

1815.

Merlinus Liberatus.

A N

A L M A N A C K

For the Year of our Redemption,

1815,

Being the Third after *Bissextile, or Leap-Year* ;
And from the Creation of the World, according
to the best History, 5762,

And the 127th of our Deliverance by *K. William*
From Popery and Arbitrary Government
But the 137th from the

Horrid, Popish, Jacobite Plot.

Wherein are contained all Things fitting and useful for such a Work ; is
an Ephemeris of the daily Motions of the Planets, with their various
Configurations, Aspects, Conjunctions ; Lunations, Eclipses, Astrono-
mical, Astrological, Meteorological Observations, the rising and setting
of the Sun, Moon, Planets, and fixed Stars, illustrated with Tables of
the Tides, Terms, and daily Equation of Clocks ; Length and Break,
Increase and Decrease of Days, Semidiurnal and Seminocturnal Arches
for several Latitudes ; a Chronology ; Remarks on the Divisions of the
Heavens, with Judgments of the Eclipses and Seasons, handled ac-
cording to the Rules of the Ptolomean Astrology, with many other
Things relating to the Truth of Astrology.

Calculated for the Meridian of LONDON.

By JOHN PARTRIDGE.

Cold Winter Storms are not all past,
 Expect another Pinch at Door;
 Remember thou that Treasure hast,
 Thy Duty's to relieve the Poor.

Now Winter Storms are almost gone,
 The lovely Spring will soon appear;
 And tender Grass spring up anon,
 The harmless Cattle's Hearts to cheer.

- 18 Q. Mary behc. 1587
- 22 Quaker's affirmation accep. 1702
- 24 Earl Derwent-water behead. 1716
- 25 Sir Chr. Wren died 1723

VENUS is an Evening Star till Oct. 13, and then a Morning Star to the End.

6 March hath XXXI Days.

Now bleed and purge bad Humours clear,
 Worser Distempers to prevent ;
 If Weather be not too severe,
 For Cost and Pains you'll not repent.

See how the Glory of the Spring
O'er spreads the flow'ry Meadows gay,
While chirping Birds do Anthems sing
To Lady Flora, Queen of May.

Full welcome is good Weather now,
 The Farmer cuts his Crop;
 And bids the Poor right welcome to
 Pick up what now is dropt.

22 November hath XXX Days.

The Fields look Dun, the Cattle mourn,
 And under Hedges creep withal;
 They look distrefs'd and quite forlorn,
 'Cause they have neither Crib nor Stall.

Observations.

On the 12th of this Month, early in the Morning, there will be a Transit of the Planet Mercury over the Sun's Disk, visible in the East Indies. It cannot be seen here, as it will be over long before the Sun rises.

An Explanation of this and the following Table.

First find the Month on the Head of the Table, and the Day in the first Column on the left Hand, and in the Angle of Meeting you have the Day of the Moon's Age, with which enter the following Table, and find your said Number in the left Hand Column, and over against it in the other Column is the Time of High Water at all the Places above mentioned, by Inspection.—*Example, Feb. 22, I find the Moon to be 13 Days old, and over against 13 in the 1st Column I find, 10 h. 2 m. in the 2d Column, 11 h. 54 m. in the 3d; which are the Times of High Water at all those Places mentioned above in the 2d and 3d Columns on that Day. Et sic de ceteris.*

A plain and easy TABLE, shewing the Time of HIGH WATER.

NOTE, That the Moon's Age being taken notice of in the Table, you have the Time of HIGH WATER at all the under-named Places.

Beachey, Candado, Dover Pier, Dunkirk, Coast of Flanders, Kentish Knock, Leith, Portsmouth, and the Spits, Queenborough, Southampton, and Isle of Wight.

Blacknefs, Calais and Dover, Downs, Gravesend Half-tide, North-Cape before Coquit, Romney, Scilly, and Manet.

Amsterdam, Dort, Gafoin, Groin, Hartlepool, Ireland in the Westward, London, Robin Hood's Bay, Rotterdam, Timen-mouth, and Whitby.

Dartmouth, Falmouth, Guernsey, Humber, Lizard, St. Maloes, Newcastle, Ramfey, Severn-mouth, Scilly, Spurn, and Torbay.

Antwerp, Boston, St. David's Holms of Brittol, Hull, Lundy, Lynn Half-tide, St. Paul's, Plymouth, salcolm without Ushant, Waterford.

Aldborough, Brittol, Falmouth, and Foy, Foulnefs, Lime, Sidmouth in the Channel, Start before St. Nicholas, Weymouth.

Caen, Calais Road, Cowes, Dover, the Frith, South-Foreland, Harwich, St. Helen's, Normandy and Picardy, Yarmouth Road.

Beachy, and the Isle of Wight, Caskets in the Channels, Combay, Dublin, Hague, Peter-Port, St. Magnus's Sound.

N. B. In the Calendar Part you will find the Planets Southing inferted to several Days in each Month; and by this Table you may easily find their Rising and Setting: First, find the Longitude for the Day proposed, with which enter this Table, and take out the Semidiurnal Arch thereof, which being added to the Time of Southing, gives the Setting, but subtracted the Rising.

A Compendious Chronology of the most principal Epochs and Æras, with their Beginnings, reduced and fixed to the Years of the Julian Period, the Creation of the World, and to the Years before and after Christ.

	Julian Period	Anno Munc	Ante Christ
T HE Creation of the World after the Jews - - -	952	1	3760
The Common Epocha of the Creation	765	1	3950
The same by the Greek Emperors -	787	1	3926
The same in Mr. Bedford's Scripture Chronology - - -	706	1	4007
The same in Bishop Usher's Annals -	710	1	4004
The Deluge, or Noah's Flood -	2362	1657	2351
Porphyrius's Chaldaic Epocha - -	2480	1717	2200
The Assyrian Monarchy by Nimrod -	2665	1960	2048
The Birth of Abraham - - -	2714	2009	1999
Joseph sold into Egypt - - -	2986	2281	1728
The Israelites 400 Years Servitude in Egypt	2819	2114	1894
The Kingdom of Argos founded by Inachus	2857	2152	1856
The Birth of Moses - - -	3143	2438	1571
The Kingd. of Athens founded by Cecrops	3157	2452	1556
The Israelites Departure out of Egypt	3219	2514	1494
Their Entrance into Canaan, or the Jubilee	3258	2553	1455
The first Sabbatical Year - - -	3260	2557	1451
The Jewish High Priesthood - - -	3300	2603	1405

ECLIPSES

OF THE

SUN and MOON,

That will happen this Year, 1815.

Within the Compass of this Year there will happen no less than Five Eclipses; Three of the SUN, and Two of the MOON; they will happen in the following Order, as they were computed from new and very exact Tables of the Sun and Moon, founded on the Newtonian System of Gravitation, which Tables are found wonderfully to agree with Observations.

THE First is an Eclipse of the Sun, on Tuesday, the 10th Day of January, at 57 Minutes past One o'Clock in the Afternoon; but it will be invisible here, and even to all Europe, by reason of the Moon's South Latitude, and that Latitude increased by her Parallax in Latitude, will cause the Moon to pass South of the Sun's Limb, so that the Eclipse cannot be seen in these Northern Parts of the World. In the Southern Parts of the Earth, this will be a great annular Eclipse; and this Annular Appearance, according to my Calculations, will be on the Meridian, or 12 o'Clock at Noon, in Latitude 63 Deg. 45 Min. South; in Longitude 26 Deg. 31 Min. West from London; which Place falls in the Great South Sea, near what is called Sandwich Land, near the Island of Georgia. The Sun will be seen more or less eclipsed, in the Southern Parts of Africa, at the Cape of Good Hope, and also in the Southern Parts of South America, even at Cape Horn, where I expect it will be a large Eclipse.

The Second Eclipse is a total one of the Moon, and happens on Wednesday, the 21st of June; but it will be invisible in these Parts. It begins at 21 Min. past 4 o'Clock in the Afternoon; and will end at 49 Min. past 7 o'Clock,

7 o'Clock, app. Time. The Duration of total Darknefs will be only 14 Minutes, but of the whole Eclipse, 3 Hours and 28 Minutes. At the Beginning, the Moon will be vertical, or directly over Head at Midnight, in Latitude 22 Deg. 56 Min. South; and in Longitude 113 Deg. 54 Min. East of London; which Place falls on the North-Weft Borders of New Holland, near that Part called De Witt's Land. At the End of this Eclipse, the Moon will be directly over Head at Midnight, in Latitude 23 Deg. 6 Min. South, and in Longitude 63 Deg. 41 Min. East from London; which Place falls in the same Eastern Ocean, but nearer the Island of Madagascar. This Eclipse will be visible in Eastern Tartary, in China, the Philippine Islands, New Guinea, those of Malacca, Borneo, Sunda, and throughout the East Indies. It will be visible at the Cape of Good Hope; it will be visible also in Persia and Arabia, and Parts adjacent.

The Third is an invisible Eclipse of the Sun, on Thursday, the 6th Day of July, at 47 Min. past our Eleven o'Clock at Night, consequently invisible to us. This Eclipse is only visible in high Northern Latitudes, when the Sun is up. The Sun will be totally eclipsed on the Meridian, or precisely at Noon, in the Latitude of 88 Degrees North, and in 174 Deg. 24 Min. of West Longitude from London; which Place falls in the Ice Ocean, within the Arctic Circle, which is within Two Degrees of the Pole itself, where I suppose no human Being is to be found. The Sun will be seen more or less eclipsed at Spitzbergen, and the Island of Nova Zembla.

The Fourth is another total Eclipse of the Moon, on Saturday, the 16th of December, but invisible to us, and even to all Europe. This Eclipse begins at 11 Minutes past our Eleven o'Clock in the Forenoon; and it will end at 47 Minutes past 2 o'Clock in the Afternoon, app. Time. The Duration of total Darknefs will be 1 Hour and 38 Minutes, and of the whole Eclipse, 3 Hours and 37 Minutes. At the Beginning of this Eclipse, the Moon is vertical (or directly over Head at Midnight) in Latitude 23 Deg. 7 Min. North, in Longitude 168 Deg. 48 Min. West from London; which Place is in the Great North Pacific Ocean, near the Sandwich Islands. At the End of this Eclipse, the Moon will be vertical in Latitude
23 Deg.

23 Deg. 21 Min. North, in Longitude 139 Deg. 6 Mia. East from London; which Place falls in the same Ocean, a little to the North of the Ladrone Islands. It appears from this Statement, that this Eclipse will be visible in Eastern Tartary, in China, the Phillippine Islands, New Guinea, those of Malacca, Borneo, Sunda, the New Hebrides and Friendly Islands, to New Holland, and New Zealand. On the Eastern Coast of North America, and in the Gulph of Mexico, the Moon sets eclipsed; but in the East Indies, and in Persia, Arabia, in Poland, and on the Borders of the Red Sea, the Moon rises eclipsed.

The Fifth, and last of these Eclipses, is a very small one of the Sun, upon Saturday the 30th of December, at 51 Minutes past 2 o'Clock in the Afternoon; but it will be invisible to these Northern Parts of the World, by reason of the Moon's great South Latitude. It will be but a small Eclipse where greatest, and that will be in the remote Parts of the Earth towards the South Pole.

The Planet *Jupiter* will come to an Opposition of the *Sun*, on the 26th Day of *March*; hence, from the Beginning of that Month to the End of *June*, this beautiful Star may be seen every clear Evening, to gratify the Curious and Lovers of Astronomy, who have got good Telescopes; in viewing him with his Belts, and to observe the Eclipses of his Four Moons or Satellites; together with their Configurations amongst themselves, which are often very beautiful to behold.

Also, the Planet *Saturn* will come to an Opposition of the *Sun*, about the 2d of *August*, at which Time, and a little before, and to the End of *November*, when the Evenings are clear, there will be good Opportunities for the Curious and Lovers of Astronomy, to gratify themselves in observing him, to see his wonderful Ring and his Satellites; but it requires good and powerful Telescopes.

N. B. In the Month of *December*, *Jupiter* and *Venus* will appear near each other, and, therefore, will make a beautiful Appearance in a Morning, long before the *Sun* rises, as they are then Morning Stars. *I here*

I here add something concerning the Foundation, Vindication, and Limitation, of that most heavenly and sublime Science, ASTROLOGY.

(Continued from my last.)

I SAID at the Conclusion of my last, whoever seeing a Person of a slow awkward Pace, with a dark, cloudy, morose Aspect, doth not condemn him for a surly, ill-natured, covetous Fellow? And again, seeing one of a brisk, lively Countenance, they fail not to commend for one of civil Behaviour, a Lover of his Friend, true and trusty, and the like. But should an Astrologer, by the Nativities of these Persons, discovering the first to be governed by the Planet Saturn, and the other by the Planet Jupiter, pronounce these or the like Words, knowing these to be the Properties of Saturn, those of Jupiter, straight they cry out, he is a Witch, a Sorcerer; or, perhaps, those which hath not so much the Rage of Mars, and Envy of Saturn found in them, may in milder Terms tell you, he speaks by Guess, as Fools do when they Lye; and though he hit right, it was no through any Knowledge he had more than others, but by Chance, as a blind Man may shoot a Cow, or a Cow kill a Hare; for, say they, it would be very strange, if they that are always guessing, should never hit right. To these last I shall say no more than this, that I guess, that when they have experienced the Art as much as I have, they will be of another Mind. And to the first Set I shall propose this Question, Whether it be not as useful to say, that the Planet Saturn is the Author of Melancholy, as that melancholy Men are Envious, &c. Or, that to say Mars inclines to Choler, is to idolize the Stars, but pronouncing choleric Persons prone to Anger, &c a word of Course, a true, but innocent Conjecture; for which of these Conjectures are most diabolical, I for my Part am not able to determine. For when we, speaking of public Transactions, pronounce Wars, Peace Envyings, Scarcity, Plenty, &c Or, if speaking of the Accidents peculiar to particular private Persons, we pronounce Health, Prosperity, Vexation, Trouble, Sicknets, or any other
Accident,

Accident, we speak not by Consultation of familiar Spirits, neither by Aims-acc, as some term it; but perceiving by the aforesaid natural Causes, the Seasons then impending, to be subject to excessive Heat, inclining Men to Choler; or, on the contrary, when to an equal Intemperize, &c. we pronounce such or such Accidents to ensue.

Thus having shown the Grounds whereon the whole Art is founded, I come in the next Place to show, how far we may safely depend on these Astral Observations. First then let me acquaint you, that when we predict any Accident, we would not be understood to say, it must unavoidably and of necessity thus or thus happen, but that Nature thus inclines; and, if the contrary be not known, or being known, through Neglect, or Forgetfulness or the like, is not applied, then will thus or thus come to pass. As when a Physician, seeing his Patient afflicted with a deep Consumption, declares that he hath an Ulcer in his Lungs, which will by Degrees waste and destroy them, and by Consequence the whole Body perish; we must not understand, that of Necessity it must so follow, but in case no contrary be procured and applied to heal and stop the same, hereby to repair the Patient, he must inevitably perish. Also, in some particular Cases, God is pleased to check the ordinary Course of Nature, producing Effects quite contrary to the Dictates thereof; but these are very rare, and to be looked on as miraculous, for God is a God of Order, and not of Confusion—therefore he having created these glorious Bodies, the Stars, to be the Causes of all natural Actions, these miraculous Obstructions are no more to be accounted sufficient Reasons for a Neglect of their Use, than the Shades once going backwards on the Dial of Ahaz, can make the Use of those incomparable Instruments at all Times, and in all Places invaluable; because, at that Time and Place, they might seem to some Persons to be erroneous. Again, in such Accidents whose Causes are merely natural, the more general and universal Causes overstay those of any particular City, Town, or Person; so that such who undertake to predict Particulars, not regarding those more general, are many Times frustrated of their Expectation, to the great Dishonour of this heavenly Science, though the Fault is not in the Art, but Artist; which ought to
 caution

caution all the Pretenders to this Art to be very wary in pronouncing Judgment in all Causes, but more especially in nice Particulars; for it is the Practice of too many in these Times, to require Judgment in such Cases as are altogether impossible to be solved; therefore in such particular Cases, the Artist would show himself more like a wise Man, did he declare himself ignorant, than by pretending to know all Things, give not only such as employ him, but even all that hear of him, just Cause to suspect he knows Nothing, thereby bringing a Scandal not to himself alone, but upon the Art too, and all that profess it.—Were it not for lack of Room, I should have proceeded to acquaint the Reader, what particular Accidents may be fore-knownn by this Art; also with what generals, and by what Means they are promoted or contradicted; with an Account of the Advantages arising from such a Foreknowledge; which expect at some future Opportunity.

The Spheres that roll in constant Course above,
 Obey God's Laws, and by his Pow'r do move;
 Each rang'd in Order, knows his destin'd Race,
 As round the Sun he takes his wonted Chace;
 Stupendious Chorus! shewing as they rove,
 The great Perfections of our God above.

Judicium Astrologicum, pro Anno 1815.

Or, an Astrological Judgment upon the Four Quarterly Ingresses of the present Year; and First, of the Brumal Ingress, or Winter Quarter.

I Begin my Astrological Remarks with the Winter Solstice, as it all falls (excepting a few Days) within the old Year.—This Winter Quarter then begins on *Thursday* the 22d Day of *December* 1814, at 53 Min. past 9 o'Clock in the Morning, when the Sun will enter the Tropic of *Capricorn*; at this Time 27 Deg. of ♋ will be ascending in the East, and the first Degree of ♌ will be upon the Meridian

Meridian. The Ψ in \square of ι , and Δ of φ , ab Δ \odot . At this Ingress, I find Υ Lord of the Meridian Angle, and within Orbs of a Δ Aspect of the Planet *Saturn*, and *Saturn* is strong on the Cusp of the Ascendant; and at the Commencement of the New Year, the Planet *Saturn* will be in a Sextile Aspect of *Mars*; *Mars* being also in his own Domal Dignities, and posited in the 9th House; *Venus* and the *Sun* are in Conjunction in the 11th House; and above all is the approaching Trine Aspect of *Jupiter* and *Saturn*, from \sphericalangle and --- ; and at this Time they are within Orbs of that Aspect. In considering these Configurations of the Planets at this Time, I cannot but think there will happen some remarkable Transactions, of great Importance, both to us as a Nation, to all *Europe*, and to *France* in particular. These Planetary Rays imply a better Understanding amongst some of the great Potentates of the Earth; Kings and Princes begin to pause awhile on the Misery and Calamities that bloody Wars have brought upon Mankind; and these Aspects give some Hopes that a Peace will be brought about, if it is not already accomplished; though I am satisfied, that the Heavens only show the Nature and Inclination of Men, and not positive Conclusions; yet now they are so much inclined to Peace and Unity, we may rationally hope a Peace may be brought about and concluded; for after so many bloody Battles fought, both in *France*, in *Holland*, and *Germany*, and after spilling so much human Blood, Peace has been the earnest Desire of Thousands. The *French* Nation and their Emperor have had a wonderful Check, such as they have never had, especially in late Years, which will bring them to Reason and incline them to Peace, and that with all the World, if the surrounding Powers at War with them are not too exorbitant in their Demands, for bringing about a general Pacification; and after all, we may expect to hear of very serious Consultations of high Concernment, about War and Peace, and the Settlement of Affairs on the Continent of *Europe*, and likewise with ourselves as a Nation. There may be some of our modern Heroes, making an Opposition to a fair Settlement of a lasting Peace, for there has been so many in the World, who have for a long Time made a Trade of War, that they may be very reluctant to beat their

Swords.

Swords into Ploughshares, or their Spears into Pruning-hooks—nevertheless, this ensuing Year will be as remarkable as any for many strange Events, which we but little thought of, that will be produced therein, and that in almost every Kingdom in *Europe*, including ourselves and all our War Connections.

THE SPRING QUARTER,

Or, the Sun's Transit through ♈, ♉, and ♐.

THE *Sun*, that great Luminary and Fountain of Universal Light and Life, will now begin to display his genial Powers on us in these Northern Parts of the World, by entering into the Equinoctial Sign *Aries*, which he will do this Year, on *Tuesday*, the 21st Day of *March*, at 36 Min. past 11 o'Clock in the Morning, when 22 Deg. of ♍ will ascend the Eastern Horizon, and 23 Deg. of ♋ will culminate. The ☽ ab * ♃, et ad ☿ ♃. From a Scheme of the Heavens, set at this Time, I find by the Positions of the Planets, that a Spirit of Division and Dissention seems to possess some great Powers, whether it be Kings, Princes, or Emperors, in both the Northern and Southern Parts of *Europe*; there will be Contradictions in Councils, and Intemperance in Debates, unsound Resolutions, and rash Actions. The *Hollanders* seem active in settling a new Order of Things, and some Com-motions take Place in *France*, *Germany* and *Italy*, if not in *Spain* also; they seem to push their various Designs and Interests with great Vigour, as the Conjunction of *Saturn* and *Mars*, just at hand, seems to import; *France*, and *Spain*, as well as ourselves, are like to take a Share of the Mal-influences of this Aspect, (viz. the ☿ of ♃ and ♄) as well as from the ☿ of the ☉ and ♃, from Cardinal Signs. These Aspects seem to threaten some Disturbances to befall the *Turkish* Dominions, and indeed I expect some Rebellious Insurrections in some other Places, not far from *England*, but as to Particulars, Time must bring them to light. It seems also, by the Planetary Positions, that the *French* Government is wonderfully employed

ployed in settling their Affairs, for strange Things are still acting there, as well as in some other Places near hand, which we shall often hear of. As to the United States of *America*, they will be much disturbed in this Year by Broils and other Troubles, if not with War; yet their Success will be but little, should they have not made Peace with the *British* Government. In the Course of this Year, as I have before mentioned, there will fall out two noble Trine Aspects of the two grand Superiors, *Jupiter* and *Saturn*, which, it is to be hoped, will incline to a better Understanding in the Courts of Princes, Kings, and Emperors, so that there may be brought about a general and lasting Peace to *Europe*, if that desired Event has not been already accomplished. And as to *England*, she shall flourish again and again, and when the Fullness of Time comes, (sooner or later) she will have a principal Hand with some Northern Powers, in performing and concluding some great Transactions, as *Europe* ever beheld before, at least for many Years last past. For the Emperor of *Russia*, King of *Prussia*, seconded by the friendly Aid of *Austria*, and *Great Britain*, will have the Honour of contributing towards bringing about a lasting Peace, and settling the Affairs of the European Continent, that may yet be still in Agitation. Great Things have, and will still take Place.

THE SUMMER QUARTER,

Or, *The Sun's Transit through* ☊, ♋, and ♌.

THE Summer Quarter commences when the *Sun* enters the Northern Tropic, namely, *Cancer*, and then making our Days the longest; it falls this Year, on *Thursday*, the 22d Day of *June*, at 9 o'Clock in the Morning; at which Time, 18 Deg. of ♋ are upon the Medium Cœli, and 29 Deg. of ♋ are ascending in the East. The ☽ ab 8 ☉ et ☽ of ♋. At this Summer Solstice the Planet *Mars* is near an Opposition of *Jupiter*, and that from Equinoctial Signs; after which, follows a Sextile Aspect of *Saturn* and *Mars*; but then the most potent

potent Aspect is the approaching Trine of *Jupiter* and *Saturn*, which will take Place about the 14th of *August*, and who are at this Time within Orbs of that Aspect, which will in a great Measure govern the Effects of Planetary Rays, both now and during the next Quarter; in short, these two Planets are within Orbs of each other most of this Summer, shewing as if political Matters were approaching to a more general Pacification, and Things returning into a better Channel; yet, nevertheless, I see some internal Broils and Disturbances breaking out in *France*, in *Italy*, and in *Switzerland*; if not amongst some of the Northern Powers. The Emperor of *Austria* is gaining Ground, and in favour with the *French* Government; and a certain Family seems not satisfied,—but who can help it. Great Changes will take Place in *Germany*, and some other Countries near us. The Arms of *Great Britain* are mostly successful and victorious, as appears by the Configurations of the Planets at this Ingress.

THE AUTUMNAL QUARTER,

Or, the Sun's Transit through φ , η , and \uparrow .

THIS Quarter takes Place when the *Sun* enters the Equinoctial Sign *Libra*, and crosses the Line in his Way to the Southern Tropic, making our Days and Nights once more equal; and this will take Place on *Saturday*, the 23d of *September*, at 51 Min. past 10 o'Clock at Night; when 13 Deg. of φ ascend in the East, and 11 Deg. of \times are on the Mid-heaven. The D ab Δ \odot et ad Δ $\frac{1}{2}$. The only Aspect of Note soon after this Ingress is an Opposition of *Jupiter* and *Mars*, from Equinoctial Signs. The Planet *Mars* is in the Ascendant of *England*, and at the same Time in his own Domal Dignities, which will put Valour into the *British* Arms, and Vigour into her Government. This has been a remarkable busy Year, and yet some great Things still remain to be done and acted upon. I hope no Civil War in *France* has been promoted and fomented by any restless Party, to the Destruction and Distress of Thousands of innocent

innocent People ; but, after all, I hope the friendly Configurations of the Planets of this Year will in a great Degree calm these unruly Passions, and allay the Heats and Animosities of these eventful Times, in order to reconcile contending Parties in War and Bloodshed, and that even all over the World.

CONCLUSION.

Farewel my little Book ; go, take thy Fate,
And please thy Friends, till thou art out of Date :
Our Year's concluded, Time will for no Man stay,
But walks his Circle, and doth pass away.

— FINIS. —
