

1318.

Merlinus Liberatus.

A N

A L M A N A C K

For the Year of our Redemption,
1818.

Being the Second after Bissextile, or Leap-Year;

And from the Creation of the **WORLD**, according
to the best History, 5765,

AND THE

130th of our Deliverance by K. WILLIAM

From Popery and Arbitrary Government;

But the 140th from the

Horrid, Popish, Jacobite Plot.

Wherein are contained all Things fitting and useful for such a Work; as an Ephemeris of the daily Motions of the Planets, with their various Configurations, Aspects, Conjunctions; Lunations, Eclipses, Astronomical, Astrological, Meteorological Observations, the rising and setting of the Sun, Moon, Planets, and fixed Stars, illustrated with Tables of the Tides, Terms, and daily Equation of Clocks; Length and Break, Increase and Decrease of Days, Semidiurnal and Seminocturnal Arches for several Latitudes; a Chronology; Remarks on the Divisions of the Heavens, with Judgments of the Eclipses and Seasons, handled according to the Rules of the Ptolomean Astrology, with many other Things relating to the Truth of Astrology.

Calculated for the Meridian of LONDON.

By JOHN PARTRIDGE.

——— *Etiam Mortuus loquitur.*

London.

Printed for the **COMPANY of STATIONERS,**

By **WILLIAM THORNE**, Red Lion Court, Fleet Street.

And Sold by **GEORGE GREENHILL**, at their Hall, *Ludgate Street.*

[Price, stitched, Two Shillings and Three Pence.]

2 January hath XXXI Days.

Observe the daily Circle of the Sun,
 And the short Year of each revolving Moon :
 By them thou shalt foresee the following Day ;
 Nor shall a Starry Night thy Hopes betray.

When first the Moon appears, if then she shrowds
Her Silver Crescent, tipt with sable Clouds ;
Conclude she bodes a Tempest on the Main,
And brews for Fields impetuous Floods of Rain.

Or, if through Mists he shoots his sullen Beams,
Frugal of Light, in loose and straggling Streams,
Suspect a drisling Day, with Southern Rain,
Fatal to Fruits, and Flocks, and promis'd Grain.

If when *Aurora*, with half open'd Eyes,
And a pale sickly Cheek, salutes the Skies;
How shall the Vine, with tender Leaves, defend
Her teeming Clusters, when the Storms descend?

But more than all, the setting Sun survey,
 When down the Steep of Heav'n he drives the Day;
 For oft we find him finishing his Race,
 With mix'd and various Colours on his Face.

16 August hath XX.XI Days.

If fiery Red his glowing Globe descends,
 High Winds and furious Tempests he portends;
 But if his Cheeks are swoln with livid Blue,
 He bodes wet Weather by his Wat'ry Hue.

Observations.

There is nothing more apparent than **Uncertainty in Human Affairs.**

There is pleasing News to the industrious Merchants; and the Month ends with Smiles from Heaven upon the Endeavours of deserving Men, who labour to do good in their Generation.

- 3. Cromwell died 1658
 - 5 Bp. Bonner died 1569
 - 8 Geo. III. and Char. wedded 1761
 - 11 Wm. the Conqueror died 1087
 - 16 Geo. I. landed 1714
 - 21 Edw. II. murdered - 1327
 - 29 Richard II. deposed - 1399
- A great Comet appeared in this Month, and in Oct. Nov. and Dec. - 1811

20 October hath XXXI Days.

But if with Purple Rays he brings the Light,
 And a pure Heav'n resigns to quiet Night,
 No rising Winds, or falling Storms are nigh,
 But Northern Breezes purge the ruffled Sky.

22 November hath XXX Days.

Thus the unerring Sun and Moon declare
 What the late Ev'n and early Morn prepare ;
 And when the South projects a stormy Day,
 And when the clear North will puff the Clouds away

24 December hath XXXI Days.

Let ev'ry Swain adore the Pow'r Divine,
 For prosp'rous Harvests, and for sparkling Wine;
 Invoking Him, to bless their Yearly Stores,
 Inviting Plenty to their crowded Floors.

Observations.

This is a cold Month, and much Business must not be expected to be done, but sitting by the Fire. The Year is likely to end better than it began, or has done for some Time. The People still hope for better Times, and so do I.

- 1 Henry I. died 1135
- 2 Mariners comp. invented 1300
- 4 One hundred and thirty sail of Dutch ships taken 1664
- 12 Cromwell made Protector 1653
- 29 T. Becket murdered at Canterbury 1171
- 30 Royal Society of London instituted 1660

An Explanation of this and the following Table.
 First find the Month on the Head of the Table, and the Day in the first Column on the left Hand, and in the Angle of Meeting you have the Day of the Moon's Age, with which enter the following Table, and find your said Number in the left Hand Column, and over against it in the other Column is the Time of High Water at all the Places above mentioned, by Inspection.—*Example, Mar. 20, I find the Moon to be 13 Days old, and over against 13 in the 1st Column I find, 10 h. 2m. in the 2d Column, and 11 h. 54m. in the 3d; which are the Times of High Water at all those Places mentioned above in the 2d and 3d Columns on that Day. Et sic de ceteris.*

A plain and easy TABLE, shewing the Time of HIGH WATER.

NOTE, That the Moon's Age being taken notice of in the Table, you have the Time of HIGH WATER at all the under named Places.																	
D's	A	Beachy, Candado, Dover Pier, Dunkirk, Coast of Flanders, Kentish Knock, Leigh, Portsmouth, and the Spits, Queensborough, Southampton, and Isle of Wight.		Blacknefs, Calais and Dover, Downs, Gravesend Half-tide, North-Cape before Coquit, Romney, Scilly, and Thanet. N. B. In the Calendar Part you will find the Planets Southing inferted to several Days in each Month; and by this Table you may easily find their Rising and Setting: First, find the Longitude for the Day proposed, with which enter this Table, and take out the Semidiurnal Arch thereof, which being added to the Time of Southing, gives the Setting, but subtracted the Rising.

A Compendious Chronology of the most principal Epochs and Æras, with their Beginnings, reduced and fixed to the Years of the Julian Period, the Creation of the World, and to the Years before and after Christ.

	Julian Period	Anno Munc	Ante Christ
T HE Creation of the World after the Jews - - -	952	1	3760
The Common Epocha of the Creation	765	1	3950
The same by the Greek Emperors -	787	1	3926
The same in Mr. Bedford's Scripture Chronology - - -	706	1	4007
The same in A. Bishop Usher's Annals	710	1	4004
The Deluge, or Noah's Flood -	2362	1657	2351
Porphyrius's Chaldaic Epocha - -	2480	1717	2200
The Assyrian Monarchy by Nimrod -	2665	1960	2048
The Birth of Abraham - -	2714	2009	1999
Joseph sold into Egypt - - -	2986	2281	1728
The Israelites 400 Years Servitude in Egypt	2819	2114	1894
The Kingdom of Argos founded by Inachus	2857	2152	1856
The Birth of Moses - -	3143	2438	1571
The Kingd. of Athens founded by Cecrops	3157	2452	1556
The Israelites Departure out of Egypt	3219	2514	1494
Their Entrance into Canaan, or the Jubilee	3258	2553	1455
The first Sabbatical Year - - -	3260	2557	1451
The Jewish High Priesthood - -	3300	2603	1405

ECLIPSES

OF THE

SUN and MOON

That will happen this Year, 1818.

WITHIN the course of this year there will happen four Eclipses; namely, two of the Sun and two of the Moon, and they fall in order as follows, as they were calculated from very correct and new tables of the Sun and Moon, founded on the Newtonian System of Gravitation. The first of these Eclipses is a partial and visible one of the Moon, on Monday and Tuesday, the 20th and 21st of April; that is, it will begin on the 20th day, between eleven and twelve at night, and end on the 21st, between one and two in the morning.

The Moon at the beginning of this Eclipse will be vertical or directly overhead at midnight, in 10 deg. 32 min. of south latitude, and in 12 degrees 8 min. east longitude from London; which place falls on the western coast of Africa, near Beaguela, the capital of the kingdom of Benguela, which kingdom begins at Cape Lado on the north, and extends to Cape Negro on the south; the climate on this coast is said to be very pernicious to Europeans. At the middle of this Eclipse, the Moon will be vertical in 10 deg. 53 min. of south latitude, and in 4 deg. 43 min. of west longitude from London, which place falls in the Great Atlantic Ocean, about sixty leagues to the north of the Island of St. Helena, the residence of Buonaparte. At the end of this Eclipse, the Moon will be vertical in 11 deg. 12 min. of south latitude, and in 22 deg. 4 min. of west longitude from London, which place falls in the said South Atlantic Ocean, where the Moon will appear to those that may be sailing in that longitude and latitude, directly over their heads. Hence, it appears, that this Eclipse will be visible quite throughout all Africa, in the Island of Madagascar, great part of the Indian Sea, the western parts of Asia, the Atlantic Ocean, all Europe, in Iceland, Greenland, Newfoundland, and all the southern parts of America, and to most of the West India Islands; but the Moon rises eclipsed on the eastern coast of North America.

In this island of Great Britain, it may be expected to happen according to the following calculation and type for London, which will serve all England.

At London, Cambridge, and Royston, the Eclipse will begin at 11 min. past 11 at night, on the 20th of April; the middle, or time of the greatest obscuration, will be at 21 min. past 12; and the Eclipse will end at 32 min. past 1 o'clock in the morning of the 21st day, according to apparent time. Digits eclipsed 5 deg. 12 min. as the above type sheweth.

Note.—At Oxford and York, it will be about 5 min. sooner than at London; and at Edinburgh 13 min. sooner.

The Second is a small Eclipse of the Sun, on Tuesday the 5th day of May, in the Morning, and visible to us, if clouds interpose not. At London, and parts adjacent, the Eclipse will be observed to begin on the right hand of the Sun's lower limb, as the following type sheweth, at 58 minutes past 5 o'clock, apparent time; the middle of the Eclipse, or time of the greatest obscuration, will be at 51 minutes past 6 o'clock; and the Eclipse will end at 47 minutes past 7 o'clock, according to solar time. The duration will be 1 hour and 49 minutes. Digits eclipsed $4^{\circ} 31'$ on the Sun's lower limb.

Note.—I would advise those who have not got proper telescopes to look at the Sun, to use a dark glass, or a piece of clear window glass smoked over the flame of a candle. as the best security to their eyes.

A TYPE of the SUN'S ECLIPSE, the 5th of May.
v, the Sun's upper limb; B, the place where the Eclipse
 begins.

The Third is a very small Eclipse of the Moon, on Wednesday the 14th day of October in the morning, visible to us should clouds not interfere; and at the time of the middle, the Moon will be vertical or directly overhead, in the latitude of 7 deg. 9 min. north; and in 83 deg. 54 min. of longitude west from London, which place falls on the globe, near P. Mala, on the western coast of Old Mexico or New Spain. Hence, it appears, that this Eclipse will be visible to all North and South America, to all the West India Islands, the Western Parts of Africa, to the Canary and Cape Verd Islands; it also will be visible to the Sandwich and Society Islands, in the Northern and Southern Pacific Ocean. The Eclipse will begin at London, Royston, and Cambridge, at 53 min. past 4 o'clock in the morning; the middle will be at 39 min. past 5; and the Eclipse will end at 25 min. past 6 o'clock, according to apparent time.

The duration of the Eclipse will be 1 hour and 32 min. The defect or digits eclipsed will be but $1^{\circ} 51'$.

Note — This Eclipse will happen about 5 min. sooner at Oxford and York than at London, and at Edinburgh it will happen 13 min. sooner.

N. B. See a Type of this small Eclipse of the Moon in MOORE'S Almanack.

The Fourth and last of these Eclipses, is one of the Sun, on Thursday the 29th of October, at 28 min. past our 5 o'clock in the evening, at which time the Sun is

set, therefore invisible to us; but in the more southern parts of the globe, and west from us, it will be a very great Eclipse: for in the latitude of 51 deg. 3 min. south, and in 87 deg. 26 min. of west longitude from London, the Sun will be centrically eclipsed on the Meridian, that is, at noon-day, and it there will appear nearly total, as the diameters of both Sun and Moon are nearly equal; this place falls in the Great South Sea, a few leagues to the west of the Straits of Patagonia, near Cape Horn, and just upon Captain Cook's track in 1769, when he was going round the world. The Sun will appear more or less eclipsed to the greatest part of South America, and it may be very properly called a South American Eclipse.

That beautiful Planet JUPITER will this year come to an opposition of the Sun, on the 28th day of July, when he will be nearer the Earth than at other times, so he will appear larger, and shine with the greatest lustre, and may be viewed at all times of the night with great advantage, when the sky is clear; and will, with his four Moons, look beautiful and grand by a good telescope.

And also, the Planet SATURN will come to an opposition of the Sun this year, on the 8th of September, which for a month before and a month after, will be the properest time for viewing, with a telescope, his wonderful ring, and also his satellites; he may be viewed at any time of the night, when the weather is clear.

That beautiful star, the Planet VENUS, will shine very late in the West, every night after sun-set, during the months of October and November, making a very fine appearance.

Of the VERITY of ASTROLOGY.

In the course of my yearly performances, I have often inserted some few scraps concerning the verity and influence of the stars, and in particular the Planets, with respect to the weather, nativities, and other subjects.

Perhaps some persons may be ready to say, to what purpose is this discourse inserted here, when Astrology is daily so very greatly exploded by the learned, as of late years it is known to be, and that the world is now grown to that pass, by means of these notions, that men believe

that the Stars in the Heavens are of less use than the signs at shop-keeper's doors, notwithstanding Sacred Writ assures us, that they were placed there by their Maker, for signs and for seasons.

If this text be allowed for a truth, which none I think dare to gainsay, then it will follow, that for a man to know there are Stars, and not to be acquainted with their influences, is to as little purpose, as for a physician to know the names of drugs, and yet be utterly ignorant of their virtues and uses; for as there is no mathematical demonstration for the verities either of physic or astrology, so it must be decided by experience, and that must be the determinator of the verity of both sciences: for there is no visible appearance to prove that rhubarb will purge, which by trial and experience it certainly will effect.

So in Astrology, the artists therein, from many observations made on the influences of the planetary bodies, have determined that the Planet Saturn is the propagator of cold; and, on the contrary, the Planet Mars to be the exciter of heat; and so on with the rest of the planets, all which have their several influences according to their natures, as hath been proved by a long series of observations, whereby the ancients have laid down rules and aphorisms, to be a guide for their succeeding followers. Therefore, for men that are utterly ignorant of Astrology (though otherwise learned) to condemn and calumniate a science they are strangers to, as is frequently done, is both absurd and ridiculous.

Although I am no professed resolver of astrological questions, as I said in my last, yet I know that abundance of truths may be discovered thereby; another remarkable instance or two of which I shall now give my Readers.— A gentlewoman (says my author) that lived not far from Soho-square, in the City of London, whom I had the honour of being acquainted with at least seven or eight years, and for some years before she was married, was often sick and indisposed, and was pleased to accept of my medical prescriptions; but the occasion of her coming to me this time, was not in respect of her health only, but also to be astrologically satisfied of another thing, that made her mind uneasy. The time was January the 7th, at 30 minutes past 10 in the morning. Her first question was thus: She having been ill four or five months, was

desirous of knowing the occasion of that illness ; therefore one of her demands was, to know whether she was with child or not, and if with child, whether male or female.

The *Figura Cæli* when the questions were proposed ;

The Solution. — Finding the fecund sign Cancer upon the cusp of the 5th, and the Moon lady thereof in the fertile sign ♋, separating from the □ of ♃, and applying to the * of ♃, ♀, and the Sun, and ♂ lord of the ascendant is strong in the fertile sign ♎ in * also of the Sun, ♀ and ♃, the Moon likewise lady of the 5th, applies to the Δ of Mars, lord of the ascendant, together with the interception of ♄ in the east angle, and Jupiter (a general significator of children) having the dignities of exaltation in the 5th, and projecting his benevolent beams to the sign ascending, are sufficient testimonies in Astrology of her having conceived ; wherefore I told her, that it was my opinion she was with child, and that of a girl (because the major arguments so denoted), which proved exactly true ; but withal, I informed her, that I supposed the child would not live long after its birth, because the Moon is posited in the 12th (the 8th from the 5th), and in □ of ♃, lord thereof, and of the 8th of the Figure ; this also was very true, for the child lived but five days after it was born.

The second demand was, about 11 guineas lost out of 75, which made her desirous of knowing the probability of discovering either the thief or money.

The Solution. — In the above scheme, the part of Fortune (\oplus), 2d House, and the Lord thereof, denotes the thing sought after in particular; and because it was gold, the Sun in general. Astrologers usually take a peregrine Planet, in an angle or 2d House, to signify the thief, especially if he does afflict any of the significators, but our position affords us no such planet; therefore Venus, Lady of the 7th in the 11th, in Conjunction with Mercury, Lord of the House of Substance, and dispositor of \oplus , must undoubtedly denote the thief; and as Venus is a feminine planet in a feminine sign, the Moon also is in a feminine sign and quarter of Heaven, applying to the * of ♀ and Δ of ♂, *cum multis aliis*, made me confident that the thief was a young woman. After I had described her person, complexion, and the colour of her hair, the gentlewoman told me, that she did well remember such a person was at her house that day, in the morning the guineas were lost. Finding ♀ in the 5th from the thief's ascendant, and the Moon in a moist sign, I judged that our malefactor lodged at some public-house, south-east from the Querent's habitation, as the Moon applies to * of ♂, Lord of the Substance, and to * of ♀, significatrix of the thief, and ♀ to * of ♂, Lord of the Ascendant, I encouraged the gentlewoman to be vigilant in seeking, and told her, that if she went about her business with courage, she would not only find the thief, but also have all or the major part of her money again within a day or two at most. This gave ample satisfaction, and proved true in every particular.—Thus much my author, the famous Mr. D. Woodward, a Student in Physic and Astrology, living at that time in London, by St. Clement's Church in the Strand.

Judicium Astrologicum, pro Anno 1818.

Or, an Astrological Judgment upon the Four Quarterly Ingresses of the present Year; and First, of the Brumal Ingress, or Winter Quarter.

I shall begin, as usual, with the Winter Quarter, as it all falls within the new year, excepting a few days.

This Quarter then begins, by my calculations, when the Sun enters the Southern Tropic, namely, Capricorn, which will happen on Monday the 22d day of December, 1817, at 19 min. past 3 in the morning; at which time 5 deg. of μ ascend in the east, and 17 deg. of Ω are on the mid heaven; at which time, the Moon is separating from a Conjunction of Mars, and an Opposition of Venus; all the Planets are under the Earth, excepting the Moon and Mars, both which will be going down in the west, and may be seen that morning very near each other; Jupiter and Venus with the Sun are posited in the 2d House; Mercury is in the 3d; and the Planet Saturn is posited in the 4th or lower angle of the Figure, and in a Sextile aspect of the Sun. From these Configurations it appears, that many judicious and honest men, both in this and other countries, are endeavouring to preserve peace and tranquillity amongst the Grandees, Kings, and Potentates of Europe, as they all seem, and well they may, to be heartily tired of war and bloodshed, and the great expences attending the same; except the Almighty hath determined to put into execution some farther vengeance against the people and nations of the earth, their sins and transgressions; for they have had many warnings and admonitions of his judgments of late years, both as to the seasons and otherwise. Riots and disturbances have occurred all over the United Kingdom of Great Britain and Ireland, to the disgrace and shame of many, and the ruin of others. There has been private conspiracies against legal Governors and Governments, with insurrections and great murmurings, with tumults and commotions; there has been piracies at sea, fires and robberies by land; and we have been involved in many of these calamities, which my readers no doubt well remember; and how far we may be able to extricate ourselves from a repetition of them, time must determine; but from this Figure of the Heavens, it seems to promise that the Government will do all they can to meliorate the condition of the people of England.

THE SPRING QUARTER,

Or, the Sun's Transit through φ , δ , and Π .

THIS Vernal Quarter is said to begin when the Sun, that glorious lamp of Heaven, enters the Equinoctial sign γ ; the Earth being then in the opposite

point, namely, in the first scruple of *Libra*, making thereby the days and nights of equal length all over the World, and will happen with us in the Meridian of London, on Saturday the 21st of March, at 44 min. past four in the morning; at which time 13 deg. of *Capricorn* culminate, and 19 deg. of *Libra* ascend in the East; the Configurations of the Planets are as follows. The Planet *Saturn* will be found in a *Sextile* aspect of *Jupiter*; the Sun is in a *Conjunction* of *Venus*, both posited in the *Ascendant*; the Moon also, has just separated from a *Trine* aspect of *Jupiter*; the Moon and the Planet *Saturn* are in an opposition of each other, and that from angles. Now most of these aspects are of a friendly nature, except the opposition of the Moon and *Saturn*, which are not so, and the Moon at the same time is hastening to an opposition of the Planet *Mercury*, and from angles also; these aspects, I am afraid, shew tumults amongst the common people, as if there would be some dissatisfaction amongst them; which will not be wondered at, when we consider what the times have been of late, together with the great burden of taxation, and scarcity of money: and, as to the weather, I hope the opposition of *Saturn* and the Moon, will not cause bad weather for the season; but should that be the case, as the month of April is at hand, it will not be of long duration. The other aspects are of a more friendly nature, and will, I think, in a great measure, overcome the evil rays of this opposition of *Saturn* and the Moon. Now, in considering the Scheme of the Spring Quarter in a political sense, the Planets shew, that there is likely to be some disorders in the northern parts of Italy, and parts more eastward, even beyond the Adriatic Sea, attended with broils and divisions in their councils, and disorders in their governments, both in a civil and religious way. There seems to be divisions and discontent amongst the people in different parts of Germany, as also in France, Spain, and Portugal; and this against the actions of their superiors.

THE SUMMER QUARTER,

Or, *The Sun's Transit through ♋, ♌, and ♍.*

THIS pleasant Quarter takes its beginning when the Sun, according to appearance, enters the Tropic of Cancer, and the Earth has wheeled into the southern re-

gion, namely, to the Tropic of Capricorn; the Sun now affording us his greatest light and heat, which this year happens on Monday, the 22d day of June, at 25 min. past two o'clock in the morning; at which time, 4 deg. of ♌ possess the mid-heaven, and 8 deg. of ♍ ascend the eastern Horizon, when the Planet Mercury is just rising, but the Sun still under the Earth, and will not rise for some time; the Planets Venus and Mars are also under the Earth; and the Planet Saturn is posited in the 11th, and Jupiter in the 8th; the Moon is in the 10th, and in a direct opposition of the Planet Mars, in the signs ♌ and ♍ , and this from the upper and lower angles of the Figure. The configurations of the Planets, at this time, are no way contradictory to those of the Spring Quarter, but in general seem to confirm all the good there promised to the British dominions; and then, O Britain, thou shalt rise and flourish again, when the fulness of time is come, thou and thy impoverished towns and cities; for the configurations of the Planets of late, and during this year, are mostly of a healing nature, denoting unity, peace, and concord; therefore, under the salutary influences of these positions, we have some reason to expect prosperity to trade and traffic, to what has been the case of late; with health in general to mankind; notwithstanding the pestilential opposition of the two Infortunes, the Planets Saturn and Mars, which takes place about the 7th of August next ensuing. This opposition may rather embroil, and give us reason to fear, that the affairs of some countries on the continent, especially France, are still in an unsettled condition. Disturbances seem likewise to be breaking out in the southern parts of Europe, with some underhand dealings of the Turks towards the Russians, if not towards Persia; and I am also fearful of troubles in Ireland during the course of this year, because that people are very unsettled. I doubt London, our metropolis, will not be privileged from troubles, and uproars, and other calamities; but still we all live in hopes that the times ere long will mend, in some way or other, as the Planets seem to promise better than of late. I expect that the harvest will prove better than that of 1816; and the weather be more propitious unto us. See the *HIEROGLYPHIC in Moore's Almanack of this Year.*

THE AUTUMNAL QUARTER,

Or, *the Sun's Transit through ♎, ♍, and ♋.*

THIS Quarter takes place when the Sun, according to appearance, enters the Equinoctial sign Libra, he then crosses the line in his way to the southern regions, until he arrives at the Tropic of Capricorn, when the Winter Quarter commences. This Autumn Quarter then begins on the 23d of September, at 19 minutes past four in the afternoon, when our days and nights become again equal; at which time 7 degrees of ♋ culminate on the mid-heaven, and 8 degrees of ♎ ascend on the eastern Horizon. The ☽ ad Δ ♋, et Δ ♎, et \square of ♋. Besides these configurations of the Planets, I find Saturn to be retrograde in the Ascendant; Jupiter to be in the 11th House; Venus to be in the 9th, and in a Trine aspect of Saturn; and Mars to be in the 8th, in a Square aspect of the Moon. The Sun, I see, is in a Conjunction of Mercury, in the 7th house, or western angle. These are the principal configurations of the Planets at this ingress of the Sun into Libra, which, in general, appears of a peaceable tendency, as the other ingresses have been; and I do not perceive any remarkable aspect in this figure of the Heavens, that relates to public quarrels, ruptures, or wars; for these rays seem not to promote things of that nature, but quite the reverse; peace and tranquillity with all or most of the powers of Europe, which I am very glad of, for there is nothing got by war but debt and taxes, which bring poverty and ruin; this my countrymen may plainly see without the gift of prophecy. I have also reason to conjecture, from planetary influences, that ENGLAND will begin to revive again, and the husbandman to meet encouragement for his pains in following his vocations, and that he will find no hard and unfriendly season to contradict his hopes and expectations; the Earth bringing forth her increase happily, to the satisfaction and benefit of all mankind.

FINIS.

C. PRITCHARD,

PRINTER, BOOKSELLER, BOOKBINDER,
STATIONER AND MUSIC-SELLER,
