

1824.

# Merlinus Liberatus.

AN

## *ALMANACK,*

For the Year of our Redemption,  
1824,

Being Bissextile, or Leap Year ;

AND FROM THE CREATION OF THE WORLD, ACCORDING  
TO THE BEST HISTORY, 5832,

AND THE

136th of our Deliverance by K. William

*From Popery and Arbitrary Government ;*

BUT THE 146th. FROM THE

*Horrid, Popish, Jacobite Plot.*

Wherein are contained all Things fitting and useful for such a Work ; as an Ephemeris of the daily Motions of the Planets, with their various Configurations, Aspects, Conjunctions ; Lunations, Eclipses, Astronomical, Astrological, Meteorological Observations ; the rising and setting of the Sun, Moon, Planets and fixed Stars, illustrated with Tables of the Tides, Terms, and daily Equation of Clocks ; Length and Break, Increase and Decrease, of Days ; a Chronology ; Remarks on the Divisions of the Heavens, with Judgments of the Eclipses and Seasons, handled according to the Rules of the Ptolomean Astrology, with many other Things relating to the Truth of Astrology.

Calculated for the Meridian of LONDON.

By JOHN PARTRIDGE

—— *Etiam Mortuus loquitur* ——

PRINTED FOR THE COMPANY OF STATIONERS

By Harrison and Son, Lancaster-court, Strand,

And Sold by GEORGE GREENHILL, at their Hall, Ludgate-Street.

[Price, stitched, Two Shillings and Three Pence.]

2 January hath XXXI Days.

Divine *Urania!* tune my string,  
 And fill my brain with wisdom true,  
 That I may of the Planets sing,  
 Their various influences shew.

16	7	Ω	♁
21	7	1	♁
26	7	2	♁

Dull Saturn squares bright Mercury;  
 At Venus darts a quartile ray;  
 At Phæbus too, as here we see;  
 Some ill these aspects will display.

22 November hath XXX Days.

Towards the end old Chronus throws  
 A baneful ray unto the Sun—  
 Now rain descends—the tempest blows,  
 And water down the gutters run.

24 December hath XXXI Days.

Now winter comes—December ends—  
 And this year's joys and sorrows cease :  
 O may you all be blest, my friends,  
 With health and happiness and peace.

*An Explanation of this and the following Table.*  
 First find the month on the head of the Table, and the day in the first column on the left hand, and in the angle of meeting you have the day of the Moon's age, with which enter the following table, and find your said number in the left hand column, and over against it in the other column is the time of High Water at all the places above mentioned, by inspection.—*Example, March 13, I find the Moon to be 13 days old, and over against 13 in the first column I find, 10h. 2m in the second column, and 11h. 54m. in the third; which are the times of High Water at all those places mentioned above in the second and third columns on that day. Et sic de ceteris.*

*A plain and easy Table shewing the Time of  
HIGH WATER.*

D A		Candado, Dunkirk, Coast of Flanders, Kentish Knock, Leith, Portsmouth, and the Spits, Queensborough, Southampton.		Blackness, Downs, Gravesend Half-tide, North-Cape before Coquit, Romney, Scilly and Thanet.		Amsterdam, Dort, Gascoin, Groin, Hartlepool, Ireland in the Westward, London, Robin Hood's Bay, Rotterdam, Tinemouth and Whitby.		Dartmouth, Plymouth, Falmouth, Guernsey, Humber, Lizard, Newcastle, Ramsey, Severn-mouth, Spurn, and Torbay. Scilly 1 hour less.		Antwerp, Boston, St. David's Holms of Bristol, Hull, Lundy, Lynn Half-tide, St. Paul's, Salcom without Ushant, Waterford.		Aldborough, Bristol, Falmouth and Foy, Foulness, Lime, Sidmouth in the Channel, Start before St. Nicholas, Weymouth.		Caen, Calais Road, Cowes, Dover, the Frith, South-Fore-land, Harwich, St. Helen's, Normandy and Picardy, Yarmouth Road.		Beachy, and the Isle of Wight, Caskets in the Channels, Combay, Dublin, Hague, Peter-Port, St. Magnus's Sound.

N. B. In the Calendar Part, you will find the Planets' Southing inserted to several Days in each Month; and by this Table you may easily find their Rising and Setting. First, find the Longitude for the Day proposed, with which enter this Table, and take out the Semidiurnal Arch thereof, which being added to the Time of Southing, gives the Setting, but subtracted the Rising, nearly.

*A compendious Chronology of the most principal Epochs and Eras, with their Beginnings, reduced and fixed to the Years of the Julian Period, the Creation of the World, and to the Years before and after Christ.*

*Note.*—At the EXCHEQUER all the Holidays are kept, except Nov. 9.

At the BANK, SOUTH SEA, and INDIA HOUSES, the following are *not kept*: Jan. 31. Feb. 14, Mar. 2, April 21, June 9, July 15, Aug. 1, Sept. 14, 18, Nov. 2. 18.

At the Excise, Stamps, and Customs, the only Holidays kept are April 16, 23, May 29, July 19, and Dec. 25.

TRANSFER DAYS AT THE BANK, &c.

Bank Stock 8 per Cent., Tuesday Thursday and Friday . . . . .	Dividends due. April 5, Oct. 10
Consolidated 3 per Cent. Ann., Tuesday, Wednesday, Thursday and Friday	} Jan. 5, July 5
Reduced 3 per Cent. Ann., Tuesday, Wednesday, Thursday, and Friday	
Three and a half per Cent. Ann., Tuesday, Thursday, and Friday	} April 5, Oct. 10
Four per Cent. Ann., Tuesday, Wednesday, Thursday, and Friday	
Four per Cent. New Ann., Tuesday, Wednesday, Thursday, and Friday	} Jan. 5, July 5
Five per Cent. Ann. 1797, Tuesday, Thursday and Friday . . . . .	
Long Ann. to January 1860, Monday, Wednesday, and Saturday	} April 5, Oct. 10
Imperial 3 per Cent. Ann., Monday, Wednesday, and Friday	
Three per Cent. Ann. 1726, Tuesday, and Thursday . . . . .	} Jan. 5, July 5
Life Ann. if transferred between January 5, and April 4, or be- tween July 5, and October 9	
Ditto, if transferred between April 5 and July 4, or between October 10 and January 4	} April 5, Oct. 10
East India Stock, Ten and a Half per Cent., Tuesday, Thurs- day and Saturday	
South Sea Stock, Three and a Half per Cent., Monday, Wed- nesday, and Friday	} Jan. 5, July 5
Three per Cent. Old South Sea Ann., Monday, Wednesday, and Friday	
Three per Cent. New South Sea Ann., Tuesday, Thursday, and Saturday	} April 5, Oct. 10
Three per Cent. Ann. 1751, Tuesday and Thursday . . . . .	

Tickets for preparing the Transfer of Stock must be given in at the respective Of-  
fices before One o'Clock.---At the India House before two o'Clock.

Private Transfers may be made at other times than as above, the Books not being  
shut for the Dividends, by paying  
At the Bank and India House 2s. 6d. extra for each Transfer.  
At the South Sea House . . . 3s. 6d. ditto.

Transfers at the Bank must be executed by half past two o'Clock---at the India  
House by 3 o'Clock---at the South Sea House by 2 o'Clock, on Saturdays by 1.

Expense of Transfer in Bank Stock for 25l. and under, 9s. above that sum 12s.  
India Stock for 10l. . . . 1l. 10s. . . . . 1l. 14s.  
South S. St. if under 100l. . . . 9s. 6d. . . . . 12s.

Powers of Attorney for the Sale or Transfer of Stock must be deposited at the Bank,  
&c. for examination, one day before they can be acted upon;---if for receiving Divi-  
dends, it is sufficient to present them at the time the first Dividend becomes payable.

The expense of a Power of Attorney is 1l. 1s. 6d. for each Stock separately; but  
for Bank, India, and South Sea Stock, 1l. 11s. 6d.; and when required to be made  
out on the same day, half past 12 o'Clock is the latest time for receiving orders.---  
The boxes for receiving Powers of Attorney for Sale close at 2 o'Clock.

All Probates of Wills, Letters of Administration, and other proofs of decease,  
are required to be left at the Bank, &c. for Registration from two to three clear  
days, exclusive of holidays.

Stock cannot be added to any Account (whether single or joint) in which the de-  
cease of the individual Party, or of any one or more of a joint Party, has taken  
place; and it is also essential to have the decease proved as soon as practicable.  
Powers of Attorney previously granted become void.

The unaltered possession of 500l. or upwards Bank Stock for six months clear,  
will entitle the Proprietor to a Vote.

The unaltered possession of East India Stock for One Year clear, to the annexed different amounts or up- wards, entitles the Proprietor to the Vote or Votes re- spectively subjoined. . . . .	} 1000l. to 1 Vote. 3000l. to 2 Votes. 6000l. to 3 Votes. 10000l. to 4 Votes.

*ECLIPSES of the SUN and MOON.*  
 THAT WILL HAPPEN THIS YEAR 1824.

**W**ITHIN the period of the present year there will be *five* Eclipses, *viz. three* of the *Sun* and *two* of the *Moon*, but only those of the latter body will be visible in this country.

The *first* is an *invisible* Eclipse of the *Sun*, on *Thursday January* the 1st., early in the *Morning*, and though the true Ecliptic Conjunction does not happen till 7 m. after 8 o'clock, yet the Eclipse will have begun to some parts of the earth long before this time, for the Sun is centrally eclipsed on the meridian at 59 m. after 7, and of course the central shade must have nearly arrived at the middle of its tract across the disc of the Earth. As the semidiameter of the Sun exceeds that of the Moon even at their greatest altitude above the horizon, this Eclipse will be *Annular* all along the central tract, presenting to the inhabitants of those distant and favoured regions for observing this phenomenon a beautiful ring of light, suspended in the ethereal blue, of about half a digit in breadth. This Eclipse will be visible to *Madagascar* and the islands near, lying in the Indian ocean, also to the *Cape-of-Good-Hope* and the western parts of *New Holland*. The Sun will be centrally eclipsed within the frozen ocean of the *Antarctic* Circle at noon-day, in latitude  $72^{\circ} 9' 25''$  longitude  $60^{\circ} 14' 24''$  east.

The *second* is a partial *lunar* defect on *Friday* morning *January* 16th., and the *fore-part* of which, will be visible in this country. This Eclipse begins, according to the meridian of Greenwich, at 7h. 17m. 58s. apparent time, and the Moon sets at 7h. 44m. 27s.; so that it will be visible only 26m. 29s. at the Royal Observatory. To other parts of the country the time of the Moon's setting will be a little different, but not so much so as to affect in a material degree its general appearance. The middle of this Eclipse takes place at 8h. 43m. 38s. the  $\delta$  at 8h. 49m. 41s. and the end at 10. 9m. 18s.; digits eclipsed at the time of the greatest obscuration  $9^{\circ} 24' 33''$  on the northern part of the Moon's disc. At the beginning of this Eclipse the Moon will rise to the northern parts of *Russia*; the N. E. parts of *China* and *Japan*; to several of the islands in the

*Great Pacific Ocean*, and to the N. E. parts of *New Zealand*; at which time she will set to *Sweden, France, Spain*, and to the western coast of the *Great Desert of Africa*. At the time of the greatest obscuration the ☽ will rise to some parts of the *Russian Empire, China, to New Guinea*, and to the eastern parts of *New Holland*, and set to some parts of *South America*, the western coast of *Ireland*, and the north of *Scotland*. And from the position of the Moon at the termination of this Eclipse, it appears it will be visible from the beginning to the end, to the whole of *North America*, to the *Sandwich, Society and Friendly Isles*, and also to several other islands in the *Great Pacific Ocean*. The Moon's parallax during this Eclipse will be  $61' 24''$ , which is the *maximum* for the whole year, consequently she will be nearer the Earth at this time than at any other time during the said period. The first impression of the Earth's shadow on the Moon, will take place at  $34^{\circ} 11' 51''$  from the highest point of her disc, and the quantity, and position, of this Eclipse, at the time of the Moon's setting are shewn in the following type.

The degree of obscuration at the time of the Moon's centre passing the visible horizon of Greenwich, is  $3^{\circ} 39' 15''$ .

The *third* of these Eclipses is one of the *Sun*, on *Saturday, June* the 26th, but *invisible* to us in Great Britain, though to our *Periæci*, and those of our continental neighbours this will be a fine Eclipse, as the Sun will be centrally and totally eclipsed when on the meridian of the parallel of northern latitude  $47^{\circ} 5' 50''$ , and longitude  $174^{\circ} 25'$  west. The true  $\odot$  of the Sun and Moon will take place at 11h. 39m. 6s. at night, according to the meridian of Greenwich; and the Sun will be eclipsed in a greater or less degree to some part of the Earth or other, from 9h. 2m. 47s. that evening, to 2h. 24m. 4s. next morning, that is for the space of 5h. 21m. 17s.; and will be totally obscured 3h. 18m. 45s. This Eclipse will be visible at the *Sandwich*, the *Ladrone* and *Phillipine* isles, and will be very large in some parts of *China*, the *Yellow Sea* and the *Peninsula* of *Corea*, which are near the path of the central shade. The central tract enters the *Northern Pacific*, near the strait of *Sungaar*, and crossing that sea, leaves the earth with a setting Sun in latitude  $14^{\circ} 6' 9''$  north, longitude  $104^{\circ} 28' 18''$  west. This Eclipse will be visible at the *Pole*, and what may appear strange to those who are not acquainted with Astronomy, that if the air be clear, the like will take place even at *Midnight* within the *Arctic Circle*. The Sun will rise centrally eclipsed in that part of *China*, latitude  $28^{\circ} 34' 32''$  N. longitude  $105^{\circ} 22' 54''$  E.

The *fourth* is a small *Lunar* Eclipse, and will be partly visible in this country; it happens on *Sunday, July* the 11th, when the Moon will set that morning at 3h. 58m. 46s. only  $1^{\circ} 30' 33''$  eclipsed, as shewn by the following Type. This Eclipse will not be very interesting to us in this part of the world, not altogether on account of its smallness, but from the effects of the predominancy of the twilight at the time. This Eclipse will be visible to *North* and *South America*, to the western parts of *Africa*, from *Morocco* to the *Cape of Good Hope*. The Moon will be vertical over *South America* during the continuance of this Eclipse, from longitude  $51^{\circ} 20'$  to  $73^{\circ} 20'$ , and nearly in

the parallel of  $21^{\circ} 18'$  south latitude. Hence this phenomenon will be visible within the frozen regions of the southern pole, where our great and indefatigable navigator was not able to penetrate on account of the great masses of ice beyond the latitude of  $71^{\circ} 10'$ , when he was at that time upwards of thirteen hundred miles from the pole. About the middle of this Eclipse the Moon will set to some parts of *Ireland*, and the western parts of *England*. The following Type will be found to agree with its appearance for the latitude and meridian of Greenwich; where the Eclipse *Begins* at 3h. 25. 18s., the *Middle* takes place at 4h. 9m. 20s., the true  $\oslash$  at 4h. 20m. 37s. and the *End* at 4h. 53m. 21s., making the duration 1h. 28m. 3s., and digits eclipsed on the Moon's southern limb =  $1^{\circ} 36' 7''$ . The ingress of the umbra will be at  $64^{\circ} 55'$  from the lowermost point of the Moon's periphery.

The *fifth* and last Eclipse that will happen this year will be of the *Sun*, on *Monday December* the 20th, but *invisible* with us, the conjunction taking place at 40m. 29s. after ten that morning. This will be a beautiful annular Eclipse all along the central tract, where the inhabitants will be entertained with a most charming sight, that of a beauti-

ful ring of light of about of a quarter of a digit in breadth suspended in the heavens. Although the Sun will be above our horizon all the time of the central appearance of this Eclipse, yet he will suffer no diminution of his rays, owing to the Moon's true latitude at the time, which is south; it requiring a latitude of a contrary denomination to produce a visible solar Eclipse in our own northern parts of the globe.—The central appearance will be first seen in that extensive country of *Brazil* at Sun rise, and according to the first meridian of England, at 52 minutes after eight o'clock that morning. The central tract will leave the continent of *South America* near the town of *Spírita-Santo*, or *Espiritu Santo*, and crossing the *Atlantic*, it enters the western coast of the *Cape-of-Good-Hope*, where in that colony the Sun will be centrally eclipsed when on the meridian in latitude  $33^{\circ} 9' 37''$  S. longitude  $19^{\circ} 48' 45''$  E., which is only 97 miles N. E. by E. of *Cape Town*. But as the central appearance passes within 2 miles north of *Cape Town*, it will probably be annular there, or the lower limbs of the Sun and Moon will very nearly coincide, which will render this a very interesting phenomenon to the curious in Astronomy of this distant part of the world. The central tract, after leaving this point of land, will terminate in the *Indian Ocean* at 35 minutes after our twelve o'clock at noon; the Sun having been centrally eclipsed over a considerable lineal extent of this part of the globe during 3 hours and 43 minutes. This Eclipse will be *visible* to the southern, and as far as the equatorial parts of *Africa*, to *Madagascar*, and for a short time will be seen at *Ceylon*, and along the *Malabar Coast*. This Eclipse will also be *visible* as far south as the *Antarctic Circle*, where the Sun will be obscured on his lower limb to the icy continent of these austral regions.

*Other Celestial Phenomena that will happen this Year.*

ON account of the position of the Moon's nodes and that of the latitude of the planet *Jupiter*, there will be several near appulses of our satellite to this wonderful star of our system, and which will prove occultations to some parts of the Earth or other during the present year, one of

which will be visible in this country, and should the air prove clear, will I trust be found to agree with the following calculations and representations which have been made for the latitude and meridian of the Royal Observatory at Greenwich. The occultation of Jupiter by the Moon of which I have been speaking takes place on *Monday, April* the 5th at night; the Moon, which is now near her first quarter, will be seen that evening approaching the Planet, and at 29 minutes after 11 o'clock the star will *immerse* behind the dark part of the Moon at *I.* and will emerge from behind the illuminated disc of the Moon at *E.* at 22½ minutes after 12 at midnight, having been hid by the Moon 53 minutes.

Those who have good telescopes will be highly gratified at this time in viewing the Planet and his four satellites, when three of the latter will be on the west and one on the east of their primary, when the 4th will *Im.* about 11h. 18m., the 3d at 11h. 21m., the 1st. at 11h. 28m., then the Planet, and finally the 2d, at 11h. 34m. The *Immersion* of the Planet will take place at *I.* at  $51^{\circ} 49'$  from the vertical point *v* of the Moon's disc, and the *Emersion* at *E* at  $74^{\circ} 22'$  from the lowermost verge of the Moon's limb.

On *Friday, August* the 6th, the Moon will hide from our view the *Planet Herschel*, when the *Immersion* takes place at 9h. 57m., and the *Emersion* at 11h. 9m. that evening. This occultation will happen shortly after the Moon and Star have passed the meridian, but both having

great southern declination at the time, and the Moon being near the full, will so much diminish the light of the planet as to render it nearly invisible without the aid of a good telescope.

In conclusion I shall in a few words inform my readers when to observe the different planets: and first, MERCURY will be visible in the *evenings*, on, or about, *Jan. 19th, May 10th. Sept. 7th. Dec. 31st.*; and again in the *mornings* of *Feb. 28th. June 28th. and Oct. 19th.* VENUS will be approaching the inferior part of her orbit in *Dec.* and will be in  $\zeta$  with  $\zeta$  on the 24th., when she will pass about 43' south of that star; they will set that evening at 58m. after 6. JUPITER may be observed to advantage during the first three months of this year, and again in *December.*

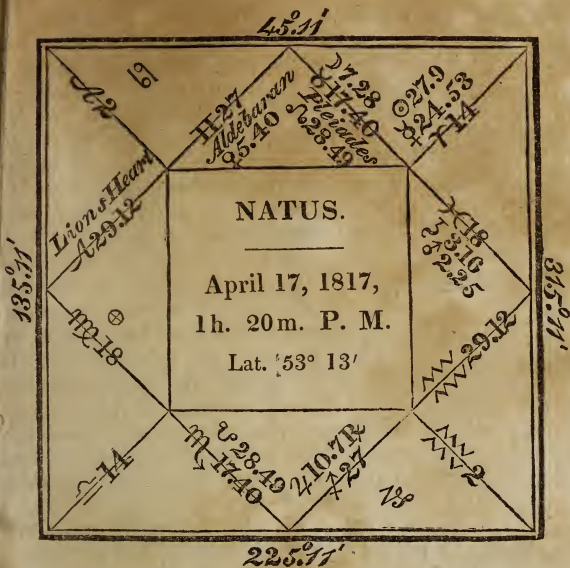

The last three months will afford many opportunities for viewing *Saturn* and his stupendous ring.

### *On Genethliacal Astrology.*

IT cannot be denied but that Astrology has many adversaries, and although I have for some years introduced such examples, as in a great measure may be said to establish the truth of the present division of this ancient astral divination; yet nevertheless there are some still, who doubt or deny the influence of the stars on the actions and destinies of mankind. For the sake of such persons, and others of my readers, I shall introduce the following curious Nativity from the pen of our worthy correspondent and long tried veteran in this branch of Astrology.

The Nativity of CHRISTOPHER TORN, of HATTON, near WRAGBY, in the county of Lincoln, who was drowned at the age of three years and one month:—calculated by Mr. JOHN WORSDALE, *sen.* PROFESSOR of the CELESTIAL SCIENCES, near the Cathedral, Lincoln: by whom any person may have any Nativity calculated on the shortest notice.

The time of this Child's Birth was accurately taken by his Father, and given to me for publication. The preced-

ing figure of the Heavens evidently forbodes a **SUDDEN**, and **VIOLENT DEATH**, and of that nature which all human Efforts could by no means prevent. The circumstances attending this Child's death, are truly wonderful; he was drowned on the 15th of May 1820. The morning of that day was very fine and pleasant, and as usual, he was playing in a piece of ground a short distance from the house, in which was a hollow place, without the least appearance of any water. In the course of the day it rained very heavy, so that water was collected in that place, which in the morning was very dry; but as he was passing by the verge of the place, in the afternoon, he fell therein, not being five inches deep, and was not found until he was dead.—In every Nativity where a violent Death is previously visible, both the benevolents are afflicted either in the Radix, or by Direction. In this case Jupiter and Venus are both injured by the violent rays of the enemies, who are furiously conjoined in the western angle, in a watery sign, and I have no doubt but some may suppose that the Ascendant to the Opposition of Saturn and Mars destroyed Life, but that is improbable, for the Sun is the true Apheta, or giver of Life, and had he not been directed to the Zodiacal Parallels of Saturn, Mars, and the Moon, at the time of dissolution, this Native would have been yet living, though the Directions of the Horoscope to the Opposition of the Malefics assisted the others in completing the fatal stroke of Death; therefore I do affirm that the Effects of the Sun's Directions to the Malefics, were the original *cause* of dissolution, and of that quality of which this Native died, as may be seen by inspecting the preceding mortal train of Directions which I have tabulated in progressive order.—In the Native's Revolution for the third year of his age, the Prorogator was afflicted by the Square of Mars, from violent Cardinal Signs, and the Luminaries were both posited in obnoxious places, and afflicted by secondary Motion, all which indicate Death by drowning. *But the true Method of computing all Directions in the Zodiac, and Mundo, will be found in my new work on Nativities, entitled, CELESTIAL PHILOSOPHY, or GENETHLIACAL ASTRONOMY, which is now publishing by Subscription, price One Guinea.*

*Judicium Astrologicum, pro Anno 1824; or an Astrological Judgement upon the four quarterly Ingresses of the present Year; and first of the Brumal Ingress, or Winter Quarter.*

THE Brumal, or Winter Quarter, begins with the apparent entrance of the Sun into the first Scruple of *Capricorn*, or the real entrance of the Earth into the opposite sign *Cancer*, which takes place on *Monday* the 22d of *December*, 1823, at 2h. 14m. 12s. P. M. when we have  $4^{\circ} 35'$  of  $\Pi$  on the eastern angle,  $1^{\circ} 16'$  of  $\sim$  on the southern, and consequently  $4^{\circ} 35'$  of  $\uparrow$ , and  $1^{\circ} 16'$  of  $\Omega$  must respectively occupy the western and northern angles of the figure. The Planets at the same time will be found located in the several mundane divisions of Heaven, as follow, viz. *Jupiter* in the 2d,  $\Upsilon$  et  $\♂$  in the 5th,  $\♀$  in the 6th,  $\odot$  et  $\♁$  in the 8th, and  $\♃$  in the 12th. Without giving the number and characters of the several aspects formed within orbs of the respective Planets, I may observe that they are of a mixed quality, but their effects are much diminished by the debilitated state of the Promissors at the time of this Ingress. From which we may infer, that should the unjust and cruel war which has so lately commenced by *France* against the rising liberties of *Spain*, be continued to the present time, the Bourbon commander in chief will have little to boast of by way of victory, but this valiant son of Old Louis's heart, if he steer clear of cannon balls, will probably have cause to rue the day that first led him to engage in a war that is at once revolting to human nature, and a disgrace to the age we live in. The planet  $\♂$  is about entering the cardinal sign  $\♌$ , and will begin to be  $\Re$  in the 13th degree of that sign, and will become stationary in the 25th degree of  $\♍$ ; this circumstance with the Zodiacal and Mundane positions, lead us to suppose that much mischief is threatened to *France*, *Austria*, *Turkey*, and I am afraid that our *Indian* possessions will come in for a share of the evil effects of these malefic configurations. This ingress is certainly favourable to the Czar of *Moscow*, who still seems destined to be an efficient member of the Holy Alliance.—This is likely to be a trying quarter for many aged persons, who after lingering for a considerable time under tedious disorders, at last find repose in the grave. *Mors omnibus communis*. Disturbances in *France*,—the people much dissatisfied with the present ruling faction in that country.

### THE SPRING QUARTER;

*Or the Sun's transit through  $\Upsilon$ .  $\♁$ , and  $\Pi$ .*

THIS cheerful animating quarter begins on *Saturday*, the 20th day of *March*, at 3h. 31m. 52s P. M. when  $3^{\circ} 56'$  of  $\♍$  are upon the ascendant, and  $25^{\circ} 14'$  of  $\♁$  occupy the *Medium Cæli*, and moreover we find  $\♂$  in the 2nd. house, the  $\♃$  and  $\♄$  in the 4th.  $\♀$  in the 6th,  $\♁$  in the 7th. the  $\odot$  in the 8th,  $\♃$  in the 9th, and  $\♆$  with *Aldebaran* and the *Pleiades*, in the 10th. We have be-

sides  $\text{D ab } \triangle \odot$ , et ad  $\square \text{ } \text{♀}$ , et ab  $\ast \text{ } \text{♂}$ ; as also  $\text{♁ } \odot \text{ } \text{♂}$ ,  $\square \odot \text{ } \text{♃}$ ;  $\square \text{ } \text{♁}$ , and  $\square \text{ } \text{♃}$ . Although many of these configurations are of themselves of an important nature, yet owing to the unessential dignities of the Planets during this quarter, we must not expect matters to assume a very decisive character in mundane affairs. Mars having got into *Libra* the ascendant of *Austria*, *Portugal* and some parts of *France*, &c. from some of which places we may now expect to hear of martial enterprises, and much trouble and confusion, with preparations for war, or war-like action. The House of *Austria* cannot, yet, beat their swords into plough shares or their spears into pruning hooks; at present, they have other occasions for them, and in which they will employ them, though the God of war is by no means propitious towards this power at the present time. Troubles are likely to take place in *Ireland*, also in *Russia*, *Poland* and *Holland*, and some other countries near. These ebullitions of the populace, do not always arise from an inherent bad disposition of the people, but may more commonly be traced to the narrow minded policy adopted by those who think a system of coercion and exclusion the best form of government in the world.

Our ministers are now very busily employed both with domestic and foreign affairs of great importance.

### THE SUMMER QUARTER;

*Or the Sun's transit through  $\text{♄}$ ,  $\text{♁}$ , and  $\text{♃}$ .*

IT is well known that this Quarter begins when the Sun has arrived at its greatest north declination, or enters the first scruple of  $\text{♄}$ , which happens this year on *Monday* the 21st day of *June*, at 0h. 59m. 57s. P. M.; when  $10^{\circ} 32'$  of  $\text{♄}$  ascend and  $13^{\circ} 45'$  culminate; all the Planets are above the Earth:  $\text{♁}$  is in the 12th house and the  $\text{D}$  is in  $\text{♃}$ , near the western angle, &c. &c. Much perplexity and uncertainty in publick affairs, a want of decision in the councils of Princes: the times are out of joint, and the state doctors of the Holy Alliance do not seem equal to the task of uniting the several parts exactly to their minds.—*Necesse est ut multos timeat, quem multi timeant.*

### THE AUTUMN QUARTER;

*Or the Sun's transit through  $\text{♄}$ ,  $\text{♁}$ , and  $\text{♁}$ .*

AGREEABLE to calculation, we find that this Quarter commences on *Thursday*, the 23d. day of *September*, at 2h. 56m. 41s. A. M., when it appears that  $27^{\circ} 56'$  of  $\text{♁}$  ascend, and  $16^{\circ} 45'$  are on the meridian: all the Planets, with the exception of  $\text{♃}$  and  $\text{♁}$ , are under the horizon. The most important configuration of this Quarter is  $\text{♁ } \text{♁} \text{ } \text{♁}$ , and which is likely enough to prepare mens' minds for something of importance; such as wars and contention with the idle sottish Monks, and other of this cast, who live upon the hard labour of others, &c. Things are fast verging to that state of consummation which every just man must wish, who has the well being of his species at heart. *Les tems present est gros de l'avenir.*

FINIS.
