

Merlinus Liberatus.

BEING AN

A L M A N A C K

For the YEAR of our Redemption,

M D C C X C I I.

Being the BISSEXTILE, or *Leap-Year*;

And from the CREATION of the WORLD, according to the best History, 5739,

And the 104th of our Deliverance by **K. WILLIAM**, from Popery and arbitrary Government;

But the 98th from the

Horrid, Popish, High Church, Jacobite Plot.

Wherein is contained all things fitting and useful for such a work, as an Ephemeris of the daily motions of the planets, with their various configurations, aspects, conjunctions, lunations, eclipses, astronomical, astrological, meteorological observations; the rising and setting of the sun, moon, planets, and fixed stars; illustrated with tables of the tides, terms, and daily equation of the clocks, length and break, increase and decrease of days, semidiurnal and seminocturnal arches; with judgments of the quarters; and also a particular judgment of a nativity, handled according to the rules of the Ptolemean astrology, with many other things relating to astrology.

Calculated for the Meridian of *London*;

By **JOHN PARTRIDGE.**

---- *Etiam Mortuus-Loquitur.*

BIRMINGHAM,

Printed and Sold by **THOMAS PEARSON**,

AT THE WHOLESALE ALMANACK, STATIONARY, AND MEDICINE
WAREHOUSE, IN THE HIGH-STREET.

(Price *TEN-PENCE.*)

PARTRIDGE, 1792.

To the friendly and judicious Reader,

I AM most happy in having again an opportunity to present to you my annual work; an Almanack, in the composition of which I have found, for many years, so much pleasure; and I trust that MERLINUS has afforded its readers a like satisfaction, and that they have found it to contain wherewithal some profitable instruction.

I alluded in my last to many of those then hidden events, which have been produced in the course of the wonderful year that is passed. An *annus mirabilis*, in which kingdoms have undergone revolutions, and states been new ordered. On the wisdom and temper of Legislators, it depends finally to settle and arrange the new systems, and to make them lasting and prosperous. They will, however, have many enemies, and even wars (if the prudence of good men does not prevail) may be excited against them. But we will hope for the best, and for victory to the lovers of peace.

In looking forward to the coming year, and comparing the mundane aspects, there is sufficient cause to believe, that our Commerce will be most prosperous in 1792; and that our ships will come freighted into harbour with the riches of the East, the West, the North, and the South. Some foreign islands, however, seem liable to much commotion, and blood will be spilt—we do not, however, conjecture such islands belong to wealthy Britain; but are the dependencies of other kingdoms.

From

But from what we can foresee, we have reason to fear that religious dissensions will continue to prevail. Mankind have ever suffered much from them; yet the warm and violent on each side, will not open their eyes, and be persuaded they are in error. Seldom do they reflect in their various disputes, that there can be no religion without christian charity, temperance, and love. Do you, however, my friends, cultivate these virtues, and ever endeavour to cure the wounds of dissension, and serve mankind.

We have reason to apprehend, that there will be found persons in this country so wrong-headed in their notions of Government, as not to be the best friends of our good King. We hope, however, such men are few in number; and that whoever desires to destroy our excellent Constitution of "King, Lords, and Commons," will be discovered and punished. We have always been loyal to the House of Hanover, now on the Throne—and may they long be there. *Fear God, and honour the King*, should be every Briton's motto.

We hope, however, we shall hear no more of those shocking riotous proceedings which drove several from their peaceful habitations only to return to find them in ruins. Remember, that the riotous and seditious are equally the enemies of our good King and his Government. Be peaceable then, my friends, and be content in your state. Always bring your mind to bear your situation, and to suit your circumstances. Let also all you do, whether successful or not, be well meant; and having honesty and a good conscience, and not wanting a just reverence for God, and regard for your King and Country, you must be happy; and that you may be so, is the sincere wish of

Your faithful,

MERLINUS LIBERATUS.

A TABLE of the Moon's Age, for every day throughout this present year 1792; whereby, with the help of the next general Tide-Table, the time of high water at all the places under-mentioned in it are shewn by inspection.

An Explanation of this and the following TABLE.

First, find the month in the head of the table, and the day in the first column on the left-hand, and in the angle of meeting you will have the day of the moon's age, with which enter the following table, and find your said number in the left-hand column, and over-against it, in the other columns, is the time of high-water at all the places above-mentioned, by inspection.

Example. January the 4th, I find the moon to be 11 days old, over-against 11 in the first col. I find 11 h. 48' in the 2d col. 10h. 18' in the third, which is the time of high-water at all those places mentioned above in the 2d and 3d columns. Et sic de cæteris.

Month.	Days.	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31

READER, by this small *Table* thou may'st count
 How *little* sums in time to great amount;
 A Penny *daily* very small appears,
 But's more than *twenty* Pounds in *fourteen* Years:
 A Groat a day is but a small expence,
 Yet makes i'th' *Year* six Pounds and *twenty* Pence.
 Then neither *Time* nor *Coin* profusely walte,
 Lest thou repent it ere this year be past.

Terms and Returns.

A TABLE of Terms and Returns, for the Year of our Lord God 1792.

Hilary Term begins January 23, ends February 13.

Returns or Effoign Days.		Exc.	Ret.	Ap.	W. D.
In eight Days of St. Hilary	Jan. 20	21	22	23	Monday
From the Day of St. Hilary, in 15 Days	27	28	29	30	Monday
On the Morn. of the Purific. of B. V. M.	Feb. 3	4	5	6	Monday
In eight Days of the Purific. of B. V. M.	9	10	11	13	Monday

Easter Term begins April 23, ends May 21.

From the Day of Easter in 15 Days	April 22	23	24	25	Wednesd
From the Day of Easter in 3 Weeks	29	30	MI	2	Wednesd
From the Day of Easter in 1 Month	May 6	7	8	9	Wednesd
From the Day of Easter in 5 Weeks	13	14	15	16	Wednesd
On the Morrow of Ascension-day	18	19	20	21	Monday

Trinity Term begins June 8, ends June 27.

On the Morrow of the Holy Trinity,	June 4	5	6	8	Friday
In eight Days of the Holy Trinity	10	11	12	13	Wednesd
From the Day of the H. Tr. in 15 D.	17	18	19	20	Wednesd
From the Day of the H. Tr. in 3 W.	24	25	26	27	Wednesd

Michaelmas Term begins November 6, ends November 28.

On the Morrow of all Souls	Nov. 3	4	5	6	Tuesday
On the Morrow of St. Martin	12	14	15	16	Friday
In eight Days of St. Martin	18	19	21	22	Saturday
From the Day of St. Martin in 15 Days	25	26	27	28	Wednesd

N. B. No Sittings in Westminster-Hall on Ascension-day, Midsummer-day, and the Second of February.

The Exchequer opens eight days before any Term begins, except Trinity, before which it opens but four days. — Note, The first and last Days of every Term, are the first and last Days of Appearance.

A Lawyer once thought surely he should die,
 And order'd for a will immediately;
 Quoth he, my wealth, even all I have to leave,
 I unto Bedlam freely do bequeath;
 I got it of madmen, the case is plain,
 Then 'tis but just I leav't to them again.

Observations.

Vicissitudo omnium rerum.

Now by divine Providence we are arrived to the year 1792, which loen presents us with a square of the Sun and Saturn, and predict many fly practices on foot, and the restless tribe scarce able to be decent. Nay, Majesty itself in some places seems to be affronted; some, however, will be caught in their villainy, and may they be well rewarded; then will there be heats and animosities, much grumbling and repining amongst themselves.

The mouth of a righteous man is a well of life; but violence covereth the mouth of the wicked.

Partridge, February, 1792. 11

All Nature rises from his strong embrace,
Pregnant with blessings for the human race;
The grateful *Indians*, not knowing more,
Contests him God, and as a God adore;
From him the *Moon* receives her feeble light,
And reigns bright sovereign of the gloomy night.

Observations.

The aspects of this month are few and benevolent, and at the present things look kindly at home, though there is stirring abroad. God preserve the King and Parliament, and prosper all their endeavours and undertakings. Let the Church of England flourish in virtue, kindness, candour, and tolerance, with all the righteous that are in and out of authority; for when the wicked bear rule (though they are never such pretended saints) then the people mourn, and justly complain. Observe, a righteous and good man will regard even the life and comfort of his beast: but the tenderest mercies of a wicked man, at the best, are but cruel.

The ♁ of the Sun and Jupiter does menace to remove the disgrace of death of some eminent man, but of what degree I know not; and may also animate some others to mischief. And again, the ♁ of the Sun and Saturn may shake some great families, either by death or other wise; and a Son of Belial falls. When the wicked are multiplied, transgression encreaseth, but the righteous shall see his fall.

And couring upwards the ascendant gains,
 Distraction seizes on th' infected brains;
 Reason retains no more her wonted rule,
 But straight we see a madman or a fool.
 The Moon's great sway commands the flowing tide.
 And the vast ocean rolls from side to side.

Observations

The aspects of this month are of a heating nature.

On the 4th of this month, was born his most excellent Majesty King George III. who having ruled for thirty-two Years these Imperial realms to the glory of God, and happiness of his people, has given us a stock of illustrious Princes, that justifies the wishes of the nation that the line may never be extinct.

Successful are the endeavours of the wise and prudent notwithstanding the malice of the self-interested party, who, rather than lose their heads in meddling, would fling it all in a flame.

Partridge, July, 1792. 21

Observations.

This month produces 5 squares, 3 sextiles, and 2 conjunctions, there is like to be many secret contrivances and much underhand dealing.

The square of the sun and jupiter, from cardinal signs, signifies contests about religion.

I have read of 7 things that God hates (id est) a proud look, a lying tongue, hands that shed innocent blood; a heart that deviseth wicked imaginations, feet that be swift in running to mischief, a false witness, and him that soweth discord among brethren, and all under the cloak of religion, therefore a wolf though he walks about in sheep's cloathing, is a wolf still.

August hath xxxi days.

When raging winds across the billows roar
 And heave the beaten ship from shore to shore;
 He views his *Compass* with observing eye,
 The *Needle* veering to the polar sky,
 Guided by this a certain course he forms
 Thro' thickest darkness, and thro' fiercest storms.

Observations.

The heavens in this month cast some benevolent aspects which we hope will promote amity and benevolence in all parts of the world that have been at difference: And things are somewhat in a better posture in the Eastern parts, than they have been some time past; though somewhat near these very times may seemingly prove in an unquiet temper, particularly in Italy, or towards Rome, and in the Turkish dominions in Egypt.

Reports may come from those parts of the world, of some massacres at this time acted there.

24 September hath xxx days.

But who can count the wonders of the sky,
 Orb above orb immeasurably high?
 Who can their courses restrain, their marches trace,
 Thro' the vast compass of the etherial space?
 Each in its sphere moves regularly on,
 Not touching and untouched their stages run.

As the last month ended, so this month begins; brisk winds and showers for some days.

Now more

* ☉ ♂

calm and settled air, but soon changes to more unsettled weather, as wind and rain.

♃ ☉ ♀

The air and season more settled and like to hold favourable for the latter harvest.

And the season more temperate and warmer than usual at this time of the year.

Observations.

Most people of Europe are very active and mindful of defending themselves against the machinations of their enemies. If the territories of Great-Britain are but free at home, what need hath she to fear the malice of Foreigners?

Rome near this time, is not a little concerned in mundane affairs. Very considerable matters that have been long concealed, are now brought to light. If the God of peace should so far befriend disturbed Europe, as to find out proper ways to allay the animosities of these times, then and not till then, can the world expect a redress from those grievances, let the planets promise never so well.

30 December hath xxxi days.

In the bright regions of the Worlds above,
 He plac'd his Seraphs and his Saints of love.
 Then, oh! may we to their sweet converse go,
 And join their songs and all their raptures know,
 Chaunt loud *Hofannas* to our MAKER there,
 For all his goodness and his mercies here.

Observations:

May all remain well in our metropolitan city; but there is an aspect this month which may not prove so favourable to that or some other Imperial city.

Innumerable however, are the instances in which we have been blessed with the bounties of providence. May his mercies still be extended towards us and every impending evil be averted from us, so that with pious gratitude to God, loyalty to our King, and benevolence to our fellow subjects, we may happily end this year, and in health and comfort begin the next. Such is my wish, and let all say, AMEN.

JUDICIOUS READER,

IT has always been a pleasing task to me to call your particular and serious attention to those glorious orbs that move around us, to lead you to consider "*the Sun when it shineth, and the Moon walking in brightness*" (Job xxxi. v. 26) as being, I am persuaded, one of the best means of carrying you up to the grand contemplation of their Great Author, even *the FATHER of Lights* (James 1. 17) before whom all the Host of Heaven is standing in array. A contemplation of this nature cannot fail of its due effect, and will render you what every genuine lover of Astronomy could wish, more dutiful and pious to your God, more loyal to your King, and better inclined to do acts of kindness and benevolence to your fellow creatures; and such effects I trust you have been sensible of, and happy in having known.

Rightly, however, to contemplate, it is necessary that you should rightly understand; and to do this, I think a brief description of our Solar System, and the visible heavenly bodies, will give you the best, though an imperfect notion, of the wonders of creation. Our Solar System, then, consists of the Sun, and the Planets moving round him. The Sun, at the distance fixed Stars are, would have the appearance of a Star only, and all its Planets would be invisible. The fixed Stars are called fixed because they always keep the same distance one from another, and there is no doubt (such is the immensity of the universe) that they are all other suns like ours, and that each of them have other planets moving round them. The planets are so called from a Greek word which signifies their *wandering*, because they change their places, and keep moving round the Sun, and do not, consequently, like the fixed Stars (which Stars you may know by their twinkling) preserve the same distance from each other. Of these planets, the Earth and five others were only observed formerly; but the great Mr. Herschell has lately discovered a sixth, more distant from the Sun than any of the rest, and which, in honour to his great patron, our gracious King GEORGE III. he has named

named the *Georgium Sidus*, or George's Star. The names, situations, signs, &c. of the others, are as follows :

Their Names.		Distance from the Sun.	Time going round the Sun.		
			Years.	Days.	Hours.
Mercury	♄	36,841,468 miles	0	87	33
Venus	♀	68,891,486 ditto	0	224	17
The Earth	♁	95,173,000 ditto	1	0	0
Mars	♂	145,014,148 ditto	1	321	17
Jupiter	♃	494,990,976 ditto	12	0	0
Saturn	♄	907,956,130 ditto	29	167	6

All the above are called *primary* planets ; but there are also others which are called *secondary* planets, these are *Satellites* or *Moons* attending the primary planets. Saturn being at such a great distance from the Sun, and requiring more of their auxiliary light, has five of them, Jupiter has four, and our Earth has one Moon, which moves round us in the course of 29 days 12 hours and 44 minutes, and appears to us larger than any other planet, because she is nearest to us, though she is certainly the smallest, for to a spectator from the Sun she would be scarcely visible.

And here I cannot help remarking another instance of the Almighty's peculiar favour to the whole of this world, our Earth ; for whereas when the chearing rays of the Sun are withdrawn from the various portions of the globe, he gives in quick succession unto all here, the benefit of the Moon's reflected light, and by her friendly aid relieves the wintry darkness of the poles ; yet by one half of the inhabitants of the Moon (as she only turns once round her axis as she moves round us, always presenting the same side to us) we are never seen, unless they take a journey upon their globe to that side which is next to us, and for which purpose some of them must travel more than 1500 miles.—But then to such of them as do see us, we must appear indeed a glorious orb—to them we must seem to be the largest body in the universe, for as the surface of the Earth is thirteen times greater than that of the Moon, we must reflect upon them thirteen times as much light, and appear thirteen times as large to them as she does to us.

This very brief and faint description of Creation, will naturally lead us to reflect upon our own nothingness; and the goodness of that Great Being who regards such an insignificant portion of his work as we are. It will lead us to love and to adore Almighty Power; it will confirm our faith, as it clearly shews that the universe bears evident witness to the truth of the inspired historian, Moses's account of it, by the revolutions of its orbs, and the successions of its seasons; it shews (as a great author observes) that "*the Stars in their courses fight against* Incredulity, that the "*works of God give hourly confirmation to the Law, the* "*Prophets, and the Gospel, of which one day telleth another,* "*and one night certifieth another; and that the validity of* "*the Sacred Writings never can be denied, while the* "*Moon shall increase and wane, and the Sun shall know his* "*going down.*"

JUDICIUM ASTROLOGICUM.

Of the different Quarters of the Year 1792.

WINTER QUARTER,

Which takes its beginning at such Time as the glorious Lamp of Heaven, the Sun, touches the first point of Capricorn, or the celestial Goat, which happens this year on Dec. 21, at 7 h. 46 m. p. m. 1791, and continues till the 19th of March. At this ingress we find 15 deg. of Leo ascends the Eastern horizon, and about 28 deg. of Υ is upon the mid-heaven; and Mars is in the first, the ♃ and ♄ in the fourth, and the Sun in the 6th, ♅ in the 10th, and Jupiter in the fourth; and thus are the planets posited at this ingress; when 6 of the 7 planets are under the Earth, and Saturn in the 10th, which shews many close consultations, and underhand dealings will be carried on in this quarter. Feuds and animosities; and crimes too, will be still in vogue, grumbling, grudging, and repining at each other's good. The common enemy to Europe, and indeed to all mankind, ever awake for nefarious purposes, incites to vice and every species of impiety; unhappy are those
that

that they him—for he hastens their youthful lives to an
 untimely end, or at the best deprives them of all enjoyment
 in their winter days. *Dictum verum sed lamentabile.*

Now Winter is come with his cold-chilling breath,
 And the verdure is dropp'd from the trees ;
 All nature seems touch'd with the finger of death,
 And the streams are beginning to freeze.
 Now the cold feather'd snow does in fleeces descend
 And whiten the prospects around ;
 And the keen cutting winds from the North do attend,
 Hard incrustating over the ground.
 Now the poor harmless hare may be trac'd to the wood,
 By her footsteps indented in snow ;
 And the lips and the fingers are starting with blood ;
 And the marksmen a cock shooting go.
 Now the day is come round when a *Saviour* was born,
 All the world should agree in one voice,
 All nature unite to salute the blest morn,
 All the ends of the earth should rejoice :
 For grim Death is depriv'd of his all-killing sting,
 And the Grave is triumphant no more !
 Saints, Angels, and Men, Hallelujahs should sing,
 And the *Rich should remember the Poor.*

SPRING QUARTER.

Which commenceth at such time as that Prince of Light,
 and glorious Taper, the Sun, mounts the equinoctial sign
 Aries, or the princely celestial Ram, which happens this
 year on March 19, at 9 h. 22 m. And the planets are
 erected in the following scheme :

	Lat.	Plan.	
♄	2	17	S.
♃	1	31	N.
♂	3	35	N.
♀	0	32	S.
♁	1	58	S.
♂	2	10	N.

	Declination.		
♄	5	22	N.
♃	10	0	S.
♂	5	19	N.
♀	14	5	S.
♁	5	11	S.
♂	6	6	N.

In which you find 18 deg. of Leo upon the mid-heaven, and about 5 deg. of Scorpio ascends the eastern horizon; and the planets are posited in the foregoing scheme in which you see the Sun and Moon; in the 5th Saturn, in the 6th Jupiter, in the 12th Venus, Mercury in the 4th, and Mars in the 12th. The Moon's application to 8 of Mars, and body of Mercury, and the aspects between Saturn and Mercury, and Jupiter and Mercury, in the month of April, and the Sun, argue some most violent wranglings and debates in some popular assemblies, much noise about constitutions and state affairs throughout Europe, even revilings on religious subjects are general, and much popular commotion. I hope, however, all will be well, though as the fourth opposition of Saturn and Jupiter is at hand, high people, very high people may dread some gross affront, it is to be wished it may not be to Majesty, but that wherever the Regal power resides, it may know nought but delight springing up like the budding season.

Again the blossom'd hedge is seen,
The turf again is dress'd in green;
Again the lark ascends the sky,
No longer idle plough shares lie.

The swallow that the fields forsook,
 Revisits now, and skims the brook.
 The dew to steeple-top up springs,
 The clam'rous rook extends his wings,
 The feather'd tribe on every spray,
 Chaunt lively carols to the day.
 The leaves hang clust'ring on the trees,
 And health comes riding on the breeze.
 The garden moist with *April* show'rs,
 Puts forth a family of flowers.
 All this the bounteous hand of heaven,
 For man's delight has kindly given.

The SUMMER QUARTER.

The Summer Quarter is always said to begin when this our earthly Globe inclining southward 23 deg. 29 minutes towards the Sun, will volve and remove us her Northern inhabitants to the greatest portion of day, or when the Sun (according to appearance) enters the first scruple of α , which either way taken, is on June 20, at 17 h. 19 m. P. M. or vulgarly on June the 21st, at 19 m. past five in the morning. In which you may find about 19 deg. of Cancer ascends the Eastern horizon, and 19 deg. of Pisces is upon the mid-heaven. And thus are the planets posited, \odot and \S in the 12th, the Moon in the first, δ and Υ in the fourth, ♀ and ♃ in the eleventh, and the Moon applies to the \square of Jupiter from cardinal signs. Now the former part of this quarter afford us many aspects—perhaps of a healing nature, though much of the violence of bickering and debates is continued; and discoveries made in private families that tend to shew that both the countenance and the heart are extremely deceitful—this applies chiefly to women; but some very base acts are brought to light of the other sex, that confirm the truth of the Latin (old Roman) proverb, *Multi homines nomine, non re* (that is, *Many are men in name, but not in fact*). The diseases of this season all arise from over-heating, over-eatings, and over-drinkings—therefore moderate your passions, lie not on the ground

ground when hot, eat no great meals, and drink no spiritous liquors—if strong, they will put you in a fever; if lowered with water, they will only weaken you, and do you no good. *Verbum sapienti—a word to the wise:*

Now Spring at length resigns her chearful sway,
 Bright Summer comes in all its splendid day.
 The morn more early now with roseate hue,
 Dispels the night, and brings the Sun to view.
 Now loaded trees their different fruits produce,
 For man's sweet pleasure, and for man's good use.
 The fields now scented with the mow'd down grass,
 Make beds for kissing of the thrown down lads;
 And horse and man now sweating through the day,
 Carry to rick the new-made fragrant hay;
 Nor ends their toil till the retiring Sun,
 Declares the business of the day is done:
 Then to their home the happy labourers haste,
 Where the good wife prepares the frugal feast,
 And gives the chearing cup, and decks the board
 With all the best productions of her hoard;
 While the pipe and the dance enlivens the plains,
 And the cool eve rewards all their noontide pains.

The AUTUMNAL QUARTER.

Which takes its beginning at such time as the Sun enters Libra, or the Earth, Aries, which happens this year on September the 21st, at 21. 4. P. M. or vulgarly on the 22d, near nine in the morning. At this ingress we find about 2 deg. of Scorpio ascends, and 13 deg. of Leo is upon the mid-heaven. The principal aspects about this ingress is the 5th and last opposition of Saturn and Jupiter, from the beginning of Taurus and Scorpio; which shews great disagreements have arisen either in a public or a private way, which the sword alone can settle. Oh! when shall we see the day when man shall cease to fight against man, and all our weapons of war be turned into plough-shares and pruning-hooks! Happy times, may their approach be near-

er than we think for! A very serious interruption in some commercial concerns may, if not providently prevented, now occur; but we shall look and hope for the best of good fortune. The diseases of this season are such as affect the bowels, catarrhs, rheumatic and gouty pains, and such like, so that the old will take wisely to their flannels, and their fire sides. If the young would be wise too, they would be cautious also—Ye green-heads, mind what I say, “keep your heads cool and your feet warm.” You will find this a good prescription.

Health, beauty, vigour, now decline
 The pride of Summer's splendid day;
Leaves all their stems will now resign,
 The mournful preludes of decay.
 But let fair Virtue's *fruit* remain,
 Though Summer with its leaves be fled
 Then not forgotten, we'll not complain,
 But cherish Autumn in its stead.

Of the Eclipses in 1792.

This year is not a year producing any Eclipse of either luminary visible from this Earth, and therefore I shall give the Type of none. Two invisible Eclipses of the Sun, however, will happen.

The first invisible Eclipse of the Sun will be on the 22d of March, and happen near six o'clock at night.

The second invisible Eclipse of the Sun will be on the 16th of September, and happen near six o'clock in the morning.

The following Nativity of a young Man was calculated by
a Friend for this Almanack.

Plan.		Lat.	
♃	1	8	S.
♃	1	25	N.
♃	1	10	N.
♀	1	11	N.
♃	2	43	S.
♃	0	34	S.

	Dec.		
♃	21	59	N.
♃	7	58	N.
♃	24	33	N.
♃	16	16	N.
♀	23	20	N.
♃	20	51	N.
♃	6	45	N.

His manners, inclination, &c. I shall take from Mercury, who is posited in Aries, and in Sextile to Saturn and Mars; and the ♃ is going to the * ♃. Δ ♃ and the * ♂, from hence I judge he will be fair, generous, and easy in his conversation, and very ingenuous, subject to a little passion, because Mercury is in aspect to both the infortunes; desirous of employment, though inconstant, because a double bodied sign ascends, and Jupiter is lord thereof, in a double bodied sign also; and in this case Mercury is disputable; and his nature must, and will be at times, of a very lofty soaring kind.

And now my friends, as I understand my parable of last year had its use, and was acceptable to you (for I inserted it *quod prudenti vitam consilio monet*) I shall conclude with the following, written by a celebrated Brother Almanack-maker, now deceased, in hopes that it will call your minds from trifles and frivolous disputes to more substantial things.

When

When I was a child at seven years old, my friends on a holiday, filled my little pocket with coppers. I went directly to a shop where they sold toys for children; and being charmed with the sound of a whistle that I met by the way, in the hands of another boy, I voluntarily offered and gave all my money for one. I then came home and went whistling all over the house, much pleased with my whistle, but disturbing all the family. My brothers, and sisters, and cousins, understanding the bargain I had made, told me I had given four times as much for it as it was worth. This put me in mind what good things I might have bought with the rest of the money, and they laughed at me so much for my folly, that I cried with vexation—and the reflection gave me more chagrin than the whistle gave me pleasure.

This, however, was afterwards of use to me, the impression continuing on my mind, so that often when I was tempted to buy some unnecessary thing, I said to myself, don't give too much for the whistle—and so I saved my money.

As I grew up, came into the world, and observed the actions of men, I thought I met with many, very many, who gave too much for the whistle.

When I saw one too ambitious of court favours, sacrificing his time in attendance at levees, his repose, his liberty, his virtue, and perhaps his friends, to attain it, I have said to myself, this man gives too much for his whistle.

When I saw another fond of popularity, constantly employing himself in political bustles, neglecting his own affairs, and ruining them by that neglect, he pays indeed, said I, too much for the whistle.

If I knew a miser, who gave up every kind of comfortable living, all the pleasure of doing good to others, all the esteem of his fellow citizens, and the joys of benevolent friendship, for the sake of accumulating wealth; poor man, said I, you indeed pay too much for your whistle.

When I met with a man of pleasure, sacrificing every laudable improvement of the mind, or of his fortune, to mere corporeal sensations, and ruining his health in the pursuit: Mistaken man, said I, you are providing pain for yourself

yourself instead of pleasure; you give too much for your whistle.

If I saw one fond of fine clothes, fine houses, fine furniture, fine equipage, all above his fortune, for which he contracts debts, and ends his career in prison. Alas! said I, he has paid dear, very dear, for his whistle.

When I saw a beautiful sweet-tempered girl, married to an ill-natured brute of a husband, what pity it is, said I, that she paid so much for a whistle.

In short, I conceived that great part of the miseries of mankind were brought upon them by the false estimates they had made of the value of things, and by their giving too much for their whistles.

To the PUBLIC. As it is more than probable that other Almanacks will be printed and published this year, entitled, *Partridge's Almanack*, all persons are hereby cautioned against the same, as they may depend upon it, they are false and counterfeit. For I, *Thomas Wright*, of *Eaton*, near *Melton-Mowbray*, *Leicestershire*, *Grazier*, *Astronomer*, *Mathematician*, and professor of *Astrology*, have been for near the fourth of a century the only Author of the true *Partridge's Almanack*, which I have always compiled from the original copy and instructions, as they were transmitted and communicated to me by *Mr. Tycho Wing*, the successor of *Mr. Partridge*, for *Mr. Partridge* died in *June 1715*. And the right of printing and publishing the said *Partridge's Almanack*, which I formerly vested in the Company of Stationers at *London*, I have now transferred to *Mr. THOMAS PEARSON*, Printer, Bookseller, and Stationer, in *Birmingham*. The Purchasers of Book Almanacks are therefore thus publicly informed, that the said *Partridge's Almanack*, published as aforesaid, is the only true one, and are cautioned against all others, as they must of consequence be counterfeit and spurious.

Eaton, near *Melton-Mowbray*, *Leicestershire*,

October, 1791.

T. WRIGHT.

JUST PUBLISHED FOR THE FEMALE SEX,

(Price 2s. 6d. sewed)

Dr. RICKEMY'S

NEW TRANSLATION OF ARISTOTLE;

With all the Improvements of modern Anatomists, in which the particular States of the Female Frame are fully treated, and a very choice Collection of Receipts is given for the Sex's Complaints in the various Stages of their peculiar Situation.

☞ Take care that the old nonsensical Book is not sold you for Dr. Rickemy's.
