; but it is considered that an addition is not a change which can be objectionable to any. Moore's Almanack has hither to consisted of forty-eight pages ; the Company, how-

ever, have now determined to evince their gratitude, and to descrve such popularity, by the addition of twelve pages, the price continuing as before. While, therefore, the reader will lose nothing of what he has been accustomed to meet with, he will not object to find, henceforth, twelve additional pages, comprising occasional useful Tables and other information in Domestic Economy, Farming, and Gardening, such as, it is hoped, will afford both instruction and amusement. This information it is intended to vary, for the most part, every year; and it is hoped that almost every reader will find something worthy of engaging his attention.

## The Property Tax.

This tax having been renewed for at least three years more, the following simple table will give the amount payable on any sum at 7d. in the pound. In the case of farm-rentals, the tenant has to make the return of the amount of rent, on which he pays, for his landlord 7d., and for himself  $3\frac{1}{2}d$ ., or half the amount in the annexed table. Persons returning the profits of trade are not to make deduction from their return on account of the interest of any borrowed capital; but, having included it in their profits, they are to deduct it from the interest, in the same manner as the tenant of a farm deducts it from his landlord.

#### Recent Regulations respecting Wills.

It is now absolutely necessary that all Wills made since December, 1837, and to be made hereafter, should have certain formalities strictly attended to, or the Will is void.

The Will must be signed at the foot or end of it by the Testator, or by some other person in his presence, and by his direction.

The signature must be made or acknowledged by the Testator, in the presence of *two* or more witnesses present at the same time.

The witnesses must attest and subscribe the Will in the presence of the Testator; it is absolutely necessary that it be done in his presence.

It will then be sufficient for the passing of real or personal property, or both.

- *Note.*—The whole of the above ceremonies will be required whether the Will contain the most trifling gift, or disposes of property of the first magnitude.
- And note further.—A gift to an attesting witness, or to the wife or husband of an attesting witness, is void; therefore neither a legatee, nor the wife nor husband of a legatee, should be made an attesting witness to the Will.

No particular form of attestation is necessary; but the following may be used. If used, it must be copied and written at the end of the Will, below the signature of the Testator.

"Signed by the said A. B. [the Testator], in the presence of us, present at the same time, who in his presence have subscribed our names as Witnesses."

The Testator should appoint one or more Executors.

If, after the execution of the Will, any alteration be made in it, by obliteration, interlineation, or otherwise, care must be taken that such alteration be executed in like manner as the Will itself. And it will be desirable also that the names of the Testator and witnesses be written on the margin of the Will, opposite every such obliteration, interlineation, or other alteration.

Wills may at any time be revoked; but Wills made by single persons or widowers are absolutely void on their marriages after the date of the Wills: but such Wills may be re-executed by new delivery with two attesting witnesses, or by a Codicil similarly executed, expressive of the Testator's wish to carry into effect the provisions of the original Will.

N.B.-No person who is under twenty-one can make a Will.

#### Landlord and Tenant.

Every Tenant of premises from year to year, or where no certain time is specified, is bound to give his Landlord *half a* 

year's notice ; and this notice must be so given as to expire on the same quarter-day as that on which he took possession. When notice is given improperly on either side, as a quarter where half a year is necessary, or up to a wrong time, such improper notice should be objected to as soon as possible; for if no objection be made to a notice, although wrongful, within a reasonable time, such notice may be deemed binding on the party accepting it.

If a Landlord covenant to repair a house, and neglect or refuse to do so, the Tenant may make all necessary repairs, and deduct the expenses out of rent. If he accept the last quarter's rent, when there are arrears due on a former quarter, it may be taken as an acknowledgment that no former rent was owing at the time.

The same law holds with regard to Lodgers, as to the payment of rent, on turning them out of possession : where lodgings are taken for a certain term only, no notice is necessary ; but if the Tenant goes on, he is in the same situation as if no definite term had been originally mentioned.

#### Duties of Churchwardens.

Churchwardens are chosen annually, on March 28, or within fourteen days after, either by the minister, the parish, or both together, as custom or statute directs. It is not uncommon for those in office to nominate two to succeed them; but this mode, though customary, is not necessary. The regular mode of proceeding is by poll, or by a select vestry, if there be one.

Until a Churchwarden has taken the oath of office, at the next visitation after the election, he cannot act in his official capacity, nor have any power to make or levy any rate, or reimburse himself for any money he has advanced to the parish, or to do any other act in virtue of his parochial functions. Generally speaking, all the rated inhabitants of the parish are liable to serve the office, except peers and members of parliament, clergymen, barristers, attorneys, physicians, surgeons, aldermen, officers of the customs, and other persons whose avocations require constant personal attendance; aliens, papists, Jews, dissenting preachers, and persons living out of the parish, are disqualified. The duties of the office, where there is no local act to interfere, are to bind out poor children as apprentices; to collect and disburse assessments made by the parishioners for the repairs of the church; to keep the keys of the belfry, and take care that the bells are rung only on proper occasions; during a vacancy of the benefice they are to observe that the church is properly aired and kept clean and in good repair; to provide all requisites for the communion service, christenings, and other ceremonies; to prevent indecent or disorderly behaviour at church, for which purpose they may, withc 2

out being guilty of an assault, take off a person's hat, or even turn him out of the church; to maintain a due observance of the Lord's Day by shopkeepers and others, and to prevent all tippling in alc-houses during the hours of Divine Service; to assist the overseers in making out the list of persons qualified to serve on juries; to cause dead human bodies cast on shore to be decently interred; to apprehend and secure lunatics and insane persons; to see that the parson does his duty according to the rites of the Church of England; and to see that the minister enters, in the parish register, all weddings, christenings, and burials; and to give public and proper notice to the parishioners of the holding of vestries.

The Churchwardens may bring an action, in their joint names, against any person causing damage to the organ, bells, parish books, surplice, and chalice, having especial property in them. In most places they have the ordering and allotting of pews, which may be said to be the common property of the parishioners. But the rector and churchwardens, collectively, have not the legal right to dispose of them without consent of the ordinary. Every churchwarden, except such as are appointed under the provisions of 8 and 9 Vict. c. 70, is an overseer of the poor by 43 Eliz. c. 2. Under the Church Building Act, 58 Geo. III. c. 45, two churchwardens of each new church, under the act, are to be chosen,—one by the incumbent, one by the parishioners.

#### Advice on the Use of Spectacles.

Do not adopt spectacles either unnecessarily or too soon. When, in reading small print, or threading a needle, it becomes necessary to bring them near the candle, or beyond it, the eyes require the assistance of glasses, and will be injured without them. Take great care, however, not to begin with such as magnify too much, or are what are called old sights ; but advance gradually as the vision becomes more defective, or it will be irreparably injured. If your sight has been a natural one, and you have not waited too long before taking to glasses, you will find a focus of 36 inches proper to commence with; from that you descend to 30, 24, 20, 18, 16, and so downwards to 10. If this gradation be attentively followed, the sight may be preserved till an extreme age. Do not, therefore, precipitate these changes, lest you outrun the resources of art, and find your sight irretrievably impaired. Be careful to buy your spectacles of regular opticians, not of itinerant vendors : nowhere are they made better than in England; and the scientific optician will not only supply you with a good article, but will adapt it properly to your sight in the first instance, which is of great importance.

### Expenses of Witnesses.

To indemnify witnesses for their expenses and loss of time, when summoned on trials of civil actions, the following allowances are made :---

	5.	5.
Travelling expenses, per mile, one way,	1	
Journeymen, Labourers, &c., while de-		
tained, per day from	5 to	15
	1 5 10	10
Tradesmen, Yeomen, Farmers, while		
detained, per day	10 to	15
Merchants, Gentlemen, Auctioneers,		
Accountants, Clerks, (if residing in		
London, and the trial there)	21	
If at assizes	21	
	a 21 to	
	15 to	20
Females, according to rank, per day	5 to	20

#### Precautions against Fire, Contagion, and Lightning.

FIRE. All windows and doors connected with the apartment should be instantly closed, and remain so till water can be procured. If the clothes of a female or child take fire, cover up the person in a blanket, hearth-rug, carpet, or any woollen substance that is at hand : whether such can be obtained or not, let her roll on the carpet or floor ; but on no account run about the room, as every motion in an upright posture increases the flames. In case of the danger of escape being extreme, do not, to use a common expression, "throw yourself" out of the window; but suspend your body outside by holding the sill of the window, and drop from it: thus the depth of descent is lessened, and the violence of the fall also; besides that it gives to the bystanders below a chance of preparing to catch you.

CONTAGION. Fumigate the apartments in the following manner :- Take of powdered manganese two parts, two of common salt, three of sulphuric acid, and one of water. Put the manganese and salt into an earthen vessel in the room or building to be purified, then pour upon it slowly the sulphuric acid, and then the water : thus fumes will ascend in abundance. If you cannot procure manganese, the other articles will do without it; and by putting some fire under the vessel, the fumes will be increased. This will be of use in summer-houses, and other places where there is not a free admission of air. But it should be remembered that contagious fevers originate greatly in the want of good drainage; and it is of the utmost importance to health that this should be attended to.

LIGHTNING. If out of doors, by no means run to a tree, a hayrick, or a building, as is usual, for the sake of shelter from rain : the middle of a field is the best place. In a room, take a c 3

seat in the centre, away from the window, fire-place, bell ropes, &c.; as metallic articles of every sort should be avoided, so also lakes, and large collections of water. Timid persons, however, may be assured that there is no personal danger, except when the thunder follows *closely* on the flash of lightning.

#### Cultivation of Potatoes.

As this important vegetable is too frequently cultivated in a very careless manner, the following hints may be useful to many persons, particularly to private and cottage gardeners. The ground should be well dunged; but the practice of placing the dung in the furrow, and the sets immediately upon it, or covering the sets with the dung, is not found best, after repeated experiments. The best way is to mix up the dung well with the earth before laying the sets. Each row should be twentyfour inches apart, each set in the row nine inches, and the covering of earth over the sets about seven inches. Some persons are satisfied with placing their rows eighteen or twenty inches apart; but let the planter be assured that, in this economy of ground, he will use more sets, and obtain a less produce. It is a bad plan to cut the potatoes into sets several days before they are planted; the fresher they are the better. If the cottager has no stable-dung, he will probably have a pig-The cleanings and droppings from sty and some poultry. these, mixed with a little road sand or drift, will form a very good manure. In earthing up, while the plants arc young, the earth should encroach as little as possible on the leaves; but when the stems are grown, and more foliage produced, a little encroachment by the earth on the lower leaves will not be injurious. The sides of the ridges should be convex rather than concave or straight, in order to leave room for the growth of the tubers without being uncovered. There has been much discussion of late, and many experiments have been made, to prove whether the pinching off the potato blossoms previous to their forming seed, does or does not increase the quantity of fruit at the roots. The preponderance, however, is in favour of this operation; but it is suggested that the true method is to take off about half the blossoms only from each plant. Thus, while you prevent too large a portion of the strength of the plant from being exhausted by the formation of seed, you do not wholly counteract the objects of nature. As in the late season, 1845, a very serious disease attacked the potatoes in the ground, particularly in the south and west of England, arising probably from the excess of cold and damp, it is recommended to all persons residing in parts visited by this disease or murrain, to procure their potatoes for planting in the ensuing spring from distant parts not at all affected, also not to use the same ground; but if this cannot be avoided, to plough deep and turn up the

ground long before planting, in order that any infected tubers, which may have been left behind, may be effectually destroyed. If any person, having infected potatoes, should think fit to feed pigs with them, he should have them pared first, and then partly boiled, thus lessening the chance of their doing mischief. This very alarming disease at present perplexes most cultivators : experience and experiment will probably elucidate it ere long; but as its continuance and increase would be one of the greatest scourges which could afflict this land, nothing in the shape of useful advice can be considered as thrown away. Mr. Herapath, the eminent practical chemist, has made the following remarks :--- " My attention has been given to the disease which has shown itself so extensively amongst the growing potatoes. I find, in almost every instance, that the epidermis of the stalk below the surface of the ground is more or less in a state of decay, often disintegrated, and completely rotten; the leaves and branches accord with that part of the stalk below the ground. The tuber beneath the outer skin is first spotted brown, like a bruised apple; these spots extend and penetrate towards the centre, quite changing the nature of the potato. Those near the surface are most injured; in some cases the lowest on the root are not at all affected, while the upper ones are useless. I should therefore expect that the longer the crop remains in the land, the greater the injury will be. It seems, from the microscopic appearances, that the starch escapes injury for a long time after the cellular parts are gone; and as the whole of the nutritive powers of the potato reside in the starch, I should recommend that, wherever the disease has shown itself to any extent, the crop should be dug, whether ripe or not, and the starch extracted by the following simple process :---

"After washing the roots, let them be rasped fine, and thrown into a large tub or earthen vessel; pour in a considerable quantity of water, and well agitate and rub the pulp with the hands; all the starch will, from its great weight, fall to the bottom, while the skin and fibrous matter will be carried away by the water; wash the starch with one or two more waters, allowing it to fall after each washing; spread it upon cloths in a warm room to dry. In this way about 20lbs. or 21lbs. will be obtained from every 100lbs. of potatoes, and it contains as much nourishment as the original roots; it will keep any length of time, and might be used with flour to make bread, pies, puddings, &c., as well as farinaceous spoon-meat. This is much better than throwing away the diseased root, and would furnish food for thousands who might otherwise want it."

#### The Corn Moth.

This insect does immense injury to corn stored up in granaries. The moths appear in May, June, and July, and the female PRINTED FOR THE COMPANY OF STATIONERS. lays one or two yellowish-white eggs, of an oval shape, on each grain of corn. In a few days the eggs are hatched, and small white maggots produced, which immediately eat into the grain, closing the opening with their excrement, which is glued together by a fine web. In August and September, when fully grown, these maggots leave the corn, and seck a place convenient for their undergoing their transformation into the pupa state. At this time the crevices of the floor, walls, and roof of a granary are full of these insects; they gnaw the wood into fine chips, and make themselves a cocoon or pupa-case, in which they remain during the winter, till they undergo their final change, and appear as small whitish moths, more or less spotted with black or brown. It is when in the pupa state that they are most easily destroyed; and they should be every where sought for in the cracks of the floor, and in the small openings of the wall or roof; and all cocoons found should be immediately burnt; or, directly that the cocoons are discovered, the boards on which they have located themselves should be well washed with a saturated solution of corrosive sublimate. Bats, birds, and spiders, are enemies of the common moth, and should be encouraged in the neighbourhood of granaries rather than destroyed.

#### The Cabbage Moth.

During the months of May and June attention should be paid to the destruction, in gardens, of two large moths, one called the cabbage moth (Mamestra Brassica), the other the whiteline brown-eyed moth (Mamestra Oleracea), as the larvæ of these insects are most destructive to cabbages, cauliflowers, and broccoli. The extended wings of the former are about 11 inch across; they are light brown, variously marked with waved bands and stripes, and have, near the centre of the upper wings, two large spots, one blackish, the other grey. The caterpillar appears in July, and is very destructive. The white-line browneyed moth is of a dark rusty-brown colour, about the same size as the former. The upper wings have a round darkish spot in the centre, with a white margin, and an orange-coloured kidneyshaped spot near it. Near the edge of the wings is a white stripe. When the caterpillars appear, the only way to lessen their numbers is to hand-pick and destroy them. The destruction of the moths in May and June is the effectual prevention.

#### Seeds.

The time which seeds may be safely kept without losing their vitality is a matter of great importance, but too little attended to. The following list, derived from the experience of Mr. Loudon, will be found valuable to every gardener :--

Peas, beans, kidney-beans, carrot, parsnip, rhubarb-should not exceed one year.

- Radish, salsafy, scorzonera, purslane, cardoon, alisander, loveapple, capsicum—will keep two years.
- Secale, artichoke, lettuce, marigold, rue, rosemary-three years.
- Brassicas, skirret, spinach, asparagus, endive, mustard, tarragon, borage—four years.
- Burnet, sorrel, parsley, dill, fennel, chervil, hyssop-five or six years.
- Beet, celery, pompion, cucumber, melon, tobacco-may be safely kept ten years.

With regard to the depth at which seeds may be sown, the following require the slightest possible covering of soil : viz. those small seeds which vegetate quickly, as turnips, radishes, and all the cabbage tribe ; also such as are capable of floating in the air, being furnished with wings or down, as carrots, lettuce, &c. Some seeds will spring from a considerable depth, as peas and beans; and therefore, being placed rather deep, are out of the way of birds. The seeds saved for planting should always be the finest produced by the plant, not the whole taken promiscuously. An experiment with beans and peas, by taking the longest and most productive pods, has been found successful in producing the next year pods still longer and more productive. The same consequence would doubtless follow with wheat and barley, if the largest and most productive ears were selected for the purpose of the next year's sowing ; and probably a considerable improvement in the grain attained.

The following little table may be a useful guide to the cottager in purchasing his seed. By guess-work he may buy more than he wants; and it would be much better to spend the extra money in obtaining the best in quality, which is of the first importance :---

1	Pint of Dwarf Kidney-	1 Pint Dwarf Marrow . 1720
		1 — Victoria Peas 1236
1	- Scarlet Runners . 264	1 - Early Warwick . 2100
1	- Longpod Beans . 200	1 — Prussian Blue Peas 1210
		1 — Scimitar
1	- Green longpod	1 Oz. Onion Silver-skin-
		ned 7600
1	- Knight's Wrinkled	1 - Parsley 16,200
	Peas 1594	1 — Salmon Radish . 1950
	The second state of the state	11

Experience and attention will soon enable him to add usefully to this list; but in all cases the number will vary slightly, according to the season and soil producing them.

#### An easy mode of Cultivating Strawberries.

Let the beds alone, neither thinning, transplanting, nor cutting away the runners. At the beginning of the winter PRINTED FOR THE COMPANY OF STATIONERS. cover the beds with straw: the young runners will kill the old roots, and thus leave a layer of nutritive manure. Early in the spring, and as soon as the plants show signs of growth, mix the following articles with sixty gallons of water :--namely, one pound each of Epsom salts, of Glauber salts, of pearl-ash, and of carbonate of soda, and half a pound of muriate of ammonia. Apply this mixture with the watering-pot, but without the rose; three liberal applications, at intervals of a week, will probably be sufficient, but not to be used after the blossoms have begun to appear. It will however be useful to use plain water frequently afterwards. Of course the quantity of mixture required will be in proportion to the size of the bed; but three liberal waterings may be considered sufficient.

#### Winter Food for Bees.

In February bees begin to recover from their torpid state. When this takes place, if there is reason to suspect that the hive is weak, and in need of support, they should be fed occasionally. The best thing to give them is a mixture made of a pint of ale with a pound of sugar and about half an ounce of salt; the whole boiled together and skimmed. When cold, it will have the consistency of honey. It should be given occasionally, in a shallow plate, with some short clean straw or very small twigs laid across it, before it is put into the hive. It should be given at night, and taken away in the morning; and as soon as it is found that little or none is consumed, desist from giving it.

#### The Poultry Yard.

It should have, if possible, an open exposure to the south, and be perfectly dry, moisture of any sort being injurious to nonaquatic birds; and poultry suffer more from a wet winter, though mild, than from one intensely cold, if it be clear and dry. -If the ground is wet, the foundation should be thoroughly drained, and the surface hardened, to render it sound, with a thick stratum of well-rammed bricklayers' rubbish, or broken limestones, mixed with small sandy gravel, over which pounded oyster-shells and egg-shells, or bones coarsely powdered, should be spread. But it should never be paved with flags or pantiles, which would prevent the fowls from scratching the ground and picking those calcareous matters which are necessary to their health and the formation of their eggs. The yard should be sloped, to carry off the rain, and should contain an open covered shed, to afford occasional shelter to the fowls, which seldom seek their night abode during the day, except for the purpose of laying their eggs. The shed is also requisite for the purpose of keeping dry sand, small einders, lime, and ashes, either in small heaps or pits, for the use of common fowls in scouring their feathers from the lice to which they are subject-a process in

which they delight, by rolling themselves in the heaps, as in a sort of dry bath. If the shed covers the litter removed from the horses' stable, it will also be useful, as the warmth which their crouching in it imparts to them, is not only agreeable, but healthful; and they pick up many grains of corn which would otherwise be lost.

#### Points of a Good Cow.

She's long in the face, she's fine in the horn ; She'l quickly get fat, without cake or corn ; She's clean in her jaw, and full in her chine ; She's heavy in flank, and wide in her loin ; She's broad in her rib, and long in her rump, A straight and flat back, with never a bump. She's wide in her hips, and calm in.her eyes ; She's fine in her shoulders, and thin in her thighs ; She's light in her neck, and small in her tail ; She's fine in her breast, and good at the pail ; She's fine in her bone, and silky of skin ; She's a grazier's without, and a butcher's within.

#### Cutting of Grass and Wheat.

Among the many evils arising from the too great economy of labour, practised by farmers, is that of suffering the harvesting of one crop to press too closely on that of another, and thereby suffering the whole to get too ripe before cutting. The habit of letting the grass remain until it is full ripe, not only is injurious to the after-grass, and is the cause of its being necessarily got in too hurriedly, but it employs all hands when they should be beginning with the wheat crop. This should be cut comparatively green, that is, at least ten days earlier than it usually is; the seed would perfect its ripening and hardening in the sheaves, and very little, if any, would be lost by scattering in the field. It has been proved, not only that the raw wheat produced more flour than the ripe by more than 6lbs. per bushel, and that there was a greater produce of from five to eight per cent.; but also, the quality having been tried by analysis, it has been found to contain more gluten.

#### To make Yeast.

Put a gallon of ground malt into a wooden vessel, and pour on it three gallons of water, short of boiling, say 190°; stir the mixture frequently, and cover with a cloth. In two hours strain the liquor from the malt, and boil it for three hours; when nearly cold, say at 65°, add not quite half a pint of the best yeast, which must be well incorporated with it; keep the vessel in a moderately-warm situation, covered with a cloth. Fermentation soon takes place, and in a few days the liquor may be PRINTED FOR THE COMPANY OF STATIONERS.

## VARIETIES.

poured off, and the yeast at the bottom collected and preserved in bottles. In making a fresh quantity, which may be done at any time, some of this yeast may be used to mix with it, instead of the bitter yeast which probably was used before.

### Prognostics of approaching Rain.

The hollow winds begin to blow, The clouds look black, the glass is low, The soot falls down, the spaniels sleep, And spiders from their cobwebs creep. Last night the sun went pale to bed; The moon in halos hides her head. The boding shepherd heaves a sigh, For see a rainbow spans the sky! The walls are damp, the dilches smell; Closed is the pink-eyed pimpernell. Hark, how the chairs and tables crack ! Old Betty's joints are on the rack ; Loud quack the ducks, the peacocks cry; The distant hills are looking nigh. How restless are the snorting swine ! The busy flies disturb the kine ; Low o'er the grass the swallow wings; The crickel, too, how sharp he sings ! Puss on the hearth, with velvet paws, Sits wiping o'er her whisker'd jaws;

Through the clear stream the fishes rise, And nimbly catch th' incautious flies ; The glow-worms, numerous and bright, Illumed the dewy dell last night; At night the squalid *toad* was seen Hopping and crawling o'er the green; The whirling wind the dust obeys, And in the rapid eddy plays; The frog has changed his yellow vest, And in a russet coat is dress'd. Though June, the air is cold, yet still; The blackbird's mellow voice is shrill; My dog, so alter'd is his taste, Quits mutton bones, on grass to feast. And see yon rooks, how odd their flight ! They imitate the gliding kite, And seem precipitate to fall, As if they felt the piercing ball: 'Twill surely rain; I see with sorrow, Our jaunt can not take place to-morrow.

#### INTEREST TABLE.

BY THE FOLLOWING TABLE THE INTEREST OF  $\pounds$ 100, at any rate, and for any time, may be readily found.
