# CURIOSITIES OF LONDON

EXHIBITING THE MOST

RARE AND REMARKABLE OBJECTS OF INTEREST  
IN THE METROPOLIS;

WITH NEARLY

*Sixty Years' Personal Recollections.*

By JOHN TIMBS, F.S.A.

[Bow Church and Cheapside, 1750.]

"I'll see these things!—They're rare and passing curious."—OLD PLAY.

"I walked up to the window in my dusty black coat, and looking through the glass, saw all the world in yellow, blue, and green, running at the ring of pleasure."—STERNE.

"The man that is tired of London is tired of existence."—JOHNSON.

A NEW EDITION, CORRECTED AND ENLARGED.

LONDON :

JOHN CAMDEN HOTTEN, 74 & 75, PICCADILLY .

[All Rights Reserved.]

## P R E F A C E.

IT is not without considerable anxiety that I submit to the public this enlarged edition of a Work in which are garnered many of the labours of a long life, for the most part passed amidst the localities and characteristics which it is the aim of this volume to focus and portray. The cause of the above anxiety lies chiefly in the changeful nature of the subject; for at no period in the existence of the Metropolis have so many changes been wrought in its "scarred face," and its modern aspect, as in the Twelve Years that have elapsed since the publication of the first edition of this Work.

The "CURIOSITIES OF LONDON" originally appeared in the Spring of 1855, in a small octavo volume of 800 pages, when it was received by the Critical Press with almost unanimous approval; or, in some respects, an inclination to take the word for the deed, and in others to kindly regard the difficulties of the labour. In either case I am bound to be grateful. The edition, over 3000 copies, was sold within a comparatively short period, considering the character of the work, then regarded as almost exclusively *antiquarian*; although the above reception induces the belief that "the Present has its Curiosities as well as the Past." The book remained for several years entirely out of print, and second-hand could only be rarely obtained by advertisement. I then resolved upon its revision, and its reproduction, enlarged and more perfect in its details than hitherto; and the present volume of library size, 880 pages, is the result; improved, it is hoped, in the value of its contents, as well as increased in bulk.

The plan and arrangement of this edition are essentially the same as those of its predecessor. The type is somewhat enlarged, and more readable; in the quotations and descriptive details, the small but clear letter has been adhered to, so as to comprise an additional amount of exact and authorized illustrative information. Meanwhile, the extent of the more important articles has been considerably augmented, though with the requisite attention to conciseness and facility of reference. Several new articles have been added; others have been re-written and enlarged. Correctness has been the cardinal point throughout the Work; although the many thousand facts, names, and dates contained in this large volume will, it is hoped, be taken into account.

The Preface to the First Edition has been reprinted for the sake of its explanation of the design, which I have here amplified, improved, and rendered more trustworthy as well as entertaining, by the best means and opportunities at my disposal, venerating the injunction of the old poet—

“Up into the watch-tower get,  
And see all things despoiled of fallacies.”

The Annals of a great City are oftentimes to be traced in the history of its Public Edifices. In the ancient and modern Cathedral, the venerable Minster, and the picturesque Churches of the Metropolis, we not only read the history of its Architecture, but in their “solemn paths of Fame” we trace countless records of our country’s greatness.

The Birthplaces and Abodes of eminent Londoners are so many hallowed sites to those who love to cherish the memories of great men. The palace-prison of “the Tower” bears upon its very walls an index to most stirring events in our history.

The Civic Halls of London are stored with memorials of past ages illustrating curious glimpses of manners and artistic skill in their Pictures, Plate, and Painted Glass.

To trace the growth of great centres of population, from the village in the fields to a city of palaces, part of the Great Town itself, leads us through many vivid contrasts of life and manners:—from the times when Southwark was a Roman suburb; Lambeth and Chelsea were Saxon villages; Westminster was a “Thorny Island;” St. Marylebone, a hamlet on the brook; St. Pancras, in the fields; and Finsbury, a swampy moor: all lying around the focus of Roman civilization, the City itself.

Certain localities bear names which “make us seek in our walks the

very footmarks of the Roman soldier;" whilst one of our most thronged thoroughfares can be identified as a British trackway and Roman street. How often upon such sites are unearthed relics of the civilization and luxury of our conquerors and colonists.

The records of the Amusements of the People, and their Sights and Shows, in all ages, are richly stored with Curiosities: from the period when Smithfield was an Anglo-Norman race-course, to the waning of the last of the City pageants, Lord Mayor's Show. Old Poets and Dramatists, Travellers and Diarists, have left us pictures-in-little of the sports and pastimes, the follies and nine-day-wonders, of the "Londiners." Fitzstephen and Hentzner, Stow and Strype, Howell and Aubrey, Evelyn and Pepys, Ned Ward and Tom Brown, Gay and Walpole, have bequeathed us many "trivial fond records" of this anecdotic class. Again, how many amusing eccentricities are recorded in the lives of the Alchemists, Astrologers, and Antiquaries of Old London!

Such are the leading Archæological features which, interwoven with the Modern History and Present Condition of the Metropolis, form the staple of the present volume. In the intermediate changes have disappeared many old London landmarks, which it has been my special object to describe:

"Praising what is lost,  
Makes the remembrance dear."

JOHN TIMBS.

---

LITTLE need be said to bespeak the interest of readers in the *staple* of the present work—the Notable Things in the History of London through its Nineteen Centuries of accredited antiquity. Still, I am anxious to offer a few words upon the origin and growth of this volume; and the means by which I have striven to render it as complete as the extent and ever-varying nature of the subject will allow.

Twenty-seven years since (in 1828), I wrote in the parlour of the house No. 3 Charing Cross (then a publisher's), the title and plan of a volume to be called "CURIOSITIES OF LONDON;" and the work here submitted to the public is the realization of that design. I then proposed to note the most memorable points in the annals of the Metropolis, and to describe its most remarkable objects of interest, from the earliest period to my own time,—for the Present has its Curiosities as well as the Past. Since the commencement of this design in 1828,—precisely midway in my lifetime,—I have scarcely for a day or hour lost sight of the subject; but, through a long course of literary activity, have endeavoured to profit by every fair opportunity to increase my stock of materials; and by constant comparison, "not to take for granted, but to weigh and consider," in turning such materials to account. In this labour I have been greatly aided by the communications of obliging friends, as well as by my own recollection of nearly Fifty Years' Changes in the aspects of "enlarged and still increasing London."

"Thinking how different a place London is to different people," I have, in this volume, studied many tastes; but its leading characteristics will

be found to consist in what Addison's *Freeholder* calls "the Curiosities of this great Town." Their bibliographical illustration, by quotations from Old Poets and Dramatists, Travellers and Diarists, presents a sort of literary chequer-work of an entertaining and anecdotic character; and these historic glimpses are brought into vivid contrast with the Social Statistics and other Great Facts of the London of to-day.

The plan of the book is in the main alphabetical. Districts and localities are, however, topographically described; the arrangement of streets being generally in a *sub-alphabet*. The Birthplaces, Abodes, and Burial-places of Eminent Persons—so many sites of charmed ground—are specially noted, as are existing Antiquities, Collections of Rare Art and Virtu, Public Buildings, Royal and Noble Residences, Great Institutions, Public Amusements and Exhibitions, and Industrial Establishments; so to chronicle the renown of Modern as well as Ancient London. The articles describing the Churches, Exchanges, Halls, Libraries and Museums, Palaces and Parks, Parliament-Houses, Roman Remains, and the Tower of London, are, from their importance, most copious in their details.

The utmost pains has been taken to verify dates, names, and circumstances; and it is trusted that no errors may be found in addition to those noted at the close of the volume, with the changes in the Metropolis during the progress of the printing of the work. The reader, it is hoped, will regard these inaccuracies with indulgence, when the immense number of facts sought to be recorded in this volume is considered. Lastly, it has been my aim to render the *Curiosities* useful as well as entertaining; and with that view are introduced several matters of practical information for Londoners as well as visitors.

JOHN TIMBS.

88, SLOANE-STREET, CHELSEA,

Jan. 16, 1855.

ADDITIONS, CHANGES, CORRECTIONS, &c.

---

During the printing of the present Work (nearly 900 pages), several changes have been made in the Metropolis—its material aspect, as well as in circumstances affecting its government, &c.; among which are the following, entitled to special note:—

Page 36.—BUNHILL-FIELDS BURIAL-GROUND. By Act of Parliament, the management of this property has been transferred by the Ecclesiastical Commissioners to the Corporation of London, who are to convert the ground into a public garden; the Commissioners reserving the right to resume possession of the estate should their conditions be ineffectually performed.

Page 37.—*Bartholomew's (S.) Hospital*. The question as to the election of the Presidents of the four great City Hospitals, stated at p. 37 to be then *sub judice*, was, in November, 1866, decided by the Court of Queen's Bench in favour of the Hospitals, the Governors of which have free choice in the election of their Presidents (see p. 436). His Royal Highness the Prince of Wales has since been elected President of S. Bartholomew's.

Page 41.—*Pantheon Bazaar* was closed in 1867, and the building converted into a wine depôt. (See p. 640.)

Page 49.—*Bermondsey Priory*. See *Annales Monastici*, vol. iii., edited by H. R. Luard, 1866.

Page 74.—Top line, for Jolliffe Banks, read Jolliffe *and* Banks.

Page 80.—The Speaker's State Coach is now kept at the Speaker's stables, Millbank.

Page 85.—*Charterhouse* site and buildings are to be transferred to Merchant Taylors; and Charterhouse to be removed into the country.

Page 92.—The old print of the "Bunn House at Chelsea," measures 52 by 21 inches.

Page 144.—*Church of S. Alban the Martyr*: the choir entirely for the parishioners.

Page 153.—*S. Benet's Church*, Gracechurch-street, has been taken down.

Page 238.—For Peckburn read *Pickburn*.

Page 284.—NELSON COLUMN. The bronze lions, by Landseer, on the pedestal, are described at p. 759.

Page 287.—COMMON COUNCIL. For "the Court held," read the Court *hold*.

Page 302.—For "Britton and Bailey," read Britton and *Brayley*.

Page 312.—DOCTORS' COMMONS. The buildings were taken down in 1867.

Page 350.—FLEET-STREET. No. 50, (not 13,) formerly the *Amicable Life Assurance Office*, is now the Office of the *Norwich Union Society*.

Page 430.—*Middle Row* has been taken down.

Page 469.—GRAY'S INN. For "Corner-court," read *Coney-court*.

Page 541.—MANSION HOUSE. At the close of the International Exhibition of 1851, the Corporation of London, with a view of encouraging the growth of Art in this country, voted the sum of 10,000*l.* to be expended in Statuary for the Egyptian Hall; and the Statues now in the Hall were ordered.

Page 608.—STRAND MUSIC HALL. For "Old," read *New Exeter 'Change*.

Page 716.—*Spitalfields*. For "Lottesworth," read *Lolesworth*.

# CURIOSITIES OF LONDON.

## ADELPHI, THE.

A SERIES of streets in the rear of the houses on the south side of the Strand, reaching east and west from Adam-street to Buckingham-street, and facing the Thames on the south—a grand commencement of the architectural embankment of the river, in 1768. It is named Adelphi (ἀδελφός, *brother*) from its architects, the four brothers Adam, who built vast arches over the court-yard of old Durlam House, and upon these erected, level with the Strand, *Adam-street*, leading to *John, Robert, James*, and *William-streets*; the noble line of houses fronting the Thames being the Adelphi-terrace. The view from this spot is almost unrivalled in the metropolis for variety and architectural beauty: from Waterloo Bridge on the east, with the majestic dome and picturesque *campanili* of St. Paul's, to Westminster Bridge on the west, above which rise the towers of Lambeth Palace and Westminster Abbey; the massive entrance and lofty clock-tower, and pinnaced and bristling roofs of the Houses of Parliament: beneath lies the river, spanned with manifold bridges. The prospect is, however, partially disfigured with huge and shapeless railway buildings.

In passing through Parliament the Bill for the Embankment of part of the Thames adjoining Durlam-yard, a violent contest arose between the City and the Court. The Lord Mayor, as Conservator of the river, considering the rights of the citizens exposed to encroachment, they were heard by counsel in Parliament. They produced a grant of Henry VII. of all the soil and bed of the river, from Staines Bridge to a place in Kent, near the Medway; and showed a lease granted by them, sixty-six years before this period, of a nook of the river at Vauxhall, under which they still continued to receive rent. On the other side a charter of Charles II. to the City was produced, in which he reserved the bed of the river; and it was contended that the City, by receiving the latter grant, abandoned the former; that the charter of Henry VII. extended only to the soil of the river within the City and suburbs. The lease of Vauxhall was said to be a mere encroachment, and the right of the City was utterly denied. These arguments prevailed: the Bill passed both Houses: and the magnificent pile of buildings called the Adelphi was erected on the site. The brothers Adam were chosen the Court architects, through the influence of the Earl of Bute, and did not escape the satire of the day:—

“Four Scotchmen, by the name of Adam,  
Who keep their coaches and their madam,”  
Quoth John, in silky mood, to Thomas,  
“Have stole the very river from us.”

*Foundling Hospital for Wit*, vol. iv.

In the centre house of the Terrace, No. 4, David Garrick lived from 1772 till his death, Jan. 20, 1779: the ceiling of the front drawing-room was painted by Antonio Zucchi, A.R.A.; the white marble chimney-piece cost 300*l.* Garrick died in the back drawing-room; and here his remains lay in state, previous to their interment in Westminster Abbey, Feb. 1. Johnson says: “His death eclipsed the gaiety of nations;” but Walpole, “Garrick is dead; not a public loss; for he had quitted the stage.” There were not at Lord Chatham's funeral half the noble coaches that attended Garrick's; Burke was one of the mourners, and came expressly from Portsmouth to follow the great actor's remains; and Lord Ossory was one of the pall-bearers. Walpole writes to the Countess of Ossory:—

“Yes, madam, I do think the pomp of Garrick's funeral perfectly ridiculous. It is confounding the immense space between pleasing talents and national services. What distinctions remain for a patriot hero, when the most solemn have been showered on a player? . . . Shakspeare, who *wrote* when Burleigh counselled and Nottingham fought, was not rewarded and honoured like Garrick, who only *acted*.”—*Letter*, Feb. 1, 1779.

Garrick's widow also died in the front drawing-room of the same house, in 1822, at the Adelphi-terrace. The floor is now the chambers of the Royal Literary Fund Society. In another of the Terrace houses lived Sir Edward Banks, one of the builders of Waterloo, Southwark, London, and Staines bridges, over the Thames. He was one of the earliest railway "navvies," and worked on the Merstham Railway, in Surrey, about the year 1801: by natural abilities and the strictest integrity, he raised himself to wealth and station: he died July 5, 1835.

At the north-east corner of Adam-street, No. 73, Strand, Becket, the bookseller, kept shop,—the rendezvous of Garrick, who never went to taverns, seldom to coffee-houses. At No. 1, Adam-street, lived Dr. Vicesimus Knox, one of "the British Essayists." In the first floor of the same house resided, for twenty years, in almost total seclusion, George Blamire, barrister-at-law, of very eccentric habits, but sound mind. No person was allowed to enter his chamber, his meals and all communications being left by his housekeeper at the door of his ante-room. He was found dead in an arm-chair, in which he had been accustomed to sleep for twenty years. He died of exhaustion, from low fever and neglect; at which time his rooms were filled with furniture, books, plate, paintings, and other valuable property.

At Osborne's Hotel, John-street, in 1824, sojourned Kamehameha II., King of the Sandwich Islands, and his sister the Queen, with their suites: at this time was written the song of "The King of the Cannibal Islands." The Queen died here of measles, July 8; and the King died of the same disease at the Caledonian Hotel on the 14th. Their remains lay in native pomp at Osborne's, and were then deposited in the vaults of St. Martin's Church, prior to their being conveyed in the *Blonde* frigate to the Sandwich Islands for interment. The poor King and Queen were wantonly charged with gluttony and drunkenness while here; but they lived chiefly on fish, poultry, and fruit, and their favourite drink was some cider presented to them by Mr. Canning.

In John-street also, on the north side, is the house built for the Society of Arts by the Adams, and extending over part of the site of the New Exchange, Strand. In the second-floor chambers at No. 2, James-street, lived, for nearly thirty years, Mr. Thomas Hill, the "Hull" of Theodore Hook's novel of *Gilbert Gurney*. Hill died here December 20, 1841, in his eighty-first year, and left a large collection of curiosities, including a cup and a small vase formed from the mulberry-tree planted by Shakspeare at Stratford-upon-Avon. Neither of these, however, is the Shakspeare Cup presented to Garrick by the Mayor and Corporation of Stratford at the time of the Jubilee. This celebrated relic was bought on May 5, 1825, for 121 guineas, by Mr. J. Johnson; and by him sold, July 4, 1846, for 40*l.* 8*s.* 6*d.*, to Mr. Isaacs, of Upper Gower-street.

The Adelphi vaults, in part occupied as wine-cellars and coal-wharfs, in their grim vastness, remind one of the Etruscan Cloaca of old Rome. Beneath the "dry arches," the most abandoned characters have often passed the night, nestling upon foul straw; and many a street-thief escaped from his pursuers in these dismal haunts, before the introduction of gas-light and a vigilant police.

#### ADMIRALTY OFFICE, THE,

**F**ORMS the left flank of the detachment of Government Offices on the north side of Whitehall. It occupies the site of Wallingford House, from the roof of which Archbishop Usher saw King Charles I. led out to execution in the front of Whitehall Palace, and swooned at the sad scene.

Wallingford House was sold to the Crown in 1680, and thither the business of the Admiralty was removed from Crutched Friars, and Duke-street, Westminster. The street front was rebuilt by Thomas Ripley, about 1726.

"See under Ripley rise a new Whitehall."

*The Dunciad*, B. iii.

The Admiralty is a most ugly edifice. To conceal its ugliness, the court-yard was fronted with a stone screen, by Adam, in the reign of George III. This screen is a very characteristic composition; its sculptured hippocampi, and prows of ancient vessels, combining with an anchor in the pediment of the portico of the main building,

to denote the purposes of the office—the administration of the affairs of the Royal Navy. In one of the large rooms the body of Lord Nelson lay in state, January 8, 1806; and next day took place the solemn funeral procession, with a military force of nearly 8000 men, from this spot to St. Paul's Cathedral.

The office of Lord High Admiral was, in 1827, revived, after the sleep of a century, and was conferred by patent (similar to that of Prince George of Denmark), upon the Duke of Clarence, who resided at the Admiralty. His Royal Highness was thought by the Duke of Wellington, then Premier, to have mixed up with the business of the office too much jaunting and cruising about, presenting of colours, and shows, on sea and land, "more expensive and foolish than in any way serviceable." On a long account for travelling expenses being sent in to the Treasury by the Duke of Clarence, the Premier endorsed the paper, "No travelling expenses allowed to the Lord High Admiral," and dismissed it; when His Royal Highness retired; the salary was 5000*l.* a year.

On the roof of the Admiralty Office, many years since, was placed a Semaphore (the invention of Sir Home Popham); the arms of which, extending laterally at right angles, communicated orders and intelligence to and from the sea-ports; previous to which was used the shuttle telegraph, invented by R. L. Edgeworth. The Semaphore has, however, been superseded by the Electric Telegraph, of which wires are laid from the office in Whitehall to the Dockyard at Portsmouth, &c.

## ALCHEMISTS.

SOME sixty years since, there died in his chamber, in Barnard's Inn, Holborn, Peter Woulfe, the eminent chemist, a Fellow of the Royal Society. According to Mr. Brande, Woulfe was "the last true believer in alchemy." He was a tall, thin man; and his last moments were remarkable. In a long journey by coach, he took cold; inflammation of the lungs followed, but he strenuously resisted all medical advice. By his desire, his laundress shut up his chamber, and left him. She returned at midnight when Woulfe was still alive; next morning, however, she found him dead; his countenance was calm and serene, and apparently he had not moved from the position in which she had last seen him. These particulars of Woulfe's end were received by the writer from the Treasurer of Barnard's Inn, who was one of the executors of Woulfe's last will and testament. Little is known of Woulfe's life. Sir Humphry Davy tells us that he used to affix written prayers, and inscriptions of recommendations of his processes to Providence. His chambers were so filled with furnaces and apparatus, that it was difficult to reach the fireside. Dr. Babington told Mr. Brande that he once put down his hat, and could never find it again, such was the confusion of boxes, packages, and parcels, that lay about the room. His breakfast-hour was four in the morning; a few of his friends were occasionally invited, and gained entrance by a secret signal, knocking a certain number of times at the inner-door of the chamber. He had long vainly searched for the Elixir, and attributed his repeated failure to the want of due preparation by pious and charitable acts. Whenever he wished to break an acquaintance, or felt himself offended, he resented the supposed injuries by sending a present to the offender, and never seeing him afterwards. These presents sometimes consisted of an expensive chemical product, or preparation. He had an heroic remedy for illness, which was a journey to Edinburgh and back by the mail-coach; and a cold taken on one of these expeditions terminated in inflammation of the lungs, of which he died.—*A Century of Anecdote*, vol. ii., pp. 315, 316.

"About 1801, an adept lived, or rather starved, in the metropolis, in the person of an Editor of an evening journal, who expected to compound the alkahest if he could only keep his materials digested in a lamp-furnace for the space of seven years. The lamp burnt brightly during six years, eleven months, and some odd days besides, and then, unlooked for, it went out. Why it went out the adept never could guess; but he was certain that if the flame could only have burnt to the end of the septenary cycle his experiment must have succeeded."—*Paper on Astrology and Alchemy*, by Sir Walter Scott; *Quarterly Review*, 1821.

In Catherine-street, Strand, lived for many years, one John Denley, a bookseller, who amassed here a notable collection of the works of alchemist, cabalist, and astrologer. He is the individual so characteristically portrayed by Sir Edward Lytton Bulwer, in the introduction to his *Zanoni*.

Within the last fifteen years, there has been printed in England, a volume of considerable extent, entitled, *A Suggestive Inquiry into the Hermetic Mystery*: London, T. Saunders, 1850. This work, which a Correspondent of *Notes and Queries* describes as "a learned and valuable book," is by a lady (anonymous), and has been suppressed by the author. By this circumstance we are reminded of a concealment of alchemical practices and opinions, some thirty years since, when it came to our knowledge that a man of wealth and position in the metropolis, an *adept* of Alchemy, was held *in terrorem* by an unprincipled person, who extorted from him considerable sums of money under a threat of exposure, which would have affected his mercantile credit.

#### ALMACK'S

ASSEMBLY-ROOMS, on the south side of King-street, St. James's, were built by Robert Mylne, architect, for Almack, a Scotchman, and were opened Feb. 12, 1765, with an Assembly, at which the Duke of Cumberland, the hero of Culloden, was present. Gilly Williams writes to George Selwyn:—

"There is now opened at Almack's, in three very elegant new-built rooms, a ten-guinea subscription, for which you have a ball and supper once a week, for twelve weeks. You may imagine by the sum the company is chosen; though, refined as it is, it will be scarce able to put old Soho (Mrs. Cornelys') out of countenance. The men's tickets are not transferable, so, if the ladies do not like us, they have no opportunity of changing us, but must see the same persons for ever." . . . "Our female Almack's flourishes beyond description. Almack's Scotch face, in a bag-wig, waiting at supper, would divert you, as would his lady, in a sack, making tea and curtsying to the duchesses."

The large ball-room is about one hundred feet in length, by forty feet in width; it is chastely decorated with gilt columns and pilasters, classic medallions, mirrors, &c., and is lit with gas, in cut-glass lustres. The largest number of persons ever present in this room at one ball was 1700.

The rooms are let for public meetings, dramatic readings, lectures, concerts, balls, and dinners. Here Mrs. Billington, Mr. Braham, and Signor Naldi, gave concerts, from 1808 to 1810, in rivalry with Madame Catalani, at Hanover-square Rooms; and here Mr. Charles Kemble gave, in 1814, his Readings from Shakespeare. Almack's Rooms are often called "Willis's," from the name of their present proprietor. Many public dinners now take place here.

Almack's has declined of late years; "a clear proof that the palmy days of exclusiveness are gone by in England; and though it is obviously impossible to prevent any given number of persons from congregating and re-establishing an oligarchy, we are quite sure that the attempt would be ineffectual, and that the sense of their importance would extend little beyond the set."—*Quarterly Review*, 1840.

Many years ago was published *Almack's*, a novel, in which the leaders of fashion were sketched with much freedom: they were identified in *A Key to Almack's*, by Benjamin Disraeli.

#### ALDERMAN.

THE oldest office in the Corporation of London, and derived from the title of the superior Saxon noble. The more aged were so called; for *alde* in Saxon means "old," and *alder* is our word "older:" hence, as the judgment is most vigorous in persons of more mature years, the dignitary who, among the Romans, was known as "Consul" or "Senator," among us is called "Alderman." And yet, in the case of aldermen, maturity of mind is to be considered rather than of body, and gravity of manners in preference to length of years: hence it is that in the ancient laws of King Cnut, and other kings in Saxon times, the person was styled "Alderman" who is now called "Judge" and "Justiciar," as set forth in the *Liber Custumarum*. These aldermen, too, in respect of name as well as dignity, were anciently called "Barones," and were buried with baronial honours; a person appearing in the church upon a caparisoned horse in the armour of the deceased, with his banner in his hand, and carrying upon him his shield, helmet, and the rest of his arms.\* This gorgeous ceremonial was gradually discontinued; but the alderman still retained great state, and enjoyed special immunities. He could not be placed on inquests; he was exempt from fees on the enrolment of deeds or charters relating to himself; and any person who assaulted

\* See *Liber Albus; the White Book*, B. 1, Pt. 1, translated by Riley, 1861.

or slandered him was liable to be imprisoned, to be put in the pillory, or to have his hand struck off. The aldermen were privileged to be arrayed, on particular occasions, in certain grand suits, lined with silk. But if a mayor or alderman gave away, or in any manner parted with, his robe within his year of office, he was mulcted in a forfeiture of one hundred shillings for the benefit of the community, without remission; or if he wore his cloak single, or not trimmed with fur, he was subjected to a penalty. Madox says: "Alderman was a name for a chief governor of a secular guild, and in time it became also a name for a chief officer in a guildated city or town;" and he quotes, in illustration, the circumstance of the Prior of Holy Trinity, Aldgate, becoming an Alderman of London, in consequence of the grant to that priory of the "English Knightengild." According to Norton's *Commentaries on London*, "there is no trace when the name of Alderman was first applied to the presidents of the London wards or guilds: the probability is it was introduced after the Conquest; and there is reason to believe that the appellation was not used in that sense until the time of Henry II.," when Aldermen are first mentioned as presiding over guilds, some of which were territorial and others mercantile. Each has his title from his ward, as "Alderman of Cheap," "Alderman of Queenhithe," &c.; but, anciently, the Ward was styled after the name of its alderman; as Tower Ward was called "the Ward of William de Hadestok." The present ward of Farringdon was bought by William Faryngdon in 1279, and remained in his family upwards of eighty years; it was held by the tenure of presenting at Easter a gillyflower, then of great rarity.

Among the early Aldermen we find, in the reign of Henry III., Arnald Fitz-Thedmar, who compiled a Chronicle of the Mayors and Sheriffs of London, from 1188 to 1274, in the *Liber de Antiquis Legibus*, translated in 1846 and 1863. Somewhat later, we find William de Leyre, Alderman of the Ward of Castle Baynard: he had once acted as gaoler to the heroic William Wallace; for it was in his house, situate in the parish of All Saints, Fenchurch-street, that the patriot was confined (22nd August, 1305), the day and night before his barbarous execution at the Elms in Smithfield.

Aldermen have, at various times, suffered by the caprice of sovereigns. In 1545, when Henry VIII. demanded a "benevolence" from his subjects, to defray the charges of his war with France and Scotland, Richard Read, an Alderman of London, refused to pay the sum required from him. For this offence, Henry compelled the recusant Alderman to serve as a foot-soldier with the army in Scotland, where he was made prisoner; and after enduring great hardships, he purchased his discharge by a considerable ransom. (See *Lord Herbert's Life of Henry VIII.*)

Alderman Barber, the first printer Lord Mayor (1733), was the friend of Bolingbroke, Swift, and Pope; and in 1721 erected a tablet to Samuel Butler, in Westminster Abbey, with an eulogistic Latin inscription, notwithstanding Butler's satiric "Character of an Alderman:"—

"He does no public business without eating and drinking; and when he comes to be a lord-mayor, he does not keep a great house, but a very great house-warming for a whole year; for though he invites all the Companies in the City, he does not treat them, but they club to entertain him and pay the reckoning before the meal. His fur gown makes him look a great deal bigger than he is, like the feathers of an owl; and when he pulls it off, he looks as if he were fallen away, or like a rabbit, had his skin pulled off."

The notorious Alderman Wilkes was a man of talent, though profligate and unprincipled. Alderman Boydell was a generous and discriminating promoter of the fine arts, and was honoured with a public funeral. Alderman Birch was an accomplished scholar, and wrote dramatic pieces. Alderman Salomons, who joined the Court in 1847, was the first Jew admitted to that privilege. The Aldermen form the bench of magistrates for the City: each, on his election by Wardmote, receives a present of law-books; and in the absence of any prisoners for examination at the Police Court in which the Alderman sits, he receives a pair of white kid gloves. The Aldermen receive no salary, but exercise many influential privileges; their duties are onerous. Probably the history of the Court presents a greater number of instances of self-advancement than any other records of personal history. Pensions or allowances are paid annually by the Court to the widows or descendants of their less fortunate brethren.

Each of the twenty-six City Wards elects one Alderman for life, or "during good behaviour." The fine for the rejection of the office is 500*l.*; but it is generally sought

as a stepping-stone to the Mayoralty, each Alderman being *in rotâ* Lord Mayor, he having previously served as Sheriff of London and Middlesex. The Aldermen form a court, the Lord Mayor presiding; and sit in a superb apartment of the Guildhall, which has a rich stucco ceiling, painted mostly by Sir James Thornhill; in the cornice are carved and emblazoned the arms of all the Mayors since 1780; each Alderman's chair bears his name and arms: he wears a scarlet cloth gown, hooded and furred; and a gold chain, *if he hath served as Mayor*. Upon state visits of sovereigns to the City, the several Aldermen ride in procession on horseback. At the opening of the New Royal Exchange, October 28, 1844, the Aldermen rode thus, wearing their scarlet gowns and chains, and cocked hats, carrying wands, and preceding the Queen's procession from Temple Bar to the Exchange.

### ALMONRY, THE,

OR Eleemosynary, corruptly, in Stow's time, and later, the Ambry, was named from its being the place where the alms collected in the Abbey Church at Westminster were distributed to poor persons. It was situated at the east end of the Sanctuary, and was divided into two parts: the Great Almonry, consisting of two oblong portions, parallel to the two Tothill streets, and connected by a narrow lane (the entrance being from Dean's-yard); and the Little Almonry, running southward, at the eastern end of the other Almonry.

In the Almonry the first printing-press ever known in England was set up by William Caxton: according to Stow, in an old chapel near the entrance of the Abbey; but a very curious placard, in Caxton's largest type, and now preserved in the library of Brasenose College, Oxford, shows that he printed in the Almonry; for in this placard he invites customers to "come to Westmonester in to the Almonestrye at the Reed Pale," the name by which was known a house wherein Caxton is said to have lived. It stood on the north side of the Almonry, with its back against that of a house on the south side of Tothill-street. Bagford describes this house as of brick, with the sign of the King's Head: it is said to have partly fallen down in November, 1845, before the removal of the remainder of the other dwellings in the Almonry, to form a new line (Victoria-street) from Broad Sanctuary to Pimlico, when wooden types were said to have been found here. A beam of wood was saved from the materials of the house, and from it have been made a chess-board and two sets of chessmen, as appropriate memorials of Caxton's first labour in England, namely, *The Game and Playe of the Chesse*, 1474, folio, the first book printed in England.

According to a view of Caxton's house, nicely engraved by G. Cooke, in 1827, it was three-storied, and had an outer gallery, or balcony, to the upper floor, with a window in its bold gable: its precise site was immediately adjoining the spot now occupied by the principal entrance to the Westminster Palace Hotel, in digging for the foundation of which was found, at twelve feet from the surface, a statuette of the Virgin and Child, eleven inches high, carved in sandstone, and bearing traces of rich gilding.

In the Little Almonry lived James Harrington, author of *Oceana*, in a "faire house," which, according to Aubrey, "in the upper story, had a pretty gallery, which looked into the yard (cover . . . court), where he commonly dined and meditated, and took his tobacco." This "gallery" corresponds with that in Caxton's house, which we well remember: its identity has been questioned; and in one of the appendices to Mr. Gilbert Scott's *Gleanings from Westminster Abbey*, Mr. Burges suggests, not altogether without probability, that it was in the spacious triforium of Westminster Abbey that Caxton first set up his printing-press. Walcott states his "place of trade near a little chapel of St. Catherine. It is not, however, wholly improbable that at first he erected his press near one of the little chapels attached to the aisles of the Abbey, or in the ancient Scriptorium."

"There is an old brick house in Tothill-street, opposite Dartmouth-street, which was probably at one time connected with the Almonry. It has upon its front, sunken in the brickwork, the letters E. (Eleemosynaria?) T. A. (perhaps the initials of the almoner's name), with, however, a late date, 1571. A heart, which is above the inscription, was the symbol used in the old Clog Almanacks for the Annunciation, the Purification, and all other Feast-days of Our Lady."—*Walcott's Westminster*, 1949.

## ALMONRY, ROYAL.

THIS Office, in Middle Scotland-yard, Whitehall, is maintained expressly for the distribution of the Royal Alms, or Bounty, to the poor. The duties of the Hereditary Grand Almoner, first instituted in the reign of Richard I., are confined to the distribution of alms at a Coronation. The office of the High Almoner is of a more general description. In the reign of Edward I. his office was to collect the fragments from the royal table, and distribute them daily to the poor; to visit the sick, poor widows, prisoners, and other persons in distress; to remind the King about the bestowal of his alms, especially on Saints' days; and to see that the cast-off robes were sold, to increase the King's charity.

Chamberlayne describes the Great Almoner's office, in 1755, to have included the disposal of the King's alms, for which use he received moneys, besides all deadends and *bona felonum de se*. He had the privilege to give the King's dish to whatsoever poor men he pleased; that is, the first dish at dinner, set upon the King's table, or instead, *4d. per diem*. Next, he distributed every morning, at the court-gate, money, bread, and beer, each poor recipient first repeating the Creed and the Lord's Prayer, in the presence of one of the King's chaplains, the Sub-Almoner; who had also to scatter newly-coined twopences, in the towns and places visited by the King, to a certain sum by the year. Besides these, there were many poor pensioners to the King and Queen below stairs.

For more than a century the office of Lord High Almoner was held by the Archbishops of York; but on the death of Archbishop Harcourt, in November, 1847, the office was conferred upon Dr. Samuel Wilberforce, Lord Bishop of Oxford.

The distribution of Alms on the Thursday before Easter, or *Maundy Thursday*, takes place in Whitehall Chapel; that at Easter, Whitsuntide, and Christmas, at the Office in Middle Scotland-yard.

Thus, the Royal Maundy was distributed on Maundy Thursday, 1866, in Whitehall Chapel, with the customary formalities, to 47 aged men and 47 aged women, the number of each sex corresponding with the age of her Majesty.

The procession is formed in the following order:—Boys of the Chapel Royal, Gentlemen of the Chapel Royal, Priests of the Chapel Royal, Sergeant-Major of the Yeomen of the Guard, the Sergeant of the Vestry, the Lord High Almoner, the Sub-Almoner, and the Sub-Dean, six children of the National Schools, the Yeoman of the Almonry and his assistants, the Yeomen of the Guard, one carrying the Royal Alms on a gold salver, of the reign of King William and Queen Mary.

A special service is then read, and after the first Anthem, *1l. 15s.* is distributed to each woman, and to each man shoes and stockings. After the second Anthem woollen and linen clothes are distributed. After the third Anthem, purses. And after the fourth Anthem, two prayers composed for the occasion are read, and the prayer for the Queen, when the sermon is ended.

Each red purse contained the usual gold sovereign, and a further sum of *1l. 10s.* as a commutation in lieu of provisions formerly issued from the Lord Steward's department of the Queen's Household. Each white purse contained the Maundy coin, consisting of silver fourpenny, threepenny, twopenny, and penny pieces, amounting to 47, the age of Her Majesty.

On Friday and Saturday in the previous week, and on Monday and Tuesday in the current week, Her Majesty's Royal Bounty of *5s.*, and the Royal alms, in ancient times distributed at the gate of the Royal Palace, were paid to aged and deserving poor who had been previously selected by the Lord High Almoner and the Sub-Almoner, from those who had been recommended by various clergymen and by other persons in London and its vicinity. The number relieved exceeded 1000 persons, among whom very many were blind, paralyzed, and disabled, some exceeding 90 years of age. Formerly bread, meat, and fish were distributed in large wooden bowls, and the officers carried bouquets of flowers and wore white scarves and sashes; but the earliest custom was the King washing with his own hands the feet of as many poor men as he was old, in imitation of the humility of the Saviour. The last monarch who performed this act was James II.

The pious Queen Adelaide, who died in 1849, and is known to have expended one-third of her large income in private and public charity, maintained in her household an Almoner, whose duty it was to investigate all applications for the royal benevolence.

## ALMSHOUSES,

BUILT by Public Companies, Benevolent Societies, and private individuals, for aged and infirm persons, were formerly numerous in the metropolis and its suburbs. The Companies' Almshouses were originally erected next their Halls, that the almspeople might be handy to attend pageants and processions; but these almshouses have mostly been rebuilt elsewhere, owing to decay, or the increased value of ground in the City.

Almshouses succeeded the incorporated Hospitals dissolved by King Henry VIII. Among the earliest erected were the Almshouses founded in Westminster by Lady Margaret, mother of King Henry VII., for poor women; in one of these houses lived Thomas Barker, who aided Izaak Walton in writing his *Complete Angler*. They were con-

verted into lodgings for the singing-men of the Abbey, and called Choristers' Rents : they were taken down about 1800.

Westminster contains several of these munificent foundations : as the Red Lion Almshouses, in York-street, founded in 1577, for eight poor women, by Cornelius Van Dun, of Brabant, a soldier who served under King Henry VIII., at Tournay. Next are, in the same neighbourhood, the Almshouses for twelve poor housekeepers of St. Margaret's, with a school and chapel—the boys clad in black : these were founded in 1566, by the Rev. Edward Palmer, B.D., many years preacher at St. Bride's, Fleet-street, and who used to sleep in the church-tower. Emmanuel Hospital, James-street, was founded by the will of Lady Ann Dacre, in 1601, for aged parishioners of St. Margaret's ; and in one of its almshouses, on January 22, 1772, died Mrs. Windimore, cousin of Mary (consort of William III.) and of Queen Anne.

The Drapers' Company, in 1720, maintained Almshouses at Crutched-friars, Beach-lane, Greenwich, Stratford-le-Bow, Shoreditch, St. George's-fields, St. Mary Newington, and Mile End. The Almshouses at Crutched-friars were erected and endowed by Sir John Milborn, Mayor of London, in 1521, for thirteen decayed members of the Drapers' Company (of which Sir John was several years Master), or *bedemen*, who daily prayed at the tomb of their benefactor, in the adjoining church. The stone carving of the Assumption of the Virgin, over the Tudor gateway leading towards the pleasant little garden,—the shields with heraldic devices,—the old-fashioned roof, and dark, rich, red-coloured brickwork,—formed a picture well remembered ; taken down 1862.

The Almshouses and School-house at Mile End were built in 1735, with the ill-gotten fortune bequeathed by Francis Bancroft, grandson of Archbishop Bancroft, and an officer of the Lord Mayor's Court ; and so hated for his mercenary and oppressive practices, that at his funeral, a mob, for very joy, rang the church-bells of St. Helen's, Bishopsgate, where a monument to his memory had been erected in his life-time. The almsmen are twenty-four poor old members of the Drapers' Company ; and the School boards, clothes, educates, and apprentices 100 boys.

The Trinity Almshouses, in the Mile End-road, were erected by the Corporation of the Trinity House, in 1695, for decayed masters and commanders of ships, mates, and pilots, and their wives or widows. The thirty houses have characteristic shipping on their roofs ; there is a chapel, and on the green is a statue of Captain Robert Sandes, a benefactor to the establishment ; he died 1721.

The Salters' Company had Almshouses for their decayed brethren in Monkwell-street and Bow-lane ; in 1864, they were rebuilt, at Watford, Herts, at a cost of 8000*l.*, besides that of the site and adjacent grounds.

Traditionally, we owe the foundation of Dame Owen's School and Almshouses, at Islington, to Archery. In 1610, this rich brewer's widow, in passing along St. John-street-road, then Hermitage-fields, was struck by a truant arrow, and narrowly escaped "braining ;" and the grateful lady, thinking such close shooting dangerous, in commemoration of her providential escape, built, in 1613, a Free School and ten Almshouses upon the scene of her adventure. Since 1839 they have been handsomely rebuilt by the Brewers' Company, trustees for the Charity.

Whittington's College, or Almshouses, founded in 1621, on College-hill, were rebuilt by the Mercers' Company, at the foot of Highgate-hill, about 1826 ; cost 20,000*l.* Upon the old site, College-hill, was built the Mercers' Schools.

The Fishmongers' Company's Almshouses, or St. Peter's Hospital, Newington Butts, founded 1618, consisted of three courts, dining-hall, and chapel : they were rebuilt on Wandsworth Common, in 1850 ; cost 25,000*l.*

Edward Alleyn, the distinguished actor, and friend of Ben Jonson and Shakspeare, besides founding Dulwich College, built and endowed three sets of Almshouses in the metropolis : in Lamb-alley, Bishopsgate-street ; in Bath-street, St. Luke's ; and in Soap-yard, Southwark. Of the Bath-street Almshouses, the first brick was laid by Alleyn himself, July 13, 1620 ; they were rebuilt in 1707.

Cure's College, in Deadman's-place, Southwark, was founded in 1584, by Thomas Cure, saddler to King Edward VI. and the Queens Mary and Elizabeth, for 16 poor pensioners, with 20*d.* a week ; president, the Chief Justice of the Common Pleas for the time being. The College has been rebuilt.

The East India Almshouses, Poplar, were established at the granting of the first charter, in the 17th century, for widows of mates and seamen dying in the Company's service. There are also houses, with gardens, for the widows of captains, receiving pensions of from 30*l.* to 80*l.* yearly.

In Bath-street, City-road, are Almshouses for poor descendants of French Protestant Refugees, founded in 1708, after the revocation of the edict of Nantes.

The Goldsmiths' Company have Almshouses at Woolwich, Acton, and Hackney; each house has its little garden.

The Clock and Watchmakers' Asylum was founded in 1857 at Colney Hatch.

At Hoxton, are the Haberdashers' Company's Almshouses, founded by Robert Aske, in 1692, for poor men of the Company, and boys; here is a statue of the founder.

Morden College, Blackheath, was founded by Sir John Morden, in 1695, for decayed merchants, each 7*l.* a year, with coals, candles, washing-bath, medical and clerical attendance. The chapel has some fine carvings, reputed to be by Gibbons.

Norfolk Almshouses, or Trinity Hospital, Greenwich, is an Elizabethan building, founded by Henry, Earl of Northampton, 1613. The Trustees were the Mercers' Company; revenue, 12,000*l.* a year.

Surrey Chapel Almshouses, erected 1811, were founded and principally endowed by the Rev. Rowland Hill, for twenty-three destitute females.

The Marylebone Almshouses, built in St. John's-wood-terrace, Regent's-park, in 1836, originated in a legacy of 500*l.* from Count Woronzow; the site being leased for ninety-nine years, at a pepper-corn rent, by Colonel Eyre, who is also entitled to two presentations to the Charity.

The London Almshouses were erected by subscription, at Brixton, in 1833, to commemorate the passing of the Reform Bill, instead of by illumination.

The King William Naval Asylum, at Penge, opened 1849, for the widows of Commanders, Lieutenants, Masters and Purser in the Royal Navy, was founded by Queen Adelaide, to the memory of King William IV.

The Dramatic College has its retreat "for poor players," a central hall, residences, and external cloisters, in the Tudor style, at Maybury, in Surrey.

Recently also have been erected Almshouses for the parishes of St. Pancras, St. Martin, and Shoreditch. For Bootmakers, Mortlake; Pawnbrokers, Forest-gate; Booksellers, King's Langley; Aged Pilgrims, Edgware-road; Butchers, Walham-green; Bookbinders, Ball's-pond; Printers, Wood-green; Tailors (journeymen), Haverstock-hill; and Poulterers and Fishmongers, Southgate; besides many others provided by Companies; and Provident, Trades, and other societies, for decayed members.

The Almshouses erected of late years are mostly picturesque buildings, in the old English style, with gables, turrets, and twisted chimney-shafts, of red brick, with handsome stone dressings. In Weale's *London Exhibited* in 1851 will be found a more copious List of Almshouses (pp. 214—219) than the above.

## AMUSEMENTS.

ARCHERY is mentioned among the summer pastimes of the London youth by Fitzstephen, who wrote in the reign of Henry II.; and the repeated statutes from the 13th to the 16th centuries, enforcing the use of the Bow, invariably ordered the holidays to be passed in its exercise. Finsbury appears to have been a very early locality for Archery; for in the reign of Edward I. there was formed a society entitled the Archers of Finsbury. Here, in the reign of Henry VII., all the gardens were destroyed by law, "and of them was made a plain field for archers to shoot in;" this being the early appropriation of what is now called "the Artillery Ground." There is also preserved a MS. enumeration of the Archers' Marks in Finsbury Fields, compiled in 1601: it gives, in flight shooting, nineteen score as the distance between Allhollows and Daie's Deed marks. Indeed, Miss Banks, Sir Joseph's daughter, an enthusiastic lover of the bow, has left a MS. note that a friend, Mr. Bates, often shot eighteen score in Finsbury Fields; the length of the plain being about one mile, and the breadth three-quarters. Among the curious books on Archery are the *Ayme for Finsburie Archers*, 1628; and the *Ayme for the Archers of St. George's Fields*, 1664.

Henry VIII. shot with the longbow as well as any of his guards: he chartered a society for shooting; and jocosely dignified a successful archer as Duke of Shoreditch, at which place his Grace resided. This title was long preserved by the Captain of the London Archers, who used to summon the officers of his several divisions under the titles of Marquis of Barlo, of Clerkenwell, of Islington, of Hoxton, of Shacklewell, &c., Earl of Paneras, &c. We read of a grand pageant in this reign, of three thousand archers, guarded by whiffers and billmen, pages and footmen, proceeding from Merchant Taylors' Hall, through Broad-street, the residence of their captain; thence into Moorfields by Finsbury, and so on to Smithfield, where they performed evolutions, and shot at a target for honour.

Edward VI. was fond of Archery; in his reign the scholars of St. Bartholomew, who held their disputations in cloisters, were rewarded with a bow and silver arrows.

Stow (who died in 1605) informs us, that before his time it had been customary at Bartholomew-tide for the Lord Mayor, with the sheriffs and aldermen, to go into the fields at Finsbury, where the citizens were assembled, and shoot at the standard with broad and flight arrows for games, which were continued for several days.

Charles I. was an excellent archer, and forbade by proclamation the inclosure of shooting-grounds near London. Archery, however, seems then to have soon fallen into disrepute. Sir William Davenant, in a mock poem, entitled *The Long Vacation in London*, describes idle attorneys and proctors making matches in Finsbury Fields:—

“With loynes in canvas bow-case tied,  
Where arrows stick with mickle pride;  
Like ghosts of Adam Bell and Clymme,  
Sol sets—for fear they'll shoot at him?”

Pepys records, in his *Diary*, that, when a boy, he used to shoot with his bow and arrows in the fields of Kingsland.

In the reign of Henry VIII., a shout through the City of “Shovels and spades! Shovels and spades!” assembled a band of 'prentice lads, who speedily levelled the hedges, dykes, and garden-houses, by which trespassers had encroached on the shooting-fields. Even as late as 1786, the Artillery Company, preceded by a detachment of their pioneers, marched over Finsbury, pulling down the fences again illegally erected. The brick wall enclosing a lead-mill was also attacked; but, on the entreaty of the proprietor, the Hon. Company ordered it to be spared, contenting themselves with directing one of their archers to shoot an arrow over it, in token of their prescriptive right.—*Proc. Soc. Antiquaries, London*, vol. iv. No. 47.

In 1781, the remains of the “Old Finsbury Archers” established the Toxophilite Society, at Leicester House, then in Leicester Fields. They held their meetings in Bloomsbury Fields, behind the present site of Gower-street; here, in 1794, the Turkish Ambassador's secretary shot, with a bow and arrow, 482 yards. In about twenty-five years they removed on “target days” to Highbury Barn; from thence to Bayswater; and in 1834, to the Inner Circle, Regent's Park, where they have a rustic lodge, and between five and six acres of ground. The Society consisted in 1850 of 100 members; terms, 5*l.* annually, entrance-fee 5*l.*, and other expenses: they possess the original silver badge of the old Finsbury Archers. They meet every Friday during the Spring and Summer; the shooting is at 60, 80, and 100 yards; and many prizes are shot for during the season; Prince Albert was patron.

The most numerous Society of the kind now existing is, however, “The Royal Company of Archers, the Queen's body-guard of Scotland,” whose captain-general, the Duke of Buccleuch, rode in the coronation procession of Queen Victoria.

In 1849, the Society of Cantelows Archers was established; their shooting-ground is at Camden-square, Camden New Town; the prize, a large silver medal. There was a fine display of Archery at the Fête of the Scottish Society of London, in Holland Park, Kensington, June 20, 21, 1849, when 300*l.*-worth of prize plate was shot for.

BALLAD-SINGING, the vestige of the minstrelsy which Cromwell, in 1656, silenced for a time, was common in the last century. “The Blind Beggar” had conferred poetic celebrity upon Bethnal Green; “Black-eyed Susan,” and “'Twas when the seas were roaring,” were the lyrics that landsmen delighted to sing of the sea; and “Jemmy Dawson” (set to music by Dr. Arne) grew into historic fame elsewhere than

on the scene of the tragedy, Kennington Common. To these succeeded the sea-songs of Charles Dibdin, which were commonly sung about the streets by the very tars who had first felt their patriotic inspiration: a sailor, who wore a model of the brig Nelson upon his hat, long maintained his vocal celebrity upon Tower-hill. Hogarth, in his "Wedding of the Industrious Apprentice," has painted the famous ballad-singer "Philip in the Tub;" and Gravelot, a portrait-painter in the Strand, had several sittings from ballad-singers. The great factory of the ballads was long Seven Dials, where Pitts employed Corcoran, and was the patron of "slender Ben" and "over-head-and-ears Nic." Among its earlier lyrists were "Tottenham Court Meg," the "Ballad-singing Cobbler," and "ould Gny, the poet." Mr. Catnach, another noted printer of ballads, lived in Seven Dials; and at his death, left a considerable fortune. He was the first ballad-printer who published *yards of songs for one penny*, in former days the price of a single ballad; and here he accumulated the largest stock on record of whole sheets, last-dying speeches, ballads, and other wares of the flying stationers. Another noted ballad-printer and ballad-monger kept shop in Long-lane, Smithfield.

**BEAR AND BULL BAITING.**—A map of London, three centuries ago, gives the "Spitel Field" for archers; "Fynsburie Fyeld," with "Dogge's House," for the citizens to hunt in; "Moore Fyeld," with marks, as if used by clothiers; "the Banck" by the side of the river; "the Bolle Bating Theatre," near the "Beare Baitynge House," nigh where London Bridge now commences. Pepys describes a visit to the "beare-garden" in 1666, where he saw "some good sport of the bull's tossing of the dogs, one into the very boxes. But it is a very rude and nasty pleasure." Hockley-in-the-hole, Clerkenwell, was styled "His Majesty's Bear-Garden" in 1700, and was the scene of bull and bear-baiting, wrestling, and boxing; but it was neglected for Figg's Amphitheatre, in Oxford-road:

"Long liv'd the great Figg, by the prize-fighting swains  
Sole monarch acknowledged of Marybone plains."

At Tothill Fields, Westminster, was in 1793, a noted bear-garden, a portion of which now forms Vincent-square; and bear-baiting and rat-hunting lingered in their Westminster haunts longer than elsewhere.

**BOWLS** was formerly a popular game in the metropolis: it succeeded archery before Stow's time, when many gardens of the City and its suburbs were converted into bowling-alleys; our author, in 1579, wrote:—"Common bowling-alleyes are privy mothes that eat up the credit of many idle citizens, whose gaynes at home are not able to weigh downe theyr losses abroad;" elsewhere he says:—"Our bowes are turned into bowls." The game of bowls, however, is as old as the 13th century, and in the country was played upon greens; but the alleys required less room, and were covered over, so that the game could be played therein all weathers, whence they became greatly multiplied in London. Bowls was played by Henry VIII., who added to Whitehall "tennise-courtes, *bowling-alleyes*, and a cock-pit."

Spring Garden, Charing-cross, had its ordinary and bowling-green kept by a servant of Charles the First's Court; and Piccadilly Hall, at the corner of Windmill-street and Coventry-street, had its upper and lower bowling-greens.

The grave John Locke, in one of his private journals (1679), records "bowling at Marebone and Putney by persons of quality; wrestling in Lincoln's Inn Fields on summer evenings; bear and bull baiting at the Bear-Garden; shooting in the long-bow and stob-ball in Tothill Fields."

In the last century, Bowls was much played in the suburbs, especially at Marybone Gardens, mentioned by Pepys in 1668 as "a pretty place." Its bowling-greens were frequented by the nobility, among whom was Sheffield, Duke of Buckingham, to whose partiality for the game Lady Mary Wortley Montague refers in the oft-quoted line—

"Some dukes at Marybone bowl time away."

The place grew into disrepute, and was closed in 1777; it is made by Gay a scene of Macheath's debauchery in the *Beggar's Opera*.

Greens remain attached to a few old taverns round London. In the town, bowling alleys were abolished in the last century, and gave rise to long-bowling, or bowling in

a narrow inclosure at nine-pins upon a square frame. They have been succeeded by the American bowling alley, sometimes in the cellar of the tavern.

Bowling-street, Westminster, commemorates the spot where the members of the Convent of St. Peter amused themselves at bowls. We have also Bowling-street in Marylebone and Turnmill-street; Bowling-green-lane in Clerkenwell and Southwark; Bowling-green-buildings, Bryanston-square; and Bowling-green-walk at Hoxton.

CARD-PLAYING would appear to have become early a favourite pastime with the Londoners; for in 1643 a law was passed on a petition of the cardmakers of the City, prohibiting the importation of playing-cards. It was a very fashionable Court amusement in the reign of Henry VII.; and so general, that it became necessary to prohibit by law apprentices from using cards, except in the Christmas holydays, and then only in their masters' houses. Agreeable to this privilege, Stow, speaking of the customs at London, says: "From Allhallow-eve to the day following Candlemas-day, there was, among other sports, playing at cards, for counters, nails, and points, in every house, more for pastime than for gayne." Basset was a fashionable card-game at the end of the 17th century; and Basset-tokens are preserved:—

"Who the bowl or rattling dice compares  
To Basset's heavenly joys and pleasing cares?"—*Pope's Eclogue—Basset-table.*

Whist, in its present state, was not played till about 1730, when it was much studied by a set of gentlemen at the Crown Coffee-house in Bedford-row. Gaming in public was formerly a royal pastime at Christmas: George I. and George II. played, on certain days, at hazard, at the Groom-porter's, in St. James's Palace; and this was continued some time in the reign of George III. The name of "hells," applied in our day to gambling-houses, originated in the room in St. James's Palace formerly appropriated to hazard being remarkably dark, and on that account called "hell." (*Theodore Hook.*) A few years ago there were more of those infamous places of resort in London than in any other city in the world. The handsome gas-lamp and the green or red baize door at the end of the passage were conspicuous in the vicinity of St. James's; and of St. George's, Hanover-square; and the moral nuisances still linger about St. James's parish and Leicester-square.

COCK-FIGHTING was a London pastime 1190, and very fashionable from the reign of Edward III. almost to our time. Henry VIII. added a cock-pit to Whitehall Palace, where James I. went to see the sport twice a week; this pit being upon the site of the present Privy Council Office: hence the Cockpit Gate, built by Holbein, across the road at Whitehall. Besides this Royal Cockpit, there was formerly a Cockpit in Drury-lane, now corrupted to Pitt-place, and there was the Cockpit or Phoenix Theatre. There were other Cockpits, in Jewin-street, Cripplegate, Tufton-street, whence the Cock-pit Yards there; another in Shoe-lane, *temp.* James I., whence Cockpit-court in that neighbourhood; and another noted Cockpit was "behind Gray's Inn." Hogarth's print best illustrates the brutal refinement of the Cock-fighting of the last century; and the barbarous sport was, we believe, last encouraged at Westminster, not far distant from the spot, where in kindred pastime, Royalty relieved the weighty cares of State. The famous Westminster cock-pit was in Park-street. Cock-fighting is now forbidden and punishable by statute.

CRICKET is stated to have been played at Finsbury, in the Royal Artillery Ground, before the year 1746. Some thirty years later, in 1774, a committee of noblemen and gentlemen was formed, under the presidency of Sir William Draper; they met at the Star and Garter in Pall Mall, and laid down the first rules of Cricket, which rules form the basis of the laws of Cricket to this day. The next great step was the establishment of the White Conduit Club, in the year 1799; and among its members, in addition to the before-named patron of the game, we find the names of Lord Winchelsea, Lord Strathaven, and Sir P. Burrell. Their place of meeting was still the Star and Garter, and their Ground was in White Conduit-fields. One of the attendants, Thomas Lord, was persuaded to take a ground; and under the patronage of the old White Conduit Club, a new club, called the Marylebone Club, was formed at "Lord's Cricket Ground," which was the site of the present Dorset-square. Lord's Ground is now in St. John's-

wood-road, and is about  $7\frac{1}{2}$  acres in extent, and devoted almost exclusively, in May, June, and July, to the matches and practice of the Marylebone Club; at the annual meeting, early in May, the Laws of Cricket are revised, and matches for the season arranged. Attached to Lord's Ground are a Tennis Court and Baths. Here is an old painting of the game, in which the bat has the *bend* of the club, which, it is thought, denotes Cricket to have been a gradual improvement of *the Club and Ball*. Amongst the other principal Cricket-grounds are the Oval (larger than Lord's) at Kennington: the Royal Artillery Ground, Finsbury, is, perhaps, the oldest ground in London; for here a match was played between Kent and All England in 1746. There was formerly a ground in Copenhagen-fields; there is one at the Brecknock Arms, Camden-town; at Brixton, near the church; the Middlesex County, Islington Cattle Market, Tufnell Park, Highbury; Victoria Park, Battersea Park; Rosemary Branch, Peckham; Crystal Palace, Sydenham; Sluice House, Hornsey; Primrose Hill; Vincent-square, Westminster; and at Bow, Millwall, and Putney. Of the younger London clubs is the Civil Service, consisting exclusively of members of the Civil Service.

DUCK-HUNTING with dogs was a barbarous pastime of the last century in the neighbourhood of London, happily put an end to by the want of ponds of water. St. George's Fields was a notorious place for this sport; hence the infamous Dog and Duck Tavern and Tea Gardens, from a noted dog which hunted ducks on a sheet of water there: Hannah More makes it a favourite resort of her Cheapside Apprentice. The premises were afterwards let to the School for the Indigent Blind, and were taken down in 1812, when Bethlem Hospital was built upon the site; in its front wall is preserved the original sign-stone of the tavern—a dog with a duck thrown across its back. Ingenious lesson this—in setting up a memorial of profligacy and cruelty upon a site devoted to the restoration of reason! Duck-hunting was also one of the low sports of the butchers of Shepherd's Market, at May Fair, where, to this day, is a spot known as the “duck-hunting pond;” and within memory, on the site of Hertford-street, was the Dog and Duck publichouse, with its ducking-pond, boarded up knee-high and shaded by willows.

EQUESTRIANISM appears to have been a favourite amusement with the Londoners for more than a century past. One of the first performers was Thomas Johnson, who exhibited in a field behind the Three Hats, at Islington, in 1758; he was succeeded by one Sampson, in 1767, whose wife was the first female equestrian performer in England. In the same year, rode one Price at D'Aubigny's, or Dobney's Gardens, nearly opposite the Belvedere Tavern, Pentonville, and where Wildman exhibited his docile bees, in 1772; the site is at this day marked by Dobney's-place.

About this time Hughes established himself in St. George's Fields, and Astley in Westminster-bridge-road; the latter was succeeded by Ducrow and Batty. Horses in England were taught dancing as early as the 13th century; but the first mention of feats on horseback occurs in the Privy Purse expenses of Henry VIII.

FAIRS.—The three great Fairs of old London belonged, in Catholic times, to the heads of religious houses: Westminster to its abbot; and St. Bartholomew and Southwark (or St. Mary Overie, as it is oftener called), to the Priors of those monasteries.

Westminster, or St. Edward's Fair (held on that Saint's Day), was commanded by proclamation of Edward III., in 1248; it was first held in St. Margaret's churchyard, and then was removed to Tothill-fields, where the Fair continued to be held, but of considerably less extent, so lately as 1823.

Two Fairs were held in Smithfield at Bartholomew-tide: that within the Priory precincts was one of the great Cloth Fairs of England: the other, Bartholomew Fair, was held in the Field, and granted to the City of London, for cattle and goods. The latter was proclaimed, for the last time, in the year 1855.

Southwark Fair was held on St. Margaret's-hill, on the day after Bartholomew Fair; and was by charter limited to three days, but usually lasted fourteen. Evelyn records among its wonders, monkeys and asses dancing on the tight rope; and the tricks of an Italian wench, whom all the Court went to see. Pepys tells of its puppet-shows, especially that of Whittington; and of Jacob Hall's dancing on the ropes. The Fair was suppressed in 1762; but it lives in one of Hogarth's prints.

St. James's Fair, held in the month of May, in Brook Field, acquired the name of "May Fair." It was abolished in 1709; but was revived, and was not finally suppressed until late in the reign of George III. It gave the fashionable quarter in which it was held the name of May Fair; and the Brook to Brook-street.

FIREWORKS, for pastime, are rarely spoken of previous to the reign of Elizabeth; when the foyste, or galley, with a great red dragon, and "wilde men casting of fire," accompanied the Lord Mayor's barge upon the Thames. A writer in the reign of James I. assures us there were then "abiding in the City of London men very skilful in the art of pyrotechnie, or of fireworks;" which were principally displayed by persons fantastically dressed, and called Green Men. In the last century, the train of Artillery displayed annually a grand firework upon Tower-hill on the evening of his Majesty's birthday. Fireworks were exhibited regularly at Marybone Gardens and at Ranelagh; not at Vauxhall until 1798, and then but occasionally. At Bermondsey Spa, and various tea-gardens, they were also displayed, but in inferior style. Fireworks were first exhibited at the Surrey Zoological Gardens, in illustration of picture-models; and similar galas at Cremorne Gardens, Chelsea, have been very successful.

There have been some grand Firework displays at the Government expense: as in the Green Park at the Peace of Aix-la-Chapelle, in 1748; and on August 1, 1814, in celebration of the general Peace, and the Centenary of the accession of the Brunswick family to the British throne, these fireworks being by Sir William Congreve, of rocket celebrity. There have been similar firework galas in Hyde Park at coronations and Peace celebrations. At the coronation of King William IV. and Queen Adelaide, Sept. 1831, the amount expended for fireworks, and for keeping open the public theatres, was 3034*l.* 18*s.* 7*d.*

FOOTBALL was played in the twelfth century by the youth of the City in the fields; and five centuries later, we find football players in Cheapside, Covent Garden, and the Strand; Moorfields and Lincoln's Inn Fields. There is an old print of football play in Fleet-street.

HUNTING.—"The Common Hunt" dates from a charter granted by Henry I. to the citizens to "have chaces, and hunts:" and Strype, so late as the reign of George I., reckons among the modern amusements of the Londoners "riding on horseback, and hunting with my Lord Mayor's hounds, when the Common Hunt goes out." The Epping Hunt was appointed from a similar charter granted to the citizens. Strype describes a visitation of the Lord Mayor Harper, and other civic authorities, to the Tyburn Conduits, in 1562, when "afore dinner they hunted the hare and killed her," at the end of St. Giles's, with great hallooing and blowing of horns. Much later, the Lord Mayor and Aldermen enjoyed this sport on Easter Monday, when a stag was turned out. The kennel for the hounds, and a house adjoining, was rebuilt about 1800. The officer of the Common Hunt has not long been abolished in the Lord Mayor's household; the "hunt" exists but in the verse of Tom D'Urfey, or Thomas Hood.

Poaching was common in the metropolis three centuries since; for, in a proclamation of Henry VIII., 1546 (preserved in the library of the Society of Antiquaries), the King is desirous to have the "Games of Hare, Partridge, Pheasant, and Heron," preserved from Westminster palace to St. Giles's-in-the-Fields, &c.

MASQUERADES were introduced into England from Italy in 1512-13, by Henry VIII. They were frequent among the citizens at the Restoration. In 1717-18, a very splendid masquerade was given at the Opera House by Heidegger, at which there was high play with heaps of guineas. Soon after the bishops preached against these amusements, which led to their suppression, 9 George I., 1723. They were, however, revived, and carried to shameful excess by connivance of the Government, and in direct violation of the laws. During the food-riots, in 1772, there was given at the Pantheon, Oxford-street, a masquerade, in which 10,000 guineas were expended by the revellers in dress and other luxuries: Oliver Goldsmith masqueraded there in "an old English dress." At the Pantheon, in 1783, a masquerade was got up by Delpini, the famous clown, in celebration of the Prince of Wales attaining his majority; tickets, three

guineas each. In the same year Garrick attended a masked fête at the Pantheon as King of the Gipsies. But the most eccentric *entrepreneur* was Madame Teresa Cornelys, "the Heidegger of the age," who, at Carlisle House, Soho-square, gave masquerades in extravagant style, and was soon ruined. These entertainments were never encouraged by George III., at whose request Foote abstained from giving a masquerade at the Little Theatre in the Haymarket. At Ranelagh they were given occasionally. At the Opera House and Argyle Rooms, masquerades were given; and at Drury-lane and Covent Garden Theatres: towards the close of a masquerade, or masked ball, May 5, 1856, the latter theatre was entirely destroyed by fire.

MAYINGS AND MAY-GAMES were celebrated by "the citizens of London of all estates" with Maypoles and warlike shows, "with good archers, morrice-dancers, and other devices for pastime, all day long; and towards evening they had stage-plays and bonfires in the streets." The games were presided over by the Lord and Lady of the May, decorated with scarves, ribbons, and other finery; to which were added Robin Hood and Maid Marian. May-poles were regularly erected in many parts of London on Mayday morning; as in Leadenhall-street, before the south door of St. Andrew's Church, therefore called *Under Shaft*; this pole being referred to by Chaucer as "the great Shaft of Cornhill:" it was higher than the church-steeple (91 feet). After Evil Mayday, 1517, this pole was, in 1549, sawn into pieces, and burnt as "an idol." Another celebrated Maypole was that placed in the Strand, upon the site of the present church of St. Mary: this pole was 134 feet high, and was set up with great pomp and festivity in 1661; it was broken with a high wind a few years after. Opposite is Maypole-alley, at the top of which and over against the gate of Craven House, were the lodgings of Nell Gwyn; and Mr. Peter Cunningham, in his piquant *Story of Nell*, says:—"This Maypole, long a conspicuous ornament to the West-end of London, rose to a great height above the surrounding houses, and was surmounted by a crown and vane, and the royal arms richly gilded." Stow tells us that this pole was put up by the farrier, Clarges, to commemorate his daughter's good fortune of arriving to the dignity of Duchess of Albemarle, by being married to General Monk, when he was a private gentleman. The Maypole being grown old and damaged, was, in 1717, obtained by Sir Isaac Newton (who then lived in St. Martin's-street, Leicester-fields), and being taken down was carried away to Wanstead, in Essex; there it was placed in Sir Richard Child's park, for raising a telescope, the largest in the world, stated to have belonged to Newton's friend, Mr. Pound, rector of Wanstead, to whom it had been presented by M. Hugon, a French member of the Royal Society. Another famous Maypole stood in Basing-lane: Stow described it as a large fir-pole, which reached to the roof of Gerard's Hall Inn, and was fabled to be the justice-staff of Gerard the giant, of whom a carved wood figure stood by the gate until the demolition of the inn in 1852. There are other places in London which indicate the site of Maypoles: as Maypole-alley, St. Margaret's-hill, Southwark; and Maypole-alley, from the north side of Wych-street into Stanhope-street. In the Beanfof Collection are two tokens: one Nat. Child, "near y<sup>e</sup> May poal, in y<sup>e</sup> Strand, Grocer;" and Philip Complin, "at the Maypole in the Strand, Distiller," and the Maypole, with some small building attached.

THE PARKS had their pastimes upwards of two centuries ago. The French game of Paille-mail (striking a ball with a wooden mallet through an iron ring) was introduced in the reign of Charles I. Skating was first brought into vogue in England on the new canal in St. James's Park: Evelyn enters it, 1st Dec., 1662, "with schcets after the manner of the Hollanders." Pepys records, 10th Aug. 1664, Lords Castlehaven and Arran running down and killing a stout buck in St. James's Park, for a wager, before the King; and Evelyn enters, 19th Feb. 1666-67, a wrestling-match for 1000*l.* in St. James's Park, before his Majesty, a world of lords, and other spectators, 'twixt the western and northern men, when the former won. At this time there were in the park flocks of wild-fowl breeding about the Decoy, antelopes, an elk, red-deer, roe-bucks, stags, Guinea fowls, Arabian sheep, &c.: and here Charles II. might be seen playing with his dogs and feeding his ducks. Birdcage Walk was named from the aviary established there in the reign of James I., and the decoy made there in the reign of Charles II.

Hyde Park was formerly much celebrated for its deer-hunts, foot and horse races, musters and coach-races, boxing-matches, and Mayings.

PRISON BARS, OR BASE, is as old as the reign of Edward III., when it was, by proclamation, prohibited to be played in the avenues of the Palace at Westminster during the session of Parliament, from its interruption of the members and others in passing to and fro. About 1780, a grand match at base was played in the fields behind Montagu House, by twelve gentlemen of Cheshire against twelve of Derbyshire, for a considerable stake.

"PUNCH" has for nearly two centuries delighted the Londoner; there being entries of Punchinello's Booth at Charing-cross, 1666, in the Overseers' Books of St. Martin's-in-the-Fields. (*Cunningham's Handbook*, 2nd edit.) Punch's costume closely resembles the Elizabethan peasecod-bellied doublets. Covent Garden was another of Punch's early "pitches," where Powell's performances thinned the congregation in St. Paul's Church, as we learn from No. 14 of the *Spectator*; and in 1711-12, he lessened the receipts at the Opera and the national theatres: the showman worked the wires, and "by a thread in one of Punch's chops, gave to him the appearance of animation." Such was the olden contrivance: at present the puppets are played by putting the hand under the dress, and making the middle finger and thumb serve for the arms, while the forefinger works the head. Mr. Windham, when one of the Secretaries of State, on his way from Downing-street to the House of Commons, was seen to stop and enjoy the whimsicalities of Punch.

"We are never ashamed of being caught gazing at Punch," wrote Albert Smith. In 1828, George Cruikshank produced his grotesque etchings of Punch, to illustrate Mr. Payne Collier's very agreeable volume, *Punch and Judy*. Haydon painted Punch, with Hogarthian humour, in 1829; and Webster, R.A., painted with equal humour "Punch in the Country," in 1840.

Street Shows and Performers have become very numerous in the present day. Such are Punch, Fantoccini, Chinese Shades, and Galantee Shows; jugglers, conjurers, balancers, posturers, stiff tumblers, pole-balancers, salamanders or fire-eaters, and sword and snake followers; street dancers; and performances of trained animals, as dancing dogs, acting birds, and mice. The street musicians include brass and other bands, Ethiopians, farm-yard fiddlers, horse organs, Italian organ-boys, hurdy-gurdy players, blind and crippled fiddlers, and violoncello and clarinet players. Next are the peep-showmen and the proprietors of giants, dwarves, industrious fleas, alligators, "happy families," and glass ships; together with street telescopes, microscopes, thaumasopes, and weighing, lifting, and measuring machines. Porsini and Pike were celebrated Punch exhibitors; the former is said to have frequently taken 10*l.* a day; but he died in St. Giles' workhouse. A set of Punch figures costs about 15*l.*, and the show about 3*l.* The speaking is done by a "call," made of two curved pieces of metal about the size of a knee-buckle, bound together with black thread, and between them is a thin metal plate. Porsini used a trumpet. The present artists maintain that "Punch is exempt from the Police Act." The most profitable performance is that in houses; and Punch's best season is in the spring, and at Christmas and Midsummer: the best "pitches" in London are Leicester-square, Regent-street (corner of New Burlington-street), Oxford Market, and Belgrave-square. There are sixteen Punch and Judy frames in England, eight of which work in London. *Fantoccini* are puppets, which, with frame, cost about 10*l.* *Chinese Shades* consist of a frame like Punch's, with a transparent curtain and movable figures; shown only at night, with much dialogue.—*Selected from a Letter by Henry Mayhew; Morning Chronicle*, May 16, 1850.

Punch has not, however, been always a mere puppet: for we read of a farce called "Punch turned Schoolmaster;" and in 1841, was commenced "Punch; or, the London Charivari," which under excellent editorship has effected considerable moral service.\*

PUPPET-SHOWS were common at the suburban fairs in the early part of the last century; they also competed with the larger theatres, until they were superseded by the revival of Pantomimes. But the Italian Fantoccini was popular early in the present century. The puppet-showman, with his box upon his back, is now rarely seen in the street, but we have the artist of Punch, with his theatre. Clockwork figures appeared early in the last century. In the reign of Queen Anne, a celebrated show of this kind was exhibited at the great house in the Strand over against the Globe Tavern, near Hungerford Market. A saraband, danced with castanets, and throwing balls and knives alternately into the air and catching them as they fall, with catching oranges upon forks, formed part of the puppet-showman's exhibition.

\* In a 14th-century manuscript of the French romance of *Alexander*, in the Bodleian Library, is an illumination of Punch's show, the figures closely resembling the modern Punch and Judy.

Men and monkeys dancing upon ropes, or walking upon wires; dogs dancing minuets, pigs arranging letters so as to form words at their master's command, hares beating drums, or birds firing off cannons—these were favourite exhibitions early in the last century. Raree-shows, ladder-dancing, and posturing, are also of this date.

RACKETS is nearly coeval with Tennis, which it so much resembles; Rackets being striking a ball against a wall, and Tennis dropping a ball over a central net. There are Racket-grounds at the Belvedere, Pentonville; at the Tennis Court, Haymarket; and at Prince's Club Racquets Courts, Chelsea. Rackets was also much played in the Fleet Prison, taken down in 1844; in the Queen's Bench Prison; and at Copenhagen House, St. Pancras.

SALT-BOX MUSIC will be remembered by the middle-aged reader. It was played with a rolling-pin and salt-box beaten together, the noise being modulated so as to resemble a sort of music. It was formerly played by Merry Andrews, at country fairs. Bonnel Thornton composed a burlesque *Ode on St. Cecilia's Day*, which Dr. Burney, in 1769, set for Smart and Newbury. It was performed at Ranelagh, by masks: Beard sang the salt-box song, which was admirably accompanied on that instrument by Brent, the fencing-master; Skeggs, on the broomstick, as bassoon; and a remarkable performance on the Jew's harp. Cleavers were cast in bell-metal for this entertainment. All the performers of the *Old Woman's Oratory*, employed by Foote, were engaged at Ranelagh on this occasion. Price, landlord of the Green Man, formerly the Farthing Pye-house, was a famous salt-box player.

SKITTLES, corrupted from kayles of the fourteenth century, and afterwards kettle, or kettle-pins, was much played in and near London until 1780, when the magistrates abolished all Skittle-grounds. To this succeeded Nine-holes, or "Bubble-the-justice," on the supposition that it could not be set aside by the justices, as it was not named in the prohibitory statutes: it is now called "Bumble-puppy," and the vulgarity of the term is characteristic of the company who play it. Nine-pins, Dutch-pins, and Four-corners are but variations of Skittles; which games originated in the covering of open grounds in London and its neighbourhood with houses.

TEA GARDENS were the favourite resorts of the middle classes in the last century; and, in most cases, they succeeded the promenade at mineral springs. Such was Bagnigge Wells, Battle Bridge-road, taken down a few years since: we remember its concert-room and organ, its grottoes and fountains, and grotesque figures, and bust of Nell Gwynne, who is traditionally stated to have resided here. Next were Sadler's Wells Music House, before it became a theatre; Tunbridge Wells, or Islington Spa; and the Three Hats, at Islington, mentioned in Bickerstaff's comedy of the *Hypocrite*: the house remained a tavern until 1839, when it was taken down. White Conduit House, Pentonville, was originally a small ale and cake house, built in the fields, in the reign of Charles I., and named from a conduit in an adjoining meadow. An association of Protestant Dissenters, formed in the reign of Queen Anne, met at this house: the Wheal Pond, close by, was a famous place for duck-hunting; Sir William Davenant describes a city wife going to the fields to "sop her cake in milk;" and Goldsmith speaks of tea-drinking parties, with hot rolls and butter, at White Conduit House. A description of the place in 1774 presents a general picture of the Tea Garden of that period: "The garden is formed into walks, prettily disposed. At the end of the principal one is a painting, which seems to render it (the walk) longer in appearance than it really is. In the centre of the garden is a fish pond. There are boxes for company, curiously cut into hedges, adorned with Flemish and other paintings. There are two handsome tea-rooms, one over the other, and several inferior ones in the house." The fish-pond was soon after filled up, and its site planted, the paintings removed, and a new dancing and tea saloon, called the Apollo-room, built. In 1826, the gardens were opened as a "Minor Vauxhall;" and here Mrs. Bland, the charming vocalist, last sang in public. In 1829, the small house, the original tavern, was taken down, and rebuilt upon a more extensive plan, so as to dine upwards of 2000 persons in its largest room. But in 1849 these premises were also taken down; the tavern was re-erected on a smaller scale, and the garden-ground let on building leases, for White Conduit-street, &c.

Next we reach Highbury, where originally stood the *Barn* of the Monks of Clerkenwell: hence the old name of the Tavern, Highbury Barn. In the fields, opposite Pentonville Prison, was Copenhagen House (Coopen Hagen, in Camden's *Britannia*, 1695), first opened by a Dane. In Islington there remain the Canonbury Tea Gardens, a very old resort (the tavern has been rebuilt); and in Barnsbury remains an old tea-garden. Hoxton had also several tea-gardens.

Toten Hall, at the north-west extremity of Tottenham-court-road, was the ancient court-house of that manor, and subsequently a place of public entertainment. In the parish books of St. Giles's-in-the-Fields, year 1645, is an entry of Mrs. Stacey's maid and others being fined "for drinking at Tottenham Court on the Sabbath daie, xij*d*. a-piece." The premises next became the Adam and Eve Tea Gardens: before the house is laid the scene of Hogarth's *March to Finchley*; and in the grounds, May 16, 1785, Lunardi fell with his burst balloon, and was but slightly injured. The Gardens were much frequented; but the place falling into disrepute, the music-house was taken down, and upon the site of the Skittle-grounds and Gardens was built Eden-street, Hampstead-road, the public-house being rebuilt.

Chalk Farm, corrupted from the old village of Chalcot, shown in Camden's map, was another noted tea-garden. This was "the White House," to which, in 1678, the body of Sir Edmund Berry Godfrey was carried, after it had been found, about two fields distant, upon the south side of Primrose Hill. Several duels have been fought here: here John Scott (of the *London Magazine*), was shot by Mr. Christie, Feb. 16, 1821; and the poet Moore, and Jeffrey, of the *Edinburgh Review*, met in 1806. Chalk Farm now gives name to the railway station here.

The above were the most celebrated Tea-gardens north and north-west of London. Westward lay Marybone Gardens, open for public breakfasts and evening concerts to high-class company; fireworks being added. In 1777-8 these gardens were shut up, and the site let to builders; the ground being now occupied by Beaumont and Devonshire streets, and part of Devonshire-place. Next were the Bayswater Gardens, once the "Physic Garden" of Sir John Hill; and Ranelagh, the costly rival of Vauxhall, as well as a Tea-garden in the present century. Mulberry Garden, upon the present site of Buckingham Palace and its gardens, dated from *temp.* Charles I. Pinlico was noted for its tea-gardens and ale to our day: the Gun Tea Gardens, Queen's-row, with its arbours and grotesque figures, were the last to disappear: here were the Dwarf Tavern and Gardens; the Star and Garter, Five-fields-row, famous for its equestrianism, fireworks, and dancing; and the Orange, upon the site of St. Barnabas Church. Here, too, was New Ranelagh; and Jenny's Whim, Bowling-green, and gardens, the site now covered by St. George's-row: it was opened *temp.* George I. for fireworks; and it had its duck-hunting pond, alcoves, and character figures, and was much frequented for bull-baiting in the adjoining fields. Knightsbridge was noted for its Spring Gardens, and houses of entertainment. Southward were Cumberland Gardens and Assembly Rooms, the site now occupied by Price's Candle Company's Works, Vauxhall Bridge; Spring Garden, Vauxhall; the Dog and Duck, and Apollo Gardens, St. George's Fields; and Cuper's Gardens, through the site of which runs Waterloo-bridge-road. Bermondsey had its Spa Gardens in the Grange-road; and Cupid's Gardens upon Jacob's Island, the ill-fated locality in which the cholera (1848-9) first broke out in the metropolis, and where it lingered last.

Few of these old Tea Gardens remain. In the increase of London within the last half-century, the environs have lost their suburban character, and have become part of the great town itself; and steamboats and railways now, for very small sums, convey the over-worked artisan out of its murky atmosphere into pure air and rural scenery.

TENNIS, from the French Hand-ball or Palm-play, was played in London in the sixteenth century, in covered courts erected for the purpose. Henry VII. and VIII. were fond of Tennis; and the latter added to the palace of Whitehall "tennis-courts." James I. recommended Tennis to his son, as becoming a prince. Charles II. was an accomplished Tennis-player, and had particular dresses for playing in. We have a relic of these times in the Tennis-court in James-street, Haymarket, which bears the date 1676, and was formerly attached to the gaming-house, or Shavers' Hall. In

Windmill-street was another Tennis-court, which belonged to Piccadilly Hall, also a gaming-house. Another famous Tennis-court was Gibbon's, in Clare Market, where Killigrew's comedians performed for some time. There are in Holborn, Blackfriars, and Southwark thoroughfares known as "Tennis-courts," denoting the game to have been formerly played there.

THAMES SPORTS.—Fitzstephen relates of the ancient Londoners fighting "battles on Easter holidays on the water, by striking a shield with a lance." There was also a kind of water tournament, in which the two combatants, standing in two wherries, rowed and ran against each other, and fought with staves and shields. In the game of the Water Quintain the shield was fixed upon a post in the river, and the champion, stationed in a boat, struck the shield with a lance. Jousting upon the ice was likewise practised by the young Londoners. Each mansion upon the Thames bank had its private retinue of barge and wherry, and the sovereign a gilded and tapestried barge. There were also public boats, with gay awnings, for tea-parties. All this gay water-pageantry has disappeared, including the state barges of the Sovereign and the Admiralty, the Lord Mayor, and a few of the wealthier of the City companies. In 1850, the old Barge of the Goldsmiths' Company was let at Richmond, "for Pic-nic, Wedding, and Birthday Parties," at 5*l.* 5*s.* per day. The great civic barge, the *Maria Wood*, is likewise let for similar occasions.

Of Boat-races, the oldest is that for Dogget's Coat and Badge, on August 1: the prizes are distributed by the Fishmongers' Company. We have also Regattas and Sailing Matches, to aid in the enjoyment of which steamers are employed.

THEATRES originated in Miracle Plays, such as were acted in fields and open places and inn-yards. The playhouse dates from the age of Elizabeth; and between 1570 and 1629, London had seventeen theatres. (See THEATRES.)

### APOLLONICON, THE.

A CHAMBER-ORGAN of vast power, supplied with both keys and barrels, was built by Messrs. Flight and Robson, of 101, St. Martin's-lane, and first exhibited by them at their manufactory in 1817. The denomination is formed from *Apollon*, and the Greek termination *icon*.

"The Apollonicon," says a contemporary description, "is either self-acting, by means of machinery, or may be played on by keys. The music, when the organ is worked by machinery, is *pinned* on three cylinders or barrels, each acting on a distinct division of the instrument; and these, in their revolution, not only admit air to the pipes, but actually regulate and work the stops, forming, by an instantaneous action, all the necessary combinations. The key-boards are five in number; the central and largest comprising five octaves, and the smaller ones, of which two are placed on each side the larger, two octaves each. To the central key-board are attached a swell and some compound pedals, enabling the performer to produce all the changes and variety of effect that the music may require. There is also a key-board, comprising two octaves of other pedals, operating on the largest pipes of the instrument. There are 1900 pipes, the largest twenty-four feet in length, and one foot eleven inches in aperture, being eight feet longer than the corresponding pipe in the great organ at Haarlem. The number of stops is forty-five, and these in their combinations afford very good imitations of the various wind instruments used in an orchestra. Two kettle-drums, struck by a curious contrivance in the machinery, are, with the other mechanism, inclosed in a case twenty-four feet high, embellished with pilasters, and paintings of Apollo, Clio, and Erato."

This magnificent instrument performed Mozart's overtures to the *Zauberflöte*, *Figaro*, and *Idomeneo*; Beethoven's *Prometheus*; Weber's to the *Freischütz* and *Oberon*; Cherubini's to *Anacreon*, &c., without omitting a single note of the score, and with all the fortis and pianos, the crescendos and diminuendos, as directed by the composers, with an accuracy that no band can possibly exceed, and very few can reasonably hope to rival. The Apollonicon was five years in building, and at an expense of about 10,000*l.*, under the patronage of George IV. Its performances were popular for many years.

### ARCADES.

ONLY a few of these covered passages (series of arches on insulated piers) have been constructed in London; although Paris contains upwards of twenty *passages* or *galleries* of similar design.

**BURLINGTON ARCADE.**—When, in 1815, Burlington House was purchased of the Duke of Devonshire by his uncle, Lord George Cavendish, that nobleman converted a narrow slip of ground on the west side of the house and garden into a passage, with a range of shops on each side, called Burlington Arcade, making a covered communication for foot passengers from Piccadilly to Burlington Gardens, Cork-street, and New Bond-street. This Arcade was built by Samuel Ware, in 1819. It consists of a double row of shops, with apartments over them, a roof of skylights, and a triple arch at each end; it is about 210 yards long, and the shops, seventy-two in number, produce to the noble family of Cavendish 4000*l.* a year; though the property, by sub-letting and otherwise, is stated to yield double that amount a year.

**EXETER CHANGE** (the second building of the name, but on a different site from the first) was an Arcade built in 1844, on the estate of the Marquis of Exeter, and ran obliquely from Catherine-street to Wellington-street North, Strand. It was designed by Sydney Smirke; and consisted of a polygonal compartment at each extremity, the intermediate passage being coved and groined, and lighted from above; it contained ten neat shops with dwellings over. The cove, fascia, piers, &c., had polychromic arabesque decorations: at each entrance to the Arcade was an imitative bronze gate; and the fronts in Catherine-street and Wellington-street, were of fine red brick, with stone dressings, in the Jacobean style. The “Change,” however, proved unprofitable; it was taken down in 1863, and upon its site was erected a portion of the Strand Music Hall, externally and internally, of elaborate design.

**LOWTHER ARCADE** (named from Lord Lowther, Chief Commissioner of the Woods and Forests when it was built) leads from the triangle of the West Strand to Adelaide-street, north of St. Martin’s Church. It was designed by Witherden Young, and far surpasses the Burlington Arcade in architectural character: the ceiling vista of small pendentive domes is very beautiful, and the caducei in the angles are well executed. The length is 245 feet, breadth 20 feet, and height 35 feet. The sides consist of twenty-five dwellings and shops, principally kept by dealers in foreign goods, who, by mutual consent, hold in the avenue a sort of fair for German and French toys, cheap glass and jewellery, &c. At the north end of the Arcade is the Adelaide Gallery, where Mr. Jacob Perkins exhibited his Steam Gun. A living electrical eel was shown here from August, 1838, to March 14, 1843, when it died; and in 1832 was formed here a Society for the Exhibition of Models of Inventions, &c. The rooms were subsequently let for concerts, dancing, and exhibitions.

**THE ARCADE OF COVENT GARDEN**, miscalled *piazza*, was designed about 1631 for Francis, Earl of Bedford, but only the north and east sides were built, and half of the latter was destroyed by fire about the middle of the last century. The northern was called the Great Piazza, the eastern the Little Piazza: Inigo Jones, the architect, probably took his idea from an Italian city, Bologna, for instance. “The proportions of the arcades and piers, crossed with elliptical and semicircular arches into groins, are exquisitely beautiful, and are masterpieces of architecture.” (*Elmes.*) The elevation was originally built with stone pilasters on red brick, which have for many years been covered with *compo* and white paint; at the north-east corner two arcades and piers have been removed for the intrusion of the Covent Garden Floral Hall. Had Inigo Jones’s picturesque square been completed, its entirety would probably have been preserved.

### ARCHES.

**L**ONDON differs essentially from many other European capitals in the paucity of its Arches, or ornamental gateways. It has only three triumphal Arches, whereas Paris, not half the size of our metropolis, has four magnificent Arches, and the principal entrances are graced with trophied gateways and storied columns. The Parisian *Arc de l’Etoile* is without exception the most gigantic work of its kind either in ancient or modern times; within its centre arch would stand eight such structures as Temple Bar, that is, four in depth, and as many above them. The Paris Arch cost 417,666*l.*

THE GREEN PARK ARCH, at Hyde Park Corner, was built by Decimus Burton in 1828. It is Corinthian, and each face has six fluted pilasters, with two fluted columns flanking the single archway, raised upon a lofty stylobate, and supporting a richly decorated entablature, in which are sculptured alternately G. R. IV. and the imperial crown, within wreaths of laurel. The soffit of the arch is sculptured in sunk panels. The gates, by Bramah, are of massive iron scroll-work, bronzed, with the royal arms in a circular centre. Within the pier of the arch are the porter's apartments, and stairs ascending to the platform, where, upon a vast slab, laid upon a brick arch, the colossal equestrian statue of the Duke of Wellington was placed, September 30, 1846. The height of the arch, its attic, and platform is about 90 feet; of the statue, 30 feet. (*See STATUES.*)

Opposite the above Arch is the elegant entrance to Hyde Park, by three carriage archways and sides, in a Screen of fluted Ionic columns, of 107 feet frontage, designed and built by Decimus Burton, in 1828. The blocking of the central archway has a beautiful frieze (Grecian naval and military triumphal processions), designed by the son of Mr. Henning, known for his successful models of the Elgin marbles. The gates, by Bramah, are a beautiful arrangement of the Grecian honeysuckle in bronzed iron; the hanging, by rings of gun metal, is very ingenious.

Altogether, these two Park entrances, with St. George's Hospital north, and the Duke of Wellington's palatial mansion south, form one of the finest architectural groups in the metropolis, and its most embellished entrance. Sir John Soane, however, proposed two triumphal arches, connected by a colonnade and arches, stretching across the main road—a design of superb grandeur.

The third Arch was one originally designed and constructed in St. James's Park for the especial entrance of the Sovereign and the Royal Family to Buckingham Palace. In 1851 it was removed to Cumberland Gate, Hyde Park Corner. This was the largest work of mere ornament ever attempted in Great Britain. It was adapted by Nash from the Arch of Constantine, at Rome; but it is by no means so richly embellished. The sculpture is omitted in the attic, and in place of the reversed trusses above the columns were to have been figures of Dacian warriors, and panels of sculpture intervening. The fascia was to have been more highly enriched; the attic carried considerably higher, and surmounted with an equestrian statue of George the Fourth, flanked with groups of military trophies, vases at the angles, &c. The Arch has a centre and two side openings; the sculpture is confined to a pair of figures, and a key-stone on each face of the central archway; with panels above the side openings and wreaths at the end. These sculptures are by Flaxman, Westmacott, and Rossi. The statue of George the Fourth was executed by Chantrey for 9000 guineas; it was not placed upon the Arch at the Palace, but at the north-east angle of Trafalgar-square. Upon the Arch was hoisted the Royal Standard to denote the presence of the Sovereign. The central entrance-gates were designed and cast by Samuel Parker, of Argyll-street; they are the largest and most superb in Europe, and cost 3000 guineas. They are of a beautiful alloy, the base refined copper, and are bronzed: design, scroll-work with six circular openings, two filled with St. George and the Dragon, two with G. R., and above, two lions *passant-gardant*; height to the top of Arch, 21 feet; width, 15 feet; extreme thickness, 3 inches; weight, 5 tons and 6 cwt. Although cast, their enriched foliage and scroll-work have the elaborate finish of fine chasing. They terminate at the springing of the Arch; but Mr. Parker had designed and cast for the semicircular heading a rich frieze and the royal arms in a circle, flanked by state crowns. This portion, however, was irreparably broken in removal from the foundry. The face of the Arch is Carrara marble, altogether unfitted for the sooty atmosphere of London. When it was resolved to enlarge Buckingham Palace by the erection of the present front towards the Park, the Arch could not be made to form part of the design, and it was removed and rebuilt at Hyde Park Corner, at the cost of 4,340*l.* The original cost of the Arch was 75,000*l.*

Of the two arches, ST. JOHN'S GATE and TEMPLE BAR, separate histories will be given.

## ARGYLL ROOMS.

**T**HIS place was originally a large house purchased by Col. Greville, of sporting notoriety, and converted into a place of public entertainment, where balls, concerts, masquerades, and amateur plays were much patronized by the *haut ton*. In 1818, the Rooms were rebuilt in handsome style, by Nash, at the north corner of Little Argyll-street, Regent-street, and contained a splendid suite for the above purposes: they were burnt down in February, 1830, when Mr. Braithwaite first publicly applied steam-power to the working of a fire-engine; it required eighteen minutes to raise the water in the boiler to 212°, when the engine threw up from thirty to forty tons of water per hour to a height of ninety feet. The premises were rebuilt, but not upon the same scale as heretofore.

At the Argyll Rooms, June 9, 1829, Signor Velluti, the *contralto* singer, gave a concert. In the same year, M. Chabert, "the Fire-King," exhibited here his power of resisting the effects of poisons, and withstanding extreme heat. He swallowed 40 grains of phosphorus, sipped oil at 333° with impunity, and rubbed a red-hot fire-shovel over his tongue, hair, and face unharmed. Sept. 23, on a challenge of 50*l.*, Chabert repeated these feats, and won the wager; he next swallowed a piece of burning torch; and then, dressed in coarse woollen, entered an oven heated to 380°, sang a song, and cooked two dishes of beef-steak! Still, the performances were suspected, and in fact proved, to be a chemical juggle.

## ART-UNION OF LONDON,

**A** SOCIETY established 1836, and incorporated by 9th and 10th Vict., c. 48, "to aid in extending the love of the Arts of Design within the United Kingdom, and to give encouragement to artists beyond that afforded by the patronage of individuals." The annual subscription is one guinea, which entitles the subscriber to one chance for a prize in the scheme, ranging from 10*l.* to 200*l.*, to be selected from one of the London exhibitions of the year. There are also prize medals, bronze casts, porcelain statuettes, works in cast-iron; line engravings, outlines, and mezzotints; lithographs and chromo-lithographs; etchings and photographs and wood engravings; and bas-reliefs in fictile ivory; and every subscriber is entitled to a print or prints.

The Art-Union has, unquestionably, fostered a taste for art; and the increased means of art-education has benefited the country in increased exports of articles of taste,—such as plate, silk manufactures, pottery, and paper-hangings.

The demand in England at this time for pictures is very great, and the prices paid for the works of our best painters are larger than has ever been the case before. Money judiciously spent in this way is well invested. The first purchaser of "The Strawberry Girl" gave Reynolds fifty guineas for it; the last, the Marquis of Hertford, was delighted in obtaining it for 2100 guineas.—*Art Union Report*, 1864.

Few who assisted at our first meeting, in the little gallery in Regent-street, now the Gallery of Illustration, were sanguine enough to expect a course of such continuing success as that through which the institution has run; or ventured to prognosticate that it would by this time have raised (mainly from the classes at that date spending little on art), and would have distributed in aid of art and artists, the sum of 324,000*l.*; producing during that period 35 engravings of high class, 15 volumes of illustrative outlines, etchings, and wood-engravings; 16 bronzes, 12 statues and statuettes, with figures and vases in iron, and a series of medals commemorative of British artists—to say nothing of the main operation of the Association, the distribution throughout the United Kingdom and the Colonies, of some thousands of pictures by native modern artists, and some hundreds of thousands of impressions from the engravings referred to. Such, however, has been the case, notwithstanding the difficulty with which the subscriptions for the first year were made to amount to 489*l.* For the present year the sum of 11,743*l.* has been subscribed. The subscriptions for the year amount to the sum of 13,648*l.*, showing an increase of 1941*l.* on last year.—*Report*, 1866.

Mr. Noel Paton's Illustrations of "The Ancient Mariner," given in 1864, with the text, was then allowed to be the greatest work offered to the subscribers. The Society has about 600 honorary secretaries in the provinces, in the British Colonies, in America, &c., including Canton; it has expended about 150,000*l.* in the purchase and production of works of art; and in one morning the honorary secretaries paid to artists of the metropolis no less than 10,000*l.* The drawing of the prizes is usually held in

one of the metropolitan theatres, in April, and the subscribers are admitted by tickets: office, 445, West Strand.

## ARTESIAN WELLS\*

HAVE been sunk or bored in various parts of the metropolis, the London Basin being thought well adapted for them, there being on it a thick lining of sand, and a deep bed of "London blue clay," on boring which, into the chalk formation, the water rises to various heights: hence it was thought that an abundant and unailing supply might be obtained. The first boring was made at Tottenham, Middlesex. To test the practicability of this method of procuring water in sufficient quantity for the use of the metropolis, the New River Company sank a vast well at the foot of their reservoir in the Hampstead-road: the excavation was steined with brick, 12ft. 6 in. in diameter, and then reduced and continued with iron cylinders (like those of a telescope), to 240 feet. The expense was 12,412*l.* The operations, which occupied three years, were detailed by Mr. Mylne, engineer of the company, to the Institution of Civil Engineers, 1839.

It is remarkable that chalk should have been reached at so small a depth as in the Hampstead-road. Water was found at 170 feet, but so mixed with sand as not to be easily separable, which is the chief difficulty in forming wells in the London clay; hence the workmen passed through the quicksand with the cylinders at an expense of 4000*l.*, independent of the 8000*l.* which the well cost, hoping to obtain water in the chalk below; but this was found too inconsiderable for the purpose.

Artesian Wells are mostly formed by boring and driving pipes, varying from 6 to 10 inches or more in diameter; but many of these only enter the sand immediately below the clay, instead of obtaining the supply of water from the chalk. Thus, an Artesian Well sunk in Covent Garden, for more than fourteen years failed to supply the ordinary wants of the market; but having been deepened and carried ninety feet into the chalk, it yielded an abundant supply, and is constantly worked, without materially reducing the level of the water, or lowering it in neighbouring wells, as in cases where the chalk is not reached. It has been long known that the well in the Thames-street Brewery, late Calvert's, 240 feet, and Barclay's well, 367 feet, at the Southwark Brewery, affect each other so much—even though the Thames lies between them—that the two firms agreed not to pump at the same time.

The following are the depths of a few of the Wells bored in London: Berkeley-square, 320 feet; Meux and Co.'s Brewery, 435 feet; Norwood, Middlesex, 414 feet, unsuccessful at this depth; West India Export Dock, 360 feet; Zoological Gardens, Regent's-park, 227 feet, cost 1957*l.*; Barclay and Perkins' Brewery, 367 feet; Combe and Delafield's Brewery, 522 feet; North Western Railway Station, 400 feet; Nicholson's Distillery, 160 feet; Truman, Hanbury, and Co.'s Brewery, 390 feet, cost 4444*l.*; Reid and Co.'s Brewery, shaft sunk the whole depth, 259 feet, cost 7700*l.*; Blackwall Railway, depth not given, cost 8000*l.*; Pentonville Prison, 370 feet, cost 1600*l.*; St. Mary Woolnoth, Lombard-street, 252 feet, cost 200*l.*; Whitbread and Co.'s Brewery, 160 feet; Combe and Co.'s Brewery, 190 feet; Covent-garden Market, 340 feet; Piccadilly (St. James's Church), 240 feet; Elliott's Brewery, 390 feet; Royal Mint, Tower-hill, 400 feet. At Kentish Town, in 1856, an Artesian Well was abandoned when the borings had reached 1302 feet, no water having been met with, though a copious supply had been predicted from the lower greensands naturally expected to occur immediately below the gault; but the gault was found to be succeeded by 176 feet of a series of red clays, with intercalated sandstones and grits—a fact which set geologists pondering. The two Wells for the Government Water-works, Trafalgar-square, by C. E. Amos, C.E., were sunk in 1844, 300 feet and 400 feet deep; cost nearly 8000*l.*; these works will be further described. At Kensington there has been sunk and bored, for the supply of the Horticultural Gardens, a well 401 feet deep, and 5 feet clear in diameter, the bore-hole being 201 feet deep from the bottom of the well; water rises 73 feet in the shaft, the pumps lifting 144,000 gallons daily, of excellent chalk spring-water.

The question of supply from these wells is beset with so many difficulties, the alterations in the London strata being so great, that no one experienced in wells will venture to infer from one place what will occur in another.

Dr. Buckland, the eminent geologist, one of the first to show the fallacy, states that although there are from 250 to 300 so-called Artesian Wells in the metropolis, there is not one *real Artesian Well* within three miles of St. Paul's: such being a well that is

\* The term Artesian has been applied from the supposed fact of these wells having been originally constructed in the county of Artois (the ancient *Artesium*), in the north of France. They were, however, rather found than originated in Artois, for they had long existed in Italy and a few other parts of Europe, and appear to have been common generally in the East at a very early period.

always overflowing, either from its natural source or from an artificial tube: and when the overflowing ceases, it is no longer an Artesian Well. The wells which are now made by boring through the London clay are merely common wells. It has been said that a supply of water, if bored for, will rise of its own accord; but the water obtained for the fountains in Trafalgar-square does not rise within forty feet of the surface, and is pumped up by means of a steam-engine—the same water over and over again. Dr. Buckland maintains that the supply of water formerly obtained from the so-called Artesian Wells in London has been greatly diminished by the sinking of new wells; of the more than 250 wells, one-half have broken down, and others are only kept in action at an enormous expense. The average depth at which water can be obtained from these defective wells is 60 feet below the Trinity House water-mark. In 1856, it was stated that the level of the London wells, since 1822, had sunk fifty feet; and falls at the rate of 18 or 24 inches in a year. The rapid increase in the number of these wells, of late years, has been attended with so constant a reduction of the quantity of water they respectively furnish, that it is now generally considered that any additional supply for public purposes cannot be expected from this source, as it seems already overtaxed by private work.

Mr. Prestwich, jun., F.G.S., in his *Geological Inquiry*, considers “it would be difficult to account for the generally unfavourable opinion entertained regarding Artesian Wells as a means of public supply, were it not that the annually decreasing yield of water from the tertiary sands and the chalk beneath London has produced an impression of uncertainty as to all such sources of supply; which, with the constantly increasing expense caused by the depth from which the water has to be pumped, and the proportion of saline ingredients being so much greater in them than in the river waters, have been taken as sufficient grounds of objection. But it is to be observed, in explanation of the diminished supply from the present source, that the tertiary sands are of very limited dimensions; that the chalk is not a freely permeable deposit; and that the peculiarities of the saline ingredients depend upon the chemical composition of these formations. All these causes, however, are local, and can by no means be considered as grounds of objection against the system of Artesian Wells generally.” Mr. Prestwich suggests a fresh system of Artesian Wells, especially as none have as yet been carried *through the chalk*; though it is shown that the conditions in this country are more favourable than in France.

#### ARTILLERY COMPANY.

THIS ancient body of Civic Volunteers, the oldest armed force in the kingdom, originated in the Guild of St. George, in the reign of Edward I. They were also known as the Archers of Finsbury, and were incorporated by Henry VIII., whose signature is on the great book of the Company. We next trace it as the old City Trained Band, raised, or rather augmented in 1585, at the period of the menaced Popish invasion. Within two years there were enrolled nearly 300 merchants and others, “very sufficient and skilful to train and teach common soldiers the management of their pieces, pikes, and halberds; to march, countermarch, and ring. Some of them, in the dangerous year of 1588, had charge of men in the great camp at Tilbury, and were generally called Captains of the Artillery Garden, the place where they exercised” (*Stow, by Howell*) in “the Old Artillery Ground,” demised to them out of the ancient manor of Finsbury, or Fensbury, originally a field called Tassel (or Teasel, from teasels being grown here for cloth-workers) Close; then let for archery practice; and next enclosed with a wall for the Gunners of the Tower to exercise in. After 1588, the City Artillery neglected their discipline; but in 1610 they formed anew, and in a few years numbered nearly 6000. In 1622, they removed to a larger ground without Moorgate, the present Artillery ground, west of Finsbury-square.

In the Civil War, the Company marched with Essex to raise the siege of Gloucester, which was the distinguishing crisis of the contest; and in the second battle of Newbury their steady valour repulsed the fiercest charges of Rupert’s cavalry, and proved the main safeguard of the Parliamentary Army. The reluctant testimony of Clarendon to these “Londoners” is very remarkable:—

"The London Trained Bands and Auxiliary Regiments (of whose inexperience of danger, or any kind of service, by the easy practice of their postures in the Artillery Garden, men held till then, too cheap in estimation) behaved themselves to wonder, and were in truth the preservation of that army that day, for they stood as a bulwark and rampire to defend the rest; and when their wings of horse were scattered and dispersed, kept their ground so steadily, that though Prince Rupert himself led up the choice horse to charge them, and endured their storm of small shot, he could make no impression upon their stand of pikes, but was forced to wheel about; of so sovereign benefit and use is that readiness, order, and dexterity in the use of their arms, which hath been so much neglected."—*Hist. Rebellion*, edit. 1828, iv. 236.

Howell, in his *Londonopolis*, 1657, tells us that London had then "12,000 Trained Band Citizens perpetually in readiness, excellently armed;" and in the unlucky wars with the Long Parliament, the London firelocks did the King most mischief. Cromwell knew the value of this force, and for some years its strength was 18,000 foot and 600 horse. They were, however, disbanded at the Restoration, but continued their evolutions, the King and the Duke of York becoming members, and dining in public with the new Company. When Queen Anne went to St. Paul's, the City Train Bands lined the streets from Temple Bar to the Cathedral. The last time they were in active service was at the riots of 1780, when they aided in saving the Bank of England from the pillage of the rioters.

The Artillery Company have always been the only military body in the kingdom which bears arms under the direct authority of the reigning Sovereign, and which is wholly free from the control of Parliament. From time immemorial the post of Captain-General and Colonel, which is the ancient title of the officer in supreme command of the corps, has been held, sometimes by the reigning Sovereign, by a Prince Consort, and by a Prince of Wales or heir-apparent of the throne. Its roll of Captains-General and Colonels includes the names of Charles I., James II., the Prince of Orange, Prince George of Denmark, George I. (who gave the Company 500*l.*), George II., George IV., William IV., the Duke of Sussex, and Albert, Prince Consort, who was succeeded by the Prince of Wales: on its muster-roll are the names of Prince Rupert, the Duke of Buckingham, General Monk, and the Duke of Monmouth.

Upon royal visits to the City, the Artillery Company attend as a guard of honour to the Sovereign. In cases of apprehended civil disturbance the Company muster at their head-quarters, the Artillery Ground, Finsbury, granted to them in trust, in 1641, at the rent of 6*s.* 8*d.* per annum. This ground, with the houses adjoining, realizes to the Company a yearly income of 2000*l.*, which is expended for the benefit of the members, and in payment of managerial officers. Strype describes the ground as "the third great field from Moorgate, next the Six Windmills." Here is the spacious Armoury House, finished in 1735; the collection of arms, &c., includes some fine pieces of ordnance, among which is a pair of handsome brass field-pieces, presented by Sir William Curtis, Bart., President; besides portions of the ancient uniforms and arms of the corps, as caps and helmets, pikes and banners. A new set of colours was formally presented to the regiment, in 1864, by the Princess of Wales.

The corps comprises six companies of Infantry, besides Artillery, Grenadiers, Light Infantry, and Yagers. They exercise on occasional field-days in the Artillery Ground, and meet for rifle practice in the vicinity of the metropolis, the prize being a large gold medal. Besides the Armoury, here is a workshop for cleaning guns, a long shooting gallery, &c. Each member, for a subscription, has the use of arms and accoutrements from the Company's stores, but finds his uniform according to regulations.

The musters and marchings of the City Trained Band have not escaped the whipping of dramatists and humorists. Fletcher ridicules them in the *Knight of the Burning Pestle*; as does Steele in the *Tatler*, more especially in No. 41, with the Company's way of giving out orders for "an exercise of arms," when the greatest achievements were happily performed near Grub-street, where a faithful historian, being eye-witness of these wonders, should transmit them to posterity, &c. The Company were then (1709) mercilessly quizzed, and we may judge of the reason from Hatton's observation, in 1708:—"They do by prescription march over all the ground from the Artillery Ground to Islington, and Sir George Whitmore's at Hoxton, *breaking down gates, &c.*, that obstructed them in such marches." Hatton tells of their former splendid public feasts, when four of the nobility and as many citizens were stewards, and to which the

principal nobility and foreign ministers were invited. The Company's armorial ensigns are very characteristic:—

The Shield and Cross of St. George, charged with a Lion of England; on a chief azure, a portentis furnished or; between two ostrich feathers, argent. Crest, a dexter-arm armed, holding a leading staff, or, fringed gules. Supporters, two military men equipped according to the laws of the Militia, the dexter with a pike, the sinister with a musket proper. Motto—*Arma Pacis Fulcra*.

The Barracks in Artillery-place, designed by Jennings, in the style of the early castellated mansion, and erected of stone in 1857, are the head-quarters of the London Militia.

### BALLOON ASCENTS.

THE following are the more memorable Balloon Ascents made from the metropolis since the introduction of aërostation into England. In most cases the aëronauts were accompanied by friends, or persons who paid for the trip various sums.

Nov. 25, 1783, the first Balloon (filled with hydrogen) launched in England, from the Artillery Ground, Finsbury, by Count Zambeccari. The Balloon was found 48 miles from London, near Petworth.

Sept. 15, 1784, Lunardi ascended from the Artillery Ground, Moorfields; being the first voyage made in England; he was accompanied by a cat, a dog, and a pigeon.

March 23, 1785, Admiral Sir Edward Vernon, accompanied by Count Zambeccari.

June 29, 1785, ascent of Mrs. Sage, the first Englishwoman aëronaut.

July 5, 1802, M. Garnerin made his second ascent in England, from Lord's Cricket Ground. The same year he ascended three times from Ranelagh Gardens; and descended successfully from a Balloon by a Parachute, near the Small-pox Hospital, St. Pancras.

1811, James Sadler, ascended from Hackney; his two sons, John and Windham, were also aëronauts; the latter killed, Sept. 29, 1824, by falling from a Balloon.

July 19, 1821, Mr. Charles Green first ascended in a Balloon inflated with coal gas, substituted for hydrogen, on the coronation day of George IV. Cost of inflation, from 25*l.* to 50*l.*: this was Mr. Green's first aërial voyage. Up to May, 1850, he had made 142 ascents from London only. Ten persons named Green have ascended in Balloons.\*

Sept. 11, 1823, Mr. Graham ascended from White Conduit House.

May 25, 1824, Lieutenant Harris, R.N., ascended from the Eagle Tavern, City Road, with Miss Stocks; the former killed by the too rapid descent of the Balloon.

July, 1833, Mr. Graham ascended from Hungerford Market; day of opening. One of Mr. Graham's companions, on this occasion, shortly after made a second ascent, which caused a derangement of intellect, from which he never entirely recovered.

Sept. 17, 1835, Mr. Green ascended from Vauxhall Gardens, and remained up during the whole of the night.

August 22, 1836, the Duke of Brunswick ascended.

Sept. 2, 1836, Mr. Green's first ascent in his great Vauxhall Balloon.

Nov. 7, 1836, Mr. Green, Mr. Monck Mason, and Mr. Holland ascended in the great Vauxhall Balloon, and descended, in eighteen hours, at Weilburg, in Nassau. Of this ascent, Mr. Mason published a detailed account.

July 24, 1837, Mr. Green ascended from Vauxhall Gardens, in his great Balloon, with Mr. Cocking in a parachute, in which the latter was killed in descending.

May 24, 1838, unsuccessful attempt to ascend with a large Montgolfier Balloon from the Surrey Zoological Gardens. The Balloon was destroyed by the spectators; it was the height of the York Column, and half the circumference of the dome of St. Paul's, and would contain, when fully inflated, 170,000 cubic feet of air.

Sept. 10, 1838, Mr. Green and Mr. Rush ascended from Vauxhall Gardens in the Nassau Balloon, and descended at Lewes, Sussex; having reached the then greatest altitude ever attained—27,146 feet, or 5 miles 746 feet.

July 17, 1840, the Vauxhall, or great Nassau Balloon, sold to Mr. Green for 500*l.*; in 1836 it cost 2100*l.*

August 19, 1844, perilous night ascent with Mr. Gypson's Balloon from Vauxhall

\* Mr. Green has made, altogether, a larger number of ascents than any other aëronaut; they exceed 500. Of this veteran a fine portrait (private plate) has been engraved.

Gardens, with fireworks. Mr. Albert Smith and Mr. Coxwell accompanied the aëronaut. At 7000 feet high the Balloon burst, but, by Mr. Coxwell cutting some lines, the Balloon assumed a parachute form, and descended safely.

Aug. 7, 1850, Mrs. Graham's Balloon destroyed by fire, after her descent, near Edmonton.

Sept. 7, 1854, ascent of Mr. Coxwell's War Balloon, from the Surrey Zoological Gardens, with telegraphic signals.

June 15, 1857, night voyage from Woolwich to Tavistock, 250 miles, made by Mr. Coxwell, in five hours.

July 17, 1862, Mr. Glaisher and Mr. Coxwell first ascended in a large Balloon made by the latter for the experiments of the British Association: ascent from Wolverhampton; elevation attained, 26,177 feet above the sea-level.

Sept. 5, 1862, the highest and most memorable ascent on record. Mr. Glaisher and Mr. Coxwell attained an elevation of 37,000 feet, or 7 miles. Mr. Glaisher became insensible; and Mr. Coxwell, his hands being frozen, had to pull the valve-cord with his mouth, and thus escaped death.

Jan. 12, 1864, Mr. Glaisher's seventeenth scientific ascent in Mr. Coxwell's large Balloon; the only ascent made in England during the month of January.

Aug. 3, 1864, M. Godard ascended from Cremorne Gardens, in his huge Montgolfier Balloon, and made a perilous descent at Walthamstow.

Mr. Glaisher, by his scientific ascents, has proved that the Balloon does afford a means of solving with advantage many delicate questions in physics; and the Committee of the British Association report that Science and the Association owe a debt of gratitude to Mr. Glaisher for the ability, perseverance, and courage with which he has voluntarily undertaken the hazardous labour of recording meteorological phenomena in the several ascents. The following survey of London, Oct. 9, 1863, sixteenth ascent, as the Balloon passed over London Bridge, at the height of 7000 feet, in an unusually clear atmosphere, is picturesquely descriptive.

"The scene around," says Mr. Glaisher, "was probably one that cannot be equalled in the world at one glance—the homes of 3,000,000 of people were seen, and so distinctly that every large building at every part was easily distinguished; while those almost under us—viz., the Bank and Newgate, the Docks and surrounding buildings, &c., in such detail that their inner courts were visible, and their ground-plans could have been drawn. Cannon-street was easily traced; but it was difficult to believe at first sight that small building to be St. Paul's. Looking onward, Oxford-street was visible; the Parks, the Houses of Parliament, and Millbank Prison, with its radiating lines from the centre, at once attracted notice. In fact, the whole of London was visible, and some parts of it very clearly. Then all around there were lines of detached villas, imbedded as it were in shrubs; and beyond, the country, like a garden, with its fields well marked, but becoming smaller and smaller as the eye wandered further away.

"Again looking down, there was the Thames, without the slightest mist, winding throughout its whole length, with innumerable ships, apparently very long and narrow, and steamboats like moving toys. Gravesend was visible, as were the mouth of the Thames and the coast leading on to Norfolk. The southern boundary of the mouth of the Thames was not quite so clear, but the sea beyond was discernible for many miles; and when higher up I looked for the coast of France, but I could not see it. On withdrawing the eye it was arrested by the garden-like appearance of the county of Kent, till again London claimed attention. Smoke, thin and blue, was curling above it and slowly moving away in beautiful curves, from all but south of the Thames; here the smoke was less blue and became apparently more dense, till the cause was evident, it being mixed with mist rising from the ground, the southern limits of which were bounded by an even line, doubtless indicating the meeting of the subsoils of gravel and clay.

"The whole scene was surmounted by a canopy of blue, the sky being quite clear and free from cloud everywhere except near the horizon, where a circular band of cumuli and strata clouds, extending all round, formed a fitting boundary for such a scene. The sun was seen setting, but was not itself visible, except a small part seen through a break in a dark stratus cloud—like an eye overseeing all. Sunset, as seen from the earth, is described as fine, the air being clear and shadows sharply defined. As we rose the golden hues decreased in intensity and richness both right and left of the place of the sun; but their effects extended to fully one-fourth part of the circle, where rose-coloured clouds limited the scene. The remainder of the circle was completed partly by pure white cumulus of very rounded and symmetrical forms. I have seen London from above by night, and I have seen it by day when four miles high, but nothing could exceed the view on this occasion at the height of one mile, varying to one mile and three-quarters, with a clear atmosphere. The roar of London even at the greatest height, was one unceasing rich and deep sound, and added impressive interest to the general circumstances in which we were placed."

#### BANK OF ENGLAND, THE,

IS an insulated assemblage of buildings and courts, occupying three acres, minus nine or ten yards, north of the Royal Exchange, Cornhill; bounded by Prince's-street, west;

Lothbury, north; Bartholomew-lane, east; and Threadneedle-street, south. Its exterior measurements are 365 feet south, 410 feet north, 245 feet east, and 440 feet west. Within this area are nine open courts; a spacious rotunda, numerous public offices, court and committee-rooms, an armoury, engraving and printing-offices, a library, and apartments for officers, servants, &c.

The Bank, "the greatest monetary establishment in the world," was projected in 1691, by Mr. William Paterson, a Scotsman; was established by a company of Whig merchants, and incorporated by William III., July 27, 1694, Paterson being placed on the list of Directors for this year only; the then capital, 1,200,000*l.*, being lent to Government. The first chest used was somewhat larger than a seaman's.

The first Governor was Sir John Houblon, whose house and garden were on part of the site of the present Bank; and the first Deputy-Governor was Michael Godfrey, who, July 17, 1695, was shot at the siege of Namur, while attending King William with a communication relating to the Bank affairs.

The Bank commenced business at Mercers' Hall, and next removed to Grocers' Hall, then in the Poultry; at this time the secretaries and clerks numbered but 54, and their united salaries amounted to 4350*l.* In 1734 they removed to the premises built for the Bank, the earliest portion of which part is still remaining—the back of the Threadneedle-street front, towards the court—was designed by an architect named Sampson. To this building Sir Robert Taylor\* added two wings of columns, with projections surmounted by pediments, and other parts. On Jan. 1, 1785, was set up the marble statue of William III., amid the firing of three volleys, by the servants of the establishment, Cheere, sculptor, in the Pay Hall, 79 feet by 40 feet, which, in the words of Baron Dupin, would "startle the administration of a French bureau, with all its inaccessibilities."

In 1757, the Bank premises were small, and surrounded by St. Christopher-le-Stocks Church (since pulled down), three taverns, and several private houses. Between 1766 and 1786 east and west wings were added by Taylor: some of his work is to be seen in the architecture of the garden court. Upon Sir Robert Taylor's death, in 1788, Mr. John Soane was appointed Architect to the Bank; and, without any interruption to the business, he completed the present Bank of brick and Portland stone, of incombustible materials, insulated, one-storied, and without external windows. The general architecture is Corinthian, from the Temple of the Sibyl at Tivoli, of which the south-west angle exhibits a fac-simile portion. The Lothbury court is fine; and the chief Cashier's office is from the Temple of the Sun and Moon at Rome. The embellishments throughout are very beautiful; and the whole well planned for business—high architectural merit. The Rotunda has a dome 57 feet diameter; and the Bank Parlour, where the Governor and Company meet, is a noble room by Taylor. Here the Dividends are declared; and here the Directors are *baited* half-yearly by every Proprietor who has had 500*l.* Bank-stock in his possession for six months. In the Parlour lobby is a portrait of Daniel Race, who was in the Bank service for more than half a century, and thus amassed upwards of 200,000*l.* In the ante-chamber to the Governor's room are fine busts of Pitt and Fox, by Nollekens. The ante-room to the Discount Office is adapted from Adrian's Villa at Tivoli. The private Drawing Office, designed in 1836, by Cockerell (Soane's successor), is original and scenic; and the Drawing Office, completed by the same architect in 1849, is 138 feet 6 inches long, and lit by four large circular lanterns. In 1850, the Cornhill front was heightened by an attic; and a large room fitted up as a Library for the clerks.

The entrance to the Bullion Yard is copied from Constantine's Arch at Rome, and has allegories of the Thames and Ganges, by T. Banks, R.A. The Bullion Office, on the northern side of the Bank, consists of a public chamber and two vaults—one for the public deposit of bullion, free of charge, unless weighed; the other for the private stock of the Bank. The duties are discharged by a Principal, Deputy-Principal, Clerk, Assistant-Clerk, and porters. The public are on no account allowed to enter the Bullion Vaults. Here the gold is kept in bars (each weighing 16 lbs. and worth about

\* The late Professor Cockerell, in his earlier lectures, used to exhibit, as a specimen of clever arrangement, a plan of the triangular block of buildings, by Sir Robert Taylor, that formerly stood between the Bank and the Mansion House, where the Wellington Statue is now.

800*l.*), and the silver in pigs and bars, and dollars in bags. The value of the Bank bullion in May, 1850, was sixteen millions. This constitutes, with their securities, the assets which the Bank possess against their liabilities, on account of circulation and deposits: and the difference between the several amounts is called "the Rest," or balance in favour of the Bank. For weighing, admirably-constructed machines are used: the larger one, invented by Mr. Bate, for weighing silver in bars from 50 lbs. to 80 lbs. troy; second, a balance, by Sir John Barton, for gold; and a third, by Mr. Bate, for dollars, to amounts not exceeding 72 lbs. 2 oz. troy. Gold is almost exclusively obtained by the Bank in the *bar* form; although no form of deposit would be refused. A bar of gold is a small slab, weighing 16 lbs., and worth about 800*l.*

In the Weighing Office, established in 1842, to detect light gold, is the ingenious machine invented by Mr. William Cotton, then Deputy-Governor of the Bank. About 80 or 100 light and heavy sovereigns are placed indiscriminately in a round tube; as they descend on the machinery beneath, those which are light receive a slight touch, which moves them into their proper receptacle; and those which are of legitimate weight pass into their appointed place. The light coins are then defaced by a machine, 200 in a minute; and by the weighing-machinery 35,000 may be weighed in one day. There are six of these machines, which from 1844 to 1849 weighed upwards of 48,000,000 pieces without any inaccuracy. The average amount of gold tendered in one year is nine millions, of which more than a quarter is *light*. The silver is put up into bags, each of one hundred pounds value, and the gold into bags of a thousand; and then these bagfuls of bullion are sent through a strongly-guarded door, or rather window, into the Treasury, a dark gloomy apartment, fitted up with iron presses, and made secure with huge locks and bolts.

The Bank-note machinery, invented by the Oldhams, father and son, exerts, by the steam-engine, the power formerly employed by the mechanic in pulling a note. The Bank-notes are numbered on the dexter and sinister halves, each bearing the same figures, by Bramah's machines: as soon as a note is printed, and the handle reversed to take it out and put another in its place, a steel spring attached to the handle alters the number to that which should follow.

The Clock in the roof is a marvel of mechanism, as it is connected with all the clocks in the Stock offices: the hands of the several dials indicate precisely the same hour and second, by means of connecting brass-rods (700 feet long, and weighing 6 cwt.), and 200 wheels; the principal weight being 350 lbs.

The Bank has passed through many perils: it has been attacked by rioters, its notes have been at a heavy discount, it has been threatened with impeachment, and its credit has been assailed by treachery. In 1696 (the great re-coinage) the Directors were compelled to suspend the payment of their notes. They then increased their capital to 2,201,271*l.* The Charter has been renewed from 1697 to the present time.

The earliest panic, or *run*, was in 1707, upon the threatened invasion of the Pretender. In the run of 1745, the Corporation was saved by their agents demanding payment for notes in sixpences, and who, paying in the same, thus prevented the *bonâ fide* holders of notes presenting them. Another memorable run was on February 26, 1797, upon an alarm of invasion by the French, when the Privy Council Order and the Restriction Act prohibited the Bank from paying cash, except for sums under 20*s.* During the panic of 1825, from the evidence of Mr. Harman before Parliament, it appears that the quantity of gold in the treasury, in December, was under 1,300,000*l.* It has since transpired that there was not 100,000*l.*, probably not 50,000*l.*! The Bank then issued one-pound notes, to protect its remaining treasure; which worked wonders, though by sheer good luck: "because one box containing a quantity of one-pound notes had been overlooked, and they were forthcoming at the lucky moment."

Panics have been produced sometimes by extraordinary means. In May, 1832, a "run upon the Bank of England" was produced by the walls of London being placarded with the emphatic words, "To stop the Duke, go for Gold!" advice which was followed, as soon as given, to a prodigious extent. The Duke of Wellington was then very unpopular; and on Monday, the 14th of May, it being currently believed that the Duke had formed a Cabinet, the panic became universal, and the run upon the Bank of England for coin was so incessant, that in a few hours upwards of half a million was carried off. Mr. Doubleday, in his *Life of Sir Robert Peel*, states it to be well known that the above placards were "the device of four gentlemen, two of whom were elected members of the reformed Parliament. Each put down 20*l.*: and the sum thus clubbed was expended in printing thousands of these terrible missives,

which were eagerly circulated, and were speedily seen upon every wall in London. The effect is hardly to be described. It was electric."

The Bank is the banker of the Government; for here are received the taxes, the interest of the National Debt paid, the Exchequer business transacted, &c. The amount paid by the Government to the Bank for the management of the National Debt is at the rate of 340*l.* per million for the first 600,000,000*l.*, and 300*l.* per million for the remainder. This amounts to about 250,000*l.* a year. "The Old Lady of Threadneedle-street," applied to the Bank, is a political *sobriquet* now almost forgotten.

The forgeries upon the Bank supply a melancholy chapter in its history. The first forger of a note was a Stafford linendraper, who, in 1758, was convicted and executed. Through the forgeries of one person, Robert Aslett, the Bank lost 320,000*l.*; and by another, Fauntleroy, 360,000*l.* In 1862, there were forgeries to a large amount, by paper expressly manufactured for the Bank, which had been stolen, for which four persons suffered penal imprisonment.

The Committee of Treasury sit weekly, and is composed of all the Directors who have passed the chair. The Accountant, the Secretary, and the Cashier reside within the Bank; and a certain number of Clerks sit up nightly to go the round of the building, in addition to the military guard.

The Bank possesses a very fine collection of ancient coins. Visitors are shown in the old Note Office, paid notes for ten years; and some bank-notes for large amounts which have passed between the Bank and the Government, including a single note for one million sterling, kept in a frame.

Madox, who wrote the *History of the Exchequer*, was first Cashier; but more popularly known was Abraham Newland, Chief-Cashier from 1778 to 1807, who had slept twenty-five years within the Bank, without absenting himself a single night. He signed every note: his name was long remembered in a popular song, "as one that is wrote upon every bank-note," to forge which, in street slang, was to "sham Abraham."

In 1852 was placed in the Garden Court a fountain, constructed by the then Governor, Mr. Thomas Hankey. The water is thrown by a single jet, 30 feet high, amongst the branches of two of the finest lime-trees in London, and is part of the Bank system of waterworks. An Artesian well sunk 330 feet—100 in the chalk—yields soft water, free from lime, and without a trace of organic matter. The water is pumped into the tanks at the top of the building, which contain 50,000 gallons, and the fountain is connected with these tanks; the pumping being by the steam-engine employed also in printing the bank-notes. The fountain is placed on the site of St. Christopher's churchyard. The last person buried there was Jenkins, a Bank clerk, 7½ feet in height, and who was allowed to be buried within the walls of the Bank, to prevent disinterment, on account of his unusual height.

There are in the Bank upwards of eight hundred clerks, at salaries ranging from 65*l.* per annum to 800*l.*; the patronage is in the hands of the directors, of whom there are twenty-four, each having a nomination to admit one clerk, provided he be found qualified on examination. The vacancies are not, as in most public offices, filled up as they occur by deaths, resignations, &c., but by electing from twenty-five to thirty junior clerks every four or five months; it is also usual to admit one-fifth of this number from the sons of clerks already in the service. The scale of pensions for length of service is the same as in the Government offices.

Among the *Curiosities* are the bank-note autograph-books—two splendidly-bound folio volumes, each leaf embellished with an illuminated border, exactly surrounding the space required to attach a bank-note. When any distinguished visitor arrives he is requested to place his autograph to an unsigned note, which is immediately pasted over one of the open spaces. They are thus illustrated by the signatures of various royal and noble personages. That of Napoleon III., Henry V., the Kings of Sweden, Portugal, and Prussia, a whole brigade of German Princes, Ambassadors from Siam, Persia, Turkey—the latter in Oriental characters—and some of our higher nobility. There are some scientific names, but few literary celebrities; among them those of Lady Sale; and Mehemet Ali, the Pasha of Egypt.

"The circulation of the Bank of England has been stationary or slightly retrogressive for some years past, notwithstanding the increase of trade, wealth, and population. The authorities even of the Currency principle no longer insist upon the variations of the bank-note circulation as the symptoms to be chiefly regarded. They, with the rest of the world, have discovered that the state of the banking reserve at the Bank of England, the condition of credit, and the effects of a high or low rate of interest, are the circumstances which really control the financial phenomena of the country from week to week and month to month."—*Economist*.

Upwards of a million is paid into the Bank daily, in the shape of notes. When cashed a corner is torn off, and this now valueless piece of paper, after being duly entered in the books, is deposited in chambers beneath the sorting-room, where it is kept ten years, in case it may be required as testimony at some future trial, or to settle any other legal difficulties. In one of the court-yards of the building is a large circular cage, within which is an octagonal furnace constructed of bricks, laid only half over each other, so as to afford ample ventilation. In this furnace, once a month, all the notes that were received during the month previous ten years back are consumed. The furnace is five feet high, by at least ten in diameter; yet we are assured that it is completely filled by the number returned during one month.

Notes of the Bank, at its establishment, 20 per cent. discount; in 1745 under par. Bank Bills paid in silver, in 1745. Bank Post Bills first issued, 1754. Small Notes issued, 1759. Cash payments discontinued, Feb. 25, 1797, and Notes of 1*l.* and 2*l.* put into circulation. Cash payments partially resumed, Sept. 22, 1817. Restriction altogether ceased, 1821. May 14, 1832, upwards of 300,000*l.* weighed and paid to bankers and others. Quakers and Hebrews not eligible as Directors. Qualification for Director, 2000*l.* Bank Stock; Deputy-Governor, 3000*l.*; Governor, 4000*l.* Highest price of Bank Stock, 299; lowest 91. The Bank has paid Dividends at the rate of 21 per cent., and as low as 4½ per cent. per annum. Silver Tokens issued, Jan., 1798. Issue on paper securities not permitted to exceed 14,000,000*l.* Capital punishment for forgery, excepting only forgeries of wills and powers of attorney, abandoned in 1832.—(See Francis's popular *History of the Bank of England*, 3rd edit. 1843.)

1852, Oct. 1, West-end Branch opened at Uxbridge House, Burlington Gardens.

The total of deposits held ten years ago by the Bank of England was about 14,300,000*l.*; it is now (1866) 20,140,000*l.*

In the Riots of 1780, the Bank was defended by military, the City volunteers, and the officers of the establishment, when the old inkstands were cast into bullets. It was attacked by the mob, when Wilkes rushed out and seized some of the ringleaders. Since this date a military force has been stationed nightly within the Bank; a dinner is provided for the officer on guard and two friends. (See a clever sketch in *Melibæus in London*.) In the political tumult of November, 1830, provisions were made at the Bank for a state of siege. At the Chartist Demonstration of April 10, 1848, the roof of the Bank was fortified by Sappers and Miners, and a strong garrison within. The Bank has now its own company of Rifles, 150 strong, with two subdivisions each, having a lieutenant and ensign, and fully armed and equipped.

#### BANKSIDE.

THAT part of the *Liberty* of Paris Garden called by old writers the "Bank" simply, and afterwards Bankside, bordering on the Thames, was the site of several early theatres, namely, the Globe, the Hope, the Rose, and the Swan; and superseded the circus for "Bull-baying" and "Bear-baiting," shown in Aggas's Map, about 1560. (See THEATRES.) The stews here were as old as the reign of Henry II., and in the time of Richard II. belonged to Sir William Walworth who slew Wat Tyler, who had several stew-houses on the Bankside. They had signs painted on the walls; as a Boar's Head, the Cross Keys, the Gun, the Castle, the Cranes, the Cardinal's Hat, the Bell, the Swan, &c. These stews, which were regulated by Parliament, were put down by sound of trumpet in 1546; about 1506 this part was known as Stews-bank. Bears were baited here from a very early period, but the bear-garden was removed to Clerkenwell about 1686; the site at Bankside is now occupied by the Eagle iron foundry and Bear-garden wharf. In 1720, the Bank was chiefly inhabited by dyers, "for the conveniency of the water." In the reigns of Queen Elizabeth and James I., Edward Alleyn, the founder of Dulwich College, kept the garden on the Bankside, in conjunction with his father-in-law, Philip Henslowe, who was originally a dyer here. Here were the Bishop of Winchester's park and garden and palace: of the latter a fragment remains; and here is "Cardinal's Cap-alley," and "Pike-garden."

## BARBICAN.

THIS old street, which is a portion of the line of thoroughfare, eastward from West Smithfield to Finsbury-square, is named from its proximity to a *barbican*, or watch-tower, attached to the City wall, the remains of which were visible within the last eighty years. It was the advanced post of Cripplegate; and, like the others that surrounded the City, was intrusted to some person of consequence in the State. This tower was granted by Edward III. to the Earl of Suffolk, and he made it his town residence. After the removal of the City gates all vestiges of the Barbican disappeared, except its name; this became applied to the street, which R. B., in Strype, describes as "a good broad street, well inhabited by tradesmen, especially by salesmen for apparel both new and old; and, fronting Redcross-street, is the watchhouse, where formerly stood a watch-tower called *Burgh*, and *Ken*, a place to view or ken from," which is the derivation given by Sir Henry Spelman, the antiquary, who resided in this street at the time of his death in 1640.

Camden, in his *Britannia* (published 1586), says: "The suburb also which runs out on the north-west side of London is large, and had formerly a watch-tower or military fence, from whence it came to be called by an *Arabick* name—*Barbacan*."

The tower is described as built on high ground, and of some good height: from thence "a man," says Stow, "might behold and view the whole city towards the south, and also into Kent, Sussex, and Surrey, and likewise every other way, east, north, or west." Mr. Godwin, F.S.A., in 1850 read to the British Archæological Association an ingenious paper illustrative of the term Barbican.

Milton lived here, 1646-7, in a house, No. 17, on the north side of the street: it was taken down in 1864. In Barbican was the mansion of the poet's early patrons, the Bridgewater family; and here lived Sir Thomas Wriothesley, Garter King-at-arms; whence Bridgewater-square, Brackley-street, and Garter-court. Beech-street, the east continuation of Barbican, was, peradventure, named from Nicholas de la Beech, Lieutenant of the Tower of London, *temp.* Edward III. Here, in Drury House, lived Prince Rupert. Its remains in 1766 were engraved by J. T. Smith. Barbican was, in 1865-6, in part taken down, to make room for the Metropolitan (Extension to Finsbury) Railway.

## BARTHOLOMEW FAIR.

THIS ancient Fair presents, through its seven centuries' existence, many phases of our social history with such graphic force, that "he may run that readeth it." The Fair originated in two Fairs, or Markets, one begun by a grant of land from Henry I. to his jester, Rayer, or Rahere, who founded a Priory to St. Bartholomew, in West Smithfield, previous to which, however, a market called "the King's Market," had been held near Smithfield. Out of the two elements, the concourse of pilgrims to the Miraculous Shrine of St. Bartholomew, and the concourse of traders to the King's Market, Bartholomew Fair grew up. Rayer's miracles were most ingenious, for he cured a woman who could not keep her tongue in her mouth: if the wind went down, as sailors far at sea were praying to the denuded saint, they called it a miracle, and presented, in procession, a silver ship at the Smithfield shrine. The forged miracles gave way to the imitative jugglers and mystery players; and these three elements—the religious, the dramatic, and the commercial—flowed on till the Reformation.

The Priory Fair, which was proclaimed on the Eve of St. Bartholomew, and continued during the next day, and the next morrow, was granted for the clothiers of England and the drapers of London, who had their booths and standings within the Priory churchyard (the site now Cloth Fair), the gates of which were locked every night, and watched, for the safety of the goods and wares. Within its limits was held a court of justice, named *Pie Poudre*, from *pieds poudreux*—dusty feet—by which, persons infringing upon the laws of the Fair, its disputes, debts, and legal obligations, &c., were tried the same day, and the punishment of the stocks, or whipping-post,

summarily inflicted; and this court was held, to the last, at the Hand and Shears, Cloth Fair, by the Steward of the Lord of the Manor.

"Thus we have in the most ancient times of the Fair, a church full of worshippers, among whom were the sick and maimed, praying for health about its altar; a graveyard full of traders, and a place of jesting and edification, where women and men caroused in the midst of the throng; where the minstrel and the story-teller and the tumbler gathered knots about them; where the sheriff caused new laws to be published by loud proclamation in the gathering places of the people; where the young men bowled at nine-pins, while the clerks and friars peeped at the young maids; where mounted knights and ladies curvetted and ambled, pedlars loudly magnified their wares, the scholars met for public wrangle, oxen lowed, horses neighed, and sheep bleated among their buyers; where great shouts of laughter answered to the 'Ho! ho!' of the devil on the stage, above which flags were flying, and below which a band of pipers and guitar bearers added music to the din. That stage also, if ever there was presented on it the story of the Creation, was the first Wild Beast Show in the Fair; for one of the dramatic effects connected with this play, as we read in an ancient stage direction, was to represent the creation of beasts by unloosing and sending among the excited crowd as great a variety of strange animals as could be brought together, and to create the birds by sending up a flight of pigeons. Under foot was mud and filth, but the wall that pent the city in shone sunlit among the trees, a fresh breeze came over the surrounding fields and brooks, whispering among the elms that overhung the moor glittering with pools, or from the Fair's neighbour, the gallows. Shaven heads looked down on the scene from the adjacent windows of the buildings bordering the Priory inclosure, and the poor people whom the friars cherished in their hospital, made holiday among the rest. The curfew bell of St. Martin's-le-Grand, the religious house to which William the Conqueror had given with its charter the adjacent moorland, and within whose walls there was a sanctuary for loose people, stilled the hum of the crowd at nightfall, and the Fair lay dark under the starlight."—*Memoirs of Bartholomew Fair*. By Henry Morley. 1858.

After the Reformation, Bartholomew Fair flourished with unabated vigour, the clergy having no longer any interest in veiling its debaucheries. The Priory, together with the rights formerly exercised by the monks, had been granted to the founder of the Rich family, who was Solicitor-General to Henry VIII., and afterwards Lord Chancellor; they were enjoyed by his descendants till the year 1830, when they were purchased from Lord Kensington by the Corporation of London. The Fair greatly declined, as a cloth fair, from the reign of Queen Elizabeth; and the mysteries and moralities being succeeded by productions more nearly resembling the regular drama, the Corporation granted licences to mountebanks, conjurors, &c., and allowed the Fair to be extended to fourteen days, the Sword-bearer and other City officers being paid out of the emoluments. Hentzner, in 1578, describes a tent pitched for the proclamation of the Fair, and wrestling after the ceremony, with the crowd hunting wild rabbits, for the sport of the Mayor and Aldermen. Here was also formerly a burlesque proclamation on the night before, by the drapers of Cloth Fair snapping their shears and loudly shouting all through Smithfield.

Ben Jonson, in his play of *Bartholomew Fair*, tell us of its motions, or puppet-shows, of Jerusalem, Nineveh, and Norwich; and the "Gunpowder Plot, presented to an eighteen or twenty pence audience nine times in an afternoon." The showman paid three shillings for his ground; and a penny was charged for every burden of goods and little bundle brought in or carried out. A rare tract, of the year 1641, describes the "variety of Fancies, the Faire of Wares, and the several enormities and misdemeanours" of the Fair of that period. At these, the sober-minded Evelyn was shocked. Pepys (Aug. 30, 1667) found at the Fair "my Lady Castlemaine at a puppet-show," her coach waiting, "and the street full of people expecting her." The sights and shows included wild beasts, dwarfs, and other monstrosities; operas, and tight-rope dancing, and sarabands; dogs dancing the Morrice, and the hare beating the tabor; a tiger pulling the feathers from live fowls; the humours of Punchinello, and drolls of every degree. An ox roasted whole, and piping-hot roast pig, sold in savoury lots, were among the Fair luxuries: the latter, called Bartholomew Pigs, were raised at by the Puritans, and eating them was "a species of idolatry." The pig-market was at Pye Corner, and pig was not out of fashion in Queen Anne's time.

Among the celebrities of the Fair was Tom Dogget, the old comic actor, who "wore a farce in his face," and was famous for dancing the Cheshire Round. One Ben Jonson, the actor, was celebrated as the grave-digger in *Hamlet*, in which he introduced a song preserved in Durfey's *Pills*. Tom Walker, the original Macheath, was another Bartholomew hero. William Bullock, from York, is alluded to by Steele, in *The Father*, and is censured for "gagging:" in 1739 he had the largest booth in the Fair. Theophilus Cibber was of the Fair, but there is no evidence that Colley Cibber ever appeared there. Cadman, the famous flyer on the rope, immortalized by Hogarth,

was a constant exhibitor at Bartholomew, as well as Southwark Fair. William Phillips was a famous Merry Andrew, and some time fiddler to a puppet-show, in which he held many a dialogue with Punch. Edward Phillips wrote *Britons Strike Home* for the Fair; and Kitty Clive played at the booth of Fawkes, Winchbeck, &c., in that very farce. Harlequin Phillips was in Mrs. Lee's company, and afterwards became the celebrated Harlequin at Drury-lane, under Fleetwood. Penkethman and Dogget, though of very unequal reputation, are noticed in the *Spectator*. The first in that humorous account of the *Projector*, in the 31st number, where it is proposed that "Penkethman should personate King Porus upon an elephant, and be encountered by Powell, representing Alexander the Great, upon a dromedary, which, nevertheless, Mr. Powell is desired to call by the name of Bucephalus." Dogget is commended (No. 502) as an admirable and genuine actor.

The public theatres were invariably closed at Bartholomew Fair time; drolls, like Estcourt and Penkethman, finding Bartholomew Fair a more profitable arena for their talents than the boards of Dorset-garden or old Drury-lane. Here Elkanah Settle, the rival for years of Dryden, was reduced at last to string speeches and contrive machinery; and here, in the droll of St. George for England, he made his last appearance, hissing in a green leather dragon of his own invention.

Here we may mention another class of sights,—“a large and beautiful young camel from Grand Cairo, in Egypt,” says the advertisement: “this creature is twenty-three years old; his head and neck are like that of a deer,” and he “was to be seen or sold at the first house on the pavement from the end of Hosier-lane, during Bartholomew Fair.” And we read that later, Sir Hans Sloane employed a draughtsman to sketch the wonderful foreign animals in the Fair.

There are scores of other Bartholomew celebrities—actors, mummers, tumblers, conjurors, and exhibitors of various grades, as Burling and his famous monkey; William Joy, the English Samson; Francis Battalia, the Stone Eater; Topham, the Strong Man; Hale, the Piper; the Auctioneer of Moorfields, who regularly, for a series of years, transferred his book-stall to Smithfields Rounds; James Spiller, the original *Mat o' the Mint* of the *Beggar's Opera*, at one time the “glory of the Fair:” this piece was played at Smithfield in 1728. Punchinello was another Bartholomew attraction:—

“’Twas then, when August near was spent,  
That Bat, the grilliado'd saint,  
Had ushered in his Smithfield revels,  
Where *Punchinello*, popes and devils,  
Are by authority allowed,  
To please the giddy, gaping crowd.”  
*Hudibras Redivivus*, 1707.

Powell, too, the Puppet-show man, was a great card at the Fair, especially when his puppets played such incomparable dramas as *Whittington and his Cat*, *The Children in the Wood*, *Dr. Faustus*, *Friar Bacon*, *Robin Hood and Little John*, *Mother Shipton*, “together with the pleasant and comical humours of Valentini, Nicolini, and the tuneful warbling pig of Italian race.” No wonder that such attractions thinned the theatres, and kept the churches empty. Steele makes mention of “Powell's books:” if they were books of his performances, what a treasure they would be in our day! The two great characters of Jewish history—*Judith* and *Holophernes*—long kept in popular favour; for Setchel's fan-print of 1728 depicts Lee and Harper's great theatrical booth, with an announcement of the play of *Judith's Adventures* as its chief attraction: elevated from puppet performers to regular living actors, *Judith* herself being seated on the platform of the show in a magnificent dress, and the high head-dress and false jewellery that captivated the wicked *Holophernes*, who strides towards her in the full costume of a Roman general.

Among Bagford's collection in the British Museum, is a Bartholomew Fair bill of the time of Queen Anne, of the playing at Heatly's booth, of “a little opera, called the *Old Creation of the World newly revived*, with the addition of the *Glorious battle obtained over the French and Spaniards by his Grace the Duke of Marlborough!*” Between the acts, jigs, sarabands, and antics were performed, and the whole entertainment concluded with *The Merry Humours of Sir John Spendall and Punchinello*;

with several other things not yet exposed." Heatly is supposed to have had no better scenery than the pasteboard properties of our early theatres :—

"The chaos, too, he had descried  
And seen quite through, or else he lied;  
Not that of pasteboard which men shew  
For groats at Fair of Barthol'mew."—*Hudibras*, canto i.

Henry Fielding had his booth here, Dr. Rimbault tells us, after his admission into the Middle Temple. That Fielding should have turned "strolling actor," and have the audacity to appear at Bartholomew at the very moment when the whole town was ringing with Pope's savage ridicule of the "Smithfield Muses," would of course be an unpardonable offence. Fielding's last appearance at Bartholomew Fair was in 1736, as usual, in the George Inn Yard, at "Fielding and Hippisley's Booth." *Don Carlos* and the *Cheats of Scapin*, adapted from Molière, were the two plays; and Mrs. Pritchard played the part of *Loveit*, in which she had made her first hit at Bartholomew. Other celebrities, who kept up the character of the Fair for another quarter of a century, were Yates, Lee, Woodward, and Shuter, the two last well known for their connexion with Goldsmith's comedies. Shuter played *Croaker* in the *Good-natured Man*, and *Hardcastle* in *She Stoops to Conquer*. Woodward played *Lofty* in the former piece. With Shuter, "the history of the English stage" (says Mr. Morley) "parted entirely from the story of the Fair." Garrick's name is connected only with the Fair by stories which regard him as a visitor: although Edmund Kean is stated to have played here when a boy.

Among the notorieties of the Fair was Lady Holland's Mob (Lord Rich having been ancestor of the Earl of Warwick and Holland),—hundreds of loose fellows, principally journeyman tailors, who used to assemble at the Hand and Shears, in Cloth Fair. They were accustomed to sally forth knocking at the doors and ringing the bells of the peaceable inhabitants, and assaulting and ill-treating passengers. These ruffians frequently united in such strength as to defy the civil power. As late as 1822, a number of them exceeding 5000 rioted in Skinner-street, and were for hours too powerful for the police.

The Fair was annually proclaimed by the Lord Mayor, on the 2nd of September, his lordship proceeding thither in his gilt coach, "with City Officers and trumpets;" and the proclamation for the purpose read before the entrance to Cloth Fair. It was the custom for the Lord Mayor, on this occasion, to call upon the keeper of Newgate, and partake, on his way to Smithfield, of "a cool tankard of wine, nutmeg, and sugar." This custom, which ceased in the second mayoralty of Sir Matthew Wood in 1818, was the cause of the death of Sir John Shorter, Lord Mayor in 1688. In holding the tankard, he let the lid slip down with so much force, that his horse started, and he was thrown to the ground with great violence. He died the next day.

The Fair dwindled year by year: the writer remembers it at midnight, before gas had become common: viewed from Richardson's, the shows, booths, and stalls, with their flaring oil-lamps and torches, shed a strange glare over the vast sea of heads which filled the area of Smithfield and the adjacent streets. As lately as 1830, upwards of 200 booths for toys and gingerbread crowded the pavement around the Fair, and overflowed into the adjacent streets. Richardson, Saunders, and Wombwell were late in the ascendant as showmen. Among the latest "larks" was that of young men of *caste* disguising themselves in working clothes, to enjoy the loose delights of "Bartlemy" Fair, in September.

For 300 years the Lord Mayor and Aldermen had in vain attempted to suppress the Fair; when, in 1840, upon the recommendation of the City Solicitor, Mr. Charles Pearson, having purchased Lord Kensington's interest, they refused to let the ground for the shows and booths but upon exorbitant prices, and limited the Fair to one day; and the State proclamation of the Lord Mayor was given up. In 1849, the Fair was reduced to one or two stalls for gingerbread, gambling-tables for nuts, a few fruit-barrows and toy-stalls, and one puppet-show. In 1852, the number was still less.

"The Mayors had withdrawn the formality as much as possible from public observation, until in the year 1850, and in the mayoralty of Alderman Musgrove, his lordship having walked quietly to the appointed gateway, with the necessary attendants, found that there was not any Fair left worth a Mayor's proclaiming. After that year, therefore, no Mayor accompanied the gentleman whose duty it

was to read a certain form of words out of a certain parchment scroll, under a quiet gateway. After five years this form also was dispensed with, and Bartholomew Fair was proclaimed for the last time in the year 1855. The sole existing vestige of it is the old fee of three and sixpence still paid by the City to the Rector of St. Bartholomew the Great, for a proclamation in his parish."—*Morley*.

It was held that the proclamation was part of the charter for holding the market, on which account it continued to be read, until the Act of Parliament for removing the market to Copenhagen-fields at length relieved the Corporation of going through the useless ceremony.

Hone, in his *Every-day Book*, describes the Bartholomew Fair of 1825, with the minuteness of Dutch painting: Hone visited the several sights and shows, accompanied by Samuel Williams, by whom the wood-cut illustrations were cleverly drawn and engraved. Mr. Morley's History of the Fair, which has been referred to, is a laborious work, with some original views.

#### BARTHOLOMEW'S (ST.) HOSPITAL,

**I**N West Smithfield, is one of the five Royal Hospitals of the City, and the first institution of the kind established in the metropolis. It was originally a portion of the Priory of St. Bartholomew, founded by Rahere, in 1102, who obtained from Henry I. a piece of waste ground, upon which he built an hospital for a master, brethren and sisters, sick persons, and pregnant women. Both the Priory and the Hospital were surrendered to Henry VIII., who, at the petition of Sir Richard Gresham, Lord Mayor, and father of Sir Thomas Gresham, re-founded the latter, and endowed it with an annual revenue of 500 marks, the City agreeing to pay an equal sum; since which time the Hospital has received princely benefactions from charitable persons. It was first placed under the superintendence of Thomas Vicary, serjeant-surgeon to Henry VIII., Edward VI., Mary, and Elizabeth; Harvey was physician to the Hospital for thirty-four years; and here, in 1619, he first lectured on the discovery of the Circulation of the Blood.

The Hospital buildings escaped the Great Fire in 1666; but becoming ruinous, were taken down in 1730, and the great quadrangle rebuilt by Gibbs; over the entrance next Smithfield is a statue of Henry VIII., and under it, "St. Bartholomew's Hospital, founded by Rahere, A.D. 1102, re-founded by Henry VIII., 1546;" on the pediment are two reclining figures of Lameness and Sickness. The cost of these buildings was defrayed by public subscription, to which the munificent Dr. Radcliffe contributed largely; besides leaving 500*l.* a year for the improvement of the diet, and 100*l.* a year to buy linen. The principal entrance, next Smithfield, was erected in 1702; it is of poor architectural character.

The Museums, Theatres, and Library of the Hospital are very extensive; as is also the New Surgery, built in 1842. The Lectures of the present day were established by Mr. Abernethy, elected Assistant-Surgeon in 1787. Prizes and honorary distinctions for proficiency in medical science were first established in 1834; and their annual distribution in May is an interesting scene. In 1843 was founded a Collegiate Establishment for the pupils' residence within the Hospital walls. A spacious Casualty Room has since been added.

The interior of the Hospital, besides its cleanly and well-regulated wards, has a grand staircase; the latter painted by Hogarth, for which he was made a life-governor. The subjects are—the Good Samaritan; the Pool of Bethesda; Rahere, the founder, laying the first stone; and a sick man carried on a bier, attended by monks. In the Court Room is a picture of St. Bartholomew holding a knife, as the symbol of his martyrdom; a portrait of Henry VIII. in Holbein's manner; of Dr. Radcliffe, by Kneller; Perceval Pott, by Reynolds; and of Abernethy, by Lawrence.

In January, 1846, the election of Prince Albert to a Governorship of the Hospital was commemorated by the president and treasurer presenting to the foundation three costly silver-gilt dishes, each nearly twenty-four inches in diameter, and richly chased with a bold relief of—1. The Election of the Prince; 2. The Good Samaritan; 3. The Plague of London.

The Charity is ably managed by the Corporation: the president must have served as Lord Mayor; the qualification of a Governor is a donation of 100 guineas.

"From a search made in the official records of the City, it appears that for more than three hundred years, namely, since 1549, an alderman of London had always been elected president of St. Bartholomew's Hospital; until 1854, whenever a vacancy occurred in the presidency of the Royal Hospitals (St. Bartholomew's, Bethlehem, Bridewell, St. Thomas's, or Christ's Hospitals), it was customary to elect the Lord Mayor for the time being, or an alderman who had passed the chair. This rule was first broken when the Duke of Cambridge was chosen President of Christ's Hospital over the head of Alderman Sidney, the then Lord Mayor; and again when Mr. Cubitt, then no longer an alderman, was elected President of St. Bartholomew's in preference to the then Lord Mayor. This question is, however, contested by the foundation-governors or the Corporation, and the donation-governors."

It has been shown that King Henry VIII. in 1546 vested the Hospital of St. Bartholomew in the mayor, commonalty, and citizens of London, and their successors, for ever, in consideration of a payment by them of 500 marks a year towards its maintenance, and with it the nomination and appointment of all the officers. In September, 1557, at a general court of the Governors of all the Hospitals, it was ordered that St. Bartholomew's should henceforth be united to the rest of the Hospitals, and be made one body with them, and on the following day ordinances were made by the Corporation for the general government of all the Hospitals. The 500 marks a year have been paid by the Corporation since 1546, besides the profit of many valuable leases.

This charity has an existence of nearly seven centuries and a half. The Hospital receives, upon petition, cases of all kinds free of fees; and accidents, or cases of urgent disease, without letter, at the Surgery, at any hour of the day or night. There is also a "Samaritan Fund," for relieving distressed patients. The present buildings contain 25 wards, consisting of 650 beds, 400 being for surgical cases, and 250 for medical cases and the diseases of women. Each ward is presided over by a "sister" and nurses, to the number of nearly 180 persons. In addition to a very extensive medical staff, there are four resident surgeons and two resident apothecaries, who are always on duty, day and night, throughout the year, to attend to whatever may be brought in at any hour of the twenty-four. It further possesses a College within itself, a priceless museum; and a first-class Medical School, conducted by thirty-six professors and assistants. The "View-day," for this and the other Royal Hospitals of the City, is a day specially set apart by the authorities to examine, in their official collective capacity, every portion of the establishment; when the public are admitted.

### BATHS, OLDEN.

THE most ancient Bath in the metropolis is "*the old Roman Spring Bath*" in Strand-lane; but evidently unknown to Stow, though he mentions the locality as "a lane or way down to the landing-place on the banks of the Thames." This Bath is in a vaulted chamber, and is formed of thin tile-like brick, layers of cement and rubble-stones, all corresponding with the materials of the Roman wall of London; the water is beautifully clear and extremely cold. The property can be traced to the Danvers, or D'Anvers, family, of Swithland Hall, Leicestershire, whose mansion stood upon the spot.

*St. Agnes-le-Clair Baths*, Tabernaer-square, Finsbury, are supposed originally to have been of the above age, from finding the Roman tiles through which the water was once conveyed. Stow mentions them as "*Dame Anne's the clear*." The date assigned to these Baths is 1502. This famous spring was dedicated to St. Agnes; and, from the transparency and salubrity of its waters, denominated *St. Agnes-le-Clair*. It has claims to antiquity, for it appears that in the reign of Henry VIII. it was thus named:—"Fons voc' Dame Agnes a Clero." It is described as belonging to Charles Stuart, late king of England. This spring was said to be of great efficacy in all rheumatic and nervous cases, headache, &c.

*Peerless Pool*, Baldwin-street, City-road, is referred to by Stow as near *St. Agnes-le-Clair*, and "one other clear water, called *Perilous Pond*, because divers youths, by swimming therein, have been drowned;" but this ominous name was change to *Peerless Pool*; in 1743, it was enclosed, and converted into a bathing-place.

*The Cold Bath, Clerkenwell*, was originally the property of one Walter Baynes, who purchased a moiety of the estate, in 1696; when it comprised *Windmill-hill*, or *Sir John Oldcastle's Field*, extending westward from *Sir John Oldcastle's* to the River

Fleet, or, as it was then called, Turnmill-brook; and southward, by Coppice-row, to the same brook, near the Clerks' Wells: while Gardiner's Farm was the plot on which stands the Middlesex House of Correction. Baynes's attention was first directed to the *Cold Spring*, which, in 1697, he converted into a *Bath*, spoken of, eleven years afterwards, in Hatton's *New View*, as "the most noted and *first* about London," which assertion, written so near the time at which it states the origin of our Cold Bath, disproves the story of its having been the bath of Nell Gwynn, whom a *nude* figure, on porcelain, preserved by the proprietor, is said to represent. In Mr. Baynes's time, the charge for bathing was 2s. : or, in the case of patients who, from weakness, required the "chair," 2s. 6d. The chair was suspended from the ceiling, in such a manner that a person placed in it could be thereby lowered into the water, and drawn up again in the same way. The spring was at the acmé of its reputation in 1700. Of its utility, in cases of weakness more especially, there can be no question. Besides which, its efficacy is stated in the cure of scorbutic complaints, nervous affections, rheumatism, chronic disorders, &c. It is a chalybeate, and deposits a saline incrustation. The spring is said to supply 20,000 gallons daily. The height to which it rises in the marble receptacles prepared for it, is four feet seven inches. Until the sale of the estate in 1811, the Bath House, with the garden in which it stood, comprised an area of 103 feet by 60, enclosed by a brick wall, with a summer-house (resembling a little tower) at each angle: the house had several gables. The garden was let on building-leases, and the whole is now covered with houses, the Bath remaining in the midst. In 1815, the exterior of the Bath House was nearly all taken down, leaving only a small portion of its frontage, which it still retains.

*The Duke's Bath, or Bagnio*, is minutely described by Samuel Haworth, in 1683, as "erected near the west end of Long Acre, in that spot of ground called Salisbury Stables." Here dwelt Sir William Jennings, who obtained the royal patent for making all public bagnios or baths, either for sweating, bathing, or washing. "In one of the ante-rooms hangs a pair of scales, to weigh such as out of curiosity would know how much they lose in weight while they are in the bagnio. The bagnio itself is a stately oval edifice, with a cupola roof, in which are round glasses to let in light. The cupola is supported by eight columns, between which and the sides is a 'sumptuous walk,' arched over with brick. The bagnio is paved with marble, and has a marble table; the sides are covered with white gully-tiles, and within the wall were ten seats, such as are in the baths at Bath. There are also fourteen niches in the walls, in which are placed so many founts or basins, with cocks over them of hot or cold water. On one side of the bagnio hangs a very handsome pendulum-clock, which is kept to give an exact account how time passeth away. Adjoining to the bagnio there are four little round rooms, about eight feet over, which are made for degrees of heat, some being hotter, others colder, as persons can best bear and are pleased to use. These rooms are also covered with cupolas, and their walls with gully-tiles." We refer the reader to Haworth's account for the details of "the entertainment," as the bath is termed.

On the east side of the Bagnio fronting the street, is "The Duke's Bagnio Coffee-house." A great gate opens into a courtyard, for coaches. In this courtyard is visible the front of the Bagnio, having this inscription upon it in golden letters, upon a carved stone:—"The Duke's Bagnio." On the left of the yard is a building for the accommodation required for the bath, on the outside of which is inscribed in like manner—"The Duke's Bath." The building is about 42 feet broad, 21 feet deep, and three stories high. There is on the lower story a room for a laboratory, in which are chemic furnaces, glasses, and other instruments necessary for making the bath waters. On the accession of the Duke of York to the throne, the Baths were improved, and reopened, under the name of the "King's Bagnio," in 1686, by Leonard Cunditt, who, in his advertisement, says—"There is no other Bagnio in or about London besides this and the Royal Bagnio in the City." This, Malcolm supposes, was in allusion to the Bagnio we shall next describe, which seems to have been the first we had in the capital.

*The Bagnio*, in Bagnio-court (altered to Bath-street in 1843), Newgate-street, was built by Turkish merchants, and first opened in December, 1679, for sweating, hot bathing, and cupping. It has a cupola roof, marble steps, and Dutch tile walls, and was latterly used as a cold Bath.

*Queen Anne's Bath* was at the back of the house No. 3, Endell-street, Long-acre, on the west side of the street. It has been converted into a ware-room by an iron-monger whose shop is in the front of the premises. The part occupied by the water has been boarded over, leaving some of the Dutch tiles which line the sides of the Bath visible. The water, which flows from a copious spring, is a powerful tonic, and contains a considerable trace of iron. Thirty years ago it was much used in the neighbourhood, when it was considered good for rheumatism and other disorders. The house in which the Bath is situate was formerly No. 3, Old Belton-street: it was newly-fronted in 1845; the exterior had originally red brick pilasters, and a cornice, in the style of Inigo Jones. It does not seem clear how this place obtained the name of *Queen Anne's Bath*. It might be supposed that this had been a portion of the King's Bagnio. Old maps of London, however, show this could scarcely be correct, for the Duke's, afterwards the King's Bagnio was on the south side of Long-acre, and the above Bath is about a hundred yards to the north of that thoroughfare. "*Queen Anne's Bath*" is engraved from a recent sketch in the *Builder*, Oct. 12, 1861; whence the preceding details of the three Baths are abridged.

*The Hummums*, in Covent-garden, now an hotel, with baths, was formerly "*a Bagnio, or Place for Sweating*;" in Arabic "*Hammam*." Malcolm says: "*The Arabic root hama, حم, signifies calescere, to grow warm: hence by the usual process of deriving nouns from verbs in that language, hummun, حمم, a warm bath. They are known by that name all over the East.*" The Bagnio at the hot Baths at Sophia, in Turkey, is thus described by Lady Mary Wortley Montague, in her *Letters*, vol. i., and probably her description suggested the name of the Old and New Hummums:—

"It is built of stone, in the shape of a dome, with no window but in the roof, which gives light enough. There are five of these domes joined together; the outermost being less than the rest, and serving as a hall, where the portress stood at the door. Ladies of quality generally gave this woman a crown or ten shillings. The next room was a large one, paved with marble, and all round it are two raised sofas of marble, one above the other. There were four fountains of cold water in this room, falling first into marble basins, and then running on the floor in little channels cut for that purpose, which carried the streams into the next room, which is something less, and fitted with the same sort of marble sofas; but from the streams of sulphur proceeding from the bath adjoining to it, it is impossible to stay with one's clothes on. Through the other two doors were the hot baths; one of which had cocks of cold water turned into it—tempering it to what degree of warmth the bather please to have."

*Queen Elizabeth's Bath* formerly stood among a cluster of old buildings adjoining the King's Mews, at Charing Cross, and was removed in 1831. Of this Bath a plan and view were presented to the Society of Antiquaries, Feb. 9, 1832, and are engraved in the *Archæologia*, xxv. 588-90. The building was nearly square on the plan, and was constructed of fine red brick. Its chief merit consisted in its groined roof, which was of very neat workmanship, and formed by angular ribs springing from corbels. The form of the arch denoted the date of this building to be the fifteenth century.

*The Floating Baths* (of which there were two in our day) upon the Thames, in plan remind one of the Folly described by Tom Brown as a "*musical summer-house*," usually anchored opposite Somerset House Gardens. The Queen of William III. and her court once visited it; but it became a scene of low debauchery, and the bath building was left to decay, and be taken away for firewood.

*The Turkish Bath*, which closely resembles the Bath of the old Romans, was introduced into Ireland and England in 1856: and in London handsome baths were erected in Victoria-street, Westminster; these were taken down in 1855-6. The most extensive establishment of this class in London is the Hammam, or hot-air Bath, opened in 1862, No. 76, Jermyn-street, St. James's, and formed under the superintendence of Mr. David Urquhart; its cost is stated at 6000*l.*; the architecture is from Eastern sources.

BATHS AND WASH-HOUSES, for the working classes, originated in 1844, with an "*Association for Promoting Cleanliness among the Poor*," who fitted up a Bath-house and a Laundry in Glass-house Yard, East Smithfield; where, in the year ending June 1847, the bathers, washers, and ironers amounted to 84,584; the bathers and washers costing about one penny each, and the ironers about one farthing. The Association also gave whitewash, and lent pails and brushes, to those willing to cleanse their own wretched dwellings. And so strong was the love of cleanliness thus encouraged, that

women often toiled to wash their own and their children's clothing, who had been compelled to *sell their hair* to purchase food to satisfy the cravings of hunger. This successful experiment led to the passing of an Act of Parliament (9 and 10 Viet. c. 74), "To Encourage the Establishment of Baths and Wash-houses." A Committee sat at Exeter Hall for the same object; a Model Establishment was built in Goulston-square, Whitechapel; and Baths and Wash-houses were established in St. Pancras, Marylebone, St. Martin-in-the-Fields, and other large metropolitan parishes.

#### BAYNARD'S CASTLE.

A STRONGHOLD, "built with walls and rampires," on the banks of the Thames below St. Paul's, by Bainiardus, a follower of William the Conqueror. In 1111 it was forfeited, and granted by Henry I. to Robert Fitzgerald, son of Gilbert, Earl of Clare; from whom it passed, by several descents, to the Fitzwalters (the chief bannerets of London, probably in fee for this castle), one of whom, at the commencement of a war, was bound to appear at the west door of St. Paul's, armed and mounted, with twenty attendants, and there receive from the Mayor the banner of the City, a horse worth 20*l.*, and 20*l.* in money. In 1428, the castle became, probably by another forfeiture, crown property; it was almost entirely burnt, but was granted to Humphrey, Duke of Gloucester, by whom it was rebuilt; upon his attainder, it again reverted to the Crown. Here Stafford, Duke of Buckingham, presented to Richard, Duke of Gloucester, a parchment purporting to be a declaration of the three estates in favour of Richard; and in the "Court of Baynard's Castle" Shakspeare has laid scenes 3 and 7, act iii., of *King Richard III.*; the latter between Buckingham, the Mayor, Aldermen, and citizens, and Gloucester. Baynard's Castle was repaired by Henry VII., and used as a royal palace until the reign of Queen Elizabeth, when it was let to the Earls of Pembroke; and here, in 1553, the Privy Council, "changing their mind from Lady Jane," proclaimed Queen Mary. The castle subsequently became the residence of the Earls of Shrewsbury. Pepys records King Charles II. supping here, 19th June, 1660; and six years after the castle was destroyed in the Great Fire. The buildings surrounded two court-yards, with the south front to the Thames, and the north in Thames-street, where was the principal entrance. Two of the towers, incorporated with other buildings, remained till the present century, when they were pulled down to make way for the Carron Iron Company's premises. The ward in which stood the fortress-palace is named Castle-Baynard, as is also a wharf upon the site; and a public-house in the neighbourhood long bore the sign of "Duke Humphrey's Head."

In *Notes and Queries*, No. 11, it is shown that Bainiardus, who gave his name to Baynard's Castle, held land here of the Abbot of Westminster; and in a grant of 1653 is described "the common field at Paddington" (now Bayswater Field), as being "near to a place commonly called *Baynard's Watering*." Hence it is concluded "that this portion of ground, always remarkable for its springs of excellent water, once supplied water to Baynard, his household, or his castle; that the memory of his name was preserved in the neighbourhood for six centuries;" and that this watering-place is now Bayswater.

#### BAZAARS.

THE Bazaar is an adaptation from the East, the true principle of which is the classification of trades. Thus, Paternoster-row, with its books; Newport Market, with its butchers' shops; and Monmouth-street with its shoes; are more properly Bazaars than the miscellaneous stalls assembled under cover, which are in London designated by this name. Exeter 'Change was a great cntlery bazaar; and the row of attorneys' shops in the Lord Mayor's Court Office, in the second Royal Exchange, were a kind of legal Bazaar, the name of each attorney being inscribed upon a projecting signboard. The Crystal Palace of 1851, and the Great Exhibition of 1862, were vast assemblages of Bazaars. The Crystal Palace at Sydenham partakes of this character.

The introduction of the Bazaar into the metropolis dates from 1816, when was opened the SOHO BAZAAR, at 4, 5, and 6, Soho-square. It was planned solely by Mr.

John Trotter, with a truly benevolent motive. At the termination of the War, when a great number of widows, orphans, and relatives of those who had lost their lives on foreign service were in distress and without employment, Mr. Trotter conceived that an establishment in the hands of Government would promote the views of the respectable and industrious (possessing but small means) by affording them advantages to begin business without great risk and outlay of capital. Mr. Trotter having at that time an extensive range of premises unoccupied, without any idea of personal emolument, offered them to Government, free of expense, for several years, engaging also to undertake their direction and management on the same disinterested terms. His scheme was, however, considered visionary, and his offer rejected. Mr. Trotter then undertook the responsibility himself; the Bazaar was opened 1st February, 1816, and by excellent management, the establishment has since flourished; this success being mainly attributable to the selection of persons of respectability as its inmates, for whose protection an efficient superintendence of several matrons is provided. The counters are mostly for fancy goods, and to obtain a tenancy requires a testimonial respectably signed. The success of the Soho Bazaar led to establishments formed by private individuals, but with only temporary success.

The WESTERN EXCHANGE, Old Bond-street (with an entrance from the Burlington Arcade), was burnt down, and not re-established.

The QUEEN'S BAZAAR, on the north side of Oxford-street, the rear in Castle-street, was destroyed, May 23, 1829, by a fire which commenced at a dioramic exhibition of "the Destruction of York Minster by fire." The Bazaar was rebuilt; but proving unsuccessful, was taken down, and upon the site was built the Princess' Theatre.

The PANTHEON BAZAAR, on the south side of Oxford-street, with an entrance in Great Marlborough-street, was constructed in 1834, from the designs of Sydney Smirke, A.R.A., within the walls of the Pantheon Theatre, built in 1812; the fronts to Oxford-street and Poland-street being the only remains of the original structure. The magnificent staircase leads to a suite of rooms, in which pictures are placed for sale; and thence to the great Basilical Hall or Bazaar, which is 116 feet long, 88 feet wide, and 60 feet high; it is mostly lighted from curved windows in the roof, which is richly decorated, as are the piers of the arcades, with arabesque scrolls of flowers, fruit, and birds; the ornaments of *papier-maché* by Bielefeld. The style of decoration is from the loggias of the Vatican. The galleries and the floor are laid out with counters, and promenades between. From the southern end of the hall is the entrance to an elegant conservatory and aviary, mostly of glass, ornamented in Saracenic style. Here are birds of rich plumage, with luxuriant plants, which, with the profusion of marble, gilding, and colour, have a very pleasing effect in the heart of the smoky town.

The BAZAAR in Baker-street, Portman-square, was originally established for the sale of horses; but carriages, harness, furniture, stoves, and glass are the commodities now sold here. Madame Tussaud's Wax-work Exhibition occupies the greater part; and here, annually, in December, the Smithfield Club Cattle Show formerly took place.

The PANTECHNICON, Halkin-street, Belgrave-square, is a Bazaar chiefly for carriages and furniture. Here, too, you may warehouse furniture, wine, pictures, and carriages, for any period, at a light charge compared with house-rent.

The LOWTHER BAZAAR, nearly opposite the Lowther Arcade, Strand, was a repository of fancy goods, besides a "Magic Cave," and other exhibitions. The establishment was frequently visited by Louis Philippe from 1848 to 1850. The Magic Cave, with its cosmoramic pictures, realized 1500*l.* per annum, at 6*d.* for each admission. This and the house adjoining, eastward, have fronts of tasteful architectural design.

ST. JAMES'S BAZAAR, King-street, St. James's-street, was built for Mr. Crockford, in 1832, and has a saloon nearly 200 feet long by 40 wide. Here were exhibited, in 1841, three dioramic *tableaux* of the second obsequies of Napoleon, in Paris, at December, 1841. And in 1844 took place here the first exhibition of Decorative Works for the New Houses of Parliament.

The COSMORAMA, No. 207-209, Regent-street, originally an exhibition of views of

places through large convex lenses, was altered into a Bazaar, subsequently, the Prince of Wales's Bazaar.

The ANTI-CORN-LAW LEAGUE BAZAAR was held in the spring of 1845, when the auditory and stage of Covent-garden Theatre were fitted up for this purpose, and in six weeks 25,000*l.* was cleared by the speculation, partly by admission-money. The Theatre was painted as a vast Tudor Hall, by Messrs. Grieve, and illuminated with gas in the day-time; the goods being exhibited for sale on stalls, appropriated to the great manufacturing localities of the United Kingdom. At this time the Theatre was let to the League at 3000 guineas for the term of holding the Bazaar, and one night per week for public meetings throughout one year.

The PORTLAND BAZAAR, 19, Langham-place, is noted for its "German Fair," and its display of cleverly-modelled toy figures of animals.

### BEGGARS.

**B**EGGING, although illegal, and forbidden by one of our latest statutes, is followed as a trade in the metropolis, perhaps more systematically than in any other European capital. It has been stated that the number of professional Beggars in and about London amounts to 15,000, more than two-thirds of whom are Irish.

The vigilance of the Police, and the exposure of Beggars' frauds by the press and upon the stage (from the *Beggar's Opera* to *Tom and Jerry*), have done much towards the suppression of Begging. The Mendicity Society, in Red Lion-square, Holborn, established in 1818, has also moderated the evil by exposing and punishing impostors, and relieving deserving persons. The receipts of this institution are upwards of 4000*l.* a year. In one day it has distributed 3300 meals. The Society has a mill, stone-yard, and oakum-room, in which, during one day, there have been employed 763 persons, who would otherwise have been begging in the streets. A record is kept of all begging-letter cases, from which police-magistrates obtain information as to the character of persons brought before them. There are other societies for similar objects.

Sir John Fielding, in his "Cautions," published in 1776, gives a curious picture of the *Sky Farmers* who imposed upon the benevolent, as "good old charitable ladies," with dreadful stories of losses by fire, inundations, &c., for which the cheats collected subscriptions entered in a book, setting out with false names. Sir John says:—

There are persons in this town who get a very good livelihood by writing letters and petitions of this stamp. A woman stuffed up as if she was ready to lie in, with two or three borrowed children and a letter, giving an account of her husband's falling off a scaffold and breaking his limbs, by being drowned at sea, is an irresistible object.

Many years ago, there died in Broad-street Buildings, aged 81, John Yardley Vernon, who wore in the streets the garb of a beggar, though he possessed 100,000*l.*, which he realized as a stockbroker.

Mr. Henry Mayhew has given us the fullest report of the Beggar-life of our time: which has been supplemented by Mr. Halliday: all tending to prove that indiscriminate relief of street-beggars is most delusive and dangerous.

With the ordinary types of "disaster beggars," such as shipwrecked mariners, blown-up miners—"those having real or pretended sores vulgarly known as the scaldman dodge," we are all familiar. But there are oddities and niceties even in this humble department of the Begging art. There are, for instance, the lucifer droppers. The business of these persons is to take a box or two of lucifers, and offer them for sale at a crowded and dirty corner. They choose a victim, and contrive to get in his way. Down go the lucifers in the mud, and the professional sets up a piteous howl. The gentleman is ashamed of having done so much mischief, and to quiet the complainant, who is generally of the softer sex, he gives her many times the worth of her dropped lucifers. "Famished Beggars" seem highly successful in their own line, but their success demands the natural advantages of a corpse-like face, an emaciated frame, and a power of enduring the winter's cold in rags. Among those endowed with these requisites, the more accomplished performers have invented many ingenious subtleties. One device is the "choking dodge." The famished beggar seizes on a crust and eagerly devours it; but he has been too long without food—he tries in vain to swallow it, and it sticks in his throat. Another device is that of the "offal-eaters." These people decline absolutely to eat anything but what they find in the gutters. When we hear of all the trouble and ingenuity that is expended in deceiving us, we may well feel inclined to ask, as a beggar was once asked, "Don't you think you would have found it more profitable had you taken to labour or to some honester calling than your present one?" But the candid answer returned is suggestive. "Well, sir, p'raps I might," he replied; "but going on the square is so dreadfully confining."—*Saturday Review*, 1862.

## BELGRAVIA

WAS originally applied as a *sobriquet* to Belgrave and Eaton Squares and the radiating streets, but is now received as the legitimate name of this aristocratic quarter. In 1824, its site was "the Five Fields," intersected by mud-banks, and occupied by a few sheds. The clayey swamp retained so much water, that no one would build there; and the "Fields" were the terror of foot-passengers proceeding from London to Chelsea after nightfall. At length, Mr. Thomas Cubitt found the strata to consist of gravel and clay, of considerable depth: *the clay he removed, and burned into bricks; and by building upon the substratum of gravel, he converted this spot from the most unhealthy to one of the most healthy*, to the immense advantage of the ground-landlord and the whole metropolis. This is one of the most perfect adaptations of the means to the end to be found in the records of the building art. In 1829, the same land, consisting of about 140 acres, was nearly covered with first and second class houses, the nucleus being Belgrave-square, designed by George Basevi; the detached mansions, at the angles, by Hardwick, Kendall, and others; the area, originally a nursery garden, about ten acres. The level is low; for it has been ascertained that the ground-floor of Westbourne-terrace, Hyde Park Gardens, 70 feet above the Thames high-water mark, is on a level with the attics of Eaton and Belgrave Squares. Yet Chelsea acquired a proverbial salubrity in the last century by Doctors Arbuthnot, Sloane, Mead, and Cadogan residing there.

Mr. Thomas Cubitt, who died in 1856, was, in his nineteenth year, working as a journeyman carpenter; he then took one voyage to India and back as captain's joiner, and on his return to London with his savings, commenced business in the metropolis as a carpenter. In about six years, upon a tract of ground in Gray's Inn-road, he erected large workshops. About 1824, he engaged with the Duke of Bedford and Lord Southampton for the ground on which Tavistock-square and Gordon-square, with Woburn-place, and adjoining streets, now stand. In the same year he engaged with the Marquis of Westminster and Mr. Lowndes, to cover large portions of "the Five Fields," and ground adjacent: the results are Belgrave-square, Lowndes-square, Chesham-place, and other ranges of houses. He subsequently engaged to cover the vast open district lying between Eaton-square and the Thames, now South Belgravia. His works and establishment were at Thames Bank: they were destroyed by fire, by which Mr. Cubitt lost 30,000*l.*; when he was apprised of the calamity, his noble reply was, "Tell the men they shall be at work within a week, and I will subscribe 600*l.* towards buying them new tools." His large engagements as to Belgrave-square, begun in 1825, had just been completed in the year of his death; and his own dwelling-house at Denbies, in which he died, had only been just finished, as the future residence of his family. His portrait has been painted and engraved. He had two brothers, Alderman Cubitt, twice Lord Mayor; and Lewis Cubitt, the eminent engineer, architect of the Great Northern Railway Terminus.—*Memoir in the Builder*, 1856.

## BELLS AND CHIMES.

THE histories of the various peals of Bells in the metropolis, and the Societies by which their ringing has been reduced to scientific standards are interesting. Commencing from the Conquest, we have

THE CUREFW.—Although the *Couvre-feu* law was abolished by Henry I., who restored the use of lamps and candles at night after the ringing of the Curfew-bell, which had been prohibited by his predecessors (*Will. Malmesb.*, fol. 88), yet the custom of ringing the bell long continued; and in certain parishes of the metropolis, and in some parts of the country, to the present time,

"The curfew tolls the knell of parting day."

Among the charges directed for the wardmote inquests of London, in the second mayoralty of Sir Henry Colet (A.D. 1495), it is said: "Also yf there be anye paryshe clerke that ryngeth curfewe after the curfewe be ronge at Bowe Chyrche, or Saint Brydes Chyrche, or Saint Gyles without Cripelgat, all suche to be presented." (*Knigh't's Life of Dean Colet*). The same charge is in the wardmote inquest 1649.

"The church of St. Martin's-le-Grand, with those of Bow, St. Giles's, Cripplegate, and Barkin, had its Curfew-bell long after the servile injunction laid on the Londoners had ceased. These were sounded to give notice to the inhabitants of those districts to keep within, and not to wander in the streets; which were infested by a set of ruffians, who made a practice of insulting, wounding, robbing, and murdering the people whom they happened to meet abroad during the night."—*Strype's Slow*, v. i. book iii. p. 106.

"The *Couvre-feu* is still rung, at eight o'clock, at St. Edmund the King, Lombard-street. At Bishopsgate (St. Botolph's); St. Leonard's, Shoreditch; Christchurch, Spitalfields; St. Michael's, Queenhithe; St. Mildred's, Bread-street; St. Autholin's, Budge-row; and in some other City churches,

\* The bell at this church was silenced by order of vestry, December, 1847.

there are bells, which are popularly known as the *couvre-feu*, but some of which are really, I believe prayer-bells.

"On the southern side of the Thames, the *couvre-feu* was, till within these six or seven years, nightly rung at St. George's Church, Borough."—Mr. Syer Cuming: *Proceedings of the British Archaeological Association*, April 12, 1848.

Mr. Cuming also states that at St. Peter's Hospital, Newington (the Fishmongers' Almshouses, taken down in 1851), there was "a bell rung every evening from eight o'clock till nine, which the old parishioners were wont to denominate the *couvre-feu*; but it is now said that this was rung to warn all strangers from the premises, and the almspeople to their several apartments."

The Curfew was not always rung at eight o'clock, for the sexton in the old play of the *Merry Devil of Edmonton* (4to. 1631) says:—

"Well, 'tis nine a cloke, 'tis time to ring curfew."

The Curfew-bell, strictly as such, had probably fallen into disuse previous to the time of Shakspeare, who, in *Romeo and Juliet*, applies the term to the morning bell:—

"The second cock hath crow'd,  
The curfew-bell has rung, 'tis three o'clock."

At Charterhouse, the Chapel-bell (which bears the arms and initials of Thomas Sutton, the founder, and the date 1631) is rung at eight and nine to warn the absent pensioner of the approaching hour; and this practice is, we think, erroneously adduced as a relic of Curfew-ringing.

"There is one peculiarity attached to the ringing, which is calculated to serve the office of the ordinary passing-bell; and that is the number of strokes, which must correspond with the number of pensioners. So that when a brother-pensioner has deceased, his companions are informed of their loss by one stroke of the bell less than on the preceding evening."—*Chronicles of Charterhouse*, p. 180.

The *Couvre-feu* formerly in the collection of the Rev. Mr. Gostling, and so often engraved, passed into the possession of Horace Walpole, and was sold at Strawberry Hill, in 1842, to Mr. William Knight. It is of copper, riveted together, and in general form resembles the "Dutch-oven" of the present day. It is stated to have been used for extinguishing a fire, by raking the wood and embers to the back of the hearth, and then placing the open part of the *couvre-feu* close against the back of the chimney. In February, 1842, Mr. Syer Cuming purchased of a curiosity-dealer in Chancery-lane a *couvre-feu* closely resembling Mr. Gostling's; and Mr. Cuming considers both specimens to be of the same age, of the close of the 15th or early part of the 16th century; whereas Mr. Gostling's specimen was stated to be of the Norman period. A third example of the *couvre-feu* exists in the Canterbury Museum. Another *Couvre-feu* was sold by Messrs. Foster, in Pall Mall, April 11, 1866; reputed date 1068.

THE BELL OF THE CLOCHARD, or Bell-tower, of the ancient Palace at Westminster had a curious destination. Although we find the details of building the tower, by King Edward III., we find nothing respecting the construction or even placing of the clock, or the casting of not one, but three bells; but bell-ropes and a vice or engine are mentioned. In later accounts (Henry VI.) we, however, have the expense of maintaining the clock and bells, for the superintendence of which Thomas Clockmaker received 13s. 4d. a year as his salary; he was but a subordinate officer; the account being rendered by Agnes de la Van, the wife of Jeffrey de la Van, who was himself the deputy of John Lenham, who is designated "Custos orologii domini Regis infra palatium suum Westmonasterio."—Rev. J. Hunter, F.S.A.: *Archæologia*, xxxvii. 23.

Aubrey, in his *Natural History of Wiltshire*, ed. Britton, p. 102, has this note: "The great bell at Westminster, in the Clochiar at the New Palace Yard, 36,000 *lib.* weight. \* \* It was given by Jo. Montacute, Earle of (Salisbury, I think). Part of the inscription is thus, *sc.* ' . . . . . annis ab acuto monte Johannis.'" The three clock-bells when taken down, however, weighed less than 20,000 lb. The metal of the largest bell is now part of the great bell of St. Paul's Cathedral.

The GREAT BELL for the Westminster Palace Clock was cast at Norton, near Stockton-on-Tees, from the design of E. B. Denison, Q.C., in 1856, by Warner and Sons, Cripplegate; its metal was nearly as hard as spring-steel, and it cracked in the sounding at Westminster, before it was attempted to be raised. It was then broken into pieces, and carted away to Mears's Foundry, Whitechapel, and there re-cast, with 2½ tons less metal; the clapper weighs about 6 cwt.: the former weighed 12 cwt. It was raised Nov. 18, 1858; weight of bell, 11½ tons: name, "St. Stephen;" note, nearer the true E natural than that of the first bell. This great bell having cracked, the clock for a time struck the quarters on the four quarter-bells, and the hour also on the largest of them, which is smaller, but more powerful, as well as sweeter in tone, than the great bell of St. Paul's: its weight is 4 tons. The great or hour bell has been repaired, and is now in use.

ST. PAUL'S CATHEDRAL has four bells,—one in the northern, and three in the southern or clock-tower: the former is tolled for prayer three times a day, and has a clapper; but neither of the four can be raised upon end and rung, as other church-bells. In the clock-tower are hung two bells for the quarters, and above them is hung the Great Bell, on gudgeons or axles, on which it moves when struck by the hammer of the clock. It was cast principally from the metal of a bell in the clock-tower opposite Westminster Hall Gate, which, before the Reformation, was named "Edward;" subsequently to the time of Henry VIII., as appears by two lines in Eccles's *Glee*, it was called "Great Tom," as Gough conjectures, by a corruption of *grand ton*, from its deep, sonorous tone. On August 1, 1698, the clochard, or tower, was granted by William III. to St. Margaret's parish, and was taken down: when the bell was found to weigh 82 cwt. 2 qrs. 21 lbs., and was bought at 10*d.* per lb., producing 38*5l.* 1*7s.* 6*d.*, for St. Paul's. While being conveyed over the boundary of Westminster, under Temple Bar, it fell from the carriage; it stood under a shed in the Cathedral Yard for some years, and was at length re-cast, with additional metal, the inscription stating it to have been "brought from the ruins of Westminster." It was cast in 1709, by Richard Phelps, of Whitechapel, whose successors in the foundry, Charles and George Mears, state the dimensions, &c., as follows:—"Diameter, 6 feet 9½ inches; height to top of crown, 6 feet 4½ inches; thickness at sound bow, 5¼ inches; weight, 5 tons 4 cwt. We have a portion of the agreement made between the Dean and Chapter of St. Paul's and Mr. Phelps, dated July 8th, 1709, in which it is stipulated that the hour-bell and quarters should be delivered at the Cathedral by the 1st of October in the same year."

"The key-note (tonic) or sound of this bell is A flat (perhaps it was A natural, agreeably to the pitch at the time it was cast), but the sound heard at the greatest distance is that of E flat, or a fifth above the key-note; and a musical ear, when close by, can perceive several harmonic sounds."—*W. Parry*.

The Great Bell is never used, except for the striking of the hour, and for tolling at the deaths and funerals of any of the Royal Family, the Bishop of London, the Dean of the Cathedral; and the Lord Mayor, should he die in his mayoralty. The same hammer which strikes the hours has always been used to toll the bell, on the occasion of a demise; but the sound then produced is not so loud as when the hour is struck, in consequence of the heavy clock-weight not being attached when the bell is tolled, and causing the hammer to strike with greater force than by manual strength.

It was the Westminster "Great Tom" which the sentinel on duty at Windsor Castle, during the reign of William III., declared to have struck thirteen instead of twelve times at midnight, and thus cleared himself of the accusation by the relief-guard of sleeping upon his post. The story is told of St. Paul's Bell; but the Cathedral had no heavy bell until the above grant by King William, who died in 1702; the circumstance is thus recorded in the *Public Advertiser*, Friday, June 22, 1770:—

"Mr. John Hatfield, who died last Monday at his house in Glasshouse Yard, Aldersgate, aged 102 years, was a soldier in the reign of William and Mary, and the person who was tried and condemned by a court-martial for falling asleep on his duty upon the Terrace at Windsor. He absolutely denied the charge against him, and solemnly declared that he heard St. Paul's clock strike thirteen; the truth of which was much doubted by the court, because of the great distance. But whilst he was under sentence of death, an affidavit was made by several persons, that the clock actually did strike thirteen instead of twelve; whereupon he received his Majesty's pardon."

This striking thirteen, instead of twelve, is mechanically possible, and was caused by the *lifting-piece holding on too long*.

The ancient Societies of Bell-ringers in London, called "College Youths," "Cumberland Youths," &c., it is very probable, are relics of the ancient Guilds; for, as early as the time of Edward the Confessor, there was in Westminster a guild of ringers. They were re-organized by Henry III.; and by a patent roll in the 39th year of his reign, the brethren of the Guild of Westminster, who were appointed to ring the great bells there, were to receive annually out of the exchequer 100 shillings—50 at Easter and 50 at Michaelmas—until was provided the like sum for them payable out of lands for the said ringing. And "that the brethren and their successors for ever enjoy all the privileges and free customs which they have enjoyed from the time of Edward the Confessor, to the date of these presents."

In the library of All Souls', Oxon, is a manuscript of "The orders agreed upon by

the company exercising the arte of ringing, knowne and called by the name of the Schollers of Cheapsyde, in London, begun 2nd February, 1603." This MS. contains the names of all the members down to the year 1634. After this date, in 1637, the Society of College Youths was established by Lord Brereton, Sir Cliff Clifton, and several other gentlemen, for the practice of ringing. They used to ring at St. Martin's Vintry, on Colledge-hill, near Doctors' Commons, upon a peal of six bells. This church was burnt in the Great Fire of London, and never rebuilt; but the Society still retains the name derived from Colledge-hill, and has in its possession a massive silver bell, which formed the top of the staff which used to be carried by the beadle of the Society when the members attended divine service at Bow Church, on the anniversary of its foundation, and other occasions; also an old book, in which the names of its members are entered. This book was lost at the time of the Great Fire, but was subsequently recovered. The names in it are sufficient to show that ringing was considered an amusement worthy of nobles, divines, and scholars. Among the notables who have been elected members are the Hon. Robert Cecil (Marquis of Salisbury), Sir John Bolles and Sir Watkin W. Wynne, baronets; Sirs Francis Withins, Martin Lonly; Richard Everard, Henry Tulse, aldermen, Richard Atkins, Henry Chaucey, Thomas Samnell, Gilbert Dolbin, William Culpeper; John Tash, alderman; Henry Hicks, and Watkin Lewis, knights.

About 1700, another Society was formed, which was called "The London Scholars." In 1746, the name was changed to the present title, "The Cumberland Youths," in consequence of the great victory under the Duke of Cumberland, at the battle of Culloden in that year. The London Scholars rang the bells of Shoreditch Church as the victorious Duke passed by on his return from the battle; for which a medal of the Duke and his chargers was presented to the Society, and is still worn by the master of the Society of Cumberland Youths, at their general meetings. The St. James's Youths, another society, was established on St. James's-day, 25th July, 1824, at St. James's Church, Clerkenwell. The grandsire ringing principally belongs to this society, as it is the first rudiment of the half-pull ringing. About 1841, the Society rang a peal of 12,000 changes of grandsire quatres at All Saints' Church, Fulham; also 7325 of grandsire cinques at St. Martin's-in-the-Fields, in 1837; and many other peals besides, as recorded in London church-belfries. The head-quarters of the society are at St. Clement Danes, Strand. The parochial ringing churches are St. Andrew's, St. Sepulchre's, St. Dunstan's in the West, St. Clement's, Westminster Abbey, St. John's, Waterloo-road; and St. Mary's, Lambeth:—

There are certain Bells still remaining in London, notwithstanding the Great Fire, which have historical notes. That, for instance, at the top of the Bell-tower which adjoins the Governor's lodgings in the Tower, which was probably tolled at the execution of Lady Jane Grey, Anne Boleyn, and other State prisoners, and probably sounded alarms of fire and other calamities in early days. This bell seems to have been more particularly used by the Tower authorities than that in St. Peter's Church, which stands near the spot where the scaffold was usually erected. The bells of St. Bartholomew's, Smithfield, are old, and were probably rung when the Court has come to the tournaments and jousting at Smithfield. With the exception of Westminster Abbey, St. Saviour's, All Hallows Barking, Cripplegate, and Old St. Paneras, there are few of the ancient bell-towers of the metropolis remaining. Several of the bells, however, may have been saved from the ruins of the Great Fire. There is also the bell of the Charter-house, which has tolled at the departure of a brother from soon after the death of Thomas Sutton. Many will still remember that, while the fire of the second Royal Exchange was raging, the self-acting bells played merrily the tune of "There is nae luck about the house," and eventually fell with a crash amidst the blazing ruins.—*Communications to the Builder.*

The curious custom of a new rector tolling himself into his new benefice, is observed in the City churches. Before the Reformation, no layman was allowed to be a "ringer," and the ecclesiastics had to perform their office in surplice. The "tolling-in" is as follows:—"The rector is met at the door of the church by the trustees of the church property belonging to the parish, and the churchwardens. Having obtained possession of the keys of the church, the new rector unlocks the doors: then, having closed them, he proceeds alone to the belfry, and for a few minutes tolls one of the bells, thus complying with the custom imposed by the ordinances of the Church, by announcing to the parishioners at large his acceptance of the rectorship, and his possession of the church property.

BOW BELLS are of ancient celebrity; and it was from the extreme fondness of the citizens for them in old times that a genuine Cockney has been supposed to be born

within the sound of Bow Bells. According to Fynes Morison, the Londoners, and all within the sound of Bow Bells, are, in reproach, called Cockneys, and eaters of "battered toasts." Beaumont and Fletcher speak of "Bow Bell suckers," *i.e.*, as Mr. Dyce properly explains it, "children born within the sound of Bow Bells."

From a book of ordinances of the City of Worcester, Mr. Burt quotes certain annual payments, dating from very early times, for ringing "day-bell" and "bow-bell," the latter being doubtless the same as the curfew, although now rung at eight instead of at nine, as at the time of the ordinances. There is no local explanation of the term bow-bell, but Mr. Burt considers Mr. Wolf's suggestion feasible—that as the curfew bell of London was rung at Bow Church, the name of that church was adopted in other places, and applied to the bell.—*Proceedings of the British Archaeological Association*, April, 1866.

In 1469, by an Order of Common Council, Bow bell was to be rung nightly at nine o'clock, and lights were to be exhibited in the steeple to direct the traveller. When the church was rebuilt, the belfry was prepared for twelve bells, but only eight were placed: these got out of order, and in 1758 the citizens petitioned the vestry, that the tenor bell being the completest in Europe, and the other seven very inferior, they requested to be allowed, at their own expense, to recast the seven smaller bells, and to add two trebles. This was permitted, after Dance and Chambers, the architects, had reported that "neither such additional weight, nor any weight that can be put upon the steeple, will have any greater effect than the bells now placed there." Accordingly, the set of ten bells was completed by subscription, and was first rung June 4, 1762, the anniversary of the birth of King George III. In the year 1822, some fear was expressed that the use of the bells would endanger the steeple, when, by order of vestry, the bells were rung for trial; and from a subsequent examination, there did not appear to be any cause for alarm. The present set is much heavier, and much more powerful in tone, than the first peal of bells: it requires two men to ring the largest (the tenor, 53 cwt., key C), in consequence of its not having been properly hung. In 1837, the College Youths rang a grand peal of Stedman quattres on Bow Bells; also, in 1840, a peal of triple ten, at the same church. Mr. W. H. Burwash, the sexton of St. James's, Clerkenwell, rang the triple to both peals, and conducted them; and Mr. A. C. Frost rang the tenor to both: weight, 2 tons 13 cwt. 22 lb., stated to be the greatest bell rung by a single man in England.

ST. BRIDE'S has a fine peal. A century ago, the College Youths, at their own expense, placed the two small bells in St. Bride's tower, to make the present peal of twelve bells; and, about 1730, twelve members of the Society rang the first peal of triple-bob maximus that was ever known to be rung on twelve bells. Rear-Admiral Sir Francis Grey and Lord Chief-Justice Hale were members of this Society, and rang in the peal. There is still a record of this feat in St. Bride's ringing-room. On Monday evening, March 13, 1843, the Cumberland Society rang a complete peal of cinques on Stedman's principle, consisting of 5146 changes, in four hours two minutes, at St. Bride's; it being the first peal in that scientific method ever performed on the bells.

CHRISTCHURCH, Spitalfields', Bells are scarcely inferior to any in the kingdom; the tenor weighs 44 cwt., or 4928 lbs. In the spring of 1836, by a fire which broke out in the belfry, and reached the loft, the tenor fell upon the other bells, and the whole were shivered to pieces, or fused by the heat of the conflagration; the clock and chimes were also destroyed: they have all been replaced.

ST. LEONARD'S, Shoreditch.—Here the London Society of Cumberland accomplished their greatest achievement in olden times—a peal of 12,000 changes of triple-bob royals, which took nine hours and five minutes on 10 bells, March 27th, 1784, of which there is a record in the tower, written on copper. The Society, in 1820, added two new small bells to St. Leonard's, to make a peal of 12 bells, at their own cost—over 100%; but it is to be regretted that the great bell of the peal has been cracked.

ST. MARTIN'S-IN-THE-FIELDS.—The peal of 12 bells has been put in good ringing order, and all the bells made to strike true, to the satisfaction of the parochial ringers and the Cumberland Society, who regard the ringing as now more easy and more

merry, as well as more musically true. The hammer of the church-clock, too, has been altered so as to strike downwards instead of upwards, thus giving greater force and clearness to the tone. The ringing-room itself has also been improved; boxes have been placed to the bells, and the place lit with gas, as well as the staircase and bell-chamber. On Nov. 19, 1862, the Cumberland Society rang here a peal of 5050 changes of Stedman's quattras, in three hours and twenty-eight minutes, in honour of the Prince of Wales attaining his majority.

ST. MICHAEL'S, Cornhill, had in Stow's time, six bells, the sixth being "rung by one man by the space of 160 yeares"; (?) Upon one St. James's night, on the ringing of a peal, during a storm, the lightning entered at the north window, which so terrified the ringers that "they lay down as dead." The present tower, rebuilt 1723, has a fine peal of 12 bells, with which, in March, 1866, twelve members of the College Youths rang a fine and good peal of treble-bob maximus, consisting of 5088 changes, occupying three hours and fifty-two minutes; this being the first peal on treble-bobs, on twelve bells ever rung, when the tenor man conducted the peal.

ST. SAVIOUR'S, Southwark, has a beautiful tenor and 12 large bells; a spacious ringing-room with great marble tablet, put up at the expense of the various societies of ringers in London: a record of a grand peal by the Cumberland Society cost 20 guineas. The 12 bells of St. Saviour's, were not rung at the opening of New London Bridge, in 1831, on account of the alleged insecurity it would occasion to the tower. The tenor of this peal weighs  $52\frac{1}{2}$  cwt.; that of Bow, 53 cwt.

ST. SEPULCHRE'S BELL has a melancholy history. In 1605, Mr. R. Dowe left 50*l.* to this parish, on condition that a person should go to Newgate in the still of the night before every execution-day, and, standing as near as possible to the cells of the condemned, should, with a hand-bell (which he also left), give twelve solemn tolls, with double strokes, and then deliver this impressive exhortation:—

"All you that in the condemned hole do lie,  
Prepare you, for to-morrow you shall die;  
Watch, all, and pray, the hour is drawing near  
That you before the Almighty must appear;  
Examine well yourselves, in time repent,  
That you may not t' eternal flames be sent.  
And when St. Sepulchre's Bell to-morrow tolls,  
The Lord have mercy on your souls!  
Past twelve o'clock!"

Dowe likewise ordered that the great bell of the church should toll on the morning; and that, as the criminals passed the wall to Tyburn, the bellman or sexton should look over it and say, "All good people, pray heartily unto God for these poor sinners, who are now going to their death;" for which he who says it is to receive *1*l.* 6*s.* 8*d.**; let us hope that the gift ere long will be a free one.

ST. STEPHEN'S, Rochester-row, Westminster.—Miss Burdett Countts has given to this church, built at her cost, a fine peal of eight bells, with a tenor of 1 ton 5 cwt.; and to St. Ann's, Highgate-rise, a peal of eight bells.

CHIMES.—The only church chimes now existing in the metropolis are those of St. Clement Danes, in the Strand; St. Giles's, Cripplegate; St. Dionis, Fenchurch-street; and St. Bride's, Fleet-street. The Cripplegate chimes are the finest in London; they were constructed by a poor working man. Formerly, several churches in London, including those of St. Margaret and St. Sepulchre, had chime-hammers annexed to their bells.

In each Royal Exchange, the business has been regulated by a bell: in Gresham's original edifice was a tower "containing the bell, which twice a day summoned merchants to the spot—at twelve o'clock at noon, and at six o'clock in the evening." (*Burton's Life and Times of Sir T. Gresham*, ii. 345).

The Chimes at the Royal Exchange, destroyed by fire in 1838, played, at intervals of three hours, "God save the Queen," "Life let us cherish," "The Old 104th Psalm (on Sundays), and "There's nae luck about the house," which last air they played at twelve o'clock on the night of the fire, just as the flames reached the chime-loft.

In the new Exchange, chimes have not been forgotten. The airs have been arranged

by Mr. E. Taylor, the Gresham Professor of Music; which Mr. Dent has applied on the chime-barrel. The airs are:—

1. A Psalm tune, by Henry Lawes, the friend of Milton; it is in the key of B flat, so as to exhibit the capability of the chimes to play in different keys.

2. God save the Queen, in E flat.

3. Rule Britannia.

4. An air selected by Professor Taylor to exhibit the power of the bells. The key in which the bells are set is E flat. There are fifteen bells, and two hammers to several, so as to play rapid passages. There are frequently three hammers striking different bells simultaneously, and sometimes five. The notes of the bells are as follows:—B flat, A natural, A flat, G, F, E flat, D natural, D flat, C, B flat, A natural, A flat, G, F, and E flat. The first bell, B flat, weighs 4ewt. 26lbs., and its cord, 8cwt. 2qrs. 5lbs.; the four bells, A flat, G, F, and E flat, weigh severally, 10cwt. 1qr. 9lbs., 12cwt. 2qrs. 27lbs., 15cwt. 2qrs. 14lbs., and 23cwt. 2qrs. 24lbs. The united weight of them is 131cwt. 1qr. They were cast by Messrs. Mears, of Whitechapel.

### BERMONDSEY

IS a large parish in Surrey, adjoining the borough of Southwark; and named *Beor-mund's eye*, or island, from its having been the property of some Saxon or Danish Thane, and the land being insulated by watercourses connected with the Thames. In 1082, a wealthy citizen built here a convent, wherein some Cluniac Monks settled in 1089, to whom William Rufus gave the manor of Bermondsey; and numerous donations and grants followed, until this became one of the most considerable alien priories in England. From its vicinity to London, the monastery occasionally became the residence of royal personages. Katherine of France, widow of Henry V., retired to this sanctuary, and died here, Jan. 3, 1437; and Elizabeth Widvile, relict of Edward IV., was committed to the custody of the monks by her son-in-law, Henry VII., and ended her days here, in penury and sorrow, in 1492. Among the persons of note interred here is said to have been Margaret de la Pole, wife of Edmund de la Pole, afterwards Earl of Suffolk, who was executed by Henry VIII., in 1513. The Abbey occupied the ground between Grange-walk (where was a farm) and Long-walk, which was a passage between the monastic buildings and the conventual church; the latter a little south of the present parish church of St. Mary Magdalene, originally founded by the Priors of Bermondsey for their tenantry; rebuilt in 1680, and since repaired. Among the communion-plate is an ancient silver alms-dish, supposed to have belonged to the abbey.

A drawing formerly in Mr. Upcott's collection shows the monastery as rebuilt early in the reign of Edward III., and the cloisters and refectory in 1380. After the surrender of the establishment to Henry VIII., he granted it to Sir Robert Southwell, Master of the Rolls: it was by him sold to Sir Thomas Hope, who, in 1545, pulled down the ancient Priory Church, and with the materials built Bermondsey House, where died Thomas Ratcliffe, Earl of Sussex (Lord Chamberlain to Queen Elizabeth), in 1583. The east gate of the monastery was taken down about 1760; the great gate-house was nearly entire in 1806, shortly after which all the ancient buildings were removed, and Abbey-street built on their site. Bermondsey-square now occupies the great close of the Abbey, and Grange-road was its pasture-ground, extending to the farm; the ancient watercourse, Neckinger, was once navigable from the Thames to the Abbey. Adjoining was an Almonry, or Hospital, for "indigent children and necessitous converts," erected by Prior Richard in 1213, but not to be traced after the Reformation.

There is, in the Spa-road, St. James's Chapel, a Grecian edifice, opened in 1829; the altar-piece is a large picture of "the Ascension," painted by John Wood, in 1844, and the prize picture selected from among eighty competitors for 500*l.* bequeathed for this purpose by Mr. Harcourt, a parishioner, and awarded by Eastlake and Haydon. St. Paul's Gothic Church and Schools were opened in 1848; and Christ Church and Schools, Neckinger-road (Romanesque), in 1849.

The Roman Catholic population of Bermondsey exceeds 5000 persons; they have a large church near Dockhead, opened in 1835. Precisely three centuries after the Dissolution of the Monasteries, was founded here, in 1838, a Convent for the "Sisters of Mercy." The inmates are mostly ladies of fortune, and support a school for 200 children. Sister Mary, the Lady Barbara Eyre, second daughter of the sixth Earl of Newburgh, took the vows December 12, 1839; with Miss Ponsonby, Sister Vincent.

At Bermondsey, perhaps, is carried on a greater variety of trades and manufactures

than in any other parish of the kingdom. It has been the seat of the Leather Market for nearly two centuries; its series of tidal streams from the Thames twice in twenty-four hours supplying water for the tanners and leather-dressers. At the Neckinger Mills here, nearly half a million of hides and skins are converted into leather yearly; and in the great Skin Market are sold the skins from nearly all the sheep slaughtered in London. Steam-machinery is much employed in the manufactories; and in Long-lane is an engine chimney-shaft 175 feet high. Here is Christy's Hat Manufactory, employing 500 persons, and considered the largest establishment of the kind in the world. Here, too, abound paper and lead mills, chemical works, boat and ship builders, mast and block makers, rope and sail makers, coopers, turpentine works, &c. The tidal ditches, with their filthy dwellings, produced cholera in 1832 and 1848-49; in the latter year 189 deaths occurred in 1000 inhabitants. Here is Jacob's Island, so powerfully pictured in Dickens's novel of *Oliver Twist*.

Bermondsey Spa, a chalybeate spring, discovered about 1770, was opened in 1780, as a minor Vauxhall, with fireworks, and a picture-model of the siege of Gibraltar, painted by Keyse, and occupying about four acres. He died in 1800, and the garden was shut up about 1805. There are *tokens* of the place extant; the *Spa-road* is named from it.

In the parish was born Mary Johns, the daughter of a cooper, in 1752, who wrote the Lord's Prayer in the compass of a silver penny.

In the Registers, 1604, is the "forme of a solemne *Vowe* made betwixt a Man and his Wife, having been longe absent, through which occasion the Woman beinge married to another Man, took her again."

Viewed from the Greenwich Railway, which crosses its north-eastern side, Bermondsey presents a curious picture of busy life, amid its streams and tan-pits, its narrow streets, close rents and lanes, by no means tributary to the public health. Yet the district has long been noted for longevity; and from 90 to 105 years are not uncommon in the burial registers.

#### BETHNAL GREEN,

**A** VILLAGE or large green, formerly a hamlet of Stepney, but made a parish (St. Matthew) in 1743. The old English ballad of *The Blind Beggar of Bethnal Green* has given the district a long celebrity; the story "decorates not only the sign-posts of the publicans, but the staff of the parish beadle."—(*Lytsons*.) The incidents have been poetically wrought into a drama by Sheridan Knowles. The mansion traditionally pointed to as "the Blind Beggar's House" was, however, built by John Thorpe, in 1570, for a citizen of London, and called after him, "Kirby's Castle." Pepys describes his visits to this house, then Sir W. Rider's, to dinner: his "fine merry walk with the ladies alone after dinner, in the garden; the greatest quantity of strawberries he ever saw, and good." It was then said that only some of the outhouses, and not the mansion, were built by the Blind Beggar of Bethnal Green.

Robert Ainsworth, author of the Latin Dictionary which bears his name, kept an academy at Bethnal Green.

Here was a large house said to have been a palace of Bishop Bonner's, and taken down in 1849, in forming Victoria Park. Between 1839 and 1849, there were built here ten district churches, principally through the exertions of Dr. Blomfield, Bishop of London: the tenth of these churches (St. Thomas's) was erected at the sole cost of a private individual. Silk-weavers live in great numbers at Bethnal Green.

Nichol-street, New Nichol-street, Half Nichol-street, Nichol-row, Turvil-street, comprising within the same area numerous blind courts and alleys, form a densely-crowded district in Bethnal Green. Among its inhabitants may be found street vendors of every kind of produce, travellers to fairs, tramps, dog-fanciers, dog-stealers, men and women sharpers, shoplifters and pickpockets. It abounds with the young Arabs of the streets, and its outward moral degradation is at once apparent to any one who passes that way. Here the police are *certain* to be found, day and night, their presence being required to quell riots and to preserve decency. Sunday is a day much devoted to pet pigeons and to bird-singing clubs: prizes are given to such as excel in note, and a ready sale follows each award. Time thus employed was formerly devoted to cock-fighting. In this locality, twenty-five years ago, an employer of labour, Mr. Jonathan Duthoit, made an attempt to influence the people for good by the hire of a room for meeting purposes. The first attendance consisted of one person. Persistent efforts were, however, made; other rooms have from time to time been taken and enlarged; here is a Hall for Christian instruction; and another for Educational purposes; Illustrated Lectures are delivered; a Loan Library has been established, also a Clothing Club and Penny Bank, and Training Classes for industrial purposes.—*Athenæum*, 1862.

## BETHLEM OR BETHLEHEM HOSPITAL.

THE history of the word *Bedlam*, by which this Hospital was called, within recollection, has been the subject of much curious inquiry. Our lexicographers commonly refer its introduction into our language to the conversion of a religious house of this name into a lunatic asylum, or about 320 years ago. The word *Bedlem*, however, occurs in Tyndale's quarto testament, twenty or two-and-twenty years before the above date; and Mr. Gairdner has proved it to have been so applied still earlier:—

It is quite true, says Mr. Gairdner, that the Hospital was granted to the City of London for the purpose to which it is still applied, either by Henry the Eighth or Edward the Sixth; but it is a mistake to suppose it had never been so used before. The royal grant changed the government of the hospital, not its use. Monastic institutions, whatever evils they may have been answerable for, were undoubtedly the medium of much practical good that we seldom give them credit for, and to mental and bodily disease they offered such assistance as the skill and science of the age afforded. I have myself met with a passage in the works of Tyndale's great opponent, Sir Thomas More, who died even before (a martyr, too, though for a different cause), which proves beyond a doubt that Bethlehem Hospital was a place for lunatics before the dissolution of the religious houses. "Think not," he says, in his treatise *De Quatuor Novissimis* (page 73 of his English works),—"Think not that every thing is pleasant that men for madnes laugh at. For thou shalt in Bedleem see one laugh at the knocking of his own hed against a post, and yet there is little pleasure therein."

Bethlem Hospital originated in an establishment founded as a "Priory of Canons, with brethren and sisters," in 1246, by Simon Fitz-Mary, a sheriff of London; towards which he gave all his lands in St. Botolph without Bishopsgate, being the spot afterwards known as Old Bethlem, now Liverpool-street. This priory stood on the east side of Moorfields, from which it was divided by a deep ditch. It is described as "an Hospital" in 1330; in 1346 it was received under the protection of the City of London, who purchased the patronage, lands, and tenements in 1546; and in the same year, Henry VIII. gave the Hospital to the City, though not before he had endeavoured to sell it to them: it was united to Bridewell Hospital in 1557.

Bethlem is, however, first mentioned as an hospital for lunatics in 1402. The earliest establishment of the kind in the metropolis appears, from Stow, to have been "by Charing Cross," though when founded is unknown; "but it was said that some time a king of England, not liking distraught and lunatic people to remain so near his palace caused them to be removed farther off to Bethlem;" to which Hospital the site of the house in question belonged till 1830, when it was exchanged with the Crown to make way for the improvements at Charing Cross.

The priory buildings becoming dilapidated, another Hospital was built in 1675-76, on the south side of Moorfields, north of the London Wall, on ground leased to the Governors by the Corporation for 999 years, at 1s. annual rent, if demanded. This, the centre of Old Bethlem Hospital, cost 17,000*l.*, raised by subscription: it was designed by Robert Hooke; but there is no foundation for the traditional story of its so closely resembling the palace of the Tuileries, that Louis XIV., in retaliation, ordered a copy of our King's palace at St. James's to be built for his offices.

This second Bethlem was 540 feet in length and 40 feet in breadth; it was surrounded by gardens, in one of which the congenial lunatics were allowed to walk; the whole was enclosed by a high wall and gates; the posterns of the latter were surmounted with two finely-sculptured figures of Raving and Melancholy Madness, by Caius Gabriel Cibber, the father of Colley.

In 1733, two wings were added for incurable patients. In 1754, the Hospital is described as consisting chiefly of two galleries, one over the other, divided in the middle by two iron gates, so that all the men were placed at one end of the house and all the women at the other; there was also "a bathing-place for the patients, so contrived as to be a hot or cold bath." The Hospital then held 150 patients. The favourite resort of the poor inmates was the Fore-street end of the building, from the windows of which we have seen them look out upon the unafflicted passengers in the streets below. Here Nat Lee, the tragic poet, was confined four years; he did not live long after his release. Here too was confined Oliver Cromwell's gigantic porter,

who is traditionally said to have been the original of one of Cibber's figures. Hannah Snell, the female soldier, who received a pension for wounds received at the siege of Pondicherry, died a patient of Bethlem, in 1792. "Tom o' Bedlam" was the name given to certain out-door patients, for whom room could not be found in the Hospital. They wore upon their arms metal plates, licensing them to go a-begging, which many cunning impostors adopted, until a caution from the Governor put a stop to the fraud.

In 1799, the Hospital was reported by a committee to be in a very bad condition: it had been built in sixteen months, upon part of the City ditch filled in with rubbish, so that it was requisite to shore-up and underpin the walls. At length it was resolved to rebuild the Hospital; and in 1810 its site,  $2\frac{1}{2}$  acres, was exchanged for about 11 acres in St. George's Fields, including the gardens of the infamous Dog and Duck. The building fund was increased by grants of public money, and benefactions, from the Corporation, City companies, and private individuals. The first stone of the new edifice, for 200 patients, was laid in April 1812, and completed in August 1815, at a cost of 122,572*l.* 8*s.*, the exact sum raised for the purpose. It was built from three prize designs, superintended by the late Mr. Lewis: it consists of a centre and two wings, the entrance being beneath a hexastyle Ionic portico of six columns, with the royal arms in the pediment, and underneath the motto:—HEN. VIII. REGE · FUNDATVM · CIVIVM · LARGITAS · PERFECIT. Two wings, for which the Government advanced 25,144*l.*, were appropriated to criminal lunatics. Other buildings have since been added, for 166 patients, by Sydney Smirke, A.R.A., the first stone of which was laid July 26, 1838, when a public breakfast was given at a cost of 464*l.* 8*s.* to the Hospital, and a narrative of the proceedings was printed at a charge to the charity of 140*l.* The entire building is three stories in height, and 897 feet in length. To the centre was added a large and lofty dome in 1845; the diameter is 37 feet, and it is about 150 feet in height from the ground. The Hospital and grounds extend to eight acres; the adjoining three acres being devoted to the House of Occupation, a branch of Bridewell Hospital.

In the entrance-hall are placed Cibber's two statues, from the old Hospital: they are of Portland stone, and were restored by the younger Bacon in 1814; they are screened by curtains, which are only withdrawn upon public occasions: some of the irons formerly used are also shown as *curiosities*. The basement and three floors are divided into galleries. The improved management was introduced about 1816. The patients employ themselves in knitting and tailoring, in laundry-work, at the needle, and in embroidery; the women have pianos and occasionally dance in the evening; the men have billiards and bagatelle tables, newspapers, and periodicals; and they play in the grounds at trap-ball, cricket, fives, leap-frog, &c. Others work at their trades, in which, though dangerous weapons have been entrusted to them, no mischief has ensued, and the employment often induces speedy cure. The railed-in fire-places and the bone knives are almost the only visible peculiarities; there are cells lined and floored with cork and india-rubber for refractory patients. The building is fire-proof throughout, and warmed by hot air and water.

From the first reception of lunatics into Bethlem, their condition and treatment was wretched in the extreme. In a visitation of 1403 are mentioned iron chains with locks and keys, and manacles and stocks. In 1598, the house was reported so loathsome and so filthily kept, as not fit to be entered; and the inmates were termed prisoners. In a record of 1619 are expenses of straw and fetters. Up to the year 1770, the public were admitted to see the lunatics at 1*d.* each, by which the Hospital derived a revenue of at least 400*l.* a year: hence Bethlem became one of "the sights of London;" and such was the mischief occasioned by this brutal and degrading practice, that, to prevent disturbances, the porter was annually sworn a constable, and attended with other servants to keep order. So late as 1814, the rooms resembled dog-kennels; the female patients chained by one arm or leg to the wall, were covered by a blanket-gown only, the feet being naked; and they lay upon straw. The male patients were chained, handcuffed, or locked to the wall; and chains were universally substituted for the strait-waistcoat. One Norris, stated to be refractory, was chained by a strong iron ring, riveted round his neck, his arms pinioned by an iron bar, and his waist similarly secured, so that he could only advance twelve inches from the wall,

the length of his chain; and thus he had been "engaged and chained more than twelve years;" yet he read books of various kinds, the newspapers daily, and conversed rationally: a drawing was made of Norris in his irons, and he was visited by several members of Parliament, shortly after which he died, doubtless from the cruel treatment he had received. This case led to a Parliamentary inquiry, in 1815, which brought about the adoption of a new method of treatment in Bethlem; although, in two years, 660*l.* were expended from the Hospital funds in opposing the bill requisite for the beneficial change. d2

The last female lunatic released from her fetters was a most violent patient, who had been chained to her bed eight years, her irons riveted, she being so dangerous that the matron feared being murdered if she released her; in May 1838, she was still in the New Hospital, and was the only patient permitted to sleep at night with her door unlocked; the slightest appearance of restraint exasperated her; but on her release she became tranquil, and happy in nursing two dolls given to her, which she imagined to be her children.

The criminal lunatics were formerly maintained and clothed here at the expense of Government, and cost nearly 4000*l.* a year. Most of the criminals were confined for murder, committed or attempted. Amongst them was Margaret Nicholson for attempting to stab George III.; she died here in 1828, having been confined forty-two years. In 1841, died James Hadfield, who had been confined here since 1802, for shooting at George III., at Drury Lane Theatre. He was a gallant dragoon, and his face was seamed with scars got in battle before his crime: he employed himself with writing verses on the death of his birds and eats, his only society in his long and wearying imprisonment. Many, including Edward Oxford, who so nearly assassinated the Queen, in 1840; Macnaughten, who murdered Sir Robert Peel's secretary, at Charing Cross; and the celebrated Captain Johnston, who under such terrible circumstances killed all the crew of his ship, the *Tory*; were kept at Bethlehm, but have been removed to the great Broadmoor Asylum, built by Government near the Wellington College Station of the South Eastern Railway. d2

M

Bethlem stands in eleven acres of ground, which is judiciously laid out. It was placed under the jurisdiction of the Commissioners in Lunacy in 1853. In 1841 only 23.60 per cent. of the patients attended chapel on Sunday, and there was a weekly average of 2.64 per cent. under restraint; in 1862, 55 per cent. attended chapel, and restraint had been for several years unknown. Of the 115 curable patients in the hospital in 1862 only eight were unemployed, and of the 61 incurables 24. The annual cost of maintenance, furniture, and clothing was about 36*l.* in 1862. The following cases are inadmissible lunatics: those who have been insane for more than twelve months; who have been discharged uncured from other hospitals; afflicted with idiocy, palsy, or epileptic or convulsive fits, or any dangerous disease. The patients are not allowed to remain more than one year: preference is given to patients of the educated classes, to secure accommodation for whom no one will be received who is a proper object for admission into a county lunatic asylum.

Although Bethlem receives only those cases of madness which it deems most likely to terminate in recovery; of these simple and select cases nearly 40 per cent. (including deaths) are eventually discharged from Bedlam unrelieved. "The annual rate of mortality in Bethlem is 7 per cent.; in other asylums, from 13 to 22 per cent."—(*Registrar-General's Report, 1850.*)

The income of Bethlem and Bridewell Hospitals amounts to about 33,000*l.* per annum, mostly the accumulation of private benevolence.

From November 22, 1841, Bethlem Hospital, with its purlieu and approaches, was considered to be within the rules of the Queen's Bench, by an order of that Court, until their abolition.

Patients are admitted by petition to the Governors from a near relation or friend; forms to be obtained at the Hospital. The visiting days are two Mondays in each month; for taking in and discharging patients, every Friday.

Strangers are admitted, on Tuesdays, Wednesdays, Thursdays, and Fridays, to view the Hospital by Governors' orders; and foreigners and Members of Parliament by orders from the president, treasurer, or Secretary of State; but the average yearly

number of visitors does not exceed 550. Still, few sights can be more interesting than the present condition of the interior of Bethlem. The scrupulous cleanliness of the house, the decent attire of the patients, and the unexpectedly small number of those under restraint, (sometimes not one person throughout the building), lead the visitors, not unnaturally, to conclude that the management of lunatics has here attained perfection; while the quiet and decent demeanour of the inmates might almost make him doubt that he is really in a madhouse. The arrangements, however, are comparatively, in some instances, defective: the building being partly on the plan of the old Hospital in Moorfields, in long galleries, with a view to the coercive system there pursued, is, consequently, ill adapted to the present improved treatment.

Above the door of the entrance-lodge are sculptured the arms of the Hospital,—*Argent, two bars sable, a file of five points gules, on a chief azure an étoile of sixteen rays or, charged with a plate, thereon a cross of the third, between a human skull placed on a cup, on the dexter side, and a basket of Wastell bread, all of the fifth, on the sinister.*

Bishop Tanner observes, however, that he was informed by John Anstis, Garter King of Arms, that the ensigns were, *Argent, two bars sable, a label of three points gules, on a chief azure a comet with ten rays or, oppressed with a torseau charged with a plain cross of the field, between a chalice or, with an hosty of the first, and a basket of the same.* With respect to any signification to be assigned to these bearings, there is, probably, no positive information extant; but, supposing them to be really ancient, it may be observed, that the bars and file in the principal part of the shield were, most likely, the arms of Simon Fitz-Mary, the founder, which would account for their very prominent situation. The étoile, or blazing star, on the blue chief, evidently refers to the star seen in the sky at the birth of Christ, which led the wise men to Bethlehem, and, therefore, properly became its peculiar badge; whilst the cross in the centre indicates the crucifixion of the Saviour for all mankind. The basket of bread has, probably, also an allusion to Bethlehem; since the best translation of that word is considered to be "the house of bread," as implying a fertile soil in the production of barley and wheat, noticed in the book of Ruth, chapter ii.; but, as wastell cakes were, anciently, especially used in Christian ceremonies and festivals, they might be designed as the English emblem of the birth-place of the Lord. Perhaps, no satisfactory signification can be assigned to the present bearing of a cup containing a skull; but if the blazon of these arms, given by Anstis to Bishop Tanner, be accepted, the chalice, surmounted by the consecrated wafer, will then be intended for the usual ecclesiastical figure of the sacrament; and, perhaps, also expresses that the Saviour, born at Bethlehem, the house of bread, was "the living bread which came down from heaven." Upon the same principle of interpretation, however, if the star be regarded as indicating Christ and his passion, the cup with the skull might be meant to designate, the "death which he tasted for every man," in the cup of his own sufferings at Gethsemane, and at Golgotha, "the place of a skull." Another armorial ensign, assigned to the ancient hospital of Bethlehem, is, *Azure, an étoile of eight points or;* and the connexion between this foundation and that of Bridewell, which is under the same governor, is indicated by the latter bearing the star of Bethlehem, on a chief azure, between two fleurs-de-lis.—*Pamphlet by Peter Laurie, Esq., LL.B.; privately printed.*

### BILLINGSGATE

IS stated to take its name from having been the gate of Belin, a king of the Britons, about 400 B.C. But this rests upon no better authority than Geoffrey of Monmouth, and is doubted by Stow, who suggests that the gate was called from some owner named Beling or Billing: Stow describes it as "a large water-gate, port, or harborough for ships and boats, commonly arriving there with fish, both fresh and salt, shell-fishes, salt, oranges, onions, and other fruits and roots, wheat, rye, and grain of divers sorts, for the service of the City. It has been a quay, if not a market, for nearly nine centuries—since the customs were paid here under Ethelred II., A.D. 979; and fishing-boats paid toll here, according to the laws of Athelstan, who died 940. Its present appropriation dates from 1699, when, by an Act of William III., it was made "a free and open market for all sorts of fish;" and was fixed at the western extremity of the Custom House, a short distance below London Bridge.

The Market, for many years, consisted of a collection of wooden pent-houses, rude sheds, and benches: it commenced at three o'clock A.M. in the summer and five in the winter: in the latter season it was a strange scene, its large flaring oil-lamps showing a crowd struggling amidst a Babel din of vulgar tongues, such as rendered "Billingsgate" a byword for low abuse: "opprobrious, foul-mouth language is called Billingsgate discourse."—(Martin's *Dictionary*, 1754, second edit.) In Bailey's *Dictionary* we have "a Billingsgate, a scolding, impudent slut." Tom Brown gives a very coarse picture of her character; and Addison refers to "debates which frequently arise among the ladies of the British fishery." She wore a strong stuff gown, tucked up, and showing a large quilted petticoat; her hair, cap, and bonnet flattened into a mass by carrying a basket upon her head; her coarse, cracked cry, and brawny limbs, and red, bloated face, completing a portrait of the "fish-fag" of other days.

Not only has the virago disappeared, but the market-place has been rebuilt, and its business regulated by the City authorities, with especial reference to the condition of the fish; and in 1849 was commenced the further extension of the market. There is no crowding, elbowing, screaming, or fighting, as heretofore; coffee has greatly superseded spirits; and a more orderly scene of business can scarcely be imagined. The market is daily, except Sundays, at five A.M., summer and winter, announced by ringing a bell, the only relic of the olden rule. The fishing-vessels reach the quay during the night, and are moored alongside a floating wharf, which rises and falls with the tide. The oyster-boats are berthed by themselves, the name of the oyster cargo is painted upon a board, where they are measured out to purchasers. The other fish are carried ashore in baskets, and there sold, by Dutch auction, to fishmongers, whose carts are waiting in the adjoining streets. The wholesale market is now over; the *bummarees* supply the costermongers, &c.

All fish is sold by tale, except oysters and shell-fish, which are sold by measure, and salmon by weight. In February and March, about thirty boxes of salmon, each one cwt., arrive at Billingsgate per day; the quantity gradually increases, until it amounts in July and August, to 1000 boxes (during one season it reached to 2500 tons)—the fish being finest when it is lowest in price. Of lobsters, Mr. Yarrell states a twelve-months' supply to be 1,904,000; of turbot, 87,958. The speculation in lobsters is very great: in 1816, one Billingsgate salesman is known to have lost 1200*l.* per week, for six weeks, by lobsters! Periwinkles are shipped from Glasgow, fifty or sixty tons at a time, to Liverpool, and sent thence by railway to London, where better profits are obtained, even after paying so much sea and land carriage. Sometimes there is a marvellous glut of fish: thus, in two days from 90 to 100 tons of plaice, soles, and sprats have been landed at Billingsgate, and sold at two and three lbs. a penny; soles, 2*d.*; large plaice, 1*d.* each.

A full season and scarce supply, however, occasionally raise the price enormously; as in the case of four guineas being paid for a lobster for sauce, which, being the only one in the market, was divided for two London epicures! During very rough weather, scarcely an oyster can be procured in the metropolis. In the *Times*, Nov. 9, 1859, we read: "In consequence of the gales which have recently prevailed, the price of fish has risen so much, that cod-fish fetched the enormous sum of 1*l.* 15*s.*, yesterday morning in Billingsgate market." d2

Mackerel were, in 1698, first allowed to be cried through the streets on a Sunday; but, by the 9 and 10 Victoria, passed August 3, 1846, the sale of mackerel on a Sunday was declared illegal.

The wholesale fish-trade of Billingsgate having greatly increased in 1854, Mr. Bunning, the City architect, completed a sub-market on the site of Billingsgate Dock; the carriage of fish by railway to London having greatly superseded the use of sailing vessels for that purpose. A new granite wharf-wall extends the entire river frontage of the market; and the foundations of the fish-market were constructed on the blue clay beneath the bed of the river, without the aid of a coffer-dam.

Few persons are aware of the great consumption of fish in the metropolis. In the Parliamentary Report on the Sea Fisheries, 1866, is a calculation showing that nearly as much fish as beef is consumed in London. About 90,000 tons of fish are brought yearly, of which some 80,000 tons are large fish, the remainder being whiting and small fish.

### BLACKFRIARS

**I**S the district between Ludgate Hill and the river Thames; where anciently a monastery of Black or Dominican Friars, removed from Holborn in 1276, to a piece of ground given them by Gregory Rocksley, Mayor. The monastery, church, and a mansion were erected with the stone from the tower of Montfichet, and from part of the City wall. Edward I. and his Queen Eleanor were great benefactors to the new convent. Here the King kept his charters and records; and great numbers of the nobility dwelt in the precinct. In the church, divers parliaments and other great meetings were held. In 1522 the Emperor Charles V. of Spain was lodged here by Henry VIII.; and here, 1524, was begun the sitting of a parliament, adjourned to the

Black Monks at Westminster, and therefore called the Black Parliament. Henry's divorce from Katherine of Arragon was decided there; and the parliament which condemned Wolsey, assembled at Blackfriars. The precinct was very extensive, was walled in, had four gates, and contained many shops, the occupiers of which were allowed to carry on their trades, although not free of the City, privileges maintained even after the dissolution of the monasteries. Part of the church was altered and fitted up for parochial use; it was destroyed by the Great Fire of 1666, and the church of St. Andrew by the Wardrobe erected in its place. Beneath the *Times* office, upon the site of the King's Printing-house, is a fragment of the Roman wall, upon which is a Norman or early English reparation; and upon that are the remains of a passage and window, which probably belonged to the Blackfriars monastery.

Taking advantage of the sanctuary privilege, Richard Burbage and his fellows, when ejected from the City, built a playhouse in the Blackfriars precinct, and here maintained their ground against the powerful opposition of the City and the Puritans. Shakspeare had a share in this theatre.

In the volume of the *Calendar of State Papers*, edited by Mr. Bruce, F.S.A., we get some interesting information of the Blackfriars theatre, part of the site of which is still called Playhouse-yard, where was a piece of ground "to turne coaches in." Under the date of Nov. 16, 1633, we find—"Notes by Sec. Windebank, of business transacted at the council this day.—Blackfriars Playhouse. The players demand 21,000*l.* The commissioners valued it at near 3000*l.* The parishioners offer towards the removing of them 100*l.* An order of the board to remove the coaches from thence, and to lay the coachmen of whomsoever by the heels. That no coaches stay between Paul's Chain and the Fleet Conduit. The officers to be punished if they do not their duties. The Lord Mayor to have his commandment directed to him, and every ward to be answerable."

Hard by is another Shakspearean locality of note, the town property of the poet, first pointed out by Mr. Halliwell—viz., the site of the house purchased by Shakspeare of Henry Walker, in March, 1612-13, the counterpart of the conveyance of which is preserved in the Guildhall Library (bought in 1841, for 165*l.* 15*s.*) with Shakspeare's signature attached, and which is there described as "abutting upon a streete leading doune to Pudle Wharfe (Blackfriars), in the east part, right against the Kinge's Majesties Wardrobe." The *very house* was, most probably, destroyed in the Great Fire; but the present one stands upon its exact site; and, until these few years, it had been tenanted by the Robinson family, to whom Shakspeare leased it. The house was bequeathed by the poet to his daughter, Susannah Hall.

Three eminent painters resided in Blackfriars: Isaac Oliver, the celebrated miniature-painter, who died in 1617, and is buried in St. Anne's; Cornelius Jansen, the portrait-painter, employed by King James I., and who painted Milton at ten years old. And here Vandyck was lodged amongst the King's artists, in 1631, when he arrived a second time in London; thither His Majesty Charles I. frequently went by water, and viewed his paintings. The painter kept here a splendid establishment and a sumptuous table; but his luxurious and sedentary life brought on gout; he died here in the Blackfriars, in 1641, and was buried in St. Paul's Cathedral, with great funeral pomp.

In 1735, the right of the City to the jurisdiction of the precinct was decided in their favour in an action against a shalloon and drugget seller, tried in the Court of King's Bench; since which Blackfriars has been one of the precincts of Farringdon Ward.

At Hunsdon House, in the Friary, occurred the catastrophe long remembered as the "Fatal Vespers." It was on the anniversary of the Gunpowder Plot that some 300 persons had assembled in a small gallery over the gateway of the lodgings of the French ambassador, to hear a sermon from the Jesuit, Father Drury, when the whole congregation were precipitated, with the timber, plaster, and rubbish, into the vacant apartments some 20 feet below. Drury was killed, and with him about 100 persons of his congregation; the bodies were buried, coffinless, in two large pits.

In a "Note of Liberties," in the State Paper Office, we find in a list of persons "as well honourable as worshipful, inhabiting the Precincts of the Blacke and White

Friers," in the middle of the reign of Queen Elizabeth, or about the year 1581, the following:—

"The Earl of Lincoln, Lord Admirall of England; the Bishop of Wigorne; the Lord Cobham; the Lord Cheynie; the Lord Laware; the Lord Russell; the Lord Clinton; Sir Ambrose Jermyn; Sir Nicholas Poynes; Sir Thomas Gerrarde; Sir William Morgan; the Lord Buckhurst; the Lord Chief Justice of England; the Lord Chief Justice of the Common Pleas; the Master of the Rolles; the Quene's Solliciteur; Mr. Thomas Fanshawe; Peter Osborne; Mr. Powle, of the Chancery."

In Earl-street was the house of the British and Foreign Bible Society, upon the exact site of the premises in which the Committee of six of the forty-seven "distinguished scholars" ordered by James I. to furnish our present translation of the Bible used to meet in the early part of the seventeenth century, to review the whole work; and which was finally revised there by Dr. Smith and Dr. Bilson, Bishop of Winchester, then approved of by the King, and printed in the year 1611. When the Bible Society purchased the above house of Mr. Enderby, there was in it a curious fourpost bedstead, carved and painted, and the following inscription in capitals at the head:—"Henri, by the Grace of God, Kynge of Englonde and of Fraunce, Lorde of Irelonde, Defendour of the Faythe, and Supreme Heade of the Church of all Englonde. An. Dmi. MCCCCXXXIX." Below the inscription, on each side, is the King's motto, with the initials of Henry and his Royal Consort, Anne Boleyn: "Dieu et mon droit." "H. A." A new house for the Bible Society was founded in June, 1866.

In the operations necessary for carrying the London, Dover, and Chatham Railway from the viaduct across the Thames at Blackfriars, great part of the east side of Bridge-street was removed in 1863-4; the railway being carried on brick arches parallel with the street line; and a large passenger-station, 150 feet in width, was erected. In the requisite clearances was removed the York Hotel, the house which Mylne, the architect of Blackfriars Bridge, built for his private residence. On its southern face, in Little Bridge-street, was a medallion, with the initials, "R. M.," surmounted by his crest and the date MDCCCLXXX.; the walls of the principal rooms bore several medallions of classic figures. Mylne also planned the noble approach to Blackfriars Bridge, and superintended the covering of the Fleet ditch. He planned well his houses in Blackfriars, although many of them were altered or rebuilt for insurance offices. In the house No. 5, opposite the York Hotel, lived Sir Richard Phillips: in the rear, Bride-court, he published his *Monthly Magazine*; and here, as became an author-publisher, he formed a considerable collection of pictures, mostly portraits of eminent men of letters.

### BLACKWALL,

ON the north bank of the Thames, and at the eastern extremity of the West India Docks, is said to have been originally called Bleakwall, from its exposed situation on the artificial bank or *wall* of the river, through the winding of which it is nearly eight miles from the City, though less than half that distance by land. Here, on the Brunswick Wharf or Pier, is the handsome Italianized terminus (by Tite) of the Blackwall Railway from Fenchurch-street,  $4\frac{1}{2}$  miles in length.

To the large taverns at Blackwall and Greenwich *gourmets* flock to eat whitebait, a delicious little fish caught in the Reach, and directly netted out of the river into the frying-pan. They appear about the end of March or early in April, and are taken every flood-tide until September. Whitebait are caught by a net in a wooden frame, the hose having a very small mesh. The boat is moored in the tideway, and the net fixed to its side, when the tail of the hose, swimming loose, is from time to time handed in to the boat, the end untied, and its contents shaken out. Whitebait were thought to be the young of the shad, and were named from their being used as bait in fishing for whittings. By aid of comparative anatomy, Mr. Yarrell, however, proved whitebait to be a distinct species, *Clupea alba*.

Pennant describes whitebait as esteemed by the *lower order of epicures*. If this account be correct, there must have been a strange change in the grade of the epicures frequenting Greenwich and Blackwall since Pennant's days; for at present the fashion of eating whitebait is sanctioned by the highest authorities, from the Court of St. James's in the West to the Lord Mayor and *his* court in the East; besides the philo-

sophers of the Royal Society; and her Majesty's Cabinet Ministers, who wind up the Parliamentary session with their "annual fish dinner," the origin of which is stated to be as follows:—

On the banks of Dagenham Lake or Reach, in Essex, many years since, there stood a cottage, occupied by a princely merchant named Preston, a baronet of Scotland and Nova Scotia, and sometime M.P. for Dover. He called it his "fishing cottage," and often in the spring he went thither, with a friend or two, as a relief to the toils of parliamentary and mercantile duties. His most frequent guest was the Right Hon. George Rose, Secretary of the Treasury, and an Elder Brother of the Trinity House. Many a day did these two worthies enjoy at Dagenham Reach; and Mr. Rose once intimated to Sir Robert, that Mr. Pitt, of whose friendship they were both justly proud, would, no doubt, delight in the comfort of such a retreat. A day was named, and the Premier was invited; and he was so well pleased with his reception at the "fishing cottage"—they were all two if not three bottle men—that, on taking leave, Mr. Pitt readily accepted an invitation for the following year. For a few years the Premier continued a visitor, always accompanied by Mr. George Rose. But the distance was considerable; the going and coming were somewhat inconvenient for the First Minister of the Crown. Sir Robert Preston, however, had his remedy, and he proposed that they should in future dine nearer London. Greenwich was suggested: we do not hear of Whitebait in the Dagenham dinners; and its introduction, probably, dates from the removal to Greenwich. The party of three was now increased to four; Mr. Pitt being permitted to bring Lord Camden. Soon after a fifth guest was invited—Mr. Charles Long, afterwards Lord Farnborough. All were still the guests of Sir Robert Preston; but, one by one, other notables were invited—all Tories—and, at last, Lord Camden considerably remarked, that, as they were all dining at a tavern, it was but fair that Sir Robert Preston should be relieved from the expense. It was then arranged that the dinner should be given, as usual, by Sir Robert Preston, that is to say, at his invitation; and he insisted on still contributing a buck and champagne: the rest of the charges were thenceforth defrayed by the several guests, and, on this plan, the meeting continued to take place annually till the death of Mr. Pitt.

Sir Robert was requested, next year, to summon the several guests, the list of whom, by this time, included most of the Cabinet Ministers. The time for meeting was usually after Trinity Monday, a short period before the end of the Session. By degrees the meeting, which was originally purely gastronomic, appears to have assumed, in consequence of the long reign of the Tories, a political, or semi-political character. Sir Robert Preston died; but Mr. Long, now Lord Farnborough, undertook to summon the several guests, the list of whom was furnished by Sir Robert Preston's private secretary. Hitherto, the invitations had been sent privately: now they were despatched in Cabinet boxes, and the party was, certainly for some time, limited to the members of the Cabinet.—*Communicated to the Times.*

An important thing to be noticed is the vast extent of iron shipbuilding carried on here, an art of construction but of thirty years' growth. A great portion of Blackwall and the Isle of Dogs is occupied in this building trade, with its clanking boilerworks, and its Cyclopean foundries and engineering shops, in which steam is the *primum mobile*.

In the East India Docks, at Blackwall, arrived, April, 1848, a large Chinese Junk, the first ever seen in England.

### BLIND-SCHOOL (THE),

OR the School for the Indigent Blind, was established in 1799, at the Dog and Duck premises, St. George's Fields; and for some time received only fifteen blind persons. The site being required by the City of London for the building of Bethlem Hospital, about two acres of ground were allotted opposite the Obelisk, and there a plain school-house for the blind was built. In 1826, the School was incorporated; and in the two following years three legacies of 500*l.* each, and one of 10,000*l.*, were bequeathed to the establishment. In 1834, additional ground was purchased, and the school-house remodelled, so as to form a portion of a more extensive edifice in the Tudor or domestic Gothic style, designed by John Newman, F.S.A. The tower and gateway in the north front are very picturesque; the School will now accommodate 220 inmates. The pupils are clothed, lodged, and boarded, and receive a religious and industrial education; so that many of them have been returned to their families able to earn from 6*s.* to 8*s.* per week. Applicants are not received under twelve, nor above thirty, years of age; nor if they have a greater degree of sight than will enable them to distinguish light from darkness. The admission is by votes of the subscribers; and persons between the ages of twelve and eighteen have been found to receive the greatest benefit from the instruction.

The pupils may be seen at work between ten and twelve A.M., and two and five P.M., daily, except Saturdays and Sundays. The women and girls are employed in knitting stockings and needlework; in spinning, and making household and body linen, netting silk, and in fine basket-making; besides working baby-hoods, bags, purses, watch-pockets, &c., of tasteful design, both in colour and form. The women are remarkably quick in superintending the pupils. The men and boys make wicker baskets, cradles,

and hampers; rope door-mats and worsted rugs; and they make all the shoes for the inmates of the School. Reading is mostly taught by Alston's raised or embossed letters, in which have been printed the Old and New Testament, and the Liturgy. Both males and females are remarkably cheerful in their employment: they have great taste and aptness for music, and they are instructed in it, not as a mere amusement, but with a view to engagements as organists and teachers of psalmody; and once a year they perform a concert of sacred music in the chapel or music-room: the public are admitted by tickets, the proceeds from the sale being added to the funds of the institution. An organ and pianoforte are provided for teaching; and above each of the inmates of the males' working-room usually hangs a fiddle. They receive, as pocket-money, part of their earnings, and on leaving the school, a sum of money and a set of tools, for their respective trades, are given to them.

Among the other Charities for the Blind is the munificent bequest of Mr. Charles Day (of the firm of Day and Martin, High Holborn), who died in 1836, leaving 100,000*l.* for the benefit of persons afflicted, like himself, with *loss of sight*; the dividends and interest to be disbursed in sums, of not less than 10*l.*, or more than 20*l.*, per year, to each blind person, the selection being left to Trustees: the Charity is named "The Blind Man's Fund."

BREWERIES.

THE great Breweries of London are described by Stow, in 1598, as for the most part remaining "near to the friendly water of Thames," which was long thought to be superior to any other for brewing; but Richardson, an experienced authority, alleges this to be a mistake, as some of the principal brewers find the New River water equally good; they have also been at great expense in sinking wells upon their own premises. In the *Annual Register* for 1760 the London beer trade is traced from the Revolution down to the accession of George the Third. The great increase in the trade appears to date from the origin of Porter.

"Prior to the year 1730, publicans were in the habit of selling ale, beer, and two-penny, and the 'thirsty souls' of that day were accustomed to combine either of these in a drink called half-and-half. From this they proceeded to spin 'three threads,' as they called it, or to have their glasses filled from each of the three taps. In the year 1730, however, a certain publican, named Horwood, to save himself the trouble of making this triune mixture, brewed a liquor intended to imitate the taste of the 'three threads,' and to this he applied the term 'entire.' This concoction was approved, and being puffed as good porter's drink, it speedily came to be called Porter itself."—*Quarterly Review*, 1854.

By Act of Parliament, beer and porter can only be made of malt and hops, the great council of the nation having omitted all mention of the water, which the brewers have added as a necessary ingredient. It has been well said that all nations know that London is the place where porter was invented; and Jews, Turks, Germans, Negroes, Persians, Chinese, New Zealanders, Esquimaux, Copper Indians, Yankees, and Spanish Americans, are united in one feeling of respect for the native city of the most universally favourite liquor the world has ever known.

The increase of brewers has kept pace with London's increase in other respects. Whitbread's Brewery, in Chiswell-street, Finsbury, dates more than two centuries back: we find it at the head of the list in 1787; and so it continued until 1806 in the *Picture of London*, for which year *Whitbread's* is described as the largest Brewery in the metropolis, the year's brewing of Porter being above 200,000 barrels.

"There is one stone cistern," says the account, "that contains 3600 barrels; and there are 49 large oak vats, some of which contain 3500 barrels; one is 27 feet in height and 22 feet in diameter. There are three boilers, each of which holds about 5000 barrels. One of Mr. Watt's steam-engines works the machinery. It pumps the water, wort, and beer; grinds the malt, stirs the mash-tubs, and raises the casks out of the cellars. It is able to do the work of seventy horses, though it is of a small size, being only a twenty-four inch cylinder, and does not make more noise than a spinning-wheel. Whether the magnitude or ingenuity of contrivance is considered, this Brewery is one of the greatest curiosities that is to be anywhere seen; and little less than half a million sterling is employed in machinery, buildings, and materials."

To the Brewery of *Barclay, Perkins and Co.*, in Park-street, Southwark, has, however, attached a greater celebrity, from its great extent. It may be inspected by a letter of introduction to the proprietors; and a great number of the foreigners of distinction who visit the metropolis avail themselves of such permission. The Brewery and its appurtenances occupy about twelve acres of ground, immediately

adjoining Bankside, and extending from the land-arches of Southwark Bridge nearly half of the distance to those of London Bridge. Within the Brewery walls is said to be included *the site of the famous Globe Theatre*, "which Shakspeare has bound so closely up with his own history." In an account of the neighbourhood, dated 1795, it is stated that "the passage which led to the Globe Tavern, of which the playhouse formed a part, was, till within these few years, known by the name of Globe-alley, and upon its site now stands a large storehouse for Porter." We are inclined to regard this evidence merely as traditional. However, the last Globe Theatre was taken down about the time of the Commonwealth; and so late as 1720, Maid-lane (now called New Park-street), of which Globe-alley was an offshoot, was a long, straggling place, with ditches on each side, the passage to the houses being over little bridges with little garden-plots before them (*Strype's Stow*).

Early in the last century there was a Brewery here, comparatively very small; it then belonged to a Mr. Halsey, who, on retiring from it with a large fortune, sold it to the elder Mr. Thrale; he became Sheriff of Surrey and M.P. for Southwark, and died in 1758. About this time the produce of the Brewery was 30,000 barrels a year. Mr. Thrale's son succeeded him, and found the Brewery so profitable and secure an income, that, although educated to other tastes and habits, he did not part with it; yet the Brewery, through Thrale's unfortunate speculation elsewhere, was at one time, according to Mrs. Thrale, 130,000*l.* in debt, besides borrowed money; but in nine years every shilling was paid. Thrale was the warm friend of Dr. Johnson, who, from 1765 to the brewer's death, lived partly in a house near the Brewery, and at his villa at Streatham. Before the fire at the Brewery, in 1832, a room was pointed out, near the entrance gateway, which the Doctor used as a study. In 1781 Mr. Thrale died, and his executors, of whom Johnson was one, sold the Brewery to David Barclay, junior, then the head of the banking firm of Barclay and Co., for the sum of 135,000*l.* "We are not here," said Johnson, on the day of the sale, "to sell a parcel of boilers and vats, but the potentiality of growing rich beyond the dreams of avarice." While on his tour to the Hebrides, Johnson mentioned that Thrale paid 20,000*l.* a year to the revenue, and that he had *four* vats, each of which held 1600 barrels, above 1000 hogsheads. David Barclay placed in the brewing firm his nephew from America, Robert Barclay, who became of Bury Hill; and Mr. Perkins, who had been in Mr. Thrale's establishment—hence the firm of "Barclay and Perkins." Robert Barclay was succeeded by his son, Charles Barclay, who sat in Parliament for Southwark; and by his sons and grandsons. Forty years since, the Brewery was of great extent; in 1832 a great portion of the old premises was destroyed by fire, but was rebuilt, mostly of iron, stone, and brick. The premises extend from New Park-street, southward, through Park-street, both sides of which are the Brewery buildings, connected by a light suspension bridge; to the right is the vast brewhouse and principal entrance. There are extensive ranges of malt-houses extending northward, with a wharf to Bankside. From the roof of nearly the middle of the premises may be had a bird's-eye view of the whole.

The water used for brewing is pumped up by a steam-engine through a large iron main, which passes under the malt warehouses, and leads to the "liquor-backs," two cast-iron cisterns, on columns, reaching an elevation of some 40 feet. By this means the establishment may be supplied with water for brewing to the extent of a hundred thousand gallons daily. There is on the premises an Artesian well 367 feet deep; but its water, on account of its low temperature, is principally used for cooling the beer in hot weather.

The machinery is worked throughout the Brewery by steam. The furnace-shaft is 19 feet below the surface, and 110 feet above; and, by its great height, denotes the situation of this gigantic establishment among the forest of Southwark chimneys.

The malt is deposited in enormous bins, each of the height or depth of an ordinary three-storied house. The rats are kept in check by a standing army of cats, who are regularly fed and maintained.

The malt is conveyed to be ground in tin buckets upon an endless leather band ("Jacob's Ladder"); and thus carried to the height of 60 or 70 feet, in the middle of the Great Brewhouse, built entirely of iron and brick, and lighted by eight large and

lofty windows. The Brewhouse is 225 feet long by 60 in width, and of prodigious height, with an elaborate iron roof, the proportions reminding us of Westminster Hall. Within this compass are complete sets of brewing apparatus, perfectly distinct in themselves, but connected with the great supply of malt from above, of water from below, and of motive force from the steam-engine behind, vast coolers, fermenting vats, &c. Each of the copper boilers cost nearly 5000*l.*, and consists of a furnace, a globular copper holding 320 barrels, and a cylindrical cistern to contain 120 barrels, an arrangement equally beautiful and useful from its compactness and the economy of heat. There is no continuous floor; but looking upwards, whenever the steamy vapour permits, there may be seen at various heights, stages, platforms, and flights of stairs, all subsidiary to the Cyclopean piles of brewing vessels. The coals, many tons per day, are drawn up from below by tackle, and wheeled along a railway.

"The hot water is drawn from one of the copper boilers to the corresponding mash-vat below; and machinery working from a centre on a cog-rail that extends over the circumference of the vat, stirs the malt. The mash-vat has a false bottom, which in due time lets off the wort through small holes to an under-pan, whence it is pumped back to the emptied copper, from whence it receives the hot water, and there, mixed with hops, it is boiled, and again run off into a vast cistern, where passing through a perforated bottom, it leaves the hops, and is pumped through the cooling tubes or refrigerators into the open cooler, and thence to the fermenting cases; whence, in a few days, it is drawn off into casks, again fermented, and when clearer put into the large vat."

The surface of one of the fermenting cases nearly filled is a strange sight: the yeast rises in rock-like masses, which yield to the least wind, and the gas hovers in pungent mistiness over the ocean of beer. The largest vat will contain about 3500 barrels of porter, which, at the retail price, would yield 9000*l.* The "Great Tun of Heidelberg" would hold but half this quantity.

Nearly every portion of the heavy toil is accomplished by the steam-engine. The malt is conveyed from one building to another, even across the street, by machinery, and again to the crushing rollers and mash vat. The cold and hot water, the wort and beer, are pumped in various directions, almost to the exclusion of human exertions. With so much machinery and order, few men comparatively are required for the enormous brewing of 3000 bushels of malt a day. The stables are a pattern of order. The name of each horse is painted upon a board over the rack of each stall. The horses are mostly from Flanders, are about 200 in number, and cost from 70*l.* to 80*l.* each.

*Truman, Hanbury, Buxton, & Co.'s* Brewery is situated in Brick-lane, Spitalfields, and covers nearly six acres of ground. Here are two mash tuns, each to contain 800 barrels, the mashing being performed by a revolving spindle with huge arms, like a chocolate-mill. The wort is then pumped into large coppers, of which there are five, containing from 300 to 400 barrels each; it is then boiled with the hops, of which often two tons are used in a day. The boiling beer is now pumped up to the cooler on the roof of the brewery, which presents a black sea of 32,000 square feet, partly open to the air. There are sixteen large furnace-chimneys connected with this brewery, the smoke of which is consumed by Juckes's apparatus. There is a vast cooperage for the 80,000 barrels; a farrier's, millwright's, carpenter's and wheelwright's shop; a painter's shop for sign-boards; all which surround the central gear or beer-barrel depôt. The malt bins are 20 feet across and 35 deep. The stables are of great extent, and there are a score of farriers. The drayman is *sui generis*; there are some 80 in number, taller than the Guardsmen, and heavier by two stone.

*Meux's* Brewery (now *Reid & Co.'s*), in Liqueurpond-street, Gray's Inn-lane, was described by Pennant, in 1795, as "of magnificence unspeakable." In this year Meux built a vessel 60 feet in diameter, and 23 feet in height, which cost 5000*l.* building, and would contain from 10,000 to 12,000 barrels of beer, valued at 20,000*l.* Their vats then held 100,000 barrels. Messrs. Meux removed from Liqueurpond-street to their great brewery at the end of Tottenham Court-road. The head of the firm, Sir Henry Meux was created a baronet in 1831, when he had a fortune of 200,000*l.*, which by his income from the brewery, increased in after years to between 500,000*l.* and 600,000*l.*

The handsomest edifice of this class in the metropolis is the Lion Brewery, built for Goding, in 1836, in Belvedere-road, next Waterloo-bridge, and surmounted with a colossal stone lion. The top of the building is a tank to contain 1000 barrels of water, pumped up from a well 230 feet deep, or from the Thames; this supplies the floor

below, where the boiled liquor is cooled—200 barrels in less than an hour; when cooled it is received on the floor beneath into the fermenting tuns; next it descends to the floor for fining; and lastly, to the cellars or store-vats. The steam-engine passes the beer under the Belvedere-road; loads or unloads barges; conveys malt by the Archimedes Screw or Jacob's Ladder; and pumps water and beer to every height and extreme position, displaying the advantage of mechanic power, by its steady, quiet regularity.

The Metropolitan Breweries have their signs, which figure upon the harness of their dray-horses; thus, Barclay and Perkins, the *Anchor*; Calvert's (now the City of London), the *Hour-glass*; Meux, *Horseshoe*, &c.

### BRIDEWELL HOSPITAL.

UPON one of the oldest historic sites in the City of London stood the ancient palace of Bridewell, which extended nearly from Fleet-street to the Thames at Blackfriars. It was founded upon the remains of a building supposed to be Roman, and inhabited by the Kings of England previous to the Conquest. Here our Norman Kings held their Courts. Henry I. gave stone towards rebuilding the palace; and in 1847, in excavating the site of Cogers Hall, in Bride-lane, was discovered a vault, with Norman pellet-moulding, and other remains of the same date. The palace was much neglected until, upon the site of the old Tower of Mountfiquit, Henry VIII. built "a stately and beautiful house thereupon, giving it to name Bridewell, of the parish and well there."—(*Stow*.) This house was erected for the reception of Charles V. of Spain, though only his nobles were lodged here, "a gallery being made out of the house over the water [the Fleet], and through the wall of the City into the Emperor's lodgings in the Blackfriars."—(*Stow*.) The whole third act of Shakspeare's Henry VIII. is laid in "the palace at Bridewell," which is historically correct. Subsequently the King, taking a dislike to the palace, let it fall to decay. The "wide, large, empty house" was next presented to the City of London by King Edward VI., after a sermon by Bishop Ridley, who begged it of the King as a workhouse for the poor and a house of correction; the gift was made for "sturdy rogues," and as "the fittest hospital for those cripples whose legs are lame through their own laziness." It was endowed with lands and furniture from the Savoy. All this history is, by a curious licence, transferred to Milan, by Decker, in the second part of the old play of the *Honest Whore*. The account is very exact, compared with Entick's *History of London*, iv. 284. (*Nares's Glossary*, new edit. 1859.) The gift was confirmed by charter only ten days before the death of the King. Nearly two years elapsed before Queen Mary confirmed her brother's gift; and in February, 1555, the Mayor and Aldermen entered Bridewell and took possession, with seven hundred marks land, and all the bedding and other furniture of the house of the Savoy. But the gift soon proved costly and inconvenient to the citizens by attracting thither idle and abandoned people from the outskirts of London, when the Common Council issued acts against "the resort of masterless men." In 1608, the City erected here twelve large granaries for corn and two storehouses for coals. In Aggas's plan of London, the buildings and gardens of the hospital extend from the present site to the Thames, on the bank of which a large castellated mansion is represented; as also in Van der Wyngreder's (1542) view, in the Bodleian Library; but in Hollar's view, after the Great Fire, most of the buildings are consumed.

The Hospital was rebuilt as we see it in Kip's view, 1720, in two quadrangles, the principal of which fronted the Fleet River, now a vast sewer under the middle of Bridge-street. Within the present century were built the committee-room and prisons; the chapel was rebuilt and the whole latterly formed only one large quadrangle, with a handsome entrance from Bridge-street; the keystone of the archway is sculptured with the head of King Edward VI. Hatton thus minutely describes the hospital in 1708:—

It is a prison and house of correction for idle vagrants, loose and disorderly servants, night-walkers, strumpets, &c. These are set to hard labour, and have correction according to their deserts; but have their clothes and diet during their imprisonment at the charge of the house.

It is also an hospital for indigent persons, and where twenty art-masters (as they are called), being decayed traders—as shoemakers, taylors, flax-drapers, &c. have houses, and their servants or appren-

tices (being about 140 in all) have clothes at the house charge, and their masters having the profit of their work, do often advance by this means their own fortunes. And these boys, having served their time faithfully, have not only their freedom, but also £10 each towards carrying on their respective trades, and many have even arrived from nothing to be governors.

The Bridewell boys were distinguished by a particular dress, and were very active at fires with an engine belonging to the hospital. In 1755 they had, however, grown unruly, and so turbulent in the streets as to be a great annoyance to peaceable citizens. Their peculiar costume was then laid aside, and they became more peaceable. The flogging at Bridewell for offences committed without the prison is described by Ward in his *London Spy*; both men and women were whipped on their naked backs, before the Court of Governors. The president sat with his hammer in his hand, and the culprit was taken from the post when the hammer fell. Hogarth, in his "Harlot's Progress," gives the peculiar features of the place. In the Fourth Plate men and women are beating hemp under the eye of a savage taskmaster; and a lad, too idle to work, is seen standing on tiptoe to reach the stocks, in which his hands are fixed, while over his head is written, "Better to work than stand thus."\* When Howard visited Bridewell he found the building damp and unhealthy, and the rooms, cells, and corridors confined and dark, and altogether a bad specimen of a prison.

"Lob's Pound" was a cant name for Bridewell, the origin of which so puzzled Archdeacon Nares, that he said: "Who Lob was, is as little known as the site of Lipsbury Pinfold." In *Hudibras* the term is employed as a name for the stocks into which the Knight put Crowdero:—

Crowdero, whom, in irons bound,  
Thou basely threw'st into Lob's Pound.

Miss Baker suggests, in her *Northamptonshire Glossary*, that the name originated from "lob," a looby or clown, rather than any specific individual—Bridewell being the place of correction for the petty offences of that class.

Bridewell is named from the famous well in the vicinity of St. Bride's Church; and this prison being the first of its kind, all other houses of correction, upon the same plan, were called Bridewells. In the *Nomenclator*, 1585, occurs "a workhouse where servants be tied to their work at *Bridewell*; a house of correction; a prison." We read of a treadmill at work at Bridewell in 1570.

Bridewell was, until lately, used as a receptacle for vagrants committed by the Lord Mayor and sitting Aldermen; as a temporary lodging for persons previous to their being sent home to their respective parishes; and a certain number of boys were brought up to different trades; and it is still used for apprentices committed by the City Chamberlain. The male prisoners sentenced to and fit for hard labour were employed on the treadmill, by which corn was ground for the supply of Bridewell, Bethlehem, and the House of Occupation; the younger prisoners, or those not sentenced to hard labour, were employed in picking junk and cleaning the wards; the females were employed in washing, mending, and getting up the linen and bedding of the prisoners, or in picking junk and cleaning the prison. The punishments for breaches of prison rules were diminution of food, solitary confinement, and irons, as the case might be. In 1842 were confined here 1324 persons, of whom 233 were under seventeen, and 466 were known or reputed thieves. In 1818 no employment was furnished to the prisoners. The seventh Report of the Inspectors of Prisons returned Bridewell as answering no one object of improvement except that of safe custody; it does not correct, deter, or reform; and nothing could be worse than the association to which all but the City apprentices were subjected. However, in 1829, there was built, adjoining Bethlehem Hospital, in Lambeth, a "House of Occupation," whither young prisoners were thenceforth sent from Bridewell to be taught useful trades.

The prison of Bridewell was taken down in 1863; and the committals are now made to the City Prison, at Holloway. Meanwhile a portion of Bridewell Hospital will be reserved for the detention and reformation of incorrigible City apprentices committed here by the Chamberlain from time to time; this jurisdiction being preserved by the Court of Chancery in dealing with the matters which concern the

\* This background is, however, incorrect; since the harlot, being sentenced by a Westminster magistrate, would not have been flogged in the City Bridewell.

disposal of the building and the estates of the governors of the Hospital. Reformatory schools are also to be built from the revenue of Bridewell, stated at 12,000*l.* per annum. At the Social Science Congress, in 1862, the worthy Chamberlain read a paper on the peculiar jurisdiction of his Court. In the prison, special care was taken to prevent the apprentices making the acquaintance of the low vagrants and misdemeanants who ordinarily occupied the building. The apprentices were placed in small cells, closed in with double doors, which shut out sound as effectually as sight; communication was, therefore, nearly impossible. Hereafter, only the apprentices will be confined here. The number of committals rarely exceeds twenty-five annually. At the date of our last visit there was but one apprentice confined here. Although the number is so small, the power of committal, which the Chamberlain has most praiseworthy asserted and successfully maintains, acts as a terror to evildoers, keeping in restraint about 3000 of these lads of the City.

In a piece of ground, leased for the burial-place of Bridewell Precinct, Robert Levett, the old and faithful friend of Dr. Johnson, and an inmate of his house, was buried, in 1732. Not a vestige of the ancient Bridewell remains. The noblest feature of the later buildings was the court-room—85 ft. 4 in. by 29 ft. 8 in., wainscoted, and hung with the great picture of Edward VI. granting the Royal Charter of Endowment to the Mayor. Beneath was a cartoon of "The Good Samaritan," by the youthful artist Dadd. The other pictures are a fine full-length of Charles II., by Sir Peter Lely; and portraits of the Presidents, including Sir William Withers, 1708, a very large equestrian portrait, with St. Paul's in the background. But the most valuable embellishments were the tables of benefactions, ranging from 500*l.* to 50*l.*, "depensilled in gold characters." In this hall the governors dined annually, each steward contributing 15*l.* towards the expenses, the dinner being dressed in the spacious kitchen beneath, only used for this purpose. This hall and kitchen were taken down at the close of the year 1862—the official buildings facing Bridge-street remain. The great picture of Edward VI. transferring Bridewell Palace to the City of London, which was engraved by Vertue in 1750, and afterwards adopted into the series of historical prints published by the Society of Antiquaries, was long accredited as painted by Holbein, whereas, it represents an occurrence which took place in 1553, ten years after Holbein's death. Consequently, it is simply impossible that he could have painted it, notwithstanding that one of the figures in the background was asserted by Vertue and by Walpole to be Holbein's own portrait. Upon this picture, Mr. J. Gough Nichols, F.S.A., remarked, in 1859, that "it is not now regarded as Holbein's work, as it bears no comparison with his capital picture at Barber-Surgeons' Hall of King Henry VIII. granting his charter to that Company." "But," adds Mr. Nichols, "after all, though not a masterly work of art, it is a valuable item among a very few historical pictures, and it would be desirable to recover its real history, of which we literally know nothing."—*Archæologia* xxxix. 21.

A very interesting historical fact in connexion with Bridewell remains to be noticed. Mr. Lemon, of the State Paper Office, has discovered in that depository a manuscript showing that in the old Bridewell were imprisoned the members of the Congregational Church first formed after the accession of Elizabeth. On the evening of the 20th of June, 1567, the gates of the old prison were opened to receive a company of Christian men and women, who were committed to the custody of the gaoler for an indefinite term, at the pleasure of the authorities, who assigned them to his care. The Lord Mayor, in pity for their condition, urged them to make the required acknowledgment; but they conscientiously refused. Then were led to their cells, men unknown to fame, but who discovered the long-neglected principles of Church Government in the New Testament, which have wrought in silence much mighty and beneficial changes. It is, no doubt, to this company that Bishop Grindal refers, in his letter to Bullinger, July 11, 1568: "Some London citizens," he says, "with four or five ministers, have openly separated from us, and sometimes in private houses, sometimes in fields, and, occasionally, even in ships, they have held meetings and administered the Sacraments. Besides this, they have ordained ministers, elders, and deacons after their own way. The number of the sect is about two hundred, but consisting of more women than men. The Privy Council have lately committed the heads of this faction to prison, and are now using means to put a timely stop to the sect."

Dr. Waddington has also discovered some papers written by the members of this Church in the Bridewell, signed chiefly by Christian women; together with a document containing a brief statement of their principles, by Richard Fitz, their pastor. It appears from these records—which have been kept for nearly three hundred years—that Richard Fitz, their minister; Thomas Rowland, deacon; Partridge, and Giles Fowler; died in prison. From the enlarged proportions the congregational denomination has since reached in Great Britain and America, considerable interest is attached to Bridewell because of these associations. Dr. Waddington, following the current of history from this hidden source, shows, by indisputable evidence from original papers in the public archives, that the succession of Congregational Churches from this period is continuous: the Bridewell may thus be regarded as the starting-point of Congregationalism after the Reformation.\*

These touching and simple memorials have been preserved by the Metropolitan Bishop, and finally transferred to the royal archives. The name of Fitz was known to the Christian exiles in Holland associated with the Pilgrim Fathers. Henry Ainsworth speaks of "that separated Church, whereof Mr. Fitz was pastor, in the beginning of Queen Elizabeth's reign." It was reserved for us to identify him in his relation to the "Flock of Slaughter," suffering bonds and imprisonment in the Bridewell. These original papers enable us with certainty to trace the origin of the first voluntary Church in England after the Marian persecution, as contemporaneous with the Anglican movement.—See *Historical Papers: No. 1, Richard Fitz.*

## BRIDGES.

**T**HERE is no feature of the metropolis calculated to convey so enlarged an idea of the wealth, enterprise, and skill of its population, as the *Eight Bridges*, which have been thrown across the Thames within the present century. Until the year 1750, the long narrow defile of Old London Bridge formed the sole land communication between the City and the suburbs on the Surrey bank of the Thames; whereas now, westward of the structure built to replace the ancient Bridge, are Southwark, Blackfriars, Waterloo, Lambeth Suspension, Westminster, Vauxhall, and Chelsea Bridges, besides the Railway Bridges to be described elsewhere.

LONDON BRIDGE, the first Bridge across the Thames at the metropolis, was of wood, erected in the year 994, opposite the site of the present St. Botolph's Wharf: it is mentioned in a statute of Ethelred II., fixing the tolls to be paid by boats bringing fish to "Bylynsagate."

The first wooden bridge is stated to have been built by the pious Brothers of St. Mary's monastery, on the Bankside; which house was originally a convent of sisters, founded and endowed with the profits of a ferry at this spot, by Mary, the only daughter of the ferryman, who is traditionally said to be represented by an antique monumental figure in St. Saviour's Church. This bridge is described with turrets and roofed bulwarks in the narrative of the invasion of the fleet of Sweyn, King of Denmark, in 994; and it was nearly destroyed by the Norwegian Prince Olaf in 1008. It was rebuilt before the invasion of Canute in 1016, who is said to have sunk a deep ditch on the south side, and dragged his ships to the west side of the bridge. It was easily passed by Earl Godwin in 1052; but it was swept away by flood in 1091; rebuilt in 1097; burnt in 1136; and a new bridge erected of elm-timber in 1163, by Peter, chaplain of St. Mary Colechurch, Poultry.

The same pious architect began to build a *stone* bridge, a little to the west of the wooden one, in 1176; when Henry II. gave towards the expenses the proceeds of a tax on wool, which gave rise to the popular saying that "London Bridge was built upon woolpacks." Peter of Colechurch died in 1205, having, it would appear, left the bridge unfinished four years previously; since the Patent Roll of the third year of the reign of King John informs us that the King was anxious to bring the Bridge to perfection, and in 1201 took upon himself to recommend to the Mayor and citizens of London for that purpose, Isenbert, Master of the Schools of Xainctes, who had already constructed a bridge there, and at Rochelle. A translation of this Royal Writ is given in the

\* See *Walks and Talks about London*, 1865, pp. 31-33.

*Chronicles of Old London Bridge* (pp. 70, 71). In it the King states that, by the advice of Hubert, Archbishop of Canterbury, and others, he had entreated Isenbert to undertake the building (or rather completion) of the bridge, and that he had granted the profits of the edifices Isenbert was to build on the bridge to be for ever applied to its repair and sustentation; in another document mention is made of the houses built upon the bridge, as well as to a plan of lighting the bridge by night, according to Isenbert's plan. (See Mr. Hardy's *Introduction to the Patent Rolls*, and Mr. W. Sidney Gibson's communication to *Notes and Queries*, 2nd s., ix., 119.) The bridge was, accordingly, finished in 1209. It consisted of a stone platform, 926 feet long and 40 in width, standing about 60 feet above the level of the water; and of a drawbridge and 19 broad-pointed arches, with massive piers. It had a gate-house at each end; and towards the centre, on the east side, a Gothic chapel, dedicated to St. Thomas of Canterbury; in the crypt of which, within a pier of the bridge, was deposited, in a stone tomb, the body of Peter of Colechurch. Up to the year 1250, a toll of twelve pence, a considerable sum at that time, had been levied upon every ship passing under London Bridge, *i.e.* through the drawbridge in the middle. The many edicts about the nets used upon the Thames show how carefully the fisheries were watched, and how productive they must have been.

Norden describes the bridge, in the reign of Elizabeth, as "adorned with sumptuous buildings and stately and beautiful houses on either syde," like one continuous street, "except certain voyd places for the retyre of passengers from the danger of cars, carts, and droves of cattle, usually passing that way," through which vacancies only could the river be seen over the parapet-walls or palings. Some of the houses had platform roofs, with pretty little gardens and arbours. Near the drawbridge, and overhanging the river side, was the famed Nonsuch House, of the Elizabethan age: it was constructed in Holland, entirely of timber, put together with wooden pegs only, and was four stories high, richly carved and gilt.

There is a view of London Bridge by Norden, which is a pearl of great price among print collectors. One impression, in the Sutherland Clarendon, in the Bodleian Library, is in the *second state*, and differs materially from the view published by Norden, in the reign of Elizabeth, twenty-seven years earlier than the Sutherland impression. Of the first named view, an early impression was discovered in Germany in 1863, by Mr. J. Holbert Wilson; the old houses upon the bridge are neatly engraved; and a cluster of traitors' heads is placed upon poles on the top of the bridge gate. The print in the *second state* has lost five inches in depth, and the dedication states that Norden had described it in the reign of Queen Elizabeth, but the plate had been "neare these twenty years, embezzed and detained by a person till of late unknown;" it was, therefore, not published until late in the reign of James I., then in a mutilated state; though the above is evidence of impressions of the first state. This is, therefore, the *oldest known view of London Bridge*.

We may here mention another old view of London Bridge—one of a series published by Boydell and Co., in 1818, with a note stating it to have been copied from a print engraved in 1754, from a "very antient picture; but the plate (which was a private one) was afterwards mislaid." This view is birds-eye, reaching from the bridge to St. Katharine's; in it appears St. Paul's, *with the spire*, which was burnt in 1561. Beneath the view this is stated to be "the oldest view of London extant;" but we have Van den Wyngreder's (1643) view, in the Sutherland Collection. In neither of these views, however, is London Bridge so distinctly shown as in Norden's horizontal view: the detail of the houses on the bridge is surprisingly minute.

The chronicles of this stone bridge through nearly six centuries and a quarter form, perhaps, the most interesting episode in the history of London. The scenes of fire and siege, insurrection and popular vengeance, of national rejoicing and of the pageant victories of man and of death, of fame or funeral—it were vain for us to attempt to recite. In 1212, within four years after the bridge being finished, there was a terrific conflagration at each end, when nearly 3000 persons perished; in 1264, Henry III. was repulsed here by De Montfort, Earl of Leicester, and the populace attacked the Queen in her barge as it was preparing to shoot the Bridge; in 1381, the rebel Wat Tyler entered the City by this road; in 1392, Richard II. was received here with great pomp by the citizens; in 1415, it was the scene of a grand triumph of Henry V., and in 1422 of his funeral procession; in 1428, the Duke of Norfolk's barge was lost by upsetting at the bridge, and his Grace narrowly escaped; in 1450—

"Jack Cade hath gotten London Bridge; the citizens  
Fly and forsake their houses:"

but the rebel was defeated, and his head placed upon the Gate-house: in 1477, Falconbridge attacked the Bridge, and fired several houses; in 1554, it was one of the daring scenes of Sir Thomas Wyatt's rebellion; in 1632 more than one-third of the houses

were consumed in an accidental conflagration; and in 1666 the labyrinth of dwellings was swept away by the Great Fire: the whole street was rebuilt within twenty years; but, in 1757, the houses were entirely removed, and parapets and balustrades erected on each side; in this state the Bridge remained till its demolition in 1832.

In 1582, at the west side of the City end of the Bridge, Waterworks were commenced by Morice, with water-wheels turned by the flood and ebb current of the Thames passing through the purposely contracted arches, and working pumps for the supply of water to the metropolis; this being the earliest example of public water service by pumps and mechanical powers which enabled water to be distributed in pipes to dwelling-houses. Previously, water had only been supplied to public cisterns, from whence it was conveyed at great expense and inconvenience in buckets and carts. These Waterworks were not removed until 1822, when the proprietors received for their interest 10,000*l.* from the New River Company.

The Bridge shops had signs, and were "furnished with all manner of trades." Holbein is said to have lived here; as did also Herbert, the printseller, and editor of Ames's *Typographical Antiquities*, at the time the houses were taken down. On the first night Herbert spent here, a dreadful fire took place on the banks of the Thames, which suggested to him the plan of a floating fire-engine, soon after adopted. Tradesmen's Tokens furnish but few records of the Bridge shopkeepers. "As fine as London Bridge" was formerly a proverb in the City; and many a serious, sensible tradesman used to believe that heap of enormities to be one of the Seven Wonders of the World, and, next to Solomon's Temple, the finest thing that ever art produced. Pin-makers, the first of whom was a negro, kept shops in considerable numbers here, as attested by their printed shop-bills.

The Bridge was also the abode of many artists: here lived Peter Monamy, the marine painter, who was taught drawing by a sign and house painter on London Bridge. Dominic Serres once kept shop here; and Hogarth lived here when he engraved for old John Bowles, in Cornhill. Swift and Pope have left accounts of their visits to Crispin Tucker, a waggish bookseller and author-of-all-work, who lived under the southern gate. One Baldwin, haberdasher, born in the house over the Chapel, at seventy-one could not sleep in the country for want of the noise of the roaring and rushing tide beneath, which "he had been always used to hear."

A most terrific historic garniture of the Bridge was the setting up of heads on its gate-houses: among these ghastly spectacles were the head of Sir William Wallace, 1305; Simon Frisel, 1306; four traitor knights, 1397; Lord Bardolf, 1408; Bolingbroke, 1440; Jack Cade and his rebels, 1451; the Cornish traitors of 1497; and of Fisher, Bishop of Rochester, 1535, displaced in fourteen days by the head of Sir Thomas More. In 1577, the several heads were removed from the north end of the Drawbridge to the Southwark entrance, thence called Traitors' Gate. In 1578, the head of a recusant priest was added to the sickening sight; and in 1605, that of Garnet the Jesuit, as well as those of the Romish priests executed under the statutes of Elizabeth and James I. Hentzner counted above thirty heads on the Bridge in 1598. The display was transferred to Temple Bar in the reign of Charles II.

The narrowness of the Bridge arches so contracted the channel of the river as to cause a rapid; and to pass through them was termed to "shoot the bridge," a peril taken advantage of by suicides. Thus, in 1689, Sir William Temple's only son, lately made Secretary at War, leaped into the river from a boat as it darted through an arch: he had filled his pockets with stones, and was drowned, leaving in the boat this note: "My folly in undertaking what I could not perform, whereby some misfortunes have befallen the King's service, is the cause of my putting myself to this sudden end; I wish him success in all his undertakings, and a better servant." Pennant adds to the anecdote that Sir William Temple's false and profane reflection on the occasion was, that "a wise man might dispose of himself, and make his life as short as he pleased!" In 1737, Eustace Budgell, a *soi-disant* cousin of Addison, and who wrote in the *Spectator* and *Guardian*, when broken down in character and reduced to poverty, took a boat at Somerset Stairs; and ordering the waterman to row down the river, Budgell threw himself into the stream as they shot London Bridge. He, too, had filled his pockets with stones, and rose no more: he left in his secretary a slip of paper,

on which was written a broken distich: "What Cato did, and Addison approved, cannot be wrong." This is a wicked sophism; there being as little resemblance between the cases of Budgell and Cato as there is reason for considering Addison's *Cato* written in defence of suicide.

Of a healthier complexion is the anecdote of Edward Osborne, in 1536, leaping into the Thames from the window of one of the Bridge houses, and saving his master's infant daughter, dropped by a nurse-maid into the stream. The father, Sir William Hewet, was Lord Mayor in 1559, and gave this daughter in marriage to Osborne, whose great-grandson became the first Duke of Leeds.

In 1716, a very remarkable phenomenon occurred at London Bridge. The Thames, from long continued drought, and the consequent stopping of the supplies by its tributaries, was reduced to so low a pitch, that many persons walked over its bed from Southwark to the city, and *vice versâ*. During the twenty-four hours which this extraordinary ebb—assisted as it was by a gale of wind from W.S.W.—lasted, many interesting observations were made in respect to the foundation of the bridge, and a variety of relics were found. To allow of extensive changes and repairs, a temporary wooden bridge was built on the sterlings, or ancient coffer-dams, to protect the piers; it was burnt April 10, 1758, but rebuilt in a month. The centre pier and two arches adjoining were then taken down and replaced by one large arch, the bridge widened several feet, and reopened in 1759. These alterations are said to have cost the large sum of 100,000*l*.

The annual loss of life and property that occurred through the dangerous state of the navigation under the arches (the fall being at times five feet), and the perpetually recurring expense of keeping the Bridge in repair, suggested, about the beginning of the present century, its demolition and rebuilding; but not until 1824 was the new structure commenced, the first pile being driven March 15. It was designed by John Rennie, F.R.S., and is about 100 feet westward of the old Bridge. In excavating the foundations, were discovered brass and copper coins of Augustus, Vespasian, and later Roman emperors; Venetian tokens, Nuremberg counters, and a few Tradesmen's Tokens; brass and silver rings and buckles, ancient iron keys and silver spoons, the remains of an engraven and gilt dagger, an iron spear-head, a fine bronze lamp (head of Bacchus), and a small silver figure of Harpocrates: the latter preserved in the British Museum. We may here notice, that upon the old Bridge grew abundantly *Sisymbrium Iris*, or London Rocket, with small yellow flowers and pointed leaves: this plant probably appeared here soon after the Great Fire of 1666, when it sprung up thickly from among the City ruins.

Mr. Rennie died in 1821; but the works were continued by his sons, Mr. (now Sir John) Rennie and Mr. George Rennie; the builders being Mr. W. Jolliffe and Sir Edward Banks. On June 15, 1825, the first stone was laid in a coffer-dam nearly forty-five feet below high-water mark, opposite the southern arch (fourth lock), with great ceremony, by the Lord Mayor (Garratt), in the presence of the Duke of York; and in the evening the Monument was illuminated with portable gas, to commemorate the event. Two large gold medals were also struck on the occasion. The first arch was keyed August 4, 1827; the last Nov. 19, 1828; and the Bridge was opened with great state, August 1, 1831, by King William IV. and Queen Adelaide, who went and returned by water, and were present at the banquet given on the Bridge; the Lord Mayor (Key) presiding; and the King and Queen partaking of the loving-cup.

New London Bridge is unrivalled in the world "in the perfection of proportion and the true greatness of simplicity."

"It consists of five semi-elliptical arches, viz. two of 130 feet, two of 140 feet; and the centre, 152 feet 6 inches span, and 37 feet 6 inches rise, is perhaps the largest elliptical arch ever attempted: the roadway is 52 feet wide. This bridge deserves remark, on account of the difficult situation in which it was built, being immediately above the old bridge, in a depth of from 25 to 30 feet at low water, on a soft alluvial bottom, covered with large loose stones, scoured away by the force of the current from the foundation of the old bridge, the whole of which had to be removed by dredging, before the coffer-dams for the piers and abutments could be commenced, otherwise it would have been extremely difficult, if not impracticable, to have made them water-tight; the difficulty was further increased by the old bridge being left standing, to accommodate the traffic, whilst the new bridge was building; and the restricted water-way of the old bridge occasioned such an increased velocity of the current as materially to retard the operations of the new bridge, and at times the tide threatened to carry away all before it. The great magnitude and extreme flatness of the arches demanded unusual care in the selection of

the materials, which were of the finest blue and white granite from Scotland and Devonshire; great accuracy in the workmanship was also indispensable. The piers and abutments stand upon platforms of timber resting upon piles about 20 feet long. The masonry is from 8 feet to 10 feet below the bed of the river.—*Sir John Rennie, F.R.S.*

The time occupied in the erection of the Bridge, from driving the first pile, March 15, 1824, to its completion in July, 1831, was seven years five months and thirteen days, during which it employed upwards of 800 men. Its building was attended with so many local difficulties, that forty persons lost their lives in the progress of the works. The total quantity of stone in the bridge is stated at 120,000 tons; and the ends of the parapets consist of the largest blocks of granite ever brought to this country. A single cornice runs along the upper part of the bridge, supported on dentils formed of solid beams of granite, marking externally the line of the roadway; this is surmounted by a close parapet, four feet high, upon which are lofty and massive bronzed standards, with gas lanterns.

The amount paid to Messrs. Jolliffe and Banks for this bridge was 425,081*l.* 9*s.* 2*d.*; but the whole sum expended on it, including the approaches, was 1,458,311*l.* 8*s.* 11 $\frac{1}{3}$ *d.* The latter are very fine, especially the roadway into the City, where, at the suggestion of Mr. Alderman Gibbs, a granite statue of King William was set up, to commemorate the opening; and a bronze equestrian statue of the Duke of Wellington, in front of the Royal Exchange, was erected as an acknowledgment by the citizens of his Grace's exertions in facilitating the means of erecting the new bridge.

The old Bridge was not entirely removed until 1832, when the bones of the builder, Peter of Colechurch, were found beneath the masonry of the chapel, as if to complete the eventful history of the ancient structure. The superstructure was enormously thick. The roadway was 8 $\frac{1}{2}$  feet above the crowns of the arches, and had apparently risen by the accumulations of five different strata, one of which was composed of charred wood, the *débris* of the houses that had been destroyed by fire. The foundations were very defective. The masonry was but 2 $\frac{1}{2}$  feet below low-water mark, and rested on oak planking 16 inches wide by 9 inches thick, which in turn was supported by a mass of Kentish rubble, mixed with chalk and flints, thrown in and held together by starlings. Parts of the piers had been faced at some early period, but very ill and carelessly, and no part of the original work rested on piles.

At the sale of the materials of this Bridge, Mr. Weiss, the cutler, of the Strand, purchased all the iron, amounting to fifteen tons, with which the piles had been shod; and such portions as had entered the ground produced steel infinitely superior to any which Mr. Weiss had ever met with. Upon examination, it was inferred that the extremities of the piles having been charred, the straps of iron closely wedged between them and the stratum in which they were imbedded, must have been subjected to a galvanic action, which, in the course of some six or seven hundred years, produced the above effects.

The stone proved finely-seasoned material: a portion of it was purchased of Alderman Humphery by Alderman Harmer, and used in building his seat, Ingress Abbey, near Greenhithe; the balustrades, of good proportions, were preserved. Many snuff-boxes and other memorials were turned from the pile-wood.

The traffic across the old Bridge, in one day of July, 1811, amounted to 89,640 persons on foot, 769 waggons, 2924 carts and drays, 1240 coaches, 485 gigs and taxed carts, and 764 horses. The present Bridge is capable of accommodating four continuous streams of vehicles, with the addition of wide pavements for foot-passengers. The traffic over the Bridge during the 24 hours ending at 6 P.M. has comprised:—Vehicles—cabs, 4483; omnibuses, 4286; waggons, carts, &c., 9245; other vehicles, 2430; horses, led or ridden, 54—total, 20,498. Passengers:—In vehicles, 60,836; on foot, 107,074—total, 167,910.—[See *Chronicles of London Bridge*, by an Antiquary (Richard Thomson), 1827; where the researches of a lifetime appear to be condensed into a single volume.]

WESTMINSTER BRIDGE was opened in 1750, until when the only communication between Lambeth and Westminster was by the ferry-boat near Lambeth Palace Gates, the property of the Archbishop of Canterbury, granted by patent under a rent of 20*d.* and for the loss of which ferry 2205*l.* were given to the see.

Attempts to obtain another bridge over the Thames, besides that of London, were made in the several reigns of Elizabeth, James I., Charles I. and II., and George I.; but it was not until the year 1736 (10 Geo. II.), that Parliament authorized the building of a second bridge. The architect was Charles Labelye, a native of Switzerland: the first stone was laid by the Earl of Pembroke, Jan. 29, 1738-9; and the bridge was opened Nov. 18, 1750. It consisted of fifteen semicircular arches, the centre seventy-six feet span; 1223 feet long by 44 feet wide. It was originally intended for a wooden bridge, and was partly commenced on this principle. The bottom courses of the piers, were laid, or built, in floating-vessels, or caissons, which when so loaded, were conducted to their proper positions, and there sunk upon the natural alluvial bed of the river; the bottom of the caissons thus forming, when the sides had been removed, the platforms or foundations of the masonry, unsustained by underpiling, or any other support than that of the gravel or sand on which they rested.

In the *Gentleman's Magazine* for 1750, a view of Westminster Bridge as then finished is given, with this memorandum:—"This structure is certainly a very great ornament to our metropolis, and will be looked on with pleasure or envy by all foreigners. The surprising echo in the arches, brings much company with French horns to entertain themselves under it in summer; and with the upper part, for an agreeable airing, none of the public walks or gardens can stand in competition." For the protection of passengers over it at night there was at this time a watch of twelve men!

Labelye states the quantity of stone in this Bridge to be nearly double that employed in building St. Paul's Cathedral. "The caissons contained upwards of 150 loads of timber, and were of more tonnage than a forty-gun vessel." (*Hutton's Tracts*). The original cost of the Bridge is given as 393,189*l.*, of which 145,057*l.* went to contractors and 248,132*l.* to other parties. The approaches cost 109,054*l.* It is worthy of note that long before Labelye's bridge was erected, the place of crossing was known as Westminster *Bridge*. (See Dr. Wallis to S. Pepys, Oct. 24, 1699.) In the old maps the landing-place on the north shore is so marked.

Vast sums were expended in the repair of this Bridge. Within forty years it cost nearly half a million of money; whereas the property of the Bridge only realized 7464*l.* 11*s.* 8*d.* In 1838, Mr. W. Cubitt found the caissons in a perfect state, the wood (fir) retaining its resinous smell. After the removal of London Bridge, as Telford foresaw, more than one of the Westminster piers gave way; to stay their sinking, in Aug. 1846 the thoroughfare was closed; the balustrades and heavy stone alcoves were removed, the stone-work stripped to the cornice, and the roadway lowered, thus lightening it of 30,000 tons weight; timber palings were put up at the sides, and the Bridge was re-opened. The proportions of the sides are stated to have been so accurate, that if a person spoke against the wall of any of the niches on one side of the way, he might be distinctly heard upon the opposite side; even a whisper was audible in the stillness of the night. This was the last metropolitan bridge which had a balustrade parapet, that of Blackfriars Bridge having been removed in 1839.

Westminster Bridge was built of magnesian limestone, containing from 24 to 42 per cent. of carbonate of magnesia, from which Epsom salts are obtained by the application of sulphuric acid. "If," said Dr. Ryan, in a lecture before the Royal Agricultural Society, "Westminster Bridge, built of that rock, were covered with water and sulphuric acid, it would be converted into Epsom salts."

It was upon Westminster Bridge, September 3, 1803, that Wordsworth poured forth this truly majestic sonnet:—

Earth has not anything to show more fair:  
Dull would he be of soul who could pass by  
A sight so touching in its majesty:  
This City now doth like a garment wear  
The beauty of the morning; silent, bare,  
Ships, towers, domes, theatres, and temples, lie  
Open unto the fields, and to the sky,  
All bright and glittering in the smokeless air.  
Never did sun more beautifully steep  
In his first splendour valley, rock, or hill;  
Ne'er saw I, never felt, a calm so deep!  
The river glideth at its own sweet will:  
Dear God! the very houses seem asleep,  
And all that mighty heart is lying still!

At length the construction of a new Bridge was commenced as near as possible to the old one, the latter being used as a temporary bridge. The works were com-

menced by T. Page, C.E., somewhat lower down the river, in the middle of 1859. No coffer-dams were used; but on the site of each pier, elm piles were driven deep below the bed of the river into the London clay. Round these again were forced massive iron circular piles, grooved at the edges, so as to admit of great sheets of cast iron being slid down like shutters between them; the space they shut in being carefully dredged out of mud to the bed of the river, the piles tied together with iron rods, and the space filled in between with concrete up to low-water mark, when the masonry—enormous slabs of granite, weighing from eight to twelve tons—was fixed for the pier, and on these were raised the massive stone piers themselves. The arches of the Bridge are seven in number, each formed of seven ribs, which are of cast-iron nearly up to the crown, where, to avoid danger from the concussion of heavy loads, they are of wrought metal. The arches vary in span, from the smallest, of 90 ft., to the largest in the centre, of 120 ft., and from a height above high-water level of from 16 ft. to 20 ft. In the spandrels of the arches are Gothic quatrefoils, filled with shields of the arms of Westminster and England. The materials used in the construction of the whole bridge were 4200 tons of cast and 1400 tons of wrought-iron, 30,000 cubic yards of concrete, 21,000 cubic yards of brickwork set in Portland cement, 165,000 cubic feet of granite, and 46,000 cubic feet of timber. Its gradient is 12 ft. lower than the old Bridge, and its total width more than double, so that it is, size for size, the cheapest Bridge over the Thames that has yet been built, costing per superficial foot less than half the price of any similar structure in London. The length, breadth, and cost of each of the metropolitan Bridges have been as follows:—

	Length. Feet.	Breadth. Ft. in.	Cost per Square ft.
London . . . . .	904	53 6	£11 6 0
Southwark . . . . .	800	42 6	11 5 10
Blackfriars . . . . .	994	42 0	3 15 6
Waterloo . . . . .	1380	41 6	10 0 0
Hungerford . . . . .	1536	13 4	4 16 6
Westminster, old . . . . .	1160	43 0	7 16 0
Westminster, new . . . . .	990	85 0	4 0 0
Vauxhall . . . . .	840	38 2	9 16 0
Chelsea . . . . .	922	40 0	2 5 0
New Bridge at Blackfriars . . . . .	980	76 0	3 5 0

Thus it will be seen that the new Bridge is very nearly twice as wide as any of the bridges over the Thames. Within the parapets it is 84 ft. 2 in. Of this the footways occupy 28 ft., the road for the light traffic 39 ft., the tramways 14 ft. 8 in., and the space between them 2 ft. 6 in. The tramways consist of iron-plates, bolted to timbers, and laid upon an elastic bed of cork and bitumen. The kerb of the footway is formed of Ross of Mull granite; the footway itself is of Blashfield's terra-cotta, in diamond-shaped tiles, grooved transversely. The Bridge was completed in 1863, and opened May 24, Her Majesty's birthday, at a quarter to 4 o'clock, the precise time when the Queen was born; and at that hour a salute of 25 guns was fired, a number corresponding to the years of her reign.

"The unparalleled width produces a most striking effect as you pass on to the Bridge: if you approach it from the Surrey side of the river, it is singularly imposing, as it stretches its wide way before you, spanning the broad unseen river, and backed by the magnificent mass of the Houses of Parliament,—never so well seen before, the visitor should see it for the first time thus—it is a thing to remember. From the river the Bridge is less impressive. It is not so majestic as London Bridge, nor so beautiful as Waterloo. The arches seem to press upon the water."—*Companion to the Almanack*, 1863. Still, with certain artistic defects, this is a noble bridge.

The old Bridge was taken down in 1861; the last arch, April 25, and the foundations three months later: altogether, including the arches, more than 2,100,000 cubic feet of masonry and brickwork were taken out.

BLACKFRIARS BRIDGE originated with a committee appointed, in 1746, to examine Labeley's designs for improving London Bridge; though the architect of Blackfriars Bridge was Robert Mylne, a native of Edinburgh. "The first pile of it was driven in the middle of the Thames, June 7, 1760; and the foundation-stone was laid by Sir Thomas Chitty, Lord Mayor, Oct. 31. On Nov. 19, 1768, it was made passable as a bridle-way, exactly two years after its reception of foot-passengers; and it was finally and generally opened on Sunday, Nov. 19, 1769. There was a toll of one halfpenny

for every foot-passenger, and one penny on Sundays; but on January 22, 1785, the tolls were redeemed by Government. The toll-house was burnt down in the Riots of 1780, when all the account-books were destroyed."—(*Chronicles of London Bridge*, pp. 568, 569.) The total cost of building and completing the Bridge and avenues thereto was 261,579*l.* Os. 6½*d.*; including 21,250*l.* 17*s.* 6*d.* paid to the Watermen's Company for the Sunday ferry.

"Under the foundation-stone were placed several pieces of gold, silver, and copper coins of George II., together with a silver medal given to Mr. Mylne, the architect, by the Academy of St. Luke, with a copper rim round it, having the following inscriptions. On the one side, 'In architectura præstantiæ præmium (ipsa Roma iudice), Roberto Mylne pontis hujus architectoni grato animo posuit.'" Upon "a plate or plates of pure tin" was a Latin inscription, stating the Bridge to have been undertaken by the Common Council of London (amidst the rage of an extensive war), and that there might remain to posterity a monument of this city's affection to the man, who, by the strength of his genius, the steadiness of his mind, and a certain kind of happy contagion of his probity and spirit (under the Divine favour and fortunate auspices of George II.) recovered, augmented, and secured the British Empire in Asia, Africa, and America, and restored the ancient reputation and influence of this country amongst the nations of Europe, the citizens of London unanimously voted this bridge to be inscribed with the name of William Pitt. It was for a short time called "Pitt Bridge," which was soon changed to Blackfriars Bridge; but the names of William and the Earl of Chatham still live in *William-street, Earl-street, and Chatham-place.*

Mylne's success was owing, in a great measure, to the exertions of his friend, John Paterson, City Solicitor; and they being of the Anti-Wilkes party, and of the same country as Lord Bute, the unpopular First Minister of the Crown, Churchill, in his poem founded on the Cock-lane Ghost story, has scathed both Mylne and Paterson.

The Bridge was built of Portland stone, and consisted of nine semi-elliptical arches, then introduced about the first time in this country, in opposition to Gwyn, who, in his design, proposed the semicircular arch. The columns were the most objectionable feature in Mylne's design, architecturally; for the line of the parapet being a curve, the pillars were necessarily of different heights and diameters. Between 1833 and 1840, the Bridge was thoroughly repaired by Walker and Burgess, at an expense of 74,035*l.*, it is stated at a loss to the contractors. The foot and carriage ways were lowered; the removal of the balustrades, and the substitution of a plain parapet, altogether spoiled the architectural beauty of the structure. It is traditionally said that our great landscape-painter, Richard Wilson, used to make frequent visits to Blackfriars Bridge, to study the magnificent view of St. Paul's Cathedral obtained from it.

At length, the Court of Common Council resolved to build a new Bridge upon the site of the old Bridge, but much wider; and the design of Joseph Cubitt was selected—to consist of five iron arches, surmounted by an ornamental cornice and parapet, and the iron floor covered with a layer of concrete, and paved with granite; each of the four piers having a massive column of red polished granite. A temporary wooden bridge 900ft. in length, having three arches of 75ft. span for the river traffic; the carriage-way is 26ft. wide, and above it, at an elevation of 16ft., two footways, each 9ft. wide, were erected: the old bridge was then closed, and its demolition commenced forthwith; the rubble and masonry above the arch-turnings was nearly 20,000 tons weight. The cost of this Bridge, four equestrian statues, and the temporary bridge, is stated at 265,000*l.*, or 3*l.* per foot super. At 150 feet eastward an iron lattice girder-bridge had been constructed for the London, Chatham, and Dover Railway.

VAUXHALL BRIDGE, communicating with Millbank, had, in consequence of disputes, four engineers: Ralph Dodd, Sir Samuel Bentham, John Rennie, F.R.S.; and lastly, James Walker, who carried the design into effect at the expense of a public Company. The Bridge is of cast-iron, but was originally intended to be of stone: hence the narrowness of the nine arches, which would not have been necessary for an iron structure. The first stone of the pier begun by Mr. Rennie was laid by Lord Dundas, as proxy for the Prince Regent, May 9, 1811. The building was then suspended, but transferred to Mr. James Walker; the first stone of the resumed works was laid by the late Duke of Brunswick, August 21, 1813; and on June 4, 1816, the bridge was opened.

The width of the river is 900 feet at this Bridge, the length of which, clear of the abutments, is 806 feet; its 9 arches are each 78 feet span, and its 8 piers, each 13 feet wide; height of centre arch, at high water, 27 feet. The bridge cost upwards of 300,000*l.*; its half-year's clear revenue from tolls in 1849-50 was 2986*l.* 3*s.* 4*d.* The

low grounds west of the bridge, and formerly known as the Neathouse Gardens, were elevated to a level with the Pimlico-road, by transporting hither the soil excavated from St. Katherine's Docks; and upon this artificial foundation several streets were built. The roadway on the south side crosses the site of the Cumberland Tea Gardens.

WATERLOO BRIDGE has been dignified by Canova as "the noblest bridge in the world," and by Baron Dupin as "a colossal monument worthy of Sesostris and the Cæsars." It was partly projected by George Dodd, the engineer, and designed for him by John Linnell Bond, architect, who died in 1837; but the bridge was eventually built for a public Company by John Rennie, F.R.S. It crosses the Thames from the Strand, between Somerset Place and the site of the Savoy, to Lambeth, at the centre of the site of Cuper's Gardens, where the first stone was laid October 11, 1811. b10

This Bridge consists of nine semi-elliptical arches, each 120 feet span and 35 feet high, supported on piers 20 feet wide at the springing of the arches; with "useless and inappropriate Grecian-Doric columns between the piers, surmounted by the anomalous decoration of a balustrade upon a Doric entablature."—(*Elmes*.) The width of the Thames at this part is 1326 feet at high water; the entire length of the bridge is 2456 feet—the bridge and abutments being 1380 feet, the approach from the Strand 310 feet, and the land-arch causeway on the Surrey side 766 feet. The roadway upon the summit of the arches is carried upon brick arches to the level of the Strand; and by a gentle declivity upon a series of brick arches over the roadway upon the Surrey bank of the river to the level of the roads near the Obelisk by the Surrey Theatre. This district, until the building of the Bridge, was known as Lambeth Marsh, was low-lying and swampy, with thinly scattered dwellings; but in a few years it became covered with streets of houses. d2

The Bridge is built of granite, "in a style of solidity and magnificence hitherto unknown. There elliptical arches, with inverted arches between them to counteract the lateral pressure, were carried to a greater extent than in former bridges; and isolated coffer-dams upon a great scale in a tidal river, with steam-engines for pumping out the water, were, it is believed, for the first time employed in this country; the level line of roadway, which adds so much to the beauty as well as the convenience of the structure, was there adopted."—(*Sir John Rennie, F.R.S.*) The Bridge was opened by a procession of the Prince Regent and the Dukes of York and Wellington, and a grand military cavalcade, on June 18, 1817, the second anniversary of the battle of Waterloo, whence it is named. The Bridge itself cost about 400,000*l.*, which, by the expense of the approaches, was increased to above a million of money—a larger sum than the cost of building St. Paul's, the Monument, and seven of our finest metropolitan churches. It has been a ruinous speculation to the Company, the tolls amounting to little more than 20,000*l.* per annum. d2

Formerly, the average number of suicides annually committed from Waterloo Bridge was 40; in September, 1841, there were nine attempts made, within a few days, to commit suicide from Blackfriars Bridge.

SOUTHWARK BRIDGE, designed by John Rennie, F.R.S., was built by a public Company, and cost about 800,000*l.* It consists of three cast-iron arches: the centre 240 feet span, and the two side arches 210 feet each, about forty-two feet above the highest spring-tides: the ribs forming, as it were, a series of hollow masses, or voussoirs, similar to those of stone, a principle new in the construction of cast-iron bridges, and very successful. The whole of the segmental pieces and the braces are kept in their places by dove-tailed sockets and long cast-iron wedges, so that bolts are unnecessary; although they were used during the construction of the bridge, to keep the pieces in their places until the wedges had been driven. The spandrels are similarly connected, and upon them rests the roadway of solid plates of cast iron, joined by iron cement. The piers and abutments are of stone, founded upon timber platforms, resting upon piles driven below the bed of the river. The masonry is tied throughout by vertical and horizontal bond-stones, so that the whole acts as one mass in the best position to resist the horizontal thrust. The first stone was laid by Admiral Lord Keith, May 23, 1815, the Bill for erecting the Bridge having been passed May 6, 1811. The iron-work, weight 5700 tons, had been so well put together by the Walkers, of

Rotherham, the founders, and the masonry by the contractors, Jolliffe Banks; that when the work was finished, scarcely any sinking was discernible in the arches. From experiments made to ascertain the extent of the expansion and contraction between the extreme range of winter and summer temperature, it was found that the arch rose in the summer about 1 inch to  $1\frac{1}{2}$  inch. The works were commenced in 1813, and the bridge was opened by lamp-light, March 24, 1819, as the clock of St. Paul's Cathedral tolled midnight. Towards the middle of the western side of the bridge is a descent from the pavement to a steamboat pier. The bridge was opened free of toll, for six months, by the Lord Mayor (Lawrence), Nov. 8, 1864, with a view to its purchase, ultimately, by the City of London.

"Within a fraction, London Bridge has as much traffic as all the rest put together, the proportions being—London equal to all; Westminster half of London; Blackfriars half of Westminster; Waterloo one third of Blackfriars; and Southwark one-fourth of Waterloo."—*Bennoch on the Bridges of London*, 1853.

HUNGERFORD SUSPENSION-BRIDGE, from Hungerford Market to Belvedere Road, Lambeth, was constructed by I. K. Brunel, F.R.S., and was a fine specimen of mechanical skill. It consisted of two lofty brick piers, or towers, in the Italian style, designed by Bunting, 58 feet above the road, and built in brickwork and cement on the natural bed of the river, without piles. In the upper part of these towers, four chains passed over rollers, so as to equalize the strain: they carried the platform or roadway, in two lines, with single suspension rods, 12 feet apart; the chains being secured in tunnels at the abutments to iron girders, embedded in brickwork and cement, and strengthened with concrete. There were three spans, the central one between the piers being  $676\frac{1}{2}$  feet, or 110 feet wider than the Menai Bridge; and second only to the span of the wire suspension-bridge at Fribourg, which is nearly 900 feet. The length between the abutments of the Hungerford Bridge was  $1352\frac{1}{2}$  feet. The roadway was in the centre 32 feet above high-water mark, or 7 feet higher than the crown of the centre arch of Waterloo Bridge. The height above the piers was  $28\frac{1}{2}$  feet. Thus was gained additional height for the river traffic, and a graceful curve, with the appearance of swagging prevented. The Bridge was commenced in 1841, and was built without any scaffolding but a few ropes, consequently, without impediment to the navigation of the river. The iron-work, between 10,000 and 11,000 tons, was by Sandys and Co., Cornwall. The entire cost of the Bridge was 110,000*l.*, raised by a public Company. The toll was a halfpenny each person each way. The Bridge was opened May 1, 1845, when, between noon and midnight, 36,254 persons passed over. Hungerford was then the great focus of the Thames steam-navigation, the embarkations and landings here exceeding 2,000,000 per annum. The Bridge was taken down in 1863, and the chains were carried to Clifton, for the Suspension-Bridge erecting there. Upon its site has been constructed the Bridge for the Charing Cross Extension of the South Eastern Railway: it has on each side a foot-path and ornamental balustrade; and in the centre four lines of rails, expanding fanwise into seven lines on approaching the Charing Cross terminus. The Bridge for carrying the Railway across the Thames to the City terminus, in Upper Thames-street, is similar to the Charing Cross Bridge, but 12 feet wider.

HAMMERSMITH SUSPENSION-BRIDGE is one of the most elegant structures of its kind; and, unlike other suspension-bridges, has part of the roadway supported on, and not hanging from, the main chains. The weight of the masonry abutments on each bank is 2160 tons, to resist the pull of the chains. Cost, 80,000*l.*; engineer, W. Tierney Clarke; first stone laid by the Duke of Sussex, May 7, 1826; finished 1827.

CHELSEA SUSPENSION-BRIDGE, opened in 1858, forms a communication between Pimlico, Belgravia, and Chelsea, on one side of the Thames, and Battersea Park, and the neighbourhood, on the other (the Middlesex roadway crossing the site of Ranelagh), and was built with funds granted by Parliament in 1846; Geo. Gordon Page, engineer. The length of the Bridge is 704 feet: it consists of a centre opening of 333 feet, with two side openings 166 feet 6 inches each. The piers terminate in

curved cutwaters: the width of the Bridge is 47 feet; the roadway at the centre of the Bridge is 24 feet 6 inches above high-water, and has a curve of 18 inches rise, commencing at the abutments. The towers and ornamental portions are of cast-iron. The girders and flooring of the platform are of wrought iron: ironwork by Howard, Ravenhill, & Co. The piers are built upon caissons, below which the ironwork spreads out at the bottom on bed-plates that rest upon York stone landings, laid on piles, and concrete supports; externally, the piers are cased with ornamental ironwork. The abutments and piers rest upon piles driven 20 feet beyond low-water mark. On each side of the carriage way is a tram for heavy traffic. A very large amount of additional strength is obtained over the ordinary suspension construction by two longitudinal lattice girders, of wrought iron, which separate the roadway from the footpaths. At each end of the bridge are rectangular lodges, with terra-cotta terminations. The four iron towers that rise from the caissons and piers have their upper portions of moulded copper, gilded and painted to resemble bronze, and crowned with globular lamps. The towers bear the royal arms and V. A. Yet, this public way across the Thames—although built ostensibly with the public money to afford the inhabitants of Middlesex access to Battersea *free* park—had a horse, carriage, and foot toll, an anomaly which was loudly reprehended.

At a short distance eastward is the Bridge for the Victoria Station and Pimlico Railway; the ironwork by Bray and Waddington, of Leeds; Fowler, engineer; opened in 1860. The stone piers, and the framework of the spandrels of the four flat and segmental iron arches, each 175 feet span, and the iron cornice, render this one of the handsomest railway bridges over the Thames.

LAMBETH SUSPENSION BRIDGE, connects Horseferry-road, Westminster, with Church-street, Lambeth, P. W. Barlow, engineer; and though constructed for both carriage and foot traffic, it cost, including the approaches, only 40,000*l.* Its entire length is 1040 feet; it has three spans of 280 feet each, of wire cable, bearing wrought-iron platforms, suspended from piers, each of two iron cylinders, 12 feet in diameter, sunk into the London clay, 18 feet below the bed of the river, filled with concrete and brickwork; the novelty consists in placing under the bridge, on each side, a longitudinal tubular iron girder, a cross girder between, so as to reduce to the minimum the upward, downward, and lateral movement.

### BUCKLESBURY,

A SHORT street at the point where the Poultry meets Cheapside: here formerly stood the great Conduit which brought water from Conduit Mead, near Oxford-road and Paddington. Stow writes: "Bucklersbury, so called of a manor and tenements pertaining to one Buckle, who dwelt there, and kept his courts." The manor-house, in Stow's time, bore the sign of the Old Barge, from its being said, that when Walbrook lay open, barges were rowed or towed out of the Thames up here: hence the present Barge Yard. Bucklersbury was a noted place for grocers and apothecaries, drugsters and furriers. In Shakspeare's days it was, probably, a herb-market; for he has the comparison of smelling "like Buckler's-bury in simple-time."—(*Merry Wives of Windsor*, Act iii. sc. 3.)

### BUNHILL-FIELDS,

NEAR Finsbury-square, one of the three great fields of the manor of Finsbury, named Bonhill Field, Mallow Field, and the "High Field, or Meadow Ground, where the three windmills stand;" Bonhill was erected in the reign of Queen Elizabeth, on a deposit made of "more than 1000 cartloads" of bones removed from the charnel of old St. Paul's, which, it is believed, gave rise to the name Bonehill or Bunhill Fields.

In 1553, a lease was granted to the Corporation of this with other land, being the property of the Prebendal Stall of Finsbury, in St. Paul's Cathedral; and by various renewals of this lease, the Corporation held the land until 1769, when the last of the leases expired. Prior to this the Statute of Charles II. had passed, by which persons of all degrees were prohibited from granting leases of Church property

for longer periods than forty years; and thus, in 1769, the growth of London having rendered it desirable that the land should be built over, a private Act was passed authorizing the then Prebend, Dr. Wilson, to lease the land to the Corporation for ninety-nine years, upon the terms of two-sixths of the net income to be received by them being paid to the Prebend as his own property (in lieu of any fine for the grant of the lease), one-sixth to the Prebendal Stall, and the remaining three-sixths to be retained by the Corporation. This lease will expire in 1868. Wilson-street is named from the Prebend, the Rev. Dr. Wilson.

The earliest known record of the Bunhill-fields themselves, as distinguished from the rest of the land in the lease, is that the City leased them to one Tindal, for fifty-one years, from Christmas, 1661: in that lease they are described as meadow-land, and the lease contains a provision for the citizens using them for recreation. Both this provision and the description of the land are at direct variance with its having been used as a place of burial up to that date. In four years afterwards, however (1665), London was visited with the Great Plague, and in the next year with the Great Fire; and it is extremely probable that in the disturbance of social order which these two visitations caused, the living sought for their dead a burial-place outside the City, and found it at Bunhill-fields. Certain it is, that before the expiration of Tindal's lease it had become a burial-ground. As such, however, the Corporation had nothing to do with it, until the year 1788, when they determined not to renew the lease, but take it into their own hands, and so it has remained to this day.

Since 1788 the Prebend has year by year received his moiety of the income of the ground as a cemetery, and as that cemetery now reverts to those claiming under the Prebend, *i.e.*, the Ecclesiastical Commissioners, they have imposed upon them the obligation of preserving the ground for the purpose for which they have received the money. There remains but one point from which liability is sought to be imposed upon the Corporation. It is said the Act of Parliament authorized the renewal of the lease in perpetuity, and that the City, through their negligence in not having obtained a renewal of the lease, must indemnify the owners of graves. It were to be wished, for the City's sake, that the renewal were authorized, as they lose in 1868, through the expiring of the lease, an income of 40,000*l.* per annum; but, unfortunately, this is not the fact. The mistake has arisen from the marginal note saying the lease is renewable; but there is nothing in the Act to warrant the note, and no one at this distance of time can explain how the error has arisen.—(*Communicated to the City Press.*)

Curll published a Register of the interments here to 1717, with the inscriptions, &c. Among these are the following:—

"Here lyeth interred the body of Edward Tucker, late of Weymouth, who (by his own prediction) departed this life, March 4th, 1706-7, aged 86 years." "This ground, six foot long eastward, is bought for Elizabeth Chapman." This notice is valuable, as conclusively showing that, even at that early period, graves were sold in perpetuity, and any attempt to sell the soil for secular purposes would be a most unwarrantable desecration. "Here lyeth the body of Francis Smith, Bookseller, who in his youth was settled in a separate congregation, sustaining, between 1659 and 1688, great persecutions, by imprisonments, exile, fines, and for printing petitions for calling of a Parliament, with several things against Popery. After nearly 40 imprisonments, he was fined 500*l.* for printing and selling the speech of a noble peer, and three times suffered corporeal punishment. He was for said fine five years a prisoner in the King's Bench, which hard duress utterly impaired his health. He dyed House-keeper in the Custom House, December 22nd, 1691." Engraved on the side of a handsome tomb, "Mordecai Abbott, Esq., Receiver-General of His Majesty's Customs, oblit 29 Feby. 1699, ætat. 43:

Here Abbott, virtue's great example, lies,  
The charitable, pious, just, and wise;  
But how shall fame in this small Table paint  
The Husband, Father, Master, Friend, and Saint?  
A soul on Earth so ripe for glory found;  
So like to theirs, who are with glory crown'd,  
That 'tis less strange such worth so soon should go  
To Heaven, than that it staid so long below."

Mr. A. J. Jones, in a volume published in 1849, gives a transcript of most of the inscriptions that remained in Bunhill-fields at that period, about three hundred.

Among the eminent persons interred here, in an altar-tomb, east end of the ground, is Dr. Thomas Goodwin, the Independent preacher, who attended Oliver Cromwell on his deathbed. Also Dr. John Owen, Dean of Christchurch and Vice-Chancellor of Oxford when Cromwell was Chancellor; he preached the first sermon before the Parlia-

ment after the execution of Charles I. But more attractive is the resting-place of John Bunyan, in the vault of his friend Strudwick, the grocer, Holborn Bridge, at whose house Bunyan died. His name is not recorded in the Register, nor is it in Curll's List; but the place was long marked by a monument, with this inscription:—"Mr. John Bunyan, Author of *The Pilgrim's Progress*, ob. 31 Aug. 1688, æt. 60.

The 'pilgrim's' progress now is finished,  
And Death has laid him in this earthly bed."

This inscription was cut many years after Bunyan's funeral. Southey tells us, with grave humour, "People like to be buried in company, and in good company. The Dissenters regarded Bunhill Fields' Burial-ground as their Campo Santo, and especially for Bunyan's sake. It is said that many have made it their desire to be interred as near as possible to the spot where his remains are deposited." In May, 1852, the above memorial was replaced by an altar-tomb, upon which is the recumbent figure of Bunyan, book in hand; the end panels have sculptures from *The Pilgrim's Progress*. 22

Here, too, sleeps Lord-Deputy Fleetwood, of the Civil Wars, Oliver Cromwell's son-in-law, and husband of the widow of Ireton: there was a monument to his memory, which has been obliterated or removed.

Here also rest Dr. Daniel Williams, founder of the Library in Redcross-street; John Dunton, author of his own *Life and Errors*; the Rev. D. Neal, author of the *History of the Puritans*; Dr. Lardner, author of the *Credibility of the Gospel History*; Dr. John Guise, Dr. Gill, Dr. Stennett, Dr. Harris; Dr. Richard Price, author of *Reverſionary Payments*; Dr. Henry Hunter, Dr. Fisher, the Rev. Theophilus Lindsey; Dr. A. Rees, editor of the *Cyclopædia*; George Walker, of Nottingham and Manchester; and the Rev. Thomas Belsham, the Unitarian Minister. M

Defoe, the author of *Robinson Crusoe*, who was born and died in the parish of St. Giles, Cripplegate, is buried in Bunhill-fields, with his second wife, the spot unknown. The entry in the register, written, probably, by some ignorant person who made a strange blunder of his name, is as follows:—"1731, April 26. Mr. Dubow, Cripplegate." Here lies, with a headstone to her memory, Susannah Wesley, mother of John Wesley, founder of the people called Methodists; and Charles Wesley, the first person who was called a Methodist. Near the centre of the ground is a monument to Dr. Isaac Watts; Joseph Ritson, the antiquary, lies here, spot unmarked; William Blake, the painter and poet, 25 feet from the north wall, without a monument; and Thomas Stothard, R.A., best known by his *Canterbury Pilgrimage*. Near the street rails is a monument to Thomas Hardy, who was tried for treason in company with John Horne Tooke. Hardy's memorial bears a long and somewhat defiant semi-political inscription.

In 1864, Mr. Deputy Charles Reed, F.S.A., presented to the Common Council a memorial, influentially signed, praying the Court to take steps for the preservation of Bunhill-fields burial-ground. This memorial eloquently says:—

"In this burying-ground are interred men whose memory and writings are among the most precious of our national heirlooms; some of the most fearless asserters of civil and religious liberty at critical periods of our history; notable men of all professions and of all religious communities; divines, artists, reformers; a crowd of worthies and confessors whose learning, piety, and public services not only adorned the age in which they lived, but have proved a permanent blessing to the land, and whose names the world will not willingly let die. The Nonconformist bodies, especially, look upon this as the holy field of their illustrious dead, because here lie buried those whose remains were refused interment in the graveyards of the churches in which they had long faithfully ministered, and whose memory is reverently cherished in the hearts and homes of their religious descendants."

George Fox, founder of the Society of Friends, is erroneously said to have been buried here; but he lies in Coleman-street, which was part of Finsbury Manor Farm, and was, before Fox's death, acquired by the Friends as their place of interment; besides, the Friends were looked upon in no favourable manner by the other dissenting bodies, who had acquired Bunhill-fields. In Fox's diary it is related how, after the meeting in White Hart Court, Gracechurch-street, he went to Henry Goldney's, close by, and there admitted to others that "he thought he felt the cold strike to his heart as he came out of the meeting." It was "the 13th of the 11th month," 1690, being in the 67th year of his age, that Fox died. On the day appointed for his interment a meeting of Friends was held in White Hart Court, and "the body was borne, accompanied by very great numbers, to the Friends' burying-ground, near Bunhill Fields." Hasty readers have inferred from this that it was in the larger cemetery George Fox was buried.

## CANONBURY TOWER,

AT the northern extremity of the parish of Islington, denotes the site of the country-house of the Prior of the Canons of St. Bartholomew; hence, it is supposed, the name of Canons'-bury, *bury* being synonymous with *burgh*, a dwelling. On a garden-house hard by is sculptured the rebus or device of Bolton, the last prior—a *bolt*, or arrow for the crossbow, through a *tun* :

“Old Prior Bolton, with his bolt and tun.”

The Tower, which is of red brick, is believed to have been built by Sir John Spencer, of Crosby-place, who purchased the estate in 1570. Elizabeth, his only daughter and heiress, married William, second Lord Compton, who is traditionally said to have contrived her elopement from her father's house at Canonbury in a baker's basket. In 1618, he was created Earl of Northampton, and from him the present owner of Canonbury, who is the eleventh Earl and third Marquis of Northampton, is lineally descended.

The Tower is 17 feet square, and nearly 60 feet in height, and consists of seven stories and 23 rooms. For many years it was let in lodgings. Amongst its tenants was Ephraim Chambers, whose *Cyclopædia* was not only the basis of Rees's work, but originated all the modern Cyclopædias in the English and the other European languages. Chambers died at Canonbury, May 18, 1740, and was buried in Westminster Abbey, under a short Latin inscription, his own composition. Newbery, the bookseller, lodged here; and in his apartments Goldsmith often lay concealed from his creditors, and under a pressing necessity he there wrote his *Vicar of Wakefield*; “he was the most diligent slave that ever toiled in the mill of Grub-street.”

“A silly notion at one time prevailed that there was formerly a subterranean communication between Canonbury House and the Priory of St. Bartholomew. Similar vulgar and absurd stories are current at most of the large monasteries; as Malmesbury, Netley, Glastonbury, &c.”—(*Godwin's Churches of London*.)

The ancient priory mansion covered the entire site now occupied by Canonbury-place, and had attached to it a park of about four acres, with large gardens, a fish-pond, &c.; most of which were included in the premises of Canonbury Tea-gardens and Tavern, in the middle of the last century but a small ale-house. It was enlarged and improved by a Mr. Lane, who had been a private soldier; but its celebrity was chiefly owing to the widow Sutton, who resided here from 1785 to 1808, and laid out the bowling-green and grounds. The streets which now cover the Canonbury estate are mostly named from the titles of the Marquis of Northampton, the ground landlord.

## CARVINGS IN WOOD.

THE art of Sculpture in Wood has ever been royally and nobly encouraged in England; and the metropolis contains many fine specimens of ancient and modern skill in this tasteful branch of decoration.

The figures carved upon the chestnut roof of Westminster Hall show the degree of excellence the art had attained in this country so early as the reign of Richard II. The sculptured arms on the corbels are those of France and England, quarterly; and of St. Edward the Confessor, as borne by Richard II.; whose favourite badge, viz., the white hart, lodged, ducally gorged and chained, and his crest of a lion guardant crowned, standing on a chapeau and helmet, are also carved, in alternate succession, on the cornice.

There is every reason to suppose the timber architecture of Old London to have been elaborate and beautiful. Till about the year 1625, nearly all the houses were built of wood: the interiors of the better sort were often richly carved, particularly in the panels of rooms, chimney-pieces, ceilings, and staircases; and the exteriors displayed a similar love of ornament in the doors and barge-boards, and story corbels.

The Great Fire of 1666 spared few specimens of early wood-carving; but several exist in quarters not reached by the destroyer. Of existing Gothic work may be

mentioned the decorations of Crosby Hall, much injured, however, by "restoration." The excellently carved stalls in the church of St. Helen, Bishopsgate, and those of the Chapel of Henry VII. at Westminster, are unusually magnificent, and were mostly executed by foreign workmen summoned to England by Henry VII.

In the reign of Elizabeth, not only the houses of the nobility were decorated, but furniture made of British woods was richly carved: the late Mr. Cottingham, F.S.A., assembled many unique specimens of this period, which were dispersed in 1851.

In the Elizabethan style may also be mentioned:—

Two splendid brackets (griffins), dated 1592, supporting the yard entrance at 21, Princes-square, Wilson-street, Finsbury.

Two house-fronts in Aldersgate-street.

Some boldly carved brackets (1595), at the Old Boar's Head, Gray's-Inn-lane.

Panel and trusses over the mantel of the Cock Tavern, Fleet-street (*temp.* James I.). The room was formerly panelled opposite the fire-place. The sign bird, over the entrance doorway from Fleet-street, is in the manner of Gibbons, and gilt.

Brackets (*temp.* James I.) at the back of the house, 61, Gray's-Inn-lane.

There was some fine Elizabethan panelling in the Star Chamber at Westminster, taken down in 1835; but restored for the Hon. E. Cust, Leasowes Castle.

Brackets, very fine, at the corner of Cloth Fair, Smithfield.

House-front, 94, Fenchurch-street.

Several house-fronts, rather later, in Whitechapel Market.

The Sir Paul Pindar's Head, Bishopsgate-street-without, has a finely carved front, and a carved ceiling in one of the unmodernized rooms.

The projecting house-front (now gilt), 17, Fleet-street, opposite Chancery-lane.

Mask brackets (*temp.* James I.), at the front and back of the Old Cheshire Cheese, 49, Hart-street, City; and a spirited grotesque head (same date) within the court of Red-Lion-place, Cock-lane.

A fine staircase, attributed to Inigo Jones (probably later), at 96, St. Martin's-lane, Charing Cross.

At the White Horse Inn, Church-street, Chelsea, (burnt Dec. 14, 1840,) were four grotesque Elizabethan brackets, carved chimney-pieces; and a carved frame for the sign, dated 1509.

The most celebrated carver after the Great Fire was Grinling Gibbons, who, Walpole tells us, so delicately carved a pot of flowers, that they shook in the room with the motion of coaches passing in the street. Most of the interior carvings of St. Paul's Cathedral were executed by Gibbons, or by Dutch workmen under his superintendence; the cherubs in the choir are in the highest style of the art.

One of the best carvers employed by Wren was Philip Wood, who came up a poor lad from Suffolk, and carved as a specimen of his skill a sow and pigs, for which he received ten guineas. According to the Commissioners' Report, between the years 1701 and 1707, Wood was paid large sums of money for carved work in St. Paul's Cathedral.

It is not generally known that the pulpit at St. Paul's was designed by Mylne, and executed about sixty years since by one of the finest flower-carvers of the time, named Mowatt, then employed by a relative of Edward Wyatt, the carver and gilder, in Oxford-street. The pulpit is carved in Spanish mahogany and satin-wood; the foliage is marvellously played with in the volutes.

Many of the Halls of the City Companies are decorated with reputed Gibbons's work; as well as the interiors of most of the churches built by Sir Christopher Wren. St. James's, Piccadilly, has some fine pulpit, altar, and pew carvings; and the churchwardens' pews at Allhallows Barking (with the symbols of the four Evangelists), are amongst the most delicate decorations of their time in the metropolis. The Hall of Herald's College is also well enriched in the Gibbons style; and a beautiful specimen of Gibbons's skill in fruit, fish, game, shells, &c. is preserved at the New River House, Clerkenwell.

At Canonbury House, Islington, the great chamber contains a quaintly carved oak fireplace, in which are small statues of Mars and Venus draped. The room had originally wood panelling and carved pilasters placed at intervals; all this, with the exception of two or three pilasters, has disappeared; the doorway with the busts of the old English gentleman and dame in the quaint costume of the time, is very curious. These doorways generally projected like small screens into these great rooms, and were used as a protection from the cold. Its Roman moulding and enriched frieze-like running ornament throughout the building of the same character as the latter. The ceiling of the room bears the date 1559, probably that year when Sir John Spencer came to reside on the spot. Besides the great chamber, there are several other long rooms full of rich carvings, especially one on the ground-floor, which retains all its original decoration: this was formerly the parlour of the old mansion. The whole of the carving of these old buildings is carefully protected by the noble owner, the present Marquis

of Northampton: the tenants being strictly directed in their leases to uphold, maintain, &c., all the several antiquities submitted to their charge. (*J. C. Richardson, Architect.*)

In 1861, there was sold amongst the old materials of No. 108, Cheapside, which stood immediately opposite Bow Church, the "fine old oak panelling of a large dining-room, with chimney piece and cornice to correspond, elaborately carved in fruit and foliage, in excellent preservation, 750 feet superficial." This "oak-clad room," was bought by Mr. Morris Charles Jones, of Gunrog, near Welshpool, in North Wales, for 72*l* 10*s*. 3*d*., including commission and expenses of removal, being about 1*s*. 8*d*. per foot superficial. It has been conveyed from Cheapside to Gunrog. This room was the principal apartment of the house of Sir Edward Waldo, and stated, in a pamphlet by Mr. Jones, "to have been visited by six reigning sovereigns, from Charles II. to George III., on the occasion of civic festivities and for the purpose of witnessing the Lord Mayor's Show." (*See Mr. Jones's pamphlet, privately printed, 1864.*) A contemporary (the *Builder*) doubts whether this room can be the work of Gibbons; "if so, it is a rare treasure, cheaply gained. But except in St. Paul's, a crown and ecclesiastical structure, be it remembered—not a corporate one—there is not a single certain example of Gibbons's art to be seen in the City of London proper."

About the same year that Gibbons died, Nicholas Collet was born. This clever carver lived until 1804. He executed the carving of Queen Anne's state-carriage, and it is probable that to him we are indebted for the best of the decorated doors in Ormond-street, Queen-square. William Collins, the inseparable companion of Gainsborough the painter, was an excellent modeller and carver.

Smith, in his *London Antiquities*, says—"Samuel Monette, a native of Paris, now living in London, claims the highest encomiums I can possibly bestow: his art is principally confined to flowers, and when I say that Grinling Gibbons was a mouse to him, I shall not utter too much; his carvings in wood are so light and playful, that they may be blown away." This artist designed the pulpits of St. Paul's Cathedral, St. Paul's, Covent-garden, St. Margaret's Westminster, &c. Smith also speaks well of the carving of Burns, famous for carving wheat-sheafs; one of these wheat-sheafs still remains in a shop in the West Strand, not far from the Electric Telegraph Station.—*Builder*, 1854.

Gog and Magog, the giants in Guildhall, which are masterly examples of carving, are of wood and hollow: they are composed of pieces of fir, and are said to be the production of a ship-carver. It is also reported that they were presented to the City by the Stationers' Company, which, if true, might have given rise to the common report of their being made of paper.

London once abounded in richly-carved doorways and over-doors of the 17th and 18th centuries: there were good examples in Great Ormond-street; in Shire-lane, Temple Bar, where Gibbons once lived; in Cavendish-square, especially at No. 33; the entrance to Langbourn Chambers, Fenchurch-street; and some old mansions in Mark-lane; there was formerly a very fine one over the door of the Ship Tavern, Water-lane.

State Coaches present fine carving. Such are the Lord Mayor's Coach, kept at the Green Yard, Whitecross-street; the Queen's Coach, at the Royal Mews, Pimlico; and the Speaker's Coach, Prince's-street, Westminster.

In private collections, some magnificent specimens of early carving are preserved: such were the Italian bedstead-pillars of the 16th century, and the bas-relief after Rubens, in the Earl of Cadogan's collection; and the collection, dating from the 15th to the 18th centuries, the property of G. Field, Esq., of Lister House, Clapham.

Carving received considerable check from the introduction of stucco in the reign of George II.; but the art has received a fresh impetus in the present century. Some fine church carving was executed in 1839-42 for the Temple Church; and in 1847-8 for the choir of Westminster Abbey, then refitted with canopied stalls, organ-case, screen, &c., by Messrs. Ruddle, of Peterborough. The church of St. Mary-at-Hill, Billingsgate, was redecorated in 1849-50, by W. Gibbs Rogers: the pulpit alone cost upwards of 500*l*.; the stairs have an elaborate string-course, and all the banisters are on the rake; the bosses and flowers of the sounding-board exceed a foot in projection: the organ-gallery front has flowers festooned with musical instruments, and the pretty conceit of a crab crawling over a violin. Mr. Rogers has also carved, from a design

suggested by the Queen, a boxwood cradle in rich Italian style, most delicately finished, and first used for the infant Prince Arthur, born 1850: it is cleverly engraved and described in the *Art Journal* for August 1850.

St. Michael's Church, Cornhill, has also been redecorated by Mr. Rogers, with carvings of elaborate detail, which will be described hereafter, from the carver's pamphlet.

The interior enrichments of the New Palace at Westminster present some fine specimens of contemporary carving. Much of the work has, however, been executed by machinery, and finished by hand. The new Hall of Lincoln's Inn has also some fine new work.

The great depository for old carvings is Wardour-street, Oxford-street, where the dealers mostly keep shop: much discrimination is requisite in making purchases.

### CEMETERIES,

OR public burial-grounds, planted and laid out as gardens around the metropolis, are a novelty of our times; although they were suggested just after the Great Fire of 1666, when Evelyn regretted that advantage had not been taken of that calamity to rid the City of its burial-places, and establish a necropolis without the walls. He deplores that "the churchyards had not been banished to the north walls of the City, where a grated inclosure, of competent breadth, for a mile in length, might have served for an universal cemetery to all the parishes, distinguished by the like separations, and with ample walks of trees; the walks adorned with monuments, inscriptions, and titles, apt for contemplation and memory of the defunct, and that wise and excellent law of the Twelve Tables restored and renewed."

The several Cemeteries in the suburbs are the property of Joint-Stock Companies. From the costliness of interment in them, they at first but little abated the evil of intramural burial, as stated in the Report of the Board of Health in 1850. By the Metropolitan Interment Act, passed in the above year, the evil has been abolished, and Cemeteries provided for the several metropolitan parishes.

KENSAL GREEN CEMETERY was the first established. It lies upon high ground, left of the Harrow Road and the hamlet of Kensal Green, about two miles from Paddington Green. It is divided into two grounds: the westernmost consecrated Nov. 2, 1832; the smaller ground being for the interment of persons whose friends desire a funeral service differing from that of the Church of England. The same distinction is observed in each of the Cemeteries; and each is planted and laid out in walks, parterres, and borders of flowers, and other styles of landscape-gardening. A register is kept of interments for both portions of the grounds, and a duplicate is lodged with the registrars of parishes in the diocese. Each Company has its scale of charges for interment in catacomb, vault, or grave.

Within three years from the opening of the Kensal-Green Cemetery, there took place in it about 1000 interments. Each ground has its chapel and colonnades; in the latter are placed mural tablets, and beneath are vaults or catacombs. The memorials in this Cemetery are very numerous: altar-tombs, "monumental urns," sarcophagi, and the broken column; capacious tomb-houses, encompassed with flower-beds or overhung with funereal trees; pillars, bearing urns; weeping and praying figures, medallion portraits, and groups of insignia are most frequent; though emblems are borrowed alike from the Pagan temple and the Christian church. The cross, in its picturesque varieties, and the plain but massive slab, are side by side. Among the most conspicuous is, at the entrance, a monument to Madame Soyer, by a Belgian sculptor; the pedestal and a colossal figure of Faith are upwards of twenty feet in height. The tombs of St. John Long, the "counter-irritation" surgeon; of Morison, the "hygeist;" and of Ducrow, the equestrian; are also prominent: the latter left a sum of money for flowers, shrubs, and repairs. The memorial to Thomas Hood, the popular humorist, with sculptures from his poems, is in better taste. Here is interred the Duke of Sussex, according to especial directions left by that prince: his grave, near the chapel, is covered by an immense granite tomb; and near it rest the remains of the Princess Sophia, his sister, beneath a handsome sarcophagus tomb of Sicilian marble

erected in 1850, by subscription of Queen Victoria, the King of Hanover, Adolphus Duke of Cambridge, and the Duchess of Gloucester. Beyond Kensal Green, is a large Cemetery for Roman Catholics: here is interred Cardinal Wiseman.

THE SOUTH METROPOLITAN AND NORWOOD CEMETERY was consecrated Dec. 6, 1837: the chapels, by Tite, in the pointed style, are very beautiful; and the grounds are hilly, and picturesquely planted.

HIGHGATE AND KENTISH TOWN CEMETERY, consecrated May 20, 1839, lies immediately below Highgate Church. It has a Tudor gate-house and chapel, and catacombs of Egyptian architecture; the ground is laid out in terraces, tastefully planted; and the distant view of the overgrown Metropolis, from among the tombs, is suggestive to a meditative mind.

ABNEY PARK CEMETERY and Arboretum, lying eastward, at Stoke-Newington, was opened by the Lord Mayor, May 20, 1840. It was formed from the Park of Sir Thomas Abney, the friend of Dr. Isaac Watts, to mark whose thirty-six years' residence here a statue of the Doctor, by Baily, R.A., was erected in 1845. The Abney mansion was taken down in 1844; many of the fine old trees remain.

WESTMINSTER AND WEST OF LONDON CEMETERY, Earl's Court, Fulham-road, was consecrated June 15, 1840; it has a domed chapel, with semi-circular colonnades of imposing design. In the grounds is a large altar-tomb, with athlete figures, modelled by Baily, and erected by subscription, to Jackson the pugilist.

NUNHEAD CEMETERY, Peckham, was consecrated July 29, 1840.

THE CITY OF LONDON AND TOWER HAMLETS CEMETERY, lies at the extremity of Mile-End Road, north of Bow Common; and VICTORIA PARK CEMETERY, about eleven acres, at Bethnal Green, north of the Eastern Counties Railway. There are also large Cemeteries for Marylebone and Paddington; Islington and St. Pancras.

A few suburban churchyards are planted similarly to the Cemeteries; as that of St. John's Wood Chapel, where are buried Joanna Southcot; Richard Brothers "the prophet;" and John Jackson, R.A., the portrait-painter. The churchyard of St. Giles's-in-the-Fields, Lower Pancras Road, consecrated so long ago as 1804, has many flowery graves: here is the handsome tomb of Sir John Soane, overhung with cypresses. The burying-ground of St. Martin's-in-the-Fields, Pratt-street, Camden Town, is also planted: here lies Charles Dibdin, the song-writer.

The burial-grounds for Jews are mostly laid out and planted in the cemetery manner. Formerly their burial-place was outside the City Wall, at Leyrestowe, "without Cripplegate."

### CHANCERY-LANE

"ACQUIRED its ominous name about the time of Richard I. There is extant a deed, by which Longchamp, Bishop of Ely, devised certain messuages in the Chancellor's-lane, heretofore the New-street."—(*Archæological Journal*, No. 12, p. 375.) This is the greatest "legal thoroughfare" in London, and extends from Fleet-street, opposite Inner Temple Gate, to Holborn, nearly opposite Gray's Inn. In Edward I.'s time it was so foul and miry as to be barred up, to prevent accidents. Entering by Fleet-street, on the left were until lately some half-timbered houses, with projecting windows, overhanging stories, and gabled fronts. Izaak Walton kept a draper's shop at the second house on the left, taken down when that end of the lane was widened; he subsequently removed, according to Sir Harris Nicolas's *Life of Walton*, five doors higher up in the lane. Opposite is Serjeants' Inn, rebuilt by Sir Robert Smirke in 1838; but the old Hall remains. Higher up, on the west, is the Law Institution, with a noble Grecian-Ionic portico, built of stone by Vulliamy, in 1842; it contains a library and club accommodation for the legal profession. In this ancient thoroughfare have been built several edifices of ornamental character, including the large premises for the Union Bank, at the cost of 30,000*l*.

The Bishop of Chichester formerly had a palace in Chancery-lane, where are still

Chichester Rents and Symonds Inn; the latter, to this day, owned by the see. The large old house, with low-built shops before it, and between Bream's Buildings and Cursitor-street, is said to have been the Bishop's palace. Nearly opposite is the red-brick gatehouse of Lincoln's Inn; a Tudor arch between two massive towers, built by Sir Thomas Lovell, 1518, and bearing his arms.

The Survey of Aggas, in 1560, shows Chancery-lane with only a few houses at the end, the intervening road flanked with gardens; and there is no reason to doubt Aubrey's statement that young Ben Jonson worked with his father-in-law, a brick-layer, in building the garden-wall of Lincoln's Inn, when, as Fuller says, "having a trowel in his hand, he had a book in his pocket."

The stone buildings at the northern end of the lane are the Accountant-General's and Inrolment Offices. Opposite, upon the site of Southampton Buildings, was Southampton House, inherited by the ill-fated William, Lord Russell, by his marriage with the daughter of Thomas, last Earl of Southampton.

"It was in passing this house, the scene of his domestic happiness, on his way to the scaffold in Lincoln's-Inn-Fields, that the fortitude of the martyr for a moment forsook him (W. Lord Russell); but over-mastering his emotion, he said 'The bitterness of death is now past.' It is from this house that some of Lady Rachel Russell's celebrated letters are dated. A former entrance to the chapel of Southampton House appears to correspond with the moulding of the flat timbered roof, which is of the time of Henry VII. This part of the edifice retains its original proportions, except that its height is divided by a modern floor. Its length is about 40 feet by about 20. Other portions of Southampton House have been incorporated with the surrounding dwellings, one of which contains a beautiful Elizabethan staircase. Old mouldings and panelling appear likewise in 47, Southampton Buildings, which house seems to have been constructed upon a portion of the ancient mansion."—*J. Wykeham Archer.*

#### CHARING CROSS.

THE large area at the meeting of the Strand, Whitehall, and Cockspur-street, with Trafalgar-square on the north, is named from the Village of Cherringe, near Westminster, and seems to have been the border or neutral ground between the City and the King's western palace. Tradition traces it to the stone cross erected there, to Eleanor, the *Chère Reine* of Edward I.; but this tradition is fanciful.

In the narrative of the quarrel between the merchants of London and Northampton, in the *Liber de Antiquis Legibus*, the following passage occurs:—"Quibus literis impetratis, ecce! rumores quod predicti p'sones fuerunt apud *Cherringe* juxta Westmonasterium ubi Maior et Ballivi Norehamptone illos adduxerunt." This was in 1260, and Queen Eleanor (the *Chère Reine* in question) died in 1291. But, the association is of older date, for in *King Edward I.*, Neale's Works, edited by Dyce, we read:—

"Erect a rich and stately carved cross  
Whereon her statue shall with glory shine,  
And henceforth see you call it Charing Cross;  
For why? the *chariest* and the choicest queen,  
That ever did delight my royal eyes  
There dwells in darkness."

This was the last spot at which the Queen's body rested on its way to Westminster for burial. Mr. Hudson Turner, in *Manners and Household Expenses of England in the 13th and 15th Centuries*, gives some curious particulars of the nine Eleanor Crosses, of which two were those at Charing and Cheap. Charing Cross was built of Caen stone, and Dorset marble steps, by Richard and Roger de Crundale; it was highly decorated, and had paintings and metal figures, gilt; besides Eleanor and others, sculptured in Caen stone by Alexander of Abingdon, and modelled by Torel, a goldsmith, probably an Italian. It has been much discussed whether this and the other Eleanor Crosses were erected by Edward I. as memorials of his "conjugal affection," or by him as one of the executors of the Queen; but, surely, "the very last thing that a husband who desired to express *his own affection* for the deceased wife would do would be to appear, not in his proper person, but as one of her legal representatives."—(*Athenæum.*)

That the Crosses were raised by command of the King is founded on the authority of Walsingham and his predecessors, handed down by Sandford and others to the present day: see *Mr. Abel's paper upon the Inquiry.*

The Cross appears in the Sutherland View, 1543, with only a few houses near it, and St. Martin's Church literally "in the fields." A century later, puritanical bigotry was at its full height; and April 23, 1643, "by order of the Commission or Committee

appointed by the House, the sign of a tavern, *The Golden Cross, at Charing Cross*, was taken down as superstitious and idolatrous." Next followed the Cross itself, it being pulled down in June, July, and August 1647, and knife-hafts made of some of the stone, or marble. Then the wits had their gibe :

"Undone, undone, the lawyers are,—  
They wander about the towne,  
Nor can find the way to Westminster,  
Now Charing Cross is downe.  
At the end of the Strand they make a stand,  
Swearing they are at a loss,  
And chaffing say, That's not the way,  
They must go by Charing Cross.

*The Downfalle of Charing Cross.*

Next, regicides were executed "at the said place, where Charing Cross stood." In 1674, was placed here the noble equestrian statue of Charles I., by Le Sœur, which had been cast in 1633, but long lay concealed. A memorandum in the State-Paper Office points to the statue having been originally ordered of Le Sœur by Lord Treasurer Weston, afterwards Earl of Portland, to be set up in his gardens at Roehampton. The stone pedestal, long attributed to Gibbons, is proved by written evidence to be the work of Joshua Marshall, master-mason to the Crown.

Where the Post-office at Charing Cross now stands, there was once a hermitage, within which the patent rolls of the 47th Henry III. grant permission to William de Radnor, Bishop of Llandaff, to lodge with all his retainers, whenever he came to London. Opposite this stood the ancient Hospital of St. Mary Roncevalles, founded by William Marechal, Earl of Pembroke. It was suppressed by Henry V. as an alien priory, restored by Edward IV., and finally suppressed by Edward VI., who granted it to Sir Thomas Carwarden, to be held in free soccage of the honour of Westminster.

Canalotto painted for his patron, Algernon Sidney, Baron Percy, created in 1749 Earl of Northumberland, a view of Northumberland-house and Charing Cross; the picture is now in that mansion; it was painted about 1746, and shows the houses of the street-lines, with their signs, among which is prominent the Golden Cross.

Charing Cross was a favourite pitch for Punch, or Punchinello, as he is termed in sundry entries in the Overseers' books of St. Martin's-in-the-Fields, dated 1666, March 29, which Mr. Cunningham states to be the earliest mention of Punch in England.

It was at the Rummer Tavern, Charing Cross, that Matthew Prior was brought up by his uncle, the landlord, who had him educated at Westminster School. The Swan, at Charing Cross, was a favourite tavern of Ben Jonson. Proclamations were read here: hence Swift,

"Where all that passes inter nos,  
May be proclaimed at Charing-cross,"

—a popular saying in our day. Edmund Curll, the notorious bookseller, stood here in the pillory. Sir Harry Vane, the younger, had his residence next to Northumberland House. Isaac Barrow, the divine, died in mean lodgings over the saddler's long shop at Charing Cross, which lasted till our time. Rhodes, the bookseller, hung out his sign of the Ship in the same locality. Here, according to Pyne, William Hogarth stood at a window of the old Golden Cross making sketches of the heralds and the serjeant trumpeter's band, and the yeoman guard, who rendezvoused at Charing Cross, purposing to make a picture of the ceremony of proclaiming the new King, George III. On June 21, 1837, Queen Victoria was proclaimed here in fitting state: the High Constable and High Bailiff of Westminster, Knight-marshalmen, drums and trumpets, sergeants-at-arms, pursuivants, heralds, and other authorities, in official costume, standing within a cordon of Life Guards, round the statue, and the Somerset Herald reading aloud the proclamation.

"I talked," says Boswell, "of the cheerfulness of Fleet-street, owing to the quick succession of people which we perceive passing through it." Johnson—"Why, Sir, Fleet-street has a very animated appearance, but I think the full tide of human existence is at Charing Cross." (*Boswell, Croker's ed.*, p. 433).

The changes at Charing Cross within the last forty years have been very striking. We well remember the paved area about St. Martin's Church, with the surrounding labyrinth of courts, and alleys, and lanes, which the gallants of Elizabeth

or James's time, who had cruised in search of Spanish galleons, wittily named "the Bermudas."

"Here the valorous Captain Bobadil must have lived in Barmecidal splendour, and have taught his dupes the true conduct of the weapon. Justice Overdo mentions the Bermudas with a righteous indignation. 'Look,' says that great legal functionary, 'into any angle of the town, the Straights or the Bermudas, where the quarrelling lesson is read, and how do they entertain the time but with bottled ale and tobacco? At a subsequent period the cluster of avenues exchanged the title of *Bermudas* for that of the *Cribbee Islands*, the learned possessors corrupting the name into a happy allusion to the arts cultivated there. Gay, writing in 1715, describes the small streets branching from Charing Cross as resounding with the shoeblacks' cry, 'Clean your honour's shoes?' Porridge Island was the cant name for a paved alley near St. Martin's Church, which derived its name from being full of cookshops. A writer in *The World* (1753) describes a man like Beau Tibbs, who had his dinner in a pewter-plate from a cookshop in Porridge Island, and with only 100*l.* a year was foolish enough to wear a laced suit, go every evening in a chair to a rout, and return to his bedroom on foot, shivering and supperless, vain enough to glory in having rubbed elbows with the quality of Brentford."—*Pictures of the Period.*

In the improvements, commenced in 1829, was swept away the lower part of St. Martin's-lane. Westward disappeared Duke's-court, where lived Roger Payne, the celebrated bookbinder, whose *chef-d'œuvre*, *Æschylus*, in Lord Spencer's library, cost fifteen guineas binding. Then, at the Mews'-gate, lived honest Tom Payne, the bookseller, whose little shop in the shape of L was named the Literary Coffee-house, from its knot of literary frequenters.

### CHARTERHOUSE.

NOT far from Smithfield, once the town-green of the City of London, the chivalrous Sir Walter Manny, Lord of the town of Manny, in the diocese of Cambrai, and Knight of the Garter in the reign of Edward III., founded in 1371 a monastery of Carthusian monks. The site (now Charterhouse-square) was in part a lonely field, bearing the name of "No Man's Land." Ralph Stratford bought it as a place of burial for the victims of the pestilence of 1349, "where was buried in one year," says Camden, "no less than sixty thousand of the better sort of people." Thirteen acres of adjoining ground, bought at about the same time of St Bartholomew's Spittle, and called the Spittle Croft, had also been enclosed and consecrated. The monastery was devoted to the use of the Carthusian monks, whose name of Chartreuse time has corrupted into Charterhouse. It was the third Carthusian monastery instituted in this country, and its title and address was—"The House of the Salutation of the Mother of God, without the Bars of West Smithfield, near London."

The last prior was executed at Tyburn, May 4, 1535—his head set on London Bridge; and one of his limbs over the gateway of his own convent—the same gateway, it is said, which is still the entrance from Charterhouse-square. The priory, thus sternly dissolved, was first set apart by King Henry VIII. as a place of deposit for his "hales and tents"—*i.e.*, "his nets and pavilions." It was afterwards given by the King to Sir Thomas Audley, Lord Chancellor, by whom it was sold to Sir Thomas North, Baron North of Kirtling. Lord North subsequently parted with it to John Dudley, Duke of Northumberland, on whose execution and attainder in 1553 it reverted to Lord North by a grant from the Crown. In 1565, by deeds, and in consideration of the sum of 2820*l.*, Roger, second Lord North, sold it to Thomas Howard, Duke of Norfolk, on whose execution and attainder in 1572 it again reverted to the Crown. Queen Elizabeth subsequently granted it to the Duke's second son, Thomas, afterwards Earl of Suffolk, founder of Audley End, in Essex, and father of Frances, Countess of Essex and Somerset, the infamous heroine of "the great Oyer of Poisoning," in the reign of James I.

On May 9, 1611, the property was sold by Lord Suffolk to Thomas Sutton, of Camps Castle, in the county of Cambridge, for 13,000*l.* His wealth was great: he had discovered rich veins of coal near Newcastle-on-Tyne, which he worked so profitably as to be reputed worth the then vast sum of 50,000*l.* He added greatly to his fortune by marriage; and in privateering service he captured a Spanish vessel with a cargo valued at 20,000*l.* On June 22, follows his purchase of Charterhouse; Sutton endowed it as a charity by the name of "the Hospital of King James," "for poor brethren and scholars." Sutton died almost an octogenarian in the same year, Dec. 12th, before his good work was complete, and was buried in the chapel of the Hospital, beneath a

sumptuous monument, the work of Stone and Jansen. On opening the vault, in 1842, the body of the founder was discovered "lapt in lead," like an Egyptian mummy-case. Sutton has been charged with avarice in acquiring the money he bequeathed, and has been pointed out as the original of *Volpone, the Fox*; but this Gifford disproves. In the chapel, Burrell, the preacher to the Hospital, paid the first tribute of praise to the memory of Sutton in a sermon, printed in 1629, but now as rare as a manuscript.

The buildings and grounds of Charterhouse occupy about thirteen acres of land. Entering by the gate over which one of the quarters of the last prior of the monastery was placed, on the right is part of the "fair dwelling" erected about 1537; the Middle or Monitors' Court is of about the same date, though the Long Gallery is reduced by half; the Washhouse Court is one of the few remaining portions of the monastery. The Preacher's Court contains the chapel, which, from a plan, date about 1500, seems to be identified with the monastery chapel. In some repairs in 1842 an ancient ambrie was discovered towards the south corner of the east wall. The Chapel contains several fine monuments, besides that of Sutton. The Ante-Chapel, which, like the Evidence Room above it, has a groined roof, bears the date 1512. The Great Chamber, or Old Governors' Room, was either built or decorated by Thomas, fourth Duke of Norfolk, between 1565 and 1571: it was restored in 1838, and is now the most perfect Elizabethan apartment in London. It has a chimney-piece of wood, a centre and two wings, in two stories, Tuscan and Ionic, reaching to the ceiling, decorated with escutcheons of the House of Norfolk. In this room Queen Elizabeth and James I. kept their court on their visits here. And here, on Founder's Day, is delivered the Annual Oration: the walls are richly painted, and hung with six pieces of tapestry. The Great Hall has a screen, music-gallery, sculptured chimney-piece, and lantern in the roof: here hangs a noble portrait of Sutton, and here is celebrated "the Founder's Day," Dec. 12, when the Carthusians dine together by subscription. At the Poor Brothers' celebration was formerly sung the old Carthusian melody, with this chorus:—

"Then blessed be the memory  
Of good old *Thomas Sutton*,  
Who gave us lodging—learning,  
And he gave us beef and mutton."

In the Upper Hall the foundation scholars dine daily; and, in another Hall, the Master, the Preacher, and other officers.

This "triple good," as Bacon calls it—this "masterpiece of Protestant English charity," as it is called by Fuller,—was also "the greatest gift in England, either in Protestant or Catholic times, ever bestowed by any individual." It is under the direction of the Queen, fifteen Governors selected from the great officers of state; and the Master of the Hospital, whose income is 800*l.* a year, besides a capital residence within the walls. The value of the estates bequeathed by Sutton has increased tenfold; yet the gross rental, which was, in the year 1691, 5391*l.*, is stated to average less than 21,000*l.* Upon the foundation are maintained eighty pensioners, or poor brothers, whom the Governors nominate in rotation; they live together in collegiate style, provided with apartments, and all necessaries, except apparel, in lieu of which they are allowed 14*l.* a year and a gown each. Next are the scholars, in two divisions—the foundation, or gown boys, and the boarders received by the masters; the former are fed and clothed at the expense of the Hospital; the latter by their friends. The foundation scholars also enjoy the right of election to exhibitions of from 80*l.* to 100*l.* a year, at either university, besides the preference over the scholars of presentation to valuable church preferments in the gift of the Governors. The sum of 40*l.* was formerly paid with every boy, either to advance him in college, or as an apprentice-fee in trade; but no youth has been apprenticed from the school since John Philip Kemble was bound to his uncle, the comedian, to learn the histrionic art. The total number of scholars does not exceed 200; formerly the number was 480, when boarding-houses were allowed in the neighbourhood; now the scholars are only allowed to reside within the walls.

The present school-house is a modern brick building (1803), on a mound in the playground; the large central door is surrounded by stones bearing the names of former

Head Masters, and the names of the boys as they leave the school. The internal economy of the establishment is vested in the Master; the manciple, or house-steward, provides the diet of the Hospital, for which he has "to pay in ready money."

Charterhouse is more healthily placed than any other public school in the metropolis. John Wesley imputed his after health and long life to his strict obedience to his father's injunction—that he should run round the Charterhouse playing-green three times every morning. There are two play-greens—for the "Uppers" and "Unders;" and by the wall of the ancient monastery is a gravel-walk upon the site of a range of cloisters. The Master has his flower-garden, with its fountain; there are courts for tennis, a favourite game with Carthusians; a wilderness of fine trees, intersected by grass and gravel walks; the cloisters, where football and hockey are played; the old school, its ceiling charged with armorial shields; the great kitchen, probably the banqueting-hall of the old priory; the chapel; and lastly, the burial-ground for the poor brethren. There are besides solitary courts, remains of cloisters and cells, and old doorways and window-cases, which assert the antiquity of the place; and the Governors have wisely extended the great object of the founder by the grant of a piece of ground, where a church and schools for the poorer classes have been built.

There are three schoolrooms: one very large, and two smaller, for French and study. The system of education includes Greek and Latin and mathematics; modern history, geography; natural science; the French and German languages; and singing, fencing, and drilling classes. The foundation scholarships are competed for annually. There are other prizes, including the Havelock Exhibition, founded in 1860, in honour of General Sir Henry Havelock, who was a Carthusian.

Oliver Cromwell was elected Governor in 1652, and was succeeded by his son Richard, in 1658. The most eminent Master of the house was Dr. Thomas Burnet, author of *The Sacred Theory of the Earth*; and the most eminent Schoolmaster, the Rev. Andrew Tooke, author of the *Pantheon*.

Upon the register of pupils are many illustrious names, including Crawshay, the poet; Isaac Barrow, the divine and mathematician; Sir William Blackstone, author of the *Commentaries*; Joseph Addison, and Richard Steele, both here together; John Wesley, the founder of the Wesleyans; Lord Chief-Justice Ellenborough (buried in the Chapel); the Prime Minister, Lord Liverpool; Bishop Monk; Baron Alderson; and General Sir H. Havelock—"Old Philos," he was called in the school: he is described to have been then a gentle and thoughtful lad, who used to stand looking on while others played, and whose general meditative manner procured for him the name of "Philosopher," and occasionally "Old Philos;" W. M. Thackeray, the novelist; and John Leech, the celebrated artist; Sir C. L. Eastlake, President of the Royal Academy; the two eminent historians of Greece, Bishop Thirlwall and Mr. George Grote, were both scholars together in the same form, under Dr. Raine.

Among the Poor Brethren were Elkanah Settle, the rival and antagonist of Dryden; John Bagford, the antiquary, originally a shoemaker in Turnstile; Isaac de Groot, nephew of Hugo Grotius; and Alexander Macbean, who assisted Dr. Johnson in his Dictionary.

In the Master's Lodge are several excellent portraits: the Founder, engraved by Vertue; Isaac Walton's good old Bishop Morley; Charles II.; Villiers, Duke of Buckingham; the Duke of Monmouth; Lord Chancellor Shaftesbury; William, Earl of Craven; Archbishop Sheldon; Lord Chancellor Somers; and one of Kneller's finest works, the portrait of Dr. Thomas Burnet.

"Dr. Burnet, elected Master in 1665, died here in 1715, and was buried in the chapel of the institution. Soon after Burnet's election, James II. addressed a letter to the Governors, ordering them to admit one Andrew Popham as pensioner into the Hospital upon the first vacancy, without tendering to him any oath, or requiring of him any subscription or recognition in conformity with Church of England doctrine, the King dispensing with any statute or order of the Hospital to the contrary. Burnet, as junior Governor, was called upon to vote first, when he maintained that by express Act of Parliament, 3 Car. I., no officer could be admitted into that Hospital without taking the oaths of allegiance and supremacy. An attempt was made, but without effect, to overrule this opinion. The Duke of Ormond supported Burnet, and on the vote being put, Popham was rejected: and notwithstanding the threats of the King and the Popish Party, no member of the communion was ever admitted into the Charterhouse."

The history of this noble foundation has been written by Bearcroft, Hearne, and Smythe; and in 1847 appeared *Chronicles of Charterhouse*, by a Carthusian, a clever work, with illustrations. Charterhouse is also well described in Staunton's

*Great Schools of England, 1865*, where are thus sketched the saturnalia of the "fags," now abolished:—

"In former times there was a curious custom of the School termed 'pulling-in,' by which the lower boys manifested their opinion of the seniors in a rough but very intelligible fashion. One day in the year the fags, like the slaves in Rome, had freedom, and held a kind of saturnalia. On this privileged occasion they used to seize the upper boys one by one and drag them from the playground into the Schoolroom, and accordingly as the victim was popular or the reverse he was either cheered and mildly treated, or was hooted, groaned at, and sometimes soundly cuffed. The day selected was Good Friday; and, although the practice was nominally forbidden, the officials for many years took no measures to prevent it. One ill-omened day, however, when the sport was at the best, 'the Doctor' was espied approaching the scene of battle. A general *se sauve qui peut* ensued; and in the hurry of flight a meek and quiet lad (the Hon. Mr. Howard), who happened to be seated on some steps, was crushed so dreadfully that, to the grief of the whole school, he shortly after died. 'Pulling-in' was thenceforth sternly interdicted."

In the head monitor's room is preserved the iron bedstead on which died W. M. Thackeray; and in the chapel are memorial tablets to Thackeray and Leech, erected by fellow Carthusians.

### CHEAPSIDE,

THE street extending from the Poultry and Bucklersbury to St. Paul's and Newgate-street, was, some three centuries ago, worthily called "the Beauty of London;" and was famed for its "noted store" of goldsmiths, linendrapers, haberdashers, &c. It is named from the Saxon word *Chepe*, or market: the name, therefore, is the *Market-side*.

"In 1269, the pillory that stood in Chepe was broken through the negligence of the Bailiffs, and for a long time unrepaired; wherefore, in the meantime no punishment was inflicted upon the bakers, who made their loaves just as they desired, so much so that each of their loaves was deficient in one-third of the weight that it ought to weigh; and this lasted for a whole year and more."—*Chronicle of the Mayors and Sheriffs*, p. 127.

In 1331 the south side only was built upon, and the north side was an open field, where jousts, tournaments, or ridings, were often held. By this road passed many a royal pageant; as when, in the reign of Edward I., Queen Margaret came from the Tower, "there were two bretasches (wooden towers) in the road of Chepe, from which there were eight outlets discharging wine from above; the road was covered with cloths-of-gold against her first coming." The Chepe was also the scene of many tragical deaths; as when, in the reign of Edward II., Stapleton, Bishop of Exeter, who had been proclaimed a traitor, was met near Saint Paul's Church, dragged from his horse and carried into Chepe, and there he was despoiled, and his head cut off; and one of his esquires, and his warden, were beheaded the same day in Chepe.

Stow describes one of the joustings held in the reign of Edward III., Sept. 21, 1331; when, "the stone pavement being covered with sand, that the horses might not slide when they strongly set their feet to the ground, the King held a tournament three days together, with the nobility, valiant men of the realm, and other strange knights. And to the end the beholders might with the better ease see the same, there was a wooden scaffold erected across the street, like unto a tower, wherein the Queen Philippa, and many other ladies, richly attired, and assembled from all parts of the realm, did stand to behold the jousts." This frame brake down; after which the King had a stone shed built "for himself, the queen, and other estates, to stand on, and there to behold the joustings and other shows, at their pleasure, by the Church of St. Mary Bow." This shed, or "seldam," was similarly used in after reigns, especially to behold the Great Watches on the eve of St. John Baptist and St. Peter at Midsummer. In 1510, on St. John's Eve, King Henry VIII. came to this place, then called the King's Head in Chepe, in the livery of a yeoman of the guard, with an halbert on his shoulder, and there beholding the watch, departed privily when the watch was done; "but on St. Peter's night next following, he and the Queen came royally riding to the said place, and there with their nobles beheld the Watch of the City, and returned in the morning." When Bow Church was rebuilt, Wren provided, in place of the shed or sild, a balcony in the tower, immediately over the principal entrance in Cheapside; and though the age of tournaments had passed away, the Lord Mayor's pageants were long viewed from this balcony.

Opposite Bow Church was taken down, in 1861, No. 108, the house built by Sir

Edward Waldo, after the Great Fire, and subsequently leased to David Barclay, linendraper; which house was visited by six reigning sovereigns, from Charles II. to George III., on civic festivities, and for witnessing the Lord Mayor's Show; in this house Sir Edward Waldo was knighted by Charles II.; and the Lord Mayor, in 1714, was created a baronet by George I. When the house was taken down in 1861, the fine old oak-panelled dining-room, with its elaborate carvings, was purchased entire, and removed to Gunrog, near Welshpool, Montgomeryshire, whose proprietor, Mr. M. C. Jones, has written a description (privately printed) of the panelling, the royal visits, the Barclay family, &c. (See CARVINGS, p. 80.)

Cheapside Cross, which stood facing Wood-street, was the most magnificent (except that of Charing) of the crosses built by Edward I. to his Queen Eleanor, and was (Mr. Hudson Turner states) the work of Alexander of Abingdon. It was "re-edified" by John Hatherly, Mayor, by license procured in 1441 of Henry VI.; it was regilt in 1522, for the visit of the Emperor Charles V.; and in 1533 for the coronation of Henry VIII. and Anne Boleyn; newly burnished at the coronation of Edward VI.; and again newly gilt, 1554, against the arrival of King Philip. After this the Cross was presented by juries as standing "in the highway to the let of carriages;" but they could not get it removed; and it was by turns defaced and repaired, and its images stolen and replaced, until May 2, 1643, when it was demolished to the "noyse of trumpets," the workmen being protected by soldiery.

Nearly opposite Honey-lane was the Standard, the place of execution; and between Bucklersbury and the Poultry stood Westcheap, or the Great Conduit, which brought the first supply of sweet water to London, from Paddington; facing Foster-lane stood the Little Conduit. Westward of the site of the Great Conduit, on the north side, is Mercers' Hall and chapel, rebuilt after the Great Fire of 1666; the original chapel being an hospital purchased at the Dissolution by means of Sir Richard Gresham. Westward, next No. 142, is Saddlers' Hall; the old street front has been taken down, and replaced by an elegant stone façade.

The handsome stone-fronted house, No. 73, built by Sir C. Wren, was, before the erection of the Mansion House (1737), sometimes tenanted by the Lord Mayor, during his year of office: here Mr. Tegg, the publisher, amassed a large fortune; he restored the house front, which has since been considerably altered. Nearly opposite, between Ironmonger-lane and King-street, is the Atlas Insurance Office, with three enriched fronts, granite basement, and stone superstructure: built in 1839.

The house-front, No. 39, has the sign-stone of the noted Nag's Head tavern, which stood at the east end of Friday-street.

### CHELSEA,

**A** LARGE and populous parish upon the north bank of the Thames: it was a village of three hundred houses in the last century, but now extends from beyond Battersea or Chelsea Bridge almost to Hyde Park Corner. It lies about fifteen feet above the river; and, according to Norden, is named from its strand, "like the chesel (ceosel or cesel) which the sea casteth up of sand and pebble-stones, thereof called *Cheselsey*, briefly *Chelsey*, as is Chelsey (Selsey) in Sussex." In a Saxon charter, however, it is written *Cealchylle*; in Domesday, *Cerechede* and *Chalced*; and Sir Thomas More wrote it *Chelchith*, though it began to be written Chelsey in the sixteenth century. The Rev. J. Blunt derives the name from *Cealc*, chalk, and *Hyd*, or *Hythe*, a harbour, adding that this Hythe was used for landing chalk, and so had given a name to the place. It was at Chelsea that two important councils were held under Offa, King of Mercia. Among the possessors of the manor were Sir Reginald Bray (*temp.* Henry VII.); it was given by Henry VIII. to Katherine Parr as a portion of her marriage settlement; here she lived with her second husband, Thomas Seymour, the Lord Admiral, afterwards beheaded; and here, in the same house with them, lived Queen Elizabeth, when a girl of thirteen. The manor was bought of Lord Cheyne by Sir Hans Sloane in 1712, from whom it passed by marriage and bequest to Baron Cadogan of Oakley, in whose family the property remains: hence the names of Cheyne Walk, Cadogan and Hans Places, and Sloane and Oakley Streets.

At Chelsea lived Sir Thomas More, in a mansion at the north end of Beaufort-row, with gardens extending to the Thames. Here More was visited by Henry VIII., who, "after dinner, in a fair garden of his, walked with him by the space of an hour, holding his arm about his neck;" and used to ascend with him to the house-top to observe the stars and discourse of astronomy. A more illustrious visitor was Erasmus, who describes the house as "a practical school of the Christian religion." Holbein worked here for near three years, upon portraits of the Chancellor, his relations, and friends. More also hired a house for aged people in Chelsea, whom he daily relieved. His own establishment was large: Erasmus says, "there he converseth with his wife, his son, his daughters-in-law, his three granddaughters with their husbands, with eleven great-grandchildren." More resigned the Great Seal in 1533, and retired to Chelsea for study and devotion; but dismissed his retinue, and gave his barge to his successor in the Chancellorship. More's mansion was purchased by Sir Hans Sloane, and taken down in 1740.

Sloane dwelt in the New Manor-House, nearly opposite the site of the present Pier. The grounds of More's house were extensive, and the porter's lodge became the Clock-house and Herb-distillery, in the King's-road.

After the death of Katherine Parr the Duke of Somerset obtained a grant of the manor and palace of Marlborough, which had formed part of the Queen's dower. On the attainder and death of Somerset, it was granted by the young King (Edward VI.) to the heir of Northumberland, and after his attainder and death, to John Caryl, who sold it to James Basset; yet, in the Herald's order for the funeral of Anne of Cleves, who died at Chelsea, July, 1557, the manor is described as Crown property. Elizabeth, in the second year of her reign, granted it to the widowed Duchess of Somerset, who lived there. The Lords Cheyne then became Lords of the Manor, whence the ground on which stood the Queen's palace and the palace of the Bishop of Winchester, from Morley in 1633 to North in 1820. Further west, near the river side, was the Chelsea China Manufactory.

Lady Llanover, in her piquant notes to the *Autobiography, &c. of Mrs. Delany*, thus notices *Blacklands* in the Marlborough-road, Chelsea, formerly called *Blacklands-lane*. "Bowack, in his *Antiquities of Middlesex* (1700), says:—William Lord Cheyne, Viscount Newhaven in Scotland, has two good seats in Chelsea. The first is the mansion-house, where Queen Elizabeth was nursed, east end of the town, near the Thames. The other some distance north of the town, called *Blacklands House*, both (1705) let to French boarding-schools." It adjoins the old manor-house at Chelsea, which forms part of the premises of Messrs. Scott and Cuthbertson (paper manufacturers), called *Whitlands*. *Blacklands* has still a good garden and old iron gates; and the centre of the house is evidently part of the original structure.

The beautiful Duchess of Mazarin (niece of the Cardinal) died in difficulties, in 1699, in a small house which she rented of Lord Cheyne. Lysons had heard that it was usual for the nobility and others who dined at her house to leave money under their plates to pay for their entertainment; she appears to have been in arrears for the parish-rates, during the whole time of her residence at Chelsea.

Here too was Lindsey House, the residence of the Berties, Earls of Lindsey, now the site of Lindsey-row; Danvers House, where lived Sir John Danvers, the site is now Danvers-street. Here were also Essex House, and Shrewsbury or Alstone House; Laurence-street is named from Sir John Laurence (*temp.* Charles I.) and his descendants.

In Cheyne-walk was the Museum and Coffee-house of Don Saltero, renowned in the swimming exploits of Dr. Franklin. The landlord, James Salter, was a noted barber, who made a collection of natural curiosities which acquired him the name (probably first given him by Steele) of Don Saltero. (See *Tatler*, Nos. 34, 195, and 226.) The tavern was taken down in 1866, but the Museum was dispersed about 1807. In a large meanly-furnished house in Cheyne-walk, died August 30, 1852, John Camden Neild, who bequeathed 500,000*l.* to Queen Victoria. The old Chelsea Bun-house possessed a sort of rival Museum to Don Saltero's. It was taken down in 1839. Eastward is the Royal Hospital; and on part of its garden was the gay Ranelagh, from 1740 to 1815. Here, too, are the Apothecaries' Company's Gardens; one of the fine old cedar trees was blown down in 1854. Nearly opposite was the Red House at Battersea, fifty yards west of which Cæsar is believed by some antiquaries to have forded the Thames.

Chelsea has two churches dedicated to St. Luke. The old river-side church was built in the sixteenth and seventeenth centuries, and has an eastern chapel added by Sir Thomas More. In the chancel is a black marble tablet to More, placed there by himself in 1532, three years before his death: it was restored by Sir John Lawrence about 1644, and by subscription in 1833: the inscription, in Latin, is by More. Here are also memorials of Jane, wife of the ambitious John Dudley, Duke of Northumberland; and of Lady Jane Cheyne, by Bernini. In the churchyard is the tomb of Sir Hans Sloane, egg-shaped and entwined with serpents; also monuments to Philip Miller, the writer on gardening; and Cipriani the painter.

St. Luke's new church, between King's-road and Fulham-road, was built by Savage, in 1820, in the style of the fourteenth and fifteenth centuries, and has a pinnacled tower 142 feet high.

Above Battersea Bridge was Cremorne House, formerly the elegant villa of Lord Cremorne, who had here a fine collection of Italian and Flemish pictures; adjoining was the residence of Dr. Benjamin Hoadly (son of the bishop), the author of *The Suspicious Husband*. Cremorne has been converted into a place of public entertainment, for which the grounds are well adapted.

Chelsea was once a place of courtly resort: many of the nobility, as well as scholars and philosophers, resided here; and its noted taverns and public gardens were much frequented in the 17th and 18th centuries. The principal features now are its palace-hospital for soldiers, its Botanic Gardens, its Dutch-like river terrace (Cheyne-walk), mostly brick-built, and fronted by lofty trees; and its olden church, with a brick tower.

In a river-side cottage, beyond the church, upon the road to Cremorne Gardens, J. M. W. Turner, the great landscape-painter, ended his days, having shut up his house in Queen Anne-street. His fondness for Thames scenery was great: he fell sick at Chelsea, at the close of 1851, but was daily wheeled in a chair to the window of his room, that he might look on the calm December sunshine, the river, and its craft. From a sort of gallery upon the house-top the great painter enjoyed the river traffic, and watched those beautiful atmospheric changes which Turner could so ably transfer to canvas. Here, in these cheap Chelsea lodgings, Turner, under the assumed name of "Admiral Booth," went to his rest, on the 19th of December, 1851.

In the hamlet of Little Chelsea lived Bulstrode Whitelock; Mr. Pym, member of the Long Parliament; Bishop Fowler, Sir Richard Steele, Addison, and John Locke; Lord Shaftesbury, author of the *Characteristics*, in the house now St. George's additional workhouse; and here Tobias Smollett retired after his failure in practice at Bath. Dean Swift had lodgings "a little beyond the church;" and Sir Robert Walpole had a house adjoining Gough House; hence, Walpole-street.

The Five Fields, Chelsea, are commemorated by Steele in the *Tatler*; and at the Willow Walk, Jerry Abershaw (that other Johnny Armstrong) had his secluded house, in the midst of "cuts," or reservoirs of water. In the King's-road, on the spot where is now the West London Literary and Scientific Institution, the Earl of Peterborough was stopped by highwaymen, in what was then a narrow lane; and the robbers, being watched by the soldiers on guard at the gate of the Chelsea College, were fired at from behind the hedge. One of the highwaymen was a student in the Temple, named Brown, whom Mr. Vernon, the Secretary of State, in a letter to the Duke of Shrewsbury, says, "a friend of his (Sir John Talbot) knew well; and his father, losing his estate, Mr. Brown lived by play, sharpening, and a little on the highway."

Numerous signs at Chelsea have military associations: as "The Snow Shoes," a recollection of Wolfe's glorious campaign; "The General Elliot;" and "The Duke of York;" and "Nell Gywune" from association with Chelsea Hospital.

Chelsea Water-works were originally constructed in 1724; a print of the Works was published by Boydell, in the year 1756.

### CHELSEA BUNS.

CHELSEA has been famed for its Buns since the commencement of the last century. Swift, in his *Journal to Stella*, 1712, writes:—"Pray are not the fine buns sold here in our town, as the rare Chelsea buns? I bought one to-day in my walk," &c. They were made and sold at "the Old Original Chelsea Bun-house," in Jews'-row, a one-storied building, with a colonnade projecting over the foot-pavement. It was customary for the Royal Family and the nobility and gentry to visit the Bun-house in the morning. George II., Queen Caroline, and the Princesses frequently honoured the proprietor, Richard Hand, with their company; as did also George III. and Queen Charlotte; her Majesty presented Mrs. Hand with a silver half-gallon mug, and five guineas in it. On Good Friday morning upwards of 50,000 persons were assembled here, when disturbances often arose among the London mob; in one day more than 250*l.* have been taken for buns. The Bun-house was also much frequented by visitors to Ranelagh, after the closing of which the bun-trade declined. Notwithstanding, on Good Friday, April 18, 1839, upwards of 240,000 buns were sold here. Soon after, the Bun-house was sold and pulled down; and at the same time was dispersed a collection of pictures, models, grotesque figures, and modern antiques, which had for a century added the attractions of a museum to the bun celebrity. Another

bun-house was built; but the olden charm of the place had fled. In the *Mirror* for April 6, 1839, are two views of the old Bun-house, sketched just before its demolition. Here is a glance at the sale of the *curiosities* :

There were two leaden figures of Grenadiers, about three feet high, in the dress of 1745, presenting arms, which sold for 4*l.* 10*s.* An equestrian plaster figure of William Duke of Cumberland, with other plaster casts, 2*l.* 2*s.* A whole length painting of "Aurengzebe, Emperor of Persia," 4*l.* 4*s.* A large old painting, an interior, with the King and Queen seated, and perhaps the baker, &c., 2*l.* 10*s.* A model of the Bun-house, with painted masquerade figures on two circles, turned round by a bird whilst on its perch in a cage at the back of the model, 19*s.* A large model in cut paper, called St. Mary Ratcliff Church, sold with its glazed case for 2*l.* 2*s.* A framed picture, worked by a string, recalled the exploits of the Bottle Conjuror. After the death of Mrs. Hand the business was carried on by her son, an eccentric character, who dealt also largely in butter, which he carried round to his customers in a basket on his head. Upon his death his elder brother came into possession; he had been an officer in the Stafford Militia, was one of the Poor Knights of Windsor, and not much less eccentric than his brother. It is not known that he left any relations, and his property, it is said, reverted to the Crown.

There is a folio-print, engraved in the reign of George II.; under it, "A perspective view of David London's (probably the owner before Hand) Bunn House at Chelsey, who has the honour to serve the Royal Family. 52 by 21 ft." Over the print, in the centre, is the Royal Arms. On each side stands a grenadier, three figures of Freemasons, with Masonic emblems; and on the left hand is a coat of arms. These arms are reversed, as if copied on the copper immediately from a piece of silver plate. Below them is a motto (not reversed), "*For God, my King, and Country.*" It is not impossible that these were the arms of some respectable family, whose servant David London had been.

Chelsea Bun-house has given name to one of Miss Manning's clever novels, published in 1854.

#### - CHELSEA HOSPITAL

OCUPIES the site of "Chelsea College," commenced by Dr. Sutcliffe, Dean of Exeter, in the reign of James I., but only in part built. Its object was to maintain fellows in holy orders, "to answer all the adversaries of religion," and others to write the history of their own times. It was nicknamed "Controversy College" by Archbishop Laud; the whole scheme and its originator were mercilessly ridiculed by the wits of the day, and thus failed. It was given by Charles II. to the then newly-established Royal Society, who, in 1681-82, sold the property to Sir Stephen Fox for 1300*l.*, as a site for a Royal Hospital for aged and disabled soldiers, the building of which has been attributed to the influence of Nell Gwynne, which tradition is kept in countenance by the head of Nell Gwynne having been for very many years the sign of a public-house in Grosvenor-row, Pimlico. But more than one entry in Evelyn's *Diary* proves, that Sir Stephen Fox "had not only the whole managing" of the plan, but was himself "a grand benefactor" to it. He was mainly advised by Evelyn, who arranged the offices, "would needs have a library, and mentioned several books." Here are a few other evidences :

The idea, it is said, originated with Nelly, and I see no reason to doubt the tradition, supported, as it is, by the known benevolence of her character, her sympathy with the suffering, and the fact that sixty years ago at least Nelly's share in its foundation was recorded beneath her portrait serving as the sign of a public-house adjoining the Hospital. (*Lysons*.) The sign remains, but not the inscription; yet the tradition is still rife in Chelsea, and is not soon likely to die out. Ormonds, and Granbys, and Admiral Vernons disappear, but Nelly remains, and long may she swing with her favourite lamb in the row or street commemorated for ever in the Chelsea Pensioners of Wilkie—(Peter Cunningham's *Story of Nell Gwynne*, 1852, p. 146.) Nell's residence at Sandy End is doubted; but it is certain that her mother lived near the Neate House, in Pimlico. In the records of Knightsbridge Chapel, Jan. 13, 1667, is the marriage of Robert Hand and Mary Gwin, thus connecting Nelly's family with the Chelsea Bun-house.

Sir Christopher Wren was appointed architect of the Hospital; and the foundation stone was laid, Feb. 16, 1682, by Charles II., who promised to provide the funds, and was assisted by public subscription. The progress of the building is recorded in this inscription on the southern front :—

"In subsidium et levamen emeritorum venio, belloque fractorum, condidit Carolus Secundus, auxil. Jacobus Secundus, perfecere Gulielmus et Maria, Rex et Regina, MDCXC."

The building, which cost 150,000*l.*, is of red brick, with stone quoins, cornices, pediments, and columns, and is remarkable for its harmonious proportions. It consists of three courts, two of which are spacious quadrangles; the third, the central one, is open on the south side, next the Thames; and in the area is a statue of Charles II., in Roman imperial armour, sculptured by Gibbons, for Tobias Rustat. In the eastern and western wings of this court are the wards of the Pensioners. At the extremity of

the eastern wing is the Governor's house, with a state apartment; and portraits of Charles I., his queen, and two sons—Charles, Prince of Wales, and James, Duke of York; Charles II., William III., and George III. and Queen Charlotte. The north front is of great extent, and faced by avenues of limes and horse-chestnuts. In the centre is a tetrastyle Roman-Doric portico, surmounted by a handsome lofty clock-turret in the roof.

Beneath are the principal entrances. To the right is the chapel, the furniture and plate of which were given by James II., and the organ by Major Ingram; the altar-piece has a painting of the Ascension, by Sebastian Ricci. In the left wing is the Hall, wherein the Pensioners dine: here is an equestrian portrait of Charles II., by Verrio and H. Cooke; and an allegorical picture of the victories of the Duke of Wellington, by James Ward, R.A. Both the Hall and Chapel are paved with black and white marble: in each are suspended colours captured by the British army; in the chapel are thirteen eagles taken from Napoleon I.: and in the Hall fragments of the standards captured at Blenheim; in addition are dragon Chinese banners, and the trophies of the Sikh campaign of 1840.

In the Hall the remains of the great Duke of Wellington lay in state, Nov. 11-17, 1852. The Vestibule, Hall, and Chapel were hung with black drapery. On a dais in the Hall, upon a cloth-of-gold carpet, and black velvet bier, was placed the coffin, crimson and gold; above the bier were suspended stars and orders, "in numbers and importance far surpassing anything of the kind ever possessed by a single individual." The whole bier was surrounded with a silver balustrade adorned with heraldic devices, and the Marshal's eight bâtons, and the Duke's standard and guidon; and attached to all, gold lion supporters, two feet high, bearing shields and banners. At the back of the bier was her Majesty's escutcheon, surrounded by the Wellington bannerols, upon a cloth-of-gold hanging, surmounted by a magnificent canopy, with a plume of feathers—the curtains being of black velvet, with linings, cornice, and fringes of silver, and draped in graceful festoons. The Hall was lighted with wax-tapers, and the dais with twelve magnificent silver candelabra, each with five wax-lights; here were also ten columns of spears, feathers, laurel, and escutcheons, lighted by gas. Along the side walls stood picked soldiers of the Grenadier Guards, their arms reversed; around the catafalque, Yeomen of the Guard, and seated mourners; and the chair of the chief mourner concealed at the head of the coffin. The whole was designed by Mr. Cockerell, the architect. Two persons died, and several were seriously hurt by the pressure of the vast crowd of spectators.

The old soldiers receive pensions from funds voted by Parliament: in 1850 there were nearly 70,000 out-pensioners, who received 6*d.*, 9*d.*, and 1*s.* per diem; there were 539 in-pensioners, who were well clothed and fed in the Hospital, and were allowed 1*d.* a day for tobacco, which is called "her Majesty's bounty." They wear long scarlet coats, lined with blue, and the original three-cornered cocked hats of the last century: undress, a foraging cap, inscribed R.H. Their ages vary from 60 to 90 years, and two veterans had in 1850 attained the age of 104. The annual rate of mortality among the Pensioners is 27 per cent.

Adjoining the Hospital is a burial-ground for Pensioners, wherein are the following data:—William Hisland, died 1732, aged 112—he married when upwards of 100 years old; Thomas Asbey, died 1737, aged 112; Captain Laurence, died 1865, aged 95; Robert Comming, died 1767, aged 115; Peter Dowling, 1768, aged 102; a Soldier who fought at the battle of the Boyne, 1772, aged 111; Peter Bennet, of Tinnmouth, died 1773, aged 107.

In 1739 was interred here Christian Davis, alias Mother Ross, who had served in campaigns under William III. and the Duke of Marlborough, and whose third husband was a Pensioner in the Hospital.

The Hospital Gardens are, in a measure, open to the public, but are little frequented. The river terrace is bordered with dwarf limes, and there are besides some fine shady trees. "The Old Men's Gardens" have been cleared away.

North of the Hospital is the Royal Military Asylum, for the support and education of the children of soldiers and non-commissioned officers: the first stone of the building was laid by the Duke of York, in 1801. The Hospital and Asylum may be seen daily, from 10 till 4: the boys parade on Fridays.

Eastward of the Hospital was the famous RANELAGH, which see. Upon part of the site was built a large house, with a portion of the materials of Ranelagh: it had a large Queen Anne staircase: this house was taken down in 1854, in forming the road to the new Chelsea Bridge.

## CHELSEA PORCELAIN.

THE earliest manufactories of porcelain in England were those at Bow\* and Chelsea, both which have long been extinct. "The Chelsea ware, bearing a very imperfect similarity in body to the Chinese, admitted only of a very fusible lead glaze; and in the taste of its patterns, and the style of their execution, stood as low, perhaps, as any on the list." (A. Aikin; *Trans. Soc. Arts.*) This character, however, applies only to the later productions. The period of the greatest excellence of the Chelsea porcelain was between 1750 and 1763; and there was so much demand for it, that dealers are described as surrounding the doors of the works, and purchasing the pieces at large prices, as soon as they were fired.

Faulkner, in his *History of Chelsea*, (1829,) states: "The Chelsea China Manufactory was situate at the corner of Justice-walk, and occupied the houses to the upper end of the street. Several of the large old houses were used as show-rooms. It has been discontinued for more than forty years, the whole of the premises pulled down, and new houses erected on the site."

Justice-walk took its name from a magistrate who resided in the house at the south corner of Church-street, whence formerly an avenue of lime-trees extended to Lawrence-street; and in the latter were the ovens of the Chelsea China Manufactory, where Dr. Johnson made experiments on tea-cups.

Johnson had conceived the idea that he was possessed of a peculiar 'secret for making porcelain; he obtained permission to have his compositions baked in the ovens at Chelsea, and here he watched them day by day. He was not allowed to enter the mixing-room, but had free access to all other parts of the manufactory, and roughly modelled his composition in a room by himself. He failed in all his trials, for none of the articles he formed would bear the heat of firing. He at last gave up his attempts in disgust. He always conceived that one simple ingredient was sufficient to form the body of porcelain; whereas Stephens, who managed the manufactory, declared to him that in the composition of the Chelsea paste no less than sixteen different substances were blended together.

"The premises were not far distant from Church-street, and near the water-side. They subsequently became a stained paper manufactory, conducted by Messrs. Echarlts and Woodmason, in 1786; afterwards by Messrs. Bowen and Co.; and in 1810 by Messrs. Harwood and Co." (*T. Crofton Croker, F.S.A.*) The works were discontinued in 1764, and the manufacture was then removed to Derby, and the ware was called Chelsea-Derby: it has the mark of a D crossed by an anchor; it is very beautiful, but as dear as silver.

\* In July, 1850, we saw in the stock of Mr. Heigham, Fulham-road, a set of three Chelsea vases, remarkably fine in form and colour; each bearing a view of the old church at Chelsea and the china-manufactory.

"Martin Lister mentions a manufactory at Chelsea as early as 1698, comparing its productions with those of St. Cloud, near Paris. It was patronized by George II., who brought over artificers from Brunswick and Saxony; whence, probably, M. Brongniart terms Chelsea a 'Manufacture Royale.' Its reputation commenced about 1740; and in 1745 the celebrity of Chelsea porcelain was regarded with jealousy by the manufacturers of France, who therefore petitioned Louis XV. to concede to them exclusive privileges. About 1750, it was under the direction of M. Spremont, a foreigner. The productions of the Chelsea furnaces were thought worthy to vie with those of the celebrated manufactories of Germany. Walpole, in his correspondence with Sir Horace Mann, mentions a service of Chelsea porcelain sent by the King and Queen to the Duke of Mecklenburg, which cost 1200*l.* The Duke of Cumberland took much interest in promoting the success of this interesting manufactory. The mark is an Anchor, in gold, burnished on the best specimens, and red on the inferior."—*Forster's Notes to the Stowe Catalogue*, 1848.

At Stowe, in 1848, the finest specimen "of rare old Chelsea-china" sold was a pair of small vases, painted with Roman triumphs, 23*l.* 10*s.* Few specimens of Chelsea ware were sold at Strawberry Hill, in 1842. At the sale of Sir John Macdonald's collection, in 1850, a pair of Chelsea cups and saucers, painted with birds, brought 36*l.* 15*s.*

In 1854, some fine examples of Chelsea porcelain were exhibited in the Crystal Palace, Sydenham. There was a Chelsea tea-pot which had belonged to Dr. Johnson.

In the Bernal Collection, sold in March, 1855, a pair of Scaloped Chelsea Vases, painted with birds, brought 110*l.* 5*s.*; a pair of oval dishes, 13*l.* 13*s.*; a two-handled cup and saucer, 21*l.*; and an écuelle, very delicately painted with flowers, 27*l.* 6*s.*

\* Bow China, formerly made at Stratford-le-Bow, is always marked with a crescent, or *bow*: it much resembles in quality the old Worcester or Derby, and is mostly of blue pattern; it is scarce, but never fine.

## CHESS CLUBS.

IN 1747, the principal, if not the only Chess Club in the metropolis met at Slaughter's Coffee-house, St. Martin's-lane. The leading players of this Club were—Sir Abraham Jannsen, Philip Stamma (from Aleppo), Lord Godolphin, Lord Sunderland, and Lord Elibank; Cunningham, the historian; Dr. Black and Dr. Cowper; and it was through their invitation that the celebrated Philidor was induced to visit England.

Another Club was shortly afterwards founded at the Salopian Coffee-house, Charing Cross: and a few years later, a third, which met next door to the Thatched House Tavern, in St. James's-street. It was here that Philidor exhibited his wonderful faculty for playing blindfold; some instances of which we find in the newspapers of the period:—

"Yesterday, at the Chess Club in St. James's-street, Monsieur Philidor performed one of those wonderful exhibitions for which he is so much celebrated. He played *three different games at once* without seeing either of the tables. His opponents were Count Bruhl and Mr. Bowdler (the two best players in London), and Mr. Maseres. He defeated Count Bruhl in one hour and twenty minutes, and Mr. Maseres in two hours; Mr. Bowdler reduced his games to a drawn battle in one hour and three-quarters. To those who understand Chess, this exertion of M. Philidor's abilities must appear one of the greatest of which the human memory is susceptible. He goes through it with astonishing accuracy, and often corrects mistakes in those who have the board before them."

In 1795, the veteran, then nearly seventy years of age, played three blindfold matches in public. The last of these, which came off shortly before his death, we find announced in the daily newspapers thus:—

## "CHESS CLUB, 1795. PARSLOE'S ST. JAMES'S STREET.

By particular desire, Mons. Philidor, positively for the last time, will play on Saturday, the 20th of June, at two o'clock precisely, three games at once against three good players; two of them without seeing either of the boards, and the third looking over the table. He most respectfully invites all the members of the Chess Club to honour him with their presence. Ladies and gentlemen not belonging to the Club may be provided with tickets at the above-mentioned house, to see the match, at five shillings each."

Upon the death of Philidor, the Chess Clubs at the West-end seem to have declined; and in 1807, the stronghold and rallying point for the lovers of the game was "the London Chess Club," which was established in the City, and for many years held its meetings at Tom's Coffee-house, in Cornhill. To this Club we are indebted for many of the finest chess-players of the age; and after the lapse of nearly a century, the Club still flourished, and numbered among its members some of the leading proficients.

About the year 1833, a Club was founded by a few amateurs in Bedford-street, Covent Garden. This establishment, which obtained remarkable celebrity as the arena of the famous contests between La Bourdonnais and M'Donnell, was dissolved in 1840; but shortly afterwards, through the exertions of Mr. Staunton, was re-formed under the name of "the St. George's Club," in Cavendish-square, since removed to 20, King-street, S.W.

In addition to the above, and the London Chess Club, which held its meetings at the George and Vulture Tavern, Cornhill, there are many minor institutions in various parts of the metropolis and its environs, where Chess, and Chess only, forms the staple recreation of the members. There are also the magnificent Cigar Divan, No. 100, Strand, belonging to Mr. Ries; and Kilpack's well-appointed Divan, 42, King-street, Covent Garden; at each of which the leading Chess publications are accessible to visitors, and where as many as twenty Chess-boards may often be seen in requisition at the same time.

## CHRIST'S HOSPITAL.

WE owe the foundation of this, "the noblest institution in the world," to the exertions of the City of London to provide for a large houseless population, in which good work the citizens were greatly assisted by grants from King Henry VIII. It was long customary to designate King Edward VI. as its special founder; but historical records show that King Edward had little to do with the foundation of Christ's

Hospital: both the house itself, and the revenues for its support, came from his predecessor, or were raised by the bounty of the citizens themselves; the young King Edward bestowed upon the Hospital its name, and conferred upon it certain grants for its support, in connexion with the hospital of Bridewell, which the King had founded; and St. Thomas's which the citizens themselves had purchased. The story runs, that the King's attention was directed to this foundation by a sermon preached before him by Bishop Ridley, in the year 1552; and that in consequence, the King sent by the Bishop a letter to the Mayor, "declaring his special commandment, that the Mayor should travail therein," which are the words of the old chronicler Grafton. But this was not until after the citizens had done what they could, and found that they required certain aid from the Crown. Bishop Ridley himself, in his farewell letter to his friends, written shortly before his martyrdom, attributed the chief merit to the City magistrates; first to Sir Richard Dobbs, in whose mayoralty the renewed effort was made; and next to his successor, Sir George Barnes.

When the Grey Friars came to London in the thirteenth century, they established themselves on the north side of what we now call Newgate-street. Here, aided by the citizens, they built first a chapel, then a church, and then again a much larger church,—the latter between 1301 and 1327. In 1539 they surrendered to King Henry VIII., in whose hands the house remained for some time. Just before his death, he provided that the church of the Grey Friars should become the parish church of "Christ's Church within Newgate."

It appears that Christ's Hospital was not originally founded as a school; its object was to rescue young children from the streets, to shelter, feed, clothe, and lastly to educate them. The citizens had already received from the King the monastery of the Grey Friars; and from its new parish church came the name of "Christ's Hospital." When the citizens had collected sufficient funds, they repaired the Grey Friars buildings, and on the 23rd of November, 1552, the poor children were received to the number of almost four hundred. When the Lord Mayor and Aldermen rode to St. Paul's on the following Christmas-day, all the children stood in array "from St. Laurence-lane-in-Cheap towards Paul's," attired in a livery or dress of russet cotton, the boys with red caps, and the girls with kerchiefs on their heads, having a woman keeper between every twenty children; and accompanied also by the physician and four surgeons, and the masters of the Hospital.

At the following Easter, the boys and "mayden children" were in "plonket," or blue; hence Christ's Hospital also became called the Blue Coat School. It has been imagined that the coat was the mantle, and the *yellow*, as it is technically termed, the sleeveless tunic of the monastery; the leathern girdle also corresponding with the hempen cord of the friar. There is an old tradition among the boys that the dress was originally of velvet, fastened with silver buttons, and an exact fac-simile of the ordinary habit of King Edward VI.

It is most reasonable to regard the dress as copied from the costume of the citizens of London at this period (1552), when long blue coats were the common habit of apprentices and serving-men, and yellow stockings were generally worn [the School is vulgarly called "the Yellow Stocking School"]; the coat fits closely to the body, but has loose sleeves, and beneath is worn a sleeveless yellow under-coat; around the waist is a red leathern girdle; a clerical band round the neck, and a small flat black cap about the size of a saucer, complete the costume.

While the citizens were perfecting the good work, King Edward was seized with small-pox, from the effects of which he never recovered. When, however, the scheme for the endowment of the Royal Hospitals was placed before the pious prince, and according to the usual practice, a blank had been left for the amount of property which the City were to receive for this object, Edward, with his own hand, wrote in the sum, "four thousand marks by the year;" and then exclaimed, in the hearing of his Council, "Lord, I yield Thee most hearty thanks that Thou hast given me life thus long, to finish this work, to the glory of Thy name!"

Among the early bequests is the following:—When the Hospital was erected and put into good order, there was one Richard Castel, *alias* Casteller, shoemaker, dwelling in Westminster, a man who was called "the Cock of Westminster," because

both winter and summer he was at work by four o'clock in the morning. This man, thus steadily and honestly labouring for his living, purchased lands and tenements at Westminster, worth 44*l.* per annum; and having no child, with the consent of his wife, who survived him, gave the same lands wholly to Christ's Hospital, and for the "succour of the miserable sore and sick harboured in other hospitals about London."

The ancient Hospital buildings suffered materially in the Great Fire of 1666, when the church of the monastery was entirely destroyed. The Hospital was rebuilt by the Governors, anticipating its revenue from the endowment of the King, and other sources. The Great Hall was rebuilt by Alderman Sir John Frederick, at a cost of 5000*l.* The first important addition to the foundation, after the Fire, was the Mathematical School, founded by Charles II. 1672, for forty boys, to be instructed in navigation: they are called "King's boys," and wear a badge on the right shoulder. Lest this mathematical school should fail for want of boys properly qualified to supply it, one Mr. Stone, a governor, left a legacy to maintain a subordinate Mathematical School of twelve boys ("the Twelves"), who wear a badge on the left shoulder; and to these have been added "the Twos."

The Mathematical School was originally designed by Samuel Pepys, then Secretary to the Admiralty. There is preserved a collection of letters between Pepys and Major Aungier, Sir Isaac Newton, Halley, and other persons, relating to the management of the Mathematical School; and containing details of the career of some of the King's scholars after leaving school. The letters extend from 1692 to 1695, and are the original letters received by Pepys, with his drafts of the answers. (*Notes and Queries*, No. 227.) Pepys, it appears, printed and handed about privately, some letters about the abuses of Christ's Hospital; he certainly saved from ruin the Mathematical foundation. This was the first considerable extension of the system of education at the Hospital, which originally consisted of a grammar school for boys, and a separate school for girls; the latter being taught to read, sew, and mark. Pepys relates the following curious story of a Blue-coat girl:—

"Two wealthy citizens are lately dead, and left their estates, one to a little Blue-coat boy, and the other to a Blue-coat girl, in Christ's Hospital. The extraordinariness of which has led some of the magistrates to carry it on to a match, which is ended in a public wedding—he in his habit of blue satin, led by two of the girls, and she in blue with an apron green, and petticoat yellow, all of sarsnet, led by two of the boys of the house, through Cheapside to Guildhall Chapel, where they were married by the Dean of St. Paul's, she given by my Lord Mayor. The wedding dinner, it seems, was kept in the Hospital hall."—*Pepys to Mrs. Steward, Sept. 20, 1695.*

The East Cloister and South front were next (in 1675) rebuilt by Sir Robert Clayton, alderman, and cost him about 7000*l.*; but it was not known who was the benefactor until the whole was finished. The Writing School was built by Sir Christopher Wren, in 1694, at the expense of 5000*l.* to Sir John Moore, of whom a marble statue is placed in the front: this school is situated on the west side of the playground, and is supported on cloisters, which shelter the boys in bad weather; the ward over the east side cloister was rebuilt in 1705, by Sir Francis Child the banker; and in 1795 was erected the Grammar School. Some of the buildings of the ancient monastery were standing early in the present century, but they had become ruinous and unsafe; and in 1803 was commenced a fund for rebuilding the whole, the Corporation of London granting 5000*l.*, and many private benefactions being made. The refectory of the monastery originally served as the dining-hall of the Hospital: after the Great Fire, the hall was rebuilt; this was taken down, and partly upon its site, and partly on the ancient City wall, was erected a vast edifice in the Tudor style by John Shaw, F.R.S., F.S.A., architect; the first stone laid by the Duke of York, April 25, 1825. The back wall stands on the site of the ditch that anciently surrounded London, and is built on piles driven twenty feet deep; in excavating for the foundation there were found some Roman arms and coins, and some curious leathern sandals. The southern or principal front, facing Newgate-street, is supported by buttresses and has an octagonal tower at each extremity; and the summit is embattled and pinnacled. On the ground story is an arcade open to the play-ground; here also are the Governors' meeting-room, and the Hospital wardrobe; and in the basement are the vast kitchen, 67 feet by 33 feet; and butteries and cellars. In the rear of the Hall is the Infirmary; and on the east and west sides of the cloister are the dormi-

tories. The arcade beneath the Hall is built with blocks of Haytor granite, highly wrought; the remainder of the front is of Portland stone. Over the centre arch of the arcade is a bust of Edward VI. The area in front or play-ground, is enclosed by handsome metal gates, enriched with the arms of the Hospital: argent, across gules, in the dexter chief, a dagger of the first (*The City of London*), on a chief azure, between two fleurs-de-lis or, a rose argent.

The Dining-hall, with its lobby and organ-gallery, occupies the entire story, which is 187 feet long, 51 feet wide, and 47 feet high; it is lit by nine large windows, filled with stained glass on the south side; and is, next to Westminster Hall, the noblest room in the metropolis.

In the Great Hall hangs a large picture of King Edward VI. seated on his throne, in a scarlet and ermined robe, holding the sceptre in his left hand, and presenting with the other the charter to the kneeling Lord Mayor. By his side stands the Chancellor, holding the seals, and next to him are other officers of state. Bishop Ridley kneels before him with uplifted hands, as if supplicating a blessing on the event; whilst the Aldermen, &c., with the Lord Mayor, kneel on both sides, occupying the middle ground of the picture; and lastly, in front, are a double row of boys on one side, and girls on the other, from the master and matron down to the boy and girl who have stepped forward from their respective rows, and kneel with raised hands before the King.

This picture was long erroneously attributed to Holbein; but it is now considered to be of the period of James I., or Charles I.; it is 80 feet long. Here is also a still larger picture, in which James II. is receiving the "Mathematical boys," though there are girls as well as boys. This was painted by Verrio, who also painted the full length of Charles II., which hangs near it. Here are likewise full-length portraits of Queen Victoria and Prince Albert, by Grant; and a picture of Brook Watson's escape, when a boy, from a shark, with the loss of a leg, while bathing, painted by Copley, father of Lord Chancellor Lyndhurst.

In the Treasurer's house is a portrait of Edward VI., considered by Mr. J. Gough Nichols to have been evidently painted towards the end of the King's life. There is also at the Hospital another portrait, inscribed "Edwardus, Wallie Princeps, anno ætatis suæ 9." These portraits have been ascribed to Holbein; but by the recent discovery of the will of Holbein, it is proved that at his death Edward VI. was only in his sixth year. Neither is there better evidence of the Charter picture in the Great Hall: the event took place in 1553; and "it is now ascertained beyond dispute that Holbein could have produced no work later than the year 1534; whilst hitherto his era has been extended for eleven years longer."—Nichols. *See also Archæologia*; vol. xxxix., pt. 1, 1863.

In the Hall the boys, now about 800 in number, dine; and here are held the "Suppings in Public," to which visitors are admitted by tickets, issued by the Treasurer and by the Governors. The tables are laid with cheese in wooden bowls; beer, in wooden piggins, poured from leathern jacks; and bread brought in large baskets. The official company enter; the Lord Mayor, or President, takes his seat in a state-chair, made of oak from St. Katherine's church by the Tower; a hymn is sung, accompanied by the organ; a "Grecian," or head-boy, reads the prayers from the pulpit, silence being enforced by three drops of a wooden hammer. After prayer, the supper commences, and the visitors walk between the tables. At its close, the "trade-boys" take up the baskets, bowls, jacks, piggins, and candlesticks, and pass in procession, the bowing to the Governors being curiously formal. The "Suppings in Public" are held every Sunday, from Quinquagesima Sunday to Easter Sunday, inclusive; they are a picturesque sight, and always well attended. This interesting spectacle was witnessed by Queen Victoria and Prince Albert, on Sunday evening, March 9th, 1845.

In this Hall, too, St. Matthew's Day (September 21st) the day of the annual Commemoration is a festival set apart from the first year of their foundation for the General Court of the several Royal Hospitals; and it is still observed with the usual solemnity. The Lord Mayor and Aldermen having met the Governors of each hospital in the Great Hall, the children pass before them, leading the way to Christ Church, where the sermon is preached. The company return to the Hall to hear the Grecians, or head-boys, deliver Orations before the Lord Mayor, Corporation, and Governors, and their friends; this being a relic of the scholars' disputations in the cloisters. After the Orations, a collection is made for the speakers in furtherance of their support at the University. Trollope, in 1834, stated about 120*l.* to be usually contributed. The de-

livery of the list of Governors follows the collection; and, according to the "Order of the Hospitals," all the beadles are called before the Court, and, delivering up their staves, retire to the bottom of the Hall, "that the opinion of the Court may be heard touching the doing of their duties: to the intent, if any of them be faultye, that he or they may be rebuked or dismissed, at the discretion of the said Court; and thereupon to deliver unto suche as then remayne their staves, and againe establish them." These forms concluded, the Court is dissolved, and the company, having partaken of refreshments, retire. It appears from the journal of Sheriff Hoare, 1740-41, that "sweet cakes and burnt wine" were then handed round on these occasions, and the usual breakfast was "roast beef and burnt wine."

The Spital or Hospital Sermons are preached in Christ Church, Newgate-street, on Easter Monday and Tuesday. On Monday the children proceed to the Mansion House, and return in procession to Christ Church, with the Lord Mayor, Lady Mayoress, and City authorities, to hear the sermon. On Tuesday the children again go to the Mansion House, and pass through the Egyptian Hall, before the Lord Mayor, each boy receiving a glass of wine, two buns, and a shilling; the monitors half-a-crown each, the probationers half-a-guinea each, and the Grecians a guinea—all in coins fresh from the Mint; they then return to Christ Church, as on Monday.

The boys formerly visited the Royal Exchange on Easter Monday; but this has been discontinued since the burning of the last Exchange, in 1838.

At the first drawing-room of the year the forty Mathematical boys are presented to the Sovereign, who inspects their charts, and who gives them 8*l.* 8*s.* as a gratuity. To this other members of the Royal Family formerly added smaller sums, and the whole was divided among the ten boys who left the school in the year. During the illness of King George III. these presentations were discontinued; but the Governors of the Hospital continued to pay 1*l.* 3*s.*, the amount ordinarily received by each, to every boy on quitting. The practice of receiving the boys was revived by William IV., and is continued by her present Majesty. Each scholar having passed his Trinity-House examination, and received testimonials of his good conduct, is presented with a *watch*, as a reward, worth from 9*l.* to 13*l.*; in addition to an outfit of clothes, books, mathematical instruments, a Gunter's scale, a quadrant, and a sea-chest.

Christ's Hospital, by ancient custom, possesses the privilege of addressing the Sovereign on the occasion of his or her coming into the City to partake of the hospitality of the Corporation of London. On the visit of Queen Victoria in 1837, a booth was erected for the Hospital boys in St. Paul's Churchyard; and on the Royal carriage reaching the Cathedral west gate, the senior scholar, with the Head Master and Treasurer, advanced to the coach-door, and delivered a congratulatory address to her Majesty, with a copy of the same on vellum.

The School has always been famous for its penmen. The education consists of reading, writing, and arithmetic, French, the classics, and the mathematics. There are sixteen Exhibitions for scholarships at the Universities of Oxford and Cambridge, besides a "Pitt Scholarship," and a "*Times* Scholarship," the latter founded by the proprietors of that journal, with a fund subscribed by the public in testimony of their detection of the Bogle Fraud, 1841.

Among the more eminent *Blues*, as the scholars are termed, are Joshua Barnes, editor of Anacreon and Euripides; Jeremiah Markland, the eminent critic, particularly in Greek literature; Camden, the antiquary; Bishop Stillingfleet. [Pepys has this quaint entry in his *Diary*: "January 16, 1666-7, Sir R. Ford tells me how the famous Stillingfleet was a Blue Coat boy."] Samuel Richardson, the novelist; Thomas Mitchell, the translator of Aristophanes; Thomas Barnes, many years editor of the *Times* newspaper; and Coleridge, Charles Lamb, and Leigh Hunt, who have published many interesting reminiscences of their contemporaries in the School. Lamb's "Recollections of Christ's Hospital," and "Christ's Hospital Five and Thirty Years Ago" (says Peter Cunningham, once a Deputy Grecian), have done much to uphold the dignity of the School.

The Library is a recent addition; it is a spacious room, divided into boxes and provided with tables: on the walls hang useful maps, and engravings of the steam-engine;

at one end is stored a small but well-chosen collection of books, and on the table are several illustrated periodicals. Another addition is the erection of a Gymnasium.

The old cloister of the Grey Friars Priory, repaired by Wren, and nearly deprived of its ancient appearance, formerly served as a public thoroughfare from Newgate-street to Smithfield, but has been stopped up. In 1855, in excavating for some new houses on the north side of Newgate-street, were exposed, under Christ's Church yard three pointed arches, 10 feet in span, and covered with masses of chalk and concrete, to within three feet of the surface, the rest being earth; these being vestiges of the Grey Friars buildings; as also are the gateway and a portion of the brick building under which it opens, together with the cloistered passage in rear of the basement. The brick-work of the superstructure, of about Elizabeth's reign, is marvellously fine.

The customs of the School have varied with time. Formerly the Saints' days were kept as holidays; money-boxes for the poor were kept in the cloister; and unruly boys were kept confined in dungeons; but these regulations have been discontinued. Bread and beer are no longer the breakfast. Nor do the boys perform common menial offices as heretofore. The wards or dormitories, in which the boys sleep, are seventeen in number; each boy makes his own bed, and each ward is governed by a nurse and two or more monitors. There is a curious feature in most of the sleeping wards: in one corner, near the roof, and reached by a staircase, is a wooden box, which serves as a resting-place and study for the "Grecian" of the ward. From this eminence he is enabled to notice any delinquency below.

The general burial-ground of the Hospital is between the south cloister and the houses in Newgate-street, where the funerals formerly took place by torch-light, and the service was preceded by an anthem, thus reviving the monastic associations of the place. The Burials are now by daylight.

A book is preserved, containing the records of the Hospital from its foundation, and an anthem sung by the first children.

The income of the institution has known much fluctuation; and consequently, also, the number of inmates. The 340 children with which the Hospital opened had dwindled in 1580 to 150. The object of the institution has also, in the lapse of time, become materially changed, which may in a great measure be attributed to the influence of the Governors, or benefactors, its chief supporters. The government is practically vested in a committee of 50 almoners. The system of education is not considered to have kept pace with the requirements of the times.

We have seen that there were abuses in the management of the Hospital in Pepys's time; they have lasted to our day. In 1810, Mr. Waithman, one of the Common Councilmen for the Ward in which the Hospital is situated, showed that instead of being a benefit to the children of the poor and friendless, it was engrossed almost exclusively by the rich. Presentations were, at that time, sold at an average of thirty guineas each. By recommendation of Sir Samuel Romilly, and Mr. Bell, the Lord Chancellor was petitioned for an inquiry into the conduct of the Hospital Committee; but, in 1816, its object failed. As testimonies to the original designs of the foundation, a statue of a Blue Coat Boy, in each of the four corners of the cloister, had, within the recollection of several persons living, the following painted notice underneath:

*This is Christ's Hospital, where poor Blue-Coat boys are harboured and educated.*—*Hughson's Walks through London.*

There is printed annually, and freely circulated, "A True Report of the Number of Children and other poor People maintained in the several Royal Hospitals in the City of London, under the pious care of the Right Honourable the Lord Mayor, Aldermen, and Governors thereof, for the year last past." This document, in appearance, resembles a sheet almanack: it is headed by the Easter anthem set to music; and it is enclosed in a woodcut border, the design of which indicates the custom of printing these Reports to have been of long standing. In the upper portion of the border are the Royal Arms; at the sides are the City Arms, ancient and modern; in medallions at the corners are three figures of the Christ's Hospital boys, and one of a girl; at the foot is an emblematic group, with the old Hospital in the background; and beneath it is inscribed on a ribbon, "Pray remember the Poor."

The income arising from early endowments and bequests, which may be set down as exceeding 40,000*l.* per annum, is largely augmented by the contributions of Governors, of whom, on an average, twenty-five are elected annually; and as they give 500*l.* each on election, 12,500*l.* a year arises from this source.

In 1865, the gross receipts amounted to 71,855*l.* 13*s.* 10*d.*, more than one half of which is derived

from the rents of estates, quit-rents, tithe-rent charges, &c. The benefactions were 8021*l.*; legacies, 6330*l.* 2*s.* 11*d.* The expenditure contains among other items, 2720*l.* 18*s.* 9*d.* payments under benefactions, wills, deeds of gift, &c., to various parishes and companies for their poor and for other objects, to pensioners, for relief of prisoners for debt, for setting up in business young men and women educated in the Hospital, and other purposes, 2827*l.* The sum available for the purposes of the Hospital was 57,389*l.* 0*s.* 11*d.* The washing at the two establishments amounted to 2010*l.* 9*s.* 6*d.* The provisions and stores (less the sum received by sale of kitchen-stuff and dripping), amounted to 10,342*l.* 0*s.* 4*d.*; coals and fuel, 783*l.* 18*s.* 8*d.*; gaslighting and water supply, 1565*l.* 7*s.*; the charges for apparel, linen, bedding, shoes, and leather, were 640*s.* The average number of children maintained and educated in the London and Hertford establishments in 1865 was 1205; and the average expenditure per child, 4*l.* 1*s.* 7½*d.*

Boys, whose parents may not be free of the City of London, are admissible on Free Presentations, as they are called; as are also the sons of clergymen of the Church of England. The Lord Mayor has two presentations annually; and the Court of Aldermen one each: it was the good practice of the late Alderman Humphery, to give his presentations to inhabitants of the Ward over which he presided. The rest of the Governors have presentations once in three years. A list of the Governors who have presentations for the year is printed every Easter, and may be had at the Counting-house of the Hospital. No boy is admitted before he is seven years old, or after he is nine; and no boy can remain in the School after he is fifteen, King's boys and Grecians alone excepted. There are about 500 Governors, at the head of whom are the Queen, the Prince of Wales, and Prince Alfred. The President is the Duke of Cambridge, whose election to that office was a departure from the custom, which had hitherto been to elect the Lord Mayor for the time being. The qualification for a Governor is payment of 500*l.*; but an Alderman has the power of nominating a Governor for election at half price. About 200 boys are admitted annually (at the age of from seven to ten years), by presentations in rotation, so that the privilege occurs about once in three or four years. A list of the Governors having presentations is published annually in March, and is to be had at the counting-house of the Hospital.

The subordinate establishment is at Hertford, to which the younger boys are sent preparatory to their entering on the foundation in London, which takes place as vacancies occur. The building at Hertford was erected by the Hospital Governors in 1683, and has extensive grounds for recreation; when full, it will contain 416 children, of whom about 200 are taught the classics. There is likewise accommodation here for 80 girls.

The Report published in 1865 states that all the early and chief gifts of the property held by the Hospital are expressed to be for the benefit of poor children, without distinction of sex; nor does the Hospital during the early period of its institution appear to have been appropriated more to boys than to girls. For many years past, however, up to a recent period, only six girls were admitted (at Hertford) every year, besides those received under specific trusts. The education of a boy so as to advance him in life was thought to be of much greater material advantage to a family than the education of a girl; so that it was a common expression that a governor "threw away" his presentation on nominating a girl. But the purpose of the foundation being the public good, it is considered that the general good would have been better promoted if at least an equal share of the funds of the Hospital had been expended in the education of girls.

In 1853, there were 61 girls in the establishment at Hertford, which, in its teaching, was below the level of a good parish school; the number of scholars has since been reduced to 26. Improved schemes of education have been suggested, to comprise instruction in needlework, washing, cooking, and other household work.

Apart from the special purpose for which Christ's Hospital was endowed, there are seven distinct Charities appropriated, in part or in whole, to entirely separate objects. The annual income from six of these charities may be stated at 9000*l.* The seventh, the Charity to the Blind, by the Rev. W. Hetherington, since augmented by many benefactors, is the wealthiest of all: in one year, 6520*l.* have been paid to 652 aged blind persons. To this fund the late Richard Thornton, Esq., bequeathed 10,000*l.*

## CHURCHES AND CHAPELS.

**A**N episcopal see was founded in London in the time of the Roman occupation of Britain, but very little is known concerning it. From the establishment of the Saxons in Britain to the mission of Augustine, in 596, there is no record of any Bishop in London; but when Augustine had established himself at Canterbury, he consecrated Mellitus Bishop, in the year 604. The East Saxons relapsed into paganism, on the death of Sebert, their king, when Mellitus was driven out, and

London remained without a Bishop until 656, in which year Cedd (or Chad), at the invitation of King Sigebert the Good, re-established the see, which has ever since continued without any material interruption or lengthened vacancy.

London and the suburbs, in the Middle Ages, contained, according to Fitzstephen, "13 churches belonging to convents, besides 126 lesser parish churches." Of those belonging to convents eleven may be traced. Thus, we find in Fitzstephen's time, Trinity Priory, Aldgate; St. Bartholomew's, West Smithfield; Bermondsey, Southwark; St. James's Priory, Clerkenwell; the Priory of St. John the Baptist, Holywell, Shoreditch; St. Katharine's Hospital by the Tower; St. Thomas Acon, at the south-west corner of King-street, Cheapside, upon the site of the birth-place of St. Thomas à Becket; St. John of Jerusalem, Clerkenwell; the Temple; St. Mary Overie, Southwark; and St. Martin's-le-Grand, so named from its magnificence. All, except Bermondsey, are shown in Wyngrerde's View of London, 1543, in the Sutherland Collection, at Oxford.

Stow states the entire number of parish churches at his time (1525—1605), in and about London, within four miles' compass, at 139. Within the walls, at the Great Fire, there were 98 churches, of which 85 were burnt down, and 13 unburnt; 53 were rebuilt, and 35 united to other parishes.

The following were the City Churches burnt and not rebuilt:—

Allhallows, Honey-lane; near the City School. Alihallows the Less, in Thames-street, near Coleharbour-lane, graveyard remains. St. Andrew Hubbard, near to the site of the Weigh House Chapel. St. Ann, Blackfriars, Ireland-yard, now graveyard. St. Benet Sherehog, Pancras-lane, near Bucklersbury, now graveyard. St. Botolph Billingsgate, over against Botolph-lane, Thames-street; burying-ground, and the site built upon. St. Faith was under the lien of the late Cathedral of St. Paul's, in the ground of which, previous to the Intraaural Act, the parishioners had a right of interment. St. Gabriel, Fenchurch, in Fenchurch-street, graveyard exists. St. Gregory, in St. Paul's-churchyard, near where the statue of Queen Anne now stands. St. John Baptist, on Dowgate-hill, the corner of Cloak-lane, now graveyard. St. John Evangelist, in Watling-street, corner of Friday-street, now graveyard. St. John Zachary, corner of Silver-street, Falcon-square, now graveyard. St. Laurence Pountney, on Laurence Pountney-hill, now graveyard. St. Leonard's, Eastcheap, now graveyard. St. Leonard, Foster-lane, the graveyard part of the site of the General Post Office. St. Margaret Moses, in Passing-alley, late a burying-ground, now Little Friday-street. St. Margaret, New Fish-street, church and burial ground, where the Monument now stands. St. Martin Pomeroy, in Ironmonger-lane, on part of the ground now the graveyard. St. Martin Orgar, in St. Martin's-lane, where there is now a French Church. St. Martin's Vintry, College-hill, Thames-street, now graveyard. St. Mary Bothaw, in Turnwheel-lane, now graveyard. St. Mary Colechurch, in Old Jewry, where the Mercers' Hall was, and Frederick-place now is. St. Mary Magdalen, Milk-street, and ground, where part of Honey-lane Market now stands. St. Mary Mounthaw, on Labour-in-vain-hill, now graveyard. St. Mary Staining, on the north side of Oat-lane, on a part of the graveyard remaining, opposite Titus Oates' House, now pulled down. St. Mary Woolchurch and graveyard, where the Mansion House now stands. St. Michael-le-Querne, near Paternoster-row, in Cheapside, where a conduit formerly stood. St. Nicholas Acons, in Nicholas-lane, now graveyard. St. Nicholas Olave, in Bread-street-hill, now graveyard. St. Olave, Silver-street, south side of Noble-street, now graveyard; under part of which some remains of the church have been discovered. St. Pancras Soper-lane, in Pancras-lane, near Queen-street, where is the graveyard. St. Peter Cheap, corner of Wood-street, Cheapside, where the graveyard still remains, and where the plane-tree still flourishes, on which the rooks, till lately, annually built their nests. St. Peter Paul's-wharf, at the bottom of Peter's-hill, Thames-street, now graveyard. St. Thomas the Apostle, now graveyard, corner of Cloak-lane. The Holy Trinity church, where there is now a Lutheran church, corner of Little Trinity-lane. St. Christopher-le-Stocks church, in Threadneedle-street, pulled down in 1781, for the enlargement of the Bank of England.

Pepps records this odd circumstance concerning the London churches destroyed in the Great Fire: "January 7th, 1667-8. It is observed, and is true, in the late Fire of London, that the fire burned just as many parish churches as there were hours from the beginning to the end of the fire; and next that there were just as many churches left standing in the rest of the City that was not burned, being, I think, thirteen in all of each; which is pretty to observe."

Sir Christopher Wren built, besides St. Paul's and the western towers of Westminster Abbey, fifty churches in the metropolis, at sums varying from less than 2500*l.* to upwards of 15,000*l.* In "Gothic," or, as Wren proposed to call it, "Saracenic," architecture, he was certainly not a successful practitioner; although in the adaptation of a steeple (a form peculiar to Pointed architecture) to Roman buildings, he has manifested much ingenuity, and produced some light and graceful forms of almost endless variety. This may be seen by reference to Mr. Cockerell's picturesque grouping of the principal works of Wren, the drawing of which was exhibited at the Royal Academy in 1838, and has been engraved in line by Richardson.

In the reign of Queen Anne were built or commenced eleven churches. In the next two reigns were completed three large churches, each distinguished by a noble Corinthian portico: viz., St. George's, Bloomsbury; St. Martin's-in-the-Fields; and St. George's, Hanover-square. With the exception of St. Peter-le-Poor

(1791) and St. Martin's Outwich (1796) not one church was built from the commencement of the reign of George III. nearly to the Regency, an interval of more than half a century. The two Grecian orders, Doric and Ionic, were then adopted in church-building; this pseudo classic-style was superseded by the Old English of various periods. The increase of churches did not, however, keep pace with the population; though the appeals to the public for funds were, in some instances, answered with rare munificence. Thus, in the subscription-list in 1836 for building new churches we find the following donation: "A clergyman seeking for treasure in heaven, 5000*l.*"

In 1839, Lord John Russell stated in Parliament, that in London there were 34 parishes, with a population of 1,170,000, and church accommodation for only 101,000; and in these 34 parishes were only 69 churches, and including proprietary chapels, only 100 places of worship in the whole; whereas, if we allot a church to every 3000, there ought to be 379, leaving a deficiency of 279. In the following year, 1840, the Bishop of London remarked to the House of Lords:—

"If you proceed a mile or two eastward of St. Paul's, you will find yourself in the midst of a population the most wretched and destitute of mankind, consisting of artificers, laborers, beggars, and thieves, to the amount of 300,000 or 400,000 souls! Throughout this entire quarter there is not more than one church for 10,000 inhabitants; and in one, nay in two districts, there is but one church for 45,000 souls."

The Rev. Dr. Cumming next stated that in a radius of eight miles around St. Paul's there was a population of two millions, of whom not more than 60,000 were communicants in any church or chapel whatever. Instead of five-eighths, or 1,300,000, of the population being church-goers, the greatest extent of attendance at any place of worship did not exceed 400,000, and not more than 600,000 could be accommodated. In a small district of Covent Garden there were 354 houses: 338 were of the most wretched description; these contained 1216 individuals, of whom only 134 attended church; and in that small locality there were no fewer than 44 shops regularly open on the Sabbath. In some cases there was a population of 100,000 in the parish, with only one rector and one curate. The above startling statistics led to a "Metropolis Churches Fund," established in 1836, by which means several churches have been built and provided for.

The great number of the City churches is, however, now disproportionate to its requirements. In 1834, Mr. Lambert Jones stated in the Court of Common Council, that the population of the City had within a century decreased one-half; that the number of inhabitants did not then exceed 53,000, and for them were 66 churches. The population of the City may now be set down at 55,000, for whom there are 60 churches, a proportion very different to that which exists in other parts of the metropolis. At St. Mildred's, Poultry, on a Sunday morning, there has been only one person to form a congregation, and there was, consequently, no service. By a Parliamentary return, the largest income is 208*l.* 9*s.* 4*d.*, for St. Botolph, Bishopsgate; and the smallest but one is 40*l.*, for St. Helen, Bishopsgate. In one church (St. Laurence Jewry and St. Mary Magdalen, Milk-street), with sittings for 1000 persons, the average attendance is only 30. At another church, with 700 sittings, the average attendance is 30. In 1853, the congregations were, in some cases, below 16, and in many under 50: average about 33. Various remedies have been proposed, as the union of benefices, and the removal of churches to ill-provided parishes. "The Bishop of London's Fund" has been formed. In the 211 parishes of the metropolis there are nearly 1,000,000 persons for whom the Church of England ought eventually to provide, which is sought to be done by raising a fund of 3,000,000*l.*

"One of the most important movements of our time originated in the late Bishop of London's sense of the great church destitution observable principally in the Bethnal-green district, which became even at the outset metropolitan. It has resulted up to the present time in the erection, and more or less complete endowment, of no less than seventy-eight new churches in and near London, at a cost of more than half a million; independently of seven new churches, the entire erection and endowment of which by seven separate individuals (one being the Bishop himself), is wholly attributable to the impulse derived from the appeal made to the public on the first formation of the Metropolitan Churches Fund. This is a great achievement, and it will go down in history a lasting honour to Bishop Blomfield's name. Yet it is remarkable that the first publication of this great design very nearly coincided in point of time with that of the publication of the first *Tracts for the Times*; and its success was most materially aided by the munificent zeal with which Dr. Pusey, in particular, and the then Oxford residents generally, the Tract-writers and their friends, took it up and forwarded it; but it was the Bishop's conception and execution."—*The Guardian*.

## OLD SAINT PAUL'S.

THE present Cathedral of St. Paul is the third church dedicated to that saint, and built very nearly upon the same site. The first church was founded about A.D. 610, by Ethelbert, King of Kent, but destroyed by fire in 1087. Its rebuilding was commenced by Bishop Maurice, whose successor completed the enclosing walls, which extended as far as Paternoster-row and Ave Maria-lane, on one side; and to Old Change, Carter-lane, and Creed-lane on the other. This second church, "Old Saint Paul's," was built of Caen stone: it was greatly injured by fire in 1137; but a new steeple was finished in 1221, and in 1240 a choir. The entire edifice was 690 feet long, and 130 feet broad; and its tower and spire rose 520 feet, or 116 feet higher than the spire of Salisbury Cathedral; 64 feet loftier than that of Vienna; 50 feet higher than that of Strasburg; surpassing the height of the Great Pyramid of Egypt; and higher than the Monument placed upon the cross of the present Cathedral. It had a bowl of copper-gilt, 9 feet in compass (large enough to hold 10 bushels of corn), supporting a cross  $15\frac{1}{2}$  feet high, surmounted by an "eagle-cock of copper-gilt, 4 feet long." In 1314, the cross fell; and the steeple of wood covered with lead, being ruinous, was taken down, and rebuilt, with a new gilt ball. The French Chronicle notices this reparation, and describes the extraordinary relics which were found in the old ball, and replaced, with additions, in the new one. In 1444, the steeple was nearly destroyed by lightning, and not repaired till 1462. In 1561, the Cathedral was partly burnt, but was restored in 1566, except the spire, which was never rebuilt. Heylin, in his *Cosmography*, says of the above catastrophe:—

"It was by the carelessness of the sexton consumed with fire, which happening in a thundering and tempestuous day, was by him confidently affirmed to be done by lightning, and was so generally believed till the hour of his death; but not many years since, to disabuse the world, he confessed the truth of it, on which discovery, the burning of St. Paul's steeple by lightning was left out of our common almanacks, where formerly it stood among the ordinary epochs or accounts of time."

The church was of the Latin cross form, with a Lady chapel at the east end, and two other chapels, St. George's north, and St. Dunstan's south. At the eastern extremity of the churchyard stood a square *clocher*, or bell-tower, with four bells, rung to summon the citizens to folk-motes held here. These bells belonged to St. Faith's under St. Paul's, a church so situated, but demolished about 1256, when part of the crypt beneath the Cathedral choir was granted to the parishioners for divine service. Hence the popular story in our time of there being a church under St. Paul's, and service in it once a year. At the south-west corner was the parish church of St. Gregory. Fuller wittily describes Old St. Paul's as being "truly the mother-church, having one babe in her body—St. Faith's—and another in her arms—St. Gregory's."

On the south side of the Cathedral, *within a cloister*, was a chapter-house, in the Pointed style; and on the north, on the walls of another cloister, next to the charnel-house, was a "Dance of Death," or, as Stow calls it, "Death leading all Estates, curiously painted upon board, with the speeches of Death, and answer of every Estate," by John Lydgate. It was painted at the cost of John Carpenter, Town Clerk of London, *temp.* Henry V. and VI.

On special saints' days it was customary for the choristers of the Cathedral to ascend the spire to a great height, and there to chant solemn prayers and anthems: the last observance of this custom was in the reign of Queen Mary, when, "after even-song, the quere of Paules began to go about the steeple singing with lightes, after the olde custome." A similar tenure-custom is observed to this day at Oxford, on the morning of May 1, on Magdalen College tower.

Camden relates, that on the anniversary of the Conversion of St. Paul, January 25, held in the church, a fat buck was received with great formality at the choir entrance by the canons, in their sacerdotal vestments, and with chaplets of flowers on their heads; whilst the antlers of the buck were carried on a pike in procession round the edifice, with horns blowing, &c. On the buck being offered at the high altar, one shilling was paid by the Dean and Chapter.

St. Baude, in lieu of twenty-two acres, bequeathed a fat doe in winter, and a buck in summer, which was received at the altar crowned with roses by the chapter annually, till the reign of Elizabeth.

On the north side near the east end stood *Paul's or Fowly's Cross*, with a pulpit whence sermons were preached, the anathema of the Pope thundered forth, heresies recanted, and sins atoned for.

The Cross was hexagonal in form; of wood, raised on stone steps, with a canopy covered with lead, on which was elevated a cross. Stow could not ascertain its date: we first read of it in 1259, when, by command of Henry III., striplings were here sworn to be loyal: and in the same year the folk-mote Common Hall assembled here by the tolling of St. Paul's great bell. At preaching the commonalty sat in the open air; the king, his train, and noblemen in covered galleries. All preachers coming from a distance had an allowance from the Corporation, and were lodged during five days "in sweete and convenient lodgings, with fire, candle, and all necessary food." Bishop Northburgh lent small sums to citizens on pledge, directing that if at the year's end they were not restored, then that "the preacher at Paul's Cross should declare that the pledge, within fourteen days would be sold, if unredeemed." An earthquake overthrew the Cross in 1382; it was set up again by Bishop Kemp in 1449.

Ralph Baldoe, Dean of Paul's, cursed from the Cross all persons who had searched in the church of St. Martin's-in-the-Fields for a hoard of gold. In 1483, Jane Shore, with a taper in one hand, and arrayed in her "kertell onely," did open penance at the Cross. In the same year, Dr. Shaw and Friar Pinke aided the traitorous schemes of Duke Richard; the preacher took for his text these words, "Bastard slips shall never take deep root." Stow informs us that the Doctor so repented his "shameful sermon" that it struck him to the heart, and "within a few days he withered and consumed away." Friar Pinke lost his voice while preaching, and was forced to leave the pulpit. Royal contracts of marriage were notified from the Cross. Henry VIII. sent preachers to the Cross every Sunday to preach down the Pope's authority. In 1538, Bishop Fisher exposed at the Cross the famous rood of grace from Boxley Abbey. From his attendance there, as a preacher, Richard Hooker dated the miseries of his married life. Queen Mary caused sermons to be preached at the Cross in praise of the old religion, but they occasioned serious riots.

The Cross was pulled down in 1643, by order of Parliament; its site was long denoted by a tall elm tree.

The interior of the church was divided throughout by two ranges of clustered columns; it had a rich screen, and canopied doorways; and a large painted rose-window at the east end. The walls were sumptuously adorned with pictures, shrines, and curiously wrought tabernacles; gold and silver, rubies, emeralds, and pearls glittered in splendid profusion; and upon the high altar were heaped countless stores of gold and silver plate, and illuminated missals. The shrine of St. Erkenwald (the fourth bishop), at the back of the high altar, had among its jewels a sapphire, believed to cure diseases of the eye. The mere enumeration of these treasures fills twenty-eight pages of Dugdale's folio history of the Cathedral. King John of France offered at St. Erkenwald's shrine; King Henry III. on the feast of St. Paul's Conversion, gave 1500 tapers to the church, and fed 15,000 poor in the garth, or close.

There are several notices of miracles said to have been wrought in St. Paul's at "a tablet," or picture, set up by Thomas Earl of Lancaster, who, after his execution at Pontefract, was reckoned a martyr by the populace. The tablet was removed by royal order, but replaced a few years later. At the base of one of the pillars was sculptured the foot of Algar, the first prebendary of Islington, as the standard measure for legal contracts in land, just as Henry I., Richard I., and John, furnished the iron ell by their arms. On the north side of the choir, "on whose monument hung his proper helmet and spear, as also his target covered with horn" (*Dugdale*), stood the stately tomb of John of Gaunt, Duke of Lancaster, and Blanche, his first wife. In St. Dunstan's chapel was the fine old tomb of Henry Lacy, Earl of Lincoln, from whom Lincoln's Inn derives its name. In the middle aisle of the nave stood the tomb of Sir John Beauchamp, constable of Dover Castle, and son to Guy Beauchamp, Earl of Warwick. Between the choir and south aisle was a noble monument to Sir Nicholas Bacon, father of Lord Chancellor Bacon; and "higher than the post and altar," (*Bishop Corbet*), between two columns of the choir, was the sumptuous monument of Sir Christopher Hatton; and near it was a tablet to Sir Philip Sidney, and another to his father-in-law, Sir Francis Walsingham. The stately appearance of Hatton's monument and the plainness of Walsingham's and Sidney's tablets, gave rise to this epigram by old Stow:—

"Philip and Francis have no tomb,  
For great Sir Christopher takes all the room."

In the south aisle of the choir were the tombs of two of the Deans; Colet the founder of Paul's school, a recumbent skeleton; and Dr. Donne, the poet, standing in his stony shroud: the latter is preserved in the crypt of the present Cathedral. In a vault, near John of Gaunt's tomb, was buried Van Dyck; but the outbreak of the wars under Charles I., prevented the erection of any monument to his memory. The state obsequies were a profitable privilege of the Cathedral: the choir was hung with black and escutcheons; and the horses were magnificently adorned with banner-rolls and other insignia of vainglory.

The floor of the church was laid out in walks: "the south alley for usury and popery; the north for simony and the horse-fair; in the midst for all kinds of bargains, meetings, brawlings, murders, conspiracies, &c." The middle aisle, "Pervyse of Paul's," or "Paul's Walk," was commonly called "Duke Humphrey's Walk," from Sir John Beauchamp's monument, unaccountably called "Duke Humphrey's Tomb," being the only piece of sculpture here; and as this walk was a lounge for idlers and hunters after news, wits and gallants, cheats, usurers, and knights of the post, dinnerless persons who lounged there were said to *dine with Duke Humphrey*. Here "each lawyer and serjeant at his pillar heard his client's cause, and took notes thereof upon his knee." (Dugdale's *Orig. Jurid.*) Here masterless men, at the *Si quis* door, set up their bills for service. Here the font was used as a counter for payments. Here spur money was demanded by two choristers from any person entering the Cathedral during divine service with spurs on. Hither Fleetwood, Recorder of London, came "to learn some news" to convey by news-letter to Lord Burghley. Ben Jonson has laid a scene of his *Every Man out of his Humour* in "the middle aisle in Paul's;" Captain Bobadil is a "Paul's man;" and Falstaff bought Bardolph in Paul's. Greene, in his *Theeves Falling Out*, &c., says: "Walke in the middle of Paul's, and gentlemen's teeth walk not faster at ordinaries, than there a whole day together about enquiry after news." Bishop Earle, in his *Microcosmographia*, 1629, says: "Paul's Walk is the Land's Epitome, or you may call it the lesser Ile of Great Brittain. \* \* \* \* The noyse in it is like that of Bees, in strange hummings or buzze, mixt of walking, tongues, and feet; it is a kind of still roare, or loud whisper." It was a common thoroughfare for porters and carriers, for ale, beer, bread, fish, flesh, fardels of stuff, and "mules, horses, and other beasts;" drunkards lay sleeping on the benches at the choir-door; within, dunghills were suffered to accumulate; and in the choir people walked "with their hatts on their heddes." Dekker, in his *Gull's Hornbook*, tells us that the church was profaned by shops, not only of booksellers, but of other trades, such as "the semster's shops," and "the new tobacco office." So great had the nuisances become, that the Mayor and Common Council in 1554, prohibited, by fine, the use of the church for such irreverent purposes.

The desecration of the exterior of the church was more abominable. The chantry and other chapels were used for stores and lumber, as a school and a glazier's workshop; parts of the vaults were occupied by a carpenter, and as a wine-cellar; and the cloisters were let out to trunkmakers, whose "knocking and noyse" greatly disturbed the church-service. Houses were built against the outer walls, in which closets and window-ways were made: one was used "as a play-house," and in another the owner "baked his bread and pies in an oven excavated within a buttress;" for a trifling fee, the bell-ringers allowed wights to ascend the tower, halloo, and throw stones at the passengers beneath. The first recorded Lottery in England was drawn at the west door in 1569. Dekker describes "Paul's Jacks," automaton figures, which struck the quarters, on the clock. We read, too, of rope-dancing feats from the battlements of St. Paul's exhibited before Edward VI., and in the reign of Queen Mary, who, the day before her coronation, also witnessed a Dutchman standing upon the weathercock of the steeple, waving a five-yard streamer! Another marvel of this class was the ascent of Bankes, on his famous horse Marocco, to the top of St. Paul's, in the year 1600, to the delight of "a number of asses" who brayed below. The steed was "a middle-sized bay English gelding," and Bankes was a vintner in Cheapside, and had taught his horse to count and perform a variety of feats. When the novelty had somewhat lessened in London, Bankes took his wonderful horse to Paris, and afterwards to

Rome. "He had better have stayed at home, for both he and his horse (which was shod with silver) were burnt for witchcraft." (Ben Jonson's *Epigrams*.) Shakspeare alludes to "the dancing horse" (*Love's Labour Lost*); and in a tract called *Maroccus Extaticus*, qto., 1595, there is a rude woodcut of the unfortunate juggler and his famous gelding.—Cunningham's *Handbook*.

Several attempts were made to restore the Cathedral; and money, Stow says, was collected for rebuilding the steeple; but no effectual step for the repairs was taken until 1633, when Inigo Jones, to remove the desecration from the nave to the exterior, built, it is stated at the expense of Charles I., at the west end, a Corinthian portico of eight columns, with a balustrade in panels, upon which he intended to have placed ten statues: this portico was 200 feet long, 40 feet high, and 50 feet deep; but its classic design, affixed to a Gothic church, must be condemned, unless it be considered as an instalment of a new cathedral. Laud was then Bishop of London. The sum collected was 101,330*l.*; and the repairs progressed until about one-third of the money was expended, in 1642, when they were stopped by the contests between Charles and his people: the funds in hand were seized to pay the soldiers of the Commonwealth, and Old St. Paul's was made a horse-quarter for troops.

Shortly after the Restoration, the repairs were resumed under Sir John Denham; and "that miracle of a youth," Wren, drew plans for the entire renovation. A commission was appointed, but before the funds were raised, the whole edifice was destroyed in the Great Fire:—

"The daring flames peep'd in, and saw from far  
The awful beauties of the sacred quire;  
But since it was profan'd by civil war,  
Heav'n thought it fit to have it purg'd by fire."

*Dryden's Annus Mirabilis.*

Evelyn thus records the catastrophe:—

"I was infinitely concerned to find that goodly church, St. Paul's, now a sad ruin, and that beautiful portico (for structure, comparable to any in Europe) now rent in pieces, flakes of vast stone split asunder, but nothing remaining entire but the inscriptions, showing by whom it was built, which had not one letter defaced. It was astonishing to see what immense stones the heat had in a manner calcined, so that all the ornaments flew off, even to the very roof, where a sheet of lead covering a great space was totally melted. The lead over the altar at the east end was untouched, and among the monuments the body of one bishop remained entire."

According to Dugdale, this was the corpse of Bishop Braybrooke, which had been inhumed 260 years, being "so dried up, the flesh, sinews, and skin cleaving fast to the bones, that being set upon the feet it stood as still as a plank, the skin being tough like leather, and not at all inclined to putrefaction, which some attributed to the sanctity of the person offering much money."

In the Great Fire the church was reduced to a heap of ruins; and books valued at 150,000*l.*, which had been placed in St. Faith's (the crypt) for safety by the stationers of Paternoster-row, were entirely destroyed. After the Fire, Wren removed part of the thick walls by gunpowder, but most he levelled with a battering-ram; some of the stone was used to build parish churches, and some to pave the neighbouring streets. Tradition tells that Serjeants' Inn, Fleet-street, being then ecclesiastical property, was not forgotten in the distribution of the remains of Old St. Paul's; and there remained to our day a large number of blocks of Purbeck stone, believed to have formed part of the old Cathedral.

The west end of the old church was not taken down till 1686. In the same year a great quantity of old alabaster was beaten into powder for making cement. Those fragments were, doubtless, monumental effigies or other ornaments of the old church. In 1688 the tower was pulled down, and 162 corpses taken from its cemetery and re-buried at the west end of the old foundation, at 6*d.* each.

### ST. PAUL'S CATHEDRAL.

NEARLY eight years elapsed after the Great Fire ere the ruins of the old Cathedral were cleared from the site. Meanwhile, Wren was instructed "to contrive a fabric of moderate bulk, but of good proportion; a convenient quire, with a vestibule and porticoes, and a dome conspicuous above the houses." A design was accordingly prepared, octagonal in plan, with a central dome and cupolettas, and affording a vast

number of picturesque combinations, as shown in the model, preserved to this day. It is of wood, and some 10 feet in height to the summit of the dome; it is thus large enough to walk bodily into it. Wren aimed at a design antique and well studied, conformable to the best style of the Greek and Roman architecture. The model is accurately wrought, and carved with all its proper ornaments, consisting of one order, the Corinthian only. The model, after the finishing of the new fabric, was deposited over the Morning Prayer Chapel, on the north side. Wren's model had neither side aisles nor oratories, though they were afterwards added, because as Spence, in his *Anecdotes*, imagines, the Duke of York (James II.) considered side aisles would be an absolute necessity in a cathedral where he hoped the Romish ritual would soon be practised. These innovations sadly marred the uniformity of the original design, and when decided upon, drew tears of vexation from the architect. He was paid 160 guineas only for the model. The Surveyor next devised "a cathedral form, so altered as to reconcile, as near as possible, the Gothic to a better manner of architecture;" which being

Relative positions of the Old and New Cathedrals.

temple to Diana having once occupied this spot. The accompanying ground-plan shows the relative positions of the Old and New Cathedrals.

The first stone of the new church was laid June 21, 1675, by the architect and his lodge of Freemasons; and the trowel and mallet then used are preserved in the Lodge of Antiquity, of which Wren was master. The mallet has a silver plate let into the head; and it bears this inscription:—

"By Order of the M. W. the Grand Master,  
His Royal Highness the Duke of Sussex, &c., &c.,  
and W. Master of the Lodge of Antiquity,  
and with the Concurrence of the Brethren of the  
Lodge, this plate has been engraved and affixed  
to this Mallet. A.L. 5831, A.D. 1827.  
To commemorate that this, being the same Mallet with which  
HIS MAJESTY KING CHARLES THE SECOND  
levelled the foundation Stone of  
ST. PAUL'S CATHEDRAL, A.L. 5677, A.D. 1673,  
was presented to the Old Lodge of St. Paul's,  
now the Lodge of Antiquity,  
acting by Immemorial Constitution.  
BY BROTHER SIR CHRISTOPHER WREN, R.W.D.G.M.,  
Worshipful Master of the Lodge,  
and Architect of that Edifice."

Portland stone had been selected, principally on account of the large scantlings procurable from those quarries, and yet no blocks of more than four feet in diameter could be procured. This led to the choice of two orders of architecture, with an attic story like that of St. Peter's at Rome, that the just proportions of the cornice might be preserved.

In commencing the works, Wren accidentally set out the dimensions of the dome upon a piece of a gravestone inscribed *Resurgam* (I shall rise again); which propitious circumstance is commemorated in a Phoenix rising from the flames, with the motto *Resurgam*, sculptured by Cibber in the pediment over the southern portico. In 1678 Wren set out the piers and pendentives of the dome.

approved, Charles II. issued his warrant for commencing the works May 1, 1675. In digging the foundation, a vast cemetery was discovered, in which Britons, Romans, and Saxons had been successively buried; and on digging deeper, marine shells were found, thus proving that *the sea once flowed over the site of the present cathedral*. Wren did not, however, find any remains to support the tradition of a Roman

During the building, the Commissioners, with Sir Christopher Wren, issued the following very proper order:—

“Whereas, among labourers, &c., that ungodly custom of swearing is too frequently heard, to the dishonour of God and contempt of authority; and to the end, therefore, that such impiety may be utterly banished from these works intended for the service of God and the honour of religion, it is ordered that customary swearing shall be sufficient crime to dismiss any labourer that comes to the call; and the clerk of the works, upon sufficient proof, shall dismiss them accordingly. And if any master, working by task, shall not upon admonition, refrain this profanation among his apprentices, servants, and labourers, it shall be construed his fault, and he shall be liable to be censured by the Commissioners. Dated 26th September, 1695.”

By 1685, the walls of the choir and its side aisles, and the north and south semi-circular porticoes, were finished; the piers of the dome were also brought up to the same height. On Dec. 2, 1697, the choir was opened on the day of Thanksgiving for the peace of Ryswick, when Bishop Burnet preached before King William. On Feb. 1, 1699, the Morning Prayer Chapel, at the north-west angle, was opened; and in 1710 the son of the architect laid the last stone—the highest slab on the top of the lantern.

There is a strange story of a conspiracy against Queen Anne, who was to have been crushed to death in St. Paul's; the screws of some part of the building being loosened beforehand for the purpose, and intended to be removed when she should come to the Cathedral, and thus overwhelm her in the fall.

Notices of this imaginary plot will be found in Boyer's *Annals of Queen Anne*, Nov. 9, 1710, and in Oldmixon's *Hist. of England*, p. 452. The latter states, that “Mr. Secretary St. John had not been long in office before he gave proofs of his fitness for it, by inserting an advertisement in the *Gazette* of some evil-designing persons having unscrewed the timbers of the west roof of the cathedral. Upon this foundation, Mrs. Abigail Masham affirmed that the screws were taken away that the cathedral might tumble upon the heads of the Court on the Thanksgiving-day, when it was supposed her Majesty would have gone thither. But upon inquiry, it appeared that the missing of the iron pins was owing to the neglect of some workmen, who thought the timber sufficiently fastened without them; and the foolishness, as well as malice, of this advertisement made people more merry than angry.”

Thus, the whole edifice was finished in thirty-five years; under one architect, Sir Christopher Wren; one master-mason, Mr. Thomas Strong; and while one Bishop, Dr. Henry Compton, occupied the see. For his services, Wren obtained, with difficulty, 200*l.* per annum! “and for this,” said the Duchess of Marlborough, “he was content to be dragged up in a basket three or four times a week.” The fund raised for the rebuilding amounted, in ten years, to 216,000*l.*; a new duty laid on coals for this purpose produced 5000*l.* a year; and the King contributed 10,000*l.* annually.

*Exterior.*—St. Paul's occupies very nearly the site of the old Cathedral, in the centre and most elevated part of the City; though its highest point, the cross, is 36 feet lower than the Castle Tavern, on Hampstead Heath. The plan of the Cathedral is a Latin cross, and bears a general resemblance to that of St. Peter's. Its length, from the east to the west wall, is 500 feet; north to south, 250 feet; width, 125 feet, except at the western end, where two towers, and chapels beyond, make this, the principal front, facing Ludgate-hill, about 180 feet in width. The chapels are, the Morning Prayer, north; and the Consistory Court, south.

The exterior generally is of two orders, 100 feet in height—the upper Composite,

Ground Plan of St. Paul's Cathedral.—A. Nave. B. Great Dome. C. North Transept. D. South Transept. E. Choir.

and the lower Corinthian; and the surface of the church is Portland stone, rusticated or grooved throughout. At the east end is a semicircular recess, containing the altar. At the west end, a noble flight of steps ascends to a double portico of coupled columns, twelve in the lower, Corinthian; and eight in the upper, Composite; terminated by a pediment, in the tympanum of which (64 feet long and 17 feet high) is the Conversion of St. Paul, sculptured in pretty high relief by Bird; on the apex is a colossal figure of St. Paul, and on the right and left, St. Peter and St. James. Beneath the lower portico are the doors, and above them a sculptured group, in white marble, of St. Paul preaching to the Bereans. This double portico has been much censured: Wren pleaded that he could not obtain stone of sufficient height for the shafts of one grand portico; "but," says Mr. Joseph Gwilt, "it would have been far better to have had the columns in many pieces, and even with vertical joints, than to have placed one portico above another." At the extremities of this front rise, 220 feet, two campanile towers, terminating in open lanterns, "covered with domes formed by curves of contrary flexure, and not very purely composed, though, perhaps, in character with the general façade." (*Gwilt*.) Each dome has a gilt pine-apple at the apex: the south tower contains the clock, and the north is a belfry; and in the west faces are statues of the four Evangelists. At the northern and southern ends of the transepts, the lower order, Corinthian, is continued into porticoes of six fluted columns, standing, in plan, on the segment of a circle, and crowned with a semi-dome. In the upper order are two pediments, the south sculptured with the Phœnix, and the north with the royal arms and regalia; and on each side are five statues of the Apostles. The main building is surmounted with a balustrade, not in Wren's design, the obtusion of which by the Commissioners caused the architect to say: "I never designed a balustrade; ladies think nothing well without an edging."

The Cathedral was scientifically secured from lightning, according to the suggestion of the Royal Society, in 1769. The seven iron scrolls supporting the ball and cross are connected with other rods (used merely as conductors), which unite them with several large bars descending obliquely to the stone-work of the lantern, and connected by an iron ring with four other iron bars to the lead covering of the great cupola, a distance of forty-eight feet; thence the communication is continued by the rain-water pipes to the lead-covered roof, and thence by lead water-pipes which pass into the earth; thus completing the entire communication from the cross to the ground, partly through iron and partly through lead. On the clock-tower a bar of iron connects the pine-apple at the top with the iron staircase, and thence with the lead on the roof of the church. The bell-tower is similarly protected. By these means the metal used in the building is made available as conductors; the metal employed merely for that purpose being exceedingly small in quantity.—(*Times*, Sept. 8, 1842, *abridged*.)

The height to the top of the cross is *thrice* the height of the roof, or 365 feet from the ground, 356 from the floor of the church, and 375 from that of the crypts. In most accounts the height is stated 404 feet, which may be taken from the bottom of the foundations, or the level of the Thames. In height it stands third, exceeding the Pantheon by 70 feet; about equalling St. Sophia, but falling short of the Florence cupola by 50 feet, and of St. Peter's by 150.—Weale's *London*, p. 186.

The following account of the constructive details is from Mr. Joseph Gwilt's *Encyclopædia of Architecture* :—

"The entrances from the transepts lead into vestibules, each communicating with the centre, and its aisles formed between two massive piers and the walls at the intersections of the transepts with the choir and nave. The eight piers are joined by arches springing from one to the other, so as to form an octagon at their springing points; and the angles between the arches, instead of rising vertically, sail over as they rise and form pendentives, which lead, at their top, into a circle on the plan. Above this a wall rises in the form of a truncated cone, which, at the height of 168 feet from the pavement, terminates in a horizontal cornice, from which the interior dome springs. Its diameter is 100 feet, and it is 60 feet in height, in the form of a paraboloid. Its thickness is 18 inches, and it is constructed of brickwork. From the haunches of this dome, 200 feet above the pavement of the church, another cone of brickwork commences, 85 feet high, and 94 feet diameter at the bottom. This cone is pierced with apertures, as well for the purpose of diminishing its weight as for distributing light between it and the outer dome. At the top it is gathered into a dome, in the form of a hyperboloid, pierced near the vertex with an aperture 12 feet in diameter. The top of this cone is 235 feet from the pavement, and carries a lantern 55 feet high, terminating in a dome, whereon a ball and (aveline) cross is raised. The last-named cone is provided with corbels, sufficient in number to receive the hammer-beams of the external dome, which is of oak, and its base 220 feet from the pavement,—its summit being level with the top of the cone. In form it is nearly hemispherical, and generated by radii 57 feet in length, whose centres are in a horizontal diameter, passing through its base. The cone and the interior dome are restrained in their lateral thrust on the supports by four tiers of strong iron chains (weighing 95 cwt. 3 qrs. 23 lbs.), placed in grooves prepared for their reception, and run with lead. The lowest of these is inserted in the masonry round their common base, and the other three at different heights on the exterior of the cone. Externally, the intervals of the columns and pilasters are occupied by windows and niches, with horizontal and semicircular heads, and crowned with pediments.

"Over the intersection of the nave and transepts for the external work, and for a height of 25 feet above the roof of the church, a cylindrical wall rises, whose diameter is 146 feet. Between it and the lower conical wall was a space, but at intervals they are connected by cross walls. This cylinder is quite plain, but perforated by two courses of rectangular apertures. On it stands a peristyle of thirty columns of the Corinthian order, 40 feet high, including bases and capitals, with a plain entablature crowned by a balustrade. In this peristyle, every fourth intercolumniation is filled up solid, with a niche, and connexion is provided between it and the wall of the lower cone. Vertically over the base of that cone, above the peristyle, rises another cylindrical wall, appearing above the balustrade. It is ornamented with pilasters, between which are two tiers of rectangular windows. From this wall the external dome springs. The lantern receives no support from it. It is merely ornamental, differing entirely in that respect from the dome of St. Peter's. Externally the dome is of wood, covered with lead; at its summit is *The Golden Gallery* (with gilt railing), where the lantern commences.

"The interior of the nave and choir are each designed with three arches longitudinally springing from piers, strengthened, as well as decorated, on their inner faces by an entablature, whose cornice reigns throughout the nave and church. Above this entablature, and breaking with it over each pilaster, is a tall attic, from projections on which spring semicircular arches which are formed into *ares doubleaux*. Between the last, pendentives are formed, terminated by horizontal cornices. Small cupolas of less height than their semi-diameter, are formed above these cornices. In the upright plane space on the walls above the main arches of the nave, choir, and transepts, a *clerestory* is obtained over the attic order, whose form is generated by the rising of the pendentives."

Mr. Wightwick, in a paper read to the Institute of British Architects, says:—

"It was by command of the Popish Duke of York, that the north and south chapels, near the western end, were added, to the reduction of the nave aisles, and the lamentable injury of the return fronts of the two towers, which therefore lost in apparent elevation, by becoming commingled with pieces of projecting façade on the north and south sides. Thus were produced the only defects in the longitudinal fronts of the church. The independence of the towers is destroyed; their vertical emphasis obliterated; and a pair of excrescences is the consequence which it were well to cut away. All that could be done to diminish the evil was accomplished; but no informed eye can view the perspective of the Cathedral from the north-west or south-west, without seeing how no architect, who only admitted a 'variety of uniformities,' could have intentionally formed a distinct component in an exterior of otherwise uniform parts, by a tower having only one wing, and that, too, flush with its face! With this exception, the general mass of the cathedral is faultless, *i.e.*, as the result of a conciliation between the architect's feeling for the Roman style, and his compelled obedience to the shape prescribed. With this consideration the grand building under notice must be judged. This it is which excuses the application of the upper order as a mere screen to conceal the clerestory and flying buttresses; for it must be admitted that uninterrupted altitude of the bulk, in the same plane, is absolutely necessary to the substructure of the majestic dome, which is indeed the very crown of England's architectural glory. The four projections which fill out the angles formed by the intersecting lines of the cross, finely buttress up the mountain of masonry above; and the beautiful semicircular porticoes of the transepts still further carry out the sentiment of stability.

"As to the dome in itself, it stands supreme on earth. The simple stylobate of its tambour; its uninterrupted peristyle, charmingly varied by occasionally solid intervening masonry, so artfully masking the buttress-work as to combine at once an appearance of elegant lightness with the visible means of confident security; all these, with each subsequently ascending feature of the composition, leave us to wonder how criticism can have ever spoken in qualified terms of Wren's artistic proficiency.

"The western front must be criticised as illustrating, in great measure, a Gothic idea Romanized. Instead of twin spires (as at Lichfield), we have two pyramidal piles of Italian detail; instead of the high-pointed gable between, we have the classic pediment, as lofty as may be; the coupled columns and pilasters answer to the Gothic buttresses; and a minute richness and number of parts, with picturesque breaks in the entablatures (though against the architect's expressed principles), are introduced in compliance with the general aspect and vertical expression of the Gothic façade."

The ascent to the Whispering Gallery is by 260 steps; to the outer, or highest Golden Gallery, 560 steps: and to the Ball, 616 steps.

*The Library*, in the gallery over the southern aisle, was formed by Bishop Compton, whose portrait it contains. Here are about 7000 volumes, besides some manuscripts belonging to Old St. Paul's. The room has some fine brackets, and pilasters with flowers, exquisitely carved by Gibbons; and the floor consists of 2300 pieces of oak, parquetted, or inlaid without nails or pegs. At the end of this gallery is a *Geometrical Staircase*, of 110 steps, built by Wren, for private access to the Library. In crossing thence to the northern gallery, a fine view is gained of the entire vista of the Cathedral from west to east. You then reach the *Model Room*, where are Wren's first design for St. Paul's, and some of the tattered flags formerly suspended beneath the dome. Returning to the southern gallery, a staircase leads to the south-western campanile tower, where is the *Clock Room*.

*The Clock* is remarkable for the magnitude of its wheels, and fineness of works, and cost 300*l.* It was made by Langley Bradley in 1708: it has two dial-plates, one south, the other west; each is 51 feet in circumference, and the hour-numerals are 2 feet 2½ inches in height. The minute-hands are 9 feet 8 inches long, and weigh 75 lbs. each; and the hour-hands are 5 feet 9 inches long, and weigh 44 lbs. each. The pendulum is 16 feet long, and the bob weighs 180 lbs.; yet it is suspended by a spring no thicker than a shilling: its beat is 2 seconds—a dead beat, 30 to a minute, instead of 60.

The Clock, "going eight days," strikes the hour on the *Great Bell*,\* suspended about 40 feet from the floor: the hammer lies on the outside brim of the bell; it has a large head, weighs 145 lbs., is drawn by a wire at the back part of the clockwork, and falls again by its own weight upon the bell. The clapper weighs 180 lbs. The hour struck by this clock has been heard, in the silence of midnight, on the terrace of Windsor Castle. (See p. 45.) Below the Great Bell are two smaller bells, on which the clock strikes the quarters: the larger of these weighs 24 cwt. 2 qrs. 25 lbs.: the smaller, 12 cwt. 2 qrs. 9 lbs. The northern tower contains the bells tolled for prayers.

The *Whispering Gallery* is reached by returning towards the dome, and again ascending. Here a low whisper, uttered on one side, may be distinctly heard at the opposite side, of the gallery. The phenomenon is thus explained by Dr. Paris:—

"M shows the situation of the mouth of the speaker, and E that of the ear of the hearer. Now since sound radiates in all directions, a part of it will proceed directly from M to E, while other rays of it will proceed from M to u, and from M to z, &c.; but the ray that impinges upon u will be reflected to E, while that which first touches z will be reflected to y and from thence to E; and so of all intermediate rays, which are omitted in the figure to avoid confusion. It is evident therefore, that the sound at E will be much stronger than if it had proceeded immediately from M without the assistance of the dome; for, in that case, the rays at z and u would have proceeded in straight lines, and consequently could never have arrived at the point E."—*Philosophy in Sport made Science in Earnest*, p. 310.

The organ, built by Bernard Schmydt, in 1694, at a cost of 2000*l.*, was originally placed upon the wrought-iron screen which separates the choir from the nave, where it marred the full effect of the imposing architectural merits of the edifice. From Dr. Rimbault's clever book on *The Organ* we learn that Sir Christopher Wren himself was averse from placing it over the screen. There it is stated:—

"In consequence of the reputation which 'Father Smith' had acquired by these instruments, he was made choice of to build an organ for St. Paul's Cathedral, then in the course of erection. A place was accordingly fitted up for him in the Cathedral to do the work in, but it was a long time before he could proceed with it, owing to a contention between Sir Christopher Wren and the Dean and Chapter. Sir Christopher Wren wished the organ to be placed on one side of the choir, as it was in the old Cathedral, that the whole extent and beauty of the building might be had at one view. The Dean, on the contrary, wished to have it at the west-end of the choir; and Sir Christopher, after using every effort and argument to gain his point, was at last obliged to yield. Smith, according to his instructions, began the organ, and when the pipes were finished found that the case was not spacious enough to contain them all; and Sir Christopher, tender of his architectural proportions, would not consent to let the case be enlarged to receive them, declaring the beauty of the building to be already spoilt by the box of whistles."

Steele suggested, in a paper in the *Spectator*, that the organ should be placed over the great west entrance, and be constructed on so majestic a scale as to resound throughout the whole of the Cathedral. It has been removed to the first arch from the altar on the north side of the choir, the position chosen by Wren himself, as shown in a drawing lately discovered, and preserved among the Cathedral records. This instrument, though deservedly regarded as a *chef-d'œuvre* at the time of its completion, was singularly deficient in most of the mechanical appliances for an easy and effective performance now in vogue in organs of comparatively recent date. An enormous organ, built for the Alhambra, Leicester-square, has also been placed in the south transept: it is intended for the use of the Special Evening Services, and the Annual Services under the dome.

The *Monuments* (exceeding forty) have been for the most part voted by Parliament in honour of naval and military officers; there are a few also to authors and artists, and philanthropists. But, in general, while civil eminence has been commemorated in Westminster Abbey, St. Paul's has been made a Pantheon for our heroes. At the entrance of the choir is a colossal statue of John Howard, with an inscription by Samuel Whitbread, this being the first monument erected in the church (1796); at a corresponding point is a colossal statue of Dr. Johnson, the inscription by Dr. Parr: both statues are by Bacon, R.A.: Howard with his keys, is often mistaken for St.

\* The New Great Tom of Lincoln, cast in 1834, is 6 cwt. heavier than the Great Bell of St. Paul's. Its tone is generally considered to be about the same as that of St. Paul's, but sweeter and softer. Mr. E. B. Denison, however, "thinks St. Paul's far the best of the four large bells of England, though it is the smallest of them, being about 5 tons; while York is 12, Lincoln 5½, and Oxford 7½, which last is a remarkably bad bell."—*Treatise on Clock and Watch Making*, 1850.

Peter; and Johnson, with his scroll, for St. Paul. Near Howard is a statue of Hallam, the historian, by Theed. At opposite piers are statues of Sir Joshua Reynolds, by Flaxman, R.A., and Sir William Jones, by Bacon, R.A. Under the great choir arch is a monument to Lord Nelson, by Flaxman; the statue is characteristic, but the figures about the pedestal are absurd. Opposite is a monument to Lord Cornwallis, by Rossi, R.A.: the Indian river gods are most admired. In the south transept are monuments to Sir Ralph Abercrombie and Lord Collingwood, by Sir R. Westmacott, R.A., and to Lord Howe, by Flaxman, R.A.; statue of Lord Heathfield, by Rossi, R.A.; monument to Sir John Moore, by Bacon, R.A.; statue of Sir W. Hoste, by Campbell; and Major-General Gillespie, by Chantrey, R.A. In the north transept, the principal are monuments to Lord Rodney and to Captains Mosse and Riou, by Rossi, R.A.; Capt. Westcott, by Banks, R.A.; Gen. Ponsoby, a graceful composition, by Baily, R.A.; Major-Gen. A. Gore and J. B. Skerrett, by Chantrey, R.A.; statue of Earl St. Vincent, by Baily, R.A.; Gen. Picton, who fell at Waterloo, by Gahaghan; Admiral Duncan, an elegant figure, by Sir R. Westmacott, R.A.; Major-Gen. Dundas, by Bacon, R.A.; and the Hon. Mountstuart Elphinstone, the historian of India, by M. Noble.

In the south aisle of the Nave is a monument to Dr. Middleton, the first Protestant Bishop of India, by Lough; and in the south aisle of the Choir is a kneeling figure of Bishop Heber, by Chantrey, R.A. Here also are two statues—Sir Astley Cooper, by Baily, R.A.; and Dr. Babington, by Belnes. Opposite is a statue of Admiral Lord Lyons, by M. Noble. Two of the finest and most touching works here are Chantrey's battle-piece monuments to Colonel Cadogan, mortally wounded at the battle of Vittoria; and Major-General Bowes, slain at the head of his men at the storming of Salamanca: these are poetic pictures of carnage closing in victory. Near the great northern entrance are statues, by G. G. Adams, of Sir Charles Napier, the hero of Scinde; and Sir William Napier, the historian of the Peninsular War; and in the north aisle of the Nave is the memorial to Viscount Melbourne—two angels, sculptured by Marochetti.

*The Crypt* is now used only as a place of interment. In the south aisle, on the site of the ancient high altar, is the grave of Sir Christopher Wren, covered by a flat stone, the English inscription upon which merely states that he died in 1723, aged 91: suspended on the adjoining wall is a tablet bearing the Latin epitaph:

Subtus conditur hujus ecclesiæ et  
Urbis conditor, Christopher Wren,  
Qui vixit annos ultra nonaginta,  
Non sibi sed bono publico. Lector,  
Si monumentum requiris,  
Circumspice.

Obiit XXV. Feb., Anno MDCCXXIII., ætat. 91.

Beneath lies Christopher Wren, builder of this church and City, who lived upwards of ninety years, not for himself but for the public good. Reader, if thou wouldst search for his monument, look around.

Next Wren's remains are those of his son; and here is a tablet in memory of his granddaughter, aged 95: Sir Christopher was 91, and his son 97. Here are the graves of our great painters. It has been remarked: "if Westminster Abbey has its *Poets' Corner*, so has St. Paul's its *Painters' Corner*. Sir Joshua Reynolds's statue, by Flaxman, is here, and Reynolds himself lies buried here; and Barry, and Opie, and Lawrence are around him; and, above all, the ashes of the great Van Dyck are in the earth under the Cathedral." (*C. R. Leslie, R.A.*) On December 30, 1851, the remains of J. M. W. Turner, our greatest landscape-painter, were laid next the grave of Reynolds; George Dance, the architect, and the last survivor of the original forty of the Royal Academy, also lies here, with Fuseli; and the Presidents, West, and Martin Archer Shee. The grave of Dr. Boyce, next to Purcell, perhaps, the greatest English musician, is also here; with the altar-tombs of Robert Mylne, the architect of the first Blackfriars Bridge; and John Rennie, who designed the present London Bridge.

In the middle of the Crypt, under an altar-tomb, Jan. 9, 1806, were deposited the remains of the great Nelson: they were placed beneath a black marble sarcophagus made by order of Cardinal Wolsey, but left unused in the tomb-house adjoining St. George's Chapel, Windsor. It is surmounted with a viscount's coronet upon a cushion; on the pedestal is inscribed, "Horatio Viscount Nelson." The coffin, made from part of the mainmast of the ship *L'Orient*, which blew up at the battle of the Nile, was

presented to Nelson by his friend Ben Hallowell, captain of the *Swiftsure*. Nelson's flag was to have been placed with the coffin; but just as it was about to be lowered, the sailors who had borne it, moved by one impulse, rent it in pieces, each keeping a fragment. Lord Collingwood, as he requested, was laid near Nelson, beneath a plain altar-tomb; and opposite lies Lord Northesk, distinguished at Trafalgar.

On the day of the funeral of the great Duke of Wellington, Nov. 18, 1852, his coffin was placed on the top of the sarcophagus which covered the remains of Nelson, the coronet and cushion of the Viscount having been previously removed; and here the coffin of the Duke remained nearly two years, inclosed by a wood casing. The Duke's coffin was then (in 1854) removed to the middle of a square chamber about forty feet eastward, almost immediately under the entrance to the choir of the church, in which compartment of the crypt no interment had previously taken place. Meanwhile, the Duke's tomb was prepared from the design of Mr. Penrose, the conservating architect of the Cathedral. The material is porphyry, from Luxalyan in Cornwall, and a huge block, originally weighing seventy tons. This has been sculptured into a grand and simple sarcophagus form. Upon one side is inscribed "Arthur, Duke of Wellington;" and on the opposite side, "Born May, 1769; died Sept. 14, 1852." At each end, and upon the porphyry boss, is an heraldic cross, which, and the inscriptions, are in gold outline. The sarcophagus is placed upon a massive basement of Aberdeen granite, and at each corner is sculptured the head of a guardian lion. Within the sarcophagus is deposited the rich coffin of the Duke, and upon it the coronet and cushion, and over it the porphyry lid, hermetically sealed. The floor of this compartment of the crypt is laid with Minton's tiles; and in each of the four angles is a candelabrum of polished red granite, surmounted by a ball, from which rise the gas-jets to light the place. As you stand at the left-hand corner, looking westward, the sarcophagus of Nelson is seen in the distance, and that of Wellington in the foreground. This view of the tombs of two of England's most illustrious heroes at one glance is impressive.

In another compartment of the Crypt is deposited the State Car upon which the body of Wellington was conveyed to the cathedral at his funeral.

1. The Car and its equipments consisted of the coffin at the summit, uncovered, and upon it the eap, sword, &c.; beneath a canopy of rich tissue, supported by halberds. 2. The bier, covered with a black velvet pall, diapered with the Duke's crest, and Field Marshal's bâton across, fringed with laurel leaves, and the legend "Blessed are the dead which die in the Lord,"—the whole worked in silver. 3. The platform of the car, inscribed with the names of the Duke's victories; and at the four sides military trophies of modern arms, helmets, guns, flags, and drums, real implements, furnished by the Board of Ordnance. The whole is placed on a carriage richly ornamented with bronze figures of Fame, holding palms, panels of Fame, lions' heads, and the Duke's arms. Attached to the Car are model horses three abreast, with velvet housings embroidered with the Duke's arms. The whole was designed by the Department of Practical Art: its merits, were grandeur, solemnity, and reality: coffin, bier, trophies, and metal carriage, were all real. The public are admitted to see the tomb, and the funeral car, for a small fee, to defray the expense of gaslights and attendants.

In June, 1859, the remains of General Sir Thomas Picton were removed from the burial-ground of St. George's Chapel, Bayswater-road, to St. Paul's Cathedral, and there deposited in the Crypt, nearly adjoining the tomb of Wellington.

The north aisle of the Crypt is appropriated to the parishioners of St. Faith, as a place of sepulture, from whom the Dean and Chapter receive a trifling gratuity for each body there interred. Beneath the semicircular apsis are deposited all that remain of the monuments saved from the old cathedral.

The Inner Dome (which Wren intended to have lined with mosaic) is plastered on the under side, and painted by Sir James Thornhill with events in the life of St. Paul: 1, His Conversion; 2, The Punishment of Elymas the Sorcerer; 3, Cure of the Cripple at Lystra; 4, Conversion of the Gaoler; 5, Paul Preaching at Athens; 6, Burning of the Books at Ephesus; 7, Paul before Agrippa; 8, Shipwreck on the Isle of Melita. For these paintings Thornhill received only 40s. per square yard! Putting on one side the vital error in the general arrangement, whereby the endeavour is made by painting to transform the cupola into a drum of upright walls, the pictures, about 40 feet high, are works of merit, and the heads are painted with much force: the figures are each from 14 to 16 feet high. In 1853, the restoration of the plaster-work, and repainting of the pictures, were commenced by Mr. Parris, by aid of shifting scaffolding and platforms and wire-ropes, ingeniously constructed for the purpose; the medium used by Mr. Parris being encaustic, his own "marble medium," and the tone of the

pictures being much heightened. This labour occupied Mr. Parris three years, slung in an aërie at from 160 to 200 feet high. The paintings are best seen from the Whispering Gallery, by the flood of light which flows from the lantern through the opening at the crown of the dome. When looking down into the church from this point, men seem but as children, and the immensity of the structure is altogether best felt. From the Whispering Gallery we ascend to

The *Stone Gallery*, outside the base of the dome, where the gigantic height of the figures (11 feet) on the western pediment, and the outlines of the campanile towers, are very striking. There is a second outer gallery, still below the base of the dome; and thence you ascend to

The *Outer Golden Gallery* (regilt in 1845, at a cost of 68*l.*), at the summit of the dome; the *Inner Golden Gallery* being at the base of the lantern. Through this the ascent is by ladders, to the small dome immediately below the inverted consoles which support

The *Ball and Cross*: ascending through the iron-work in the centre, we look into the dark Ball, which is 6 feet 2 inches in diameter, and will hold eight persons; its weight is 5600 pounds: thence to the Cross is 39 feet; the Cross, which is solid, is 3360 pounds weight. The Ball and Cross have been renewed, and re-gilt within thirty years from that date. In 1862 (Exhibition year), the vergers' receipts for showing the Crypt and Ball, amounted to 1160*l.*

The *View from the Outer Golden Gallery* is very minute: the persons in the streets below "appear like mice;" London seems little else than a dense mass of house-tops, chimneys, and spires; the Thames being conspicuous from its glittering surface, but the bridges appearing as dark lines across at intervals. Here, and at the higher points, in clear weather, the metropolis is seen as in a map, with the country 20 miles round. The north division of London rises gently from the Thames, to Hampstead and Highgate. On the east and west are fertile plains extending at least 20 miles, and watered by the Thames. On the south the view is bounded by the high grounds of Richmond, Wimbledon, Epsom, Norwood, and Blackheath; terminating in the horizon by Leith Hill, Box Hill, and the Reigate and Wrotham hills. Shooter's Hill is conspicuous eastward, and, in a more easterly direction, parts of Epping Forest and other wooded uplands of Essex.

When Mr. Horner, in 1821-2, made his sketches for the Great View of London, painted at the Colosseum, he built for himself an observatory upon the Cross of St. Paul's. He describes the strange scene from this lofty summit at three o'clock in the morning as very impressive; for here he frequently beheld "the Forest of London" without any indication of animated existence. It was interesting to mark the gradual symptoms of returning life, until the rising sun vivified the whole into activity, bustle, and business. In high winds, the creaking and whistling of the scaffolding resembled those of a ship labouring in a storm; and once Mr. Horner's observatory was torn from its fastenings, and turned partly over the edge of the platform.\*

*Churchyard*.—The enclosed ground-plot of the Cathedral is 2 acres 16 perches 70 feet. In the area before the west front, marking the site of St. Gregory's Church, is the statue of Queen Anne, with figures, by Bird, of Britain, France, Ireland, and America, at the corners of the pedestal. Garth wrote some bitter lines upon this group:

"France above with downcast eyes is seen,  
The sad attendant of so good a queen."

Her Majesty's nose was struck off by a lunatic, about a century ago, and was not repaired for many years. The Churchyard is enclosed with a dwarf stone wall, on which is a noble iron balustrade, 5 feet 6 inches high; there are in it seven ornamental gates, which, with the 2500 rails, weigh 200 tons 81 lbs. They were designed by M. Tijou, and cast at Gloucester Furnace, Lamberhurst, in Kent; they cost 6*d.* per pound, and with other charges, amounted to 11,202*l.* Os. 6*d.* The cost of the Church

\* An accident somewhat more perilous befel Mr. Gwyn, when measuring the top of the dome for a section of the Cathedral. While intent on his work his foot slipped, and he slid down the convex surface of the dome until his descent was fortunately obstructed by a small projecting piece of the lead. He thus remained until released from the impending danger by one of his assistants, who providentially discovered his awful situation.—*Mr. Horner's Narrative.*

was 736,752*l.* 2*s.* 3*d.*; in all, 747,954*l.* 2*s.* 9*d.*, equal to 1,222,437*l.* present money. Nine-tenths of this sum were raised by a tax on coals received into the port of London.

The admission-fee originated in "the Stairs-foot Money," fixed by Jennings, the carpenter, in 1707; the proceeds of which were applied to the relief of those men to whom accidents happened during the progress of the works. In 1849, the sum received from visitors to the body of the Cathedral, at 2*d.* each, was 430*l.* 3*s.* 8*d.*, which was divided among the four vergers. This fee is now discontinued.

Nearly opposite the North Door of St. Paul's Churchyard is the Convocation or Chapter House of the Cathedral, where a kind of clerical parliament is summoned with every new Imperial Parliament. The Chapter is composed of a Dean and four Canons, or Prebends, 12 Minor Canons, 6 Lay Vicars, and 12 Choristers. There are 30 Prebendary Stalls, or Honorary Canonries; they are of great antiquity, having been founded by Gregory the Great himself. Two of the brightest wits of their day, the Rev. Sydney Smith (*Peter Plymley*), d. 1845, and the Rev. R. H. Barham (*Thomas Ingoldsby*), d. 1845, were at the same period Canons of St. Paul's. In 1849, the Rev. H. H. Milman (the poet) was appointed Dean, an office hitherto held by the Bishop of Llandaff for the time being. The Lord Mayor's chaplain is the preacher on all State holidays; viz., 30th January, 29th May, 20th June, and 5th November, on the first Sunday in term, and the anniversary of the Great Fire of 1666.

The State processions to St. Paul's have been very imposing. Queen Anne came yearly to return thanks for the brilliant successes of Marlborough, who carried the sword of state before Her Majesty; as did Wellington before the Prince Regent, on the day of Thanksgiving for Peace in 1814. George III. went to St. Paul's, to return public thanks for his recovery from derangement, in 1789; and in 1797, in Thanksgiving for naval victories. The last procession of this kind was on Nov. 29, 1820, when Queen Caroline went to St. Paul's in Thanksgiving for her deliverance from the Bill of Pains and Penalties.

The Cathedral is the scene of other impressive celebrations: as the Anniversary Festival of the Sons of the Clergy, in May, preceded by sacred music by Handel, Boyce, Atwood, and others, aided by the choirs of St. Paul's, Westminster Abbey, and the Chapel Royal. The great annual gathering of the Charity children, about 8000 in number, is held here in June, the amphitheatre of seats being erected under the great dome: the effect of the grouping of the children ranged in their rows of seats, tier above tier, with the banners of their various schools placed in order in the uppermost circle of the amphitheatre, is remarkably striking. The attendance of the Judges and other law officers, and civic authorities, is another impressive service.

"For external elegance," says Mr. Gwilt, "we know no church in Europe which exhibits a cupola comparable with that of St. Paul's; though in its connexion with the church by an order higher than that below it, there is a violation of the laws of the art. While, notwithstanding its inferior dimensions (it would stand within St. Peter's), the external appearance of St. Paul's has been preferred by many to that of St. Peter's, it is admitted by all that the interior of the English cathedral will bear no comparison with that of the Roman. The upward view of the dome of St. Paul's, however, conveys an impression of extraordinary magnificence: though not so elevated as St. Peter's, it is still very lofty: the form of the concave, which approaches considerably nearer to that of a circle—the height being equal to a diameter and a half, while in St. Peter's it is equal to two diameters—has also been considered more beautiful than that of its rival." The crossing of Ludgate Hill by a railway viaduct interferes materially with the view of St. Paul's. Mr. Penrose, the architect, remarks:—"About 180 yards eastward of Temple Bar, the dome of St. Paul's begins to be seen, and, when fully opened out a little further on, presents a combination, unsurpassed in Europe, with the exquisite campanile of St. Martin's and the suggested access to the Cathedral by the winding street. It is true that the viaduct does not thus far hide any part of the Cathedral, but it obtrudes itself on the sight, and destroys the spectator's pleasure in the view almost as effectually. But from about 60 yards before reaching Farringdon-street it actually hides more or less of the western façade, and gives in exchange nothing but its deep sides and cavernous soffit, at least 40 feet wide."

In defence of this obstruction it was objected that already the steeple of St. Martin's church on Ludgate-hill was constantly getting in the way when you wished to see the dome of St. Paul's; which is altogether an error, as the thin proportions of the steeple, in strong contrast, add to the effect of the dome. From the east end of Bride-court, Bridge-street, you get a striking view of the dome; as well as from the Farringdon-road.

Annexed is a recapitulation of the main dimensions of the Cathedral:—

	ft.	in.
Circumference of the Cathedral . . . . .	2292	0
Height of Centre, exclusive of Dome . . . . .	210	0
Height of Nave, Choir, and Transepts . . . . .	100	0
Height from floor of Crypt to top of Cross . . . . .	404	0
Height from Nave pavement to top of Cross . . . . .	335	0
Height of Western Towers . . . . .	220	0
Height of Western Front . . . . .	133	0
Diameter of Interior Dome . . . . .	100	0
Height of Dome . . . . .	69	0
Height of Dome from ground-line . . . . .	215	0
Diameter of opening at top of Dome . . . . .	14	10½
Height of Lantern Gallery . . . . .	274	9
Diameter of opening at top of Upper Dome . . . . .	8	0

The following are the comparative dimensions of St. Paul's and St. Peter's:

	E. to W. within.	West end, in.	Ditto, out.	Tran- sept.	Height to top.	
St. Paul's . . . . .	500	100	138	223	360	English feet.
St. Peter's . . . . .	669	226	395	442	432	„
St. Peter's occupies an acre of . . . . .					227,069	superficial feet.
St. Paul's . . . . .					84,025	„

The Cathedral is now in course of repair and redecoration, the funds being raised by subscription.\* The organ and screen have been removed, and a new eastern transept formed. The great central area of the dome, found by experiment to be the part of the Cathedral best adapted to the voice, has been made available for Special Evening Services, and 3500 persons can there be seated in chairs. The marble pulpit under the dome, was given by his friends, as a memorial of the late Captain Fitzgerald. The church can now be warmed by Gurney stoves, placed in the crypt, whence the heated air ascends through ornamental openings in the floor. The lighting is mainly by the corona of gas which was left round the Whispering Gallery at the time of the funeral of the Duke of Wellington. The Cathedral was first lighted with gas in 1822; Moore, in his *Diary*, says: "May 6,—Went with Lord and Lady Lansdowne, at ten o'clock, to St. Paul's, to see it lighted up with gas, for, I believe, the first time."

The embellishment of the Cathedral, as originally designed by Sir Christopher Wren, will consist in filling eleven windows at the ends of the choir, nave, and transepts, with painted glass of the highest quality, uniform in style, design, and execution; in filling the spandrels of the dome, vaults, and other suitable compartments, and ultimately the dome itself, with paintings in mosaic; and generally in gilding and incrusting with coloured marbles parts of the architecture. The four great arches leading from the dome, and the vaultings of the choir, have been richly gilded. The spandrels of the dome, vaultings, and other compartments are to be filled with paintings in mosaic upon a gold ground, by Salviati; and the series of painted windows has been commenced with two aisle windows, by Clayton and Bell, containing life-size figures of St. Peter and St. Paul. The great west window, containing the Conversion of St. Paul, the gift of Mr. Brown (of the firm of Longman and Co.), is to cost 1000*l*.

WESTMINSTER ABBEY.

THE earliest foundation of Westminster Abbey is enveloped in obscurity, but is attributed by the early chroniclers to the British King Lucius, A.D. 184, or to King Sebert, A.D. 616, its site being then called "Thorney Island;" but it is really a

\* "The Fabric Fund" for keeping the building in repair, produces only 1200*l*. a year: there are more than 8500 square feet, or two acres, of leadwork exposed to the sun, the soot, and the weather, and the bad work of the dome has demanded very extensive repairs; there are also about 450,000 feet, or ten and a half acres, of stonework likewise exposed to the sulphureous vapours and smoke of London; to say nothing of the interior, of which the superficial area (including crypt) is about twelve acres. A considerable portion of the fund (2367*l*) is devoted to insuring the church from fire to the extent of 95,000*l*. its total value may be estimated at 1,500,000*l*., but damage by fire could not be done to a greater extent than, perhaps, 600,000*l*.

peninsula of the purest sand and gravel, which may be seen in the foundations of the Abbey. The Island is named from this circumstance: "Sebert, nephew to Ethelbert, King of Kent and King of the East Saxons, having received baptism from the hands of Mellitus, who, coming over with Austin the Monk, was placed Bishop of London, pulled down a Pagan temple at a place called Thorney, from being overgrown with thorns, about two miles' distance from London, and founded upon the place a church to the honour of St. Peter." (*Dean Buckland.*) This church was not, however, completed until about 361 years after, by King Edgar, when it was named from being the "Minster West of St. Paul's." It was in a decayed and almost expiring condition when King Edward the Confessor, in fulfilment of a vow he had made during his exile from the kingdom, erected a church and abbey in a style hitherto unparalleled in English architecture, at Westminster, and, according to William of Malmesbury, the earliest Norman church in the island. King Edward gave to its treasury rich vestments, a golden crown and sceptre, a dalmatic, embroidered pall, spurs, &c., to be used on the day of the Sovereign's coronation: here our Kings and Queens have been crowned, from Edward the Confessor to Queen Victoria, and here very many of them are buried, some with and others without monuments. The Confessor lived just long enough to see his intention fulfilled. On the Festival of the Holy Innocents, Dec. 28, 1065, the new Abbey was dedicated, and the King, who died eight days afterwards, was buried by his own desire in front of the high altar in the Church of which he had just witnessed the completion. The Abbey as it now exists was for the most part rebuilt by Henry III. (A.D. 1220 to 1269), out of regard to the memory of the Confessor; but it covers the same ground, and there are vestiges of the original building to be seen. The remains of the Confessor were removed from before the high altar to the present shrine in 1269 by Henry III. From the Fabric Rolls we gather that the outlay going on at Westminster for the King's Palace and the Abbey Church was from 20,000*l.* to 40,000*l.* a year; or, in fifteen years, more than half a million of our money value. A great diversity of materials was used. The early portion (Henry III.) was built with the green sand or God-stone, which gave the name to the place in Surrey; a large portion, including the Jerusalem Chamber, was of this stone. Purbeck marble and Caen\* stone were used; and in some of the old cloisters, magnesian limestone, similar to that in the New Houses of Parliament. The enormous and massive fabric stands on a level with the adjacent causeway—not having a basement story, like *St. Paul's*—built upon a fine close sand, secured only by its very broad, wide, and spreading foundations.

From a Norman-French verse of the time of Henry III., there is no doubt that during that king's reign there existed a central tower and two others at the west end. Sir Christopher Wren distinctly stated that the commencement of a central tower existed in his time, and one of Hollar's views shows clear indications of it. As to what kind of central tower over the crossing was originally intended, Mr. Gilbert Scott, R.A., concludes, chiefly from the slightness of the exquisitely graceful piers of the central crossing, that nothing but a light *flèche*, after the French fashion, was ever thought of. Mr. Scott, who has so ably illustrated the architecture of the Abbey, says:—

"Of the original details of the exterior it is nearly impossible to form anything like a correct idea. The whole was greatly decayed at the commencement of the last century, and was re-cased, almost throughout, with Oxfordshire stone, by Sir Christopher Wren and his successors, the details being altered and pared down in a very merciless manner: and the work, thus renewed, has again become greatly decayed. There is, in fact, scarcely a trace of any original detail of the eastern portion of the exterior left." The Bayeux tapestry shows the Abbey-church in outline.

Dugdale, however, says:—

"The Church, as far as rebuilt in the reign of Henry III., may be easily distinguished from the parts erected at a later period. It consists of Edward the Confessor's Chapel, the side aisles and chapels, the choir (to somewhat lower than Sir Isaac Newton's monument), and the transepts. The four pillars of the present choir, which have brass fillets, appear to finish Henry's work: the conclusion of which is also marked by a striped chalky stone, which forms the roof."—Dugdale's *Monasticon*, vol. i. p. 273.

In 1862, it was discovered that in the south cloister wall of the Abbey the whole extent of its lower half consists of masonry of the age of Edward the Confessor. This

\* On the coast of France, in the neighbourhood of Caen, resides an old lady, on whose property are some valuable stone quarries, from whence the English Commissioners proposed to purchase the materials for building our Houses of Parliament. It is a curious fact that, by some old records in her family, she can prove that the blocks of stone used in building our Westminster Abbey were derived from the very same source.—*A Portion of the Journal of T. Raikes, Esq.*

stone of A.D. 1060 is uninjured to this day; though the vaulting above, of the date of 1380, has perished considerably. Both are equally exposed to the air and to external influences. The western towers, of shelly Portland oolite, are sound.

Nicholas Litlington, Abbot in the reign of Edward III., added several abbatial buildings, including the Hall; a great chamber called "the Jerusalem;" the west and south sides of the Great Cloister; and the Granary. Remains of the Jewel House, built by Richard II., exist. The walls, even to the parapets and the original doorways, are perfect; the interior, however, has been altered to fit it for a depository of the records of the House of Lords; the original groined vaults remain in the basement. The walls of this ancient strong house are 6 feet thick; and the masonry, generally, is of a similar character to that of the cloisters and other vaulted substructures built by Abbot Litlington. On the bosses of the vaulting in the parts of the cloisters attributed to this abbot the initials N. L. may be traced—rendering conjecture as certain as it may be.

It has lately been brought to light that the nave of the Abbey was rebuilt in 1413 by Richard Whittington and Richard Harrowden (a monk of the Abbey), to whom Henry V. issued a commission for the purpose. It has been plausibly argued by Mr. Lysons, in his recent memoir of Lord Mayor Whittington, that this personage was the very man named in the Royal Commission. The story goes that, when the King was unable to repay the sums which Whittington had advanced, the creditor magnanimously destroyed the bonds. There is every reason to believe that the old Norman Nave was left standing until that time.

In 1502, Henry VII. pulled down the Chapel of the Virgin, at the east end, and replaced it with the beautiful chapel now called by his name. It was originally built with Caen stone, and was restored within the present century, but with stone now in a state of decomposition.

From the first opening of the edifice until after the reign of Elizabeth, the Abbey was regarded as a safe Sanctuary: hither the Queen of Edward IV. fled with her five daughters and the young Duke of York when the crafty Richard Duke of Gloucester was plotting to seize the crown. "The Queen," says Sir Thomas More, "sate low on the rushes, all desolate and dismayed;" whilst the Thames was full of boats of Gloucester's servants, watching that no man should go to Sanctuary. On the reverse of Edward IV., in 1470, his Queen, Elizabeth Woodville, took shelter in the Sanctuary, where, "in great penury, forsaken of all her friends," she gave birth to Edward V.

The dedication of the Church to St. Peter (the tutelary saint of fishermen) led to their offerings of salmon upon the high altar; the donor on such occasions having the privilege of sitting at the convent-table to dinner, and demanding ale and bread from the cellarer.

Successive kings and abbots continued the building on the plan of Henry III., but so slowly, that the west-end towers in 1714 were unfinished; these Sir Christopher Wren pulled down, and erected the present western towers, in Grecianized Gothic style; he also proposed a central spire, as originally intended, for its beginnings appear on the corners of the cross, "but left off before it rose so high as the ridge of the roof." Of the old west front there is a view by Hollar, in Dugdale's *Monasticon*.

"The Abbey Church," says Mr. Bardwell, "formerly arose a magnificent apex to a royal palace, surrounded by its own greater and lesser sanctuaries and almonries: its bell-towers (the principal one 72 feet 6 inches square, with walls 20 feet thick), chapels, prisons, gatehouses, boundary-walls, and a train of other buildings, of which we can at the present day, scarcely form an idea. In addition to *all the land around it*, extending from the Thames to Oxford-street, and from Vauxhall Bridge road to the Church of St. Mary-le-Strand, the Abbey possessed 97 towns and villages, 17 hamlets, and 216 manors! Its officers fed hundreds of persons daily; and one of its priests (not the Abbot) entertained at his 'pavilion in Tothill' the King and Queen, with so large a party, that seven hundred dishes did not suffice for the first table; the Abbey butler, in the reign of Edward III., rebuilt at his own private expense, the stately gatehouse which gave entrance to Tothill-street, and a portion of the wall which remains to this day."—*Brief Account of Ancient and Modern Westminster*.

At the Dissolution, the Abbey was resigned to Henry VIII. by Abbot Benson; and the King ordered the Church to be governed by a Dean and Prebendaries, making Benson the Dean. In 1541, the Church was turned into an Episcopal See, having Middlesex for its diocese; but was soon again placed under a Dean and Prebendaries.

Mary, in 1556, dissolved this institution, and reappointed an Abbot and monks; but Elizabeth, on her accession, placed it under a dean and 12 secular canons, as a Collegiate Church, besides minor canons, and others of the choir, to the number of 30; 10 other officers, 2 schoolmasters, 40 scholars, and 12 almsmen, with ample maintenance for all; besides stewards, receivers, registrars, library-keepers, and other officers, the principal being the High Steward of Westminster. In the time of Cromwell, most of the revenues were devoted to the public service, but afterwards restored. As the abbots of the monastery had in former times possessed great privileges and honours annexed to the foundation, such as being entrusted with the keeping of the regalia for the coronation, &c., having places of necessary service on days of solemnity, and also exercising archiepiscopal jurisdiction in their liberties, and sitting as spiritual lords in Parliament; so the Deans of the Collegiate Church succeeded to most of them, and still possess considerable privileges. The Chapter still have a jurisdiction, not only within the city and liberty of Westminster, but also the precincts of St. Martin's-le-Grand, first annexed to it by Henry VII.

We give a *précis* of the most ancient remains, by Mr. Scott:—

“As Westminster Abbey is about the earliest work of its kind in this country, and as the building of the first portion of it by Henry III. extended over a space of twenty-four years, *i.e.* from 1245 to 1269, it becomes important to ascertain how early in this period the style of its architecture can be proved to have been defined. Now, a single entry in the documents in question has for ever settled this point. I have before stated that the most advanced part of the work (as to style) is the Chapter-house, as that contained traceried windows of four and five lights in a very developed form; the tracery is not confined to circles, but containing great quatrefoils, and the heads of the lights being trefoiled, which is not the case in the church. Now it would be most useful to know the exact date of these windows, for, though Matthew Paris gives 1250 as the year of commencement of the Chapter-house, it may have spread over an indefinite length of time, and the windows have belonged to twenty years after that date. Let us look then to the bills. Here we find in a roll, bearing date 37th Henry III., or 1253, and expressly called the eighth year from the beginning of the work, an item of ‘300 yards of canvas for the windows of the Chapter-house,’ followed immediately by items for the purchase of glass, showing that the windows in question were completed in 1253, which I see was a year before the King, in company with St. Louis, visited the Sainte Chapelle, at Paris, which was then scarcely completed, and the style of which indicates exactly the same degree of advancement. I find also, that during the same year, the beautiful entrance or vestibule to the Chapter-house was erected.”

A ground-plan, which is made by the gradations of its shading to represent the several ages of each part of the structure, shows us that the Chapel of the Pyx and the whole vaulted undercroft, extending southward under the old dormitory, which is the present Westminster school-room—besides the lower story of the refectory, which forms the south side of the cloister—are remains of Edward the Confessor's work, in the Late Saxon or Early Norman style. The superficial decoration of the inner wall is, as is well known, of the most exquisite kind of Pointed Architecture—that of the reign of Henry III. Late Norman is only found in the remains of St. Catherine's Chapel, supposed to have been the Infirmary Chapel, which are visible to the east of the Little Cloister. The Choir, Chevet, and Transepts of the Abbey-church, and the Chapter-house with its vestibule, belong to the great rebuilding undertaken by Henry III. The eastern half of the Nave, with the corresponding part of the Cloister, was built in the First Pointed manner of Edward I. Later in the same style is the south-eastern angle of the Cloisters. All the west end of the Nave, with the remainder of the Cloisters, and the Abbot's house (now the Deanery), including the famous Jerusalem Chamber, were built in the Earlier Third Pointed; while the eastern Chapel of Henry VII., replacing the Lady Chapel of Henry III., was added in the Tudor times of the expiring Gothic.

The church is remarkable as marking, first, the introduction of the French arrangement of chapels which, however, failed to take root here; and, secondly, the completed type of bar tracery, which was no sooner grafted on an English stock than it began to shoot forth in most vigorous and luxuriant growth.

The *Exterior* of the Abbey is best viewed from a distance: the western front from Tothill-street; the picturesque North Transept from King-street; and the south side from College-street. St. Margaret's Church, so often condemned as a disfigurement in viewing the Abbey, renders its height much greater by contrast. “Distant peeps of the Abbey towers, springing lightly above the trees, may be caught on the rising ground of the Green-park, and from the bridge over the Serpentine; and the superior elevation of the whole Abbey is seen with great effect from the hills about Wandsworth

and Wimbledon.”—(*Handbook*, by H. Cole.) The importance of the western towers is, however, lessened by the loftier tower of the New Houses of Parliament.

The *North Transept*, though its niches are statueless, is remarkable for its pinnacled buttresses, its triple porch and clustered columns, and its great rose-window, 90 feet in circumference—so as to have been called, for its beauty, “Solomon’s porch.” From the west side of this Transept, judicious restorations are in progress. At the arched doorway leading into the North Aisle terminates the portion of the Abbey completed by Edward I.

The *Western Front* bears the date of 1735: the height of the towers (225 feet) tells nobly; they were used as a telegraph station during the last French war. The great west window was the work of Abbot Estney, in 1498. The base of the south tower is hidden by the gable of the Jerusalem Chamber, now used as the Chapter-house. Parallel with the Jerusalem Chamber are the College Dining Hall and Kitchen, built by Abbot Litlington. The Westminster scholars dined in the hall until the year 1839; in the centre fagots blazed on a circular stone hearth, the smoke finding egress through the lantern in the roof.

The *South Side* is approached from Dean’s Yard, on the east side of which an old doorway leads into a court where is Inigo Jones’s rustic entrance to the school-room of the College, refounded, in 1560, by Queen Elizabeth. To the left are the old grey *Cloisters*, with groined arches of the fourteenth century, surrounding a grassy area—monastic solitude in contrast with the scene on the opposite side of the Church. The Rembrandtish lights in these cloisters are very fine; and here the South Aisle of the Church, with its huge buttresses, is best seen. The North Cloister is distinguished by its trefoiled arches, with circles above them, of the twelfth century. The East Cloister (*temp.* Edward III.) is rich in flowing tracery and foliations. Here is the entrance to a chapel of the Confessor’s time, and now “the Chamber of the Pyx,” wherein are kept the standards used at the trial of the Pyx, the three keys of its double doors being deposited with distinct officers of the Exchequer. The groined roofs are supported by Romanesque or semicircular arches, and thick, short, round shafts.

Eastward is the magnificent entrance to the *Chapter-house*, which is to be repaired under the direction of Mr. Scott. Its beauty is evident, notwithstanding its neglected condition. In the course of the works, the architect has discovered the ancient entrance to the dormitory, which he re-opened, and restored as the entrance to the library. This has enabled him to get rid of the modern entrance to the library, which was cut through the groining of this passage, leading to the vestibule of the Chapter-house.

*The Interior*.—The best entrance to the Abbey is through the little door into the South Transept, or Poets’ Corner; whence the endless perspective lines lead into mysterious gloom.

From Poets’ Corner we see, almost without changing the point of sight, the two Transepts, and part of the Nave and Choir. The interior consists, as it were, of two grand stories, or series of groined arches of unequal height: a lower story, which comprises the outer aisles of the Transepts, of the Nave, and the ambulatory of the Choir; and a higher story, forming the middle aisles of the Nave, Transepts, and the Choir. The lower story mostly exhibits the remains of a series of three-headed arches or trefoil-headed arcades, resting on a basement seat: and above these arcades are pointed windows, each divided in the centre by a single mullion, surmounted by a circle. Among the marked features of the whole of the upper and inner story are the mural decorations of the spandrels of the arches; above them, the gallery or triforium; and over this a clerestory of lofty windows.—(See *Handbook*, by H. Cole, pp. 45, 46.)

The Interior, viewed from the western entrance, shows the surpassing beauty of the long-drawn aisles, with their noble columns, harmonious arches, and fretted vaults, “a dim religious light” streaming through the lancet windows.

The general plan of the Church is cruciform: besides the Nave, Choir, and Transepts, it contains 12 chapels, the principal of which are those dedicated to St. Edward of England, to the Blessed Virgin (Henry VII.’s), the easternmost building, and those in the northern and southern sides of the building: four on the south, viz., those of St. Blaise, St. Benedict, St. Edmund, and St. Nicholas; on the north those of St. Andrew, St. Michael, St. John the Evangelist, St. Erasmus, St. John the Baptist, and St. Paul. Of these, 10 are nearly filled with monumental tombs; the Chapel

of Henry VII. containing but the monument of its founder; and that of St. Paul having but one tomb.

The *South Transept* is less decorated than its fellow on the north; and the lower part is concealed by the Library and Chapter-house. Here, in what is appropriately termed *Poets' Corner*, are the graves or monuments of the majority of our greatest poets, from Chaucer to Campbell. To the right of the entrance-door is the tomb of "the Father of English Poetry" (d. 1400): it is a dingy and greasy recess, on which may be traced with the finger Galfridus Chaucer, the only part of the inscription which was originally chiselled; the other lines have disappeared. This memorial was partly placed here in 1556, by Nicholas Brigham, a student at Oxford, and a poet, too: the altar-tomb originally covered Chaucer's remains, removed from here by Brigham, who placed over it the canopy: it is altogether in decay, but in 1850 was proposed to be restored. Nearer the door is the large monument erected by Sheffield, Duke of Buckingham, to Dryden, whose name it simply bears, with a noble bust of him by Scheemakers. Pope wrote for the pedestal this couplet:—

"This Sheffield raised: the sacred dust below  
Was Dryden once: the rest, who does not know?"

Next is a wreathed urn, by Bushnell, erected by George Duke of Buckingham over Abraham Cowley, as the Latin inscription declares, the Pindar, Horace, and Virgil of England: this full-blown flattery, by Dean Sprat, greatly provoked Dr. Johnson. From Chaucer's tomb, eastward, the monuments are placed as follows:—To John Philips, who wrote *The Splendid Shilling*, *Cider*, and other poems: profile in relief, within a wreath of apple and laurel leaves. Barton Booth, the eminent actor, the original *Cato* in Addison's play: a bust, erected by Booth's widow. Michael Drayton, who wrote the *Polyolbion*: a bust on pediment, with a beautiful epitaph, attributed to Dryden; erected at the expense of Clifford, Countess of Dorset, who also put up a monument to Edmund Spenser, author of the *Faerie Queene*: tablet and pediment, renewed in marble in 1778. Spenser was the second poet interred in the Abbey; he "died for lake of bread," in King-street, Westminster, and was buried here by Devereux, Earl of Essex. Ben Jonson: medallion on the wall, by Rysbrack, after Gibbs; "O rare Ben Jonson!" inscribed beneath the head. Samuel Butler, author of *Hudibras*: bust, placed here by Alderman Barber, the patriotic printer (see ALDERMAN, p. 5). John Milton, buried in St. Giles's Church, Cripplegate: bust and tablet, erected by Mr. Auditor Benson, who, "in the inscription, has bestowed more words upon himself than upon Milton." Thomas Gray, buried at Stoke Poges: a figure of the Lyric Muse holding a medallion of the poet, by Bacon, R.A., with inscription by William Mason, Gray's biographer, who lies next: profile medallion, with inscription by Bishop Hurd. Matthew Prior: bust by Coysevox, presented to Prior from Louis XIV.; and statues of Thalia and Clio, by Rysbrack. St. Evremond, the French Epicurean wit: bust and tablet; and below it, profile medallion, by Chantrey, R.A., of Granville Sharp, Negro Slavery Abolitionist, erected by the African Institution of London. Thomas Shadwell, poet-laureate early in the reign of William III., buried at Chelsea: but crowned with bays, above Prior's monument. Christopher Anstey, author of the *New Bath Guide*: tablet on the next column; and at the back of St. Evremond's monument, a tablet to Mrs. Pritchard, the eminent tragic actress. William Shakspeare: the subscription monument; a statue by Scheemakers, after Kent, with absurd and pedantic accessories: the lines on the scroll are from the play of the *Tempest*. James Thomson, buried in Richmond (Surrey) Church: statue, paid for by a subscription edition of his *Seasons*, &c., in 1762. Nicholas Rowe, dramatist and poet-laureate (George I.), and his daughter Charlotte: busts by Rysbrack; inscription by Pope. John Gay, who wrote the *Beggars' Opera*: winged boy and medallion portrait, erected by the Duke and Duchess of Queensbury: the scoffing couplet, "Life's a jest," is Gay's own unworthy composition; the lines beneath it are by Pope. Oliver Goldsmith, poet, dramatist, and essayist: medallion by Nollekens, R.A., over doorway to the Chapel of St. Blaise; the place chosen by Sir Joshua Reynolds; the Latin inscription written by Dr. Johnson. John Duke of Argyll: statues of the warrior and orator as a Roman, with History, Eloquence, Britannia, &c., by Roubilliac: Canova said of the figure of Eloquence: "This is one of the noblest

statues I have seen in England." George Frederick Handel, the great musician: statue, beneath a winged harper and stupendous organ; the last work of Roubiliac, who took the mould from Handel's face after death. Above the niche is a record of the "Commemoration," in 1784; the gravestone is beneath. Joseph Addison, buried in Henry VII.'s Chapel: a poor statue on pedestal, by Westmacott, R.A. Addison's visits here are ever to be remembered: "When I am in a serious humour," writes he, "I very often walk by myself in Westminster Abbey, where the gloominess of the place, and the use to which it is applied, with the solemnity of the building, and the condition of the people who lie in it, are apt to fill the mind with a kind of melancholy, or rather thoughtfulness, that is not disagreeable." Isaac Barrow, "the unfair preacher," *temp.* Charles II.: bust and tablet. Sir Richard Coxe, Taster (of food) to Queen Elizabeth and James I.: marble tablet. Isaac Casanbon, the learned editor of *Persius* and *Polybius*: marble monument. Camden, the great English antiquary, and a Master of Westminster School: half-length figure; buried before St. Nicholas's Chapel. David Garrick, the eminent actor: statue, with medallion of Shakspeare; a coxcombical piece of art.

The most remarkable gravestones in the *South Transept* are those of Richard Cumberland, Richard Brinsley Sheridan, Samuel Johnson, and David Garrick and his wife; "Thomas Parr, of ye county of Sallop, born in A.D. 1483. He lived in the reigns of ten princes, viz., King Edward IV., King Edward V., King Richard III., King Henry VII., King Henry VIII., King Edward VI., Queen Mary, Queen Elizabeth, King James, and King Charles; aged 152 years, and was buried here Nov. 15, 1635;" Sir William Chambers, architect of Somerset House; R. Adam, architect of the Adelphi; John Henderson, the actor; James Macpherson, Esq., M.P. (*Ossian* Macpherson); William Gifford, critic; Davenant (inscribed, "O rare Sir William Davenant!"), in the grave of Thomas May, the poet, whose body was disinterred, and his monument destroyed, at the Restoration; Francis Beaumont, "Fletcher's associate;" and Sir John Denham, K.B., author of *Cooper's Hill*.

Near Shakspeare's monument is a bust, by Weekes, of Robert Southey, poet-laureate (buried in Crowthwaite Church, Keswick); and next is the gravestone over Thomas Campbell, author of the *Pleasures of Hope*, with an exquisite statue of the poet, by W. C. Marshall. Here also is a sitting statue of Wordsworth, by Theed.

Large fees are paid to the Dean and Chapter for the admission of monuments: from 200*l.* to 300*l.* for a statue, and from 150*l.* to 200*l.* for a bas-relief; for Lord Holland's monument, 20 feet square, 300*l.* The statue of Lord Byron, by Thorwaldsen, was refused admission; and after lying twelve years in the London Dock cellars, in 1845 it was placed in the Library of Trinity College, Cambridge.

"The power of granting or refusing permission to erect monuments in the Abbey rests exclusively with the Dean, except when the House of Commons, by a vote and grant of public money, takes the matter out of his hands. The Dean invariably refuses to allow the erection of statues, as encroaching on space which ought to belong to worshippers, and is already unduly encumbered with stone and marble."

Over the grave of Lord Macaulay is placed a tablet, with the following simple inscription: "Thomas Babington, Lord Macanlay, born at Rothley Temple, Leicestershire, October 25, 1800. Died at Holly Lodge, Campden-hill, December 28, 1859. 'His body is buried in peace, but his name liveth for evermore.'"

On the end of the gallery, westward, are the remains of a supposed fresco, a White Hart, "couchant, gorged with a gold chain and coronet," the device of Richard II.

The *Chapel of St. Blaise*, or the Old Revestry, which occupies the space between the South Transept and the Vestibule, leading from the Cloisters to the Chapter-house, is known to few visitors: its beautiful bit of sexpartite groining, and its mural paintings, are very curious.

The Chapel of St. Blaise occupies the place of what is known at St. Alban's and elsewhere as the "slype." At the east end of the chapel are the remains of an elaborate painting of a figure holding a gridiron, supposed, therefore, to represent St. Faith; beneath which is the Crucifixion: there is also a monk at his devotions; and the remainder of the pointed arch is filled with red and other coloured zigzag ornaments, inscriptions, and devices; and although the original altar has been removed, the low elevation, with a peculiar circle in front, may still be traced. Immediately above the Blaise Chapel is some Norman masonry,—a piece of the exterior of the former Abbey.

From Poets' Corner (Goldsmith first mentions the felicitous name), in passing to the first Chapel may be seen, preserved under glass, the remains of an altar-painting, including a figure, probably intended for Christ; an angel with a palm-branch on each side, and a figure of St. Peter; considered by the late Sir C. L. Eastlake, P.R.A., to be "worthy of a good Italian artist of the fourteenth century," yet executed in England: of the costly enrichments there remain coloured glass, inlaid on tinfoil, and a few cameos and gems. The following is the order of the Chapels, only the most remarkable of their monumental *Curiosities* being noticed. The Chapels, both on the north and south sides are nearly alike, and architecturally in character with Henry III.'s structure: they are lighted by lofty windows, with arches enclosing circles, above which are windows within triangles, also enclosing circles.

Ground Plan of Westminster Abbey.—A. Jerusalem Chamber. B. College Dining Hall. C. Kitchen. D. Larder. E. Ancient remains. F. Confessor's building (Pix). G. Dark Cloisters. H. Hall of Refectory. 1. High Altar. 2. Henry V.'s Chapel. 3. Porch to Henry VII.'s Chapel. 4. Henry VII.'s Tomb.

1. *St. Benedict's Chapel*.—The oldest tomb here is that of Langham, Archbishop of Canterbury (d. 1376); his effigies robed and mitred.

2. *St. Edmund's Chapel*: Tomb of William de Valence, Earl of Pembroke, and half-brother to Henry III. (d. 1296), the effigies encased in metal—the earliest existing instance in this country of the use of enamelled metal for monumental purposes; tomb of John of Eltham, son of Edward II., but without its beautiful canopy covering the whole with delicate wrought spires and mason's work, everywhere intermixed and adorned with little images and angels, according to the fashion of those times, supported by eight pillars of white stone, of the same curiously wrought work (d. 1334); alabaster figures of William of Windsor and Blanch de la Tour, children of Edward III.

the boy in a short doublet, the girl in a horned headdress; portrait brasses, in the area, of Eleanor de Bohun, Duchess of Gloucester, as a nun of Barking Abbey (d. 1399), and Robert de Waldeby, Archbishop of York (d. 1397)—both the most perfect in the Church; alabaster figure of Lady Elizabeth Russell, long absurdly said by the guides to have died from the prick of a needle; wall monuments to Lady Jane Seymour (d. 1560) and Lady Jane Grey (d. 1553); black marble gravestone of Lord Herbert of Cherbury (d. 1678); and Sir Bernard Brocas (d. 1470), altar statue and decorated canopy. This Chapel contains altogether about twenty monuments, including one of the finest brasses in the Abbey. There are also some interesting specimens of enamelling on the well-known fine monument to Edward III., with metal statuettes on the side opposite the entrance to this chapel. These enamels are of later date (Edward III. died in 1377) and are probably of English make.

3. *St. Nicholas's Chapel*: Perpendicular stone screen, with quatre-foiled arches highly decorated, and embattled frieze of shields and roses, once coloured; entrance, over the grave of Sir Henry Spelman, the antiquary; rich in Elizabethan tombs, bright with gold and colour, alabaster, touchstone, porphyry, and variegated marbles, Gothic canopies, Corinthian pillars, kneeling and recumbent figures, &c.: marble tomb of the wife of the Protector Somerset; portrait brass of Sir Humphrey Stanley, knighted by Henry VII. on Bosworth Field; gorgeous monument of the great Lord Burghley to his wife Mildred and their daughter Anne; costly altar-tomb of Sir George Villiers, erected for his wife, by N. Stone, cost 560*l.*, the year before her death; monument of Bishop Dudley, his original brass effigies gone, and the figure of Lady Catherine St. John in its place! Here rests Katherine of Valois, Queen of Henry V., removed on the pulling down of the old Chapel of the Virgin; her body was for nearly three centuries shown to visitors, not being re-interred until 1776. Next is the vault of the Percys, with a large marble monument, designed by Adam; here the Dukes of Northumberland have been interred with great state; their funeral processions reaching from Northumberland House to the Abbey western door.

In the Ambulatory, opposite St. Nicholas's Chapel, are the eastern side of the tomb of Edward III., and the chantry of Henry V., where Mr. Scott discovered tabernacle-work and statuettes within the masonry, and niches filled with blue glass. The entire work contained, when perfect, more than seventy statues and statuettes, besides several brass figures on the surrounding railing. Looking thence, in a few square feet, we have specimens of Gothic architecture, in several of its stages, as it flourished from the time of Henry III. to Henry VII. Through a dark vestibule you ascend to

4. *Henry VII.'s Chapel*, consisting of a Nave and two aisles, with five chapels at the east end. The entrance-gates are of oak, cased with brass-gilt, and richly dight with the portcullis, the crown, and twined roses. The vaulted porch is enriched with radiated quatrefoils and other figures, roses, fleurs-de-lis, &c.; Henry's supporters, the lion, the dragon, and the greyhound; his arms and his badges; a rose frieze and embattlement. The fan-traceried pendentive stone roof of the Chapel is encrusted with roses, knots of flowers, bosses, pendants, and armorial cognizances; the walls are covered with sunk panels, with feathered mouldings; and in a profusion of niches are statues, and angels with escutcheons; and the royal heraldic devices, the Tudor rose and the fleur-de-lis under crowns. The edifice is lighted by eight clerestory windows.

In the Nave are the dark oaken canopied stalls of the Knights of the Bath, who were installed in this Chapel until 1812: these stalls are studded with portcullises, falcons on fetterlocks, fruit and flowers, dragons and angels; and above each still hangs the banner of its knight. In the centre of the apsis, or east end, within rich and massive gates of brass, is the royal founder's tomb: a pedestal, with the effigies (supposed likenesses) of Henry and his Queen Elizabeth, originally crowned; the whole adorned with pilasters, relieves, rose-branches, and images, on graven tabernacles, of the Kings and patron Saints, all copper-gilt; at the angles are seated angels. This costly tomb is the six years' work of Pietro Torrigiano, a Florentine, who received for it the large sum of 1500*l.*: the Perpendicular brazen screen, resembling a Gothic palace, is fine English art: it formerly had thirty-six statues, of which but six remain. The only remnant of old glass in the Chapel is a figure called Henry VII. in the east window.

From Henry VII. to George II., most of the English sovereigns have been interred

here. Edward VI. was buried near the high altar, but is without tomb or inscription. In the *North Aisle*, in the same tomb, lie the Queens Mary and Elizabeth, with a large monument to Elizabeth, by Maximilian Coulte, erected by James I.

"The bigot Mary rests in the Abbey Church of Westminster, but no storied monument, no costly tomb, has been raised to her memory. She was interred with all the solemn funeral rites used by the Church, and a mass of requiem, on the north side of the chapel of Henry VII. During the reign of her successor not the slightest mark of respect was shown to her memory by the erection of a monument; and even at the present day no other memorial remains to point out where she lies, except two small black tablets at the base of the sumptuous tomb erected by order of King James I. over the ashes of Elizabeth and her less fortunate sister. On them we read as follows :

REGNO CONSORTES  
ET VRNA HIC OBDOR-  
MIMUS ELIZABETHA

ET MARIA SORORES  
IN SPE RESVRREC-  
TIONIS.

*Sir F. Madden; Privy-Purse Expenses of the Princess Mary, &c.*

Near Queen Elizabeth's monument is an alabaster cradle and effigy of the infant daughter of James I.; which King, with his Queen Anne, and son Prince Henry, the Queen of Bohemia, and Arabella Stuart, lie beneath. Next is a white marble sarcophagus, containing the supposed remains of Edward V. and his brother Richard, murdered in the Tower by order of their uncle, King Richard III. Near it is a recumbent figure, by Sir R. Westmacott, R.A., of the Duke of Montpensier, brother of Louis Philippe, King of the French. Next is the grave of Addison, whose elegant and impressive essay on the Abbey Church and its monuments is inseparable from its history; and close by is the great pyramidal monument of Addison's friend and patron, the Earl of Halifax. The headless corpse of Charles I. was buried at Windsor. The Protector was buried in Henry VII.'s Chapel, but in about two years his remains were removed. In the *South Aisle* was interred Charles II., "without any manner of pomp, and soon forgotten" (*Evelyn*). James II. has no place here; the vacant space next his brother's remains being occupied by William III. and his Queen. Anne and Prince George complete the royal occupants of the vault. In the centre of the Chapel, in another vault, are the remains of King George II. and Queen Caroline, as it were in one receptacle, a side from each coffin having been removed by the King's direction. In the same vault rests Frederick Prince of Wales, father of George III., beside the Duke of Cumberland, the hero of Culloden. In the *South Aisle* is the altar-tomb of Margaret Countess of Richmond, mother of Henry VII., with a brass effigy by Torrigiano; a very fine altar-tomb, with effigy, of Lord Darnley's mother, who "had to her great-grandfather King Edward IV., to her grandfather King Henry VII., to her uncle King Henry VIII., to her cousin-german King Edward VI., to her brother King James V. of Scotland, to her son (Darnley, husband of Mary Queen of Scots), King Henry I. (of Scotland), and to her grandchild King James VI. (of Scotland)," and I. of England. Here also is the tomb, with effigy, of Mary Queen of Scots, erected by Cornelius Cure for James I., who removed his mother's remains thither from Peterborough Cathedral. In the same aisle lies Monk, Duke of Albemarle, whose funeral Charles II. personally attended: the statue monument is by Kent. Here likewise are interred George Villiers, Duke of Buckingham (assassinated 1628), and his son, the profligate Duke.

Henry VII. did not live to see this Chapel finished; but his will, dated A.D. 1509, contains orders and directions for its completion. In several parts of the walls is repeated a rebus, formed by an *eye* and a *slip* or branch of a tree, indicating the name of the founder, Islip. The Chapel had, at the beginning of the present century, been built only about 300 years; within a period of thirty-three years no less a sum than nearly 70,000*l.* was spent in repairs, chiefly of the exterior.\* In 1793, James Wyatt stated that the repairs, necessary and ornamental, would amount to 25,200*l.* The restoration was commenced in 1810; contrary to Wyatt's estimate, it occupied thirteen years instead of three, and cost over 42,000*l.*

The choristers had a right to levy a fine on any person who entered this Chapel with spurs:

\* Henry the Seventh's Chapel is built of stone from the quarries between the town of Reigate and the chalk hills to the north.—Webster; *Geolog. Trans.*

Bishop Finch had to pay eighteenpence for offending; and even the Royal Duke of Cumberland, excusing himself with this reply, "It is only fair I should wear my spurs where they were first buckled on," complied with the custom. It was made the Chapel of the Knights of the Bath, May 18, 1725; the last installation occurred in 1811. On May 9, 1803, according to old custom, the King's cook met the Knights at Poets' Corner with a chopping-knife, and addressed them with these words: "If you break your oath, by virtue of my office I will hack your spurs from off your heels."

5. *St. Paul's Chapel* is crowded with Cinque-cento tombs, rich in marble, gilding, and colour: the tombs of Sir Thomas Bromley, Queen Elizabeth's Chancellor, hung with banners; of Lord Bouchier, standard-bearer to Henry V. at Agincourt; and of Sir Giles Daubney, are among the best specimens of the period. In frigid and colossal contrast with their beauty, and hiding the Raffaelesque sculptures of Henry the Fifth's chantry, is the sitting statue of James Watt, the engineer, by Chantrey, R.A., strangely out of place in a mediæval Church: the inscription, which contains not a word of flattery, is by Lord Brougham. Next westward you ascend a small staircase, leading to

6. *Edward the Confessor's Chapel*, in the rear of the high altar of the Abbey. A square of red tiles marks the site of St. Edward's altar, which was standing at the coronation of Charles II., and used as the depository of the regalia. In the centre is the Shrine of the Confessor, erected at the expense of Henry III., and enriched with mosaic, priceless jewels, and images of gold and silver; and bearing a Latin inscription, now almost effaced. Northward is the altar-tomb of Edward I. (d. 1307), of Purbeck marble, "scantly fynysshed:" it was opened in 1774, when the King's body was nearly entire. Next is the canopied altar-tomb of Henry III. (1272), once richly dight with glittering marbles and mosaic work of gold, and still bearing a fine brass effigies of the King. At the east end is the altar-tomb and effigies of Eleanor, Queen of Edward I.; its beautiful iron-work, wrought by a smith at Leighton Buzzard in 1293-4, was restored in 1849. To Fabyan's time, two wax tapers had been kept burning upon Eleanor's tomb, day and night, from her burial. The statue of the Queen Eleanor is of English workmanship, by William Torel, a goldsmith, and citizen of London. There has been an attempt to prove that he was a member of the Italian family of Torelli; but the name of Torel occurs in documents from the time of the Confessor down to the said William. When the beauty of the statue of the Queen is examined it will be understood how acceptable is this discovery: "her image most curiously done in brass, gilt with gold; her hair dishevelled, and falling very handsomely about her shoulders; on her head a crown, under a fine canopy, supported by two cherubim, all of brass gilt." The stone-work of the Queen's tomb was constructed by Master Richard de Crundale, mason, who began the Charing Cross. Above the effigy was originally a canopy of wood, made by Thomas de Hockington, carpenter. This canopy was painted by Master Walter de Durham, who also executed the paintings on the side of the tomb.

Richard II. and his Queen, Anne of Bohemia, are commemorated by a tomb of Petworth marble, inlaid with latten; the fabric cost 250*l.*, the images 400*l.*, and the building of the effigies of copper and latten gilt, linked hand in hand, 400 marks. Henry V., who removed Richard's remains from Langley, established a Chantry of "sad and solemn priests," for his soul's repose.

The altar-tomb and chantry of Henry V. occupy the east end of the chapel; the head of the King, of solid silver, was stolen from the tomb at the Reformation. "In Harry the Fifth's time," says Sir Philip Sidney, "the Lord Dudley was his lord-steward, and did that pitiful office in bringing home, as the chief mourner, his victorious master's dead body, as who goes but to Westminster in the church may see."

At the King's burial, three chargers, with their riders excellently armed, were led according to custom, up to the high altar. The iron gates were wrought in the reign of King Henry VI. The screen, flanked with two octagonal towers, is a mass of images of saints, sculptures of his coronation, and heraldic badges. A mutilated effigy of oak lies upon the tomb; above him are the remains of the armour which he offered here in thanksgiving, the saddle-tree stripped of its blue velvet housings powdered with fleur-de-llys; the small shield, its green damask semée with lilies of France; and that renowned sore broken helmet, its crest deeply dented with the stroke of D'Alençon's battle-axe that stunned him at Agincourt, when it clove away half of his golden crown. The canopies and niches, filled with statues of kings, bishops, abbots, and saints, are very fine.

The archway had formerly ornamented iron gates, made by a London smith, in 1431, but now among the Abbey stores. Next, by

7. *St. Erasmus's Chapel*, you enter

8. *St. John the Baptist's Chapel*, with a groined roof, coloured end wall, and sculptured arcades. Here are buried several early Abbots of Westminster. An altar-tomb, of freestone, bears the effigy of William de Colchester, wearing gold bracelets bordered with pearls and set with stones, and a gold mitre covered with large pearls, and crosses and stars of precious gems,—a rare piece of monumental costume. Here is a large Cinque-cento monument to Cary, Lord Hunsdon, first cousin and Chamberlain to Queen Elizabeth; in the centre of the area is the altar-tomb of Thomas Cecil, Earl of Exeter, and his two wives, the second of whom refused to allow her statue to be laid in the left side space, still vacant. The alabaster monument to Colonel Edward Popham, “one of the Parliament Generals at sea,” was the only one spared at the Restoration. Nearly all the old tombs have lost their canopies. The view from here is very picturesque and varied; and in leaving the Chapel, the eye ranges across the north transept, and down the north aisles of the choir and nave, through a high over-arching vista of “dim religious light,” brightened by a gemmy lancet window.

9. *Abbot Islip's Chapel* is elegantly sculptured, and contains his altar-tomb, with an effigy of the Abbot in his winding-sheet. In this chapel was the Wax-work Exhibition, which originated in the olden custom of waxen figures of great persons being formerly borne in their funeral processions, then for a time deposited over their graves, and subsequently removed. Other figures were added; the *sight* was called by the vulgar, “The Play of the Dead Volks,” and was not discontinued until 1839. Next the Chapel is the monument to General Wolfe, by Wilton, R.A., with a lead-bronzed bas-relief of the landing at Quebec, executed by Cappizoldi. We now enter the East Aisle of the North Transept, formerly divided by enriched screens into the Chapels of St. John, St. Michael, and St. Andrew. Here is the celebrated tomb of Sir Francis Vere (*temp.* Elizabeth), his effigy recumbent beneath a canopy on which are his helmet, breastplate, &c., supported by four kneeling knights at the four corners; the design is said to have been borrowed from a tomb at Breda, attributed to Michael Angelo. Roubiliac was found one day with his looks fixed on one of the knights' figures; “Hush! hush!” said he to the Abbey mason, laying his hand on his arm as he approached, and pointing to the figure, “he will speak presently.” Near this tomb is Roubiliac's famous monument to Mr. and Mrs. Nightingale, where Death, as a skeleton, is launching his dart at the beautiful wife, who sinks into the arms of her agonized husband. Her right arm is the perfection of sculpture: “life seems slowly receding from her tapering fingers and quivering wrist.” (*Allan Cunningham.*) Roubiliac died the year after its erection, 1762: this work touches every heart, but the figure of Death is too literal and melodramatic. Upon the spot, formerly the oratory of St. John the Evangelist, is a marble statue of Mrs. Siddons by Campbell; she is in her famous walking dream as Lady Macbeth. Here is also an alto-relievo, by J. Bacon, jun., to Admiral R. Kempenfeldt, drowned by the sinking of the *Royal George*, 1782:

“When Kempenfeldt went down  
With twice four hundred men.”

Opposite is the colossal statue of Telford, the eminent engineer, by Baily, R.A.; and a tablet to Sir Humphry Davy. Eastward is the north side of Henry the Fifth's Chantry, with his coronation ceremony, and its equestrian war-group, whose poetic grandeur of sculpture so charmed Flaxman.

The shrine of Henry V. is excellently carved. The figures, which are carried along the screen, in niches, are mostly habited in long gowns, fastened by a buckled belt, and reaching to the feet, with a cloak over them: others represent ecclesiastics; and several of them have books. The coronation, in a square compartment, is supposed by Gough to represent the coronation of Henry V. in this church, by Thomas Arundel, Archbishop of Canterbury, and Henry Beaufort, the king's uncle. The canopies over the coronation, and nine small figures, are surmounted by devices of the swan and antelope alternately. The large cornices under the figures are likewise ornamented with swans and antelopes, collared and chained to a tree, on which is a flaming cresset light.

Near to this Chantry is the tomb of Philippa of Hainault, Queen of Edward III., in the account of its cost stated to have been executed by one “Hawkin Liege, from France,” though its character is Flemish.

The monument consists of an altar tomb of dark marble overlaid with niches of open work in white alabaster. These niches contained thirty statuettes of different personages, connected by relationship or marriage with the queen. Nearly the whole of the tabernacle-work, though shown as perfect in the prints of the early part of the last century, has since disappeared.

Next is the highly decorated altar-tomb and effigies of Edward III., with the richest and most perfect canopy in the Abbey: it is Early Perpendicular, and elaborately carved; six statues of Edward's children remain, of brass-gilt, set in niches; the metal table and effigy are of latten; the head of the King is eulogized by Lord Lindsay as one of almost ideal beauty. The sword, 7 feet in length, and weighing 18 lb., and the plain rough shield of wood, coarsely lined with buckram and rough leather, recel "the mighty victor, mighty lord." The state sword and shield were carried before Edward III. in France:

"The monumental sword that conquered France."—*Dryden*.

Here, also, are three small tombs of children of Edward III., Edward IV., and Henry VII.; likewise, a brass of John de Waltham, Bishop of Salisbury, and Lord High Treasurer, buried, by favour of Richard II., in this "Chapel of the Kings." This is parted from the Choir by a shrine of fifteenth-century work, its frieze bearing the following 14 sculptures, from the life of the last legitimate Anglo-Saxon King:

1. Prelates and nobles doing fealty to Edward the Confessor before he was born. 2. Birth of the Confessor. 3. The Confessor's Coronation. 4. The Confessor witnessing the Devil dancing on the Danegelt Tax in casks. 5. Edward admonishing the thief stealing his treasure. 6. Christ appearing to Edward. 7. Vision—King of Denmark falling into the sea. 8. Tosti and Harold's quarrel. 9. Vision—Emperor Theodosius and Cave of Seven Sleepers of Ephesus. 10. Edward giving his ring to St. John Evangelist. 11. Restoration of the Blind, by use of water in which Edward had washed. 12. St. John giving Edward's ring to Pilgrims. 13. Pilgrims returning the ring to Edward. 14. Called "Dedication of Edward the Confessor's Church."

The two upper stories of the Shrine are of wainscot, and were probably erected by Abbot Feckenham, in Queen Mary's reign. The massive iron-bound oaken coffin containing the ashes of the pious Edward, within the ancient stonework, may be seen from the parapet of Henry V.'s Chapel.

Two illuminations from the life of St. Edward, in the University Library, Cambridge, show—1. One end of the Shrine in which the saint was, probably, first deposited after canonization, with the infirm persons creeping through the openings left in his tomb for this purpose. There is a pillar on either side of the Shrine surmounted by statues of St. John the Evangelist and Edward the Confessor. It is therefore probable that the two large twisted columns which we now see at the basement of the Shrine served for a similar purpose. 2. The side of the same Shrine. The lid is raised, upheld by several persons; and four other persons, one of whom is doubtless intended to represent Gundulph, who vainly endeavoured to abstract one of the hairs of the beard, are readjusting the saint's remains. His features and beard are shown as in perfect preservation; and there is a crown upon his head.

Mr. John Gough Nichols, from diaries kept during the days of Queen Mary, shows that the body of the Confessor had been removed, and the Shrine, wholly or in part, taken down at the Dissolution, but restored in Queen Mary's time, when the present wooden Shrine, cornice, modern inscription, and painted decorations were added. Mr. Scott, however, thinks the marble substructure to have been only in part removed. There is, in Abbot Litlington's service-book in the Abbey Library, a view of the Shrine—it is feared, an imaginary one. The substructure is speckled over to represent mosaic work, but the seven arched recesses for pilgrims to kneel under, which really occupy two sides and an end, are all shown on one side! The Shrine has on its sloped covering a recumbent figure of the Confessor. Mr. Scott opened the ground round the half-buried pillars at the west end, and found them to agree in height with those at the east, which they so much exceed in diameter; and he recovered the broken parts of one of the eastern pillars, and refitted and refixed its numerous fragments with the help of one new piece of only a few inches in length; so that we have now one perfect pillar.

Some seven years ago, Mr. P. Cunningham found in the Accounts of the Paymaster of Works and Buildings, belonging to the Crown during the reign of King James II., the following entry:—

"Paid to Mathew Bankes, for a large coffin by him made to enclose the body of St. Edward the Confessor, and setting it up in its place, in the year 1685,—*6l. 2s. 8d.* And to William Backe, locksmith, for large hinges and rivetts, and 2 crossebarrs for the said coffin,—*2l. 17s. 7d.*"

"I have seen" (says Keepe) "a large chest or coffin, bound about with strong bands of iron, lying about the midst of the inside of this shrine, where I suppose the body of the pious Confessor may still be conserved." Keepe's work was published in 1681; and four years after, at the taking down of the

seaffolding, erected for the coronation of James II., a hole was either accidentally or purposely broken in the lid of the Confessor's coffin. "On putting my hand into the hole" (says Keepe), "and turning the bones which I felt there, I drew from underneath the shoulder-bones a crucifix, richly adorned and enamelled, and a gold chain, twenty-four inches long." The crucifix and chain of the *last but one* of our Saxon kings were accepted by *the last* of our Stuart kings. Their destiny is, I believe, unknown.

With their backs to the screen stand the two Coronation Chairs used at the crowning of the British sovereigns. One was made by order of Edward I. to hold the Scone stone, of legendary fame, and which had been for ages the coronation seat of the Scottish kings: it is of reddish-grey sandstone, 26 by 16 $\frac{3}{4}$  inches, and 10 $\frac{1}{2}$  inches thick. The companion chair was made for the coronation of Mary, Queen of William III. Both chairs are of architectural design: the ancient one, St. Edward's Chair, is supported upon four lions; and both are covered with gold-frosted tissue, and cushioned, when used at coronations.

Mr. Burges believes that the Chair was ornamented with painting, gilding, glass, jewels, and enamels in a similar mode as were the sedilia and retabulum. The gilding of the chair was effected by a process not hitherto detected. After the usual "gesso" was applied, and the gold laid on by means of white of egg, and the ground thus formed was still elastic, a blunt instrument was used to prick out the pattern. By the aid of a dark lantern and a strong lens, the decorations have been made out by Mr. Tracy. At the back of the chair are remains of the representation of a king there, seated on a cushion diapered with lozenges, with his feet resting on a lion. On the dexter side are traces of birds and foliage;—on the sinister a diaper of compound quatrefoils with a different subject, such as a knight, a monster, a bird, foliage, in each quatrefoil.

In the Wardrobe Accounts of Edward I.'s time there is a charge by Master Walter, the painter, for the costs and expenses incurred by him for making one step at the foot of the *new chair* (in which is the stone from Scotland), set up near the altar in St. Edward's Shrine in the Abbatial Church at Westminster, in pursuance of the order of the King, for the wages of the carpenter and painter for painting the same, together with making a case for covering the chair. The cost of this was 1*l.* 19*s.* 7*d.* The coronation-stone is placed within the framework of the chair: at each end is a circular iron handle, affixed to a staple within the stone itself, so that it might be lifted up.

In 1297, according to Stow, Edward I. offered at the Confessor's Shrine the chair, containing the famous stone; and the sceptre and crown of gold of the Scottish sovereigns, which he had brought from the Abbey of Scone. The Prophetic or Fatal Stone is named from the belief of the Scots that whenever it was lost, the power of the nation would decline; it was also superstitiously called Jacob's Pillow. The mosaic pavement of this chapel, by Abbot Ware, is as old as the Confessor's Shrine: its enigmatical designs in tesserae of coloured marbles, porphyry, jasper, alabaster, &c., are very curious.

*The North Transept*, from its number of political memorials, is sometimes called *Statesmen's Corner*, in correspondence with *Poets' Corner*, in the South Transept.

The North Transept contains some important modern monuments: such are Bacon's statue of the great Lord Chatham, with allegorical figures; and Nollekens's large group of pyramid, allegory, and medallion, to the three Captains mortally wounded in Rodney's victory of April 12, 1782: these are national tributes, erected by the King and Parliament. The memorials to naval commanders here are numerous, and their heroic suffering is usually narrated in medallion. Mrs. Warren and child, sometimes entitled "Charity," for pathetic treatment has few rivals in modern sculpture; it is by Sir R. Westmacott, R.A. One of the grandest works here is Flaxman's sitting statue of Lord Chief-Justice Mansfield, supported by figures of Wisdom and Justice; in the rear of the pedestal is the crouching figure of a condemned youth, with the torch of life reversed, or it is better described as "a criminal, by Wisdom delivered up to Justice." (Cunningham's *Handbook of Westminster Abbey*.) Lord Mansfield rests beneath this memorial: it cost 2500*l.*, bequeathed by a private individual for its erection. In the pavement here are buried Chatham, Pitt, and Fox; Castlereagh, Canning, and Grattan; Lord Colchester and William Wilberforce:

"Now—taming thought to human pride!—

The mighty chiefs sleep side by side.

Drop upon Fox's grave the tear,

'Twill trickle to his rival's bier;

O'er Pitt's the mournful requiem sound,

And Fox's shall the notes rebound." *Sir Walter Scott.*

Fox's memorial, by Westmacott, shows the orator dying in the arms of Liberty, attended by Peace and a kneeling negro. Canova said of the figure of the African in this group, that "neither in England nor out of England had he seen any modern work in marble which surpassed it." King George IV. subscribed 1000 guineas

towards this monument. Pitt's monument, by the same sculptor, is over the great western door of the Nave. In the north aisle of the Choir, leading to the Nave, are Chantrey's marble portrait-statues of Horner, Canning, Malcolm, and Raffles; a statue of Follett, by Behnes; John Philip Kemble (without a name), modelled by Flaxman, but executed after his death; Wilberforce, by S. Joseph; and, opposite Canning, the late Marquis of Londonderry, by J. E. Thomas—placed here, in 1850, by the Marquis's brother. Nearly opposite is the grave of Viscount Palmerston, d. October 18, 1865.

Here are three monuments by Wilton: statue of General Wolfe, and figures; statue of Admiral Holmes, in Roman armour; and William Pulteney, Earl of Bath, statues and medallion.

The more ancient monuments, of the larger size, are those of William Cavendish, the loyalist Duke of Newcastle, and his Duchess; and his kinsman, the Duke John Holles. Here, too, are memorials of our old admirals, Sir Charles Wager, Vernon of Portobello, and Sir Peter Warren, by Schemakers, Rysbrack, and Roubiliac. Here are busts, by Weekes, of Charles Buller and Sir George Cornwall Lewis, the latter in the western porch, and adjoining the monuments to Follett, Kemble, and Lieut.-Gen. Sir Eyre Coote. Next, also, are the bust of Warren Hastings, by Bacon; Thrupp's statue of Sir Thomas Fowell Buxton; and Sir Robert Peel, by Gibson, R.A. Here, likewise, is the mural monument, by Noble, to Sir James Outram—a bust surmounting a historical group of the meeting of Outram, Havelock, and Clyde, at Lucknow: the tablet supported by figures of a Scindian and Bheel chief.

The six lancet windows of the North Transept, painted with figures of Moses, Joshua, Caleb, Gideon, David, and Jonathan, and with medallion pictures of their chief exploits, were erected in memory of six officers of Sir James Outram's army, killed in the Indian War of 1857 and 1858; another window, in the aisle to the left, is dedicated to that of Brigadier the Hon. Adrian Hope. The rose-window, higher up, filled with paintings of the Saviour, the twelve Apostles, and the four Evangelists, is of much older date.

The *Choir* is in height the loftiest in England. The light and graceful piers are ornamented with detached shafts filleted with brass. The triforium, or gallery immediately above the aisles, where the nuns of Kilburn are traditionally said to have attended service, is an arcade of double compartments of two arches with a cinquefoil in the head; the arches narrow towards the apse, and become sharply pointed. This arcade is probably the most beautiful example in existence of its kind. Mr. Scott says:—"The spaciousness of this upper story is quite surprising to persons who see it for the first time. It is capable of containing thousands of persons, and its architectural and artistic effects, as viewed from different points, are wonderfully varied and beautiful." Its convenience for public solemnities, as coronations, was very great; and it is to be wished that access to these noble triforial galleries, from which by far the most beautiful views of the interior are to be had, were more freely granted to such visitors as would appreciate the privilege. Mr. Burges suggests, not altogether without probability, that it was in the spacious triforium that Caxton first set up his printing-press in Westminster Abbey.

The clerestory windows are of two lights: the spandrels are chiselled with diaper work in small panels, containing flowers in low relief. The piers of the lantern are massive and grand—one continuous upward line of grey marble, surrounded by sixteen shafts wrought out of the main column. The bosses in the vault were gilded in the time of Queen Anne. The vaulting of plaster under the lantern is by Bernasconi, and designed by James Wyatt, who set up the paltry altar screen at the coronation of George IV.

The pavement of *opus Alexandrinum*, on the altar platform, was made by a Roman artist for Abbot Ware, circa 1268. An inscription on the pavement says:—"Odericus et Abbas hos compegere porphyreos lapides." But for three peculiarities indicated by Mr. Burges, it might be supposed that Abbot Ware had brought this present for his church from Rome in its finished state; an examination will show that the Italian ground for mosaics, cippolino, not being obtainable in this country, Purbeck was substituted; that legends in brass letters were inserted in the Purbeck borders; and that glass was introduced; facts which show conclusively that it was of Northern workmanship. Among the sums paid by the executors of Queen Eleanor was an account of sixty shillings to William le Pavour "pro pavimento faciendo in Ecclesia West." This, it is conjectured, relates to the mosaic pavement in the chapel of Edward the Confessor.—Scott's *Gleanings from Westminster Abbey*.

The Choir was formerly hung with beautiful tapestries, and cloth of arras, which, on

Jan. 4, 1644, were transferred to the Parliament House, given back at the Restoration, and finally removed in 1707: a portion is now in the Jerusalem Chamber.

The *Choir* has some fine canopied monuments. On the north side is the richly canopied tomb of Avelina, Countess of Lancaster; of Aymer de Valence, Earl of Pembroke (best seen from the north aisle); and Edmund Crouchback, Earl of Lancaster, second son of Edward III. Aymer de Valence was one of the heroes of Bannockburn, and fell wounded by a tilting-spear in France, June 23, 1323: Gray portrays his countess as—

The sad Chatillon on her bridal morn  
Who wept her bleeding love.

The monument was thus described by Keefe in 1683:—

“A wainscot chest, covered over with plates of brass, richly enamelled, and thereon the image of de Valence, Earl of Pembroke, with a deep shield on his left arm, in a coat of mail with a surcoat, all of the same enamelled brass, gilt with gold, and beset with the arms of Valence, &c. \* \* \* Round about the inner ledge of this tomb is most of the epitaph remaining, in the ancient Saxon letters; and the rest of the chest, covered with brass, wrought in the form of lozenges, each lozenge containing either the arms of England or of Valence, alternately placed one after the other, enamelled with their colours. Round this chest have been thirty little brazen images, some of them still remaining, twelve on each side, and three at each end, divided by central arches that serve as niches to enclose them; and on the outward ledge, at the foot of these images, is placed a coat of arms in brass enamelled with the colours.”

Flaxman characterizes the two latter monuments as “specimens of the magnificence of our sculpture in the reign of the first two Edwards. The loftiness of the work, the number of arches and pinnacles, the lightness of the spires, the richness and profusion of foliage and crockets, the solemn repose of the principal statue, representing the deceased in his last prayer for mercy at the throne of grace; the delicacy of thought in the group of angels bearing the soul, and the tender sentiment of concern variously expressed in the relations ranged in order round the basement,—forcibly arrest the attention, and carry the thoughts not only to other ages, but to other states of existence.” In the South aisle of the Choir is part of a splendid altar frontal (thirteenth century), discovered in 1827.

This is a very wonderful work of art, being most richly decorated with glass, gold, and painting, and probably with precious stones, and even with casts of antique gems. The glass enrichments are of two sorts—in one the glass is coloured, and is decorated on its face with gold diaper; in the other it is white, and laid upon a decorated surface. The great charm, however, of the work must have been in the paintings. They consist of single figures in niches of our Lord and SS. Peter and Paul, and two female saints, and a number of small medallion subjects beautifully painted.

On the south is the Cinque-cento altar-tomb of Anne of Cleves, one of King Henry VIII.'s six wives, which is so miserable as to have led old Fuller to observe, “not one of Harry's wives had a monument, and she but half a one;” above is the tomb of King Sebert, erected in 1308, and bearing two pictures, Sebert and Henry III., among our earliest specimens of oil-painting, and in tolerable condition.

In 1848, the oak refitting of the Choir was completed; the Organ over the screen at the west entrance was then partly removed to the sides, and partly lowered, so as not to intercept the view of the great west window. On each side are ranged oaken stalls, with decorated gables, those for the Dean and Sub-dean distinguished by loftier canopies, and the western entrance being still more enriched; the pew-fronts and seat-ends are also carved, and many more sittings have been provided: the carved wood-work is by Messrs. Ruddle, of Peterborough, from designs by E. Blore. The great circular or marigold window, and the triforium and other windows beneath it, in the South Transept, have been filled with stained glass by Ward and Nixon; the subjects are incidents in the life of our Saviour, with figures nearly three feet high. From the cross of the Transepts, the magnificent perspective of the high imbowed roof of the Nave and Choir, and the great height of the edifice, nearly 104 feet, is seen to the best advantage. The pavement is partly Abbot Ware's, and in part black and white marble, the latter given by Dr. Busby, of Westminster School. The decorations of the altar are in the Gothic style; but a classic order disgraced the choir from the days of Queen Anne to the reign of George IV. The original stalls of the choir seem to have been retained in a more or less perfect state till late in the last century. They are shown in the view given by Dart, and in that given in Sandford's account of the coronation of James II. The canopies are there supported by single shafts. The sedilia are more than usually curious, from the fact that they are made of wood. They have suffered much since Sir J. Ayliffe had them and the tomb of Avelina, Countess of

Lancaster, drawn for the *Vetusta Monumenta*, in 1778. There are four of them: but no trace is found of a piscina. They appear to have been elaborately decorated by processes similar to that which beautified the retabulum, which was discovered by Mr. Blore, in 1827, lying on the top of the effigy cases in the upper chapel of Abbot Islip. It is a rich specimen of thirteenth-century workmanship; and has been restored to its place at the back of the high altar.

The north aisle of the Choir, leading to the Nave, has been described as a sort of *Musicians' Corner*; for here rests Purcell, with the striking epitaph, attributed to Dryden: "Here lies Henry Purcell, Esq., who left this life, and is gone to that blessed place where only his harmony can be exceeded." On the same pillar is a memorial of Samuel Arnold; both Purcell and Arnold were organists of the Abbey. Opposite is a tablet to Dr. Blow; and close by lies Dr. Croft, another organist of the Abbey, whose death is said to have been brought on by his attendance at the coronation of George II.

*Coronations.*—In this Abbey-church the following monarchs and consorts have been crowned:—

Jan. 6, 1066, Harold; Dec. 25, William; Sept. 26, 1087, William II.; Aug. 6, 1094, Henry I.; Dec. 26, 1135, Stephen of Blois; March 22, 1135-6, Matilda of Boulogne; Dec. 19, 1154, Henry II. and Eleanor of Aquitaine; Sunday after St. Barnabas' day, 1170, Prince Henry; Sept. 3, 1189, Richard I.; May 27, 1199, John; Oct. 28, 1216, Henry III., and again Feb. 1236, with Eleanor of Provence; Aug. 19, 1272, Edward I. with Eleanor of Castile; Quinquagesima, 1308, Edward II., and Isabella of France; Feb. 2, 1327, Edward III., and Philippa of Hainault; Richard II., July 16, 1377; Jan. 14, 1382, Anne of Bohemia; Oct. 13, 1399, Henry IV., and Feb. 26, 1403, Joan of Bretagne, with the sacred unguent of Rheims; April 9, 1421, Henry V., and Feb. 24, 1421, Katherine of Valois; Nov. 6, 1421, Henry VI.; May 30, 1445, Margaret of Anjou; June 8, 1490, Edward IV., and Ascension-Day, 1465, Elizabeth Woodville; July 5, 1483, Richard III.; Oct. 30, 1485, Henry VII., and Nov. 25, 1487, Elizabeth of York; June 24, 1509, Henry VIII. and Catherine of Aragon; Whitsun-Day 1533, Anna Boleyn; Shrove Tuesday, 1547, Edward VI.; Oct. 2, 1552, Mary; Jan. 13, 1558-9, Elizabeth; July 25, 1603, James I. (the service for the first time being in the English tongue); Feb. 2, 1626, Charles I., ominously clad in white satin; St. George's Day, 1661, Charles II.; St. George's Day, 1685, James II., and Mary of Modena; April 18, 1689, William of Orange and Mary, when Lord Danby had to produce twenty guineas at the offertory, as the purse had been stolen at the king's side [the Bishop of London put the crown on the king's head, as Dr. Saucroft, the Archbishop of Canterbury, would not take the oaths to their Majesties]; April 23, 1702, Anne; Oct. 20, 1714, George I., who rudely repulsed Dean Atterbury's ceremonious offer of the canopy and chair of state, but refused to wear his crown while receiving the Holy Communion, saying it was indecent so to appear before the King of kings; Oct. 11, 1727, George II. and Caroline of Anspach; Sept. 22nd, 1761, George III. (the kiss of charity was omitted, and mitres were first disused by the prelates); July 19, 1821, George IV.; Sept. 8, 1831, William and Adelaide, without coronation feast and procession, or champion's challenge; June 28, 1838, "The Hanover Thursday," Queen Victoria; when, for the first time since the Revolution, a sovereign was desired to lay aside the crown before receiving the Holy Communion; and a procession of coaches was substituted for the ancient procession on foot.—*Walcott's Guide to the Cathedrals*, 1858.

Upon most occasions, the sacred ceremony was followed by a banquet in the Great Hall of the Palace of Westminster. The last of these festivities was that at the coronation of George IV. On the night previous, the King reposed on a couch in the tapestry-room of the Speaker's official residence in the Old Palace; and next morning the royal procession advanced along a raised platform, covered by an awning, from Westminster Hall to the Abbey Church, where the King was crowned; and then returned to the Great Hall, where the banquet was served.

The entire cost of this Coronation is stated to have exceeded a quarter of a million, or more than 268,000*l.* It has been commemorated in one of the most costly works of pictorial art ever produced—the *Illustrated History of the Coronation of George IV.*, by Sir George Naylor: containing forty-five splendidly coloured plates, atlas folio, price fifty guineas per copy. Sir George lost a considerable sum by the publication, although Government voted 5000*l.* towards the expense. Sir George also undertook a much more costly memorial of this Coronation for George IV., but it was never completed. The portion executed contains seventy-three coloured drawings, finished like enamels, on velvet and white satin: the portraits are very accurate likenesses, and many of the coronets have rubies, emeralds, pearls, and brilliants set in gold; each portrait costing fifty guineas, first-hand.—II. Bohn's *Catalogue*.

At the coronation of Queen Victoria, temporary reception apartments were erected at the great western entrance to the Abbey Church; the Nave was fitted with galleries and seats for spectators, as were also the Choir and Transepts; the peers were seated in the North Transept, and the peeresses South; and the House of Commons in a gallery over the altar; and the orchestra of 400 performers in front of the organ. At the intersection of the Choir and Transepts was the theatre, or pulpitum, covered with rich carpets and cloth of gold, in the centre of which, upon a raised platform, stood the Chair of Homage. At the north-east corner of the theatre was the pulpit, whence "the Coronation Sermon" was preached. The crowning in St. Edward's Chair took place in the Sacarium, before the altar, in front of St. Edward's Chapel;

and behind the altar was "the Queen's Traverse," or retiring-room. (See "Coronation Chairs," described at p. 132.)

At the altar were married the Princesses Joan and Margaret, May 2, 1284; and Henry and Elizabeth, January 18, 1486; here were offered the spoils of Wales, April, 1285; here, when Prince Edward was made a Knight, two knights were stifled in the crowd, and the King swore him and his nobles on the two golden swans that were carried up in procession, to avenge John Comyn and conquer Scotland. Here Henry V. offered the trappings of his coursers on his return from France, to be converted into vestments. Here, August 11, 1381, the Constable of the Tower and Sir Ralph Farren slew a squire who had fought at Najara, and a monk who endeavoured to save him, before the Prior's stall: as in 1380 Wat Tyler's mob slew a man before the Shrine. Here Abbot Weston celebrated mass in armour, when Sir T. Wyatt was marching on London; and afterwards silenced his opponents in a famous disputation, saying, "You have the word, but we have the sword."—*Walcott's Handbook*.

The *Nave* has almost every variety of memorial—sarcophagus and statue, bust and brass, tablet and medallion, mostly modern. Immediately behind the memorial of Fox, on the left, as the visitor enters the great western door, are a marble bust of Sir James Mackintosh, and busts of Zachary Macaulay, Tierney, and other public men. In the southern aisle of the Choir, leading to the Nave, is Bird's monument to Sir Cloudesley Shovel, personifying "the brave, rough English Admiral" by a periwigged beau, which was so justly complained of by Addison and the pious Dr. Watts. Opposite is Behnes's bust of Dr. Bell, the founder of the Madras System of Education; and near it is the monument to Thomas Thynne, of Longleat, Wilts: he was shot in his coach, at the end of the Haymarket, Sunday, Feb. 12, 1682, as sculptured on the tomb. Here, too, is a fine bust, by Le Sœur, of Sir Thomas Richardson, Lord Chief-Justice (*temp.* Charles I.); and a bust of Pasquale de Paoli, the Corsican chief. Here, also, are the monuments to Dr. South, the witty prebendary of the Church; Dr. Busby, master of Westminster School; and Dr. Isaac Watts, buried in Bunhill Fields.

In the two side arches of the Choir screen are the monuments of Sir Isaac Newton, and James, first Earl Stanhope; both designed by Kent, and executed by Rysbrack: Newton's is characterized by the celestial globe, with the course of the comet of 1681, and the genius of Astronomy above it. In the screen niches are statues of Edward the Confessor, Henry III., and Edward I., and their respective queens.

In the Nave north aisle is a weeping female, by Flaxman, to the memory of George Lindsay Johnstone—a touching memorial of sisterly sorrow. One of the few old monuments here is that to Mrs. James Hill—a kneeling figure and sheeted skeleton, and the mottoes: "Mors mihi lucrum," and "Solus Christus mihi sola salus." Near the above is the Parliamentary figure-group, by Westmacott, to Spencer Perceval, the Prime Minister, shot by Bellingham, in the lobby of the House of Commons, May 11, 1812; the assassination is sculptured rearward of the figures. Here also are several interesting monuments to heroes who have fallen in battle: as, Colonel Bringfield, killed by a cannon-shot at Ramilies whilst remounting the great Duke of Marlborough on a fresh horse; the three brothers Twysden, who fell in their country's service in three successive years; Captains Harvey, Hutt, and Montagu, who fell in Lord Howe's victory of June 1; Sir Richard Fletcher, killed at St. Sebastian; and the Hon. Major Stanhope, at Corunna. Here, too, is a plain tablet to Banks, the sculptor, R.A.; a monument to Sir Godfrey Kneller, the painter, by Rysbrack, after Sir Godfrey's own design, Pope furnishing the epitaph: Kneller is buried in Twickenham Church. Towards the middle of the Nave are the gravestones of Major Rennell, the geographer; and Thomas Telford, the engineer; and near Banks's tablet is buried Ben Jonson, his coffin set on its feet, and originally covered with a stone inscribed "O rare Ben Jonson!" By his side lies Tom Killigrew, the wit of Charles the Second's court; and opposite, his son, killed at the battle of Almanza, in Spain, 1707. In the north aisle, too, is a large brass to the memory of Sir Robert Wilson, the soldier and politician, and Dame Jennima, his wife; with figures of a mediæval warrior in coat of mail, and of a mediæval lady, under canopies; and below are two groups of seven boys and seven girls! Side by side are memorials of Robert Stephenson, the engineer, and John Hunter, the surgeon, removed here in 1859, from the Church of St. Martin's-in-the-Fields; the memorials are of polished granite, inlaid and bordered with brass.

Over the west door is Westmacott's statue-memorial to the Right Hon. William Pitt: it cost 6300*l.*, then the largest sum ever voted by Government for a national monument. To the left is a large marble monument to Lord Holland, by Baily, R.A., erected by public subscription in 1848; the design—the prison-house of Death, with three poetic figures in lamentation, bassi-relievi on the two sides, and the whole surmounted by a colossal bust of the deceased Lord—is, perhaps, the finest architectural and sculptural combination in the Abbey.

We now reach the south tower of the western front, used as the Consistory Court, and Chapel for Morning Prayers.

In the south aisle of the Nave, commencing from the west, is the tomb of Captain Cornwall, who fell in the sea-fight off Toulon, 1743; this being the first monument voted by Parliament for naval services.

Next is the statue of the Right Hon. James Craggs, the friend of Pope and Addison; and Bird's bust-monument to Congreve, the great dramatic poet, erected at the expense of Henrietta Duchess of Marlborough, to whom Congreve, "for reasons not known or not mentioned," bequeathed 10,000*l.* Among the noticeable personages interred here, without memorials, is Dean Atterbury—the place his own previous choice, being, as he told Pope, "as far from kings and kæsars as the space will admit of;" also Mrs. Oldfield, the actress, buried "in a very fine Brussels-lace head, a Holland shift, with a tucker and double ruffles of the same lace, a pair of new kid gloves," &c.; to which Pope thus alludes:—

"Odions! in woollen! 'twould a saint provoke,  
(Were the last words that poor Narcissa spoke):  
No, let a charming chintz and Brussels lace  
Wrap my cold limbs and shade my lifeless face;  
One would not, sure, be frightful when one's dead—  
And—Betty, give this cheek a little red."

Eastward is the sculptural burlesque deservedly known as "the Pancake Monument," to Admiral Tyrrell, with its patchy clouds, coral rocks, cherubs, harps, palm-branches, and other allegorical absurdities. Between three successive windows are the monuments, by Roubiliac, of Lieut.-Gen. Hargrave, Maj.-Gen. Fleming, and Marshal Wade, all in the conventional school of allegory. Next are a good bust, by Bird, of Sidney, Earl of Godolphin, chief minister to Queen Anne; alto-relievo and figures to Lieut.-Col. Townsend, killed by a cannon-ball at Ticonderago, in his 28th year; and a monument, by Bushnell, to Sir Palmes Fairborne, governor of Tangier, with inscription by Dryden. We now reach the tomb of Major André, who was executed by the Americans as a spy in 1780; his remains were removed here in 1821: the bas-relief shows André as a prisoner in the tent of Washington, with the bearer of a flag of truce to solicit his pardon. This monument was put up at the expense of George III.; the heads of the principal figures have been several times mischievously knocked off, but as often restored. The new pulpit, on the north side of the Nave, was designed by Scott, R.A., and executed by William Farmer. Its sculptural details are as follow:

The pulpit is composed principally of magnesian limestone from the Mansfield Woodhouse quarry. It is octagonal, with a capping of red Devon marble. The cornice is ornamented with leaves and flowers of the columbine. At the angles are figures of the four Evangelists and of St. Peter and St. Paul under canopies. In one panel is the face of our Lord, in white marble, well sculptured by Monro. In the other panels are lozenges containing circular medallions of mosaic work in different coloured marbles. The capping of the string which runs round the bottom of the panels is of grey Derbyshire marble; the string is ornamented with First Pointed foliage. The pulpit is supported on columns of Devonshire marble at the angles, and a larger one in the centre; the capitals being of Early Pointed character. The columns of the staircase are of the same. The figures of the Apostles are well carved. The nave has been fitted for special Sunday services.

The *Jerusalem Chamber*, adjoining the south tower of the Western front, is now used as the Chapter-house. Its northern window has some stained glass, *temp.* Edward III.; and here hangs the ancient portrait of Richard II. in the Coronation chair. In the Jerusalem Chamber died Henry IV., brought from the Confessor's Shrine in the Abbey in a fit of apoplexy, March 20, 1413. Being carried into this Chamber, he asked, on rallying, where he was; and when informed, he replied, to use the words of Shakspeare, founded on history—

"Laud be to God! even here my life must end:  
It hath been prophesied to me many years,  
I should not die but in Jerusalem."

*King Henry IV.*, Part 2, act iv. sc. 4.

Here the body of Congreve lay in state, before his pompous funeral, at which noblemen bore the pall. Here, too, Addison lay in state, before his burial in Henry VII.'s Chapel, as pictured in Tickell's elegy:—

“Can I forget the dismal night that gave  
My soul's best part for ever to the grave?  
How silent did his old companions tread,  
By midnight lamps, the mansions of the dead;  
Through breathing statues, then unheeded things;  
Through rows of warriors, and through walks of kings,” &c.

The *Chapter-house*, an exquisitely beautiful specimen of mediæval Gothic architecture, was originally built by Edward the Confessor; the existing walls are of the time of Henry III. Fabric-rolls and other papers discovered by Mr. Burt have proved the very important fact that the Chapter-house, which is the latest part of the work of Henry III., was finished ready for glazing so early as 1253; and a Parliament was held here in 1264. The Chapter-house was the most usual place of meeting of the House of Commons through the Middle Ages, until the dissolution of the Collegiate body of St. Stephen had put the Royal Chapel of the Plantagenets at the disposal of the Legislature. Originally lent by the Dean and Chapter of Westminster for the casual use of Parliament, the building was quietly appropriated by the Tudors after the reason of the loan had passed away. Room was wanted for records, and the Chapter-house provided a tempting expanse of wall space. So the rich tile floor was boarded over, and thereby luckily preserved; the traceried windows were gutted and walled up; the vaulted roof was demolished by some builder, after Wren had refused the job, and the whole interior choked with recesses and galleries equally concealing wall-painting and carved-work. Mr. Scott thus gives the details:

It is an octagon of 18 feet diameter, and had a vaulted roof, which was supported by a central pillar about 35 feet high. It is entirely of Purbeck marble, and consists of a central shaft, surrounded by eight subordinate shafts attached to it by three moulded bands. The capital, though of marble, is most richly carved. The doorway itself has been truly a noble one. It was double, divided by a single central pillar and a circle in the head, whether pierced or containing sculpture cannot be ascertained, as it is almost entirely destroyed. The jambs and arch are magnificent. The former contains on the outer side four large shafts of Purbeck marble; their caps are of the same material, and most richly carved, and the spaces between the shafts beautifully foliated. The walls below the windows are occupied by arcaded stalls, with trefoiled heads. The five which occupy the eastern side are of superior richness and more deeply recessed. Their capitals, carved in Purbeck marble, are of exquisite beauty. The spandrels over the arch are diapered, usually with the square diaper so frequent in the church, but in one instance with a beautifully executed pattern of roses. One of the most remarkable features in the Chapter-house is the painting at the back of the stalls. The general idea represented by this painting would appear to be our Lord exhibiting the mysteries of the Redemption to the heavenly host. In the central compartment our Lord sits enthroned; His hands are held up to show the wounds, and the chest bared for the same purpose; above are angels holding a curtain or dossal, behind the throne, and on either side are others bearing the instruments of the Passion. The whole of the remaining spaces are filled by throngs of cherubim and seraphim. The former occupy the most important position, and are on the large scale. And on one of its sides is a statue called “St. John,” said to be one of the oldest sculptures in the Abbey. This was a beautifully-decorated building, with painted walls and coloured and gilded arcades, and high arched windows in seven of its sides, now sadly obscured.

The restoration of the Chapter-house has very properly been undertaken by the Government, under the direction of Mr. Scott. Beneath the present building, the walls of which are 5 feet thick, is a crypt with walls of the enormous thickness of 17 feet. From a straight joint which separates the lower wall into two concentric portions, Mr. Scott is of opinion that the bulk of the subterranean masonry is of the date of the Confessor, the foundation having been enlarged for the new chapter-house of King Henry III., which was coeval with the Sainte Chapelle in Paris. The crypt is called the Chapel of the Confessor, but is part of the original Norman church. The crypt contains an altar, a piscina, and aumbry. The outer walls are of a great thickness, and solid masonry. There are no indications, as is the case in many crypts, of iron rings for the suspension of lamps. Here is the *Library* of the Dean and Chapter, (about 11,000 volumes): it was formed from the monks' parlour by Dean Williams, whose portrait hangs at the south end. The great treasure of the place was William the Conqueror's Domesday Book,\* in excellent condition, from searchers not being

\* On the night of the burning of the Houses of Parliament, in 1534, Sir Francis Pa'grave and Dean Ireland were standing on the roof of the Chapter-house, looking at the fire, when a sudden gust of wind seemed to bring the flames in that direction. Sir Francis implored the Dean to allow him to carry *Domesday Book* and other valuable records into the Abbey, but the Dean answered that he could not think of doing so without first applying to Lord Melbourne or the Board of Works!

allowed to touch the text, or writing. Here, too, were Clement the Seventh's Golden Bull, conferring the title of Defender of the Faith on Henry VIII.; a treaty of perpetual peace between Henry VIII. and Francis I., with a gold seal, 6 inches diameter, said to be the work of Cellini; the original wills of Richard II., Henry V., Henry VIII.; and the Indenture between Henry VII. and the Abbot of Westminster, a glorious specimen of miniature-painting and velvet binding, with enamelled and gilt bosses.

*Cloisters.*—South—lie four of the early Abbots of Westminster. Here is "Long Meg," a slab of blue marble, traditionally the gravestone of twenty-six monks who died of the Plague in 1349, and were buried in one grave. Here is a tablet to William Lawrence, which records:

"Short-hand he wrote: his Flowre in prime did fade,  
And hasty Death Short-hand of him hath made.  
Well cooth he Nv'bers, and well mesur'd Land;  
Thvs doth he now that Grovd whereon yov stand,  
Wherein he lyes so Geometrical:  
Art maketh some, bvt thvs will Natvre all."

This quaint conceit is in the North Walk; where also are the graves of Spranger Barry, the actor, famous in Othello; and Sir John Hawkins, who wrote a History of Music, and a Life of Doctor Johnson.

East Walk; medallion monument to Bonnell Thornton ("the Connoisseur"), inscription by Joseph Warton; monument to Lieut.-Gen. Withers, with inscription by Pope, "full of commonplaces, with something of the common cant of a superficial satirist" (*Johnson*); tablet to Sir Edmund Berry Godfrey (d. 1678), buried in St. Martin's-in-the-Fields; graves of Aphra Behn, the lady dramatist (*temp.* Charles I.); and Mrs. Bracegirdle, the fascinating actress.

West Walk: bust and alto-relievo, by Banks, R.A., to William Woollett, the engraver, buried in Old St. Pancras' churchyard: tablets to George Vertue, the engraver; Dr. Buchan, who wrote on "Domestic Medicine;" and Benjamin Cooke, organist of the Abbey, with the musical score of "the Canon by twofold augmentation" graven upon the slab.

In the Cloisters, too, are interred Henry Lawes, the composer of the music of *Comus*, and "one who called Milton friend;" Tom Brown, the wit; Thomas Betterton, who "ought to be recorded with the same respect as Roscius among the Romans;" Samuel Foote, the actor, and dramatist; Aphra Behn, above-mentioned, Thomas Betterton, Mrs. Bracegirdle, Samuel Foote, Mrs. Yates, Mrs. Rowe, and Mrs. Cibber, all well-known professors of the dramatic art; so that the Cloisters may be termed the *Actors' Corner*.

Here is a wall monument, with this inscription:—

"Sir Edmund Bury Godfrey, Kt.  
being lost on the 4 Id. Octob. 1678  
was found five days after  
murdered after a most cruel and barbarous manner.  
History will inform you further."

At the entrance of the Little Cloisters is Litlington Tower, built by Abbot Litlington, and originally the bell-tower of the Church;\* the four bells were rung, and a small flag hoisted on the top of this tower (as appears in Hollar's view), when great meetings or prayers took place in St. Catherine's Chapel; pulled down 1571. The bells (one dated 1430, and two 1598) were taken down, and, with two new bells, were hung in one of Wren's western towers. Litlington Tower was restored by its tenant, Mr. R. Clark, one of the choir, who also erected in its front the original Gothic entrance to the Star-Chamber Court, and its ancient iron bell-pull.

Mr. Scott has recently discovered an old hall of the date of Abbot Litlington, no doubt the hall of the Infirmarer's house, and probably used by the convalescent patients. The garden now called the College Garden, was originally the Infirmary garden.

There are preserved several models of churches, one of which is the model constructed by Sir Christopher Wren, in the reign of Queen Anne, of his proposed

\* An author of the fourteenth century says: "At the Abbey of St. Peter's, Westminster, are two bells, which over all the bells in the world obtain the precedence in wonderful size and tone." We read also, that "in the monasterye of Westminster ther was a fayr yong man which was blynde, whom the monks hadde ordeyned to ryng the bellys."

alteration of the Abbey Church, by erecting an elevated spire on the central tower. We believe that the other models are those of St. Mary's and St. Clement's in the Strand, St. Paul's, Covent-garden, and St. John's, Westminster. Here are also, it is said, some models by Roubilliac.

*Music.*—In 1784 took place the "Commemoration of Handel," in the Abbey Nave; and similar festivals in 1785-6-7, and 1790-91; and in 1834 was a Four Days' Festival, commencing June 24, when King William IV., Queen Adelaide, and the Princess Victoria, were present.

"It is full fifty years since I heard last,  
Handel, thy solemn and divinest strain  
Roll through the long nave of this pillar'd fane,  
Now seeming as if scarce a year had pass'd."—*W. Lisle Bowles, 1834.*

Oct. 28, *St. Simon and St. Jude.* Anniversary of the birth of Thomas Tallis celebrated; his Cathedral Service performed at morning prayers. Tallis was organist to Henry VIII., Edward VI., Queen Mary, and Elizabeth.

*Organs.*—The small organ, the oldest, was repaired by Father Smith, in 1694: this organ is represented in the prints of the Choir of the Abbey, at the coronation of James II., in Sandford's *Book of the Coronation*. It was placed under one of the arches on the north side of the Choir, and had a small projecting organ-loft over the Stalls. The larger organ, built by Schreider, who succeeded Schmidt, about 1710, as organ-builder to the Royal Chapels, is a very fine instrument. "Mr. Turle's accompaniment of the Choral Service is quite a model of that kind of organ playing."—*A Short Account of Organs, 1847.*

*Tombs.*—The numerous specimens of early Italian decorative art make Westminster Abbey the richest church north of the Alps. The tomb of William de Valence is stated to be a French work, probably executed by an enameller from Limoges. Labarte, in his *Handbook of the Arts of the Middle Ages*, after quoting a document cited by Mr. Albert Way, which tells us that an artist of Limoges, "Magister Johannes Limovicensis," was employed about the year 1276, to construct the tomb and effigy of Walter de Merton, Bishop of Oxford, says:—"This curious monument was despoiled of its enamelled metal at the Reformation, but there still exists in England an evidence of the high repute in which the enamelled work of Limoges was held, in the effigy of William de Valence, in Westminster Abbey. There can be no doubt that this curious portraiture was produced by an artist of Limoges." The effigy is of wood, overlaid with enamelled and engraved copper, and includes an enamelled shield displaying twenty-eight bars, alternately *argent* and *azure*, diapered; or, rather, ornamented with inlaid scroll-work; and having nineteen martlets, *gules*, displayed around the circumference of the shield. Mr. Scott observes:—

Taking the tombs of the Confessor, of Henry III., and his daughter, and of young de Valence, in connexion with the pavement before the high altar, and that of the Confessor's Chapel, I should doubt whether—I will not say any church north of the Alps—but, I may almost say, whether any country north of the Alps contains such a mass of early Italian decorative art; indeed, the very artists employed appear to have done their utmost to increase the value of the works they were bequeathing to us, by giving to the mosaic work the utmost possible variety of pattern.

The tombs at Westminster have been at least spared from the hand of the early restorers, if not from the destroyers. The earliest tomb erected after the completion of the new Choir was that of the beautiful little dumb princess, daughter of Henry III., who died 1257, in her fifth year.

*Painted and Stained Glass.*—(Ancient.) North Aisle of Nave, figure, said to be Edward the Confessor; South Aisle, given to the Black Prince, Edward III., and Richard II. See also clerestory windows east of Choir, east window of Henry VII.'s Chapel, and Jerusalem Chamber.—(Modern.) Great west window, the Patriarchs; large rose window, North Transept, Apostles and Evangelists—a noble mass of brilliant colour and delicate stone tracery; marigold window in South Transept (put up in 1847), figures nearly three feet high; also windows above Henry VII.'s Chapel, and in east end of triforium. The lost original tracery of the great rose windows of the Transepts has been imaginatively restored from the pattern of some encaustic paving-tiles still remaining in the Chapter-house. Amongst the recent works set up in the Abbey, must be mentioned, too, a small painted glass window, in the East Aisle of that Transept, by Lavers and Barraud, commemorative of Vincent Novello, musical composer:

the subject is St. Cecilia. Here is the Stephenson memorial—a window filled with stained glass, by Wailes: in the body are represented some of the greatest architectural and engineering works; and above these, at the top of the window, are in five-foil, bust-portraits of eminent engineers. Robert Stephenson is placed in the centre; above, his father, George Stephenson; on one side, Thomas Telford; on the other, John Smeaton; and below these, James Watt and John Rennie. The architectural works represented are bordered with ornamental tracery, and consist of, on the one half of the window, the Ark, the erecting of the Tabernacle, the first Temple, the second Temple, and Menai Bridge; and on the other half, the building of Nineveh, the Treasure Cities of Egypt, Aqueduct near Pygros, the Colosseum at Rome, and the High-Level Bridge at Newcastle.

*Metal-work.*—There are five examples of metal-work remaining in the Abbey Church. These are the grille at the top of the tomb of Queen Eleanor, lately reinstated by Mr. Scott; the railing round Archbishop Langham's effigy; that at the west end of the Chantry of Henry V.; the brass or copper gates of Henry VII.'s Chapel; and the beautiful brass grille round the tomb of the latter King. The metal-work that protected the tomb of Queen Philippa, that "most gentyll quene" of Edward III., had previously kept guard round the tomb of a bishop in St. Paul's Cathedral; this and the railing of Edward I.'s are, however, lost to us. In 1822 the Dean and Chapter ordered the removal of most of the railings around the tombs; although some of the metal-work then taken down has been discovered in the vestry. Across the Transept, looking north, new ironwork has been put up from the designs of Mr. Scott. The gate and the grille is for the most part of wrought iron; it is 30 feet in length on each side, and was executed by Potter, for the sum of 700*l*.

*Brasses.*—There are still fifteen Brasses in the Church: the principal are in the Chapels of St. Edmund, St. John the Baptist, and Edward the Confessor.

The present conservating architect of the Abbey is Mr. George Gilbert Scott, R.A. The following are the principal *Admeasurements*:—

*Nave.*—Length, 166 ft.; breadth, 38 ft. 7 in.; height, 101 ft. 8 in.; breadth of aisles, 16 ft. 7 in.; extreme breadth of nave and its aisles, 71 ft. 9 in.

*Choir.*—Length, 155 ft. 9 in.; breadth, 33 ft. 4 in.; height, 101 ft. 2 in.

*Transepts.*—Length of both, including choir, 203 feet. 2 in.; length of each transept, 82 ft. 5 in.; breadth, including both aisles, 84 ft. 8 in.; height of south transept, 105 ft. 5 in.

*Interior.*—Extreme length, from western towers to the piers of Henry VII.'s Chapel, 383 ft.; extreme length, from western towers, including Henry VII.'s Chapel, 511 ft. 6 in.

*Exterior.*—Extreme length, exclusive of Henry VII.'s Chapel, 416 ft.; extreme length, inclusive of Henry VII.'s Chapel, 530 ft.; height of western towers, to top of pinnacles, 225 ft. 4 in.

*Henry VII.'s Chapel.* *Exterior.*—Length, 115 ft. 2 in.; extreme breadth, 79 ft. 6 in.; height to apex of roof, 95 ft. 5 in.; height to top of western turrets, 101 ft. 6 in. (*Interior.*)—Nave: length, 103 ft. 9 in.; breadth, 35 ft. 9 in.; height, 69 ft. 7 in. Aisles: length, 62 ft. 5 in.; breadth, 17 ft. 1 in.; height of west window, 45 ft.

*Admission.*—The Abbey is open to the public between the hours of 11 and 3, generally; and in summer, between 4 and 6 in the afternoon. There is no charge for admission to the Nave, Transept, and Cloisters; but the fee for admission to view the Choir and Chapels, and the rest of the Abbey, is 6*d*. each person, with the attendance of a guide. The entrance is at Poets' Corner. The admission-money was originally 15*d*. each person, when it usually produced upwards of 1500*l*. per annum, mostly distributed among the minor canons, organists, and lay-clerks.

The Chapter is composed of a Dean and eight Canons; there are six minor canons, twelve lay vicars, and twelve choristers. There are two daily services—choral—and a weekly celebration of the Holy Communion. The caputular revenue was, in 1852, 30,657*l*.; and the expenditure on the fabric in fourteen preceding years, 29,949*l*.

"In Westminster Abbey," observes Horace Walpole, "one thinks not of the building: the religion of the place makes the first impression." One more walk through its aisles was the dying wish of the exile Atterbury. "Westminster Abbey or Victory!" were the watchwords which fired the heart of Nelson himself. From the design of applying the Abbey property, under the care of Sir T. Wroth, to the repairs of St. Paul's, on the dissolution of the bishopric, came the cant proverb to *rob Peter to pay Paul*. The following is from a thoughtful and eloquent paper by Dean Stanley:

"The Abbey of Westminster owes its traditions and its present name, revered in the bosoms of the people of England, to the fact that the early English Kings were interred within its walls, and that through its associations our Norman rulers learnt to forget their foreign paternity, and to unite in fellowship and affection with their Saxon fellow-citizens. There is no other church in the world, except, perhaps, the Kremlin

at Moscow, with which Royalty is so intimately associated. There our Sovereigns are crowned and buried under the same roof, whereas in Russia the coronation takes place in one church, the marriage in another, while a third is reserved for the reception of the dead. It was in the reign of Henry III. that the Abbey began to assume that national character which now belongs to it so fully. The third Henry was the first thoroughly English King after the Conquest—that is to say, the first who was born in England, and who never resided in Normandy. The Abbey never possessed a bishop's throne, except for a short time in the reign of Henry VIII., and so was not a cathedral in the ordinary sense; but from the time of Edward I. it always contained the Coronation Chair, in which is fixed 'the fatal stone of Scone.' This throne, which gives to the Abbey the constructive character of a cathedral, has never since the time of the first Edward been removed from the church except once, and that was in the time of Oliver Cromwell—so jealous were the people of monarchical attributes and privileges." The Dean then traces the burial-places of our Kings and Queens from the time of Henry III. to Elizabeth's reign; "after the death of the latter, tombs ceased to be erected in the Abbey to the memories of Sovereigns. This was owing to the peculiar course of succession, for none of the monarchs from the Tudors to those of the Hanoverian dynasty had any peculiar interest in honouring the names of their predecessors. The second George was the last of our Kings who was buried in the Abbey; but another of Royal blood, though of a different dynasty and a different country, had found his last resting therein—the Duke de Montpensier, younger brother of Louis Philippe."

More striking than the edifice and its general associations are its personal monuments and contents. Here, for example, beyond a doubt, lies the body of the Confessor himself, like the now decayed seed from which the wonderful pile has grown. Around his shrine are clustered not only the names but the earthly relics of the principal actors in every scene of our history. No less than seventeen of our Kings, from the Confessor to George II., and ten of our Queens, lie within the Abbey, amid statesmen, poets, divines, scholars, and artists. "It has," says Mr. Scott, "claims upon us architects—I will not say of a *higher* but of *another* character, on the ground of its intrinsic and superlative merits, as a work of art of the highest and noblest order; for, though it is by no means pre-eminent in general scale, in height, or in richness of sculpture, there are few churches in this or any other country, having the same exquisite charms of proportion and artistic beauty which this church possesses."

On Dec. 28, 1865, being the Feast of the Holy Innocents, and just 800 years since the dedication of the Abbey by Edward the Confessor, the Dean and Chapter commemorated the event by special services and the celebration of the Holy Communion. The sermon, eloquently descriptive, was preached by the Dean (Dr. Stanley) from John x. 21, 22: "And it was at Jerusalem, the feast of the dedication, and it was winter. And Jesus walked in the temple in Solomon's porch."

The whole of the music was selected from composers who either in the past or present were connected with the Abbey—namely, Thomas Tallis, who died in 1585, organist to Henry VIII.; Henry Purcell, organist of Westminster Abbey, who died in 1695, and was buried in the north aisle; William Croft, organist of Westminster Abbey, who died in 1727, and was also buried in the north aisle; George Frederick Handel, who died in 1759, and was buried in the south transept; Benjamin Cooke, organist of Westminster Abbey, who died in 1793, and was buried in the west cloister; J. L. Brownsmith, John Foster, and Montem Smith, vicars choral; and James Turle, organist, all of Westminster Abbey. The words of the hymn for the introit, commencing "Hark, the sound of holy voices," were written by Dr. Wordsworth, Canon and Archdeacon of Westminster, and the tune for it, entitled "All Saints," was composed by Mrs. Frere, niece of the late Rev. Temple Frere, Canon of Westminster.

CHAPEL ROYAL, St. James's Palace, is situated on the western side between the Colour Court and the Ambassadors' Court. It is oblong in plan, with side galleries, the Royal Gallery being at the west end.

The superb ceiling, painted by Holbein in 1540, is one of the earliest specimens of the new style introduced by him into England. The rib-mouldings are of wooden frame-work, suspended to the roof above; the panels have plaster grounds, the centres displaying the Tudor emblems and devices. The subject is gilt, shaded boldly with bistre; the roses glazed with a red colour, and the arms emblazoned in their proper colours; leaves, painted dark green, ornamented each subject; the general ground of the whole was light blue. The mouldings of the ribs are painted green, and some are gilt; the under side is a dark blue, on which is a small open running ornament (cast in lead), gilt. The ceiling has undergone several repairs, in one of which the blue ground was painted white. In 1836, when the chapel was enlarged under the direction of Sir Robert Smirke, the blue ground was discovered, as were likewise some of the mottoes in the small panels; thus, "STET DIEV FELIX: HENRICQ REX 8—H. A. VIVAT. REX. 1540. DIEV. ET. MO. DROIT," &c.

Divine Service is performed here as at our Cathedrals, by the gentlemen of the choir,

and ten choristers (boys). The establishment consists of a Dean (usually the Bishop of London), the Sub-Dean, Lord High Almoner, Sub-Almoner, Clerk of the Queen's Closet, deputy-clerks, chaplains, priests, organists, and composer; besides violist and lutanist (now sinecures), and other officers; and until 1833, there was a "Confessor to the Royal Household." Each of the Chaplains in Ordinary preaches once a year in the Chapel Royal. The hours of service are 8 A.M. and 12 noon. There are seats for the nobility, admission-fee 2s. George III., when in town, attended this Chapel, when a nobleman carried the sword of state before him, and heralds, pursuivants-at-arms, and other officers, walked in procession; and so persevering was his attendance at prayers, that Madame d'Arbly, one of the robing-women, tells us, in November 1777, the Queen and family, dropping off one by one, used to leave the King, the parson, and His Majesty's equerry, to "freeze it out together." In this Chapel were married Prince George of Denmark and the Princess Anne; Frederick Prince of Wales and the daughter of the Duke of Saxe-Gotha; George IV. and Queen Caroline; and Queen Victoria and Prince Albert. Before the building of the Chapel at Buckingham Palace, Her Majesty and the Court attended the Chapel Royal, St. James's. The silver candelabra and other altar-plate are magnificent. The fittings of the Chapel and Palace for the last royal marriage cost 922*l*. The Chapel is supposed to be the same building that was used when St. James's Palace was first founded as an Hospital for fourteen leprous females.

In the *Liber Niger Domus Regni* (temp. Edward IV.) is an ordinance naming "Children of the Chapelle viij, founded by the King's privie cofferes for all that longeth to their apperelle by the hands and oversyghte of the deane, or by the master of song assigned to teache them;" such being the origin of the present musical establishment of the Chapel Royal. Ordinances were also issued for the *impressment of boys* for the royal choirs: in 1550, the master of the King's Chapel had licence "to take up from time to time children to serve the King's Chapel." Tusser, the "Husbandrie" poet, was, when a boy, in Elizabeth's reign, thus impressed for the Queen's Chapel. The Gentlemen and Children of the Chapel Royal were the principal performers in the religious dramas or *Mysteries*; and a "master of the children," and "singing children," occur in the chapel establishment of Cardinal Wolsey. In 1583, the Children of the Chapel Royal, afterwards called the Children of the Revels, were formed into a company of players, and thus were among the earliest performers of the regular drama. In 1731, they performed Handel's *Esther*, the first oratorio heard in England; and they continued to assist at oratorios in Lent, so long as those performances maintained their ecclesiastical character entire.

"Spur-money," a fine upon all who entered the chapel with spurs on, was formerly levied by the choristers at the doors, upon condition that the youngest of them could repeat his gamut; if he failed, the spur-bearer was exempt. In a tract dated 1593, the choristers are reprov'd for "hunting after spur-money;" and the ancient Cheque-book of the Chapel Royal, dated 1622, contains an order of the Dean, decreeing the custom. "Within my recollection," wrote Dr. Rimbault, in 1850, "the Duke of Wellington (who, by the way, is an excellent musician) entered the Royal Chapel 'booted and spurred,' and was, of course, called upon for the fine. But his Grace calling upon the youngest chorister to repeat his gamut, and the 'little urchin' failing, the impost was not demanded."—*Notes and Queries*, No. 30.

CHAPEL ROYAL, Whitehall, the Banqueting House of the Palace, designed by Inigo Jones, commenced June 1, 1619, finished March 31, 1622, cost 14,940*l*. 4*s*. 1*d*. The above hall was converted into a Chapel in the reign of George I., who, in 1724, appointed certain preachers, six from Oxford and six from Cambridge University, to preach in successive months on the Sundays, at a salary of 30*l*., through the year. The edifice has, however, *never been consecrated* as a Chapel, which fact was mentioned in the House of Commons by Sir Robert Inglis, several years ago, when it was proposed to use the Hall as a picture-gallery. It was shut up in 1829, and remained closed till 1837, during which interval it was restored and refitted, under the direction of Sir Robert Smirke, R.A. The lower windows were then closed up, the walls were hung with drapery (1400 yards of drugget), and the floor carpeted, to remedy the excessive echo. The Guards formerly attended Divine Service here; they now attend at the Chapel in Wellington Barracks, St. James's Park; and the gallery in which they sat at Whitehall has been removed. The organ originally placed here was sold by order of Cromwell, and is now in Stanford Church, Leicestershire; the present organ is of subsequent date. The hall is exactly a double cube, being 111 feet long, 55 feet 6 inches high, and 55 feet 6 inches wide. Over the principal doorway is a bronze bust of James I., attributed to Le Sœur; above is the organ-loft, and along the two sides is a lofty gallery. Above the altar were formerly placed eagles and other trophies taken from the French at Barossa, in Egypt, and at Waterloo; but they have been removed to Chelsea Hospital. The Whitehall ceiling is divided into panels, and painted black, and gilded in parts. These are lined with oil

pictures on canvas, painted abroad by Rubens in 1635, it is stated for 3000*l.*, by commission from Charles I. There are nine compartments: the largest in the centre, oval, contains the apotheosis of James I., who is trampling on the globe, and about to fly on the wings of Justice (an eagle) to heaven.\* On the two long sides of it are great friezes, with genii, who load sheaves of corn and fruits in carriages drawn by lions, bears, and rams: each of the boys measures 9 feet. The northernmost of the large compartments represents the King pointing to Peace and Plenty, embracing Minerva, and routing Rebellion and Envy; at the south end (the altar) the King is on the throne, appointing Prince Charles his successor. The four corner pictures are allegorical representations of Royal Power and Virtue. The whole are best viewed from the south end of the apartment. Dr. Waagen considers these pictures to have been principally executed by the pupils of Rubens: they have undergone restorations: in 1687, under the direction of Sir Christopher Wren; and about 1811, by Cipriani, who was paid 2000*l.* Vandyck was to have painted the sides of the Banqueting House with the history and procession of the Order of the Garter. Divine Service is performed in the Chapel on Sundays, Saints' Days, &c., the gentlemen and choristers of the Chapels Royal executing the musical service. The Maundy is distributed in this Chapel on the day preceding Good Friday, *Maundy Thursday*.—(See ALMONRY, p. 7.) The Royal closet is large and massive, situated on the right-hand side in the centre of the Chapel, opposite the pulpit. King William IV. and Queen Adelaide often attended this Royal Chapel, and it is said that the King was here present for the last time at a public service only six weeks before his death. The Royal closet is described in the reports as being within a few feet of the spot on which King Charles I. was executed. This is hardly correct; for, according to a memorandum of Vertue, on a print in the library of the Society of Antiquaries, through a window belonging to a small building abutting from the north side of the present Banqueting House, the King stepped upon the scaffold, "which was equal to the landing-place of the Hall within side." The *Boyle Lectures*, founded by the Hon. Robert Boyle for proving the truth of the Christian religion against notorious infidels are sometimes delivered in the Chapel Royal. For many years these lectures were delivered in the City churches, where scarcely half a dozen persons could be obtained to listen to them. The preachers are enjoined to perform the office following:—"To preach eight sermons in the year for proving the Christian religion against notorious infidels—viz., Atheists, Theists, Pagans, Jews, and Mahometans, not descending lower to any controversies that are among Christians themselves."

CHAPEL ROYAL, SAVOY, in the rear of the south side of the Strand, occupies a site granted by King Henry III., in 1245, to Peter Count of Savoy (hence its name) on his arrival to visit his niece Queen Eleanor. It was afterwards possessed by Edmund, Earl of Lancaster (1267), and John of Gaunt, during whose tenure of it the palace was destroyed; after which, being inherited by his son, Henry IV., it was vested in the Crown as part of the Duchy of Lancaster, and thus acquired its peculiar dignities and privileges as a Royal manor. An Hospital was erected in the Savoy under the will of Henry VII., and in the reign of Henry VIII. a perpetual Hospital was incorporated. This was one of the institutions declared to be illegal in the 1st of Edward VI., and it was given up to the King. It was re-established in the fourth year of Philip and Mary, but was converted into a military hospital and marine infirmary in the reign of Charles II., and shortly afterwards was used as a barrack. The Hospital was, therefore, declared to be dissolved in 1702.

Styrc, in his edition of Stow's *Survey*, 1755, says: "In the year 1687, Schools were set up and ordained here at the Savoy; the masters whereof were Jesuits;" the classes soon consisted of 400 boys, about one-half of whom were Protestants; the latter were not required to attend mass. All were taught gratis, buying only their own pens, ink, paper, and books; and in teaching no distinction was made, nor was any one to be persuaded from the profession of his own religion; yet they were generally successful in promoting the Roman religion. The Schools were, however, soon dissolved upon the ceasing of the government of King James. And the clock that was made for the use of the Savoy School, was bought and set up upon a gentleman's house in Low Layton. The College gave rise to many other schools in the metropolis: the Blue Coat School, in St. Margaret's, Westminster, is one of these. There is a contemporary ballad, entitled "Religious Reliques; on the Sale at the Savoy, upon the Jesuits breaking up their School and Chapel."—Printed in *Notes and Queries*, 2nd S., No. 14, Jan. 1856.

\* Rubens's original sketch is in the National Gallery, Trafalgar-square.

Several persons of note are buried here, and had figure monuments. Among them was one, in the chancel, of Sir Robert Douglas and his lady (seventeenth century). In a pointed niche was the figure of a lady kneeling—Jocosa, daughter of Sir Allan Apsley, Lieutenant of the Tower, sister of Mrs. Hutchinson. In the western wall, near the altar-piece, was an ornamental recess, in the back of which had been effigies incised in brass; and near this was a small tablet to the memory of Anne Killigrew, daughter of one of the Masters of the Savoy, and niece to the well-known jester. This was the lady described by Dryden as “A grace for beauty and a muse for wit.” Over the door was a small kneeling figure, with a skull in her hands, inscribed “Alicia Steward.” A recumbent figure was, it is thought, improperly named the Countess Dowager of Nottingham. Here, also, is a brass over the grave of Gawin Douglas, who translated Virgil; and here rest George Wither, the poet, without a monument; the Earl of Feversham, who commanded King James II.’s troops at the Battle of Sedgmoor; and Dr. Cameron, the last person who suffered for the Rebellion of 1745, to whom was erected a marble relief tablet by his great-grandson, in 1846, “one hundred years after the Battle of Culloden.” Here, also, was placed a tablet to the memory of Richard Lander, the traveller in Africa; and in the burial-ground is the tomb of Hilton, R.A., the historical painter, whose works were barely appreciated in his lifetime.

In the Chapel was a monument, rather sumptuous, erected about 1715, in honour of a merchant; the sole statement of the epitaph was, that he had bequeathed 5*l.* to the poor of the Savoy Precinct, and a like sum to the poor of the parish of St. Mary-le-Strand; while at the side, and occupying about half the breadth of the marble, the money was expressed in figures, just as in a page of a ledger, with lines single and double, perpendicular and, at the bottom, horizontal; the whole being summed up, and in each line two cyphers for shillings and one for pence. The epitaph concluded, “which sum was duly paid by his executors.”

The Savoy was last used as barracks and a prison for deserters until 1819, when the premises were taken down to form the approach to Waterloo Bridge. The roadway to the Bridge from the Strand, or Wellington-street and Lancaster-place, covers the entire site of the old Duchy-lane and great part of the Hospital. We see the river front of the Savoy in Hollar’s prints and Canaletti’s pictures; and Vertue’s ground-plan shows the Middle Savoy Gate, where Savoy-street now is; and the Little Savoy Gate, where now are Savoy-steps. Ackermann published a view of the ruins as they were in their last condition, before they were swept away. The pulling down of the ruins, in 1816, when the chapel was left isolated, was a work of immense labour, so massive was the masonry. Not the least amusing incident was that of the *gamins* picking out the softest parts of the Royal palace walls and cutting them into hearth-stones to clean hearths and the steps before doors!

The Chapel is a parochial benefice in the gift of her Majesty, in right of her Duchy of Lancaster; it was endowed by Henry VII., and the incumbent to this day receives an annual fee by Royal warrant. The interior dimensions of the chapel are 90 ft. by 24 ft.; its style English Perpendicular, late and plain, except the ceiling, which was rich and coloured, and one of the finest pieces of carved work in the metropolis.

It was wholly of oak and pear tree, and divided into 133 quatrefoil panels, each enriched with a carved ornament sacred or historical. The panels numbered twenty-three in the length of the chapel and six in its width. Ten of the ranges had each a shield in the centre presenting in high relief some feature or emblem of the Passion and Death of the Saviour; and all devised and arranged in a style of which there are many examples in sacred edifices in the fifteenth and sixteenth centuries. The panels throughout the rest of the ceiling contained bearings or badges indicating the various families from which the Royal lineage was derived, and more particularly the alliances of the house of Lancaster, each panel being surrounded by a wreath richly blazoned and tinted with the livery colours of the different families. For a long series of years they were hidden under repeated coats of whitewash, but in 1843 Mr. John Cochrane, a bookseller in the Strand, having been appointed chapel warden, brought his antiquarian knowledge to bear on the neglected ceiling, and it was restored.

The Savoy has a certain literary aspect: all Proclamations, Acts of Parliament and Gazettes, used to issue from the Royal Printing-press established in the precinct; and there Fuller lectured, if he did not write his *Worthies*. It was in the Chapel, also, that the memorable Conference between the Episcopalian and Presbyterian divines on the Book of Common Prayer was held in 1661. Here many of the bishops were consecrated, and among them Wil-on, Bishop of Sodor and Man, by Archbishop Sharpe, in 1698; and among those who have held the benefice was Dr. Anthony Horneck, the favourite chaplain of King William III.

The Savoy precinct became as notorious for thieves and beggars, as for the lame,

the sick, and the vagabond, who considered themselves privileged to claim succour from the Master of the Hospital of the Savoy, an office which was much coveted, and which Cowley struggled ineffectually to obtain. While the Dutch, German, and French congregations met quietly within the precinct, a favour which was originally owing to Charles II., all sorts of unseemly marriages were celebrated by the "Savoy parsons," there being five private ways by land to this chapel, and two by water. The Rev. Mr. Wilkinson, the father of Tate Wilkinson, the actor, for performing the illicit ceremony, was informed against by Garrick, and the reverend gentleman was transported. A letter to Lord Burleigh in 1581, as to an outbreak of rogues, states, "the chief nurserie of all these evell people is the Savoy, and the brick kilnes near Islington."

The Chapel was built, in 1505, of squared stone and boulders, with a low bell-tower and large Tudor windows; and, standing in a small burial-ground, amid a few trees and evergreens, it resembled the church of a rural hamlet; it was all that remained of the Hospital. Thither John, King of France, was brought prisoner from Poitiers by Edward the Black Prince; and there, in his "antient prison," King John died. The chapel was originally dedicated to the Saviour, the Virgin, and St. John the Baptist; but when the old church of St. Mary-le-Strand was destroyed by the Protector Somerset, the parishioners united themselves to the precinct of the Savoy, and the chapel, being used as their church, acquired the name of St. Mary-le-Savoy, though before the householders beyond the precinct were permitted to use it as their parish church they signed an instrument renouncing all claim to any right or property in the chapel itself. There is a tradition that when the Liturgy in the vernacular tongue was restored by Queen Elizabeth, the chapel of the Savoy was the first place in which the service was performed.

The Chapel Royal was restored chiefly through the instrumentality of George IV. The interior was destroyed by fire, but was repaired at the expense of Queen Victoria, in 1843; the fine ceiling was restored and emblazoned by Willement, by whom it has been minutely illustrated. Mr. Willement also reglazed the altar-window. In the lower centre was a figure of St. John the Baptist; the side compartments contained emblems of the other Evangelists; and in other parts were the ducal coronet, the red rose of Lancaster, and the lions, also fleurs-de-lis of the Plantagenet escocheon, and over all the inscription—"This window was glazed at the expense of the congregation, in honour of God, and in gratitude to our Queen Victoria." The altar-screen, said to have been the work of Sir Reginald Bray, was restored by Mr. Sydney Smirke, in 1843. In July, 1864, the Chapel was again destroyed by fire, save the walls; the fine altar-screen and window, the carved ceiling, and many of the old monuments, were entirely consumed. It has been rebuilt at a cost of about 5000*l.* (it was insured for 4000*l.*), under the superintendence of Mr. Sydney Smirke; the roof has been embellished much after the design of that which was destroyed, but different in detail; the great window over the altar has been magnificently painted, and a fine Organ erected at the southern end of the Chapel. Over the window is a Latin inscription to the effect that it was presented by the inhabitants of the precinct in 1843, destroyed with the chapel in 1864, and restored by Queen Victoria in memory of the Prince Consort in 1865. A beautiful font has been contributed by Mrs. De Wint, a parishioner; a carved oaken pulpit of chaste design has been presented by another parishioner, Mr. Burgess, of the Strand. The benefice is a "peculiar;" building un consecrated; clergy unlicensed. Her Majesty pays every current expense belonging to the chapel, its officers, and services.

On the Sunday following Christmas-day it has been customary to place near the door a chair covered with a cloth: on the chair being an orange in a plate. This curious custom at the Savoy has not been explained.

ST. ALBAN THE MARTYR, Baldwin's Gardens, Grays'-Inn-lane, was built and endowed at the sole expense of Mr. Hubbard, M.P. The site was given by Lord Leigh: Butterfield, architect; consecrated Feb. 20, 1863; the choir entirely from the parishioners of the district. The church comprises a clerestoried Nave and a Chancel, both with aisles, and a saddle-back tower at the west end. The building is of brick, with stone, alabaster, and terra-cotta dressings. Externally, the bricks are of the

ordinary stock brick character, with very slight bandings of red; and internally, red and yellow bricks are disposed in patterns mixed with stone; the latter being ornamented with incised scroll-work filled in with black mastic. The use of constructive polychrome, and the absence of carving, are characteristics of the edifice. At the west end is a narthex, or Galilee porch, supported by an arch of imposing span and height, and lighted by a noble west window. Here, according to the custom of the early churches, are the north and south doors. The Chancel is approached by two steps, and the altar is raised on a platform considerably higher. Over it is a large marble cross, enriched, let into the wall. The chancel walls are lined with alabaster, banded with tile, and ornamented with *niello* work. On the flat east end, above the second story, is a series of panels filled with ten water-glass pictures, designed by Le Strange, from Our Lord's life, the central place being occupied with a picture of the Annunciation. A low wrought-iron screen separates the Nave from the Chancel; and lofty iron parclosets divide the chancel from its aisles. The columns of the clerestory here, as in the Nave and in the arcading against the north and south walls of the aisles, are of red terra-cotta, in short lengths. The roof is of wood, ornamented with colour. The font has a rich character in design and form, and in the coloured stone of its inlaid work. In the Chancel is a brass lectern. The pulpit is of oak, simple in design, on a pedestal of stone and terra cotta. The entrance to the belfry story is by a staircase opening into the church at the centre of the west wall: over the door is inscribed, "I believe in one baptism for the remission of sins," under a sculptured bas-relief of the Last Supper. Incense and the vestments are used. Here is a tenor bell, one of an intended peal of eight. Near the entrance of the church is placed a drinking-fountain. The whole cost of the church, without the pictures, is about 15,000*l*.

ST. ALBAN'S, Wood-street, Cheapside, is stated to have been named from its belonging to the monastery of St. Albans. Stow thinks it to be "at least of as antient standing as King Adelstane the Saxon (925 to 941), who, as the tradition says, had his house at the east end of this church," and which gave name to Adel-street. Maitland supposes the church to have been one of the first places of worship built in London by Alfred, after he had driven out its destroyers, the Danes. It was rebuilt by Inigo Jones, but destroyed by the Great Fire, and again rebuilt by Wren in 1685, "Gothic, as the same was before the Fire," with clustered columns, flat pointed arches, and boldly groined roof. To the right of the reading-desk, within twisted columns, arches, &c., and in a frame richly ornamented with angels sounding trumpets, &c., is an hour-glass, such as was common in churches in the sixteenth and seventeenth centuries, "that when the preacher doth make a sermon, he may know the hour passeth away:" the hour-glass frame and the spiral column upon which it is mounted are of brass. Butler, in *Hudibras*, has :

As gifted Brethren preaching by  
A carnal Hour-glass do imply.—*Canto 3, v. 1061, and Note.*

The exterior of the church is ill designed, and has a pinnacled tower 92 feet high. The whole was restored in 1859, by G. Gilbert Scott, architect. The interior is wainscoted with Norway oak. One of the St. Alban's rectors, Dr. Watts, who died in 1649, assisted Sir Henry Spelman in his *Glossary*, and edited Matthew Paris's *Historia Major*.

ALLHALLOWS BARKING, at the east end of Great Tower-street, so called from having belonged to the Abbot and Convent of Barking, in Essex, narrowly escaped the Great Fire, which burnt the dial and porch, and vicarage-house. The church contains a curiously-carved communion-table, font-cover, and screen with altar-wreaths; and some funeral brasses of early date, among the best in London. The headless bodies of the poet Surrey, Bishop Fisher (More's friend), and Archbishop Laud, who were executed on Tower Hill, were interred in Allhallows Church and churchyard, but have been removed for honourable burial. The body of Fisher was carried on the halberds of the attendants, and interred in the churchyard.

There has been published, by the archæologist curate of this parish, *Berkynges Churche Juxta-Turrim*—collections in illustration of the architecture and monu-

ments, notices of vicars, &c. Much of the church is Perpendicular; the chancel-window is late Decorated. The whole building had a narrow escape at the Great Fire; for, as Pepys records, the dial and porch were burnt, and the fire there quenched.

Mr. Leyborne, in *Strype*, B. ii. p. 36, relates that over against the wall of Barking Churchyard, a sad and lamentable accident befel by gunpowder in this manner. At a ship-chandler's, upon Jan. 4, 1649, about seven o'clock at night, being busy in his shop barrelling up gunpowder, it took fire, and in the twinkling of an eye blew up, not only that, but all the houses thereabouts to the number (towards the street and in back alleys) of fifty or sixty. The number of persons destroyed by this blow could never be known, for the next house but one was the Rose Tavern, a house never (at that time of night) but full of company; and that day the parish dinner was at the house. And in three or four days after digging, they continually found heads, arms, legs, and half bodies, miserably torn and scorched, besides many whole bodies, not so much as their clothes singed. In the digging, strange to relate, they found the mistress of the Rose Tavern sitting in her bar, and one of the drawers standing by the bar's side, with a pot in his hand, only stified with dust and smoke; their bodies being preserved whole by means of great timbers falling across one another. Next morning there was found on the upper leads of Barking Church, a young child lying in a cradle, as newly laid in bed, neither the child nor the cradle having the least sign of any fire or other hurt. It was never known whose child it was, so that one of the parish kept it as a memorial; for in the year 1666 (says the narrator), I saw the child, grown to be then a proper maiden, and came to the man that had kept her all that time, where he was drinking at a tavern with some other company then present. And he told us she was the child that was so found in the cradle upon the church leads, as aforesaid. According to a tablet which hung beneath the organ gallery of the church, the quantity of gunpowder exploded in this catastrophe was twenty-seven barrels.

ALLHALLOWS, Bread-street, was built by Wren, in 1680: the old church, in which Milton was baptized, was destroyed in the Great Fire, but the register preserves the entry of the poet's baptism. Here was buried Alderman Richard Reed, who refusing to pay to "a benevolence" levied by Henry VIII., was sent to serve as a soldier, "both he and his men at his own charge," in the Northern wars. Reed was taken prisoner by the Scotch, and was glad to make his peace with the King, and purchase his ransom at a heavy rate. Laurence Saunders was rector of this parish in 1553. In Queen Mary's reign he preached most zealously against Romish errors, and was imprisoned fifteen months, degraded Feb. 4, 1555, and next day was carried to Coventry, where, on the 8th, he suffered martyrdom.

"There are but few residents in the parish, which is chiefly filled with warehouses, nearly every one of which has a padlock on the door on Sunday. The congregation usually averages nine!—*Mackeson*."

ALLHALLOWS THE GREAT AND LESS, Upper Thames-street, built in 1683, has a richly carved oak rood-screen the whole width of the church. It was manufactured at Hamburg, and presented in the reign of Queen Anne to the church by Hanse Merchants, who formerly resided in this parish in considerable numbers.

William Lichfield was Rector in 1440. He composed during his ministry 3083 sermons, which were found in his own handwriting, after his decease. Pepys speaks of Allhallows the Great as one of the first churches that set up the King's Arms before the Restoration, while Monk and Montague were as yet undecided. Theodore Jacobson, the architect of the Foundling Hospital, is buried here.

ALLHALLOWS, Honey-lane, a small parish church, in the ward of Cheap, on the site of Honey-lane Market; it was destroyed in the Great Fire, and not rebuilt. Here was buried John Norman, draper, Mayor, 1453, "the first Mayor that was rowed to Westminster by water, for before that they rode on horseback."—(*Stow*.) Thomas Garrard was Rector in 1537, and having circulated forbidden theological books, was attainted by Parliament, and burned in Smithfield, 1540.

ALLHALLOWS, Lombard-street, destroyed by the Great Fire and rebuilt by Wren in 1694, contains an exquisitely-sculptured white marble font; carved figures of Time and Death, in wood, besides a carved curtain, which seems to hide foliage behind it. The churchyard was closed in the cholera year, 1849, and laid out as a garden.

In 1590, one Peter Symons left 3*l*. 2*s*. 8*d*. to the parish of Allhallows, in order that, after a sermon and the usual morning service upon Whit-Sunday, a penny and a packet of plums should be given to sixty boys belonging to Christ's Hospital. Each lad receives a new penny and a packet containing about a quarter of a pound of plums. Another version of the Will states the distribution to be in the burying-ground in Old Bethlem to sixty poor people of the parish of St. Botolph, Bishopsgate. The penny loaves have increased to twopenny loaves, and the burial-ground of Old Bethlem has been invaded by railway companies. Of late years the loaves have been given away in the garden of Mr. Elwin. Gifts of bread, buns, and money, from a local source, are also then given to the charity children, and to many of the poorer inhabitants of the parish.

ALLHALLOWS STAINING, Mark-lane, escaped the Great Fire, and Stow thinks was

called Stane church to distinguish it from others in the City of the same name, built of timber. The tower and a portion of the west end alone are ancient. The Princess Elizabeth, on May 19, 1554, after her release from the Tower, performed her devotions in this church; and afterwards is said to have dined off pork and peas at the King's Head in Fenchurch-street, where a metal dish and cover used on the occasion are shown; and a commemorative dinner was held annually on Elizabeth's birthday, but discontinued thirty years since. The churchwardens' books contain payments for ringing the bells "for joye of ye execution of ye Queene of Scots:" also for the return of King James II. from Feversham; and, two days after, on the arrival of the Prince of Orange. In De Laune's *History of London*, published 1681, mention is made of charities connected with Allhallows Staining; and that "John Costin, a Girdler, who dyed 1244, gave the poor of the parish a hundred quarters of charcoals for ever."

ALLHALLOWS-IN-THE-WALL, Broad-street Ward, is named "of standing close to the wall of the City." (*Stow.*) It was built in the shape of a wedge, east end broadest, by Dance, jun., 1765, and contains an altar-picture, painted and presented by Sir N. Dance, of P. da Cortona's "Ananias restoring Paul to sight." The parish books (commencing 1455) record the benefactions of an "ancker," or hermit, who lived near the old church which escaped the Great Fire. Here is a tablet to the Rev. William Beloe, translator of Herodotus, and twenty years rector of this parish; his successor in the living was Archdeacon Nares, so well known by his *Glossary*.

ALL SAINTS BISHOPSGATE, Skinner-street, a Gothic church, built in 1830, at the expense of Bishop Blomfield, when rector of St. Botolph's.

ALL SAINTS, Kennington Park, W. White, architect, completed in 1853, presents in its materials stone of various colours, Devonshire marble, and different coloured tiles and brickwork; in the clerestory, part of each window-head is filled with mosaic work, instead of being pierced; and large squares of stained glass in place of the ordinary perishable quarry lights. This church owes its erection mainly to the munificence of the Rev. Dr. Walker, rector of St. Columb Major, after the model of whose beautiful church in Cornwall the church of All Saints is built.

ALL SAINTS, Knightsbridge, in the Lombardic or Byzantine style, by Vulliamy, consecrated 1849; incumbent, the Rev. W. Harness, one of the editors of *Shakspeare*; senior curate, the Rev. Mackenzie Walcott, author of *Memorials of Westminster*, 1819.

ALL SAINTS, Lower Marsh, Lambeth, built in 1846, in the Anglo-Norman style, has a tower and spire 160 feet high, and upwards of 100 feet from the body of the church, with which it is connected by a passage.

ALL SOULS, Langham-place, built by Nash in 1822-25, has been much ridiculed, but is suited to its angular plan; the circular tower, surrounded with Ionic columns, has a Corinthian peristyle above, and a stone cone or spire; it is well adapted to its situation, having the same appearance whichever way viewed. The surface is fluted, and the point finished with metal. The interior is formed on the model of the older churches in the Italian style, and is divided "by colonnades into nave and" aisles: it contains an altar-picture by Westall, R.A., of Christ crowned with thorns.

ALL SAINTS, Margaret-street, W. Butterfield, architect, was designed as a *model church*, in art-development, and "in strict conformity with all the distinctive tenets and limitations of the pure reformed church." The first stone was laid by the Rev. Dr. Pusey, on All Saints' Day (Nov. 1, 1850); and the conduct of the work was undertaken on his own responsibility by Mr. A. J. B. Beresford Hope, with a very limited number of subscriptions, one of which, however, is stated to have been 30,000*l.* from an anonymous benefactor. The ground, which includes the site of Margaret-street Chapel, was purchased chiefly by Mr. Hope for 10,000*l.* The church forms one side of a small court, two sides of which are formed by houses (schools and clergy house), connected with the church, and the fourth side opens to Margaret-street. It consists of a nave and chancel, with aisles to each: its length is 109 feet, its width 64 feet. The length of the nave internally is 63 feet 6 inches, and of the chancel, which is vaulted, 38 feet 6 inches. The external height of the building itself is 75 feet; and that of the tower and spire, one of the noblest features in the design, 227 feet.

The style of the entire mass is Early Middle Pointed, *i.e.*, the style of about A.D. 1300. The material of the whole is red brick, chequered, in the church itself, by mosaic patterns of black brick, and courses of Danby Dale stone; in the collegiate buildings by patterns of black brick, which is used, especially above the window arches, with great boldness. The court is separated from the road by an iron screen standing on a low perpendicular wall; the entrance is by a pedimented gateway, and immediately opposite a buttress is converted into a kind of churchyard cross. In its upper part it is ornamented with a sculpture of the Annunciation; above that, it carries a metal cross at the height of 55 feet. The tower is at the west end of the south aisle. Its union and harmony with the spire, and the treatment of the belfry windows, are, beyond comparison, finer than the Marien Kirche of Lubeck. The decoration of the tower consists principally of courses of Danby Dale stone, edged by a border of black brick, and relieved by a chevron of the same; mosaic patterns being introduced. The spire is broached; it is covered with slates, and relieved with bands of lead, and carries a very noble metal cross. It is (1866) the highest spire in London, being more elevated than that of Bow Church or St. Bride's.

The interior is the most gorgeous in the kingdom, and the one in which ecclesiological teaching has been most studiously followed; every part of it having been executed in accordance with mediæval precedent and symbolism. The Nave is divided into three bays, the south-western being inclosed so as to form a Baptistery. The clustered columns which support the arches of the Nave are of polished Aberdeen granite, with plinths of black marble, and boldly foliaged capitals of alabaster; the spandrels of the arches are inlaid with coloured stones and encaustic tiles in geometrical patterns. The roof is of wood in seven bays, painted of a chocolate colour relieved with white and pricked out with blue. The great Chancel arch is of alabaster; the wall above is inlaid with black, white, and coloured work, and has a large "cross of glory," in the centre. All the windows are of stained glass: the one of the south aisle and great window (the Root of Jesse) by Gerente of Paris, represent scriptural subjects. The clerestory windows are of geometrical patterns, by O'Connor. The pulpit is of coloured marble, and cost nearly 400*l.* The floor is laid with encaustic tiles; there are neither pews nor forms, but chairs are used.

The Chancel is mainly lined with alabaster and statuary marble; the arches dividing the Chancel from its aisles being filled with tracery of alabaster, resting on shafts of dark red serpentine; while on the ground-line of the sanctuary beyond, these rich materials are sculptured into canopied arcades, forming graceful sedilia. There is no east window, the entire end of the chancel above the altar being occupied by a series of fresco paintings by W. R. Dyce, R.A., on a diapered gold ground, and each in a canopied frame of alabaster; the detached shafts are of serpentine. In the lowest stage is "the Nativity;" the Madonna, with the infant in her lap occupies the centre; whilst three of the Apostles are in panels on either side. In the middle stage in the centre is a representation of "the Crucifixion," and the rest of the Apostles occupy the side panels; the upper space is devoted to a large representation of "the Celestial Court, with our Lord in Majesty in the centre," the Saviour being seated in front of an elliptical aureole, around which is a choir of angels, while below are Saints of the church, standing and kneeling in adoration. The upper portion of the Chancel is decorated with geometrical and mosaic work, in coloured marbles. The roof, which is externally more elevated than the nave, is groined in stone; the main ribs of the arches and vaulting are gilt; the low screen, which shuts off the altar, is of alabaster and coloured marble. The floor is laid with encaustic tiles. The Organ, divided into two parts, occupies portions of the Chancel aisles, the trackers passing under the floor. The Baptistery (the ground-floor of the tower) is ornamented with polished red granite, serpentine, and alabaster; the font is of coloured marble, resembling in style the pulpit. The ceiling contains a figure of the emblematic pelican. Throughout the building is a rich display of Gothic brasswork. The grilles dividing the chancel from the transept are light and graceful; the stalls are very unobtrusive and neat; the holy table is of various precious woods.

Mr. Butterfield's design and intention evidently was to produce a whole profusely but delicately coloured, bright and luminous, refreshing to the eye, and satisfying (if it comes to be reflected upon) to

the mind. The key-note of the colour was to be struck by the lovely natural marbles so largely used throughout the church; white was to be the foundation of the system, relieved indeed and decorated, but never overpowered, by the stronger and more decided hues, whether of marble, of paint, or of gilding, employed to surround it and give it force; the result is admirable. The low marble screen, chiefly of white and light brown marble; the side arches filled with tracery of serpentine and alabaster full of manly strength and beauty; the magnificent alabaster reredos; the general use of alabaster and green marble on the sides of the chancel, and alabaster and faintly coloured chalkstone in the groining, together with most of the encaustic tiles and the woodwork, are Mr. Butterfield's. The pillars carrying the vaulting are of green Mona marble, with alabaster capitals. The alabaster ribs are completely covered with gold, and have the effect of bars of simple metal; the capitals of the columns and large masses of the reredos are covered with gold. The church is not absolutely large. The height of the roof, however, increased to the eye by the use of white plaster between the carved beams; the broad and stately arches; the large, bold, and bright patterns inlaid upon the walls; all combine to create an impression of breadth and dignity altogether uncommon. The mingling of the coloured bricks, the white stone, the pink granite, and the alabaster arches and capitals, is very happy. The carvings of the capitals were long since remarked upon by Mr. Ruskin, with perfect justice, as unequalled in modern times.—Abridged from the *Guardian*.

The church is the parish church of a "Peel" parish, formed, in 1849, out of the district rectory of All Souls', St. Marylebone, in the perpetual patronage of the Bishop of London. Its present and first incumbent is the Rev. W. Upton Richards. The church was, in the main, finished in 1859, and is understood to have cost 70,000*l*. One of our ablest ecclesiologists, himself a leader among the exclusively Gothic architects of our time, Mr. G. E. Street, observes:—"Though I have a rather large acquaintance with English and foreign works executed since the revival of Pointed Art, I cannot hesitate for an instant in allowing that this church is not only the most beautiful, but the most vigorous, thoughtful, and original of them all."

ALL SAINTS, Poplar-lane, India-road, was first built in 1650-54, by subscription, on ground given by the East India Company, and was nearly rebuilt by them in 1776. It has a very good peal of ten bells. Here are monuments to Robert Ainsworth, the lexicographer; and Flaxman's sculpture in memory of George Steevens, the illustrator of Shakspeare: it is a bas-relief of Steevens earnestly contemplating a bust of our great Dramatic Bard; the poetical inscription is by Hayley.

ST. ALPHAGE, London Wall, escaped the Great Fire, and was rebuilt in the last century: it has a porch with sculptured heads and pointed arches, stated to be a remnant of the ancient Elsing Priory. Its registers record, within a few years, about forty persons in this parish who certified that they had been *touchèd* by Charles II. for the Evil.

ST. ANDREW'S, Canal-road, Kingsland-road, built of brick of divers colours, C. A. Long, architect, has a recessed porch at the west end, and a square tower and zinc spire at the east: opened 1865.

ST. ANDREW'S, Holborn, was rebuilt by Wren, upon the site of the old church, in 1686; the original tower (date Henry VI.), 110 feet high, was recased in 1704. It is one of the best placed churches in London: "for as the west end is nearly at the summit of Holborn-hill, the foundation was necessarily continued throughout on this level to the east end in Shoe-lane; so that the basement is there considerably elevated above the houses." (*Godwin*.) The interior is rich in gilding and stained glass.

The Organ was built from the famous instrument constructed by Harris for the Temple Church, part of which was sent to Christchurch Cathedral, Dublin, but was sold for 500*l*., and is now in Wolverhampton Church. When Dr. Sacheverell entered upon the living of St. Andrew's, he found that the organ, not having been paid for, had, from its erection in 1699, been shut up; when Sacheverell, by a collection amongst his parishioners, raised the amount, and paid for the instrument.

St. Andrew's has been called "the Poets' Church," from the sons of Song connected with it: John Webster, the dramatic poet, a late contemporary of Shakspeare, is said to have been parish-clerk here, but this is not attested by the register; Robert Savage was christened here, Jan. 18, 1696-7; the register records, Aug. 28, 1770, "*William*" (Thomas) "Chatterton," with "the poet" added by a later hand, interred in the burial-ground of Shoe-lane Workhouse, now the site of Farringdon Market; and in the churchyard lies Henry Neele, the gravestone bearing a touching epitaph written by him on his father. Among the eminent rectors of the church were Hacket and Stillingfleet, afterwards bishops; and Sacheverell, the partisan preacher, who is buried in the Chancel. In the south aisle is a tablet to John Emery, the comedian, d. 1822. Some of the registers date from 1558.

ST. ANDREW'S UNDERSHAFT, Leadenhall-street, nearly opposite the site of the East India House, is a Tudor church, before whose south side was set up on every May-day morning a long shaft or May-pole, which was higher than the church-steeple. It was last raised in 1517, on "Evil May-day," "so called of an insurrection made by apprentices and other young persons against aliens:" it was then hung on iron hooks over the doors and under the "pentices" of Shaft-alley, until 3rd King Edward VI., when one St. Stephen, a curate, preaching at Paul's Cross, "said that this shaft was made an idol, by naming the church of St. Andrew with the addition of 'under-that-shaft.'" Stow heard this sermon, and describes how the parishioners in the afternoon lifted the shaft from the hooks whereon it had rested thirty-two years, sawed it in pieces, "every man taking for his share so much as had lain over his door and stall, the length of his house; and they of the alley divided among them so much as had lain over their alley-gate" (*Stow*): and thus was this idol "mangled and after burned." The present church, rebuilt 1520-1532, consists of a nave and two side aisles, with ribbed and flattened roof, painted and gilt with flowers and shields. The Chancel has also paintings of the heavenly choir, landscapes, and buildings. St. Andrew's has much stained glass; and a large pointed window at the east end of the Nave contains whole-length portraits of King Edward VI., Queen Elizabeth, James I., Charles I., and Charles II. The church was *pewed* soon after 1520. It contains many brasses, tablets, and monuments, the most characteristic of which is that of John Stow, author of *A Survey of London* (1598). This monument is of terra-cotta, and was erected by Stow's widow; it contains the figure of the chronicler, once coloured after life: he is seated at a table, pen in hand, with a book before him, and a clasped book on each side of the alcove: above are the arms of Stow's Company, the Merchant Tailors'.

John Stow was born in the parish of St. Michael, Cornhill, in the year 1525. There is abundant proof that he was by trade a tailor. In 1549, he was dwelling near the well within Aldgate, now known as Aldgate pump; where the Bailiff of Rumford was, to use Stow's own words, "executed upon the pavement of my door, where I then kept house." Amidst the toils of business, Stow wrote his *Chronicles*, his *Annales*, and his *Survey*, a "simple and unadorned picture of London at the close of the 16th and commencement of the 17th century;" besides other works, printed and manuscript, which, to use his own words, "cost him many a weary mile's travel, many a hard-earned penny and pound, and many a cold winter night's study." He enjoyed the patronage of Archbishop Parker, the friendship of Lambarde, and the respect of Camden; yet he fell into poverty, and all he could obtain from his sovereign, James I., for the toil of near half a century, was a license to beg! Stow died a twelvemonth after, on the 6th of April, 1605, in the parish of St. Andrew Undershaft, and was buried on April 8: but, according to Maitland, in the year 1732, certain men removed Stow's "corpse, to make way for another." His collections for the *Chronicles of England*, occupying 60 quarto volumes, are now in the British Museum. Of the various editions of Stow's *Survey*, it may suffice to commend to the reader's notice the reprint from the edition of 1603, carefully edited by W. J. Thoms, F.S.A., 1842.

In a desk in this church are preserved seven curious old books, mostly in black letter, with a portion of iron chain attached to them, by which they were formerly secured under open cages.

ST. ANDREW BY THE WARDROBE, in Castle Baynard Ward, was named from its contiguity to the King's Great Wardrobe, destroyed in the Great Fire, and rebuilt by Wren, in 1692. Here is a monument, by the elder Bacon, to the Rev. William Romaine; the bust very good.

ST. ANDREW'S, Wells-street, Marylebone, built by Daukes and Hamilton, in 1845-7, is fine Early Perpendicular, and has a tower and spire 155 feet high: the Anglican musical service is fully performed here; seats free and open.

ST. ANNE'S, Blackfriars, was destroyed in the Great Fire, and not rebuilt. It was "pulled down with the Friars' Church, by Sir Thomas Cawarden, Master of the Revels; but in the reign of Queen Mary, he being forced to find a church for the inhabitants, allowed them a lodging chamber above a stair" (*Stow*). The parish register records the burial of Isaac Oliver, the miniature painter; Nat Field, the poet and player; Dick Robinson, the player; William Faithorne, the engraver. Van Dyck lived and died in this parish; his daughter was baptized the day her illustrious father died, December 9, 1641.

ST. ANNE'S, Limehouse, built by Hawksmoor, pupil of Wren, 1712-24, at a cost of 35,000*l.*, has a tower, with four angular turrets, and a more lofty one in the centre,

original and picturesque. At 130 feet high is the clock, put up by Messrs. Moore in 1839: it is the highest in the metropolis, not excepting St. Paul's, and has four dials, each 13 feet in diameter; the hours being struck on the great bell (38 cwt.), inscribed:

“At proper times my voice I'll raise,  
And sound to my subscribers' praise.”

The whole of the interior of the church, including a fine organ, was destroyed by an accidental fire on the morning of Good Friday, March 29, 1850; but has been judiciously restored.

ST. ANNE'S, Soho, was finished in 1686, and occupies a spot formerly called Kemp's Fields. It was dedicated to St. Anne in compliment to the Princess Anne of Denmark. The tower and spire were rebuilt about 1806 by the late S. P. Cockerell; the clock is a whimsical and ugly excrescence. The interior is very handsome, and has a finely-patterned window at the east end. In this church is a tablet to the memory of Theodore Anthony Neuhoff, King of Corsica, who died in this parish in 1756, soon after his liberation from the King's Bench Prison by the Act of Insolvency. The friend who gave shelter to this unfortunate monarch, whom nobles could praise when praise could not reach his ear, and who refused to succour him in his miseries, was himself so poor as to be unable to defray the cost of his funeral. His remains were therefore about to be interred as a parish pauper, when one John Wright, an oilman in Compton-street, declared, *he for once would pay the funeral expenses of a king*, which he did. The tablet was erected at the expense of Horace Walpole, who inscribed upon it

“The grave, great teacher, to a level brings  
Heroes and beggars, galley-slaves and kings;  
But THEODORE this moral learn'd ere dead;  
Fate pour'd its lesson on his living head,  
Bestow'd a kingdom, and denied him bread.”

In the church is buried David Williams, founder of the Literary Fund; and in the churchyard, William Hazlitt, the clever essayist. In the church are monuments to Sir John Macpherson, Governor-General of India, and William Hamilton, R.A., painter.

ST. ANTHONY'S (St. Antholin's or St. Antling's), in Budge-row, at the corner of Sise-lane, is of ancient foundation, being mentioned in the twelfth century. The church was rebuilt about 1399 and again 1513; and being destroyed in the Great Fire of 1666, was rebuilt by Wren in 1682, when the parish of St. John Baptist, Watling-street, was annexed to that of St. Antholin. The interior has an oval dome, supported on eight columns; and the carpentry of the roof is a fine specimen of Wren's constructive skill. The exterior has a tower rising directly from the ground, with an octagonal spire, terminating with a Composite capital, at the height of 154 feet. In 1559, there was established, “after Geneva fashion,” at St. Antholin's, an early prayer and lecture, the bells for which began to ring at five in the morning. This service is referred to by our early dramatists, and the preacher (a Puritan) and the bell of St. Antlin's were proverbially loud and lengthy. The chaplains of the Commissioners from the Church of Scotland to King Charles, in 1640, preached here: and “curiosity, faction, and humour,” drew such crowds, that on Sundays, from daybreak to nightfall, the church was never empty. The churchwardens' accounts present (in an unbroken series) the parish expenditure for nearly three centuries.

ST. AUGUSTINE'S, Watling-street, was destroyed in the Great Fire, and rebuilt by Wren, in 1682. The ancient church stood near the gate that led from Watling-street into St. Paul's churchyard. In 1387 (says Strype) was founded the fraternity of St. Austin's, in Watling-street (corrupted from St. Augustine's), who met in this church on the eve of St. Austin's, and in the morning at high mass, when every brother offered a penny, afterwards they were ready either “at mangier or at revele”—to eat or to revel, as the master and wardens of the fraternity directed. After the Great Fire, the parish of St. Faith-under-Paul's (so called because a part of the crypt of that cathedral was formerly their church) was united to St. Augustine's.

ST. BARNABAS', Queen-street, Pimlico, is a portion of a college founded on St. Barnabas' Day, 1846, including schools and residentiary house for the clergy, upon

ground presented by the first Marquis of Westminster. The buildings are in the Early Pointed style, Cundy, architect; and the church has a Caen-stone tower and spire 170 feet high, with a peal of ten bells, the gifts of as many parishioners. The windows throughout are filled with stained glass by Wailes, of Newcastle; the subjects from the life of St. Barnabas. The open roof is splendidly painted; the rood dividing the Choir from the Chancel, and other fittings, are entirely of oak; the lectern is a brass cagle: the superb altar-plate, the font, illuminated office-books, the *corona lucis* in the chancel, and other costly ornaments, are the gifts of private individuals. The funds were contributed by the inhabitants of the district of St. Paul, Knightsbridge, through the pious zeal of the Rev. W. J. E. Bennett, the incumbent. There is an organ by Flight, of great richness, variety, and power; and full choral service is performed. During the Anti-Papal agitation towards the close of 1850, this church was more than once the scene of disgraceful interruption by intolerant mobs, who, but for the intrepidity of the officiating clergy, would have set aside the right to undisturbed worship. The church was consecrated by the Bishop of London, on St. Barnabas' Day (June 11), 1850. The clergy and services are maintained by the offertory, as there is no endowment. In 1849-50, sermons were preached here by the Bishop of London (Blomfield), the Bishop of Oxford, Archdeacon Manning, the Regius Professors of Hebrew at Oxford and Cambridge (Dr. Mill and Dr. Pusey), Mr. Sewell (of Oxford), Mr. Paget, Mr. Gresley, Mr. Keble, Mr. F. Bennett, Mr. Kennaway, Mr. Neale, Mr. H. Wilberforce, Mr. Richards, Mr. R. Eden, and Mr. W. J. E. Bennett. The ancient practice of singing the Litany at a faldstool, at the entrance to the chancel, has here been revived, and in all other respects the most approved Catholic usages have been observed, in so far as they are applicable to our own ritual. The *stone* altar has been replaced by a wooden one,—a *table*.

ST. BARNABAS, Bell-street, Edgware-road, stands north and south, instead of east and west, owing to the peculiar form of the site. Over the altar is a metal cross, affixed to the wall, bearing in its centre a circular mosaic representing the Lamb, on a gold ground. Above the Chancel arch is a figure of the Saviour seated, painted in fresco; and the north window is of stained glass. A. W. Blomfield, architect.

ST. BARTHOLOMEW BY THE EXCHANGE, rebuilt by Wren after the Great Fire, mostly with the old masonry, was taken down in 1840: the tower was in eccentric taste, appearing as though the upper part had been blown down, and a door-way or window-frame been left on each side. Here was buried Miles Coverdale, our first translator of the Bible, whose remains were removed to St. Magnus' Church, London Bridge, on the taking down of St. Bartholomew's. This church has been rebuilt in Moor-lane, Cripplegate, under the direction of C. R. Cockerell, R.A. The interior details are Tuscan; the altar-piece, pulpit, &c., are richly-carved oak; and the communion end is lighted by a stained Catherine-wheel window. From the western door the whole interior to the east is discovered through a triumphal arch, formed by a novel and ingenious construction of the choir-gallery in front of the organ.

ST. BARTHOLOMEW THE GREAT, in West Smithfield, is part of the ancient Priory of St. Bartholomew the Great, founded about 1102, by Rahere, the King's Minstrel, who became first Prior. Originally, the church consisted of a low central tower, with four other towers, one at each of the angles of the edifice, and all crowned with conical spires. Of Rahere's church, founded as above, in the reign of Henry I., and finished about 1123, nothing remains but the Choir, with an aisle or procession-path surrounding its apsidal east end, the crossing (at the original intersection of the transepts), and one bay only—the easternmost one—of the Nave. These remains are coeval with the naves of the cathedrals of Durham, Norwich, and Peterborough. The original length of St. Bartholomew's seems to have been about 280 feet, and its breadth 60 feet—a little less than those of Rochester Cathedral. At the Dissolution of religious houses the Nave was pulled down, and the conventual buildings were disposed of to various persons. The Choir and Transepts were granted in 1544 to the parishioners, for their use as a parish church; and so remained till now—except that about the year 1628 the original tower was taken down and a new one built of brick. The Nave is supposed to have originally extended to the house-fronts in West Smithfield, where is the entrance-gate,

an excellent specimen of Early English, with the toothed ornament in its mouldings. Mr. Parker has, however, explained that the above gateway was not the doorway to the south aisle, as it had been considered. The grant of the Priory by Henry VIII. defines the Nave as it was then, "a void ground, 87 feet in length and 60 feet in breadth," and it was reserved as a churchyard, for which purpose it had been used to our time. The discrepancy of the present dimensions with those in the grant, it is remarkable had not before occurred to antiquaries. Mr. Parker has also explained that the size of the doorway and extent of the mouldings are altogether unsuited to the position assigned to them in the church. Here are the details:

At present the building is 132 ft. by 57 ft., and 47 ft. high, having an open timber roof, which is supposed to be equal in age to the building itself. The square brick tower at the end of the south aisle is 75 ft. high, and was erected in 1628. It contains five bells. The six bells belonging originally to the edifice were sold at the Dissolution of the monastery to the parish church of St. Sepulchre. On the east side of the south wing stood a beautiful chapel of the time of Edward III., with a large western archway, which was destroyed by fire in 1830. Attached to the east end of the church was a Lady Chapel, of Norman style, now a fringe manufactory, the side walls of which still remain. The prior's house, infirmary, refectory, dormitory, chapter-house, and cloisters originally surrounded the building. The walls of the chapter-house, of the time of Henry III., were remaining in 1809, as high as the window-sills. It had three arched entrances to the cloister, with arcades on the north and south sides. On the south side of the church is an oriel window built by Prior Bolton early in the 16th century, and supposed to have been used, like that at Worcester Cathedral, by the sacristan for the supervision of the lights burning at the altar. It is ornamented by the Prior's rebus, an arrow, or some such thing, inserted through a tun. The interior of the church contains several very ancient monuments in good preservation; among others the effigy and tomb of Rahere, the first prior, inserted within a screen; the Elizabethan tomb of Sir Walter Mildmay, Chancellor of the Exchequer, and founder of Emmanuel College, Cambridge, who died in May, 1589; and of Rycroft, the king's printer of the Polyglot. Le Sœur, the sculptor, and Milton lived in Bartholomew-close, hard by; and William Hogarth was baptized in the church in November, 1697.

Archer, in his *Vestiges of Old London*, has engraved the west gate of the Priory and that portion of it which is now the "Coach and Horses" public-house, at the entrance to Bartholomew-close, formerly the Priory close. The kitchen is now a dwelling-house, from which a subterranean passage communicated with the church. Mr. Archer identified the mulberry-garden from an old plan, and the decayed stump of a celebrated mulberry-tree was grubbed up just before his visit in 1842.

This church, the oldest beyond all question in the whole City of London, having been erected nearly 750 years ago, is about to be restored to its primitive grandeur at the cost of a large sum of money, under the direction of a Committee.

ST. BARTHOLOMEW THE LESS, St. Bartholomew's Hospital, West Smithfield, was formerly the Chapel of the Brotherhood of St. Bartholomew, and was founded by Rahere the first Prior, and contained a chapel for the poor. It escaped the Great Fire, but becoming dilapidated, was taken down, except the tower, and replaced by an octagon wooden building by Dance. This again was taken down, and a stone building erected, in 1823, by Hardwicke, R.A. During the operation, the arms of Edward the Confessor, in stone, were found under the tower (they are now in the Vestry), and as these arms were assumed by the Edwards, it is supposed that the old church was erected during one of their reigns. The tower contains very fine Norman and Early English arches and pillars; the piscina from the ancient church is used as a font. A beautiful Chancel has been built in the style of the Lady Chapels in Normandy; the reredos of marble and alabaster, as is also the pulpit, with bas-reliefs of the Sermon on the Mount; stained glass windows by Powell.—*Mackeson*.

ST. BENET, Gracechurch-street, is one of Wren's least attractive edifices, rebuilt after the Great Fire. The original church is mentioned as "S. Benedicti, Graschurch," in a survey made in the twelfth century; according to Stow, it was called Grass-church, to distinguish it from other churches of the same name, because that the *herb-market* was held opposite its western door. Weever mentions only one monument of early date (1491) in the church; but the parish books contain many curious entries. Thus, at the accession of Queen Mary, in 1553:—"Paid to a plasterer, for washing owte and defacing of such Scriptures as in the tyme of King Edward VI. were written aboute the chirche and walls, we being commanded to do so by y<sup>e</sup> Right Hon. y<sup>e</sup> lord bishop of Winchester, L<sup>d</sup> Chan<sup>r</sup> of England, 3s. 4d.;" and "Paid to the paynters for the making y<sup>e</sup> Roode, with Mary and John, 6l.;" while in the first year of Queen Elizabeth's reign, 1558, occur, "Payd to a carpenter for pulling down the Roode and Mary,

4s. and 2d.;" and "Paid three labourers one day for pulling down the altars and John, 2s. 4d." Later still, in 1642, were sold "the superstitious brasses taken off the grave-stones for 9s. and 6d." The tower of Wren's church, at the north-west angle, is, with the cupola and spire, 140 feet high. The interior of the church is a double cube of 60 feet by 30 feet, with a groined ceiling, crossed by bands. In the register is: "1559, April 14, Robert Burges, a common player." The yard of the Cross Keys Inn, Grace-church-street, was one of our early theatres.

ST. BENNET FINK, named from Robert Finke, the original founder (as also of Finch-lane adjoining), was destroyed in the Great Fire of 1666, rebuilt by Wren, but taken down in 1842-44. The remains were sold by auction, Jan. 15, 1846, when lot 12, the carved oak poor-box, with lock, &c. (date on the lock 1683), fetched four guineas; and lot 17, the carved and panelled oak pulpit, with sounding-board, &c., fifteen guineas. The paintings of Moses and Aaron, the carved and panelled oak fittings of the altar, marble floor, and the two tablets with inscriptions in gold, were purchased for 50*l.* The parish registers record the marriage of Richard Baxter, the celebrated Nonconformist, to Margaret Charlton, Sept. 10th, 1662; and the baptism of "John, the son of John Speed, merchant-tailor," March 10, 1608.

ST. BENNET, Paul's Wharf, or ST. BENET HUDE or HYTHE, was destroyed in the Great Fire, and rebuilt by Wren, in 1683. The burial register records Inigo Jones, the architect; Sir William Le Neve (Clarenceux); John Philpott (Somerset Herald); and William Oldys (Norroy). Inigo Jones's monument (for which he left 100*l.*) was destroyed in the Great Fire. Elias Ashmole, the antiquary, was married to his first wife in this church.

ST. BENNET SHEREHOG, or SYTH, Ward of Cheap, was destroyed in the Great Fire, and not rebuilt. Stow says its most ancient name is Shorne, from one Robert Shorne, citizen and stock-fish monger, "a new builder, repairer, or benefactor thereof, in the reign of Edward II.;" so that Shorne is but corruptly Shrog, or more corruptly, Sherehog.

ST. BOTOLPH WITHOUT ALDERSGATE escaped the Great Fire, and was rebuilt in 1796. Here are monuments to Dame Anne Packington, believed to have written *The Whole Duty of Man*; Elizabeth, wife of Sir Thomas Richardson; Elizabeth Smith, with cameo bust by Roubilliac; and a tablet to Richard Chiswell, bookseller.

ST. BOTOLPH, ALD GATE, at the corner of Houndsditch, opposite the Minories, was rebuilt by G. Dance, 1741-44. It contains monuments of good sculpture to Lord Daere, beheaded 1537; and Sir Nicholas Carew, of Beddington, beheaded 1538; also an effigies monument to Robert Dowe, who left the St. Sepulchre's Bell, &c. (*see* p. 48). In the churchyard is a tomb inscribed with Persian characters, of which Stow gives the following account:—

"August 10, 1626. In Petty France [a part of the cemetery unconsecrated], out of Christian burial, was buried Hodges Shaughsware, a Persian merchant, who with his son came over with the Persian ambassador, and was buried by his own son, who read certain prayers, and used other ceremonies, according to the custom of their own country, morning and evening, for a whole month after the burial; for whom is set up, at the charge of his son, a tomb of stone with certain Persian characters thereon, the exposition thus:—This grave is made for Hodges Shaughsware, the chiefest servant to the King of Persia for the space of twenty years, who came from the King of Persia, and died in his service. If any Persian cometh out of that country, let him read this and a prayer for him. The Lord receive his soul, for here lieth Maghmote Shaughsware, who was born in the town Novoy, in Persia."—*Stow's Survey*, ed. 1633, p. 173.

ST. BOTOLPH'S is situate *without* the walls of London, near one of the ancient entrances to the City, supposed to have been built by a bishop, and thence called Bishopsgate. The old church narrowly escaped the Great Fire of 1666; it was rebuilt in 1725-29 by James Gold; its peculiarity is, that the tower rises at the east end, in Bishopsgate-street, and the lower part forms the chancel. The living, valued at 1650*l.*, with a Rectory-house, is the richest in the City and Liberties of London. The Crown exercises the right of patronage in consequence of having raised the then rectors to the Episcopal Bench. Dr. Blomfield (the late Bishop of London) was rector from 1820 until his consecration as Bishop of Chester in 1828; and Dr. Grey was rector from 1828 until his consecration as Bishop of Hereford in 1832. In the chancel is the monument to Sir Paul Pindar, whose residence in Bishopsgate-street Without is now

the Sir Paul Pindar's Head public-house. He was a rich merchant (*temp.* James I, and Charles I.), and like many other good subjects, was ruined by his attachment to the latter monarch. He was charitable and hospitable, and often gave "the parish venison" for public dinners: yet the parishioners made him pay for a license for eating flesh. Sir Paul presented the parish yearly with a venison pasty; for in 1634 we find charged in the parish book 19s. 7d. for the mere "flour, butter, pepper, eggs, making, and baking." Another curious entry is in 1578: "Paid for frankincense and flowers, when the Chancellor sate with us, 11s.

The ecclesiastical custom of a new Rector "tolling himself in," or, legally speaking, taking up "the livery of possession," was performed by the Rev. William Rogers, M.A., the present Rector, with the formalities described at p. 46, BELLS. The "reading himself in" took place on the following Sunday. The above induction custom seems to imply the general authority of the Rector over the peal of bells; and there is an old saying, that the number of strokes given on the occasion will correspond with the years the incumbent is to hold the living.

BOW CHURCH, see St. MARY-LE-BOW, page 183.

ST. BRIDE'S, or St. Bridget, Fleet-street, was built by Wren, upon the site of the old church, destroyed in the Great Fire. It was completed in 1703, cost 11,430*l.*, and is remarkable for its graceful steeple. "Ye first stone was layed on the 4th day of October, 1701, and was finished, and the wether-cocke was put up in September, 1703; it being in height 234 feet 6 inches from the surface of ye earth to ye top of the cross, ye wether-cocke from ye dart to ye end is 6 feet 4 inches." In June 1764, this beautiful steeple was so damaged by lightning, that it was found requisite to take down eighty-five feet of the stone-work, and in restoring it, the height was lowered eight feet: the whole cost was 3000*l.* In 1803 the steeple was again struck by lightning: "The metal vane, the cramps with which the masonry was secured, and the other ironwork employed in the construction, led the electric fluid down the steeple, in the absence of any continued or better conductor; and as at each point where the connexion was broken off, a violent disruption necessarily ensued, the stonework was rent in all parts and projected from its situation. One stone, weighing nearly eighty pounds, was thrown over the east end of the church, and fell on the roof of a house in Bride-lane; while another was forced from the bottom of the spire, through the roof of the church, into the north gallery." (Godwin's *Churches of London*, vol. ii.) The *Philosophical Transactions* for 1764 also contains two scientific investigations of the above damage. The upper part was, for a long time, preserved on the premises of a mason in Old-street Road. The entire spire is one of Wren's most beautiful designs, and consists of four stories, the two lower Tuscan, the third Ionic, and the fourth Composite, terminating in an obelisk, with a ball and vane. In height and lightness it approaches nearer to the exquisite spires of the Pointed style than any other example; the details, however (in Portland stone), are hastening to decay. In the north face of the tower is a transparent clock-dial, first lit with gas in 1827, and one of the earliest in the metropolis. In the tower is a peal of twelve bells (*see* p. 47); and the Organ, by Harris, is good. The interior is handsome: the great eastern window, above the altar, is filled with a copy, in stained glass, of Rubens's "Descent from the Cross," in Antwerp Cathedral: this was executed by Muss in 1824-5, and is a fine production. The marble font bears the date 1615. Richardson, the author of *Clarissa Harlowe*, and who printed his own novels in Salisbury-square, is buried in the church; and in the vestibule, beneath the tower, is a tablet to Alderman Waitman (interred here), who sat in five Parliaments for the City of London. The registers of St. Bride's were saved at the destruction of the first church: they commence from 1587: and the vestry-books, which date from 1653, minutely chronicle the Great Fire, a relic of which is the doorway into a vault, to the right of the entrance from Bride-passage. In the old church were buried Wynkin de Worde, whose printing-office was in Fleet-street; Thomas Sackville, Earl of Dorset (d. 1608), the poet, who commenced *The Mirrour for Magistrates*; Sir Richard Baker, the chronicler, who died in the Fleet Prison, 1644-5; Richard Lovelace, the poet, who died a broken cavalier, "very poor in body and purse," in Gunpowder-alley, Shoe-lane, in 1658. The register also records the burial of Ogilby, the translator of Homer (d. 1676); Mary Carlton, or Frith, the "English Moll" of *Hudibras*, alias Moll Cutpurse, an infamous cheat and pick-pocket, hanged at Tyburn 1672-3; also, the burial of Flatman, the poet and painter:

Flatman, who Cowley imitates with pains,  
And rides a jaded Muse whipt with loose reins.  
*Lord Rochester.*

The present church and much of its elegant spire, were hidden by houses until after a destructive fire in Bride-passage on Nov. 14, 1824, when an avenue was opened from Fleet-street: it was designed by J. B. Papworth; this improvement cost 10,000*l.*, of which Mr. Blades, of Ludgate-hill, advanced 6000*l.*

One of Milton's London abodes was in St. Bride's churchyard: here, after his return from Italy, he lodged with one Russel, a tailor, and devoted himself to the education of his nephews, John and Edward Phillips, and to the politics of the day. Thence, however, he soon removed to "a pretty garden-house" in Aldersgate-street.

BRITISH AND FOREIGN SAILORS' CHURCH (the) was opened April 30, 1845, in the Danish Church, Wellclose-square, Ratcliffe Highway. An inscription over the entrance states it to have been built in 1696, by Caius Gabriel Cibber, the sculptor, at the cost of Christian V., King of Denmark, for such merchants and seamen, his subjects, who visited the port of London. The architect and his son, Colley Cibber, are buried in the vaults; and in the church is a tablet to Jane Colley. The pulpit has four sand-glasses in a brass frame, by which preachers formerly regulated the length of their sermons.

CAMDEN CHURCH, Camberwell, has a Byzantine Chancel, G. G. Scott, R.A., architect. The stained glass window is by Ward, Frith-street, assisted by hints from Mr. Ruskin (a member of the congregation). The carving and decorations throughout the church are good.

CATHERINE CREE (or Christ Church), on the north side of Leadenhall-street, was rebuilt in the year 1629, and consecrated by Laud, Bishop of London, Jan. 16, 1630-31; when persons were stationed at the doors of the church to call with a loud voice on his approach, "Open, open, ye everlasting doors, that the King of Glory may enter in." When Laud had reached the interior, he fell on his knees, and lifting his hands, exclaimed, "This place is holy, the ground is holy; in the name of the Father, Son, and Holy Ghost, I pronounce it holy;" then throwing dust from the ground into the air, he bowed to the Chancel, and went in procession round the church. These and other ceremonies, fully described in Rushworth, were made grave accusations against Laud, and brought about his death. The present church is debased Gothic and Corinthian. Among the monuments removed from the old church is a canopied figure of Sir Nicholas Throgmorton (d. 1570), from whom Throgmorton-street is named. By the Will of Sir John Gager, Lord Mayor in 1646, provision is made for a sermon to be annually preached on the 16th of October, in St. Catherine Cree Church, in commemoration of his happy deliverance from a lion, which he met in a desert whilst travelling in the Turkish dominions, and which suffered him to pass unmolested.

The old church was the reputed burial-place of Holbein, upon which Mr. W. H. Black, F.S.A., remarks, in connexion with the recent discovery of the great Painter's Will:—

Walpole observes that "the *spot* of his (Holbein's) *interment* was as uncertain as that of his *death*;" and he might have added (if the circumstances of the "Plague" had been considered)—1554 was not a Plague year—of the *time* of his death also. He alluded to Strype's story of Lord Arundel's desire to erect a monument to the painter's memory. Strype's words are (speaking of St. Catherine Cree Church):—"I have been told that Hans Holbein, the great and inimitable painter in King Henry VIII.'s time, was buried in this church; and that the Earl of Arundel, the great patron of learning and arts, would have set up a monument to his memory here had he but known whereabouts the corpse lay." So uncertain is tradition, that, although this rumour must have originated in a knowledge of the neighbourhood where Holbein died, yet a wrong place is assigned for his burial; for Cree Church and Undershaft are situate in the same street, on the same side of the way, and within 200 yards of each other. The beautiful pile of Undershaft escaped the Fire of London, but the register from 1538 to 1579 inclusively, has not been preserved; and if it were extant who would believe that a John Holbein, dying and buried in 1543, was the Hans Holbein whose life had been prolonged by all biographers to 1554, unless upon the infallible testimony of the Will now brought to light?—*Archæologia*, vol. xxxix.

ST. CHAD, Haggerston, has all seats free: "*altar cross, and lights* at every celebration of the Holy Communion."—*Mackeson*.

CHRIST CHURCH, Broadway, Westminster, was designed in 1842, in the Early

Pointed style, by Poynter; upon the site of the former New Chapel: the spire not built. It has some good stained glass by Willement, especially in the centre window. The New Chapel was built about 1631; Archbishop Laud contributing to the funds 1000*l.* and some most curious glass. At the Rebellion, Sir Robert Harley defaced the window, laid the painted glass in heaps upon the ground, and trod it to pieces, calling his sacrilegious antics "dancing a jig to Laud." The troopers of the Commonwealth stabled their chargers in the church aisles; and Cromwell and his officers are said to have used it as a council-room. In the adjacent ground was buried Sir William Waller (d. 1688), the famous Parliamentary General in the Civil Wars. On June 26, 1739, Margaret Patten was interred here, at the age of 136 years (?): she was born at Lochborough, near Paisley, and was brought to England to prepare Scotch broth for King James II.; but after his abdication she fell into poverty, and died in St. Margaret's Workhouse, where her portrait is preserved. "None would recognise the description given of this burial-ground—now so crowded upon by houses—towards the beginning of the last century, that it was 'the pleasantest churchyard all about London and Westminster.'"—(*Walcott's Westminster*, p. 286.)

CHRIST CHURCH, Clapham, of Gothic geometrical design, by Ferrey. "Incense and the vestments are used; this was the first church in London at which they were used."—*Mackeson*.

CHRIST CHURCH, Down-street, Piccadilly, a stone building; Messrs. Francis, architects; style, "Middle Pointed French Gothic;" only the eastern half built.

CHRIST CHURCH, Highbury, designed by T. Allom, in 1848, has a tower and spire in the angle between the North Transept and Nave, the spire having gabled and crocketed lucarnes. Internally, the plan is equally novel, in the centre becoming an octagon of eight arches, so as to allow the pulpit and reading-desk, placed against the pillars of the Chancel arch, to be distinctly seen from all parts of the church.

CHRIST CHURCH, Newgate-street, was built by Wren between 1687 and 1704, and occupies part of the site of the ancient Grey Friars' Church, destroyed by the Great Fire of 1666. The tower rises directly from the ground, and with the steeple is 153 feet high; the basement-story being open on three sides, and forming a porch to the church. A large gallery at the west end is appropriated for the Christ's Hospital Boys; and here, since 1797, have been preached the "Spital Sermons." In 1799, the Spital Sermon on Easter Tuesday was preached by the celebrated Dr. Parr, who occupied nearly three hours in its delivery.

The Spital Sermons originated in an old custom by which some learned person was appointed yearly by the Bishop of London to preach at St. Paul's Cross, on Good Friday, on the subject of "Christ's Passion;" on the Monday, Tuesday, and Wednesday following, three other divines were appointed to uphold the doctrine of "The Resurrection" at the Pulpit Cross in the "Spital" (Spitalfields). On the Sunday following, a fifth preached at Paul's Cross, and passed judgment upon the merits of those who had preceded him. At these Sermons, the Lord Mayor and Aldermen attended; ladies also on the Monday forming part of the procession; and at the close of each day's solemnity, his Lordship and the Sheriffs gave a private dinner to such of their friends among the Aldermen as attended the Sermon. From this practice, the civic festivities at Easter were at length extended to a magnificent scale. The children of Christ's Hospital took part in the above solemnities; so that, in 1694, when it became necessary to rebuild the Pulpit Cross at the Spital, a gallery was erected also for their accommodation. In the Great Rebellion, the pulpit was destroyed, and the Sermons were discontinued till the Restoration; after which, the three Spital Sermons, as they were still called, were revived at St. Bride's Church, in Fleet-street. They have since been reduced to two, and from 1797 have been delivered at Christ Church, Newgate-street. It was on their first appearance at the Spital that the children of Christ's Hospital wore the blue costume by which they have since been distinguished. Instead of the subjects which were wont to be discussed from the Pulpit Cross of St. Mary's Spital, discourses are now delivered commemorative of the objects of the five sister Hospitals; and a Report is read of the number of children maintained and educated, and of sick, disorderly, and lunatic persons for whom provision is made in each respectively. On each day, the Boys of Christ's Hospital, with the legend "He is risen" attached to their left shoulders, form part of the civic procession; walking on the first day in the order of their schools, the King's Boys bearing their nautical instruments; and on the second, according to their several wards, headed by their nurses.—Abridged from the Rev. Mr. Trollope's *History of Christ's Hospital*.

CHRIST CHURCH, Poplar, cruciform, with spire, was built at the expense of Alderman William Cubitt, twice Lord Mayor; some stone from old London Bridge was used in the building: it has five bells and a good organ.

CHRIST CHURCH, Spitalfields (originally a hamlet of St. Dnnstan's, Stepney), was

built by Hawksmoor, a pupil of Wren, and consecrated July 5, 1729. It is entirely of stone, very massive, and has one of the loftiest spires in London, 225 feet high, or 23 feet higher than the Monument. It contains a peal of 12 bells, scarcely inferior in power and sweetness to any in the kingdom; the tenor weighing 4928 lbs. It has a large organ, the masterpiece of Bridge, containing 2126 pipes. Here is a monument to Sir Robert Ladbrooke, a whole-length figure, in the full dress of Lord Mayor: one of the early works of Flaxman. This church was greatly injured by fire on Feb. 17, 1836, shortly after the parishioners had finished paying 8000*l.* for repairs. On the morning of Jan. 3, 1841, the spire and roof of the church were greatly damaged by lightning, at ten minutes before seven, when the clock stopped. The lightning struck the cone, or upper part of the spire; thence it descended to a room above the clock-room, forcing the trap-door from the hinges down to the floor, melting the iron wires connected with the clock, scorching the wooden rope-conductors, breaking many of the windows, and making a considerable fracture in the wall, where the lightning is supposed to have escaped. The roof was partially covered with large stones, which broke in the lead-work by their weight in falling; and the lead near the injured masonry was melted in several places.

ST. CLEMENT'S, Eastcheap, Clement's-lane, City, is of uncertain foundation: it was rebuilt, except the south aisle and steeple, in 1658, but destroyed in the Great Fire; after which it was rebuilt by Wren in 1686, and made to serve the two districts of St. Clement and St. Martin Orgar, which church stood in St. Martin's-lane. The tower remains to this day, and serves as an entrance to the site of the old church, occupied as a burial-ground for the united parishes. St. Clement's Church has little that is noteworthy; but the parishioners were satisfied with its architect: for we find in the Register-book, date 1685, "To one-third of a hogshead of wine given to Sir Christopher Wren, *4*l.* 2*s.**" The tower is 88 feet high. The church has a fine organ, and an elaborately carved pulpit and desk, and sounding-board; and a marble font, with a curious oak cover. In the list of rectors is Dr. Benjamin Stone, presented to the living by Bishop Juxon in 1637; but deemed popishly affected, and declared unfit to hold office, in Cromwell's time, and confined in Crosby Hall; thence removed to Plymouth, and set free by paying 60*l.* fine: but Stone recovered his benefice in 1660. Another celebrated rector was Bishop Pearson, who, in the old church, delivered the Lectures forming his *Exposition of the Creed*, which, when published in 1653, he dedicated to the parishioners of St. Clement, Eastcheap; the work is to this day used as a text-book in the examination of candidates in divinity. Among the former organists at this church were Purcell, Battishill, and Whitaker.

ST. CLEMENT'S DANES, Strand, the first church west of Temple Bar, is said by Stow to have been so called "because Harold, a Danish king, and other Danes, were buried there." Strype gives another reason: that the few Danes left in the kingdom married English women, and compulsorily lived between Westminster and Ludgate; and there built a synagogue, called "*Ecclesia Clementis Danorum.*" This account Fleetwood, the antiquary, Recorder of London in the reign of Elizabeth, reported to the Lord Treasurer Burleigh, who lived in this parish. The body of the old church was taken down in 1680, and rebuilt to the old tower in 1682, by Edward Pierce, under the gratuitous directions of Wren, as recorded on a marble slab in the north aisle. In 1719, Gibbs added the present tower and steeple, about 116 feet high, with a peal of ten bells. The clock strikes the hours twice, "the hour being first struck on a larger bell, and then repeated on a smaller one, so that has the first been miscounted, the second may be more correctly observed." (A. Thomson's *Time and Timekeepers*, p. 77.) In addition to the clock is a set of chimes, which play the old 104th Psalm, though somewhat crazily. In the church are buried Otway and Nat Lee, the dramatic poets; and Rymer, compiler of the *Fœdera*, &c.

Dr. Johnson was a constant attendant at the service of St. Clement's Danes, in one of the pews of which (No. 18), in the north gallery, he had a seat for many years against the large pillar at the end, which bears the following inscription, written by the Rev. G. Croly, LL.D., Rector of St. Stephen's, Walbrook:—

"In this pew and beside this pillar, for many years attended Divine Service, the celebrated Dr. Samuel Johnson, the philosopher, the poet, the great lexicographer, the profound moralist, and chief

writer of his time. Born, 1709; died, 1784. In remembrance and honour of noble faculties, nobly employed, some inhabitants of the parish of St. Clement Danes have placed this slight memorial, A.D. 1851."

ST. CLEMENT'S, Islington, of Gothic design, G. G. Scott, R.A., architect, was erected at the sole expense of George Cubitt, Esq., M.P.: it has three good bells; organ by Walker; and stained windows in the Chancel by Clayton and Bell.

ST. CLEMENT'S, York-place, Barnsbury, is a spacious brick church, designed by G. G. Scott, R.A., and built at the expense of George Cubitt, Esq., M.P.; cost nearly 8000*l.*; opened 1865. The west front is striking; it is lofty, has a good doorway, over which are lancet windows, and above these a well-carved seated statue of St. Clement, within a niche; whilst the gable is crowned by a stepped open bell-cote, having two large bells in the lower and a smaller one in the upper stage. The interior is spacious; the Nave, of six bays, is divided from the aisles by cylindrical stone columns, which support tall brick arches, and a clerestory with triplet lancet windows over each arch. The Chancel is similarly lighted, and has a painted oval light, filled, like the windows below, with painted glass. The Chancel arch is noble, and the roof an open timber one, of high pitch: the walls are of plain yellow brick.

ST. DIONIS' BACKCHURCH (behind the line of Fenchurch-street), is the third church upon this site, and was rebuilt by Wren after the Great Fire of 1666: it has a tower 90 feet high. In the vestry-room are preserved four of the large syringes, at one time the only engines used in London for the extinction of fires; they are about 2 feet 3 inches long, and were attached by straps to the body of the fireman. The organ, for which, in 1722, the sum of 741*l.* 9*s.* was subscribed, was built by Byfield, Jordan, and Bridge: "this magnificent instrument is in its original state."—(*Dr. Rimbault.*) There is a peal of ten bells, for which, in 1727, a sum of 479*l.* 18*s.* was subscribed.

ST. DUNSTAN'S-IN-THE-EAST, between Tower-street and Upper Thames-street, was nearly destroyed in the Great Fire of 1666, and was restored by Wren in 1698: it has a stone tower and spire, supported on four arched ribs, springing from the angles of the tower: this is Wren's best work in the Pointed style; but it generally resembles the spire of St. Nicholas' Church, at Newcastle-upon-Tyne, built in the fifteenth century. John Carter, however, says:—"St. Nicholas's tower is so lofty, and of such a girth, that, to compare great things with small, our London piece of vanity is but a mole-hill to the Newcastle 'mountain,' the pride and glory of the northern hemisphere." There is a tradition, that the plan of St. Dunstan's tower and spire was furnished by the architect's daughter, Jane Wren, who died in 1702, aged 26, and was buried under the choir of St. Paul's Cathedral. Lady Dionysia Williamson, in 1670, gave 4000*l.* towards the rebuilding of St. Dunstan's. After the dreadful storm in London through the night of the 26th November, 1703, Wren hearing next morning that some of the steeples and pinnacles had been damaged, quickly replied, "Not St. Dunstan's, I'm quite sure." The old church had a lofty leaden steeple. The body of the present church was rebuilt of Portland stone, in the Perpendicular style, by Laing and Tite, in 1817. The interior is divided into three aisles by clustered columns and pointed arches. The east window represents symbolically the Law and the Gospel; the north, Christ Blessing Little Children; and the south, the Adoration of the Magi. In the vestry is a wood carving, by Gibbons, of the arms of Archbishop Tenison. In the south churchyard is a Rookery.

ST. DUNSTAN'S-IN-THE-WEST, Fleet-street, was designed by John Shaw, F.R.S. and F.S.A., in 1831-33, set back 30 feet from the site of the former church, which projected considerably beyond the street-line. It just escaped the Great Fire of 1666, which stopped within three houses of it; as did also another fire in 1730. A View in 1739 shows the oldest portion to be the tower and bell-turret, the latter containing a small bell which was rung every morning at a quarter before seven o'clock. The body of the church is Italianized Gothic, with battlements and circular-headed windows; shops with overhanging signs are built against the south and west walls, though previously the churchyard was thus built in, and was a permanent station for booksellers, as appears by many imprints. Thus, "Epigrams by H. P.," &c.—"and are to be soulde by John Helme, at his shoppe in St. Dunstan's Churchyarde, 1608, qto." John

Smethwick had "his shop in St. Dunstan's churchyard, in Fleet-street, under the Diall;" and here, in 1653, Richard Marriott published the first edition of Walton's *Angler*, for 18*d*. The church clock was one of London's wonders: it had a large gilt dial, overhanging Fleet-street, and above it two figures of savages, of life-size, carved in wood, and standing within an alcove, each bearing in his right hand a club, with which they struck the quarters upon two suspended bells, moving their heads at the same time. This clock and figures were the work of Mr. Thomas Harrys, in 1671, then living at the lower end of Water-lane, who received for his work 35*l*. with the old clock, and the sum of 4*l*. per annum to keep the whole in repair.\* Originally the clock was within a square ornamental case with a semicircular pediment, and the tube from the church to the dial was supported by a carved figure of Time, with expanded wings, as a bracket; when altered, in 1738, it cost the parish 110*l*. Strype calls the figures "two savages, or Hercules;" Ned Ward, "the two wooden horologists;" and Cowper, in his *Table Talk*, likens a lame poet to—

"When labour and when dulness, club in hand,  
Like the two figures at St. Dunstan's, stand."

In 1766, the elegant statue of Queen Elizabeth, which stood on the west side of Ludgate, was put up at the east end of St. Dunstan's Church; and the other figures, King Lud and his two sons, were deposited in the parish bone-house. The old church was taken down in December, 1829, when the materials were sold by auction: the bell-turret for 10*s*.; the flag and flag-staff for 12*s*.; and an iron standard, with copper vane, warranted 850 years old (?), weighing three-quarters of a cwt., was sold for 2*l*. 1*s*. At another sale, in 1830, the statue of Queen Elizabeth sold for 16*l*. 10*s*., and a stained-glass window for 4*l*. 5*s*. The clock, figures, &c. were purchased by the late Marquis of Hertford, and placed in the grounds of his villa in the Regent's Park, where they strike the hours and quarters to this day. The new church of St. Dunstan was consecrated July 31, 1832, which the architect did not live to witness, he having died July 30, 1831, the twelfth day after the external completion of the edifice.† It is in the latest Pointed style, and has a lofty tower surmounted by an elegant lantern, 130 feet high (of Ketton stone), different from any other in the metropolis, but resembling St. Botolph's, Boston, Lincolnshire; St. Helen's, York; and St. George's, at Ramsgate, built in 1825. Over the entrance-porch are sculptured the heads of Tyndale, the Reformer; and Dr. Donne, who was once vicar of the church: they are considered faithful portraits. Above is a clock, with three dials, curiously coloured and gilt in the embellished taste of the architectural period; and a belfry, with eight fine bells from the old church, the sound of which receives effect from the four large windows which are the main features of the tower. The enriched stone lantern is perforated with Gothic windows of two heights; the whole being terminated by an ornamental pierced and very rich crown parapet. The body of the church is of octagon form, and has eight recesses, with as many windows above, containing good stained glass. The roof is formed by eight iron spandrel-beams, projecting from an angle towards the centre, and there connected by an iron ring; and from the enriched keystone hangs the chandelier. The *northern* recess contains the altar-table, of oak elaborately carved: and the altar-piece presents three admirably carved canopies, of foreign workmanship. Above is a large Pointed window, filled with stained glass, by Willement, in the ancient manner: it contains figures of the Evangelists; the crown of thorns and the nails; the spear and sponge upon a reed; the Holy Lamb; and the inscription, in black letter, "Deo et ecclesie fratres Hoare dicaverunt, anno Domini MDCCCXXXII." This is, altogether, one of the most elegant church interiors in the metropolis. In May, 1839, the statue of Queen Elizabeth, already mentioned, was placed in a niche, flanked with two pilasters, above the doorway of the parochial schools, east of the principal entrance to the church. On the west side is the Law Life Insurance Office, designed by John Shaw, in the style that prevailed between the last period of Pointed

\* So early as 1478 there was a similar piece of mechanism in Fleet-street. Stow describes a conduit erected in the above year, near Shoe-lane, with angels having "sweet-sounding bells before them; whereupon, by an engine placed in the tower, they, divers hours of the day and night, with hammers chimed such an hymn as was appointed." There is, we believe, a like contrivance to that at St. Dunstan's, at Norwich Cathedral. (See also *Paul's Jacket*, p. 106.)

† The interior was finished by his son, John Shaw.

architecture (of which St. Dunstan's Church is an example), and the complete revival of the architecture of Greece and Rome. In the old church was a large hour-glass, in silver frame; of the latter, in 1723, two heads were made for the parish staves. The Rev. William Romaine was rector of the old church in 1749, when it was generally so crowded that the pew-opener's place was worth 50*l.* per annum. The font is ancient.

ST. DUNSTAN'S, Stepney, a Perpendicular church, is famed in story for its legend of "The Fish and Ring," and the popular ballad of "The Cruel Knight, or Fortunate Farmer's Daughter;" her identity is referred to Lady Berry, whose tomb is on the outer east wall, with the fish and annulet in the arms thereon: but the finding of a ring in a fish is an incident of much greater antiquity than Lady Berry's time (1696), and occurs in the *Arabian Nights' Entertainments*. The churchyard is noticed in the *Spectator*, by Steele, for the number and oddity of its epitaphs. Here lies the father of Dr. Mead, who was born over the antique brick gateway opposite the rectory, and first began practice at Stepney; also Rev. W. Vickers, author of the *Companion to the Altar*; and Roger Crab, who lived long on bran, dock-leaves, grass, and water. Within the church is the splendid tomb of Sir Henry Colet, Lord Mayor in 1486 and 1495, and father of the founder of St. Paul's School. Here also is a marble monument of the Good Samaritan, by Sir R. Westmacott, R.A., to B. Kenton, Esq. (d. 1800), leaving 63,500*l.* to charity schools, and 30,000*l.* to his friends. In the western porch is a stone reputed to have been brought from the wall of Carthage.

ST. EDMUND'S (the King and Martyr), Lombard-street, has also been called St. Edmund's Grass Church, because of a grass-market held here: whence Grasschurch-street, now Gracechurch-street. The church was destroyed in the Great Fire, and rebuilt by Wren: it has a tower and incongruous steeple, 90 feet high, and a projecting bracket clock. The altar-piece has some fine carvings, and two paintings of Moses and Aaron by William Etty, 1833: above is a stained glass window, with the arms of Queen Anne, "set up in the memorable year of union, 1707;" besides two other stained glass windows, of superior excellence, representing St. Paul and St. Peter.

ST. ETHELBURGA'S, Bishopsgate-street, a Gothic church, which escaped the Great Fire, and retains some of its Early English masonry; it has been restored by Withers: it was anciently in the patronage of the Convent of St. Helen. It is well known for the "short services for City men," and, according to tradition, is frequented by sailors returning from voyages, or immediately previous to sailing. Here incense is used on Saints' Days; and stoles and altar vestments, according to the canonical colours. (*Mackeson*.) Traces of a reredos were found during the repairs, and Roman coins and bricks have been discovered in the churchyard. The western arch is said to have formed part of the gateway of St. Helen's Priory. Under it John Hudson and many of his crew came to receive the Holy Sacrament before they left their native shores in 1610 (Rev. Mackenzie Walcott, *Gentleman's Magazine*, June, 1863.) The churchwardens of St. Ethelburga appear, from the accounts, to have provided profusely for their Ascension-Day dinner, 1686:—"Three quarters of lamb; 600 of sparagrasse, sallatering, and spinnage; 400 oranges and lemons, three hams, Westphalia bacon, and  $\frac{1}{2}$  lb. of tobaccoe." There are also charges for "yew and box to decke ye church;" "hearbes" for the same; "wands and nosegays," "strawings and greenes." Dryden's antagonist, Luke Milbourne, died, April 15, 1720, rector of St. Ethelburga's. "The view of this church, by West and Toms (1737) exhibits several of the adjoining houses, and is one of the most interesting of Old London illustrations."—*Cunningham*.

ST. ETHELREDA'S, Ely-place, Holborn, is all that remains of the ancient palace of the Bishops of Ely, and retains much of its original aspect: the interior roof is boldly arched; on each side is a row of noble windows, though their tracery has disappeared; the pinnacle-work between and overtopping them is very fine, and at the east end is "one fine Decorated window, of curious composition." Evelyn records the consecration here of Dr. Wilkins, Bishop of Chester, in 1668, when Dr. Tillotson preached; and April 27, 1693, Evelyn's daughter Susannah was married here to William Draper, Esq., by Dr. Tenison, then Bishop of Lincoln. Cowper thus chronicles an amusing

occurrence in this chapel, at the time of the defeat of the Young Pretender by the Duke of Cumberland, in 1746:—

“So in the chapel of old Ely House,  
When wandering Charles, who meant to be the Third,  
Had fled from William, and the news was fresh,  
The simple clerk, but loyal, did announce,  
And eke did roar right merrily two staves,  
Sung to the praise and glory of *King George*.”

The chapel, after being leased to the National Society for a school-room, was for some time closed; but on Dec. 19, 1843, was opened for the service of the Established Church in the Welsh language; this being the first performance of the kind in London.

ST. GEORGE'S, Campden-hill, Kensington, E. B. Keeling, architect, cost 7000*l.*, defrayed by Mr. J. Bennett. In plan it is cruciform, and has a tower with a lofty spire, and an apsidal Chancel. It is of Early Second Pointed style, but of French character. The tower is ornamented with bands, mouldings, and dressings. The entrance is by a continued porch or Galilee at the west. The interior is lofty, lined with various coloured bricks, and shafts of red Mansfield stone. The roof is of very high pitch, and decorated in polychromy; behind the altar is a tall reedos. Opened 1864.

ST. GEORGE'S, Hanover-square, was completed by John James in 1724; the parish being taken out of St. Martin's-in-the-Fields. St. George's is built upon ground given by Lieut.-Gen. W. Stewart: it has a stately and august Corinthian portico, and a handsome and well-proportioned steeple; still, it can only be viewed in profile; but “were it not for two or three intervening houses, it would be seen in the noblest point of sight in the world.” The interior has a large altar-picture of the Last Supper, attributed to Sir James Thornhill; above it is a painted window, foreign, of the 16th century, with the Virgin and Child, the Crucifixion, ecclesiastical personages, masonic emblems, &c.; the altar-piece, in its sculptured framework, and the painted glass in its architectural recess, is effective; but this Gothic window in a Roman church is a glaring absurdity.

“The view down George-street, from the upper side of Hanover-square, is one of the most entertaining in the whole city: the sides of the square, the area in the middle, the breaks of building that form the entrance to the vista, but above all, the beautiful projection of the portico of St. George's Church, are all circumstances that unite in beauty, and make the scene perfect.”—*Ralph*.

St. George's, Hanover-square, also possesses a burial-ground at a short distance on the Bayswater-road. Here is the grave of Sterne, with a stone set up by two “Brother Masons:” here, too, lay Sir Thomas Picton, who fell at the Battle of Waterloo, in 1815; his remains were removed to St. Paul's Cathedral in 1859.

ST. GEORGE'S IN THE EAST, Ratcliffe Highway, designed by Hawksmoor, 1715–29, in an original and massive style, has a very picturesque spire. The altar-piece is a painting of “Jesus in the Garden,” by Clarkson. In the churchyard is buried Joseph Ames (d. 1759), author of *Typographical Antiquities*, originally a plane-maker, and afterwards a shipchandler at Wapping; he lies in a stone coffin, in *virgin earth*, at the depth of eight feet. This church was, for a considerable period, the scene of disgraceful riots upon the plea of opposition to the manner of conducting the service.

In this parish are the Schools and Asylum founded by Mr. Raine, a wealthy brewer, in 1717 and 1736; who also provided that on May 1 and December 26, annually, a marriage-portion of 100*l.* should be presented to two young women, former inmates of the School, and who have attained the age of twenty-two years. The bridegrooms must be inhabitants of St. George's-in-the-East, or of Wapping, or Shadwell; and the young women draw lots for the portion, one hundred new sovereigns, usually put into a handsome bag, made by a young lady of St. George's parish, and presented at a dinner of the trustees. In the morning a discourse is preached in the Church, “On Diligence and Industry in our Calling;” after which the drawing takes place at the Asylum.

ST. GEORGE'S, Hart-street, Bloomsbury, was designed by Hawksmoor in handsome style, and was consecrated in 1731; a district for its parish being taken out of that of St. Giles's-in-the-Fields. This church is remarkable for standing north and south; the tower and steeple are placed by the side of the main edifice, the favourite practice of Palladio. Upon the tower, on the four sides, rises a range of unattached Corinthian pillars and pediments; above is a series of steps, with lions and unicorns at the corners, guarding the royal arms, and which supports at the apex, on a short column, a statue,

in Roman costume, of George I. The design is from Pliny's description of the first mausoleum, the tomb of King Mausolus, in Caria. Walpole calls this steeple a master-stroke of absurdity, and it has provoked this epigram:—

“When Harry the Eighth left the Pope in the lurch,  
The people of England made him head of the Church;  
But George's good subjects, the Bloomsbury people,  
Instead of the church, made him head of the steeple.”

More admired is the magnificent portico of eight Corinthian columns, which Hawksmoor added to his design, influenced by Gibbs's portico at St. Martin's-in-the-Fields, then just completed; but St. George's is the better, from its height above the level of the street. Here are a tablet to the great Lord Mansfield; and a monument to Mr. Charles Grant, by Bacon, R.A.

ST. GEORGE THE MARTYR, Queen-square, Bloomsbury, built in 1706, as a chapel of ease to St. Andrew's, Holborn, was declared a parish church in 1723; of which Dr. Stukeley, the Roman-British antiquary, was many years the rector: in his MS. Diary, 1749, formerly in the possession of Mr. Britton, is described the then rural character of Queen-square and its vicinity. The parish burial-ground is in the rear of the Foundling Hospital: a strong prejudice formerly existed against new churchyards, and no person was interred here till the ground was broken for Robert Nelson, author of *Fasts and Festivals*, whose character for piety reconciled others to the spot: people like to be buried in company, and in good company. Nancy Dawson, the dancer, of Covent Garden and Drury-lane Theatres (noted for hornpipes) lies here.

ST. GEORGE THE MARTYR, Southwark, was built in 1733-36, by John Price, upon the site of the old church; the parish having been originally given by William the Conqueror to the noble family of Arderne, and for some time attached to the Priory of Bermondsey. Stow describes the former church as almost directly over against Suffolk House, formerly the mansion of Charles Brandon, Duke of Suffolk, the brother-in-law of Henry VIII.; now the site of the premises of Mr. Pigeon, the distiller. There were buried in the old church, Bonner, Bishop of London, who died in the Marshalsea; and Rushworth, author of the *Collections*, who died in the King's Bench; both these prisons being in the parish. Edward Cocker, engraver and teacher of writing and arithmetic, is also stated upon a sexton's evidence to have been interred here: his *Arithmetic*, a posthumous work, was first published “by John Hawkins, writing-master, near St. George's Church.” The present church has a lofty stone spire and tower, with a fine peal of eight bells; the large bell is tolled nightly, and thought to be a relic of the curfew custom. Hogarth, in his plate of Southwark Fair, represents Figg, the famous prizefighter, and Cadman, flying by a rope from the tower of St. George's Church; the fair being held in that part of the Mint which lies in the rear of the houses opposite.

There is preserved a curious handbill, or *affiche*, printed in black letter, which must have been promulgated previous to the suppression of religious houses in the reign of Henry VIII. It is surmounted by a small woodcut of St. George slaying the Dragon, and by a child. It appears from Staveley's *History of Churches in England*, p. 99, that the monks were sent up and down the country with *briefs* of a similar character to the above, to gather contributions of the people; and it is most probable that the collectors were authorized to grant special *indulgences* proportionate to the value of the contributions. One of these handbills is reprinted in *Notes and Queries*, No. 84.

ST. GILES'S, Camberwell, is one of the largest churches built in England since the Reformation: it occupies the site of the old brick church, burnt on Sunday, Feb. 7, 1841. The new church, designed by Scott and Moffatt, is massively built entirely of stone, and was consecrated Nov. 21, 1844: it is in the Transition style, from Early English to Decorated; cruciform in plan, with a large central tower and spire, 207 feet high, and the tower thirty feet square; it has a fine peal of bells, by Mears. The outside length of the church exceeds 153 feet. The interior has an open timber roof, and oak fittings; a very powerful Organ by Bishop; and several stained glass windows by Ward and Nixon, the largest, over the altar, enriched with the symbolism of the thirteenth century.

ST. GILES'S, Cripplegate, is the successor of a church founded by Alfun, subsequently the first hospitaller of the Priory of St. Bartholomew. It was built in 1090, near the

postern in the City wall, called Cripple-gate, from an adjoining Hospital for lame people (*Camden*), or from the numerous cripples begging there (*Stow*); and it was dedicated to St. Giles, as the patron of cripples; it was small, and its site was "where now standeth the vicarage-house." In the year 1545, it suffered greatly from fire, but was soon repaired, and partially rebuilt; and in 1682, the tower was raised 15 feet; it has a peal of twelve bells, besides one in the turret, and a very musical set of chimes, said to have been constructed by a working mechanic. The interior is divided into a Nave and aisles by clustered columns and pointed arches, and the ceiling of the Chancel is painted with cherubim. Here are buried John Fox, the martyrologist, described in the register as "householder, preacher;" John Speed, the historian, with his bust, once painted and gilt; John Milton and his father, under the clerk's desk: a bust of the poet, by Bacon, R.A., with a tablet, were set up on the north side of the nave, by Samuel Whitbread, in 1793. The entry in the parish register is: "12 November, 1674, John Milton, gentleman, consumpcon, chancell." In the Chancel, too, are tablets to Constance Whitney and Margaret Lucy, both descendants of Sir Thomas Lucy, of Charlecote, Warwickshire: the former represents a female rising from a coffin, and has been erroneously supposed to commemorate a lady who, having been buried while in a trance, was restored to life through the cupidity of a sexton in digging up the body to get possession of a ring left upon her finger. Several of the actors from the Fortune Theatre, Golding-lane, are buried here. Here, too, rests Sir Martin Frobisher, one of the earliest of the Arctic voyagers (d. 1594-5); and Henry Welby, the Grub-street hermit, yet a man of exemplary charity (d. 1636). And the register records the marriage of Oliver Cromwell with Elizabeth Bowchier, August 20, 1620. In 1861, the restoration of the church was commenced, "in honour of the memory of John Milton;" a monument has been erected, as a memorial of the poet, in the south aisle, near the chancel. The cenotaph is nearly 13 feet high, and about 8 feet wide at the base; and the body of the work, consisting of carved Caen stone, is divided by pillars of coloured marble, thus forming three canopied niches. In the central niche the bust of the poet, which was executed by Bacon, has been placed. Beneath this is a marble tablet, with the following simple record:—"John Milton, author of 'Paradise Lost.' Born December, 1608. Died November, 1674." The date of his father's death in 1646, and the name of Mr. Samuel Whitbread, who placed the tablet in the church in 1793, are also engraved thereon. Milton lived in the parish—first in Barbican, subsequently in Jewin-street, and finally, in Artillery-walk, where he died. There is an apocryphal story of the poet's remains being irreverently disturbed, and scattered, in the year 1790; but the evidence of identity is weak, and it is recorded that the corpse then found was that of a female, and of smaller stature than that of the poet. The story of the assumed desecration is told in "The Diary of General Murray," in the *Monthly Magazine*, August, 1833. The restoration of the church includes windows of rich memorial glass contributed by parishioners; the reconstruction of the Chancel with an open roof, and the reglazing of a magnificent window, long blocked up. In the adjoining burial-ground remains a bastion of the old London wall.

ST. GILES'S-IN-THE-FIELDS, on the south side of High-street, was formerly in the *fields*, and the parish the village of St. Giles; the church being traceable to the chapel of a Hospital for Lepers, founded about 1117, by Queen Matilda, consort of Henry I. The ancient church was taken down in 1623, and a brick edifice was erected in its place: this was removed in 1730, and the present church, designed by Henry Flitcroft, was completed in 1734. It is built of Portland stone, and has a tower and spire, 160 feet high, with eight bells. Above the entrance gateway, in the lunette, is "The Day of Judgment," in alto-relievo, brought from the Lich-gate, or Resurrection-gate of the old church in 1687; it is well described by Mr. George Scharf, jun., in a paper read to the Society of Antiquaries, in 1855, upon "Representations of the Last Judgment:"—

The figures (he tells us) are very small in proportion to the semicircular lunette they occupy. The Saviour stands in the clouds, surrounded by rays, holding the banner of redemption, and with His right hand pointing upwards. Angels playing musical instruments, and tumultuously expressing the joys of heaven, completely surround Him. Neither the Virgin Mary nor Apostles are to be seen in order. The prominent attitudes of the rising dead, and of the condemned, betray markedly the influence of Michael Angelo; they have been directly and ignorantly copied from his outline conception.

This alto-relievo is very curious, and, being both elaborate and well preserved, deserves to be carefully drawn and published. (It forms one of the many illustrations of Mr. Scharf's paper in the *Archæologia*, vol. xxxvi. part 20.) The treatment is very unworthy of the subject, but, as a piece of carving, it is remarkably good.

This sculpture was formerly placed over the north-western gateway, which has been taken down, and a new gateway erected opposite the western or principal door of the church, over which is placed the alto-relievo.

At St. Giles's were buried Chapman, the translator of Homer; Lord Herbert of Cherbury, who lived in Great Queen-street; Shirley, the dramatist, and his wife; Sir Roger L'Estrange, the political writer; and Andrew Marvell, "a man in whose reputation the glory of the patriot has eclipsed the fine powers of the poet." The monument to Chapman, built by Inigo Jones at his own expense, is now in the churchyard, against the south wall of the church. In the churchyard, too, is the altar-tomb of Richard Pendrell, who aided in the escape of Charles II.; and a few years since was revived the custom of decorating this tomb on Restoration Day (May 29) with branches of oak. The finest monument in the present church is the recumbent effigies of the Duchess Dudley (d. 1670), preserved in grateful memory of her munificence to the parish. At the place of public execution, a short distance north-west of the church, Sir John Oldcastle, Lord Cobham, was hung in chains and roasted over fagots in 1417, during the reign of Henry V., his early friend. The phrase, "St. Giles's Bowl," is referred to the custom of giving, at the Hospital gate, every malefactor on his way to Tyburn a bowl of ale, as his last worldly draught, which practice was also continued at an hostel built upon the site of the monastic house; of this the Bowl Brewery, taken down in 1849, was the representative; and the bowl itself is said to be in existence. The transparent clock-dial of the church was lit with gas in 1827, the first in the metropolis; and opposite, in 1842, was made one of the earliest experiments with wood-paving. In Endell-street, in 1845, was built a district church, in the Early Pointed style, by Ferrey—a timely provision for the spiritual destitution of the parish. St. Giles's possesses a cemetery in the Lower St. Pancras-road, where are buried, each beneath an altar-tomb, John Flaxman, our greatest English sculptor; and Sir John Soane, the architect. (See CEMETERIES, p. 82.)

ST. GREGORY BY ST. PAUL'S was contiguous to the Lollards' Tower, which had once been used as a prison for heterodox divines. It stood at the south side of the Cathedral, in Castle Baynard Ward. It was very ancient, for the body of Edmund, king of the East Angles, who was martyred by the Danes in 870, rested there for three years.—*Newcourt*.

ST. HELEN'S, Bishopsgate, on the east side of Bishopsgate-street Within, was once the church of the Nunnery of St. Helen, the site of which, judging from pavements found here, was originally occupied by a Roman building.

The church consists of two broad aisles, 122 feet in length, and two chantry chapels. The north aisle, known as the Nuns' Quire, was appropriated to the use of the inmates of the Convent, and separated from the south or parish aisle by a wooden screen; this screen, together with the altar, was removed at the dissolution of the House. Fortunately, 17 of the original carved miserere seats have been preserved, and the hagioscope which formerly communicated with the crypt still remains. The interior of the edifice, with its columns and pointed arches, is picturesque: it contains more monuments, perhaps, than any other church in the metropolis; and these being altar-tombs upon the floor, increase the appearance of antiquity and solemnity. They include a freestone altar-tomb, with quatrefoil panels enclosing shields; upon the ledger lie full-length alabaster effigies of Sir John Crosbie and his first wife Anneys or Agnes; the knight wears his aldermanic gown over plate armour. Also, a canopied monument to Sir W. Pickering, in dress armour, reclining upon a pillow of matting (d. 1542); several kneeling figures, elaborately painted and gilt, in memory of Sir Andrew Judd (in armour) (d. 1558); a very large sculptured altar-tomb to Sir Thomas Gresham, who founded the Royal Exchange; a monument representing Martin Bond, captain of the trained bands at Tilbury when the Spanish Armada was expected—he is sitting within a tent, with sentries, &c. (d. 1643); a tomb of Francis Bancroft (d. 1726), built in his lifetime, when he directed that his body should be embalmed, and placed

in a coffin unfastened; and a table monument by N. Stone to Sir Julius Cæsar, Master of the Rolls to James I. (1636), the monument erected in the previous year, with the Latin inscription sculptured, as if on a folded deed, an engagement of the deceased to pay the debt of nature whenever it shall please God to appoint it. In the vestibule also are several elaborate monuments, displaying figures; and an alms-box supported by a curiously-carved figure of a mendicant. Here are also fine monumental brasses of the fifteenth and sixteenth centuries. The church was restored in 1866.

ST. KATHARINE'S, the church of the Royal Hospital of St. Katharine, rebuilt in 1827, on the east side of the Regent's Park, after the demolition of the ancient Hospital and Church, "at the Tower," for the site of St. Katharine's Docks.

More than 700 years ago, in the reign of King Stephen, 1148, Queen Matilda founded and endowed, on the east side of the Tower of London, a Hospital dedicated to St. Katharine; the foundation was confirmed by the grants of succeeding sovereigns, and the revenues increased by Queen Eleanor, and other royal donors. The mastership is in the gift of the Queen Consort; if there be no such personage, the Queen Dowager. Provision was made for a master, who, according to an ordinance of Queen Philippa, was to be a priest. There were to be maintained also three Brothers, who were to be priests, and three Sisters, all under obligation of perpetual chastity, and to "serve and minister before God," and do works of charity. Masses were to be said daily in the chapel, one to be for the souls of all the Kings and Queens of England. Provision was to be made also for 24 poor men and 10 poor women; and the charter of Queen Eleanor directed that when in future times the means of the Hospital should augment, the number of chaplains and poor men and women relieved should be increased. In the reign of Henry VIII. the income was about 365*l.* a year.

The Church and Hospital, in the Regent's Park, designed by A. Poynter, is in the florid Gothic style, has octagonal towers, with a large painted window of beautiful tracery. Among the relics of the old church is a finely enriched tomb, part of a chantry chapel, thus inscribed:

"This monument was erected in the Collegiate Church of St. Katharine, near the Tower, to the memory of John Holland Duke of Exeter, Earl of Huntingdon and Ivry, Lord of Sparr, Admiral of England, Ireland, and Aquitaine, Knight of the most noble order of the Garter, and Constable of the Tower. He died the V. of August, M.CCCCXLVII. Also, to the memory of his two wives, viz.: Anne, daughter of Edmund Earl of Stafford, by whom he had issue Henry Holland, the late Duke of Exeter of that surname, who married Anne, sister of King Edward the Fourth, and died without issue; and Anne, daughter of John Montacute, Earl of Salisbury, by whom he had issue one daughter, mother to Ralph Nevil, third Earl of Westmoreland." Below is engraved—

"These remains, having been carefully removed from the original place of interment, were deposited in this chapel, as were those of the other persons whose monuments and gravestones were transferred to it from the Collegiate Church aforesaid."

In some parts along the mouldings are well-designed groups of sporting subjects—"Reynard" and the goose, monkeys in chains, and other quaint devices. The shields of arms and crests are coloured and gilt. The effigies represent the Duke, one of his wives, and his sister.

The old wood pulpit from St. Katharine's is also preserved, and is a curious example of the elaborate carved work of the sixteenth and seventeenth centuries: in the panels are two views of old St. Katharine's. Some of the carved seats, similar to those in Henry the Seventh's Chapel in Westminster Abbey, have also been saved; as have likewise some of the corbels formed by crowned angels, bearing shields. These, with additions, have been arranged round the present church, with the arms and dates of the reigns of the English Queens from Matilda's time. The Organ, of about the reign of George II., has also been preserved; and among the old monuments is one with this inscription on a *gold* plate within a frame:

"Here dead in part whose best part ne'er dyeth,  
A benefactor, William Cuttunge, lyeth;  
Not deade if good deedes could keepe man alive,  
Nor all deade, since good deedes doe men revive.  
Gonvile and Kaes his good deeds men recorde,  
And will, no doubt, his praise for them afford:  
Sainte Katrins eke neer London can it tell:  
Goldsmithes and Marchant Taylers know it well.  
Two Country's towns his civil bounty hleste,  
East Dareham and Nortonfitzwarren West:  
More did he then this table can unfold,  
The worlde his faime this earth his carth doth hold.

"He deceased ye 4 daie of March, 1599."

According to an official Report issued in 1866, the income of the Hospital now exceeds 7000*l.* a year; and if the system of letting the estates on leases for lives with fines for renewal were abandoned, the income would probably be nearly 11,000*l.*, to be increased to nearly 15,000*l.* when the Tower-hill leases fall in in the year 1900. The site of the Hospital has now become a dock, and when the new hospital was about to be erected in the Regent's Park, unfortunately, the removal was made in such a manner as to involve much expense that might have been avoided. To the inquiry, "What is done with this 7000*l.* a year?" an answer is given in this Report. The Master receives nearly 1500*l.* a year, increased to 2000*l.* by the rent of his official house, which, as he is non-resident, he lets. His house and gardens occupy two acres, and it is considered to be, for its size, one of the most desirable residences in London. He attends the meetings of the Chapter, which are held about three times in a year; but is seldom, if ever, at the chapel; he occasionally visits the schools; but these are considered to be sufficiently superintended by the Brothers and Sisters in residence. He was appointed by Queen Adelaide, whose vice-chamberlain he was. Each of the three Brothers receives above 360*l.* a year, and has also a sufficiently convenient residence, though much less costly than the Master's. Each Brother is in residence four months in the year. One of them has been presented by the Hospital to the living of Kings-thorpe, near Northampton, with a net income of 700*l.* a year and a house. The junior Brother became British vice-consular chaplain at Dieppe in 1863, and has since let his official residence, which is considered to be worth 100*l.* a year; but he occupies rooms in it during his term of residence. Each of the three Sisters receives about 240*l.* a year, besides having a residence provided. The senior Sister has always been non-resident, and lets her house. The junior has done the like until recently, her duties as preceptress to the Royal Princesses requiring her constant attendance at Court; but these having ceased, she has now virtually, if not actually, entered upon residence. There are various officers and attendants provided for the establishment. There remain funds sufficient to pay 10*l.* each to 20 Bedesmen and 20 Bedeswomen (decayed tradespeople and worn-out governesses and servants), and to maintain a school in which 33 boys and 18 girls, the children of clerks, tradespeople, artificers, and servants are freely educated and clothed, and then apprenticed or presented with outfits for entering domestic service.

It is suggested in the Report that the large and increasing resources of this institution should by competent authority be made productive of more extended benefit than they are at present. Thus, a scheme has been propounded, which proposes the restoration of the Hospital to the east of London; and the establishment there of a collegiate church, with the Master and Brothers for dean and canons, each of them, by virtue of his office, holding a benefice, with cure of souls, in that quarter; the three Sisters, with stipends of not less than 250*l.* a year each, to reside within the limits of these parishes or places, and superintend and direct the work of the bedeswomen, who should also reside within the same limits, and perform the duties of parochial mission women and nurses; the bedesmen, also resident in the limits, to perform the duties of Scripture readers, or lay assistants. The four benefices might either be acquired by exchange, or newly constituted by the Crown. The scheme contemplates also that a portion of the income of the foundation be devoted to educational or eleemosynary purposes in the east of London. The scheme was proposed by, or on behalf of, a Committee of the local clergy, comprising seven incumbents in the immediate neighbourhood of the site of the ancient Hospital, which forty years since was required and taken for the construction of St. Katharine's Docks.

ST. JAMES'S, Aldgate, Mitre-square, was built on the site of the wealthy Priory of the Holy Trinity, in tasteless style, 1622. Here is service on great festivals and on the last night of the year. And here, every Whit-Tuesday evening is preached the "Flower Sermon," on a topic allied to flowers. The church is decked with flowers, and the congregation carry nosegays, and a bouquet is placed in the pulpit. On Whit-Tuesday evening, 1866, the Sermon was preached by the Rev. W. M. Whittemore, the Rector. His text was Genesis i. 11, "Let the earth bring forth grass."

The following is an outline of the discourse:—Pleasantness of a walk in the fields, conversing with dear friends, resting from the care and toil of a busy City life, enjoying the sights and sounds of nature,

and striving to gather spiritual lessons from the objects around us. A single blade of grass, how much it may teach us! How full of testimony to the goodness of the Creator, who has covered the earth with this enamelled carpet of soft, fragrant verdure, to refresh and gladden our hearts. How full, also, of solemn teachings of our frail mortality. All flesh is grass. This was shown to be true literally, as well as figuratively. Then the preacher brought out several lessons, which he bade his youthful hearers to remember. 1. The value of little things. A blade of grass is full of creative skill; the combining of many little blades covers the hills and valleys of the world. 2. The union of firmness with gentleness of character. The grass bends easily, yet is coated with flint, and its root is remarkably tenacious. 3. Discrimination necessary in striving to be useful. Some one sowed grass-seed, as he thought, but it grew up chiefly chickweed and groundsel. 4. Unity may consist with great diversity. There are 5000 species of grasses, yet they have many features of aspect, structure, and growth in common, so that no class of plants is so easily identified.

ST. JAMES'S, Clerkenwell, on the north side of Clerkenwell-green, has replaced the church of a Benedictine monastery, founded about 1100; it served the nuns and inhabitants until the Dissolution of the convent, when it was made parochial, and dedicated to St. James the Less instead of the Virgin Mary. In the Sutherland View of 1543, we see it far in the fields. In 1623, the steeple and tower both fell, and destroyed part of the church; both were rebuilt. In 1788, the whole was taken down, rebuilt by Carr, and consecrated in 1792. In the vaults are preserved some coffins from the old church, and among them that of Bishop Burnet, who died 1714-15 in St. John's-square, close by, though the fanatic rabble threw dirt and stones at his funeral procession. His handsome mural monument was removed to the present church, which has a peal of eight musical bells.

ST. JAMES'S, Garlick Hithe, on the east side of Garlick-hill, Upper Thames-street, is named from its being near the chief garlick market of the City. It was rebuilt in 1326: among the persons interred here was Richard Lyons, a wine-merchant and lapidary, beheaded in Cheapside by Wat Tyler in the reign of Richard II. Stow describes his "picture on his gravestone very fair and large, with his hair rounded by his ears, and curled; a little beard forked; a gown girt to him down to his feet, of branched damask, wrought with the likeness of flowers: a large purse on his right side hanging in a belt from his left shoulder; a plain hood about his neck, covering his shoulders, and hanging back behind him." The following citizens who had served Mayor were also buried here: John of Oxenford, Mayor in 1341; Sir John Wroth, or Wroth, 1360; William Venor, 1389; William More, 1385; Robert Chichell, 1421; James Spencer, 1527. The old church was destroyed in the Great Fire: it was rebuilt by Wren, 1676-83, with a tower and lantern, 98 feet high, and a projecting clock-dial, with a carved and gilt figure of St. James: a large organ, built by Bernard Schmidt, in 1697; and a clever altar-picture of the Ascension, by A. Geddes. In this church Steele heard the Common-Prayer service read so distinctly, so emphatically, and so fervently, that it was next to an impossibility to be inattentive. Steele proposed that this excellent reader (Mr. Philip Stubbs, afterwards Archdeacon of St. Alban's), upon the next and every annual assembly of the clergy of Sion College, and all other convocations, should read before them.—*Spectator*, No. 147, August 18, 1711.

Here is a curious story, by Newcourt, of Arthur Bulkley, D.D., Rector of St. James's in 1531, who was promoted to the Bishopric of Bangor in 1541. "This man sold away five fair bells out of the steeple of his cathedral, and it is certainly reported, that going to the sea-side to see them shipped off, he had not set three steps on his way homeward before he was stricken with blindness, so that he never saw afterwards."

ST. JAMES THE LESS, Garden-street, Westminster, was built in 1861, at the expense of Miss Monk, in memory of her father, the late Bishop Monk, of Gloucester, a Canon of Westminster; G. E. Street, architect; style, Byzantine Gothic; cost about 8500*l.* The church is situated in the poor district of St. Mary, Tothill-fields. It consists of a Nave and Chancel, with north and south aisles to both. It has a detached steeple, forming ante-porch, with porch connecting it with the north aisle. The height of the tower and slated spire is 134 feet. The materials used are mainly red and black bricks, stone, and marble. The apse has windows of three lights, with a rose-window in the head, filled with stained glass, representing types and antitypes of Christ. Between these descend the groining-ribs, to rest upon banded shafts of polished marble. The reredos below the line of lights is of white stone, inlaid (with a black composition) with figures of holy women, commencing on the left with Mary

the mother of James, then Mary Magdalen, St. Elizabeth, and the Virgin Mary; then, on the other side of the reredos proper, come the wife of Manoah, Hannah, Ruth, and Sarah. Bands of red and yellow tiles are inserted between these figures, which are represented in niches, dividing them into twos. Immediately over the altar is a cross of vari-coloured Irish marbles, set with studs of Derbyshire spar. Within the apse come the transept aisles; in that on the left is the Organ. Two drop arches, on broad shafts of polished granite, with carved caps, and resting on tall plinths (the height of the choir seats), divide these Transept aisles from the Choir. Each Transept aisle is, in itself, divided by a shaft of Bath stone in its centre, whence spring arches to the side piers of the Choir. The two shafts which are on each side of the Nave are of polished red granite, with bands of Bath stone midway of their heights; the caps are carved, illustrative of the Parables and Miracles. Over the Chancel arch is a fresco painted by G. F. Watts, representing a sitting figure of Our Lord in the centre, with groups of angels on each side, and the four Evangelists below, on a gold ground. The pulpit is of stone and marble, and is very richly sculptured: it contains figures of the four Doctors of the Western Church and the four Evangelists, and on the panels, which are divided from each other by shafts of green marble, are illustrations of preaching:—1. St. John the Baptist preaching; 2. Dispute with the Doctors; 3. The Sermon on the Mount; 4. St. Augustine of Canterbury preaching. The Chancel is groined in brick, with stone ribs. The screens and gates round the Chancel are of wrought iron and ornamental brasswork. The pavement of the body of the church is formed of Maw's tiles, and that of the Chancel has marble inserted. The steps leading to the Chancel and altar are of black Isle of Man limestone. The roof has been painted by Clayton and Bell, with the Tree of Jesse and the Genealogy of our Lord, typical busts of the personages being introduced in medallions along the sides of the span in a line on either hand. The stained glass throughout is also by Clayton and Bell.

ST. JAMES'S, Piccadilly, or St. James's, Westminster, was built by Wren, at the cost of Henry Jermyn, Earl of St. Alban's, whose arms are placed above the south door; consecrated Sunday, July 13, 1684; it was originally a chapel of ease, and constituted a parish church in 1685. It has a tower and spire, 150 feet high; the latter was not the work of Wren. It was built a few years after the church, and was from a design supplied by one Mr. Wilcox, a carpenter in the parish, which, strange to say, was made choice of by the Vestry in preference to a design for the same furnished by Wren himself, the cost of the erection of which was estimated to exceed the other by only 100*l*. It was covered with cement in 1850, when the interior of the church was repaired throughout. The clock was the gift of Mr. H. Massey, and the original dial was gilded and painted by Mr. Highmore, H.M. Serjeant-Painter: its diameter is 10 feet. The interior, Wren's masterpiece, is in its plan Basilical, Nave and aisles being formed by two ranges of six piers and columns, in two stories. The piers, which are of the Doric order, panelled, carry the galleries; the fronts of the latter of oak, with carved enrichments, forming the entablature of the order, with a low attic above, to complete the breastwork. The upper order is the Corinthian; columns rise from the breastwork of the galleries, and the highly-enriched entablature of these, stretching across from each column to the side walls, serves as imposts to a series of transverse arches from column to column, forming the covering of the aisles; whilst from the abacuses also springs the great semicircular vault that covers the Nave; the whole roof being divided into sunk panels, ornamented with festoons of drapery and flowers in relief, "producing," as Mr. J. Gwilt observes, "by its unity, richness, and harmonious proportions, a result truly enchanting." These ceilings and their enrichments, as now seen, were put up in 1837, when the decayed state of the timbers had rendered an entire new roof to the church necessary. The work was strictly a restoration. Wren, in a letter printed by Elmes, says:—"I can hardly think it practicable to make a single room so capacious, with pews and galleries, as to hold 2000 persons, and all to hear the service and see the preacher. I endeavoured to effect this in building the parish church of St. James's, Westminster, which, I presume, is the most capacious, with these qualifications, that hath yet been built."

The noble Organ was built for James II., and intended for his Roman Catholic Oratory at Whitehall, but given to this parish by Queen Mary in 1691.

It is in two oaken cases, standing one before the other, the organist's place being between them; his face to the great organ, and his back to the smaller one, to the latter of which the action passes beneath his feet and seat. The great case is in the florid style of the period of its original construction (Louis XIV.). The carving of Fames, angels, cherubs' heads, &c. with which it is adorned, strikingly mark, by their great beauty, the master-hand of Gibbons. This favourite old instrument, originally made by the celebrated Renatus Harris, anno 1678, was entirely rebuilt by the late Mr. Bishop, in 1852, on a much more comprehensive scale, but retaining the old pipes—for these, the mellowing hand of time had rendered of more than ordinary value—when also the old case was restored, with the original decoration, and the detached front choir added.

In 1738, the Prince of Wales gave crimson velvet and gold hangings, valued at 700*l.*, for the holy table and pulpit. The end above the altar-screen is nearly all occupied by a Venetian window, in 1846 filled with stained and painted glass.

The window is illustrative by six principal pictures—one to a compartment—of the narrative of our Blessed Lord's Sacrifice for the Redemption of Mankind. In the lower central division is displayed the Crucifixion, with the praying in the Garden of Gethsemane, on the left; and the Bearing of the Cross on the right. The upper central compartment is the Ascension, with the Entombment on the left, and the Resurrection on the right. Very wide mosaic borders surround each of these pictures, in which, as well as in the other parts of the filling in, are numerous minute representations of other scriptural subjects; with details of immense variety, consisting of religious emblems, symbols, monograms, &c. &c. For this glass Wailes, of Newcastle, received 1000*l.*

It is intended also to fill in with stained and painted glass the whole of the ten gallery windows, designed to form, when completed, a series of paintings, illustrative of the history of our Blessed Saviour's life and ministry, commencing with the "Nativity," in the easternmost window on the south side—the succeeding windows to carry on the subject, progressively, as follows:—No. 2. The Adoration of the Magi; 3. Baptism of Christ; 4. Christ and the Woman of Samaria; 5. Christ with Peter on the Sea. And returning eastward on the north side with—6. The Transfiguration; 7. Christ with Martha and Mary; 8. Christ Blessing Little Children; 9. The Raising of Lazarus; 10. Entry into Jerusalem. Thus connecting the narrative with the Passion, as represented in the great altar window. Nos. 2 and 4 have been executed (also by Mr. Wailes) at a cost of 125*l.* each.

Evelyn, in his *Diary*, thus describes the altar and east end of the church:—

Dec. 16, 1684.—I went to see the new church at St. James's, elegantly built. The altar was especially adorned, the white marble inclosure curiously and richly carved, the flowers and garlands about the walls by Mr. Gibbons, in wood: a pelican, with her young at her breast, just over the altar in the carved compartment and border invironing the purple velvet fringed with (black) I. H. S. richly embroidered, and most noble plate, were given by Sir R. Geere, to the value (as was said) of 200*l.* There was no altar anywhere in England, nor has there been any abroad, more handsomely adorned."

The wood is lime, with cedar for the reredos; the marble scrolls have been replaced by bronze. In addition, a noble festoon ending in two pendants, which extends nearly the whole length of the screen, displays all the varied representations of fruit and flowers, in the highest relief. This elaborate and delicate work having become much injured by the casualties of 160 years, was in 1846 thoroughly repaired by two Italian artists—a work of protracted labour; several thousand bits of carving, more or less minute, requiring to be added, in order to restore the groupings to their pristine state.

Facing the western entrance is the white marble font, exquisitely sculptured by Gibbons: it is nearly five feet high, and the bowl is about six feet in circumference. The shaft represents the tree of life, with the serpent twining round it, and offering the forbidden fruit to Eve, who, with Adam, stands beneath: these figures are 18 inches high. On the bowl are bas-reliefs of the Baptism of the Saviour in the Jordan; the Baptizing of the Treasurer of Candace by St. Philip the Deacon; and the Ark of Noah, with the dove bearing the olive-branch. The cover of this font (shown in Vertue's engraving), held by a flying angel and a group of cherubim, was stolen about the beginning of the present century, and subsequently hung up as a sign at a spirit-shop in the neighbourhood.—(Brayley's *Londiniana*, vol. ii. p. 282.)

In the church are interred Charles Cotton, the companion of Walton in the *Complete Angler*; Dr. Sydenham, with a marble tablet erected by the College of Physicians, in 1810; Hayman, the portrait-painter; the two Vanderveldes, the marine painters; and Michael Dahl, the Swedish portrait-painter; Dr. Arbuthnot, the friend of Pope, Swift, Gay, and Prior; Benjamin Stillingfleet, the naturalist, so touchingly deplored by Pennant, in the preface to his *British Zoology*; Dr. Akenside, the poet; James Dodsley, the bookseller, with a tablet; G. H. Harlow, who painted "The Trial of Queen Katherine;" also Sir John Malcolm. Here lies Thomas d'Urfey, dramatist and song-writer, to whom there is a tablet on the outer south face of the church-tower, inscribed "Tom d'Urfey, dyed February 26, 1723." In the vestry are the portraits of the St. James's rectors, that of Dr. Birch alone missing: the first rector, Dr. Tenison;

the third, Dr. Wake; and the seventh, Dr. Secker; became Archbishops of Canterbury. (See Walcott's *Handbook of St. James's*.)

Nollekens, the sculptor, when a lad, had an idle propensity for bell-tolling, and whenever his master missed him, and the dead-bell of St. James's Church was tolling, he knew perfectly well what "Joey" was at.

The church exterior and interior were in 1857 greatly improved; and an ornamental arched entrance to the churchyard, and a large Vestry-hall erected.

ST. JAMES'S, Shoreditch, Curtain-road, of Early English architecture, erected 1838, "stands on a site occupied by a theatre in Shakspeare's time. He lived close by, in a place called Gillum's Field. At this theatre a *curtain* was for the first time used; hence the name of the road. The theatre was afterwards removed to South Lambeth. Tradition says that Shakspeare himself acted at the theatre, and that his Hamlet was first performed there."—Mackeson's *Churches*.

ST. JAMES'S, Spa-road, Bermondsey, contains a large altar-picture, painted for 500*l.*, by John Wood, upon conditions detailed at p. 49. The subject is the Ascension of our Saviour; the figures are considerably above the natural size: on a canvas of 275 square feet (25 feet by 11), in the upper part, a full-length figure of the Saviour occupies nearly one-half of the picture; a nimbus around the head illumining the upper sky; the eleven disciples are in various positions, standing, kneeling, prostrated, with uplifted hands and faces, and bodies bent with reverential awe and devotion; and their personal identity, costume, and colouring, are very successful.

ST. JOHN'S, formerly ST. AUGUSTIN'S, at Hackney, was taken down in 1798, except the tower, of the sixteenth century, which still remains, with a clock and a peal of eight bells; the body of the church was rebuilt northward of the ancient edifice; eastward is the chapel of the Rowe family, built in 1614, and preserved as a mausoleum. The churchyard has thoroughfare paths, lined with lofty trees, but the funereal yew is not among them. The old church, before its demolition, was extremely rich in monuments and brasses, some of which were removed to the porches and vestibules of the new church.

ST. JOHN'S, Bethnal Green, designed by Sir John Soane in 1828, was the first church consecrated by Bishop Blomfield in the diocese of London. (See *Gentleman's Magazine*, Feb. 1831.)

ST. JOHN'S, Clerkenwell, a modern church, in St. John's-square, has an ancient crypt (part of the Priory of St. John of Jerusalem), in which the detection of the Cock-lane Ghost hoax was consummated.

"While drawing in the crypt of St. John's, Clerkenwell, in a narrow cloister on the north side (there being at that time coffins, and fragments of shrouds, and human remains lying about in disorder), the sexton's boy pointed to one of the coffins, and said the woman in it was 'Scratching Fanny.' This reminding me of the business of the Cock-lane Ghost, I removed the lid of the coffin, which was loose, and saw the body of a woman, which had become adipocere; the face perfect, handsome oval, with aquiline nose. [Will not arsenic produce adipocere?] She was said to have been poisoned, although the charge is understood to have been disproved. I inquired of one of the churchwardens of the time (Mr. Bird, I believe), and he said the coffin had always been understood to contain the body of the woman whose spirit was said to have haunted the house in Cock-lane."—*Communicated by John Wykeham Archer*, 1851.

ST. JOHN THE EVANGELIST, Charlotte-street, Fitzroy-square, designed by Hugh Smith, in the Norman or Romanesque style, was opened in 1846, its west front having two towers, and a spire 120 feet high, and a large wheel-window beneath the intervening gable. The second spire has not been built.

ST. JOHN THE EVANGELIST, Horselydown, one of the Fifty New Churches (10 Anne), was finished in 1732: it has a tower, with an ill-proportioned Scamozzian Ionic column, seen to the eastward from the London and Greenwich Railway.

ST. JOHN THE EVANGELIST, Smith-square, Westminster, was the second built of the Fifty New Churches (10 Anne), finished in 1728, after the designs of Archer, pupil of Vanbrugh; before which it began to settle, and a tower and lantern-turret were added at each corner to strengthen the main building; "and these would have been

beautiful accompaniments to the central tower and spire intended by the architect." (*Elmes*.) These towers reminded Lord Chesterfield of an elephant thrown on its back, with its four feet erect in the air; and Charles Mathews, of a dining-table upside-down, with its four legs and castors. Meanwhile, justice has not been done to the originality and powers of the architect: the whole composition is impressive, and its boldness loses nothing by the graceful playfulness of the outline; it has some inaccuracies of detail, but is, altogether, a very striking production of the Vanbrugh school. (*Donaldson*.) It has semicircular apses east and west, and imposing Doric porticoes north and south. The interior of the church (said to have been the first in London lit with gas) is without columns, and is highly embellished: the east window is filled with ancient painted glass brought from Normandy; and above the altar-table is a copy of the celebrated picture of Christ bearing his Cross, by Ribalta, in the Chapel of St. Mary Magdalen College, Oxford. The elegant marble font, designed by C. Barry, jun., sculptured by J. Thomas, was placed here in 1847. The Organ, erected by a German builder, in 1727, and repaired by Hill, in 1840, is handsome and powerful. Churchill, the satirist, born in the parish, succeeded his father in 1758, in the curacy and lectureship of this church: he soon disgraced the holy office, and substituted for the clerical costume a blue coat, gold-laced waistcoat and hat, and large ruffles; remonstrances ensued, and he resigned.

St. John's burial-ground contains "the ashes of an Indian chief, who died of small-pox, in 1734, and was buried in the presence of the Emperor Toma, after the custom of the Karakee Creeks, sewn up in two blankets, between two deal boards, with his clothes, some silver coins, and a few glass beads."—Walcott's *Westminster*, p. 314.

ST. JOHN THE EVANGELIST, Waterloo-road, was built in 1822–24, from the design of F. Bedford: it has a Grecian-Doric hexastyle portico, and lofty steeple, with an excellent peal of eight bells; tenor, 1900 lbs. weight. The font is of white marble, and was brought from Italy. In a vault here is interred R. W. Elliston, the comedian. The site of St. John's was a swamp and horse-pond; the district commences at the middle of Westminster Bridge, whence an imaginary boundary-line passes through the middle of the River Thames and Waterloo Bridge.

ST. JOHN OF JERUSALEM, South Hackney, Middlesex; a large and beautiful church in the best Pointed style, thirteenth and fourteenth centuries, by E. C. Hakewill; consecrated July 20, 1848. The plan is cruciform, with a tower and spire of equal height, together rising 187 feet; the latter has graceful lights and broaches, and the four Evangelists beneath canopies at the four angles; the Nave has side aisles with flying buttresses to the clerestory; each Transept is lit by a magnificent window, 29 feet high; and the Choir has an apsis with seven lancet windows: entire external length, 192 feet; materials, Kentish rag and Speldhurst stone. The principal entrance is at the west, through a screen of open arches. The roof, of open-work, is of 60 feet highest pitch, with massive arched and foliated ribs; and the meeting of the Transepts, Chancel, and Nave is very effective. The Chancel has a stone roof, and the walls of the apse are painted and diapered—red with fleur-de-lis, and blue powdered with stars; the pulpit and reading-desk are also diapered; and the seats are of oak, and mostly formed of stall-ends with finials: the two first seats are well-carved; on one is the crest of the Rector and the badge of the patron Saint; and on the other side the dove with the olive-branch, and the lynx, as an emblem of watchfulness. All the windows are filled with painted, stained, or richly-diapered glass, by Wailes, Powell, &c.; and a memorial clerestory window, Christ Blessing Little Children, and Raising Jairus's Daughter, is beautifully painted by Ward and Nixon. The altar-floor is laid with Minton's tiles; the font is nicely sculptured; the Organ is from the old church at Hackney: the tower has a fine peal of eight bells.

ST. JOHN'S, Notting-hill, an Early English cross church, designed by Stevens and Alexander, and consecrated Jan. 22, 1845, stands upon an elevated portion of Kensington Park, facing Ladbroke Grove, and has a tower 156 feet high, seen to picturesque advantage.

ST. JOHN'S, Oxford-square, Paddington, is a debased imitation of New College

Chapel in the exterior; architect, Fowler: it possesses a good stained glass window of the Twelve Apostles.

ST. JUDE'S, Gray's Inn Road, was the first church which received aid from the Bishop of London's Fund; founded, November, 1862; style, Early English; architect, Joseph Peacock. The tower, at the south-east angle, is 100 feet high, terminating with an iron finial. All the chancel windows are of stained glass. The three lancet windows, the gift of a lady, represent the Birth, Crucifixion, and Resurrection, of Our Lord. The large rose-window is a thank-offering of the congregation: in the centre circle is the Ascension; and in the tracery around the Annunciation are—Disputing in the Temple, the Baptism, the Agony, Bearing the Cross, the First Appearance to Mary, the Journey to Emmaus, and the Pentecost. The reredos is of Caen stone, and represents the Last Supper carved in relief, the wall on each side being richly covered with tiles in pattern. The Organ, which is of original arrangement, is in the Chancel aisle, under the tower, and is free and open to the choir.

ST. LAWRENCE JEWRY, King-street, Cheapside, was commenced by Wren, in 1671, upon the site of the old church, destroyed in the Great Fire: it has a tower and steeple 130 feet high, with, for a vane, a gilt gridiron, the emblem of St. Lawrence; the east end, in King-street, is so pure as to be almost Grecian. The interior has some excellent plaster-work, in wreaths and branches; and the organ-case, pulpit, and doorways are richly-carved oak. In the centre is a large pew for the Lord Mayor and Common Council, the church being used for Corporation Sermons. Here Tillotson was Tuesday lecturer; was married 1663-4; and buried in 1694, three years after he was consecrated Archbishop of Canterbury: his sculptured monument is on the north wall of the church. The Vestry-room walls are entirely cased with fine dark carved oak; and the ceiling has elaborate plaster foliage, and a painting, by Thornhill, of St. Lawrence. In the old church, mentioned 1293, was buried Thomas Boleyn, Earl of Wiltshire, whose daughter Anna married King Henry VIII., and was the mother of Queen Elizabeth: here lay also the remains of Richard Rich, mercer (d. 1469), from whom descended the Earls of Warwick. There are a fine peal of bells, two good windows by Clayton and Bell, and an excellent Organ by Schmidt.

ST. LEONARD'S, Eastcheap, destroyed in the Great Fire, and not rebuilt, had a curious affix. Newcourt oddly says:—"On Fish-street-hill, in the Ward of Bridge Within, stood St. Leonard *Milk* Church, so called after one William Melker, the builder thereof."

ST. LEONARD'S, Shoreditch (anciently *Soresdich*), occupies the site of a church mentioned in grants early in the thirteenth century. The last church (which had four gables in a line, and a low square tower) was taken down in 1736: and the present church built by the elder Dance in 1740: it has a steeple imitated from that of St. Mary-le-Bow, Cheapside, and a fine peal of twelve bells. The Organ is by Bridge.

Holywell-street, in this parish, now High-street, Shoreditch, was in the reign of Queen Elizabeth and James I. inhabited by players of distinction, connected with the Curtain Theatre, the Blackfriars Theatre, and the Globe on the Bankside. The parish register (within a period of sixty years) records the interment of the following celebrated characters:—Will Sommers, Henry VIII.'s jester; Richard Tarlton, the famous clown of Queen Elizabeth's time; James Burbage, and his more celebrated son, Richard Burbage; Gabriel Spenser, the player, who fell in 1593, in a duel with Ben Jonson; William Sly and Richard Cowley, two original performers in Shakspeare's plays; the Countess of Rutland, the only child of the famous Sir Philip Sidney; Fortunatus Greene, the unfortunate offspring of Robert Greene, the poet and player. Another original performer in Shakspeare's plays, who lived in Holywell-street, in this parish, was Nicholas Williamson *alias* Tooley, whose name is recorded in gilt letters on the north side of the altar as a yearly benefactor of 6*l.* 10*s.*, still distributed in bread every year to the poor of the parish, to whom it was bequeathed.—Cunningham's *Handbook*, p. 235.

In the register is entered, among the "Burialles, Thomas Cam, y<sup>e</sup> 22d inst. of January, 1588, Aged 207 years, Holywell-street. George Garrow, parish clerk." [Is not 2 written for 1 in the number of years?] At St. Leonard's is annually preached the endowed Lecture founded by Mr. Thomas Fairchild, gardener, who carried on his business in Selby's Gardens, extending from the west end of Ivy-lane to the New North-road. By his will, in 1728, he bequeathed the sum of 25*l.*, the interest of which he desired might be given annually to the lecturer of St. Leonard's, for preaching on Whit-Tuesday a sermon on "The Wonderful Works of God in the Creation," or "On the Cer-

tainty of the Resurrection of the Dead, proved by certain changes of the Animal and Vegetable parts of the Creation." The bequest came into operation in 1730, and has been continued ever since. The sum bequeathed by Mr. Fairchild was increased by subscriptions to 100*l.* South-Sea Annuities, producing 3*l.* per annum, which was transferred to the President and Council of the Royal Society. To the subscription added to the bequest, Archdeacon Denne added 29*l.* out of the money he, the first lecturer, had received for preaching the sermon. It was the custom for the President and Fellows of the Royal Society to hear this sermon preached. Stukeley records:—"Whitsunday, June 4, 1750, I went with Mr. Folkes, and other Fellows, to Shoreditch, to hear Dr. Denne preach Fairchild's sermon, On the Beauties of the Vegetable World. We were entertained by Mr. Whetman, the vinegar-merchant, at his elegant house by Moorfields; a pleasant place, encompassed with gardens well stored with all sorts of curious flowers and shrubs, where we spent the day very agreeably, enjoying all the pleasures of the country in town, with the addition of philosophical company."—*MS. Journal.*

ST. LUKE'S, Nutford-place, Edgware-road, was erected in 1856, Ewan Christian, architect, as a thank-offering for the exemption from cholera, where, at the time, fifty in a thousand was the rate of mortality in some parishes, and only two in a thousand suffered. The cost was 13,782*l.*, of which 6000*l.* was for the site; the church was built chiefly for working-men, by whom it is well attended.

ST. LUKE'S CHURCH, Chelsea (the Old Church), near the river, consists of a Nave, Chancel, and side aisles; the chancel rebuilt early in the sixteenth century; chapel at the east end added by Sir Thomas More about 1520; and the tower of brick, built 1667–1674. The interior has been much altered. Its tombs of "divers persons of quality" are very interesting. In the chancel is an ancient altar-tomb, without inscription, supposed to belong to a Bray, of Eton. Here, on the south wall, is the black marble tablet, erected by Sir Thomas More, in 1532 (see *ante*, p. 90), with the famous biographical epitaph, in Latin, from More's own pen, and the following to More and his two wives:—

"Chara THOMÆ jacet hic JOANNA uxorcula MORI,  
 Qui tumulum ALICLÆ hunc destino, quique mihi.  
 Una mihi dedit hoc conjuncta virentibus annis,  
 Me vocet ut puer, et trina puella patrem.  
 Altera privignis (quæ gloria rara nocere est)  
 Tam pia, quam quatis, vix fuit ulla suis.  
 Altera sic mecum vixit, sic altera vivit,  
 Charior incertum est, quæ sit an illa fuit.  
 O simul, O juncti poteramus vivere nostros,  
 Quam bene, si fatum religioque sinant.  
 At societ tumulus, societ nos, obsecro, cælum!  
 Sic mors, non potuit quod dare vita, dabit."

This elegant Latin is considered to be not excelled by any epitaph in that or any other language. In the biographical epitaph, the word "hereticisque" was purposely omitted when the monument was restored on both occasions: there is a blank space left. Over the tomb are the crest of Sir Thomas More, namely, a Moor's head; the arms of himself and his two wives.

Sir Thomas More is stated to have been buried here, but this is disputed: most probably, he was buried in the chapel of St. Peter-in-the-Tower; though Aubrey distinctly states that "after More was beheaded, his trunk was interred in Chelsey Church," beneath the monument already described. The decapitated head of More was long kept in the Tudor mansion of Baynard's, in Surrey, by More's favourite daughter, Margaret Roper, who once lived here. The skull of Sir Thomas was finally deposited in the vault of the Ropers, in St. Dunstan's Church, in the suburbs of Canterbury, where it was seen by E. W. Brayley, about sixty years ago.—(See Note in Brayley's *Survey*, vol. v. p. 183.)

The Rev. Mr. Blunt suggests that the ancient dedication of the church was to All Saints, though it has long been appropriated to St. Luke. The Chancel, with the chantries north and south of it, are the only portions of ancient work left. The north chantry, called the Manor Chantry, once contained the monuments of the Brays, now in very imperfect condition; having been destroyed or removed to make space for those of the Gervoise family. There remains, however, an ancient brass in the floor. Of the south, or More Chantry, Mr. Blunt states that the monument of Sir Thomas More was removed from it to the chancel, and the chantry had been occupied by the monuments of the Georges family, now also removed, displaced, and destroyed. Notwithstanding the current contrary opinion, founded on Aubrey's assertion, the More monument (says Mr. Blunt) is the original one for which Sir Thomas More himself dictated the epitaph.

Mr. Burnell, the architect of the improvements effected subsequently to 1857, speaks positively as to the non-existence of a crypt which conjecture had placed under the More chantry. The foundation

of the west end of the church, before it was enlarged in 1666, he found west of Lord Dacre's tomb. On the north side of the chancel an aumbry, and on the south a piscina, were found, coeval with the chancel (early fourteenth century). The arch between the More Chantry and the chancel is a specimen of Italian workmanship, dated 1528; a date confirmed by the objects represented in the carved ornaments, those objects being connected with the Roman Catholic ritual. It is a remarkably early instance of the use of Italian architecture in this country.

Here are these monuments: one with kneeling figures, to Thomas Hungerford; to the daughter of Sir Theodore Mayerne, wife of Peter de Caumont, Marquis de Cugnac; Jane Dudley, Duchess of Northumberland, beheaded for proclaiming Lady Jane Grey, mother of Queen Elizabeth's favourite, Robert Dudley, Earl of Leicester; her daughter Mary was the mother of Sir Philip Sidney ["her monument at east end of south chapel is not unlike Chaucer's in Westminster Abbey, but sadly mutilated;"—*Cunningham*]; Gregory, Lord Dacre, and Lady Ann, his wife: the latter founded the almshouses in Westminster which bear her name; she was sister to Sackville, Earl of Dorset, the poet. In a chapel of the north aisle lie the Laurence family, after whom "Lawrence-street," Chelsea, was called. In the same aisle is the monument (said by Walpole to be by Bernini, and cost 500*l.*), to Lady Jane Cheyne, and wife of Charles Cheyne, Esq., whence *Cheyne-row*; she is represented lying on her right side, and leaning on a Bible.

In the south-west corner of the church is a mural monument to Dr. Edward Chamberlayne, with a punning Latin epitaph: it mentions that some of his books [MSS.], inclosed in wax, were buried with him; yet when his tomb fell into decay not a vestige of them could be found. From a Latin epitaph on his daughter, we learn that on June 30, 1690, she fought valiantly in men's clothing six hours against the French, on board a fire-ship under the command of her brother.

In the church are interred, *without monuments*, the mother of John Fletcher, the poet; the mother of George Herbert and Lord Herbert of Chisbury: Dr. Donne preached her funeral sermon in this church, and Izaak Walton tells us he heard him; Thomas Shadwell, the Mac-Flecknoe: his funeral sermon was preached in this church by Nicholas Brady, Nahum Tate's associate in the Psalms; Abel Boyer, author of a Life of Queen Anne and the French Dictionary which bears his name; Cipriani, the elegant painter and designer; Dr. Martyn, translator of Virgil; Henry Mossop, the actor; Dr. Kenrick, the annotator of Shakspeare; Sir John Fielding, the magistrate; and Henry Sampson Woodfall, printer of *Junius*.

In the churchyard is the mystic monument of the great naturalist and virtuoso, Sir Hans Sloane, M.D., who attended Queen Anne in her last illness, and was the first medical man created a baronet; his collections became the nucleus of the British Museum. Here, too, is a pyramidal monument erected by the Linnæan and Horticultural Societies to Philip Miller, author of the *Gardeners' Dictionary*; he was nearly fifty years gardener to the Apothecaries' Company's Garden at Chelsea.

The Register, under Feb. 13, 1577-8, records the baptism of "Charles, a boy by estimacon 10 or 12 yers olde, brought by Sir Walter Rawlis from Guiane." John Larke, presented to the rectory of Chelsea, in 1530, by Sir Thomas More, was executed at Tyburn, in 1544, for following the example of his patron, in denying the King's supremacy.

ST. LUKE'S NEW CHURCH, Chelsea, was founded in 1820; Savage, architect, one of the restorers of the Temple Church; style, Gothic, 14th and 15th centuries. The building is of brick, cased with Bath stone. It has a pinnacled tower, 142 feet high, with arched entrance porch. The north and south fronts have bold buttresses; and the east front is magnificent. The vaulting, 60 feet in height, is entirely of stone; and under the clerestory windows is a triforium; the Nave is divided from the aisles by an arcade and clustered pillars. The altar-screen is ably sculptured, and in the centre is a picture of the Ascension, stated to be by Northcote. The interior length of the church is 130 feet. The Organ, built by Nicholls, contains 33 stops and 1876 pipes, and is one of the most powerful instruments in the metropolis.

In the churchyard lie Blanchard and Egerton, the actors, side by side. Captain McLeod, who wrote the *Voyage of the Alceste*, 1817; and Alexander Stephens, who wrote a *Life of John Horne Tooke*, and edited the *Annual Biography and Obituary*. In a cemetery in the King's-road, given to St. Luke's parish in 1733, by Sir Hans

Sloane, is buried Andrew Millar, the bookseller, who lived in the Strand, "at Buchanan's Head" (see his imprint to *Thomson's Seasons*); his grave is marked by an obelisk in the centre of the ground.

ST. LUKE'S, near the centre of Old-street-road, is one of the fifty Queen Anne churches, and was consecrated on St. Luke's day, Oct. 16, 1733. It is built of stone, and has an obelisk spire, a masterpiece of absurdity. The parish was taken out of St. Giles's, Cripplegate.

ST. MAGNUS THE MARTYR, London Bridge, was burnt in the Great Fire, and rebuilt by Wren, 1676. It has a tower, octagon lantern, cupola, and spire, added in 1705, which are very picturesque. The footway under the tower, on the east side, was made in 1760, through the recesses and groined arches originally formed in the main building by Wren, as if he had seen its necessity whenever the street leading to Old London Bridge required widening.

This improvement was made after the destruction of the church roof by fire, April 18, 1760, which began in an oilman's premises in Thames-street, adjoining the church, and consumed seven houses and all the warehouses on Fresh Wharf. This conflagration was occasioned by the neglect of a servant, who left some inflammable substances boiling while he went to see Earl Ferrers return from his trial and condemnation for murder: before the man could get back, the shop was in flames.

Miles Coverdale was for a short time rector of St. Magnus: he was buried in St. Bartholomew's by the Exchange, which being taken down in 1840, Coverdale's remains were removed, and interred in St. Magnus', where a monument to his memory was erected in 1837.

The inscription upon Coverdale's tomb states:—"On the 4th of October, 1535, the first complete English version of the Bible was published under his direction." The third century of this event was celebrated by the clergy throughout the churches of England, October 4, 1835; and several medals were struck upon the occasion.

The handsomely carved and gilt projecting dial, affixed to St. Magnus' tower, was the gift of Sir Charles Duncomb, in 1709, and cost 485*l.* 5*s.* 4*d.*: Sir Charles, it is related, when a poor boy, had once to wait upon London Bridge a considerable time for his master, whom he missed through not knowing the hour; he then vowed that if ever he became successful in the world, he would give to St. Magnus' a public clock, that passengers might see the time; and this dial proves the fulfilment of his vow. It was originally ornamented with several richly gilded figures: upon a small metal shield inside the clock are engraven the donor's arms, with this inscription: "The gift of Sir Charles Duncomb, Knight, Lord Major, and Alderman of this ward. Langley Bradley fecit, 1709." Sir Charles also presented the large Organ in St. Magnus' Church: it was built by Jordan, in 1712, as announced in the *Spectator*:

"Whereas, Mr. Abraham Jordan, senior and junior, have with their own hands, joynery excepted, made and erected a very large Organ in St. Magnus' Church, at the foot of London Bridge, consisting of four sets of keys, one of which is adapted to the art of emitting sounds by swelling the notes, which never was in any Organ before; this instrument will be publicly opened on Sunday next, the performance by Mr. John Robinson. The abovesaid Abraham Jordan gives notice to all masters and performers, that he will attend every day next week at the said church, to accommodate all those gentlemen who shall have a curiosity to hear it."—*Spectator*, Feb. 8, 1712.

This instrument still exists, but has been much altered and modernized by Parsons; and at present, only three of the original four sets of keys remain.—*A Short Account of Organs, &c.*, 1847.

The tower has a peal of ten bells. A bronzed or copper medalet, date 1676, bears on its obverse a view of old St. Magnus' Church. Here was buried Hervey Yevele, or Zenely, described by Stow as *Free-Mason* to Edward III., Richard II., and Henry IV.: he assisted to erect the tomb of Richard II. in Westminster Abbey, between 1395 and 1397, and prepared plans for raising the walls of Westminster Hall.

ST. MARGARET'S, Lothbury, destroyed in the Great Fire, and rebuilt by Wren in 1690, has a steeple 140 feet high; two carved and painted figures of Moses and Aaron, brought from St. Christopher-le-Stocks, when that church was taken down; and a marble font attributed to Gibbons, resembling that in St. James's Church, Piccadilly. The Organ is by England.

ST. MARGARET PATTEN'S, Fenchurch-street, destroyed in the Great Fire, and rebuilt by Wren in 1687, contains a fine altar-picture—Angels ministering to Christ in

the Garden—scribed to Carlo Maratti. About the altar-piece are some exquisitely carved flowers. Against the south wall is a large monument, by Rysbrack, to Sir P. Delme, Lord Mayor in 1723. The church was named from the patten-makers, who formerly mostly lived in the neighbourhood.

ST. MARGARET'S parish church, Westminster, is placed a short distance from the north door of Westminster Abbey: it was originally built about 1064, by Edward the Confessor, for the people who had thickly settled around the Abbey, and were greatly increased by those who sought here the privilege of Sanctuary. This Norman edifice was destroyed, and the church rebuilt in the reign of Edward I., of which period there exist a few remains. It was considerably altered in the time of Edward IV., when, probably, a flight of steps led up to the church-door, the surrounding level having been raised about nine feet above the original surface: a stone cross and a pulpit formerly stood here, as at St. Paul's. Soon after the ancient Chapel of St. Stephen had been given up for the sittings of the House of Commons, it is supposed the members attended Divine Service in St. Margaret's, as the Lords went to the Abbey Church. On Sept. 25, 1642, the Covenant was read from St. Margaret's pulpit, and taken by both Houses of Parliament, the Assembly of Divines, and the Scots Commissioners. Here also were preached the lengthy Fast-day Sermons; and Hugh Peters, "the pulpit buffoon," persuaded the Parliament to bring Charles "to condign, speedy, and capital punishment," while the churchyard was guarded by soldiers with pikes and muskets. St. Margaret's did not escape plunder by the Puritans; but in 1660, "the State's Arms," richly carved and gilt, were set up in the church, and they are still preserved in the vestry. In 1641, a gallery was built over the north aisles; and in 1681, another over the south aisles, "exclusively for persons of quality," the latter erected at the expense of Sir John Cutler, the miser satirized by Pope. Doctors Burnet and Sprat, old rivals, once preached here before Parliament in one morning; and on Palm Sunday, 1713, Dr. Sacheverell preached here first after the term of his suspension: 40,000 copies of this sermon were sold. In 1735, St. Margaret's was repaired at the expense of Parliament, when the tower was faced with Portland stone and raised 20 feet, being now 85 feet high: it has a fine peal of ten bells, the tenor weighing 26 cwt. In 1753 was placed over the altar-table a relieve of our Lord's Supper at Emmaus, sculptured in limewood, by Alken of Soho, from Titian's celebrated picture in the Louvre. In 1758, the east end was rebuilt and made apsidal; and the great east window removed, and replaced by the present beautiful cinque-cento window, said to have occupied five years executing, at Gouda in Holland, intended as a present from the magistrates of Dort to Henry VII.

This celebrated glass painting represents the Crucifixion, with angels receiving the blood-drops from the Saviour's wounds; an angel wafts the soul of the good thief to paradise, and a dragon (the devil) bears the soul of the wicked thief to eternal punishment. The six upper compartments are filled with as many angels, bearing the cross, the sponge, the crown of thorns, the hammer, the rods, and nails. In the lower compartment (right) is Arthur Prince of Wales, eldest son of Henry VII., and above him St. George and the red and white rose; and to the left is Catherine of Arragon, Arthur's bride, with above her the figure of St. Cecilia, and a bursting pomegranate, the emblem of Granada. The window is also said to have been ordered by Ferdinand and Isabella, on Prince Arthur being affianced, in 1499, to the Princess Catherine, their portraits being procured for the purpose. It was probably finished after his brother's death, to be sent as a gift to Henry VIII. The king gave it to Waltham Abbey, where it remained until the Dissolution, A.D. 1540; when the last abbot sent it for safety to his private chapel at New Hall, which, by purchase, subsequently became the property of Sir Thomas, father of Anne Boleyn, queen of Henry VIII. The chapel remained undisturbed until General Monk becoming possessor of New Hall, to save the window from destruction by the Puritans, had it buried underground. After the Restoration, Monk replaced the window in the chapel. Subsequent to his death, the seat fell into decay, and the chapel was taken down: but the window was preserved for some time cased up, until purchased by Mr. Conyers, of Copt Hall, Essex, by whose son it was sold, in 1753, to the churchwardens of St. Margaret's for 400 guineas: it was then placed in the church, re-opened in 1759, a fine anthem for the occasion being composed by Dr. Boyce. A prosecution was now instituted against the parishioners by the Dean and Chapter of Westminster, for putting up what was attempted to be proved "a superstitious image or picture." After seven years' suit, the bill was dismissed; in memory of which Mr. Churchwarden Peirson presented, as a gift for ever, to the churchwardens of the parish, a richly-chased cnp, stand, and cover, silver-gilt, weighing 93 oz. 15 dwt., which is the loving-cup of St. Margaret's, and is produced with especial ceremony at the chief parochial entertainments.

St. Margaret's is otherwise rich in painted glass: the north-east window is filled with gold mosaic designs, the Holy Monogram, the red and white roses, and porteuillis, and a saint (Iago of Compostella?) bearing an open book. The crescent beside the rose, Mr. Rickman thought, denoted some "expectancy of regal amplitude;" so Shakspeare:

"*Pompey*. My power 's a crescent, and my auguring hope  
Says it will come to the full."—*Ant. and Cleop.* act ii, sc. 1.

In this and the south-east windows are the arms of Edward the Confessor, represented as blazoned by the heralds *temp.* Henry VIII. The saint in the centre is St. Michael overcoming the dragon.—Abridged from Walcott's *Westminster*.

The Chancel is decorated in polychrome by Willement: and over the reredos are crocketed canopies, coloured ruby, azure, and emerald diaper, and richly gilded. In 1802, the present beautifully carved pulpit and reading-desk, by Lenox, were erected; the Speaker's chair of state was placed in the front of the west gallery; and a new Organ, by Avery, was built. Altogether, the votes of the House of Commons for the repairs of this church have been frequent and considerable. Upon certain occasions, as Restoration Day (May 29), the Chaplain of the House of Commons preached here; when the House was usually represented by the Speaker, the Serjeant-at-Arms, the clerks and other officers, and some eight or ten members. These and similar observances, as on Jan. 30, King Charles's Martyrdom, and Nov. 5, Gunpowder Plot, have been discontinued since 1858. The church originally consisted of a Nave and Choir, with side aisles; with chapels or altars in the latter to St. Margaret, St. George, St. Katherine, St. Erasmus, St. John, and St. Cornelius, besides two to St. Nicholas and St. Christopher: the churchwardens' accounts bear evidence of the maintenance of these shrines. In the ambulatory is a carved stall of the 16th century.

Among the names of the more eminent of the Puritans who preached in St. Margaret's, are those of Calamy, Vines, Nye, Manton, Marshall, Gauden, Owen, Burgess, Neweomen, Reynolds, Cheynell, Baxter, Case (who censured Cromwell to his face, and when discoursing before General Monk, cried out, "There are some will betray three kingdoms for filthy lucre's sake," and threw his handkerchief into the General's pew); the critical Lightfoot; Taylor, "the illuminated Doctor;" and Goodwyn, "the windmill with a weathercock upon the top."—Walcott's *Westminster*.

The monuments are very numerous: among them are a tablet to Caxton the printer, by Westmacott, raised 1820 by the Roxburgh Club; alabaster figures, coloured and gilt, to Marie Lady Dudley (d. 1600); brass tablet, put up by subscription, 1845, to Sir Walter Raleigh, whose body was interred within the Chancel of this church on the day he was beheaded in the Old Palace-yard, Oct. 29, 1618; a black marble slab to James Harrington (d. 1677), who wrote *Oceanu*; monument near the porch-door to Mrs. E. Corbet, with what Johnson considered "the most valuable of all Pope's epitaphs;" monument to Captain Sir Peter Parker, Bart., R.N., with bas-relief of his death, 1814, and lines by Lord Byron, in Chancel north aisle: a curious tablet of Cornelius Van Dun (d. 1577), with a coloured bust in the uniform of the Yeomen of the Guard: and a small monument to Mrs. Joane Barnett (d. 1674), who left money for a yearly sermon and poor widows: she is said to have sold oatmeal cakes hard by the church-door, in memory of which a large oatmeal pudding is a standing dish at the "Feast." There is but one ancient brass in the church, the rest having been sold in 1644, at 3*d.* and 4*d.* per pound, as the churchwardens' accounts attest. Weever records the burial here of John Skelton, Poet Laureate to Henry VIII. (d. 1529); and the registers contain the burial of Thomas Churchyarde, "Court Poet" (d. 1604). Soon after the Restoration, several bodies were disinterred from the Abbey, and deposited in a pit in St. Margaret's churchyard: among them was the corpse of Oliver Cromwell's mother, from Henry VII.'s Chapel; Sir W. Constable, one of the judges in the trial of Charles I.; Admiral Blake; John Pimme; Thomas May, the poet, &c. Here, too, are buried Sir William Waller, the Parliament General (d. 1668); Hollar, the engraver (d. 1677), in the churchyard, "near N.W. corner of the tower" (*Aubrey*); Thomas Blood, who attempted to steal the regalia (d. 1680); Gadbury the Cavalier astrologer, and helpmate of Lilly (d. 1704); Frances Whate (d. 1736), a charwoman, buried in the church; John Read, the "Walking Rushlight," and the oldest general in the service (d. 1807). The churchyard is extremely crowded with bodies. In the report on Extramural Sepulture, 1850, Dr. Reid stated, "that the state of the burying-ground around St. Margaret's Church is prejudicial to the air supplied at the Houses of Parliament, and also to the whole neighbourhood;" that "these offensive emanations have been noticed at all hours of the night and morning;" and that even "fresh meat is frequently tainted" by the deleterious gases issuing from this churchyard. The removal of the church was proposed even in Stow's time, and has often been revived: it was favoured by Sir Charles Barry, in his design for the completion of the New Palace of Westminster: if allowed to remain, the church should be restored, to harmonize with the Abbey, to which it was originally an adjunct. Among the be-

quests is an endowment, founded in 1781, by the will of Mr. Edward Dickenson, who left 5000*l.* stock, the interest of which was to be divided, on the first month after Easter-day, between three newly-married couples from each parish of St. Margaret and St. John the Evangelist, Westminster, and of Acton. The distribution takes place with the approbation of the Bishop of London; and petitions are taken into consideration by the trustees on the Wednesday in Easter week, when they decide on the nine couples to receive the bounty, 15*l.* each.

A celebrated heirloom of the parish is the "*Overseers' Box*," originally purchased at Horn Fair for fourpence, and presented by a Mr. Monek to his brother Overseers, in 1713. In 1713, the Society of Past Overseers commemorated the gift by adding to the Box a silver rim; and in 1726 were added a silver side-case and bottom. In 1740, an embossed border was placed on the lid, and the bottom enriched with an emblem of Charity. In 1746, Hogarth engraved inside the lid a bust of the Duke of Cumberland, in memory of the battle of Culloden. In 1765 was added to the lid a plate with the arms of the City of Westminster, and the inscription:—"This Box is to be delivered to every succeeding set of Overseers, on penalty of five guineas." The original Horn Box thus ornamented has been placed in four additional cases, each ornamented by its several custodians, the senior Overseer for the time being, with silver plates engraved with the following subjects:—Fireworks in St. James's Park (Peace of Aix-la-Chapelle), 1749; Admiral Keppel's Action off Ushant, and his Acquittal by Court Martial; Battle of the Nile, 1798; Repulse of Admiral Lincolin, 1804; Battle of Trafalgar, 1805; Action between San Fiorenzo and La Piedmontaise, 1803; Battle of Waterloo, 1815; Bombardment of Algiers, 1816; House of Lords at Trial of Queen Caroline; Coronation of George IV., and his visit to Scotland, 1822. Portraits:—Wilkes, Churchwarden in 1759; Nelson, Duncan, Howe, and Vincent; Fox and Pitt, 1806; the Prince Regent, 1811; Princess Charlotte, 1817; and Queen Charlotte, 1818. Views:—Interior of Westminster Hall, with Westminster Volunteers attending Divine Service, on Fast-day, 1803; the old Sessions House; St. Margaret's Church from north-east, the west front, tower, and altar-piece. In 1813 was added to the outer case a large silver plate portrait of the Duke of Wellington, commemorating the centenary of the box. The top of the second case represents the Governors in their board-room, inscribed, "The original Box and cases to be given to every succeeding set of Overseers, on penalty of fifty guineas, 1783." Outside the first case is engraved a cripple. In 1793, a contumacious Overseer detained the Box, and it was deposited "in Chancery" until 1796, when it was restored to the Overseers' Society; this event being commemorated by the addition of a third case, of Justice trampling upon an unmasked man and a serpent, and the Lord Chancellor (Loughborough) pronouncing his decree. On the fourth, or outer case, is the Anniversary meeting of the Past Overseers' Society, and the delivery of the Box to the succeeding Overseer, who must produce it at certain parochial entertainments, with three pipes of tobacco at least, under the penalty of six bottles of claret; and must return the whole safe and sound, with some addition, under penalty of two hundred guineas. Within the Box is a mother-of-pearl tobacco-stopper, with a silver chain.—Abridged from Walcott's *Westminster*.

ST. MARK'S, Kennington Common, a Doric church, designed by Roper, and built in 1824, on the spot formerly the place of execution for Surrey, and where several persons suffered death in the Stuart cause. Here was executed "Jemmy Dawson," 1746.

ST. MARK'S, Old-street-road, St. Luke's, a beautiful Early English Church, designed by Ferrey, and built in 1848: it has a noble four-storied tower and spire, rising from the ground 125 feet; and the windows throughout the edifice are fine.

ST. MARK'S, Victoria Docks, near the little village of Silvertown, was built for the accommodation of the "Londoners over the border." The style is English Decorated, fifteenth century: materials, inside and outside, white and coloured bricks; Teulon, architect. It contains 1000 sittings, and cost 7000*l.*: the Organ, a gift, is fine.

ST. MARTIN'S-IN-THE-FIELDS, north of the western extremity of the Strand, is the second church built upon this site; the first having been erected by Henry VIII., from his disliking the funerals of inhabitants passing Whitehall in their way to St. Margaret's, at Westminster, as they had no parish church. It is probable that there was a building before this, but "only a chapel for the use of the monks of Westminster when they visited their Convent (*Covent*) Garden, which then extended to it."—(*J. Gwilt*.) The old church had a low square tower, and was strictly "in the fields:" in 1607, Henry Prince of Wales added a chancel. In this ancient church was buried Nicholas Stone, the sculptor, his monument adorned with his bust finely carved in profile, with tools used in sculpture, compasses, &c.: he was engaged in the building of the Banqueting-house, Whitehall. No doubt the sculpture, scrolls, and other ornaments in stone were of his work. In this church also were interred Paul Vansomer, portrait-painter, scarcely inferior to Vandyck; Nicholas Lanier, painter, musician, and engraver, and who bought pictures for Charles I.; Nicholas Lyzard, who had been in the service of Henry VIII. and Edward VI., and who was sergeant-painter to Queen Elizabeth; Nicholas Hilliard, limner, jeweller, and goldsmith to Queen Elizabeth, and afterwards to King James I.: he was, perhaps, the best miniature-painter who

had appeared: also Sir Theodore Mayerne, the physician, a friend of Vandyck, to whom he communicated valuable information relating to pigments; also Dobson, the English Vandyck; George Farquhar, the comic dramatist; Nell Gwynne was interred in the church; and Jack Sheppard in the burial-ground. In the church was buried, Oct. 31, 1679, Sir Edmund Berry Godfrey, found murdered in a ditch near Chalk Farm: the corpse was brought from Bridewell Hospital with great pomp, eight knights supporting the pall, and attended by all the City aldermen, 72 London ministers, and above 100 persons of distinction. At the funeral sermon two divines stood by the preacher, lest he should be assassinated by the Papists. The Hon. Robert Boyle was buried here, and his funeral sermon was preached by his friend Dr. Burnet. The Organ was built by Schmydt, in 1676, and he himself was the first organist here, and played for a salary. Edward, a son of the celebrated Henry Purcell, was elected organist in 1726. The old church was taken down in 1720-21, and the present church commenced from a design by Gibbs, when King George I., by proxy, laid the first stone, March 19, 1721, gave the workmen 100 guineas, and subsequently, upon being chosen churchwarden, presented the Organ, built by Schreider; but this has long given place to another Organ, built by Gray.

The present church was consecrated in 1726; the cost of its erection was 36,891*l.* 10*s.* 4*d.* Its length, including the portico, is equal to twice its width: it is in the florid Roman or Italian style, and has a very fine western Corinthian hexastyle portico: the east end is truly elegant, and the round columns at each angle of the building render it very effective in profile. The tower and spire rise out of the roof, behind the portico. The interior is richly ornamented, "a little too gay and theatrical for Protestant worship." In 1842, 45 feet of the spire were struck by lightning, and had to be restored at the expense of 1000*l.*: the ball and vane were also regilt; the latter is 6 feet 8 inches high and 5 feet long, and is surmounted with a *crowns*, to denote this the parish of the Sovereign; and in its registers are entered the births of the royal children born at Buckingham Palace. The tower has a fine peal of twelve bells; but the story of Nell Gwynne having left a legacy, paid weekly to the ringers, has no foundation in fact. High in the steeple hangs a small shrill bell, formerly called the Sanctus, and now the Saint's or Parson's Bell. "It was rung before the Reformation, when the priest came to the *Sanctus*, 'Holy, holy, holy, Lord God of Sabaoth!' so that those without the church might participate in the devotions of those present at the most solemn part of the divine office."—*The Parish Choir*, No. 59.

The churchyard was paved in 1829; and in 1831, the vaults beneath the church were reconstructed, each vault being 10 feet high, 20 wide, and 40 long. Here is preserved the old parish whipping-post, with a carved head.

In the present church rest Roubiliac, the sculptor; and Scott, the author of a *Visit to Paris*, who was killed in a duel in 1821. The remains of John Hunter were deposited in the vaults in 1793, whence they were removed with fitting ceremony in 1859 to Westminster Abbey.

ST. MARTIN'S, Gospel Oak Fields, between Kentish Town and Haverstock-hill, is a carefully finished specimen of that now rare style, the Third Pointed, or Perpendicular. The tower at the north-west, almost detached from the body of the church, is square, lofty, has rather large windows, and an angle turret crowned by a small spirelet, shorter pinnacles capping the other angles; of which form we remember no other example about London. There are also two capped turrets at the junction of the Nave and Chancel. The windows have florid tracery; the roof is an elaborate one, on the hammer-beam principle, and is of dark varnished timber, rich in effect. With the parsonage, this church is estimated to cost 13,000*l.*, defrayed by Mr. J. B. Alcroft; architect, E. B. Lamb. It will accommodate 1000 worshippers, who will all have an almost uninterrupted view of the Chancel, reading-desk, and pulpit; 400 sittings are free. The tower contains six bells, of deep tone.

ST. MARTIN'S, Ironmonger-lane, was a small church, and also called St. Martin Pomary, "on what account (saith the antiquary) he knoweth not; but it is supposed from apples growing there."

ST. MARTIN'S LUDGATE, near the site of the City gate of that name, in Ludgate-street, was rebuilt by Wren after the Great Fire; the steeple has a small gallery, and

rises 168 feet. Between Ludgate-street and the body of the church is an ambulatory, the whole depth of the tower, so as to lessen within the church the noise from the street. In the vestry-room are a carved seat (date 1690), and several curious coffers or chests. The font has a Greek inscription, a palindrome, *i.e.*, it reads the same backwards as forwards. In the old church was the following epitaph, dated 1590:—

Earth goes to	}	Earth	{	As mold to mold
Earth treads on				Glittering in gold
Earth as to				Return here should
Earth shall to				Goe ere he would
Earth upon	}	Earth	{	Consider may
Earth goes to				Passed away
Earth though on				Is stout and gay
Earth shall from				Passc poor away.

The spire of St. Martin's, backed by the campanile towers and majestic dome of St. Paul's, seen from Fleet-street, is a fine architectural group; although the injudicious have condemned the spire as an obstacle in the view. Extraordinary antiquity has been claimed for the ancient church of St. Martin: according to Newcourt, it is alleged that Cadwallo, the valiant King of the Britons, after he had reigned for forty years, died in 677, and was buried in this place; and Robert of Glo'ster tells us of the said monarch—

“ A Church of St. Martyn, livyng he let rere,  
In whych yat men shold Goddys seruyse do,  
And siug for his soule and al Christene also.”

The former church was dated 1437. Samuel Purchas, known by his *Pilgrimages*, was rector here in 1613: he is styled “the English Ptolemy,” but gained more fame than profit by his publications.

ST. MARTIN ORGAN, now united to the adjacent parish of St. Clement, near East-cheap, formerly possessed a church on this spot, which, after having served as a place of worship for French Protestants for about twenty years, was pulled down in the year 1820. The old clock-tower remained standing till 1851, together with two adjoining houses belonging to the parish, formerly known as “the rectory.” These have been taken down, and a new clock and bell-tower erected, the lower part forming part of the rectory-house; the upper part only being appropriated for the reception of the clock, whilst the cupoletta, which crowns the composition, receives an ancient bell, which is highly valued by the parish. The height is about 110 feet to the top of the pine, which forms the finial. The tower is five diameters high to the top of the cornice, the proportion adopted in most of Wren's towers. The bracket-clock is picturesque.

ST. MARTIN'S OUTWICH (Otteswich), Bishopsgate-street, was originally built in the fourteenth century, in the Pointed style, with a low tiled roof and square tower; and the churchwardens' accounts (1508 to 1545) contain entries of ancient usages previous to the Reformation: as, “Wyne on Relyks Sondaye, 1d. ;” “Paschall or Hallowed Taper, tenebur Candell and Cross Candell, License to eate flesh,” &c. This church escaped the Great Fire of 1666, but was greatly injured in a conflagration in Nov. 1765, which burnt fifty houses. In 1796, the present church was built by S. P. Cockerell. Its form is oval, with a recess for the chancel, in the ceiling of which is a light filled with stained glass, mostly from the old church. There are also several monuments from the same, including two recumbent stone figures of John Otterwich and his wite, their head-cushions supported by angels; the feet of the man resting against a lion, and those of the female against a dog. Here also is a canopied tomb, date 1500, with remains of brass figures, armorial bearings, and labels against the back; and several stone effigies to the memory of Alderman Staper (1594): “hee was the greatest merchant in his tyme, the chiefest actor in discovere of the trades of Turkey and East India, &c. ;” also two brass figures of rectors of the church in the fifteenth century. Few would expect to find these monumental treasures within a church of such unecclesiastical design. It contains also a fine picture of the Resurrection, by Rigaud. The South Sea House, which is in St. Martin's, was given to the parish by Mrs. Margaret Taylor, in 1667.

ST. MARY ABBOTS', Kensington, the mother-church, was rebuilt 1696: here are monuments to Edward, eighth Earl of Warwick and Holland (d. 1759), with his

effigies, seated, and reposing upon an urn; and to the three Colmans: Francis Colman; his son, George, "the Elder;" and his son, "the Younger:" the two latter wrote several comedies, and were proprietors of the Haymarket Theatre. In the churchyard are monuments to Jortin, author of the *Life of Erasmus*, and Vicar of Kensington; and to Mrs. Inchbald (a Roman Catholic), a beauty, a virtue, a player, and authoress of the *Simple Story*. Here, too, is buried William Courten, the traveller and naturalist, whose curiosities, it is said, filled ten rooms in the Middle Temple: this collection he bequeathed to Sir Hans Sloane, and thus it became part of the nucleus of the British Museum. James Mill, the historian of British India, is buried here; and a son of George Canning, with a headstone by Chantrey. St. Mary's, Kensington, had a "Vicar of Bray" in one Thomas Hodges, collated to the living by Archbishop Juxon: he kept his preferment during the Civil War and interregnum, by joining alternately with either party; although a frequent preacher before the Long Parliament and one of the Assembly of Divines, he was made Dean of Hereford after the Restoration, but continued Vicar of Kensington.—(Murray's *Environs of London*, p. 69.) The Organ is a fine old instrument; and there is a good peal of bells. The ancient church of Kensington (Chenesit) is mentioned in Domesday, and had for its patron Aubrey de Vere, who came over with the Conqueror, from whom he received the manor.

ST. MARY ABCHURCH, Abchurch-lane, was destroyed by the Great Fire, and rebuilt by Wren in 1686: its tower and spire are 140 feet high: the interior has a large cupola, painted by Sir James Thornhill; and an altar-piece, with fruit and flowers, exquisitely carved by Gibbons, and originally painted after nature by Thornhill. The Organ is by Bishop.

ST. MARY ALDERMARY, Bow-lane, is the third church erected on this site. To the first, Richard Chaucer, vintner, gave his tenement and tavern, with the appurtenances in the royal street, the corner of Kerrion-lane, and was there buried, 1348. It is believed that this was the father of Chaucer the poet. Charles Blunt, Lord Mountjoy, was buried there about the year 1545. In 1510, Sir Henry Keble, Lord Mayor of London, began to rebuild the church. This church was destroyed in the Great Fire, with the exception of the tower, so built by Lord Mayor Keble, the lower part of which was repaired by Sir Christopher Wren, and the upper part new built in 1681, a sum equal to 5000*l.* being furnished for that purpose by the widow of Henry Rogers, in pursuance of his will. The clustered columns, fine groinings, large circular ornamental openings for skylights, the ceilings decorated with flowers, foliage, and shields, and the fine east window, are admired. In 1835 some houses abutting upon the north wall of the church were pulled down, which brought to light a crypt, possibly the vaulted cemetery of the old church, about 50 feet in length and 10 feet wide, having five arches on each side in the Pointed style of architecture. The church is a specimen of Wren's Gothic, for which his apologists plead that he was required to follow the plan of the old church destroyed by fire. The tower, with four turrets, is 130 feet high. In the great storm of 1703, two of these turrets were blown down.

ST. MARY'S, Battersea, a church of tasteless design, built in 1776, is remarkable for containing Roubiliac's elegant monument to the celebrated Lord Bolingbroke, and his second wife, a niece of Madame de Maintenon. In the east window are three portraits: 1. Margaret Beauchamp, ancestor (by her first husband, Sir Oliver St. John) of the St. Johns, and (by her second husband, John Beaufort, Duke of Somerset) grandmother to Henry VII.; 2. the portrait of that monarch; 3. the portrait of Queen Elizabeth, placed here because her grandfather, Thomas Boleyn, Earl of Wiltshire (father of Queen Anne Boleyn), was the grandfather of Anne, the daughter of Sir Thomas Leighton, and wife of Sir John St. John, the first baronet of the family. Here is a monument to Sir Edward Wynter, who died 1635-6; it has a bas-relief representing the feats thus commemorated in the inscription:

"Alone, unarm'd, a tyger he oppress'd,  
And crush'd to death the monster of a beast;  
Twice twenty mounted Moors he overthrew  
Singly on foot; some wounded, some he slew,  
Dispers'd the rest. What more could Samson do?"

At the top is a large bust of Sir Edward, in a flowing peruke and lace shirt.

ST. MARY-LE-BONE, or St. Mary-at-the-Bourne, at the end of the High-street, verging on the New-road, was originally the mother-church of Marylebone, and was rebuilt in 1741, on the site of an edifice erected about 1400, on the removal of the ancient church of Tyburn, "which stood in a lonely place near the highway (on or near the site of the present Court-house, at the corner of Stratford-place), subject to the depredations of robbers, who frequently stole the images, bells, and ornaments."—(Lysons's *Enviros*, vol. iii. 1795.) In Vertue's Plan, about 1560, the only building seen between the village of St. Giles's and Primrose-hill is the little solitary church of Marylebone: its interior is shown in one of Hogarth's plates of the *Rake's Progress* (the Marriage), where some ill-spelt verses on the vault of the Forset family, and the churchwardens' names, are accurately copied; this plate was published in 1735, and part of the original inscription was preserved in the present church, converted into a parish chapel in 1817, on the consecration of the church in the New-road. In the chapel are tablets to Gibbs, the architect; Baretti, the friend of Dr. Johnson; and Caroline Watson, the engraver; and in the churchyard is a monument to James Ferguson, the Astronomer. Among the burials in the register are James Figg, the prize-fighter; Vanderbank, the portrait-painter; Hoyle, aged 90, who wrote the *Treatise on Whist*; Rysbrack, the sculptor; and Allan Ramsay, portrait-painter, and son of the author of the *Gentle Shepherd*. In Paddington-street are two burial-grounds formerly attached to this church. In 1511, the Marylebone curate's stipend was only 13s. per annum; in 1650, the impropriation was valued at 80*l.* per annum, and Richard Bonner was curate; before the late separation, the value of the living was 1898*l.*

In a Map published in 1742, the diminutive church of St. Mary-le-bone is shown detached from London, with two zigzag ways leading to it, one near Vere-street, then the western extremity of the new buildings, and the second from Tottenham-Court-road. Rows of houses, with their backs to the fields, extended from St. Giles's Pound to Oxford-market; but Tottenham-Court-road had only one cluster on the west side, and the spring-water house. The zigzag way above mentioned, near Vere-street, still retaining its original name of Mary-le-bone-lane, was the communication between the high road and the village. A friend, born in 1780, remembers his father and mother relating how they walked out *through the fields*, to be married at Marybone Church.

ST. MARYLEBONE (New Church), New-road, opposite York Gate, Regent's-park, designed by T. Hardwick, father of P. Hardwick, R.A., was originally built "on speculation" as a chapel; and was purchased by the parish, and converted into a handsome church, at the cost of 60,000*l.* It has a lofty stone clock-tower and portico; the interior was at first objected to as too theatrical in arrangement: it has an altarpicture of the Holy Family, painted and presented by B. West, P.R.A. Cosway and Northcote, Royal Academicians, are buried here.

ST. MARY-LE-BOW, Cheapside, "for divers accidents happening there, hath been made more famous than any other parish church of the whole city or suburbs."—(*Stow*.) If not originally a Roman temple, as was once believed, this was one of the earliest churches built by our Norman conquerors. Stow says it was named St. Mary *de Arcubus*, from its being built on arches of stone, the semicircular-arched Norman crypt, extant to this day: and hence is named the "Court of Arches," formerly held in the church. About 1190, Longbeard, ringleader of a tumult, took refuge in the steeple, which was fired to drive him out: in 1271, part of the steeple fell, and killed several persons; and some years after its repair, one Duckett, a goldsmith, fled here for Sanctuary, and was murdered. The old steeple was entirely rebuilt by 1460, when the Common Council ordered that Bow bell should be rung nightly at nine o'clock, a vestige of the Norman curfew; in 1472, two tenements in Hosier-lane (now Bow-lane), were bequeathed "to the maintenance of Bow bell," which being rung for the closing of shops somewhat late, the young men, 'prentices, and others in Cheap, made this rhyme:

"Clarke of the Bow bell, with the yellow lockes,  
For thy late ringing, thy head shall have knockes."

To which the Clerk replied:—

"Children of Cheape, hold you all still,  
For you shall have the Bow bell rung at your will."

William Copeland, churchwarden, either gave a new bell for this purpose, or caused the old one to be recast, in 1515: Weever says the former. In 1512, the arches and

spire of the tower were provided with lanterns, as beacons for travellers: the latter is shown in the View of London, 1643 (in the Sutherland Collection); it has a central lantern, or bell-turret, and a pinnacle at each corner. The church was rebuilt, as we now see it, by Wren, after the Great Fire of 1666, and the belfry was prepared for twelve bells, though only eight were placed; but two were subsequently added, and the set of ten bells was first rung in 1762. (See BELLS, p. 46.) The earliest monument in the old church was that to Sir John Coventry, Mayor in 1425: Weever gives his epitaph. The present church contains a large marble sarcophagus, with figures of Faith and a cherub, and a medallion bust, by Banks, R.A., of Bishop Newton, twenty-five years rector of this parish, and interred in St. Paul's.

Bow Church is one of Wren's finest works: it is well described in Godwin's *Churches of London*. The large Palladian doorways are noble; and the campanile is one of Wren's most picturesque designs.

The circular peristyle, or continued range of columns, which rises from a stylobate on the top of the tower (a miniature representation of that around the dome of St. Paul's), let it be viewed from what point it may be, is the most beautiful feature of the steeple. By the introduction of the combined scrolls at each angle of the tower, Wren has endeavoured to prevent that appearance of abruptness which would otherwise have resulted from the sudden transition from the square to the circular form, and has caused the outline to be gradually pyramidal from the top of the tower to the vane. The flying buttresses, which appear to support the columns above the peristyle, are introduced chiefly with a view to effect the same end.

The spire was repaired by Sir W. Staines when a young stonemason; and in 1820 it was in part rebuilt by George Gwilt, F.S.A., but was not lowered, as generally believed. Its height is 225 feet; the dragon, ten feet long, was regilt, and a young Irishman descended from the spire point on its back, pushing it from the cornices and scaffolds with his feet, in the presence of thousands of spectators.\* Over the doorway in Cheapside is a small balcony, intended as a place to view processions from. The present bells are much heavier, and more powerful in tone, than the first set. It requires two men to ring the largest (the tenor, 53 cwt., key C.) The ringers belong to the Society of "College Youths," founded in 1637, and named from the College of St. Spirit and Mary, built by Sir Richard Whittington, on College-hill, Upper Thames-street, and burnt down in the Great Fire. A book recording the names of the founders and members of the College Youths, from 1637 to 1724, was lost about the latter date, and only recovered in 1840. Another Society, called the "Cumberland Society," rang for a few years at Bow Church. There is a peal called the "Whittington Peal," which can only be rung on twelve bells. (See BOW BELLS, p. 47.)

Independently of ordinary services in the church, prayers are read and the Sacrament administered at eight o'clock in the morning on every festival throughout the year which does not fall on a Sunday. This is in compliance with the will of Mr. Robert Nelson, author of the *Companion to the Festivals and Fasts of the Church of England*, who left for the purpose 3*l.* per annum. Formerly, the Boyle lectures were delivered here, but they have been discontinued for some years past. The Bishops elect of the province of Canterbury attend at this church, previous to their consecration, to take the oaths of supremacy, &c.

ST. MARY'S, Islington, "the old church," is built upon the site of a church with an embattled tower and bell-turret, and which was presumed to be 300 years old when taken down in 1751. One of its oldest monuments was that to "Thomas Gore, parsonne of Isledon and Westhame," who died in 1499: here were also memorials of the Fowlers, and Dame Katherine Brook, nurse who "nourished with her milk" the Princess Mary, daughter of Henry VIII. Dame Alice Owen, foundress of the almshouses and school at the top of Goswell-road, was buried here; and here are two monumental brasses of the Savills. Dr. Cave, the learned ecclesiastical historian, and chaplain to Charles II., who became vicar of Islington at the age of 25, was buried in the old church. The present church was erected by Launcelot Dowbiggin, opened May 26, 1754. It has a tower and stone spire, 164 feet high, and a fine peal of eight bells, each inscribed with a couplet inculcating loyalty, love, and harmony. In 1787, when a lightning conductor was affixed to the spire, one Thomas Bird constructed round it a wickerwork scaffold, with steps within. Among the persons buried here are Dr. Hawes, one of the originators of the Humane Society; Earlom, the mezzo-

\* One of Mother Shipton's prophecies was, that when the Dragon of Bow Church and the Grass-hopper of the Royal Exchange should meet, London streets would be deluged with blood! In 1820 both these vanes were lying together in a stonemason's yard in Old-street Road, where the upper portion of Wren's spire is preserved to this day.

tinto engraver; and John Nichols, F.S.A., the editor of the *Gentleman's Magazine*, his grave being a few yards from the house in which he was born. During the last forty years more than sixteen churches have been erected in the district of Islington, and Dissenting chapels have multiplied in a similar proportion.

ST. MARY, Lambeth, the mother-church of the manor and parish, stands within the patriarchal shade of Lambeth Palace, and has a Perpendicular tower, lately restored. In the Bishop's Register at Winchester, date 1377, is a commission to compel the inhabitants to erect this tower for their church, then newly built. In the churchwardens' accounts, "pewes" are mentioned as early as the reign of Philip and Mary. The eastern end of the north aisle, built 1522, by the Duke of Norfolk, is called the Howard Chapel. In the church are the tombs of these Archbishops of Canterbury: Parker, d. 1575; Bancroft, d. 1610; Tenison, d. 1715; Hutton, d. 1758; Seeker (in passage between church and palace), d. 1768; Cornwallis, d. 1783; Moore, d. 1805.

In burying Archbishop Cornwallis, were found the remains of Thirlby, the first and only Bishop of Westminster: he died a prisoner in Lambeth Palace (*temp.* Elizabeth). The body was discovered wrapped in fine linen, the face perfect, the beard long and white, the linen and woollen garments well preserved; the cap, silk and point lace, as in portraits of Archbishop Juxon; slouched hat, under left arm; cassock, like apron with strings; and pieces of garments like a pilgrim's habit.

Here also are the tombs of Alderman Goodbehere; Madame Storace, the singer; Peter Dollond, inventor of the achromatic telescope; and Elias Ashmole, the antiquary. In the churchyard is the altar-tomb of the Tradescants, father and son:

"These famous antiquarians that had been  
Both gardeners to the Rose and Lily queen,"—*Epitaph.*

The tomb is sculptured with palm-trees, hydra and skull, obelisk and pyramid, and Grecian ruins, crocodile, and shells. In the Register are entered the burials of Simon Forman, the astrologer; and Edward Moore, who wrote the tragedy of *The Gamester*. In a window of the middle aisle is painted a pedlar with his pack and dog, said to represent the person who bequeathed to the parish of Lambeth "Pedlar's Acre," provided his portrait and that of his dog were perpetually preserved in one of the church windows. When the painting was first put up is unknown, but it existed in 1608; "a new glass pedlar" was put up in 1703, but removed in 1816.

The name of the benefactor is unknown; but it has been suggested that this portrait was intended rather as a rebus upon the name "Chapman" than upon his trade: for in Swaffham Church, Norfolk, is the portrait of John Chapman, a great benefactor to that parish; and the device of a pedlar and his pack occurs in several parts of the church, which has given rise to nearly the same tradition at Swaffham as at Lambeth. (*Preface to Hearne's Cui Antiquitates*, p. 84.) Besides, Pedlar's Acre was not originally so called, but the Church Hopes, or Hopys (an isthmus of land projecting into the river), and is entered in the Register as bequeathed by "a person unknown."—*Popular Errors Explained*, &c. p. 293.

The church, except the tower, has been rebuilt by Hardwick in correct design; the font is fine, and many of the windows are filled with memorial stained glass. The bells and Communion-plate are of very considerable age, the latter of great value.

ST. MARY-AT-HILL, Eastcheap, "called on the hill because of the ascent from Billingsgate," rebuilt by Wren, after the Great Fire, had this singular custom:

"On the next Sunday after Midsummer, every year, the Fellowship of the Porters of London, time out of mind, came to this church in the morning, and whilst the Psalms were reading, they went up two by two towards the rails of the Communion table, where were set two basins, and there they make their offerings. Afterwards the inhabitants of the parish, and their wives, make their offerings; and the money thus offered is given to the poor, decrepit porters of the Company for their better support."

The church was built by Wren, between 1672 and 1677, the west-end tower being of subsequent date: the exterior of the east end alone remains. In 1848-9, the interior was entirely refitted, with such an extent of carving as had not been executed before in the City for many years. The pillars supporting the organ gallery are ornamented with fruit and flowers. The great screen has a frame of oak; the Rector's pew and reading-desk are enriched with carved open tracery, and brackets surmounted with the royal supporters, bearing shields with V.R. 1849. The pulpit is entirely new, and is very elaborately carved: in the sounding-board are bosses of flowers of 12-inch projection; from the eyes of the volutes garlands of flowers are suspended, which pass through the split trusses, and fall down, crossing and uniting behind; and within the pulpit, at the back, is a well-executed drop of fruit and flowers: on the front of the

organ-gallery are bold clusters of musical trophies and garland of flowers, with birds and fruit; and the royal arms, with a mantle scroll, about ten feet long, form a perforated screen on the top of the gallery. All the carved work is by W. Gibbs Rogers. The organ was built by Hill, on the German plan, and contains two manuals and a pedal organ. Brand, who compiled the *Popular Antiquities*, and was Secretary to the Society of Antiquaries, was Rector of St. Mary-at-Hill from 1789 till his death in 1806: he is buried in the Chancel. Dr. Young, author of *Night Thoughts*, was married here.

ST. MARY MAGDALENE, Bermondsey, was originally founded by the monks of Bermondsey, it is supposed, early in the reign of Edward III.; but taken down in 1680, when the present church was built upon the same site: in 1830, the west front was remodelled, the tower repaired, and the large pointed window restored. Among the communion plate is an ancient silver salver, supposed to have belonged to the Abbey of Bermondsey: in the centre, a knight in plate armour is kneeling to a female, about to place a helmet on his head, at the gate of a castle or fortified town: from the fashion of the armour and the form of the helmet, this relic is referred to the age of Edward II. In the church is a monument to Dr. Joseph Watson, more than thirty-seven years teacher to the first public institution in this country for the education of the deaf and dumb, established in this parish, 1792. In the churchyard is buried Mrs. S. Utton, who was tapped twenty-five times for dropsy, and had 157 gallons of water taken from her; also Mrs. S. Wood, tapped ninety-seven times, water 461 gallons; and the husband of the latter, who died 1837, aged 108 years!

The registers commenced in 1538, have been continued with great exactness, and with very few interruptions up to the present time: some of the entries are very eccentric.

ST. MARY MAGDALEN, Old Fish-street, in Castle-Baynard Ward, was rebuilt by Wren, after the Great Fire, and contains a small brass tablet, date 1586, with the figure of a man, and the following lines in black letter:

“ In God the Lord put all your truste,  
 Repente your former wicked waies,  
 Elizabethc our Queen moste juste  
 Bless her, O Lord, in all her daies;  
 So Lord encrease good counclers,  
 And preachers of his holie worde  
 Mislike all papistes desiers  
 O Lord, cut them off with thy sworde.  
 How small soever the gift shall be  
 Thank God for him who gave it thee.  
 III penie loaves to III poor foulkes  
 Geve every Sabbath day for aye.”

This church serves as well for the parish of St. Gregory-by-St. Paul's. St. Mary Magdalen, Milk-street, was on the site of the City of London Schools.

ST. MARY MAGDALEN, Munster-square, Regent's Park, was designed by R. C. Carpenter, and consists of a Nave with south aisle, large and lofty Chancel, and tower; style, Geometric, of the fourteenth century. The Nave and Aisle have massive open gabled roofs, of Baltic fir timber. The Chancel roof is arched with timber, boarded and panelled. The east window of the Chancel, which is of seven lights, is filled with stained glass, at a cost of 400*l.* by Hardman of Birmingham, and was one of the last works upon which Pugin was engaged. The lower part of the Chancel is adorned by richly carved arcades, with shafts of St. Ann's marble, and panels in the spandrels. The arcades and the Chancel roof are highly enriched with colour and gilding, executed by Crace. The arcade on the south side of the Chancel is varied, to form sedilia for the officiating clergymen, and the floor is raised three steps above that of the Nave, and is separated from it by a stone septum. The west window of the Nave, a fine one, of five lights, has been filled with stained glass, in memory of the architect. In the service, the Eucharistic vestments are used daily, and incense at high celebration on Sundays.

ST. MARY'S MATFELON, Whitechapel, at the eastern end of High-street; was originally a chapel-of-ease to Stebenhith, or Stepney; its second name being from *Matfel*,

in Hebrew, a woman recently delivered of a son. Stow traces the name to the wives of the parish having slain out of hand a certain Frenchman who had murdered and plundered a devout widow, by whom he had been cherished and brought up of alms. This occurred in 1428, the sixth of King Henry VI.; but Stow also finds the name as early as the twenty-first of Richard II. The old church was taken down in 1673, and rebuilt nearly as at present: it has a gas-lit clock-dial.

The Parish Register records that Richard Brandon was buried in the churchyard, June 24, 1649; and a marginal note (not in the hand of the Registrar, but bearing the mark of antiquity), states: "This R. Brandon is supposed to have cut off the head of Charles I." He was assisted by his man Ralph Jones, a ragman in Rosemary-lane; and a tract in the British Museum, entitled, "The Confession of Richard Brandon, the Hangman, upon his Deathbed, concerning the Beheading of His late Majesty," printed in 1649, relates that the night after the execution he returned home to his wife, living in Rosemary-lane, and gave her the money he had received, 30*l.*; that about three days before he died, he lay speechless. "For the burial whereof, great store of wines were sent by the sheriff of the City of London, and a great multitude of people stood waiting to see his corpse carried to the churchyard, some crying out, 'Hang him, rogue!' 'Bury him in the dunghill!' others pressing upon him, saying they would quarter him for executing the king, insomuch that the churchwardens and masters of the parish were fain to come for the suppression of them; and with great difficulty he was at last carried to Whitechapel churchyard." See Ellis's *Letters on English History*, vol. iii. second series; and the *Trial of Charles I.* vol. xxxi. *Family Library*.

ST. MARY'S, Newington-butts, was built in 1791-3 by Hurlbatt, in place of a smaller church. It contains a monument with statues to Sir Hugh Brawne, buried in the old church, 1614, and who "for the space of twenty-two years was the whole ornament of the parish." Here, too, is a tablet to Dr. Fothergill; and to Captain M. Waghorn, one of the few persons who escaped from the sinking of the *Royal George*, in 1782. The parsonage-house was originally built of wood, and surrounded by a moat, now filled up. In this parish was a small water-course called the river Tigris, part of Cnut's trench; and a parishioner who died at the age of 109 years, early in the present century, remembered when boats came up as far as the church at Newington.

In the church is buried Mr. Sergeant Davy (d. 1860). He was originally a chemist at Exeter: and a sheriff's officer coming to serve on him a process from the Court of Common Pleas, he civilly asked him to drink; while the man was drinking, Davy contrived to heat a poker, and then told the bailiff that if he did not eat the writ, which was of sheepskin and as good as mutton, he should swallow the poker! The man preferred the parchment; but the Court of Common Pleas, not then accustomed to Mr. Davy's jokes, sent for him to Westminster Hall, and for contempt of their process, committed him to the Fleet Prison. From this circumstance, and some unfortunate man whom he met there, he acquired a taste for the law; and on his discharge he applied himself to the study of it in earnest, was called to the bar, made a sergeant, and was for a long time in good practice.—See Manning and Bray's *History of Surrey*.

ST. MARY'S, Paddington, on the Green, was rebuilt in 1788-91; and its churchyards are remarkable as the burial-place of several eminent artists; among whom are, Bushnell, the sculptor of the statues on Temple Bar; Barrett, the landscape-painter; Banks and Nollekens, the sculptors; Vivares, Hall, and Schiavonetti, the engravers; Caleb Whitefoord (see Goldsmith's *Retaliation*); Mrs. Siddons, the great actress; Collins, the painter; and Haydon, historical painter. Hogarth was married in this church to the daughter of Sir James Thornhill, March 23, 1729.

ST. MARY'S, Rotherhithe, close to the shaft of the Thames Tunnel, was rebuilt in 1736-39, upon the site of the old church, which had stood above 400 years. This new church has a lofty spire: in the vestry-room is a portrait of King Charles I., in his robes, kneeling at an altar, and holding a crown of thorns, the composition resembling the frontispiece to the *Eikon Basilike*. In the churchyard is buried Prince Lee Boo, a native of the Pellew Islands, d. Dec. 29, 1784, æt. 20; over his remains a monument has been erected by the East India Company, in testimony of his father's humane and kind treatment of the crew of the *Antelope*, wrecked off Goo-roo-raa, one of the Pellew Islands, on the night of August 9, 1783.

ST. MARY'S SOMERSET (Summer's hith, or wharf), was destroyed in the Great Fire of 1666, and rebuilt by Wren in 1685: it has a tower, with pedestals and urns and obelisks upon the summit, 120 feet high; and the keystones of the arches are sculptured with grotesque heads.

ST. MARY'S, Stoke Newington (2½ miles north from London), in the patronage of the Prebendary of Newington, in St. Paul's Cathedral, was repaired, or "rather new

demolished in 1871

John  
my  
Gd  
16

buildd" (*Stow*), in 1563, of hewn stones, flint, and pebbles, but has been inuch modernized. It has a square embattled tower, about 60 feet high, with six bells, with an additional bell in a wooden cupola, and a clock made 1723. The chapel, and a portion of the body of the church, under two other roofs, formed the whole of the ancient structure. The painted altar-window represents the Virgin Mary and the Purification, the Birth and Preaching of St. John the Baptist, and the arms of Queen Elizabeth; and in the Chancel windows are the arms of the Drapers' Company and the City of London. Among the communion-plate is a large silver offertory alms-dish. In the Chancel is an elegant coloured alabaster monument to John Dudley, Esq., and his widow, afterwards married to Thomas Sutton, Esq., founder of Charterhouse: the writer of the long Latin inscription was rewarded with 10s., according to the roll of Mr. Dudley's funeral expenses: and the tomb was restored in 1808 by subscription of grateful Carthusians. Behind the church is Queen Elizabeth's Walk, a grove of tall trees; and at Newington Green is King Harry's Walk. At Stoke Newington lived many years Mrs. Barbauld, the amiable educationist, who taught Lord Denman when a boy the art of declamation; and Mr. Barbauld, her husband, was for four years morning preacher to a Unitarian congregation at Newington-green.

ST. MARY-LE-STRAND, erected on the site of a very ancient church, St. Ursula of the Strand, and nearly upon the site of the old Maypole, was the first built (1714-17) of Queen Anne's Fifty Churches, but was to our day called "the New Church." It was not consecrated till Jan. 1, 1723. Gibbs, the architect, was desired by the Commissioners "to beautify it," on account of its public situation: hence it is overloaded with ornament. It was originally to have had only a small bell-tower at the west end, changed to a steeple, which therefore appears to stand on the roof; it consists of three receding stories, surmounted by a vane: when it was last repaired, at an expense of 47l. 10s., the scaffolding cost 30l. The exterior of the body is of two stories, Ionic below, the lower wall "solid, to keep out noises from the street;" and Composite above, surmounted by a balustrade and urns: during the procession to proclaim Peace, in 1802, one of these urns was accidentally pushed down on the crowd below, when three persons were killed, and several others much hurt. The west end has a semicircular Ionic portico, and occupies the Maypole site. The interior is grand, but too florid, with Corinthian and Composite pilasters, ceiling crowded with ornaments, and the semicircular altar-part, with the triangular symbol of the Trinity glorified, and cherubim, &c. The windows are hung with crimson drapery, and in the side intercolumniations are paintings of the Annunciation and the Passion, by Brown. The old church was "next beyond Arundell House, on the street side," and was "called of the Nativitie of our Lady (St. Mary), and the Innocents of the *Strand*." (*Stow*.) Seymour states, that its site became part of the garden of Somerset House, and that when the Protector pulled down this old church, he promised to build a new one for the parishioners, but death prevented his fulfilling that engagement. The Rev. Joshua Denham was rector of St. Mary-le-Strand; he wrote a brief *History of the Church of St. Dunstan's-in-the-West*.

ST. MARY'S, Windham-place, Marylebone, was designed by Sir Robert Smirke, R.A., and consecrated Jan. 7, 1824, when the Rev. T. Frognall Dibdin, D.D., was instituted rector. This church has a large painted east window, of the Ascension, said to have cost 250 guineas. The circular tower and cupola, 135 feet high, are picturesquely effective.

ST. MARY'S WOOLNOTH, one of the most striking and original churches in the metropolis, is between the western ends of Lombard-street and King William-street. This has been the site of a Christian church from a very early period, and previously of a pagan temple. The church was rebuilt early in the fifteenth century, much injured by the Great Fire, and repaired by Wren in the following year; to this Alderman Sir R. Viner, living in Lombard-street, contributed liberally, to commemorate which, says *Stow*, "a number of *vines* were spread over that part of the church which faced his house." In 1716, the church, as we now see it, was rebuilt by Hawksmoor: the west front, which has an elongated tower, like two towers united, has no prototype in

England; but its details are so heavy as to indicate rather a fortress and prison than a church. The interior, on the model of a Roman atrium, is nearly square: it has twelve Corinthian columns, admirably arranged, and is profusely ornamented with panels and carved mouldings. It contains an Organ built by Father Schmidt, in 1681. Here is a tablet to the Rev. John Newton, the friend of Cowper, and Rector of this church for twenty-eight years: it bears this inscription, written by himself:

"John Newton, clerk, once an infidel and libertine, a servant of slaves in Africa, was, by the rich mercy of our Lord and Saviour Jesus Christ, preserved, restored, pardoned, and appointed to preach the faith he had long laboured to destroy."

"I remember, when a lad of about fifteen, being taken by my uncle to hear the well-known Mr. Newton (the friend of Cowper the poet) preach his wife's funeral sermon in the church of St. Mary's Woolnoth, in Lombard-street. Newton was then well stricken in years, with a tremulous voice, and in the costume of the full-bottomed wig of the day. He had, and always had, the entire possession of the ear of his congregation. He spoke at first feebly and leisurely, but as he warmed, his ideas and his periods seemed mutually to enlarge: the tears trickled down his cheeks, and his action and expression were at times quite out of the ordinary course of things. It was as the '*mens agitans molem et magno se corpore miscens*.' In fact, the preacher was one with his *discourse*. To this day I have not forgotten his text, Hab. iii. 17-18: 'Although the fig-tree shall not blossom, neither shall fruit be in the vines; the labour of the olive shall fail, and the fields shall yield no meat; the flock shall be cut off from the fold, and there shall be no herd in the stalls; yet I will rejoice in the Lord, I will joy in the God of my salvation.' Newton always preached extemporaneous."—Dr. Dibdin's *Reminiscences of a Literary Life*, vol. i. p. 162.

The origin of Woolnoth is uncertain; but is attributed to the beam for weighing wool, which stood in the churchyard of St. Mary's Woolchurch, in the Stocks Market, on the site of the Mansion-house: this church was burnt in 1666, and the parish is now united to St. Mary's Woolnoth.

St. Mary's Woolnoth was saved from destruction in 1863, although it had been some time *priced* for sale. At a vestry meeting, the Lord Mayor (Alderman Rose) as a parishioner by his tenancy of the Mansion House, ably supported the opposition to the "amalgamation" scheme, and an amendment rejecting it was carried unanimously. In the Report of the Ecclesiological Society, the committee recorded that the parishioners had successfully resisted a scheme put forward under the auspices of the Bishop of London's Act for the demolition of the remarkable church of St. Mary Woolnoth (Hawksmoor's *chef-d'œuvre*), which it was proposed to destroy for the convenience of the General Post Office."

ST. MATTHEW'S, Oakeley-crescent, City-road, built by G. G. Scott, in 1848, in the Early English style, has an ornamented four-storied tower and spire, eastern lancet windows, filled with stained glass, and other meritorious details; a picturesque stone porch was added July, 1866.

ST. MATTHIAS, Stoke-Newington, a Gothic church, Butterfield, architect; seats, all free. Incense and the Eucharistic vestments are used; and all expenses are paid from the weekly offertory, except a small endowment for the incumbent.

ST. MATTHEW'S, Bethnal-Green, built in 1740, has at the west end a low square tower, with a large stone vase at each angle. A second church, *St. John's*, was built by Sir John Soane, and much resembles the Grecian church of the Holy Trinity, Regent's Park. In 1839, there were only these two churches for a population of 80,000, and schools for about 1000 children. There were next built in the parish ten churches: St. Matthew's, St. John's, St. Peter's, St. Andrew's, St. Philip's, St. James the Less, St. James the Great, St. Bartholomew's, St. Jude's; and St. Simon Zelotes, the latter at the sole expense of Mr. W. Cotton. These churches owe their origin to the exertions of Bishop Blomfield; there have been added three churches since the accession of Bishop Tait in 1856. St. Matthew's church, except the walls, was burnt on the night of Dec. 18, 1859, during a hard frost; the water froze as it was poured on the burning ruins. It was rebuilt by a rate levied on the parish. The apse is very handsomely coloured, and has a carved stone rearedos, with cross, and scenes from the life of Christ. There is a good east-end window of the Crucifixion; the stone pulpit and font are finely carved. There is a curious old staff used by the beadle, the head of which (in silver gilt) presents the legend of the Blind Beggar of Bethnal Green and his daughter, as in the old ballad; the date 1669.—Mackeson's *Churches*.

ST. MATTHEW'S, Brixton, at the junction of the Tulse-hill and Brixton-hill roads, is of Grecian Doric design, by Porden, and was consecrated in 1824: it has a noble portico, resembling the pronaos of a Grecian temple; at the east end is a tower surmounted

with an octagonal temple, from that of Cyrrhestes, at Athens. In the churchyard is a costly mausoleum of Grecian design, upwards of 25 feet high.

ST. MICHAEL AND ALL ANGELS, Paul-street, Finsbury, is built of yellow brick; style, First and Second Pointed; architect, J. Brook; opened, 1865. The interior, designed for "æsthetic service," is of great width, height, and length; and "the deep Chancel, narrower than the Nave, and raised several steps, gives importance to the skilfully-arranged grouping of priests and choristers, banners and crosses, millinery and flowers, and saves even the processions from appearing mean." (*Companion to the Almanack*, 1866.) It will accommodate nearly 1000 persons; cost of site, 4700*l.*, of which one gentleman contributed 3000*l.*; the building cost 7500*l.*, towards which another (or the same) anonymous donor gave 6000*l.* The bare walls look cheerless, but the architect designed them to be covered with paintings and other decorations. And apart from its æsthetic character, the interior is a success; the nave columns scarcely intercept the sight, and the acoustic principles seem good—you hear the preacher and reader well from very different parts of the church, and the tones of the organ produce no awkward reverberation.

ST. MICHAEL'S BASSISHAW (haugh, or hall, of the Basing family), Basinghall-street, was originally founded about 1140, and rebuilt in 1460; here was interred Sir John Gresham, uncle to Sir Thomas Gresham, and Lord Mayor in 1547: at his funeral, on a fast-day, a fish dinner was provided for all comers:

"He was buried with a standard and pennon of arms, and a coat of armour of damask (Damasens steel), and four pennons of arms; besides a helmet, a target, and a sword, mantles and the crest, a goodly hearse of wax, ten dozen of pensils, and twelve dozen of esutecheons. He had four dozen of great staff torches, and a dozen of great long torches. The church and street were all hung with black, and arms in great store; and on the morrow there goodly masses were sung."—*Stow*.

The old church was destroyed in the Great Fire, and rebuilt by Wren in 1676-79. It contains a beautifully sculptured monument to Dr. T. Wharton, who did so much to stay the Great Plague of 1665; and here rests Alderman Kirkman, sheriff-elect in 1780, who died, at the age of 39, of a cold taken in aiding to suppress the Riots.

ST. MICHAEL'S, in Chester-square, Pimlico, is a picturesque church in the Decorated style of the fourteenth century, and has a tower and spire rising from the ground at the west end, 150 feet high; Cundy, architect, 1844; the details are very characteristic.

ST. MICHAEL'S, Cornhill, was destroyed by the Great Fire, except the great tower, which contained a celebrated set of ten bells: the body was first rebuilt by Wren, and fifty years later (1729) the tower itself, which is an imitation of the splendid chapel tower of Magdalen College, Oxford, built in the fifteenth century, and 145 feet high; but St. Michael's is only 130: it has a set of twelve bells. The site is presumed to have been occupied by a church since the Saxon dynasty; it had a cloister and pulpit cross. Of the old steeple, destroyed in 1421, a pen-and-ink drawing upon vellum is preserved on the fly-leaf of a vellum vestry-book (*temp.* Henry V.) belonging to the parish. In the old church and churchyard were buried Robert Fabyan, the chronicler and sheriff; and the father and grandfather of John Stow, the antiquary. In the present church was buried Philip Nye, with "the thanksgiving beard," in 1672; Nye was curate of St. Michael's from 1620 to 1633. The architect, in rebuilding the tower, adhered to the Gothic style, and though the details are poor, the general outline is noble and effective. It was long shut in, but some of the houses which intervened between the north side of the tower and Cornhill being cleared away, to obtain an entrance there to the church, a porch has been built, and two stages of the tower itself have been repaired and altered, windows with tracery, and a new circular window with wheel tracery immediately above the porch, having been inserted. The six shafts in the jambs of the principal doorway are of red polished granite.

The sculpture in the gable of the doorway represents Our Lord in the act of benediction. In the tympanum below is a group representing Michael disputing with Satan about the body of Moses. The other carving consists of medallions of angels, bosses of foliage, &c. Architects, Scott and Mason. The church has been entirely refitted with carvings executed by Rogers, under the direction of Scott and Williams, architects.

The pulpit is hexagonal, on a dwarf column of Portland stone, with the hand-rail supported by ornamental brass-work. On the angles are twisted pillars, each with various designs, and supporting

a cornice with branches of the hawthorn. The panels have each a different diaper pattern, with boldly carved symbols of the four Evangelists in roundels. The reading-desk has two double arches and ten pillars. The centre pillars are round, resting on square bases. On each of the angles are heads of the dragon, in reference to the prowess of the patron Saint. The perforated friezes in the screens behind the choir-seats in the chancel are of foliated scroll-work, interspersed with sacred fruits and emblematical flowers—the passion-flower, trefoil, pomegranate, lily, figs, and olives.

Sixteen panels have been carved for the chancel-gates: Moses in the Bulrushes; the Tablets of the Law, with the sword of Justice; the Star of Bethlehem; the Gospel of Peace, over which is a dove; the Brazen Serpent in the Wilderness; the Seven-branch Golden Candlestick; emblems of the Sacrament (wheat and grapes); chalice and paten. Solomon's Glory, represented by three crowns rising out of three full-blown lilies; the Crown of Victory; emblems of the passion-flower; the Resurrection, emblemized by a butterfly issuing from a chrysalis; Light out of Darkness, the Snowdrop; Faith, Hope, and Charity; the Trinity in Unity.

The first seat south of the chancel is a representation of the Agony in the Garden. The eup is enclosed in foliage at the top, and at the back is a branch of olives copied from one gathered by E. T. Rogers, vice-consul of Caiffa, Palestine, in the garden of Gethsemane: around the outer edge of this bench-end are the words, "Not my will, but Thine be done."

The fronts and backs of the seats have a double row of variously enriched panelling, 180 in number, the upper row being alternately relieved by sprigs or branches of sacred flowers bound with labels, and having suitable inscriptions in raised letters, such as "In the midst of judgement He remembers mercy;" "Look upon the rainbow, and praise Him," &c. &c.

At the chancel end of the centre aisle there are seven seats set apart for special purposes. On the right is the royal pew, with an enriched double shield surmounted by the crown, V.E., and the motto "*Dieu et mon droit*;" her Majesty's monogram, Victoria, in the form of a Greek cross, enclosed in foliage and flowers, the rose, thistle, and shamrock. The Diocesan pew has ecclesiastical shield with croziers, mitre, and the crossed swords representing the martyrdom of St. Paul; the Corporation pew, the City arms and representation of St. George, &c.; the pew of the Worshipful Company of Drapers, enriched shield, date, and motto of the company, "Unto God only be honour and glory," surmounted by the triple crown issuing from clouds, with rays of light: on the inside are a triple branch of lilies, the emblem of the Virgin, the patroness of the Company, the shield of Fitzalwyn, the first mayor of London. On the pew of the Merchant Tailors' Company are the shield, &c. of the Company, and in one part is introduced an illustration of a text from St. Augustine's 19th chapter of St. John,—God is all to thee: if thou be hungry, He is bread: if thou be thirsty, He is water: if in darkness, He is light: and, if naked, He is a robe of immortality." In this instance Mr. Rogers has figured the star of light, the bread, chalice, and the robe, in a manner which describes the text. Next are the pews of the Clothworkers' Company, and the Rector's pew; on the former the teal is conspicuous, and on the latter the monogram of the Rev. T. W. Wrench, surmounted by a branch of olives. All the bench-ends in this aisle have a shield, emblazoned on the outside, enclosed by Greek foliage: on the inside are fruits and flowers, such as the gourd of Jonah, Syrian dates, nut fruit, oak and acorns, chestnuts, wheat ears, mulberry, pine fruit, the Rose of Sharon, olives, figs, &c. Amongst the carvings on the benches for the north aisle, is a female figure of Charity, seated in an ecclesiastical chair, supported by pelicans: she is feeding and protecting three children, the idea from an early sculpture in Valterra marble. On other seats are the pelican in her piety; the fall of man represented by the serpent coiling round the forbidden tree. On the back is the lily of the valley. The sage-plant of Palestine is combined with the primrose of England, the stork of the wilderness, &c. On some of these are the sage-plant of the East, combined with a branch of oak; the ivy and the anemone, and the common flowers of the East; a cluster of pomegranates and bell-flowers, Aaron's rod, a triple branch of lily rising out of a bulbous root, which is given in the form of a heart. On the device of a Latin cross is suspended the passion-flower; the carving of the scape-goat wandering in the wilderness, with the mark of the High Priest on his forehead: in the background is forked lightning, indicating the wrath of God. On the back of this standard is a crown of thorns,—“On him was laid the iniquity of us all.” In the design of these numerous carvings Mr. Rogers has been assisted by his son, Mr. W. H. Rogers.—(See the descriptive pamphlet, by Mr. Rogers.)

The colouring of the walls and ceiling of the church, the altar of alabaster and marble, and the stained glass in the windows, are all executed with great richness.

ST. MICHAEL'S, Crooked-lane, was of ancient foundation, before the year 1304. In 1336, John Loveken, four times Lord Mayor, rebuilt the church, which received several additions and benefactions from Sir William Walworth, Lord Mayor in 1374, and formerly servant to Loveken. St. Michael's was a general burial-place of stockfish-mongers; Loveken and Walworth rested here. The church was destroyed in the Great Fire, but rebuilt by Wren in 1687; it had a Portland stone tower, 100 feet high, and a picturesque steeple, with clock, vane, and cross. This handsome church was taken down in 1831, in forming the New London Bridge approaches. Crooked-lane, "so called of the crooked windings thereof," was then in part taken down; it was famous for its bird-cage and fishing-tackle shops.

ST. MICHAEL'S PATERNOSTER ROYAL, Thames-street, is partly named from its neighbourhood to the Tower Royal, wherein our sovereigns, as early as King Stephen, resided. The church was rebuilt by the munificent Whittington, who was himself buried in it, under a marble tomb with banners, but his remains were twice disturbed: once by an incumbent, in the reign of Henry VI., who fancied that money was buried with him; and next by the parishioners, in the reign of Mary, to rewrap the body in lead, of which it had been despoiled on the former occasion (*Godwin's Churches of*

*London*). Whittington's church was destroyed by the Great Fire, but rebuilt by Wren, and has a somewhat picturesque steeple. The interior has a beautiful altarpicture, by Hilton, R.A., of Mary Magdalen anointing the feet of Christ; this fine work was presented by the Directors of the British Institution in 1820. There was long no memorial to Whittington in the present church, until the Rector contributed a handsome painted window. The rights and profits of the old church Whittington bestowed on a College and almshouses close by, the site of which is now occupied by the Mercers' Company's School.

ST. MICHAEL'S, Queenhithe, destroyed in the Great Fire, was rebuilt by Wren in 1677: it is chiefly remarkable for its spire, 135 feet high, with a gilt vane in the form of a ship in full sail, the hull of which will contain a bushel of grain—referring to the former traffic in corn at the Hithe.

ST. MICHAEL'S, Wood-street, Cheapside, stands at the corner of Huggin-lane, named from a resident there about the time of Edward I., and known as "Hugan in the lane." The old church was destroyed by the Great Fire, and the present edifice completed in its place by Wren, in 1675: it is of very unecclesiastical design, but the Wood-street front is well-proportioned Italian. The head of James IV. of Scotland, slain at Flodden Field, Sept. 9, 1513, is said by Stow to have been buried here; the body was conveyed, after the battle, to London, and thence to the monastery of Sheen, in Surrey, where it was seen by Stow, lapped in lead, but thrown into a waste room. "Some workmen, for their foolish pleasure, hewed off his head, which Launcelot Young, master-glazier to his Majesty, brought to his house in Wood-street, where he kept it for a time; but at length gave it to the sexton to bury amongst other bones," &c. This statement is contradicted by the Scottish historians; but Weever is positive that Sheen was the place of James's burial.

ST. MILDRED'S, Bread-street, destroyed in the Great Fire, and rebuilt by Wren, 1677-83, is remarkable for being roofed by a large and highly enriched cupola; and has a pulpit and sounding-board and altar-piece exquisitely carved in the style of Gibbons.

ST. MILDRED'S, Poultry, was destroyed by the Great Fire, and rebuilt by Wren; when was united with it the parish of St. Mary Colechurch, the church of which stood at the south end of the Old Jewry; its chaplain was "Peter of Colechurch," who in part built old London Bridge. St. Mildred's has a tower 75 feet high, surmounted by a gilt ship in full sail. In the former church was buried Thomas Tusser, who wrote the *Points of Husbandrie*, and was by turns chorister, farmer, and singing-master.

ST. NICHOLAS COLE ABBEY, Fish-street-hill, destroyed by the Great Fire, and rebuilt by Wren in 1677, has a tasteless steeple, 135 feet high, but some fine interior carvings; the parish register-books contain a list of persons, with their ages, whom King James II. at his coronation touched for the cure of the Evil.

ST. OLAVE, Hart-street, escaped the Great Fire: it is of Norman, Early English, Decorated, and Perpendicular work; the foundation and walls are of rubble, and the upper part brick. There does not exist any account of its erection; and the first mention of its Rector, William de Samford, who held that office prior to 1319, and whose salary was 2½ marks per annum, refers to an earlier structure than the present St. Olave's. It has an interesting interior, with clustered columns and pointed arches and windows, and the ceilings of the aisles powdered with stars. This church is often mentioned in the *Diary* of Samuel Pepys, Secretary to the Navy (*temp.* Charles II. and James II.), who lived in a house belonging to the Navy Office, in Seething-lane, and resided subsequently in Hart-street: he was buried in St. Olave's at nine at night, "in a vault of his own making, by his wife and brother," "by y<sup>e</sup> Communion Table," June 4, 1703; and there is a monument to his wife in the chancel. There are also several figure tombs and brasses; and a marble figure of Sir Andrew Riccard (d. 1672), who bequeathed the advowson of the living to the parish. There is likewise a monument to John Orgone and Ellyne his wife, with a quaint inscription, which is sometimes found in Latin:—

“As I was so be ye,  
As I am you shall be,  
That I gave that I have,  
That I spent that I had,  
Thus I ende all my cost,  
That I left that I loste.—1534.”

St. Olave's was repaired in 1863; one of the towers at the west end of the south aisle, hitherto bricked up, has been thrown into the church, and now forms a baptistry; the roof, which is of oak, has been varnished, and the bosses, &c., gilt. A new reredos has been erected, from a design of G. G. Scott; it is composed of Caen stone, and has five panels of alabaster. In the churchyard are interred a number of victims to the Great Plague: the first entry in the register is dated July 24, 1665: “Mary, daughter of William Ramsay, one of the Drapers' Almshouses;” and there is a tradition that the pestilence first appeared in the Drapers' Almshouses, Cooper's-row, in this parish. Here is a peal of six bells, five made by Anthony Bartlet, in 1662; the sixth by James Bartlet, in 1694.

ST. OLAVE'S, Jewry, a brick church, rebuilt by Wren, in 1763-76, upon the site of the old church, destroyed in the Great Fire, is alone remarkable for containing the remains of Alderman Boydel, the eminent engraver and printseller, who expended a large fortune in founding the English School of Historic Painting: he was Lord Mayor in 1790 (d. 1804); and on the north wall of the church is a tablet to his memory, surmounted by his bust.

ST. OLAVE'S, Tooley-street, Southwark, in Bridge Ward Without, was designed in 1737-39, by Flitcroft, a pupil of Kent; the funds being mostly advanced by a French emigrant, on an annuity for his life; and he dying soon after, it became a saying that the Organ had cost more than the church: it had a richly-decorated interior, and a fine peal of bells. The interior was burnt almost to the walls on August 19, 1843; when also was destroyed Watson's Telegraphic Tower, originally a shot manufactory. St. Olave's Church has since been handsomely restored. The former church was of the fourteenth century, with a low square tower and bell-house. The first church was certainly founded prior to the Norman Conquest, from its dedication to St. Olave, or Olaff, King of Norway, who, with Ethelred, in 1008, destroyed the bridge at London, then occupied by the Danes. The present church is nearly on the site of this exploit; for the first bridge was somewhat eastward of the old bridge, taken down after the building of the present bridge. St. Olave has been corrupted into St. Oley and Tooley-street.

ST. PANCRAS-IN-THE-FIELDS, one of the oldest churches in Middlesex, is situated on the north side of the road leading from King's Cross to Kentish Town. Norden, in his *Speculum Britannia*, describes it, in 1593, as standing “all alone, utterly forsaken, old and wether-beten;” “yet about this structure have bin manie buildings, now decayed, leaving poore Pancras without companie or comfort.” St. Pancras is a prebendal manor, and was granted by Ethelbert to St. Paul's Cathedral about 603. It was a parish before the Conquest. Its ancient church, which Stukeley says occupied the site of a Roman camp, was erected about 1180; it consisted of a nave and chancel, built of stones and flints, and a low tower, with a bell-shaped roof. St. Pancras contained, in 1251, only forty houses. Pancras was corrupted to “Pancredge” in Queen Elizabeth's time. In 1745 only three houses had been built near the church. In 1775 the population was not 600. It is now the most extensive parish in Middlesex, being eighteen miles in circumference. The annual value of land (including the houses built upon it, the railways, &c.) is 3,798,521*l*.

“Of late,” says Strype, “those of the Roman Catholic religion have affected to be buried here, and it has been assigned as a reason that prayer and mass are said daily in St. Peter's at Rome for their souls, as well as in a church dedicated to St. Pancras, in the south of France.” In Windham's *Diary*, we find another explanation of the choice:—“While airing one day with Dr. Brocklesby, in passing and returning by St. Pancras Church, he (Dr. Johnson) fell into prayer, and mentioned, upon Dr. Brocklesby inquiring why the Catholics chose that spot for their burial-place, that some Catholics in Queen Elizabeth's time had been burnt there.” It is also understood that this church was the last whose bell tolled in England for mass, and in which any rites of the Roman

Catholic religion were celebrated before the Reformation. The crosses with "Requiescat in Pace," or the initials of those words, "R. I. P.," on the monuments and tombstones, are very frequent. At the beginning of the present century the French clergy were buried here at the average rate of thirty a-year. There is said to have been in the church a silver tomb, which was taken away at the time of the Commonwealth. The edifice, reconstructed and enlarged by A. D. Gough, was reopened July 5, 1848: the style adopted was Anglo-Norman: the building was lengthened westward; the old tower was removed, and a new one built on the south side; and to the west end was added a Norman porch, and a wheel-window in the gable above. In the progress of the works were found Roman bricks, a small altar-stone, Early Norman capitals, an Early English piscina, and Tudor brickwork. Under the old tower, which was then removed, is said to have been privately interred, in a grave 14 feet deep, the body of Earl Ferrers, executed at Tyburn, in 1760. The Chancel windows are filled with stained glass, by Gibbs, as is also the western wheel-window. On the north wall, opposite the baptistery, is the Early Tudor marble Purbeck memorial, supposed to have belonged to the Gray family, of Gray's Inn; the recesses for brasses removed, and neither dates nor arms remaining. On the south-east interior wall is the marble tablet, with palette and pencils, to Samuel Cooper, the celebrated miniature-painter; the arms are those of Sir Edward Turner, Speaker of the House of Commons in the reign of Charles II., at whose expense it is probable the monument was erected. The ancient communion-plate of the church, date 1638, discovered in 1848, is now again in use.

In the burial-ground of Old St. Pancras are deposited scions of the noble families of Abergavenny, Arundell, Barnewall, Calvert, Castlehaven, Clifford, Dillon, Fleming, Howard, Litchfield, Montagu, Rutland, Waldegrave, Wharton, and other distinguished persons. Here lies Lady Barbara Belaysyc, whose father was grandnephew of the Lord Falconberg who married Cromwell's daughter. Among the illustrious foreigners interred here are Count Harlang; Louis Charles, Count de Herville, Marschal of France; Philip, Count de Montlosier, Lieutenant-General in the French army; Angelus Franciscus Talaru de Chalmaret, Bishop of Contances, in Normandy; Francois Claude Amour, Marquis de Bouillé; Augustinus Renatus Ludovicus Le Mintier, Bishop and Count of Treguier; Alexandre Marquis de Lire; Louis Claude Bigot de St. Croix, dernier Ministre de Louis XVI.; Louise d'Esparbes, de Lussan, Comtesse de Polastron, Dame de Palais de la Reine de France; Louis André Grimaldi d'Antibes des Princes de Monaco, Evêque, et Comte de Noyon, Pair de France; Jean Francois de la Marche, Bishop of Pol St. Leon; Henri, Marquis de l'Ostanges, Grand Seneschal of Querey, and Field Marshal of France; Baroness de Montalembert; Pascal de Paoli, the Corsican patriot, kinsman of the Bonapartes, and as such of the present Emperor of the French; Pasqualino Philip St. Martin, Comte de Front, the inscription on whose tomb is—"A foreign land preserves his ashes with respect."

Near the church door is a headstone to William Woollett, the engraver, and his widow; it was restored some years since. On the north side of the churchyard is an altar-tomb to William Godwin, author of *Caleb Williams*, and his two wives, Mary Wolstoncroft Godwin and Mary Jane. Here, too, is a headstone to John Walker, author of the *Pronouncing Dictionary*. Here, also, were buried Abraham Woodhead, reputed by some the author of *The Whole Duty of Man*; and near him his friend, Obadiah Walker; Dr. Grebe, editor of the Septuagint; Jeremy Collier, who wrote against the immorality of the stage in the time of Dryden; Lewis Theobald, the editor of Shakspeare; Lady Henrietta Beard, daughter of an Earl Waldegrave, widow of Lord Edward Herbert, and wife of Beard, the singer; S. F. Ravenet, the engraver; Arthur Richard Dillon (of Lord Dillon's family), Bishop of Evreux, Archbishop of Narbonne, and President of the States of Languedoc; the Chevalier D'Eon, &c. And here rests Father Arthur O'Leary, to whom Earl Moira erected a monument, which has been repaired by public subscription.

ST. PANCRAS, near Euston-square, Euston-road, was built by Messrs. Inwood; the first stone being laid by the Duke of York, July 1, 1819. The cella, or body of the church, is designed from the Erechtheium, dedicated to Minerva Polias and Pandrosus, at Athens; and the steeple, 168 feet high, is from the Athenian Tower of the Winds, with a cross, in lieu of the Triton and wand, symbols of the wind, in the original. The clock-dials are but  $6\frac{1}{2}$  feet in diameter, though at the height of 100 feet, and therefore are much too small. The western front of the church has a fine portico of six columns, with richly-sculptured voluted capitals; beneath are three enriched doorways, designed exactly from those of the Erechtheium, and exquisite in detail. Towards the east end are lateral porticoes, each supported by colossal statues of females, on a plinth, in which are entrances to the catacombs beneath the church, to contain two thousand coffins: each of the figures bears an ewer in one hand, and rests the other on an inverted torch, the emblem of death; these figures are of terra-cotta (artificial stone), formed in pieces, and cemented round cast-iron pillars, which in reality support the entablature.

These figures are ill-executed, as may be seen by reference to the original Caryatides from the Pandrosium, in the Elgin Collection in the British Museum. The St. Pancras figures, and other artificial stone details for the church, were executed by Rossi, from Messrs. Inwood's designs, and cost 5400*l.*

The eastern front varies from the ancient Temple in having a semicircular termination, round which, and along the side walls, are terra-cotta imitations of Greek tiles. The interior is designed in conformity with the general plan of ancient temples. The pulpit and reading-desk are made from the trunk of "the Fairlop Oak," in Hainault Forest, blown down in 1820. The cost of this classic edifice, much too close a resemblance to a Pagan temple to be appropriate for a Christian church, was 76,679*l.* The fine Organ, recently erected, was originally built by Gray and Davison for the New Music Hall at Birmingham, and cost nearly 2000*l.*

ST. PAUL'S, Avenue-road, St. John's-wood, is of red and black brick, in various patterns, with stone window-frames and dressings; the tiled entrance surmounted by a wooden bell-cote. The roof is of high pitch and wide span, and is borne by the walls, which have internal buttresses dividing them into five bays: there are, consequently, no pillars to obstruct light or sound, but all is clear and open: architect, S. S. Teulon; completed 1859.

ST. PAUL'S, Camden New Town, St. Pancras, was built in 1848-9 (Ordish and Johnson, architects); it is majestically situated, and consists of a nave and aisles, with transepts and chancel, and a tower and spire at the west end, 156 feet high; the windows are Decorated, the roofs have crosses and crests, and the arrangement is very picturesque: this large church, for 1200 persons, cost less than 9000*l.*

ST. PAUL'S, Covent Garden, was commenced for the ground-landlord, Francis Earl of Bedford, by Inigo Jones, in 1631, but not finished till 1638; this being the last of that great architect's works. The Earl's commission is stated to have been for a chapel "not much bigger than a barn;" when Jones replied, "Well, then, you shall have the handsomest barn in England." The truth of this anecdote has been questioned: for the fabric cost 4500*l.*, a large sum for those days. Pennant ascribes the church to the second Duke of Bedford, "whom," says Walpole (*Letters*, Sept. 18, 1791), "he takes for the first, and even then would not be right, for I conclude Earl Francis, who died in 1641, was the builder, as the church was probably not erected after the Civil War began." It was built of brick, with a portico at the east front, consisting of a pediment supported by four Tuscan columns of stone, and the roof was covered with tiles: Hollar's print of it shows a small bell-turret surmounted with a cross. Within the pediment was placed a pendulum clock, made by Richard Harris in 1641, and stated by an inscription in the vestry to be the first made.

If this inscription be correct, it negatives the claim of Huyghens to having first applied the pendulum to the clock, about 1657; although Justice Bergen, mechanician to the Emperor Rodolphus, who reigned from 1576 to 1612, is said to have attached one to a clock used by Tycho Brahe. Inigo Jones, the architect of St. Paul's, having been in Italy during the time of Galileo, it is probable that he communicated what he heard of the pendulum to Harris. Huyghens, however, violently contested for the priority; while others claimed it for the younger Galileo, who, they asserted, had, at his father's suggestion, applied the pendulum to a clock in Venice which was finished in 1649.—Adam Thomson's *Time and Timekeepers*, pp. 67, 68.

The ceiling of the interior was beautifully painted by E. Pierce, senior, a pupil of Van Dyck. Inigo Jones was present at the consecration by Bishop Juxon, Sept. 27, 1638. In 1725 it is recorded that the Earl of Burlington gave 300*l.* or 400*l.* to restore the portico, which had been spoiled by some injudicious repairs. Its appearance in the middle of last century is familiar from one of Hogarth's prints of "The Times of the Day." In the picture of "Morning" the front of this church is represented. The church dial points to a few minutes before seven A.M., and two very incongruous groups appear—Miss Bridget Alworthy, with her foot-boy carrying her prayer-book, going to the early service, while some dissipated rakes are staggering out of Tom King's Coffee-house, hard by.

In 1788, the walls of the church were cased with Portland stone; and the rustic gateways at the east front, which Jones had imitated in brick and plaster from Palladio, were then rebuilt with stone. In 1795, the interior of the church was burnt, the fine old roof, the stained glass, and some pictures, including one of Charles I., by Lely, being then destroyed; but the portico and the walls remained, and the edifice was restored by the elder Hardwick. The altar-piece has two figures of angels, sculptured by Banks, R.A. Among the eminent persons interred here are Samuel Butler, author

of *Hudibras*, whose friends could not afford to bury him in Westminster Abbey; Sir Peter Lely, the painter, to whom there was a monument, with a bust by Gibbons, destroyed with the old church; Edward Kynaston, the famed actor of female parts, who played Juliet to Betterton's Romeo; William Wycherley, the witty dramatist, who had "a true nobleman look;" Susannah Centlivre, who wrote *The Wonder*; Grinling Gibbons, the sculptor and wood-carver; Dr. John Armstrong, known by his didactic poem, *The Art of Preserving Health*; and Charles Macklin, the actor, at the supposed age of 107: the two last in a vault under the Communion-table. Another centenarian, named by Strype, is Marmaduke Conway, buried here 1717, at the age of 108 years and some months: he was in the service of the royal family from the reign of King James I. to his dying day, and was much liked by Charles I. for his skill in hawking. Here, too, lie Michael Kelly, the musical composer; and Estcourt, the founder of the original Beef-steak Club. Wolcot (Peter Pindar,) lies beneath the vestry-room; and Butler in the churchyard, abutting on King-street. Dr. Arne's remains are also said to rest here without any tombstone or memorial. In the churchyard lies Sir Robert Strange, the engraver, who published his own prints at "the Golden Head," Henrietta-street. Holland and Edwin, and many players of minor note, are also buried in the churchyard. The portico and overhanging roof of the church are picturesque in effect; and the whole building is impressive from its vastness, and agreeable from the simple rusticity of the order.

Du Val, the famous highwayman, executed at Tyburn, Jan. 21, 1669, after *lying in state* at the Tangier Tavern, St. Giles, was buried in the middle aisle of St. Paul's; his funeral was attended with flambeaux, and a numerous train of mourners, including many of the fair sex.

Before the portico of St. Paul's Church is erected the hustings for the election of members of Parliament for Westminster. Contests are now restricted to one day; but Westminster was, for many Parliaments, the cockpit wherein battles of Court and people were fought, when "madman's holiday" extended to fifteen days; from Bradshaw and Waller to Fox and Sheridan; Burdett, Cochrane, and Hobhouse; and the popular *dii minores*, Hunt and Cartwright.

ST. PAUL'S, Herne-hill, between Camberwell and Dulwich, was built in 1844-5, by Stevens and Alexander, in the Perpendicular Gothic style of the 15th century. It had a lofty stone tower and spire, and a highly-decorated interior: the ceiling was divided, by moulded beams and Gothic tracery, into panels, elaborately painted; the beams had illuminated Scripture texts; all the windows were filled with stained glass; the open seats were of polished oak; the floor is laid with coloured encaustic tiles, and the chancel-steps with tasteful porcelain, by Copeland; the Decalogue, &c., was written in illuminated characters upon porcelain slabs; and the pulpit panels were filled with paintings of the Evangelists and Apostles. As this was one of the earliest specimens of modern High-Church embellishment, so it was one of the most beautiful. The interior was destroyed by fire in 1858, but has been rebuilt (Street, architect) in an earlier style, and according to stricter ecclesiastical principles. Mr. Ruskin has pronounced the church to be, as it now stands, "one of the loveliest churches of the kind in the country, and one that makes the fire a matter of rejoicing."

ST. PAUL'S, Lorimore-square, Walworth, erected 1857, H. Jarvis, architect; Early English, with Transition details; has a tower and spire of good form, at the north-east angle, 122 feet high.

ST. PAUL'S CHURCH FOR SEAMEN OF THE PORT OF LONDON, near the London and St. Katharine's Docks, the Sailors' Home, and the Seamen's Asylum, was founded by Prince Albert, May 11, 1846, and consecrated July 10, 1847; H. Roberts, architect. The style is Early English, with a western tower and spire 100 feet high. Prince Albert gave the east window and communion-plate, and was present at the consecration. "In the course of a year it is computed that about 7000 seamen come to this church: a field of usefulness that can scarcely be overrated."—(Low's *Charities of London*, p. 390.) St. Paul's has superseded the Episcopal Floating Church, originally the *Brazen sloop-of-war*: she was moored in the Pool, and fitted with a small organ; and boats were provided on Sundays at the Tower-stairs for the free passage of sailors to attend the ship service, which was under the direct superintendence of Dr. Blomfield, Bishop of London.

ST. PAUL'S, Shadwell, named from its being in the patronage of the Dean and Chapter of St. Paul's, was originally built in 1656; but rebuilt, as we now see it, in

1820-1, by Walters, who died in the latter year: it has a beautiful spire, and is throughout a very meritorious design. The parish, formerly a hamlet of Stepney, was called Chadwelle, from a spring dedicated to St. Chad, within the churchyard.

ST. PAUL'S, Virginia-row, Bethnal-green, W. Wigginton, architect, is an inexpensive church, built for a very poor neighbourhood. It is of ordinary stock brick, with red and black bands; has a four-light east window, with tracery; and at the north-east angle a square chamfered tower of four stages, with a short broach spire.

ST. PAUL'S, Wilton-place, Knightsbridge, designed by Cundy, was consecrated by the Bishop of London, May 30, 1843. It has an Early Perpendicular and eight-pinnacled tower, 121 feet high. It consists of a nave and two aisles, and a chancel, the latter very handsome; here, in advance of the reading-desk and pulpit, is the lectern. On the south are three sedilia; over the Communion-table are three compartments of stonework, terminating in a reredos, above which is the great window of stained glass, by Wailes, portraying the Prophets and the Twelve Apostles: the window and stonework cost 1000*l.* The font is of Caen stone, and has eight sculptured panels, angels holding a shield or book, plant bosses, &c. The Organ is a very powerful one, and has a richly-canopied case; it covers 14 feet square, and is 30 feet high. The roof is open, and is said to be the largest unsupported by pillars of any ecclesiastical edifice in the metropolis. Eight of the side windows are filled with stained glass, by Wailes, representing scenes and actions of St. Paul and other Apostles. The choral service is efficiently performed; the silver-gilt Communion-plate is very massive; the altar appointments are truly Anglican. The cost of this church was 11,000*l.*, exclusive of fittings. The Rev. W. J. E. Bennett, M.A., of Christ Church, Oxford, appointed to the incumbency in 1843, resigned in 1850, and was succeeded by the Hon. and Rev. R. Liddell. The furniture and services of this church have given rise to much ritualistic controversy and litigation.

ST. PETER'S, Belsize-park, Hampstead, is a cruciform Decorated church, with a nave, five bays, and a handsome east window of five lights; all the windows are of stained glass, stated to be the work of the incumbent: completed 1859.

ST. PETER'S, Cornhill, was rebuilt of brick by Wren, after the Great Fire; it has a tower and spire 140 feet high, surmounted by an enormous key, the emblem of St. Peter. Here is a tablet recording the death by fire, Jan. 18, 1782, of the seven children of James and Mary Woodmason, of Leadenhall-street. The nave and chancel are separated by a carved wainscot rood-screen, set up by direction of Bishop Beveridge, who was 32 years rector of St. Peter's, and who paid special attention to the appropriateness of church furniture and repairs. An inscription upon a brass plate in the vestry-room describes the old church as founded A.D. 179,—a statement unsupported by facts. Stow records a murderer who had fled to St. Peter's for sanctuary in 1230; and one of the priests was murdered in 1243.

ST. PETER'S, Eaton-square, Pimlico, an Ionic Church; H. Hakewill, architect; consecrated in 1827. The altar-piece, "Christ crowned with Thorns," painted by W. Hilton, R.A., was presented to the church by the British Institution.

ST. PETER'S, Saffron-hill, a district church of St. Andrew's, Holborn, was designed by C. Barry, R.A., in the Anglo-Norman Style, and consecrated in 1832: it has been placed in a proverbially depraved locality, with the most salutary effect.

ST. PETER'S, Sunner-street, Bankside, designed by Edmunds, and consecrated 1839, is in the plain Pointed style, and has an embattled tower 84 feet high.

ST. PETER'S-LE-POOR, Old Broad-street, was taken down in 1788, rebuilt by Jesse Gibson, and consecrated by Bishop Porteus in 1792. The church is traceable to 1181: it was "sometime peradventure a poor parish" (*Stow*), but scarcely now contains one pauper.

ST. PETER'S, Vauxhall, occupies part of the site of the once famous Vauxhall Gardens, was designed by J. L. Pearson, and consecrated in 1864. The style is First Pointed, of French type. It has two aisles, a western vestibule, nave, baptistery attached to the west side of the south aisles, and polygonal aisleless chancel; there are four

bays to the nave, which comprises a sort of blank triforium, to be hereafter filled with pictures, the subjects of which, it is suggested, should be from the Old and New Testaments, on the respective appropriate sides. The triforium of the chancel is open, composed of seven coupled lights, with rear-vaults and detached shafts; the clerestory of the chancel is composed of acute lancets deeply splayed. The reredos of alabaster, carved, is by Poole; the mosaics on the wall are executed by Dr. Salviati, of Venice. Beneath the triforium arcade of the east end it is proposed to place a line of frescoes, representing the Passion. The whole of the church is groined in brick, with stone ribs springing from vaulting-shafts of red stone, with carved capitals. The pulpit is square, and of stone, with an incised picture towards the west, representing St. Peter preaching on the Day of Pentecost: it is also richly carved. "Mr. Pearson's excellent Church of St. Peter's is memorable as the first example, in London, in the present revival, of a church vaulted throughout."—*Report of the Ecclesiological Society.*

ST. PETER'S AD VINCLIA, the chapel of the Tower, situate north-west of the White Tower, dates as early as Henry I.: it was restored by Edward III., who added 18*l.* to the original 3*l.* of rectorial endowment. The seats are appropriated to the inhabitants of the Tower. It is a very old rectory, and was put under the jurisdiction of the Bishop of London by Edward VI. and Queen Mary: it is extra-parochial. The present chapel was erected *temp.* Edward I.; it is of squared stones and flints, and has a small bell-tower. The interior consists of a chancel, nave, and north aisle, the two latter separated by flat-pointed arches springing from clustered columns; but little of the original building remains. This chapel is extremely interesting, as the burial-place of these eminent persons, executed within the Tower walls or upon Tower-hill: Queen Anne Boleyn (beheaded 1536); Queen Katherine Howard (beheaded 1542); Sir Thomas More (beheaded 1535); Thomas Cromwell, Earl of Essex (beheaded 1540); Margaret Countess of Shrewsbury (beheaded 1541); Thomas Lord Seymour, Lord Admiral, beheaded 1549, by warrant of his own brother, the Protector Somerset, who in 1552 was executed on the same scaffold; John Dudley, Duke of Northumberland (beheaded 1553).

"There lyeth before the High Altar in St. Peter's Chureh, two Dukes between two Queenes, to wit, the Duke of Somerset and the Duke of Northumberland, between Queen Anne and Queen Katherine, all four beheaded."—*Stow (Howes's).*

Lady Jane Grey and her husband, Lord Dudley (beheaded 1553-4); Robert Devereux, Earl of Essex (beheaded 1600): under the communion table lies the Duke of Monmouth (beheaded 1684); and beneath the gallery, Lords Kilmarnock and Balmerino (beheaded 1746); and Simon Lord Lovat (beheaded 1747). The Register records the burial in this chapel of Sir Thomas Overbury, poisoned in the Tower, 1613: and here lies Sir John Eliot, who died a prisoner in the fortress, his son being refused by King Charles I. permission to remove the body to Cornwall for interment. Also are buried in St. Peter's, John Roettier, "his Majesty's engraver at the Tower;" and Colonel Gurwood, who edited the *Wellington Despatches*. In the north aisle is the altar-tomb, with effigies, of Sir Richard Cholmondeley (Lieutenant of the Tower, *temp.* Henry VII.) and his wife, Lady Elizabeth. In the chancel is a rich marble monument to Sir Richard Blount and his son Sir Michael, Lieutenants of the Tower, sixteenth century; with figures of the knight and his sons in armour, and of his wife and daughters. Here also is the tomb of Sir Allan Apsley, Lieutenant of the Tower; and in the nave-floor is the inscribed gravestone of Talbot Edwards, keeper of the Regalia in the Tower when Blood stole the crown. In the Tower Liberties the parochial perambulation on Holy Thursday is triennial: after service in the church of St. Peter, in the Tower, a procession is formed of the headsman bearing an axe, a painter to mark the bounds, yeomen-warders with halberts, the Deputy-Lieutenant, and other officers of the Tower, &c.; the boundary-stations are painted with a red broad arrow upon a white ground, while the Chaplain of St. Peter's repeats "Cursed be he who removeth his neighbour's landmark."

ST. PETER'S, Walworth-road, in the parish of St. Mary, Newington, was built in 1823-5, and cost about 19,000*l.* It is one of Soane's classic churches; the west front decorated with Ionic columns, and the tower has two stories, the lower Corinthian and the upper Composite. The interior is in elegant and original taste.

ST. PETER'S, Great Windmill-street, is in close juxtaposition with the Argyll Rooms. The first stone was laid by the Earl of Derby, in 1860: it was built by subscription of the richer of the parish of St. James's, to supply the wants of the poorer. To the fund of 12,000*l.*, Lord Derby contributed 4500*l.* It is remarkable for its picturesque west front, the only portion not shut in by the surrounding houses: the church cost about 6000*l.*, and the site a like sum: architect, Raphael Brandon; style, Decorated Early English.

ST. SAVIOUR'S, Cedars-road, Clapham Common, built by the Rev. Wentworth Bowyer, rector of Clapham; James Knowles, architect; cost about 10,000*l.*; is cruciform, and has, at the intersection of the nave and transepts, a central pinnaced tower, 120 feet high. The windows are filled with stained glass by Clayton and Bell, a connected series, illustrating the life of our Lord on earth. Under the tower, and in front of the altar rails, is an altar-tomb, bearing on it a recumbent effigy of Mrs. Bowyer, co-foundress of the church, who died just before its completion. The style is Second Pointed: the mouldings, tracery, and carving are good.

ST. SAVIOUR'S, Hoxton, built 1866, J. Brooks, architect, of brick, with stone bands; in the First Pointed Gothic style, of Continental cast. The apse with half-conical roof, the Nave roof 75 feet high, and the spirelet, rising like a sanctus bell, are externally effective; Lancet clerestory windows, good.

ST. SAVIOUR AND CROSS, Wellclose-square, was built at the expense of Christian V. King of Denmark, in 1696, by Caius Gabriel Cibber, who erected here a monument to his wife Jane, mother of Colley Cibber, the famous dramatist. King Christian VII. of Denmark, attended the church in 1768 while he remained in this country: it is still used by the Danes, as well as by St. George's Mission.

ST. SAVIOUR'S, Pimlico; architect, T. Cundy; Second Pointed in style, has a tower and spire 190 feet high, only 12 feet less than the height of the London Monument. It cost 12,000*l.*, towards which the Marquis of Westminster contributed 7000*l.*

ST. SAVIOUR'S, Southwark, a short distance from the south foot of London-bridge, ranks in magnitude and architectural character as the third church in the metropolis, and is one of the few churches in the kingdom possessing a Lady Chapel. Roman masonry and pottery have been found below the church floor.

A romantic tradition is associated with this church. Stow, in the account which he received from Linsted, the last Prior, describes it as "Saint Mary over the *Rie*, or *Overy*, that is, over the water. This church, or some other in place thereof, was (of old time, long before the Conquest) an House of Sisters, founded by a maiden named *Mary*, unto the which House and Sisters she left (as was left to her by her parents) the ouersight and profits of a Crosse Ferrie, or trauese ferrie over the Thames, there kept before any bridge was builded." (See LONDON BRIDGE, p. 65.) This story has however, been much discredited. The shrouded figure now in the north aisle has been gossippingly assigned to Audery, the Ferryman, father of the foundress of St. Mary Overie's. There is a curious, although probably fabulous, tract of his life, entitled, "The True History of the Life and sudden Death of old John Overs, the rich Ferry-Man of London, shewing how he lost his life by his own covetousness. And of his daughter *Mary*, who caused the church of St. Mary Overs in Southwark to be built; and of the building of London Bridge." There are two editions: the first, 1637, with woodcuts; the second, 1774, "Printed for T. Harris at the Looking-Glass on London Bridge." It is among S. W. Musgrave's Biographical Tracts in the British Museum. A synopsis of the story is given in the *Chronicles of London Bridge*, pp. 40-44.

This was originally the church of the Augustine Priory of St. Mary Overie, and was founded by the Norman knights, William Pont de l'Arche and William Dauncy. The nave of the church is attributed to Gifford, Bishop of Winchester in 1106 (7th Henry I.); and an arch, an apsis, and other remains of this date, have been uncovered by the removal of the masonry of the church, altered in the reigns of Richard II. and Henry IV. After the Dissolution of the Monasteries, this church was purchased of Henry VIII. by the people of Southwark; and in 1540, it was made parochial as St. Saviour's, and united with the two parishes of St. Mary Magdalen and St. Margaret-at-Hill. The church is cathedral or cruciform in plan, with a nave, transepts, choir, and Lady Chapel, and a lofty embattled tower at the central intersection; besides Mary Magdalen's and the Bishop's Chapels, now removed. An etching, by Hollar, executed for Dugdale's *Monasticon*, shows the church about 1660. The Choir and Lady Chapel were commenced in the Lancet style, according to an ancient chronicle: "John

anno X<sup>o</sup> (1208). Seynte Marie Overie was that yere begonne." In 1618, the fine perspective of nave and choir was destroyed by an organ-screen, set up in place of the ancient rood-loft. In 1624, the Lady Chapel, which had been let out as a bakehouse for 60 years, was restored; and in 1689, the tower was repaired, and the pinnacles were rebuilt: height 150 feet. From the roof Hollar drew his celebrated Views of London, before and after the Great Fire, lately rendered familiar by Martin's pen-and-ink lithograph. The choir, transepts, Lady Chapel, and tower are the work of Bishop de Rupibus, and afford a good specimen of the architecture of the commencement of the thirteenth century, when the Pointed style flourished in its greatest purity. The windows are lancet-shaped, the buttresses large and massive, united to the choir by segments of arches; the pinnacles which finish the buttresses closely resemble the corresponding works of Wykeham at Winchester. The eastern gable of the choir and the foliated cross on the apex are very fine. "Of the east end," says Mr. George Gwilt, "no remains of the more ancient building existed; for this part of the restoration, the eastern end of Salisbury Cathedral furnished the requisite data, and this is fully borne out by Wyngrede's Drawing of London, 1543."

For a long interval, the only repairs of the church tended to its disfigurement, by barbarous brick casing and the destruction of beautiful windows; until, in 1818, the repair of the entire edifice was commenced with the tower. Ascending the tower, it will be seen that a great portion of its elevation was open to the church as a lantern, before the present painted ceiling, with its trap, was set up. "This tower," says Mr. Gwilt, "if we may indicate the period of its erection from a well-preserved bust on the north-west pier, must have been built so long ago as the time of King John. It was not so much time, as the tremendous vibration caused by the ringing of a fine peal of twelve bells, containing nearly eleven tons of metal (the tenor bell alone weighing about 2½ tons), which split the tower on two sides, causing a fissure of three inches in breadth. The further progress of this impending ruin was checked by the application of cast-iron ties; imperceptibly encircling each angular pier, as well as the four sides of the tower, secured to octangular rings, ample allowances being provided for changes of temperature." The pinnacles and embattled parapets were rebuilt, also windows inserted. This restoration was superintended by Mr. George Gwilt, F.S.A., who also, in 1822-24, took down the east end of the church to the clerestory, and gave the present face to the structure—his own design—consisting of an enriched gable, with an elaborately foliated cross on its apex; pinnacled staircase turrets, with niches at the angles; and a new triple lancet window, in the more florid style of the thirteenth century, instead of the original window of five lights (*temp.* Henry VII.); besides a Catherine-wheel window, of extraordinary richness and beauty. Over the vaulting a cast-iron roof was erected, and covered with copper; and the piers of the flying buttresses on each side were cased with stone, the aisle windows built anew, &c.; in all which Mr. Gwilt has rigidly adhered to the former work, "not only in the general design, but in the minutest details, wherever prototypes could be found." In 1829-30, the transepts were restored from the designs of R. Wallace, architect; groined roofs were added; and in the south was introduced a circular window, designed from that in the ruins of Winchester Palace, Bankside, discovered through a fire in 1814. In the north transept has been inserted a window of circular tracery, in the style of Westminster Abbey; but the side windows, originally of beautiful length, have been injudiciously shortened. Within, the transepts present a beautiful vista, second only to the choir. The four magnificent arches which support the tower remain unaltered.

The Lady Chapel was used by Bishop Gardiner as a Consistorial Court in the reign of Queen Mary. In 1555, a commission sat here for the trial of heretics, Bishop Hooper and John Rogers being the first victims to the stake; but within four years, the Popish vestments were sold for the repairs of the church, and next the valuable Latin records of the Priory were burnt as superstitious remains of Popery. The Lady Chapel was restored in 1832, by public subscription, at the expense of 402*l.* 19*s.* 1*d.*, Mr. G. Gwilt giving his gratuitous superintendence as architect. It possesses the singularity of four gables, which has a very beautiful effect. The groined roof of the Lady Chapel is very fine. Here is the marble tomb of Lancelot Andrewes, Bishop of Winchester, with his full-length effigies, formerly in the Bishop's Chapel, where also

his leaden coffin was found. Some stained-glass windows, in memory of Protestant martyrs, have been put up in the Lady Chapel, and are effective as seen from the choir.

The Nave, it is believed, the oldest part of the structure, was, in 1839, taken down within 7 feet of the ground, and was sold for 150 guineas!—by order of vestry—the Organ being then moved up to form a temporary end to the Choir. The roof of the nave had wooden bosses, sculptured with grotesque heads, shields, dragons, flowers, fruits, &c. The trusses of the roof had knees, springing from stone corbels, carved into winged angels, bearing shields painted with various colours. The roof of each aisle was groined and ribbed, with bosses at the intersections. The timber roof of the nave was a fine specimen of carpentry, said to have been put up by Bishop Fox (*temp.* Edward IV.) At the west end were Tudor doorways, to let down tapestry on high festivals over the walls. In the ruined nave have been found a semicircular-headed door and some other portions of the Norman church; and a semicircular apse at the north-east corner of the vestry, formerly St. John's Chapel, was brought to light. These fragments, together with some other remains, would seem to show that the church of the date of 1106 was situated on the north side of the present Choir. Thus dismantled stood the roofless walls, and the massive Tudor doorway at the west end, until, in 1838-9, the Nave was rebuilt for Divine Service in poor, incongruous style; and being separated from the Choir, St. Saviour's now presents the anomalous appearance of two churches in one; but had the Nave been restored according to the ancient example, the groined roof of the church would exhibit an uninterrupted perspective of 208 feet. The most picturesque views are from the clerestory vaultings of the Choir. The commonplace oak and plaster of the last century have been removed from the eastern end, thus unveiling the stone altar-screen, a beautiful composition of niches, &c.; and which, from its resembling that in Winchester Cathedral, and bearing Bishop Fox's device of the pelican feeding her young, is inferred to be his workmanship: it was restored in 1833, at the cost of 700*l.*

"In the fifteenth century, sculpture and painting lent their aid to complete and embellish this sumptuous display of architecture. Upon the altar and under the central canopy, in the first range, stood the crucifix; the large niche above was appropriated to the statue of the Blessed Virgin, the patroness of the church; and the corresponding niche in the upper range we may as confidently assign to the representation of the sacred Trinity; the minor niches might be occupied by the sainted bishops of the see. Above the whole, the design was carried on in the painted glass of the east window, inclosed as it were in a richly sculptured frame: in this perfect state, what a magnificent scene was displayed in the Choir!"—*E. J. Carlos, Gentleman's Magazine, Feb. 1834.*

The church is very rich in painted sculpture tombs. In the south transept is the Perpendicular monument of the poet Gower, removed from the north aisle of the nave in 1832, when it was restored and coloured at the expense of the first Duke of Sutherland, a presumed collateral descendant from the poet.\* Here Gower and his wife are buried; the poet beneath the above monument, triple canopied, and richly dight with gold and colour inscription, with the recumbent effigies of Gower in prayer: his hair auburn, and long to the shoulders, and a small forked beard; on his head a purple and gold rose fillet, with the words, "Merci Ihù;" a habit of purple, damasked, down to his feet; a collar of esses, gold, about his neck; his head resting upon three gilded volumes, the "Speculum Meditantis," "Vox Clamantis," and "Confessio Amantis;" on the wall at his feet are his arms, and a hat or helmet, with a red hood, ermined, and surmounted by his crest—a dog. Opposite Gower's tomb is the coloured bust of John Bingham, saddler to Queen Elizabeth and James I. In the north transept is a richly-painted, carved, and gilt monument, with angels, rocks, suns, and serpents, to William Ansten, Esq., who wrote a poem of "Meditations." Next lies Dr. Lockyer, the empiric (*temp.* Charles II.), his reclining effigies in thick curled wig and furred gown:

"His virtues and his pills are so well known,  
That envy can't confine them under stone."—*Epitaph.*

\* "We are afraid, on the showing of Sir H. Nicolas and Dr. Pauli, that the family of the Duke of Sutherland and Lord Ellesmere must relinquish all pretension to being related to, or even descended from, John Gower. They have hitherto depended solely upon the possession of a MS. of the *Confessio Amantis*, which was supposed to have been presented to an ancestor by the poet; but it now turns out, on the authority of Sir Charles Young, Garter, that it was the very copy of the work which the author laid at the feet of King Henry IV., while he was yet Harry of Hereford, Lancaster, and Derby!"—Review of Dr. Pauli's edition of the *Confessio Amantis*; *Athenæum*, No. 1537, p. 463. Baker is the only Chronicler who gives the date of Gower's death correctly, namely, 1403, as in his Will; most if not all other writers represent Gower as dying in 1402 or 1403.

In the north aisle is the monument to John Trehearne, gentleman-porter to James I., with the costumed bust of himself and wife. Opposite is the tomb of Alderman Humble (*temp.* James I.), with kneeling figures of himself and his two wives, and representations of their children; and an inscription, slightly varied from a poem attributed to Francis Quarles, commencing—

“Like to the damask rose you see.”

Here, too, is an oaken effigy, supposed of one of the Norman knights, founders of the church; and near it is the figure of an emaciated man, wrapped in a shroud, and finely sculptured. The burial register records, under 1607, “Edmond Shakespeare, a player, in the church,” the great dramatist’s brother, and who, doubtless, was followed to the grave by *him* as chief mourner; under 1625 is “Mr. John Fletcher, a man, in the church” (Beaumont and Fletcher); and Philip Massinger, “a stranger,” in the churchyard, 1638–9. Beneath a gravestone in the Choir lies Sir John Shorter, who died Lord Mayor, in 1688; and his wife, who died in 1703: he was the grandfather of Lady Walpole, wife of Sir Robert, and mother of Horace Walpole.

In the church was married, in 1406, Edmund Holland, last Earl of Kent, Lord Admiral of England, and grandson of the Fair Maid of Kent, to Lucia, eldest daughter of Barnaby, Lord of Milan: King Henry IV. gave away the bride at the church-door.

Here, on the termination of his sentence, the Rev. Dr. Sacheverel preached in 1713, on the Christian Triumph, or Duty of Praying for Enemies; and the booksellers gave him 100*l.* for the sermon.

The tower has a fine peal of twelve bells, and in the belfry are recorded exploits performed upon them by the College and Cumberland Youths; though these bells were not rung at the opening of London Bridge, in 1831, from the alleged insecurity to the masonry. The clock, put up in 1795, has a dial 31 feet in circumference; length of minute-hand, 5 feet; circumference of bell, 11 feet 6 inches. The tower, east end, and Lady Chapel, originally concealed by the west side of the old High-street, were opened to view in forming the approaches to New London Bridge, thus presenting, perhaps, the finest architectural group in the metropolis: its restoration in the present century has cost above 60,000*l.*

ST. SEPULCHRE’S, anciently “in the Bailey,” at the east end of Skinner-street, and adjacent to Newgate, was damaged in the Great Fire, which just reached Pye Corner, northward of the church. It was rebuilt about the middle of the fifteenth century. The south-west entrance-porch, resembling a transept, has a groined roof, with bold ribs and beautifully-sculptured bosses; adjoining is an ancient chapel, erected by the Popham family. The body of the church was refitted by Wren after the Fire. The Organ, one of the largest and finest in London, was built by Harris, second only to Schmidt, in 1677, and has been enlarged; the pedal organ, with ten stops, or fourteen ranks of pipes throughout, is unequalled in England. St. Sepulchre’s was, in Newcourt’s time, “remarkable for possessing an exceedingly fine Organ, and the playing is thought so beautiful that large congregations are attracted, though some of the parishioners object to the mode of performing Divine service.” The pulpit has a sounding-board, like a parabolic reflector, with ribs of mahogany, the grain radiating from the centre. Among the monuments is that of Capt. John Smith, Governor of Virginia, and a romantic traveller (d. 1631): his eccentric epitaph, recorded by Strype, has disappeared. The benefactions to the parish include that of Mr. Richard Dowe, who left a hand-bell, to be rung, with certain forms, to the condemned criminals in Newgate, and on their way to Tyburn for execution, when it was also customary to present a nosegay to each. St. Sepulchre’s tower, “one of the most ancient in the outline in the circuit of London” (*Malcolm*), has four pinnacles with vanes, rebuilt 1630–33, and is 140 feet high: it has a fine peal of ten bells; the clock regulates the hanging of criminals at Newgate. “Unreasonable people,” says Howell, “are as hard to reconcile as the vanes of St. Sepulchre’s tower, which never looked all four upon one point of the heavens.” On April 10, 1600, one William Dorrington threw himself from the roof of this tower, leaving there a written prayer for forgiveness.

On St. Paul’s Day, service is performed in the church in accordance with the will of Mr. Paul Jervis, who in 1717, devised certain land in trust, that a Sermon should be preached in the church upon every Paul’s Day, upon the excellence of the Liturgy of the Church of England; the preacher to receive 40*s.*

for such sermon. Various sums are also bequeathed to the Curate, the Clerk, the Treasurer, and Masters of the parochial schools. To the poor of the parish he bequeathed 20*s.* a-piece to ten of the poorest housekeepers within that part of the parish of St. Sepulchre commonly called Smithfield quarter; 4*l.* to the Treasurer of St. Bartholomew's Hospital; and 6*s.* 8*d.* yearly to the Clerk, who shall attend to receive the same. The residue of the yearly rents and profits is to be distributed unto and amongst such poor people of the parish of St. Sepulchre, London, who shall attend the service and sermon. At the close of the service, the Vestry Clerk reads aloud an extract from the Will, and then proceeds to the distribution of the money. In the evening the Vicar, Churchwardens, and Common Councilmen of the Precinct, dine together.

ST. SIMON'S, Moore-street, Chelsea, J. Peacock, architect, is of Gothic design, cruciform, with an interior of some polychromatic display, by means of coloured marble shafts; and it has a very large east window of five lights, filled with stained glass: completed 1859.

ST. STEPHEN'S, Coleman-street, was destroyed by the Great Fire, and rebuilt by Wren, as we now see it, with a tower and bell-turret 65 feet high. Among the monuments is a marble bas-relief, by E. W. Wyon, erected in 1847, to the Rev. Josiah Pratt, Vicar of the parish, whose missionary labours are personified by the Angel of the Gospel addressing an African, Hindoo, and New Zealander. A curious square oak carving, about 5 feet by 2½, in alto-relief, is inserted over the gateway of St. Stephen's, which Mr. George Scharf thus describes:—

"From the two upper corners seems to hang a festoon of clouds, upon which in the centre, the Saviour is seated in cumbrous drapery, holding the banner of Redemption in the right hand, and the ball and cross in the left; the significant action of the Judge is, therefore, entirely lost. He has a large beard and rough hair, but no nimbus.

"Immediately beneath the Saviour, in front of the clouds, Satan is falling. He is represented of a slim human form, with hideous face, horns and bats' wings; his feet are tied together! The entire space below is filled with the dead—all entirely naked—issuing from their coffins, which are shaped like those now in use. At each end some figures are seen issuing from caverns. The central figures below are large, fat children; but otherwise there is no distinction of age or sex. One angel, to the left of the Saviour, sounds the trumpet.

"There are no musical instruments nor indications of entrance to the places of final reward. The Book of Life also is not represented. The remaining space within the line of clouds is filled with winged angels, many of them exceedingly graceful, busied in assisting the aspirants to heaven by reaching their hands over the clouds. Many of the figures, in their excitement, seem ready to scale the walls of heaven; but the treatment of the whole is very unworthy of the subject. As a piece of carving it is remarkably good, and superior to that over the lich-gate of St. Giles's."—*Archæologia*, vol. xxxvi. p. 389. See ST. GILES'S-IN-THE-FIELDS, p. 165.

In the old church was buried Master Antony Munday, who wrote a continuation of Stow's *Survey*, and for more than forty years arranged the City pageants and shows. Of this parish John Hayward was under-sexton during the Great Plague, when he carried the dead to their graves, and fetched the bodies with the Dead Cart and Bell, yet "never had the distemper at all, but lived about twenty years after it."—(See Defoe's *Memoirs*.)

ST. STEPHEN'S THE MARTYR, Avenue-road, Portland-town, is a large Decorated church, by Daukes, with a tower and spire 136 feet high; towards building which two individuals gave 1000*l.* each; the freehold of the site and 500*l.* being also given by the Duke of Portland.

ST. STEPHEN'S THE MARTYR, Rochester-row, Westminster, is a stately church, built and endowed at the sole cost of Miss Burdett Coutts, as a memorial to her patriotic father, Sir Francis Burdett, Bart., M.P. for Westminster thirty years. The site was presented by the Dean and Chapter of Westminster, and is nearly opposite the Alms-houses founded by Emery Hill in 1674. The first stone of the church was laid by Miss Coutts, July 20, 1847; it was consecrated June 20, 1850. The style is the Decorated, of the reigns of the first three Edwards; and the architect, Ferrey. The church consists of a Nave with aisles, and a Chancel; and on the north side a massive tower and spire, 200 feet high, with a peal of eight bells by Mears; all the windows are richly traceried. The Chancel ceiling is coloured blue, powdered with gold stars; the walls are decorated with texts; and the reredos is of the Canterbury diaper, picked out in gold and colour: the altar-cloth was presented by the Duke of Wellington, and the chancel carpet was wrought in Berlin work by forty ladies of rank, the border by the girls of St. Stephen's Schools; the design consists of shields and heraldic devices and panels of the *fleur-de-lis* and Tudor rose, within a Tudor rose border. The Organ, by Hill, has a screen of diapered pipes, and cost 800 guineas. The nave and aisle roofs

are of oak ; and the arcade rests upon clustered shafts, with sculptured capitals. The pulpit is of stone, and enriched with tracery ; and the font is sculptured with Scripture subjects. The windows are filled with stained glass, by Wailes, and Powell's stamped quarries. The stalls and seats are of oak, and for about 900 persons : in the chancel is a handsome *corona* of gas-burners and candlesticks. Adjoining are Schools, of very picturesque design, also by Ferrey. By an Order in Council, in the *Gazette*, April 9, 1856, no one is to be buried in St. Stephen's Church besides Miss Coutts and Mrs. Brown (widow of Mr. Brown, who is already buried there) ; and their bodies are to be imbedded "in a layer of powdered charcoal, six inches at least in thickness, and be separately entombed in brickwork well cemented."

ST. STEPHEN'S, Spitalfields, E. Christian, architect, on the east side of Commercial-street, was completed in 1862. It is of yellow brick, with red and black bricks, sparingly introduced ; its distinctive feature being the apse, which, instead of serving as the chancel, as is usual, is placed at the west-end of the nave—a fashion borrowed, with some other features, from Germany. Beside it is a parsonage, as quaint as the church. The interior of the church is an exact square, without the apse. The walls are plastered, but the piers and arches are faced with red and white bricks.

ST. STEPHEN'S, Wallbrook, is the third church of that name and locality : the first, according to Dugdale, stood on the *west* side of the "Brook ;" the second, built in 1428, on the *east* side, was destroyed by the Great Fire ; and the present church, Cinque-cento style, was built upon the same site, 1672–79, from the designs of Wren, at a salary of 100*l.* a year ; and the parish accounts show that a hogshead of claret was presented to the architect, and twenty guineas to his lady. The exterior is plain : tower and spire 128 feet high. The interior is one of Wren's finest works, with its exquisitely-proportioned Corinthian columns, and great central dome of timber and lead, resting upon a circle of light arches springing from column to column ; its enriched Composite cornice, the shields of the spandrels, and the palm-branches and rosettes of the dome-coffers, are very beautiful ; and as you enter from the dark vestibule, a halo of dazzling light flashes upon the eye through the central aperture of the cupola. The fittings are of oak : and the altar-screen, Organ-case, and gallery, have some good carvings, among which are prominent the arms of the Grocers' Company, the patrons of the living, and who gave the handsome wainscoting. The carved pulpit has festoons of fruit and flowers, and canopied sounding-board, with angels bearing wreaths. The church was cleansed and repaired in 1850, when West's painting of the Martyrdom of St. Stephens, presented in 1779 by the then Rector, Dr. Wilson, was removed from over the altar and placed on the north wall of the church. The large east window, painted by Willement, represents the ordination and death of the proto-martyr, to whom the church is dedicated : the other windows, by Gibbs, are a memorial to the late rector, Dr. Croly, the eloquent poet and imaginative prose-writer, whose bust by Behnes, and monument by Philip, are here. In a niche is also placed a bust of the architect of St. Stephen's, Sir Christopher Wren. There are four large windows, two at either end of the church, and thirteen smaller ones. The subjects of the large windows at the west end of the church are the Nativity and Baptism of Christ ; at the east end, the Crucifixion and Ascension. The small windows at the north side are illustrative of the Parables of our Lord : the Sower, Good Samaritan, Prodigal Son, Dives and Lazarus, Pharisee and Publican, the Ten Virgins, and the Good Shepherd. On the south side, the miracles represented are—Turning Water into Wine, Raising Jairus's Daughter, Restoring the Blind to Sight, Feeding the Five Thousand, the Pool of Bethesda, and Christ Walking on the Sea. The Organ was built by England, and is very sweet-toned ; the case harmonizes with the beautiful architecture of the church.

This church, unquestionably elegant, has been overpraised. The rich dome is considered by John Carter to be Wren's attempt to "set up a dome, a comparative imitation (though on a diminutive scale) of the Pantheon at Rome, and which, no doubt, was a kind of probationary trial previous to his gigantic operation of fixing one on his octangular superstructure in the centre of his new St. Paul's." Mr. J. Gwilt says of St. Stephen's : "Compared with any other church of nearly the same magnitude, Italy cannot exhibit its equal ; elsewhere its rival is not to be found. Of those worthy notice, the Zitelle at Venice (by Palladio), is the nearest approximation in regard to size, but it ranks far below our church in point of composition, and still lower in point of effect." Again : "Had its materials and volume

been as durable and extensive as those of St. Paul's Cathedral, Sir Christopher Wren had consummated (in St. Stephen's) a much more efficient monument to his well-earned fame than that fabric affords."

St. Stephen's serves also for the parish of St. Bennet Sherehog. Upon the north side of Pancras-lane is a small enclosed piece of ground, and upon a stone on an adjoining house is inscribed, "Before the dreadful fire, anno 1666, here stood the parish church St. Bennet Sherehog."

Pendleton, the celebrated Vicar of Bray, known by his multiversations, subsequently became rector of St. Stephen's, Walbrook. It is related that in the reign of Edward VI., Lawrence Sanders, the martyr, an honest but mild and timorous man, stated to Pendleton his fears that he had not strength of mind to endure the persecution of the times; and was answered by Pendleton that "he would see every drop of his fat and the last morsel of his flesh consumed to ashes ere he would swerve from the faith then established." He, however, changed with the times, saved his fat and his flesh, and became rector of St. Stephen's, whilst the mild and diffident Sanders was burnt in Smithfield.

The oldest monument in the church is that of John Lilburne: Sir John Vanbrugh, the wit and architect, is buried here, in the family vault. During the repairs in 1850, it is stated that 4000 coffins were found beneath the church; they were covered with brickwork and concrete to prevent the escape of 'noxious effluvia.

ST. SWITHIN'S, LONDON STONE, Cannon-street, was destroyed by the Great Fire, and rebuilt by Wren, in 1680, as we now see it. It has a tower and spire 150 feet high; but is chiefly remarkable for having against its outer south wall, within a modern stone case, all that remains of the ancient "London Stone," a Roman *miliarium*. Before it was removed from the opposite side of Cannon-street it was well secured, for Sir John Fielding, in his *London and Westminster*, 1776, tells us, "it was fixed so very deep in the ground, and was so thoroughly fastened by bars of iron, that the most ponderous carriages could do it no injury."

TEMPLE CHURCH (*St. Mary's*), in the rear of the south side of Fleet-street, was the church of the Knights Templars after their removal from their chief house on the site of old Southampton House, without Holborn-bars.\* It consists of "the Round," built in 1185, and consecrated by Heraclius, Patriarch of Jerusalem, some two centuries, or nearly so, before the addition of the Gothic Latin Chapel of the time of Edward II., as erected by the Knights of St. John after the expulsion of the Templars. The inscription (from the Saxon) beneath the western entrance is:

"Ab incarnatione Domini MCLXXXV., dedicata hæc ecclesia in honore beatæ Mariæ, a domino ERACLIO, Dei gratia Sanctæ Resurrectionis ecclesiæ patriarcha, IV. idus Februarii, qui eam annatum petentibus de injuncta sibi penitentia LX. dies indulsit."

This is one of the four circular churches built in England after the Templars' return from the first and second Crusades; the other three existing at Cambridge, Northampton; and Maplestead, in Essex. The architecture is midway between Romanesque and Early English Gothic: the western entrance semicircular arches and capitals are richly sculptured and deeply recessed; within, Purbeck marble columns, with boldly-sculptured capitals, support a gallery or triforium of interlaced Norman arches; and the clerestory has six Romanesque windows, one filled with stained glass, bright ruby ground, with a representation of Christ, and emblems of the Evangelists; and the ceiling, of Saracenic character, is coloured. On the gallery well-staircase is a "penitential cell." The arcade in the aisle beneath has sculptured heads of astonishing variety, copies executed by Sir R. Smirke in 1827; and here are pointed arches with Norman billets. Upon the pavement are figures of Crusaders, "in cross-legged effigy devoutly stretched," but originally placed upon altar-tombs and pedestals.

These effigies of feudal warriors are sculptured out of freestone. The attitudes of all are different, but they are all recumbent with the legs crossed. They are in complete mail with surcoats; one only is bare-headed, and has the cowl of a monk. The shields are of the heater or Norman shape, but the size is not the same in all; one of them is very long, and reaches from the shoulder to the middle of the leg. Their heads, with one exception, repose on cushions, and have hoods of mail. Three of them have flattish helmets over the armour, and one has a sort of casque. They have been well restored by Mr. Richardson. The best authorities assign five of them as follow: to Geoffry de Magnaville, Earl of

\* In the rear of the house No. 322, High Holborn, is a room or hall, for some unexplained reason, called "the chapel:" it has a finely panelled oak ceiling, about A.D. 1500; a large window opening, and a pointed doorway, now filled up. A few yards westward may be traced the position of the Round Church of the Templars, which they possessed previous to the erection of the present Temple Church in Fleet-street. Stow relates that adjoining the old Temple Church was the inn of the Bishop of Lincoln; and afterwards a house belonging to the Earl of Southampton, to which the room in question appears to pertain.—*J. Wykeham Archer*, 1850.

Essex, A.D. 1144 (right arm on his breast and large sword at his right)—he is not mentioned by Weever; William Mareschall, Earl of Pembroke, A.D. 1219 (sculptured in Sussex marble, with his sword through a lion's head); Robert Lord de Ros, A.D. 1245 (head uncovered, with long flowing hair), whose effigy is said to have been brought from Helmsley Church, Yorkshire; William Mareschall, junior, Earl of Pembroke, 1231 (with lion rampant on shield, and sheathing his sword); Gilbert Mareschall, Earl of Pembroke, 1281 (drawing his sword, winged dragon at feet).—*A Glance at the Temple Church*, by Henry Cole. See also Richardson's *Illustrations*, 1845.

In 1841 were discovered the ancient lead coffins containing the bodies of these knights, who did not appear to have been buried in their armour; and none of the coffin ornaments were of earlier date than the beginning of the 13th century.

There has also been found in the Church an early inscribed monument, upon which Mr. W. S. Walford has succeeded in deciphering the name of Philip de St. Hilaire, who was of a Norman family, allied with the Clares and the Earl of Arundel at the close of the twelfth century; and the name has been found by Mr. Waterton among the Knights Templars of the century.

In the Temple Round, lawyers received clients as merchants on 'Change :

“Retain all sorts of witnesses,  
That ply i' the Temple under trees ;  
Or walk the Round with Knights o' the Posts,  
About the cross-legg'd knights, their hosts.”—*Hudibras*, pt. iii. c. 3.

Dugdale says: “Item, they (the lawyers) have no place to walk in and confer their learnings but the *church*; which place all the term-times hath in it no more quietness than the Pervise of Paules, by occasion of the confluence and concourse of such as are suitors in the law.” “The Round” is the nave or vestibule to the oblong portion, which is the Choir, in pure Lancet style, almost rebuilt in the restorations and alterations in 1839–42 by Savage and Sydney Smirke. The groined roof, richly coloured in arabesque, and ornamented with holy emblems, is rendered very effective by the floods of light from the triple lancet-headed windows.

The Temple Church Organ has a strange history. It was built late in the reign of Charles II. by competition. First was set up an organ by Schmidt, when Dr. Blow and Purcell, then in their prime, performed on the instrument on appointed days, to display its excellence. Another organ was built in a different part of the church, by Harris, who employed Sully, organist to Queen Catharine, to touch this organ, which brought it in favour; and the rival organs competed for nearly a year. At length, Harris challenged Schmidt to make additional reed-stops in a given time; these were the vox humana, Cremorne, the double-cartel, or double-bassoon, and some others; and these stops, which were new to English ears, delighted the crowd at the trial. At length, Judge Jefferies, of the Inner Temple, terminated the controversy in favour of Schmidt; and Harris's Organ was removed. The partisanship ran so high, that, according to the Hon. Roger North, “in the night preceding the last trial of the reed-stops, the friends of Harris cut the bellows of Smith's organ in such a manner that when the time came for playing upon it, no wind could be conveyed into the wind-chest.”

The Temple Organ is considered Schmidt's masterpiece, and though additions have been made by Byfield, and by Bishop, it retains all the original pipes in great organ and choir organ. The swell was constructed by Byfield, and perhaps still contains the pipes of the original also. This organ is remarkable for possessing quarter-tones, so that there is a difference of tone between G sharp and A flat, and also between D sharp and E flat. Originally this arrangement occurred only in the choir organ and great organ; and it seems to have been introduced either as an object of curiosity, or to render it in some way more perfect than its rival, since probably Harris was unprepared for the novel contrivance. (See *A short Account of Organs built in England*, 1847.) This organ is a grand instrument, but far too large for the church. The Musical Service here is very fine.

In the little vestry beneath the Organ-gallery is a marble tablet to Oliver Goldsmith, buried in the ground east of the choir, April 9, 1774. The choir-stalls and benches are beautifully carved in oak from ancient examples: the altar is new, in the style of Edward I., and contains five canopied panels, gilt and illuminated; here are an ambry, piscina, and sacrarium or tabernacle for the Eucharist; and behind the altar are three ancient niches for sacred utensils. On the south is the monumental effigies of a bishop in pontificals, supposed to be that of Silverston de Eversdon, Bishop of Carlisle, d. 1255, and buried here. To the left is a white marble tomb over the remains of the learned Selden, d. 1654, in Whitefriars; his funeral sermon was preached by Archbishop Ussher. In the triforium are the tombs of Plowden, the jurist; Howell, writer of the *Familiar Letters*; and Edmund Gibbon, an ancestor of the historian: the views of the church from this gallery are very picturesque. Here are also several memorials of eminent lawyers; and among them, a marble bust, by Rossi, of Lord Chancellor Thurlow (d. 1806). On the south wall is a tablet to Ann Littleton (d. 1623), daughter-in-law to Sir Edward Littleton, with a quaint epitaph, ending—

“Keep well this pawn, thon marble chest;  
Till it be called for, let it rest:  
For while this jewel here is set,  
The grave is but a cabinet.”

It is mentioned in Dugdale's *Monasticon* that both King Henry II. and his Queen Eleanor directed that their bodies should be interred within the walls of the Temple Chapel, and that the above monarch by his Will left 500 marks for that purpose. The walls are inscribed with Scripture texts in Latin; and between the top of the stalls and the string-course beneath the windows, is the Hymn of St. Ambrose. The windows, by Willement, are among the finest specimens of modern stained glass: the altar subjects are from the life of Christ, the interspaces being deep-blue and ruby mosaic, with glittering borders. Knights Templars fill the aisle windows; but that opposite the organ has figures of angels playing musical instruments.

A brief history of the Templars in England and of this church may be read in the rude effigies of the successive kings during whose reigns they flourished, now painted on the west end of the chancel. At the south corner sits Henry I. (A.D. 1128), holding the first banner of the Crusaders, half black, half white, entitled “Beauseant;” white typifying fairness towards friends; black, terror to foes. This banner was changed during the reign of Stephen (A.D. 1116) for the red cross:

“And on his brest a bloodie crosse he bore,  
The deare remembrance of his dying Lord.”

Henry II. and the Round Church are represented by the third figure. Richard I., with the sword which he wielded as Crusader, and John, his brother, are the next kings; and in the north aisle is portrayed Henry III., holding the two churches; the chancel, or square part, having been added in his reign, and consecrated on Ascension-day, 1240.—Cole's *Glance at the Temple Church*.

Externally, the east end has three high gables, with crosses; and the bell is hung in a new stone turret on the north side. The church has been thrown open to view; and in removing the house over the porch, a western wheel-window was exposed in the Norman Round. The groined western Norman porch has been restored, and covered with a leaded gable roof. The renovated ashlar-work has been carried throughout the Round; a new cone or spire has been placed on the top, in place of the former roof, dormer lights introduced, and the spire terminated in a large metal gilt vane—a strictly mediæval bird. By the demolition of buildings, a sort of new location is given to the Norman Round and porch, and a new grassy churchyard with its ancient tombs. These works are by S. Smirke and others. During their progress, the dust and bones of the learned John Selden were “carried away and shot into a dust-hole.” Opposite the bell-turret, in the burial-ground, was found a decayed blue flag or slate ledger-stone, inscribed with uncial letters, ending DEN, which slab was once laid over the remains of Selden, whose dust and remains were ignominiously treated as above by the workmen. This is remarkable, seeing that, according to Aubrey, at the time of the interment of Selden, no pains seem to have been spared to render the depository secure. Aubrey tells us:—

“His (Selden's) grave was ten foot deep or better, walled up a good way with brick, of which also the bottom was paved, but the sides of the bottom for about two feet high were of black polished marble, wherein his coffin (covered with black bays) layeth, and upon that wall of marble was presently left downe a huge black marble stone of great thickness with this inscription: ‘His jacet corpus Johannis Selden, qui obiit die Novembris, 1654.’ Over this was turned an arch of brick (for the House would not give their ground), and upon that was throwne the earth, &c.—Letter to *The Times*, late in 1864.

North-east of the Choir is the house of the Master of the Temple, as the preacher at the church is called: it is fronted by a garden, beneath which is the Benchers' Vault. One of the most learned Masters was Hooker, author of the *Ecclesiastical Polity*; another eminent Master was Sherlock, afterwards Bishop of London.

The Offertory alms are distributed to the poor, chiefly old servants of the Temple, at Midsummer and Christmas.

In March, 1862, at a short distance south of the Round of the church were excavated some pillars and part of the basement of St. Anne's Chapel, which connected the convent of the Temple with the church. This chapel was taken down in 1827: here Almeric de Montfort, the Pope's chaplain, who had been imprisoned by Edward I., was set at liberty at the instance of the Roman Pontiff.

ST. THOMAS THE APOSTLE stood in Knightrider-street. It was an endowment of the Canons of St. Paul's, and is spoken of so early as 1181. Sir Wm. Littlebury, *alias* Horn (so named, saith Stow, by King Edward IV., because he was an excellent

blower on the horn), was buried here. He bequeathed his house, called the George, in Bread-street, to find a priest for the sanctuary, who was to have a stipend of 6*l.* 13*s.* 4*d.* yearly; also to every preacher at Paul's-cross and the Spittle, 4*d.* for ever; to the prisoners at Newgate, &c., 10*s.* at Christmas and Easter, for ever, which legacies were soon forgotten. He further gave four new bells to the church, and 500 marks towards repairing the highways between London and Cambridge. His house, garden, &c., to be sold and bestowed in charity, "as his executors would answer before God." The church of St. Thomas the Apostle was destroyed in the Great Fire, and was not rebuilt.

ST. THOMAS, CHARTERHOUSE, Goswell-street-road, a brick church in the Anglo-Norman style, was designed by E. Blore, and consecrated 1842. A portion is set apart for the Brethren of the Charterhouse.

ST. THOMAS'S, Southwark, in St. Thomas's-street, was originally the church of the Monastery or Hospital of St. Thomas, but was made parochial after the Dissolution: in 1702 it was rebuilt of brick, with a square tower, closely resembling that of the former church. The Register records the marriage, Jan. 27, 1613, of the father and mother of John Evelyn. Johnson, the younger, the sculptor of the Stratford bust of Shakspeare, is ascertained, by Cunningham and Halliwell, to have lived in this parish.

TRINITY, HOLY, Bessborough Gardens, close to Vauxhall Bridge, a district church of St. Margaret's and St. John's, Westminster, was erected at the sole expense of Arch-deacon Bentinck, Prebendary of Westminster; the foundation-stone was laid by Mrs. Bentinck, Nov. 8, 1849, on which day also was founded another church, in Great Peter-street, in the same parish. Holy Trinity Church is designed in the Early Decorated style (*temp.* Edward I. and II.): at the intersection of the four arms rises an enriched tower and spire, 193 feet high: the east-end window of seven lights is large and fine. The church has been decorated and furnished by subscription.

TRINITY, HOLY, Bishop's-road, Paddington, a Perpendicular church, built by Cundy in 1844-6; it has a richly crocketed spire and pinnacled tower, 219 feet high, and a magnificent stained chancel-window: the crypt is on a level with the roofs of the houses in Belgrave-square.

TRINITY, HOLY, Brompton, a church in the Early English style, by Donaldson; with a lofty tower, and stained glass of ancient design and colour; consecrated 1829. It occupies, with the burial-ground, the site of a nursery-garden; here flowers and funeral shrubs decorate the graves. John Reeve, the comic actor, is buried here.

TRINITY, HOLY, Hartland-road, Haverstock-hill, is a district church of St. Pancras, and was consecrated 1850. It is built in the Middle Pointed style, Wyatt and Brandon, architects, and consists of a Nave, with north and south aisles, Chancel, and tower and spire 160 feet high; the chancel is novel, the arches producing an elegant play of lines.

TRINITY, Gray's-inn-road, district church of St. Andrew's, Holborn, designed by Pennethorne, was built in 1837-8: it has a pedimented centre, and belfry with cupola roof and cross, and catacombs beneath for 1000 bodies. Adjoining is the old burial-ground of St. Andrew's, its crowded graves interspersed with trees and shrubs.

TRINITY, Albany-street, Marylebone, designed by Soane, R.A., in classic taste, has the first story of the tower of beautiful design; but the second puny, owing to lack of funds. The basement has spacious catacombs.

TRINITY, HOLY, Minories, was originally the church of the Priory of the Holy Trinity, founded by Matilda, Queen of Henry I., in 1108. The church was without the walls of London, and escaped the Great Fire; but becoming insecure, it was taken down and rebuilt in 1706; the font was taken from the old church; a spring in Haydon-square was the Priory fountain. It is stated by Strype, that Trinity pretended to privileges, as "marrying without a license." In the Chancel is the tomb of the loyal William Legge, who bore the touching message of Charles I. from the scaffold to his son, the Prince of Wales, enjoining him to "remember the faithfulest servant ever prince had." Here, too, is buried Legge's son, the first Earl of Dartmouth; and his

grandson, the second Earl; and annotator of Burnet. Some bones from the battle-field of Culloden are deposited in the churchyard, bearing date 1745.

ST. VEDAST'S, Foster-lane, destroyed by the Great Fire, and rebuilt by Wren, has an original and graceful spire, in three stories. The interior has a ceiling enriched with wreaths of flowers, and fruits, and foliage; and a carved oak altar-piece, with winged figures, palm-branches, a pelican, &c. In the vestry-room is a print of "West Cheap" in 1585, with the church of St. Michael on the north side of Paternoster-row, the burial-place of the antiquary, Leland (d. 1552). "The only church clock in London—or, perhaps, the kingdom—*without a face*, is St. Vedast's, Foster-lane, at the back of the Post-Office, which strikes on a small shrill bell, supernumerary to the peal of six."

TOWERS AND SPIRES.—The Churches of London give much beauty to every view of the metropolis, and have, moreover, many valuable and interesting associations. In the "Union of Benefices Act is nothing that shall authorize the pulling down the churches of St. Stephen, Walbrook; St. Martin, Ludgate; St. Peter, Cornhill; and St. Swithin, Cannon-street." To preserve the other works of this class, a meeting was held on *the top of St. Paul's*, at which six architects examined the various towers and steeples, with the view of saying which should be preserved. The sight was wonderful, and those present found few spires to the destruction of which they were willing to assent. A memorial was agreed on, and, being signed by the President of the Institute of Architects and members of the Council, presented to the House of Commons, praying that the following towers and steeples be added to those exempted from destruction, namely :

Saint Alban's, Wood-street; Allhallows, Bread-street; Allhallows, Lombard-street; Allhallows, Thames-street; Saint Andrew's, Holborn; Saint Antholin's, Watling-street; Saint Augustine's, Watling-street; Saint Bartholomew's the Great; Saint Beuet's, Thames-street; Saint Bride's, Fleet-street; Christchurch, Newgate-street; Saint Dionis's Backchurch; Saint Dunstan's in the East; Saint Dunstan's in the West; Saint Edmund the King's; Saint George's, Botolph-lane; Saint Giles's, Cripplegate; Saint James's, Garlick-hill; Saint Lawrence's, Jewry; Saint Magnus's, London Bridge; Saint Margaret's, Lothbury; Saint Margaret Pattens'; Saint Mary Abchurch; Saint Mary Aldermay; Saint Mary's-le-Bow; Saint Mary's, Somerset; Saint Mary Magdalen's, Old Fish-street-hill; Saint Michael's, Cornhill; St. Michael's, Queenhithe; Saint Michael's Royal; Saint Mildred's, Bread-street; Saint Mildred's, Poultry; Saint Sepulchre's; Saint Vedast's, Foster-lane.

According to Mackeson's trustworthy *Guide to the Churches of London and its Suburbs*, 1866, their entire number is 368.

### EPISCOPAL CHAPELS.

ASYLUM (FEMALE ORPHAN) CHAPEL, Westminster-road, Lambeth, was built for the Charity, established 1758, at the suggestion of Sir John Fielding, the police-magistrate. The chapel service was rendered attractive by the singing of the Orphan children, and by popular preachers, thus contributing to the support of the institution by a collection. The Asylum was rebuilt in the country, in 1866, with the chapel, when the premises in Westminster-road were taken down.

ST. BARTHOLOMEW'S, Kingsland, was an ancient and picturesque wayside chapel, near the toll-gate, and taken down in 1846. Its walls were of flint and rubble, the window-frames of stone, in the Perpendicular style, and in the roof was a wooden bell-turret. It was originally the chapel of a hospital or house of lepers, called "Le Lokas," and was long an appendage to St. Bartholomew's Hospital, to which it was a kind of outer ward till 1761, when the patients were removed from Kingsland, and the site let for building. Upon the petition of the neighbouring inhabitants, the chapel was repaired, and service performed there, the chaplain being appointed by the governors of St. Bartholomew's. It was so small as scarcely to contain 50 persons. It is engraved in Archer's *Vestiges of Old London*, part i. 1850.

BEDFORDBURY CHAPEL AND SCHOOL.—Bedfordbury is a narrow street running out of New-street, Covent Garden, to Chandos-street, and was built about 1637. On the west side of this, a compound edifice, part chapel, part school, has been erected—the school-room placed over the chapel; and opened (not consecrated) with an afternoon service, Dr. Tait, Bishop of London, preaching. The site is about 60 feet by 40 feet. The building is entered from Bedfordbury, through a small gabled tower. The

doorway has an arched head, the tympanum being filled with sculpture representing "The Good Shepherd." The chapel consists of a Nave and south aisle, a small Chancel raised two steps, and a sacarium one step higher. The material employed, inside and out, is brick, relieved with bands of red. The nave is divided from the aisle by a brick arcade, carried on Bath stone columns with carved capitals. The arch to the sacarium is carried on small columns of slate with carved capitals and corbels. The sacarium is decorated in a somewhat novel manner in *sgrafito*. There is a credence table and a reredos, in stone, alabaster, and marble, by Earp, who executed all the carving; the east window, of five lights, is filled with stained glass: the other windows are filled with rough plate-glass (not in quarries). Light is admitted, too, by dormers in the south aisle. The ceiling is boarded, and separated into compartments by the girders which carry the floor of the school-room. A harmonium has been presented to the chapel by Lady Overstone. The building, exclusive of the site, cost 2300*l.*, raised by subscription, headed by the Queen and Prince Albert, 250*l.*; Miss Burdett Coutts, 300*l.*; architect, A. W. Blomfield.

**BENTINCK CHAPEL**, Chapel-street, New-road, was built in 1772, and opened by the Rev. Mr. Hunt, father of the originator of the *Examiner* newspaper. The Rev. Basil Woodd was minister of this chapel 45 years.

**CHARLOTTE CHAPEL**, Charlotte-street, Buckingham-gate, was built in 1776 for "the unfortunate Dr. Dodd," who laid the first stone in July. "Great success attended the undertaking," writes Dodd; "it pleased and it elated me." In the following year, June 27, Dodd was hanged at Tyburn for forgery. Charlotte Chapel, now St. Peter's, was also occupied by Dr. Dillon; it was refitted in 1850.

**DUKE-STREET CHAPEL**, Westminster, was originally the north wing of the house built for Lord Jefferies, Lord Chancellor to King James II., who permitted a flight of stone steps to be made thence into St. James's-park, for Jefferies's special accommodation: they terminate above in a small court, on three sides of which stands the once costly mansion. One portion of it was used as an Admiralty House, until that office was removed by William III. to Wallingford House. The north wing (in which Jefferies transacted his judicial business out of term) was formed into a chapel in 1769, with a daily service; Dr. Pettingale, the antiquary, was for some time incumbent.—See Walcott's *Westminster*, p. 72.

**FOUNDLING HOSPITAL CHAPEL**, Guilford-street, was designed by Jacobson, in 1747, and built by subscription, to which George II. contributed 3000*l.* Handel gave the large profits of a performance of his music; and his *Messiah*, performed in the chapel for several years under his superintendence, produced the Charity 7000*l.* At the west end of the edifice are seated the children and the choir; and in the centre is the Organ, given by Handel: the altar-piece, "Christ presenting a little Child," is by West, who retouched the picture in 1816. Several blind "foundlings," instructed in music, by their singing, greatly added to the funds of the Charity, by pew-rents and contributions at the doors, and for several years the latter exceeded 1000*l.*; the net proceeds of the chapel have been stated at 687*l.* the year, after paying the professional choir. Beneath the chapel are stone catacombs: the first person buried here was Captain Coram, the founder of the Hospital. Lord Chief-Justice Tenterden is interred here; and his marble bust is placed in the eastern entrance to the chapel. Children who died in the Hospital were formerly buried in the churchyard of St. Pancras.—When the Rev. Sidney Smith came to London, in 1804, he was elected one of the chaplains to the Foundling Hospital, where his sermons were very attractive, especially those on the objects of the Charity, so often misunderstood and misrepresented. The chaplain's salary was but 50*l.* a-year. Mr. Smith resided in Doughty-street, and here he early obtained the acquaintance and friendship of several eminent lawyers in that neighbourhood; the most distinguished of whom were Sir Samuel Romilly, Mr. Scarlett (Lord Abinger), and Sir James Mackintosh. To these may be added Dr. Marcet, M. Dumont, Mr. Whishaw, Mr. R. Sharpe, Mr. Rogers, &c. Mr. Smith likewise officiated at Berkeley Chapel, May-fair; and at Fitzroy Chapel.—*Lives of Wits and Humourists*, vol. ii. pp. 216-219. 1862.

GRAY'S-INN CHAPEL, on the south side of Gray's-inn-square, on the site of a chapel built long anterior to the Reformation, has special seats assigned to the Benchers, Barristers, and Students, and others unappropriated. It has been much modernized. Here are three good windows by Gibbs, on the north side: 1. Christ in the Temple, in the midst of the Doctors. 2. Christ delivering the Sermon on the Mount. 3. The Ascension. These windows were presented by Samuel Turner, Esq., one of the Benchers, and Dean of the chapel, 1862. In the east window are the arms of the various prelates who have been either honorary Members or Benchers of the Society. A new Organ was set up in 1863. The sermons are preceded by "the Bidding Prayer." The Offertory is dispensed to the poor of the Inn. The music is chiefly from the old English masters, sung by the choir, established 1850. There do not appear to be any records of the Preachers earlier than 1574, when Mr. W. Cherke, or Charke, was appointed: he was afterwards Preacher of Lincoln's-inn and Fellow of Eton. There have been 23 preachers since his day, among whom were Dr. Roger Fenton, one of the translators of the Bible; Dr. Richard Sibbes, the celebrated Puritan, author of the *Bruised Reed*; Dean Nicholas Bernard, Chaplain to Oliver Cromwell, and one of his almoners; Bishop Wilkins, the mathematician; Archbishop Wake; Dean Robert Moss; Archdeacon Stebbing; Bishop Walker King; Dr. Matthew Raine, Head-master of Charterhouse School; and Dr. George Sheppard, an elegant and sound scholar, who died in 1849. He was succeeded by the Rev. Dr. Hessey, Head-master of Merchant Tailors' School, &c., the present preacher.

GROSVENOR CHAPEL, South Audley-street, contains in its vault the remains of Ambrose Philips, the Whig poet, whom Pope ridiculed, but Tickell, Warton, and Goldsmith eulogized; of Lady Mary Wortley Montague; and John Wilkes, characteristically designated by himself on a tablet as "a Friend to Liberty."

HANOVER CHAPEL, Regent-street, between Prince's and Hanover-streets, was built in 1823-28, C. R. Cockerell, R.A., architect, and is of the Ionic order of the Temple of Minerva Polias at Priene: it has a well-proportioned portico extending across the footpath, and picturesquely breaking the street-line; two square turrets, of less felicitous design, finish the elevation. The interior is square, and mostly lighted by a large glazed cupola, surmounted with a cross; and the arrangement generally resembles that of St. Stephen's, Walbrook: the altar-piece is a splendid composition of imitative antique marbles, enriched with passion-flowers and lilies, superbly coloured.

HOUSE OF CHARITY CHAPEL, Greek-street, Soho, was built in 1863, from designs by Joseph Clarke, F.S.A., and intended for the Wardens, Sisters, Council, and Associates, together with the inmates of the Hospital, known as the House of Charity.

The chapel has been built on the type of the early apsidal churches, with round aisles. The chapel of St. Croix, attached to the Abbey of Mount Majour, furnished the idea of the applicability of apsidal aisles as being specially adapted to the requirements of the House. The original arrangement of the plan was Basilican. The bema containing the Bishop's chair, with the Clergy round the altar, with the retable behind, standing in advance on the chord of the arc. The two apsidal divisions on each side of the chapel, as aisles, are for the inmates—for the women on the north side and the men on the south, the easternmost apses being for communicants. The centre of the chapel, which has a lofty iron *fièche*, besides the celebrants, is occupied by the Associated Members, and there are grilles on either side, as parclozes to ante-chapels from the nature of the ground could not be provided. The chapel is closed from the western narthex by wrought-iron gates, and the narthex (which serves as the entrance from those three) being closed, becomes available on festivals. The chapel has been erected with much care, both as regards solidity and polychromatic effect. The walls are built in a variety of stones, combined with reference to colour, and are lined internally with chalk as a vehicle of future frescoes. The roofs and all the woodwork are of oak. The floor of the sacrum with the marble steps is very striking. The altar is of oak, the retable of stone, with the super-altar of marble. The ordinary hangings of the altar are exquisitely wrought by the ladies who undertook this costly work. The needlework of the *sedilia*, the steps, the Bishop's chair in appliqué, are equally worthy of the offering. Mr. Arthur O'Connor, an Associate, executed the painted glass with which the whole chapel is filled. Round the chapels and the bema are low stone seats, with the stall or chair for the Bishop, as visitor, at the extreme end of the latter. The Choir and Clergy have oak stalls set on the paving, with chairs for the Council, Associates, and inmates. The chapel is open to Rose-street, with a low wall in front. The entrance into the interior quadrangle, and to the chapel, is through a covered passage at the west end; and ultimately the chapel will form one side of this court, with a covered way round.

The House of Charity was originally established in 1846, at a house in Rose-street, for affording gratuitous temporary board and lodging to deserving persons, who, by

such afflictions as the death of parents, husband, or employer, are brought almost to the verge of destitution. The house, No. 1, Greek-street, where the institution is now located, was the town residence of Alderman Beckford, the father of the builder of Fonthill Abbey: it is a fine house, and in the requisite alterations its elaborate plaster ceilings, carved chimney-pieces, and wainscot panelling, have been preserved.

ST. JAMES'S CHAPEL, Hampstead-road, is a chapel-of-ease to St. James's, Westminster. In the burial-ground adjoining lie George Morland, the painter (d. 1804), and his wife; John Hoppner, the portrait-painter (d. 1810); and, without a memorial, Lord George Gordon, the leader of the Riots of 1780, who died in Newgate in 1793.

ST. JAMES'S CHAPEL, Pentonville, is a chapel-of-ease to St. James's, Clerkenwell, and was built by T. Hardwick. Here is interred R. P. Bonington, the landscape-painter (d. 1828); and in the burial-ground lies poor Tom Dibdin, the playwright, close by the grave of his friend, Joseph Grimaldi, "Old Joe," the famous clown, who died in 1837.

ST. JOHN'S CHAPEL, Bedford-row, at the corner of Chapel-street and Great James-street, was the frequent scene of schism from its first erection for Dr. Sacheverell: it was subsequently occupied by the Rev. Mr. Cecil (Low Church); by the Rev. Dr. Dillon, of unenviable notoriety; the Rev. Daniel Wilson (Bishop of Calcutta); the Rev. Mr. Sibthorp, given to change; and by the Hon. and Rev. Baptist Noel, who after 22 years' ministry, preached his farewell sermon here, Dec. 3, 1848; and on Aug. 9, 1849, was publicly *baptized* in John-street Chapel, of which he became minister. St. John's has been altered and enlarged, and re-opened in 1866.

KENTISH TOWN CHAPEL, or district church, is a spacious and costly edifice in the Early Decorated style; Bartholomew, architect. It has two lofty steeples, and a large painted altar-window; and four smaller windows, inscribed with the Decalogue, Creed, &c., within sacramental borders of corn and vines; the altar recess has some good sculpture.

KING'S COLLEGE CHAPEL, Strand, is of Romanesque design, G. G. Scott, architect: the choir consists of students, and of boys on the foundation as "Choral Exhibitioners."

ST. JOHN'S-WOOD CHAPEL, north-west of the Regent's-park, is of the Ionic order, and was designed by T. Hardwick: it has a tetrastyle portico, and a tower, surmounted with a Roman-Doric lantern. Here, or in the adjoining cemetery, which is tastefully planted with trees and shrubs, are buried John Farquhar, Esq., of Fonthill Abbey, Wilts, with a medallion portrait; Richard Brothers, "the prophet;" Tredgold, the engineer; Joanna Southcott, "the prophetess," with prophetic quotations from Scripture, in gilt letters upon black marble; John Jackson, R.A., the portrait-painter, &c. "About 40,000 persons lie interred in this cemetery."—(Smith's *Marylebone*, 1833.)

LAMB'S CHAPEL was originally founded in the reign of Edward I., in the hermitage of St. James's-in-the-Wall, which was a cell to the Abbey of Geronden, in Leicestershire, certain monks of which were appointed chaplains here; on which account, and a well belonging to them, called Monks' Well, the street was called Monkswell-street. The chapel of St. James, with its appurtenances, was granted by Henry VIII. to William Lamb, one of the gentlemen of his chapel, and a citizen and clothworker, who gave it to the Clothworkers' Company; they have four sermons preached to them annually, and after the sermon, relieve, with clothing and money, twelve poor men, and as many poor women. Lamb's Chapel (the ancient Hermitage Chapel) contained a fine old bust of the founder, in his livery-gown, placed here in 1612, with a purse in one hand and his gloves in the other; and in the windows were paintings of St. James the Apostle, St. Peter, St. Matthew, and St. Matthias. The chapel was noted for many private marriages. Beneath the old chapel was a crypt, with Saxon or Norman capitals; and upon this crypt the chapel and almshouses were re-built in 1825, Angell, architect; style, Elizabethan. The bust of Lamb, painted in colours, is in the west wall.

LEADENHALL CHAPEL, built within the precincts of Leadenhall by Sir Simon Eyre, in 1417, some time an upholsterer, was fair and large, and over the porch was written "Dextra Domini exaltavit me." He gave 3000 marks to the Drapers' Company, that Divine service might be kept up for ever; but his munificent bequests were not carried out as they should have been.

LINCOLN'S-INN CHAPEL, one of "the Old Buildings," was built in 1621-23: Dr. Donne laid the first stone, and preached the consecration sermon, the old chapel being then in a ruinous condition. Inigo Jones was the architect of the new chapel, as stated in the print by Vertue, in 1751: it stands upon an open crypt or cloister, in which the students of the Inn met and conferred, and received their clients. Pepys records his going to Lincoln's-inn, "to walk under the chapel, by agreement." It is now enclosed with iron railings, and was used as a burial-place for the Benchers. The chapel has side windows and intervening battresses, style, *temp.* Edward III.; the large eastern window has a beautifully traceried circle, divided into twelve trefoiled lights. At the south-west angle is a turret with cupola and vane, and containing an ancient bell, traditionally brought from Spain about 1596, among the spoils acquired by the gallant Earl of Essex at the capture of Cadiz. The ascent to the chapel is by a flight of steps, under an archway and porch, the latter built by Hardwick in 1843. The windows are filled with glass, unusually fine: those on the sides have figures of prophets and apostles, by Flemish artists; the great eastern and western windows have armorial embellishments. The carved oaken seats are of the time of James I., but the pulpit is later. The Organ, by Flight and Robson (1820), is of great power and sweetness of tone; and the choral service is attentively performed. In the porch is a cenotaph, with Latin inscription, to the Right Hon. Spencer Perceval; and on the ascent to the chapel is a marble tablet to Eleanora Louisa (d. 1837), daughter of Lord Brougham (a Bencher of Lincoln's-inn), with a poetic inscription, in Latin, by the celebrated Marquis Wellesley, written in his 81st year. Among the remarkable persons buried in the cloister under the chapel are John Thurloe, Secretary of State to Oliver Cromwell; and William Prynne, who preserved many of our public records. In the list of preachers in this chapel are the great names of Gataker, Donne, Ussher, Tillotson, Warburton, Hurd, Heber, J. S. M. Anderson, &c. Here are delivered annually the Warburtonian Lectures.—(Selected principally from a carefully-written account of *Lincoln's-inn and its Library*, by W. H. Spilsbury, Librarian. 1850.)

ST. LUKE'S CHAPEL, Consumption Hospital, Fulham-road, built at the cost of Sir Henry Foulis, Bart., in memory of a deceased sister; consecrated June, 1850; style, Early English, E. B. Lamb, architect. It is exclusively for the officers and patients of the Consumption Hospital. The chapel, the details of which are very elegant, consists of a Nave, north and south transeptal projections, and a Chancel; and is connected with the Hospital by a corridor, externally ornamented with pinnacled buttresses and gable crosses, and an octagonal bell-turret. The Organ, by Holdich, is unique. The windows are traceried, and filled with stained glass; the roof is open timbered; the Chancel has florid sedilia of stone, and is separated from the nave by a low traceried screen. The interior fittings are of oak, some bearing the arms and crest of the founder, heraldically: "Arg. three bay-leaves proper; crest, a crescent arg. surmounted by a cross sa.;" the motto is "Je ne change qu'en mourant." The crest has been most frequently used, as applicable to the building—"Christianity overcoming Paganism." The floor is partly paved with tiles of armorial patterns. The seats are specially adapted for the patients. This is stated to be the only consecrated chapel attached to any metropolitan hospital.

MAGDALEN HOSPITAL CHAPEL, Blackfriars-road, is attractive by the singing of a choir of the reclaimed women. The "Magdalen House" was originally established in Prescott-street, Goodman's-fields, in 1758; where Dr. Dodd was chaplain, and rendered great service to the Charity by his eloquent preaching.

MARGARET-STREET CHAPEL, Margaret-street, Cavendish-square, was first converted into a chapel in 1789. Huntington preached here with Lady Huntingdon's people, when he first came to London. In 1833, the minister was the Rev. W. Dodsworth.

who has since seceded to the Roman Catholic Church. At Margaret-street may be said to have been the first development of "Puseyism" in the metropolis. In 1842, the chapel was under the direction of the Rev. Frederick Oakeley, a non-resident Fellow of Balliol College, Oxford.

"Flowers, and altar-candlesticks, and Gregorian chantings, and scarce-concealed bowings, and strange modes of reading prayers, and frequent services, with a conspicuous cross over the communion-table, served to awake the suspicions of the wary; and in conjunction with a course of zealous and earnest preaching, and the self-denying lives of the chief minister and his friends, to persuade the frequenters of the chapel that here, at least, was a true 'Catholic revival,' and that by the multiplication of Margaret Chapels the whole Anglican Establishment might be at length 'un-Protestantized.' To Margaret Chapel also was due no little of that phase of the movement which consisted in the 'adapting' of Catholic books to 'the use of members of the English Church;' and by the employment of which it has done so much good in preparing the minds of its congregations for the reception of the Catholic faith. This system was soon taken up by no less important a person than Dr. Pusey himself."—*The Rambler, a Roman Catholic Journal*, Feb. 1851.

In 1845, Mr. Oakeley resigned his license as minister of Margaret Chapel, which then fell to his curate, the Rev. Mr. Richards. Mr. Oakeley subsequently joined the Roman Catholic Church. The chapel in Margaret-street was taken down in 1850; the site is included in that of All Saints' Church, described at pp. 146-7.

ST. MARK'S, North Audley-street, a chapel-of-ease to St. George's, Hanover-square, is of original and not inelegant design, by Gandy Deering, R.A., 1828; the order is Ionic from the Erechtheium; the portico has two handsome fluted columns, with an enriched entablature; and above is a turret of Grecian design, with pierced iron-work sides and pyramidal stone roof, with gilt ball and cross. The entrance is a very good example of the portico in antis, *i.e.*, columns standing in a line, in front, with the outer or projecting ends of the side walls of the chapel. Some of the adjoining houses are in the heavy style of Sir John Vanbrugh.

ST. MARK'S CHAPEL, Fulham-road, attached to the National Society's Training College for Schoolmasters, in the Byzantine style; Blore, architect, 1843; cruciform in plan, with semicircular eastern end, and twin towers with high-pitched *broche* roofs, resembling an early German church. The east end has some stained glass of olden character. It serves as a place of worship for the adjoining district, as well as for the inmates of the College; and the musical service, including cathedral service and anthems, is by the students; offertory on Sundays and festivals, to defray the expenses of the chapel.

PERCY CHAPEL, Charlotte-street, was built by the Rev. Henry Matthew, an early patron of Flaxman (*Cunningham*). It was the scene of the showy, eloquent preaching of the Rev. Robert Montgomery, author of *The Omnipresence of the Deity*, a poem.

ST. PETER'S EPISCOPAL CHAPEL, Queen-square, Westminster, was originally a royal gift for the special use of the Judges of Westminster, and was frequented by the members of the Royal Household. In 1840, it was much injured by a fire, which originated in the adjoining mansion of Mr. Hoare; and the altar-piece, then nearly destroyed, was one of the finest specimens of ancient oak-carving in England. Here have officiated the venerable Romaine, Gunn, Basil Woodd, Wilcox, and Shepherd: the latter for fifty years held the chaplaincy, with the lectureship of St. Giles's-in-the-Fields. St. Peter's was, about a hundred and fifty years ago, the chapel of the Spanish Embassy; and here preached Antonio Gavin, a secular priest, who having been converted from Popery to the Church of England, was licensed to officiate in this chapel in the Spanish language, by Dr. Robinson, the Bishop of London; and sermons in Spanish preached here by Gavin were published.—*Gent. Mag.*, Feb. 1827.

ST. PETER'S (formerly OXFORD) CHAPEL, Vere-street, Oxford-street, designed by Gibbs, was built about 1724, and was once considered the most beautiful edifice of its class in the metropolis. It has a Doric portico and a three-storied steeple. The Duke of Portland was married at this chapel in 1734. The Rev. F. D. Maurice is the incumbent. "This is a Government church: the Government collects and reserves the pew-rents, and pays 450*l.* to the incumbent. No free seats, no poor, and no district. The offertory alms are paid to the rector of All Souls, Langham-place."—*Mackeson's Churches*.

ST. PHILIP'S CHAPEL, Regent-street, midway between Waterloo-place and Piccadilly, was built by Repton, and consecrated in 1820. It has a tower copied from the Lantern of Demosthenes at Athens; and a Doric portico, with sacrificial emblems on the side porticos or wings.

PORTLAND CHAPEL, now ST. PAUL'S, in Great Portland-street, was built in 1776, on the site of a basin of the Marylebone Waterworks: it was the cause of many fatal accidents, and the scene of as many suicides; there is a view of the basin engraved by Chatelain. The chapel was not consecrated at the time of its erection; but Divine Service was performed in it until 1831, when the consecration was performed, and it was dedicated to St. Paul. At the Portland Hotel, north of the chapel, Captain Sir John Ross lodged after his return from the North Polar Expedition, in 1833.

QUEBEC CHAPEL, Quebec-street, Marylebone, was built in 1788, and is celebrated for its sweet-toned Organ and musical service. The interior of the chapel is described as "a large room with sash-windows."

RAGGED CHURCH.—In Brewer's-court, Wild-street, exists a ragged church with its affiliated institutions—a ragged school, ragged mothers' meeting, and ragged Sunday-school teachers. The congregation meet every Sunday. Their homes are in Lincoln-court, Wild-court, and other dreary bays, into which is washed up the refuse of a London population. Many of them have been for various terms in prison, or in penal servitude. In winter, every hearer receives a loaf of bread on retiring. Some hearers have no coats, some no shirts, and others ragged trousers. They are visited at their homes by the ministers of the Ragged Church during the week; and on Sunday about a hundred and fifty of them flock to the service and sermon at the church.

ROLLS CHAPEL is attached to the Rolls House, between 14 and 15, Chancery-lane, and was originally built of flints, with stone finishings, early in the seventeenth century. Pennant states that it was begun in 1617, and that Dr. Donne preached the consecration sermon. The large west window has some old stained glass, including the arms of Sir Robert Cecil and Sir Harbottle Grimston; and here are a large Organ, and presses in which the Records are kept. Among the monuments are: to Dr. John Young, Master of the Rolls (*temp.* Henry VIII.), a recumbent figure, in a long red gown and deep square cap, the face fine; above, in a recess, is a head of Christ, between two cherubim, in bold relief—this tomb is attributed to Torrigiano; to Lord Kinloss, Master of the Rolls to James I., reclining figure in a long furred robe, and before him a kneeling figure in armour, supposed his son, killed in a desperate duel with Sir Edward Sackville; also, kneeling figure in armour of Sir Richard Allington, his wife opposite, and three daughters on a tablet; and here lies Sir John Trevor, Master of the Rolls (d. 1717), and other Masters. Bishops Burnet, Atterbury, and Butler, were eloquent preachers at the Rolls'; and Butler's volume of fifteen sermons delivered here contains the germ of his great work, the *Analogy of Religion*. Rolls Chapel occupies the site of a house founded by Henry III. for converted Jews, and in 1377, annexed by Edward III. to the new office of Custos Rotulorum, or Keeper of the Rolls, who was his chaplain and preacher: in 1837 the estate was vested by Parliament in the Crown, the salary of the Master of the Rolls being fixed at 7000*l.* a year in lieu of fines and rents.

TENISON'S CHAPEL, between Nos. 172 and 174, east side of Regent-street, was founded by Archbishop Tenison, who, in 1700, conveyed to trustees (of whom Sir Isaac Newton was one) this chapel or tabernacle, to be employed as a public chapel or oratory for St. James's parish; at the same time giving 500*l.* to be laid out in the purchase of houses, lands, or ground-rents. Out of the revenues and the Archbishop's charity were to be provided two preachers for the chapel, and a reader "to say Divine Service every day throughout the year, morning and afternoon;" a clerk to officiate; and schoolmasters to teach without charge poor boys of the parish to read, write, cast accounts, and in five years to assist them in becoming apprentices. There are forty boys on the foundation; non-foundations pay 12*s.* 6*d.* per quarter: the school is at No. 172, Regent-street. The Archbishop of Canterbury for the time being is visitor of

this excellent charity. The chapel was erected in 1702, and was refronted in building Regent-street.

TRINITY CHAPEL, Conduit-street, now a neat brick edifice, was originally a small wooden room upon wheels, resembling a caravan. Evelyn describes it as "formerly built of timber on Hounslow-heath, by King James for the mass priests, and being begged by Dr. Tenison, rector of St. Martin's, was set up by that public-minded, charitable, and pious man." Pennant writes:—

"The history of Conduit-street Chapel, or Trinity Chapel, is very remarkable. It was originally built of wood by James II., for private mass, and was conveyed on wheels, attendant on its royal master's excursions, or when he attended his army. Among other places, it visited Hounslow-heath, where it continued some time after the Revolution. It was then removed and enlarged by the Rector of the parish of St. Martin's, and placed not far from the spot on which it now stands. Dr. Tenison, when Rector of St. Martin's, got permission of King William to rebuild it; so, after it had made as many journeys as the house of Loretto, it was by Tenison transmuted into a good building of brick, and has rested ever since on the present site."

TRINITY (HOLY) CHAPEL, Knightsbridge, was formerly attached to a Hospital belonging to the Dean and Chapter of Westminster. There is, in the British Museum, a grant of James I. providing a supply of spring water from Hyde Park, "by pipe of lead." It has always been traditionally told in Knightsbridge, that during the fatal year of the Plague, 1665, the Hospital was given up to plague patients; and it is also said that the inclosed spot on the Green was the burial-place of the victims. The chapel is of ancient foundation, and was rebuilt in 1699; the front was extended in 1789. Many of our readers may possibly remember the quaintly-inscribed stone slabs under the upper windows: one bearing the words, "Rebulte by Nicho. Birkhead, Gouldsmith, of London, Anno Dom. 1699;" and the other (the westernmost), "Capella Sanctæ Individuæ Trinitatis." It was frequently dignified with the name of church. In the list of ministers was the Rev. H. J. Symons, who read the burial service over Sir John Moore at Corunna. He gained the notice of the Duke of York in this pulpit, and quitted it for the Peninsula, with a regiment, to which he was chaplain. The chapel was noted for its irregular marriages; Shadwell, in his play of *The Sullen Lovers*, 1668, speaks of "a person at Knightsbridge, that yokes all stray people together;" and in the *Guardian*, No. 14, March 27, 1713, we read of a runaway marriage being celebrated "last night at Knightsbridge." Here Sir Samuel Morland married his fourth wife, who was recommended to him as an heiress, and Morland, being "distracted for want of moneys," was "led as a fool to the stocks, and married a coachman's daughter, not worth a shilling," and whose moral character proved to be none of the purest; but he got divorced from her. At Trinity Chapel, July 30, 1700, Robert Walpole was married to Katharine Shorter, daughter of a Lord Mayor, and mother of Horace Walpole. (See extracts from the Registers, in *Memorials of Knightsbridge*, pp. 51-92.) The chapel has been rebuilt; Brandon and Eyton, architects. Its roof is entirely new in its construction, introducing an entire range of clerestory lights on each side, to compensate for the want of lights in the side walls; the building being adjoined, on each side, by ordinary houses.

YORK-STREET CHAPEL, on the north side of St. James's-square, is a chapel-of-ease to St. James's. In 1815, it was occupied by Swedenborgians. It was originally the chapel of the Spanish Embassy (then at the present No. 7, St. James's-square); and the "Tower of Castile," the arms of Spain, appears on the parapet of the front.

#### FOREIGN PROTESTANT CHURCHES.

DUTCH CHURCH, Austin Friars. *The German, Dutch, or Flemish Branch* was at first composed of the Polish exile Jean à Lasco, and the members of his church at Embden in East Friesland. To these German Protestants were united the Dutch and Flemish refugees; they are all included in the Charter of Edward VI., as forming one sole nation, *Germanorum*; and the church was subsequently known as the Flemish Church. The "Temple du Seigneur Jésus," in Austin Friars, is occupied by the members of the *Dutch Church*: on its painted windows is inscribed, "Templum Jesu, 1550." It originally belonged to the House of Augustine Friars, founded by Humphrey Bohun, Earl of Hereford and Essex; it had "a most fine-spired steeple,

small, high, and straight." Henry VIII., at the Dissolution, gave away the house and grounds, but reserved the church, which his son, Edward VI., gave to the Dutch or German nation (1550) "to have their service in, for avoiding of all sects of Anabaptists, and such like." From that time to this it has continued to that use. The church contains some very good Decorated windows. Strype says :—

"On the west end, over the skreen, is a fair library, inscribed thus: 'Ecclesiæ Londino-Belgiæ Bibliotheca, extracta sumptibus Mariæ Dubois, 1659.' In this library are divers valuable MSS., and letters of Calvin, Peter Martyr, and others, foreign Reformers." The books have been presented to the Library of the Corporation, at Guildhall.

On July 24, 1850, the tercentenary of the Royal Charter of Edward VI. was solemnly commemorated in this church by a special service, as also in the French Protestant Church in St. Martin's-le-Grand; and the members of the consistories of both churches dined together in the evening, and drank "To the memory of the pious King Edward VI."

The present church is the Nave only of the original building, which was granted by Edward VI. to the strangers in London. This contained, also, north and south transepts, choir, chapels of St. John and St. Thomas, chapter-house, cloisters, &c., and there was a remarkable spire, or *flèche*, at the intersection of the cross, all of which were destroyed by the Marquis of Winchester, to whom they had been granted at the Reformation. The church was founded upwards of 600 years ago—namely, in 1253, as an inscription over its western entrance indicates; but the Nave was erected a century later. "It is," wrote Mr. Gilbert Scott, the architect, "a noble model of a preaching nave, for which purpose it was no doubt specially intended, being of great size and of unusual openness. It is upwards of 150 feet by 80 feet internally, supported by light and lofty pillars, sustaining eighteen arches, and lighted by large and numerous windows with flowing tracery. It is, in fact, a perfect model of what is most practically useful in the nave of a church." In November, 1862, the roofs of the nave and north aisle were almost wholly destroyed by fire, when it was proposed to take down the edifice and erect a small chapel on its site. Mr. Scott, however, showed that the walls and internal stonework could be easily restored, and this has been effected. The roof, which is now of wood, and open and elegant in design, substituting an unsightly flat ceiling, is supported on twenty graceful columns, with arches springing from each pillar, and towards the east end there are six dormers in it, three on each side to light up the chancel. The church consists now, as before, of a lofty nave and two side aisles. Its interior is 136 feet in length, by 80 feet; the nave is 50 feet high, and each of the side aisles 37 feet. Besides the main or western door, there is a porch at the south side of the building. In addition to the dormers in the roof, the fabric is lighted by eighteen windows, with flowing tracery, including the western window, which, next to that of Westminster-hall, is said to be the largest of any building in London. The tracery in twelve of the windows, which had been wholly destroyed by time and the fire together, is restored in Portland stone. The prevailing style of architecture throughout the edifice is pure Gothic. The new Organ, by Hill and Sons, has a magnificent effect in this lofty and almost cathedral edifice.

FRENCH.—There are in London two branches of the Church of Foreign Protestants founded by Charter of Edward VI., July 24, 1550. The *French Branch* was at first exclusively composed of the refugees who quitted France before the revocation of the Edict of Nantes.\* They first assembled with their German and Dutch brethren in the "Temple du Seigneur Jésus" in Austin Friars; but their number having greatly increased, they subsequently met for public worship in the chapel of St. Mary, dependent on the Hospital of St. Antony, in Threadneedle-street, and belonging to the Dean and Chapter of Windsor. This chapel was taken down in 1841, consequent on the fire which destroyed the Royal Exchange; the congregation having retained almost uninterrupted possession of the site for nearly three centuries. The first church was destroyed in the Great Fire of London, but was speedily rebuilt. The congregation next removed to a new church in *St. Martin's-le-Grand*, nearly opposite the General Post-office: this church, designed by Owen, and opened in 1842, is a tasteful

\* The number of French Protestants who took refuge in England after the revocation of the Edict of Nantes is estimated at 80,000. Of these, 13,000 settled in London, in the districts of Long Acre, Seven Dials, Soho, and Spitalfields. At least one-third of these refugees joined the French Church in the years 1686, 1687, and 1688.—*Manifesto*, 1850.

specimen of Gothic, and has a large east window with *flamboyant* tracery, flanked by lofty turrets. We may here mention that about a third of the Nantes refugees met in the first church. James II. gave permission for another French church to be founded in London; in 1688 was opened the *Temple de l'Hôpital*, in Spitalfields, afterwards the *Eglise Neuve*.

During succeeding reigns, there were established in London alone no less than twenty-two foreign congregations, some of which adopted the Anglican rite, while others preserved the discipline of the Reformed Church of France. In a sermon, preached in the French Church of the Artillery in Spitalfields, in 1782, the preacher lamented that, out of twenty flourishing churches which existed on his arrival, nine had been closed, and others were declining; while M. Baup, in 1841, mourned that, of these eleven, three only remained. "As our two sisters, the *Eglise des Grecs* and that of the *Quarré*, have adopted the Anglican rite, we remain the only representatives in London of the Reformed French churches; while we are also alone, among all the foreign churches in this kingdom, in having, in common with the Dutch Church, preserved our rights to the charter of Edward VI."

LA SAVOY, Bloomsbury-street, was designed by Ambrose Poynter, and built for the congregation first established in the Savoy: it is in the Gothic style, and has a Pointed gable, and a large Decorated eastern window.

"In the year 1646, the French Protestant refugees commenced their church services in Pembroke House, near Whitehall. In 1660, the congregation had increased to 2000, with two ministers. Charles II. granted them the use of the Savoy Chapel, in the Strand; they adopted the ritual of the English Church, and received letters-patent from the King, under the title of the French Protestant Episcopal Chapel of the Savoy. The congregation increased so rapidly that, in less than twenty years, there were three separate churches—the Savoy, the Greek Church in Soho, and a church in Spring Gardens. In 1733, the Savoy Chapel was abandoned for want of funds to repair it; and in 1700, the congregation only possessed the Greek Church, in Soho, and after being transferred to a building in Edward-street, Soho, they built the above church in Bloomsbury-street, which was consecrated under the name of St. John, by the Bishop of London, on 22nd of December, 1845. The Two Hundredth Anniversary of the Church was celebrated on the 14th July, 1801."—Mackeson's *Churches*.

SWISS.—There were considerable numbers of Swiss in this country previously to the Rebellion of 1745, when George II. availed himself of the offer of the Swiss to furnish him with a regiment; the monarch acknowledged this devotion by presenting them with a standard, bearing this inscription:—

"These colours were presented by King George the Second to the Swiss residents in this country, as a mark of the sense which his Majesty was graciously pleased to entertain of the offer made by them of a battalion of 500 men towards the defence of the kingdom on the occasion of the Rebellion" (Scottish, 1745).

About 1722, the Swiss, with the approval of George I., granted the ground for building a church near Charing Cross, but they were not sufficiently numerous to raise the funds. But, in 1762, the Swiss having increased in numbers, a congregation of Protestant worshippers met in Castle-street, Holborn, in a building styled the *Eglise Helvétique*. One of the principal promoters of this church was M. François Justin Vulliamy, a native of Berne, who had settled in London, and became the founder of the house of Vulliamy, in Pall Mall, clockmakers; there is in the *Eglise Suisse* a clock given to the church by François Vulliamy, above named. On the 27th of June, 1762, M. Buignon preached the inauguration sermon from the text, "It is good for us to be here." The little chapel in Castle-street was so crowded that there was not standing-room. It was a neat building, and cost little more than 1000*l*. Before the expiry of the lease of the church in Castle-street, in 1770, to endeavour to raise subscriptions and build on lease another church, appeals were made to the Swiss in London, and to all who felt any interest in Switzerland. One curious answer was made to this appeal—the present of a "lottery ticket, No. 2110," by a M. des Barres, as his "voluntary subscription to the building of the chapel;" it is presumed to have turned up a blank. The royal family were memorialized, and a petition in French presented to George III. to aid the fund, but without effect. However, on the 22nd of March, 1775, was laid the first stone of the *Eglise Helvétique*, in Moor-street, Seven Dials. In this church Protestant service was conducted in the French language till 1855. The Prince of Orange, while an exile in England, owing to the troubles arising out of the French Revolution, was a frequent attendant; and the Swiss congregation subsequently numbered among its occasional worshippers the Princess Charlotte, the daughter of George IV. A tablet which is placed in the present *Eglise Suisse* explains the interest which her Royal Highness took in the minister and his flock. The former, Alexandre Sterky, who was born in the Canton de Vaud, in 1767, and died in London in 1838, had been French tutor to the Princess. He was the minister of the church for forty-six years. The present church, the *Eglise Suisse*, Endell-street, was opened in 1855. There are

some three hundred attendants, about two-thirds of whom are Swiss, or of Swiss origin. The entire service is conducted in French. The singing at the Eglise Suisse is accompanied by an Organ and the whole congregation. Here are preserved the colours presented by George II.

#### DISSENTERS' CHAPELS.

**A**LBION CHAPEL, Moorgate-street, next to 116, London Wall, designed by Jay, has a pleasing diastyle Ionic portico. It belongs to a United Presbyterian congregation.

**BAPTIST CHAPEL**, Little Wild-street, Lincoln's-inn-fields: here is annually preached a sermon in commemoration of the Great Storm, Nov. 26, 1703. The preacher in 1846, the Rev. C. Woollacott, in describing the damage by the Storm, stated:—

“In London alone, more than 800 houses were laid in ruins, and 2000 stacks of chimneys thrown down. In the country upwards of 400 windmills were either blown down or took fire, by the violence with which their sails were driven round by the wind. In the New Forest, 4000 trees were blown down, and more than 19,000 in the same state were counted in the county of Kent. On the sea the ravages of this frightful storm were yet more distressing: 15 ships of the Royal Navy, and more than 300 merchant vessels, were lost, with upwards of 6000 British seamen. The Eddystone Lighthouse, with its ingenious architect, Mr. Winstanley, was totally destroyed. The Bishop of Bath and Wells and his lady were killed by the falling of their palace. The sister of the Bishop of London, and many others, lost their lives.”

This annual custom has been observed upwards of a century. The chapel is built upon the site of Weld House and gardens, the mansion of the son of Sir Humphrey Weld, Lord Mayor of London in 1608. It was subsequently let: Ronquillo, the Spanish ambassador, lived here in the time of Charles II. and James II.: and in the anti-Popish riots of the latter reign the house was sacked by the mob, and the ambassador compelled to make his escape at a back door.

**BAPTIST CHAPEL**, on the west-side of Bloomsbury-street, was designed by Gibson, and opened Dec. 2, 1848: it is in elegant Lombardic style; the central portion has a gable pediment, large wheel-window, flanked by two lofty spires, and is very picturesque. It was built by Sir Morton Peto, at the expense of 12,000*l.*, and will hold from 1500 to 2000 persons. South is the French Protestants' Gothic Chapel; and the tasteless pile to the north is Bedford Chapel. The sole condition which Sir Morton Peto imposed upon the Baptist congregation was that they should repay, at their convenience, one-third of the expense, which he, on his part, undertook should be laid out in opening another chapel for the denomination in some other part of the town. Sir Morton Peto subsequently purchased the building formerly known as the “Diorama,” in the Regent's-park, and had it converted at his expense into a chapel for the Baptist denomination, by extensive alterations. The roof, for instance, which was a forest of complicated timbers, depended in a great measure for support upon framed partitions extending across the building in different directions. All these had of necessity to be removed, and a wrought-iron girder, 8½ feet span, was substituted. Upon this girder, directly or indirectly, the whole roof is now supported, leaving the area of the chapel unobstructed. The style of architecture adopted is the Byzantine.

Among the houses taken down near Bloomsbury-street, and towards the centre of what is now New Oxford-street, stood the Hare and Hounds public-house, a noted resort of the Londoners of the sixteenth and seventeenth centuries: till the reign of Charles II. it bore the sign of the Beggar's Bush, when the name was changed, owing to a hunted hare having been caught there, and cooked and eaten in the house.

**BAPTIST CHAPEL**, THE, Notting Dale, built in 1863, is a curiosity in its way. It is a slip (eleven bays) of one of the annexes of the International Exhibition Building, 1862, reconstructed by Mr. Owen Jones, who has made the interior quite gay by the application of his favourite red; white, and blue to the well-remembered old roof timbers, and with greys and yellows and pretty classical borderings round walls and windows, brought the whole into harmony, at a trifling expenditure on common distemper colour and stencil patterns.—*Companion to the Almanac*, 1864.

**CALEDONIAN CHAPEL**, Cross-street, Hatton Garden, was the chapel at which the Rev. Edward Irving first preached in the metropolis.

“Irving's London reputation was made by Canning. Irving removed to London in the year 1822, being then thirty years of age. He came at the invitation of the Caledonian Chapel in Hatton Garden,

where a small sprinkling of Scotch assembled together. Among these was Sir James Mackintosh, who was especially delighted with one phrase which Irving let fall when he spoke of orphans cast upon 'the fatherhood of God.' One night, in the House of Commons, he reported the phrase to Canning. The latter was anxious to hear the tartan, and both he and Mackintosh went the following Sunday to the Caledonian Chapel. A few nights afterwards, from the Treasury bench, Canning had to rise, and to make some remarks on clerical affairs. In the course of his speech he referred to the sermon which he heard from Irving's lips as the most eloquent that he had ever listened to. That speech was the making of Irving. All the fashion of London flocked to him. His chapel was crowded to overflowing. His powers grew as encouragement increased, and he rose into notoriety as the greatest pulpit orator of the day.<sup>5</sup>—*Life of Irving*, by Mrs. Oliphant.

**CANONBURY CHAPEL**, St. Paul's-road, Islington, was built for a congregation of Evangelical Nonconformists; Habershon, architect. The height of the building to the apex of gables is 57 feet; the interior height to lantern, 60 feet; the span of the roof is 66 feet. There are transverse arches at the four transepts, and three large windows and eight clerestory windows.

The London Congregational Chapel Building Society has stated that "The large and rapidly increasing district of Islington has a population of about 110,000, with church and chapel accommodation for less than 30,000; that is, for little more than one-fourth of the population. That the present number of inhabitants is about twice as great as it was fifteen years ago, and, during that period, very little has been done by all religious bodies for providing increased accommodation for public worship. Only one additional chapel has been erected by the Congregationalists for an additional population of about 55,000 persons."

**CATHOLIC AND APOSTOLIC CHURCH**, Gordon-square, was commenced in the year 1853, for the community who take this title. It was designed by Raphael Brandon, and consists of Chancel (with an eastern chapel, occupying the usual position of a Lady chapel), north chancel aisle (provision is made for a south aisle at some future period), north and south transepts, with lantern at intersection, Nave and aisles. The height from the floor of nave to the ridge is 90 feet. The carving in the chapel is exceedingly well done, especially that in the arches of the last three divisions on the south side of the arcade which encompasses the walls. The Chancel has a stone groined roof, with some excellent carving in the bosses. As an adaptation of the Early English style, this church must be considered one of the most successful modern works.

**CONGREGATIONAL NONCONFORMIST CHURCH**, Kentish Town, designed by Hodge and Butler, and opened in 1848, is in the Ecclesiastical style of the fifteenth century, and has several richly-traceried windows filled with stained glass, including a splendid wheel-window, 15 feet diameter.

**ESSEX-STREET CHAPEL**, Strand, the head-quarters of the Unitarians of the metropolis, is built upon part of the site of Essex House, taken down in 1774. In a portion of it was kept the Cottonian Library from 1712 to 1730; one of its large apartments was let to Paterson, the auctioneer, and was next hired by the patrons of Mr. Lindsey and Dr. Disney (Unitarians), to preach in. In 1805, on the death of Dr. Disney, Mr. Thomas Belsham removed to Essex-street Chapel from the Gravel-pit congregation at Hackney, where he had succeeded Dr. Priestley. At Essex-street, Belsham continued pastor during the rest of his life, acquiring great popularity by his eloquent and argumentative preaching; he died in 1829, aged 80, and was succeeded by the Rev. Thomas Madge.

**HORBURY CHAPEL**, Kensington-Park-road, Notting-hill, was built by subscription of the Independent denomination, and opened Sept. 13, 1849. The design, by Tarring, is transition from Early English to Decorated, with a pair of towers and spires; the principal windows are filled with stained glass.

**INDEPENDENT CHAPEL**, Robinson's-row, Kingsland, was built about 1792: here the Rev. John Campbell, the benevolent South-African missionary, was thirty-seven years minister, and is buried; and a monument to his memory has been erected by his flock.

**JEWIN-STREET CHAPEL**, Aldersgate-street, was built in 1808, for a congregation of English Presbyterians, who removed thither from Meeting-House-court, Old Jewry. Among the eminent pastors were the eloquent John Herries; Dr. Price, F.R.S., the writer on finance; and Dr. Abraham Rees, editor of the *Cyclopædia* with his name.

**MORAVIAN CHAPEL**, Fetter-lane, is the only place of worship belonging to the

Moravians (United Brethren) in London, by whom it was purchased in 1738, on their settling in England. The interior is remarkably plain, and bespeaks the simple character of its occupants; there is a small organ, for they have church music and singing; there are no pews, but seats for males and females, apart. The chapel is capacious, but the auditory does not exceed from 200 to 300 persons: the support is voluntary. There is a burial-ground for the members, with a small chapel, at Lower Chelsea, near the Clock-house. At Chelsea, in June, 1760, died Count Zinzendorf, who first introduced the Moravians into this country. The chapel in Fetter-lane lies in the rear of the houses, one of the entrances to it being through No. 32: it was possibly so built for privacy. It escaped the Great Fire of 1666, and was originally occupied by Nonconformists. Turner, who was its first minister, was very active during the Great Plague; and having been ejected from Sunbury, he continued to preach in Fetter-lane till towards the close of the reign of Charles II. Here also Baxter, the eminent Nonconformist divine, preached after the Indulgence granted in 1672; and he held the Friday-morning lectureship until August, 1682.

NATIONAL SCOTCH CHURCH, Crown-court, Little Russell-street, Covent Garden, has a cement Norman façade, with the staircases effective outside features. The minister is the Rev. Dr. Cumming, who preached before Queen Victoria, at Crathie, Balmoral, Sept. 22, 1850; and who ably controverted the claims of Dr. Wiseman the same year.

OLD GRAVEL-PIT MEETING-HOUSE, Hackney, was built in 1715: here Dr. Price, F.R.S., and Dr. Priestley were ministers; next Mr. Belsham, the congregation being Anti-Trinitarians; succeeded by the Rev. Robert Aspland, who remained here till the erection of the New Gravel-pit Meeting-house, "Sacred to one God the Father," in Paradise-fields.

OXENDON CHAPEL, Haymarket, was built about 1675, by Richard Baxter, the Nonconformist divine, in Oxendon-street, on the west side, at the back of the garden-wall of the house of Mr. Secretary Coventry, from whom Coventry-street derives its name. Baxter's principles were so little to the liking of Secretary Coventry, that he instigated the guards of Charles II. to come under the windows and flourish their trumpets and beat their drums whenever Richard preached. Finding that not a word he said could be heard, and that remonstrating with these gentry was dangerous, Baxter sought to dispose of the building. Dr. Lloyd, rector of St. Martin's-in-the-Fields, kindly introduced the affair to the vestry of St. Martin's. By his mediation poor Baxter obtained the handsome rental of 40*l.* per annum for the building from the vestry, and it was forthwith consecrated as a "Tabernacle" to St. Martin's-in-the-Fields. Oxendon Chapel now belongs to the Scotch Secession.

PRESBYTERIAN DISSENTERS' CHAPEL, Mare-street, Hackney, was established early in the seventeenth century: here Philip Nye and Adoniram Byfield, two eminent Puritan divines, preached in 1636; and Dr. W. Bates and Matthew Henry were pastors late in the seventeenth century. The old meeting-house has been taken down, and a new one built opposite, and occupied by Independents.

PRESBYTERIAN MEETING-HOUSE, Newington-green, established soon after the Restoration, was rebuilt about 1708: in the list of ministers are Richard Biscoe, Hugh Worthington, M.A., John Hoyle, Dr. Richard Price, F.R.S., Dr. Amory, Dr. Towers, Mr. Lindsey, Dr. Isaac Maddox (afterwards Bishop of Worcester), Thomas Rees; and Mr. Barbauld, husband of the authoress.

PROVIDENCE CHAPEL, Little Titchfield-street, Marylebone, was built by a congregation of Independents for Huntington, S.S. ("the Coal-heaver," as he called himself), upon his credit with "the Bank of Faith," when he quitted Margaret Chapel: when it was finished, "I was in arrears," says Huntington, "for 1000*l.*, so that I had plenty of work for faith, if I could but get plenty of faith to work; and while some deny a Providence, Providence was the only supply I had." This chapel was burnt down, with seven houses adjoining, July 13, 1810, and the site became a timber-yard.

PROVIDENCE CHAPEL, on the east side of Gray's-Inn-lane, nearly opposite Guilford-

street, was built for Huntingdon, S.S., by his flock, after the destruction of the Titchfield-street Chapel: this second edifice he named from the pulpit for these reasons: that "unless God provided men to work, and money to pay them, and materials to work with, no chapel could be erected; and if He provided all these, Providence must be its name." The chapel was, accordingly, built in Gray's-Inn-lane, and upon a larger scale than the last; it was made over to him as his own, and bequeathed in his will to his widow, who, however, resigned it to the congregation. It was subsequently altered and opened as an Episcopal Chapel, the Rev. T. Mortimer, B.D., minister.

REGENT-SQUARE CHAPEL, Gray's-inn-road, was built for the Rev. Edward Irving, in 1824-5, W. Tite, the architect, adapting the west front from York Cathedral: the twin towers are 120 feet in height. Here the "unknown tongues" attracted large and fashionable congregations.

When the charm of novelty was worn off, the chapel in Cross-street, Hatton Garden, was still insufficient for Mr. Irving's congregation, and they resolved on the erection of another chapel of larger dimensions. For this purpose 7000*l.* was in a short time subscribed, and a piece of ground purchased on the south side of Sidmouth-street, Brunswick-square, for the sum of 1800*l.* The Duke of Clarence had undertaken to lay the foundation-stone, but was prevented by illness, and it devolved upon the Earl of Breadalbane. "I undertook to open Irving's new church in London," says Dr. Chalmers. "The congregation, in their eagerness to obtain seats, had already been assembled three hours. Irving said he would assist me by reading a chapter for me. He chose the longest in the Bible, and went on for an hour and a half. On another occasion he offered me the same aid, adding, 'I can be short.' I said, 'How long will it take you?' 'Only an hour and forty minutes.'" Still Irving drew the crowds. "The excitement which Irving created in London held the throngs together for hours. They were first assembled for hours before he made his appearance, and then they listened to his lofty discourse for hours more. His sermon for the London Missionary Society was three hours long, and he had to take rest twice in the middle of it, asking the congregation each time to sing a hymn."

SCOTCH CHURCH, THE, Swallow-street, Piccadilly, was originally a French Protestant Chapel, founded in the year 1692: it was purchased by James Anderson, and converted into a Presbyterian Meeting-house; and in the *Treasury Crown Lease Book* (No. 1, p. 71) will be found a letter from the Surveyor-General, dated 1729, giving a history of the foundation of this church, and Anderson's petition for a lease, which was granted by the Lords of the Treasury; but the chapel being much out of repair, and the congregation poor, the fine was remitted; the building was then valued at 20*l.* The above document is printed in *Notes and Queries*, 2nd S., No. 3. The chapel has been rebuilt of red brick, with a low spire.

SOUTH-PLACE CHAPEL, Finsbury, is of Ionic design, and was built for a Unitarian congregation, under the ministry of Mr. W. J. Fox, the eloquent M.P. for Oldham.

SPA-FIELDS CHAPEL, Exmouth-street, Spa-fields, though consecrated for "Lady Huntingdon's Connexion," nearly 80 years since, was originally built for, and opened as, a place of public amusement, called the Pantheon, in 1770, in imitation of the Pantheon in Oxford-road. The Spa-fields building is circular in plan, and had a statue of Fame on the top. The interior had galleries entirely round the whole; and in the centre was a curious stove, with fire-places all round, from which the smoke was carried off without any chimney, and the building was warmed in the severest weather. There were also a garden, with shrubs and fruit trees, and boxes and tea-rooms for company. Upon the same site was previously the "Ducking Pond House," with a fine view of Hampstead, Highgate, and the adjacent country. The Pantheon lost its character, and was closed in 1776. The pious Selina, Countess of Huntingdon, then proposed to convert the place into a chapel, but was discouraged by Toplady. It was then fitted up, and opened upon Evangelical principles, as Northampton Chapel, and became very popular. In 1779 it was opened "in the Connexion of the Countess of Huntingdon." In 1780, it narrowly escaped being pulled down by the Rioters. The congregation became wealthy and influential: the Duke of Kent, father of Queen Victoria, often attended here; the pulpit was for many years supplied with ministers from Cheshunt College. The chapel will hold 2000 persons, and is lighted by a monster ring of gas-jets. Large schools are attached to the chapel. In the large house adjoining, formerly the tea-rooms of the Pantheon, Lady Huntingdon resided twelve years, and here she died in 1791, in her 84th year. She had expended 100,000*l.* in works of charity: she had founded, wholly or in part, 64 chapels in her connexion. The extensive plot of ground in the rear of Spa-fields Chapel became, soon after its opening, a

burial-place for Nonconformists and others. It contains 42,640 square feet, and would decently inter 1361 adult bodies; yet within 50 years 80,000 bodies were deposited here, averaging 1500 per annum. To make room, bones and bodies were burnt for upwards of a quarter of a century, to the constant annoyance of the neighbourhood; until, in 1815, the lessees of the ground were indicted, and the pestilential nuisance stopped. This agitation brought about the Abolition of Burials in Towns. (See Pinks's *History of Clerkenwell*, 1865, pp. 141-151.) The old chapel was noted for the four lofty pillars which supported the roof, they having been presented for the purpose by the States-General of Holland in 1764; and being, consequently, a memorial of the friendly intercourse then subsisting between the English Nonconformists and the Dutch.

STEPNEY MEETING, THE, erected for Congregationalists in 1863, in place of one of the oldest Independent chapels about London, is of Second Pointed Gothic, and of hammered stone in irregular courses, with Bath stone dressings: it has a stone spire, 150 feet high, with clustered pinnacles at the base; and a wheel window with graceful tracery, and filled with stained glass. The roof is high-pitched, curved, and panelled: cost 10,000*l.*; architects, Searle, Son, and Yelf.

SURREY CHAPEL, corner of Little Charlotte-street, Blackfriars-road, is of octagonal form, and was built in 1783, for a congregation of Calvinistic Dissenters, the Rev. Rowland Hill, pastor, who preached here in the winter season for nearly 50 years: he had a house adjoining, where he died, aged 88, in 1833, and was buried in a vault under the chapel. Adjacent, in Hill-street, are Almshouses for 24 poor widows, built and maintained by the Surrey Chapel congregation.

SWEDENBORG CHURCH, Argyle-square, King's-cross, was opened Aug. 11, 1844, for the followers of Swedenborg, whither they removed from a small chapel in the City, built about forty years previously. The new church is in the Anglo-Norman style, Hopkins, architect, with two towers and spires, 70 feet high, each terminating with a bronze cross; the intervening gable has a stone cross, and a wheel window over a deeply-recessed doorway. The interior has a finely-vaulted roof; the altar arrangements are peculiar; and there is an Organ and choir. The founder of the sect of Swedenborgians, the learned Baron Swedenborg, who died in 1772, is buried in the Swedish Church, Prince's-square, Ratcliffe Highway.

TABERNACLE, THE, in Moorfields, was built in 1752; previously to which, in 1741, shortly after Whitefield's separation from Wesley, some Calvinistic Dissenters raised for Whitefield a large shed near the Foundry, in Moorfields, upon a piece of ground lent for the purpose, until he should return from America. From the temporary nature of the structure it was named, in allusion to the tabernacles of the Israelites in the Wilderness; and the name became the designation of the chapels of the Calvinistic Methodists generally. Whitefield's first pulpit here is said to have been a grocer's sugar-hogshead, an eccentricity not improbable. In 1752, the wooden building was taken down, the site was leased by the City of London, and the present chapel was built, with a lantern roof: it is now occupied by Independents, and will hold about 4000 persons. This chapel was the cradle of Methodism; the preaching-places had hitherto been Moorfields, Marylebone-fields, and Kennington-common. Silas Todd describes the Tabernacle in Moorfields as "a ruinous place, with an old pantile covering, a few rough deal boards put together to constitute a temporary pulpit, and several other decayed timbers, which composed the whole structure." John Wesley preached here (the Foundry, as it was called), at five in the morning and seven in the evening. The men and women sat apart; and there were no pews, or difference of benches, or appointed place for any person. At this chapel the first Methodist Society was formed in 1740.

TABERNACLE, METROPOLITAN, was built for Mr. Spurgeon, upon part of the site of the Fishmongers' Company's Almshouses, at Newington, in 1861. The exterior has a large hexastyle Corinthian portico, and four angle turrets; the interior is remarkable for its great size, luminousness—it being lighted both from roof and windows—and unecclesiastical appearance: it was modelled from the Surrey Music-hall, in which Mr.

Spurgeon for some time carried on his ministrations. The ceiling and galleries are supported by thin iron columns, of salmon colour, with gilt capitals; the florid gallery fronts are white and gold. Instead of a pulpit there are two raised platforms with balconies; from the upper one the minister, with his church officers sitting around him, preaches and conducts the service. The chapel will hold 6500.

TRINITY INDEPENDENTS' CHAPEL, East India-road, Poplar, was erected in 1840-1, by Hosking, at the expense of Mr. George Green, the wealthy shipbuilder of Blackwall, principally for shipwrights in his employ, and for inducing the seamen in the neighbourhood to attend Divine worship. The chapel has a Greek Corinthian portico, and façade with enrichments of shells, dolphins, and foliage; and a classic bell-tower, the summit 80 feet high. The interior has a Keene's-cement pulpit, highly decorated; and a powerful Organ by Walker, in a Grecian architectural case.

UNITED PRESBYTERIANS.—Three or four noteworthy churches were built in 1863. Park Church, Highbury New Park, Habershon, architect, is a modification of the Anglo-Italian of Hawksmoor's time, and has a tower with pinnacled spire. At Clapham, a Presbyterian church has been erected, its chief feature being a lofty Corinthian portico. Another at Shaftesbury-place, Kensington, J. M. McCulloch, architect, is Second Pointed Gothic, with short transepts, a tower with spire, and a large five-light traceried window.

UNITY CHURCH, Islington, T. C. Clarke, architect, was completed in 1862, for the congregation formerly meeting in Carter-lane, City, and is remarkable for its strictly ecclesiastical character. It is cruciform, has a broad Nave with narrow aisles, and a shallow semi-octagonal chancel; a handsome tower with double buttresses, cornice, gargoyles, &c., and a spire 120 feet high. The principal entrance, in Upper-street, is Second Pointed in style, but Italianized: the window-heads have elaborate tracery, and in the tympanum of the entrance is a relief of Christ's Charge to Peter. The interior has much good carving, some polychromy; stone pulpit, with shafts and inlay of coloured marbles and alabaster, with reliefs on the panels; large stained-glass windows; and the organ treated as part of the design. The building has a curiously orthodox appearance, considering for whose use it has been constructed: it cost upwards of 10,000*l.*

WEIGH-HOUSE CHAPEL, Fish-street-hill, is named from the Weigh-house of which it occupied the site, whereon formerly stood the church of St. Andrew Hubbard, before the Great Fire. The chapel, which belonged to the Independent connexion, was rebuilt about thirty years ago upon a small freehold plot, which cost 7000*l.*, but which was sold, in 1866, to a Railway Company for 95,000*l.*, besides compensation to the minister of the chapel, the Rev. Thomas Binney. William Hone, who was persuaded by his Independent friends to try his talent as a preacher, appeared frequently in the pulpit at Weigh-house Chapel, where, in 1835, he was struck by paralysis.

WESLEYAN CHAPEL, City-road, was built in 1778, upon ground leased by the City: thither John Wesley removed from the Foundry in Moorfields, the lease of which had expired; and thenceforth the City-road Chapel became the headquarters of the Society of Methodists. Wesley laid the first stone, in which his name and the date were inserted upon a plate of brass: "This was laid by John Wesley, on April 1, 1777." "Probably," says he, "this will be seen no more by any human eye, but will remain there till the earth and the works thereof are burnt up." John Wesley, who died March 2, 1791, aged 88, was buried here in a vault which he had prepared for himself, and for those itinerant preachers who might die in London.

"During his last illness, Wesley said, 'Let me be buried in nothing but what is woollen; and let my corpse be carried in my coffin into the chapel.' This was done, according to his will, by six poor men, each of whom had 20*s.*; 'for I particularly desire,' said he, 'that there may be no hearse, no coach, no escutcheon, no pomp, except the tears of them that love me, and are following me to Abraham's bosom.' On the day preceding the interment, Wesley's body lay in the chapel, in a kind of state becoming the person, dressed in his clerical habit, with gown, cassock, and band, the old clerical cap on his head, a Bible in one hand, and a white handkerchief in the other. The face was placid, and the expression which death had fixed upon his venerable features was that of a serene and heavenly smile. The crowds who flocked to see him were so great, that it was thought prudent, for fear of accidents, to accelerate

the funeral, and perform it between five and six in the morning. The intelligence, however, could not be kept entirely secret, and several hundred persons attended at that unusual hour."—*Southey's Life of Wesley*, 3rd edit. vol. ii. p. 403.

WESLEYAN CHAPEL, Kentish Town, is of ecclesiastical character: it is built of stone, has a handsome west window of seven lights, with good tracery; and a tower with a tall stone spire. It has an open-timber roof, and apsidal termination, which serves as an organ-loft, not chancel; in front is the pulpit, large enough to contain three or four ministers; architect, J. Tarring.

WESLEYAN CHAPEL, Great Queen-street, Lincoln's-inn-fields, built in 1811, has a tasteful façade, added by Jenkins in 1841, consisting of a small Ionic tetrastyle forming a portico, crowned by a pediment; above is a Venetian triple window, and a handsome cornice. The front is executed in beautiful Talacre stone from North Wales, and is the earliest instance of its being employed in our metropolitan buildings.

WESLEYAN MODEL CHAPEL, East India-road, Poplar, named from its improved plan, was built in 1848, James Wilson, architect, by subscription, to which one person gave 500*l.* The style is Decorated, and the materials are Caen and rag stone. The windows are richly traceried; there are two turrets, each 80 feet high, and the building is finished with a pierced parapet, pinnacles, and roof-cresting.

WESLEYAN CHAPEL, at the angle of the Islington end of the Liverpool-road, is in the Decorated style: it has a turret on the front gable 76 feet in height, and the parapets are pierced with trefoils and quatrefoils. The principal windows have flowing tracery; and the interior, divided by arches and octangular columns, whence spring the roof timbers, is altogether of ecclesiastical character.

"The Wesleyans have now five or six edifices in London, clothed in the Gothic dress of various periods, and following the usual arrangements of a mediæval church, except having no tower and no extensive chancel, resembling in this respect the churches erected between the Reformation and the late abandonment of church design. The average capacity of these buildings is for 1300 persons. One, nearly facing St. John's, Clerkenwell, affects the complete Gothic above, and has a neat original front, but thin."—*Companion to the Almanac*, 1851.

WHITEFIELD'S TABERNACLE, Tottenham-court-road, was designed by the Rev. George Whitefield, and commenced building in 1756, upon a plot of ground near the Field of Forty Footsteps, and the Lavender Mills, Coyer's Gardens. It was first opened for public worship, Nov. 7, 1756. In 1759 or 1760 was added an octangular front, which gave it the appearance of two chapels; the addition being called "the Oven," and the chapel itself, "Whitefield's Soul-Trap." This enlargement is said to have been aided by Queen Caroline, consort of George II., who seeing a crowd at the door unable to obtain admission, observed it was a pity that so many good people should stand in the cold, and accordingly sent Whitefield a sum of money to enlarge the chapel; it was called "the Dissenters' Cathedral." When Whitefield preached there it was visited by many persons of rank and distinction. The Prince of Wales and his Royal brothers and sisters, Lord Chesterfield, Lord Bolingbroke, Lord Halifax, Horace Walpole, David Hume, and David Garrick, are all reported to have been among Whitefield's hearers. The existing pulpit is the same from which Whitefield preached. In the vestry there is a good portrait of Whitefield, taken when he was young, and also a fine bust of him; with portraits of all the ministers since the commencement, viz., the Rev. George Whitefield, M.A.; the Rev. Josiah Joss, the Rev. Joel Abraham Knight, the Rev. Matthew Wilks, the Rev. John Hyatt; the Rev. John Campbell, D.D.; the Rev. Joseph Wilberforce Richardson; and the present minister, the Rev. James H. Boulding. Whitefield here preached his last sermon in England on the 2nd of September, 1769; he died on the 20th of September, 1770, at Boston, America. It had been agreed between Whitefield and Wesley that whichever of them died first, the survivor should preach the funeral sermon. Wesley preached Whitefield's funeral sermon in Tottenham-court-road Chapel, on the 30th of November in the above year. Another instance of a clergyman preaching his own funeral sermon occurred in this chapel on the 16th of August, 1787. This was the Rev. Henry Peckwell, D.D., the cause of whose death was a prick of his finger with a needle, at a *post-mortem* examination, when some of the putrid blood got into the wound, which caused mortification in a few days. At this time Dr. Peckwell was doing duty for the minister of

Tottenham-court-road Chapel. Being conscious of his approaching end, he ascended the pulpit with his arm in a sling, and preached, from St. Paul's Epistle to the Hebrews, xiii. 7, 8, an affecting sermon, at the conclusion adding that this was his farewell sermon. "My hearers," he said, "shall long bear it in mind, when this frail earthly body shall be mouldering in its kindred dust." The congregation were unable to conjecture his meaning; but next Sunday morning, a strange minister ascended the pulpit and informed them that Dr. Peckwell had breathed his last on the evening before! The burial-ground which surrounds this chapel was made from the mould which was brought from the burial-ground of the church of St. Christopher-le-Stocks, in the City of London, when that church was taken down, in 1764, to enlarge the Bank of England, which now occupies the same site. By this cunning, it is stated, the consecration fees were saved. On Thursday, May 13, 1824, the Rev. Edward Irving here delivered in Whitefield Chapel his celebrated missionary oration of three hours and a half. In 1828, Whitefield's lease expired, and the chapel was closed until 1830, when it was purchased by trustees for 20,000*l.*, and altered at a great cost, the exterior being coated with stucco. It was well adapted for hearing, the octagonal portion serving as a kind of funnel or trumpet to the voice: it will seat from 7000 to 8000 persons. In 1834, an unhappy difference arose between the minister, the Rev. Dr. Campbell, and the trustees of Whitefield Chapel, which caused the chapel to be placed in Chancery: the trial respecting it occupied between three and four days. In 1857, the chapel was considerably damaged by fire. It was, however, repaired, and some years later it was sold to the London Congregational Chapel Building Society for 4700*l.* It has by them been almost rebuilt. The front has a portico and octagonal tower, with a dome. The interior is lighted from the dome by a star-light; and behind the pulpit is a fine Organ, built by J. Walker. Here are monuments to Whitefield, the founder; to Toplady, the zealous Calvinistic controversialist with John Wesley; and to John Bacon, the sculptor, who wrote his own epitaph, as follows:—

"What I was as an Artist  
Seemed to me of some importance while I lived;  
But what I really was as a Believer  
Is the only thing of importance to me now."

ZOAR CHAPEL, in Zoar-street, leading from Gravel-lane to Essex-street, Southwark, was the meeting-house in which the celebrated John Bunyan was allowed to preach, by favour of his friend, Dr. Thomas Barlow, Bishop of Lincoln, to whom it belonged; and if only one day's notice was given, the place would not contain half the people that attended; 3000 persons have been gathered together there, and not less than 1200 on week-days and dark winter mornings at seven o'clock. There is a print of this chapel in Wilkinson's *Londina Illustrata*, and a woodcut vignette of it in Dr. Cheever's Memoir of Bunyan, prefixed to the *Pilgrim's Progress* (Bogue, 1859). The chapel was used as a wheelwright's shop prior to its being pulled down, when the pulpit in which Bunyan had preached was removed to the Methodist Chapel, Palace-yard, Lambeth. Another "true pulpit" is shown in Jewin-street Chapel, Aldersgate-street. Bunyan's Pulpit Bible was purchased by Mr. Whitbread, M.P., at the sale of the library of the Rev. S. Palmer, at Hackney, in 1813.

#### FRIENDS' OR QUAKERS' MEETING-HOUSES.

THERE are six Friends' Meeting-houses in the metropolis: 1. Devonshire House (Houndsditch); 2. Bishopsgate-street Without; 3. Peel (Peel-court, John-street, Smithfield); 4. Ratcliffe (Brook-street); 5. Southwark (Redcross-street); 6. Westminster (Peter's-court, St. Martin's-lane). The first established was that in White Hart-court, which was taken down in 1865.

"The Yearly Meeting of the Society of Friends is held in London, opening always on a Wednesday in the latter end of May, and continuing into the month of June, generally lasting about ten days or a fortnight. Of course it is the most important event in their religious system, the most interesting season in their year. To this great meeting the business of all their lesser meetings points, and is here consummated. To it delegates are sent from every quarter of the island; by it committees are appointed to receive appeals against the decisions of minor meetings, to carry every object which is deemed desirable, within their body or beyond it, into effect; by it Parliament is petitioned; the Crown addressed; religious ministers are sanctioned in their schemes of foreign travel, or

those schemes restrained; and funds are received and appropriated for the prosecution of all their views as a society. The City is their place of resort; and the Yearly Meeting is held in Devonshire House.

"The mingling of plain coats, broad hats, friendly shawls, and friendly bonnets, in the great human stream that ever rolls along the *parées* of the City, in that neighbourhood, at this season, becomes very predominant. Bishopsgate Within and Bishopsgate Without, Gracechurch-street, Houndsditch, Liverpool-street, Old Broad-street, Sun-street, almost every street of that district, fairly swarms with Friends. The inns and private lodgings are full of them. The White Hart and the Four Swans are full of them. They have a *table-d'hôte*, at which they generally breakfast and dine. Every Friend's house at this time has its guests; and many of the wealthy keep a sort of open house.

"At a Friends' Meeting, the men are sitting all on one side by themselves, with their hats on, and presenting a very dark and sombre mass; the women sitting together on the other, as light and attractive. In the seats below the gallery are sitting many weighty friends, men and women, still apart; and in the gallery a long row of preachers, male and female, perhaps twenty or thirty in number. You may safely count on a succession of sermons or prayers. Men and women arise, one after another, and preach in a variety of styles, but all peculiar to Friends. Suddenly a man-minister takes off his hat, or a woman-minister takes off her bonnet; he or she drops quietly on the bass before them; at the sight the whole meeting rises, and remains on its feet while the minister enters into 'supplication.' Most singular, striking, and picturesque are often the sermons you hear."—*William Howitt*,

### GREEK CHURCHES.

**G**REEK CHURCH, London Wall, the first ecclesiastical structure erected by the Greek residents in London, was opened in 1850, on Sunday, Jan. 6, o.s., and in the Greek Kalendar, Christmas-day. The edifice is Byzantine (from Byzantium, the capital of the Lower Greek Empire), with Italian interior details. The north front has three horse-shoe arches fringed, and Byzantine columns, between which are the entrance doorways; and in the upper story is a similar arcade, containing three windows: above is this inscription, in Greek characters:

"During the reign of the august Victoria, who governs the great people of Britain, and also other nations scattered over the earth, the Greeks sojourning here erected this Church to the Divine Saviour, in veneration of the rights of their fathers."

Above is a pediment surmounted with a cross. In plan, the church is a cross of equal parts; the ceiling is domed in the centre: on the north and south sides are galleries, with flower-ornamental fronts, and supported on decorated arches and pillars, with fine capitals. The altar-screen has these panel pictures, painted in Russia: the Annunciation; the Virgin holding the infant Jesus; Jesus sitting on a throne; and St. John the Baptist. In a centre panel is inscribed, in Greek:

"O Lord, the strength of those who trust in Thee, uphold the Church which Thou hast redeemed with Thy precious blood."

Within the Iconostasis, or screen, is the altar in "the holy place," symbolic of the Holy of Holies in the Jewish ritual. A magnificent chandelier, with wax-lights, is suspended from the ceiling. The congregation stand during the whole service; but there are seats made to turn up, as in our cathedral stalls; and knobs are placed on the upper arms, to serve as rests. The officiating priest is richly robed, and attended by boys bearing a wax-taper, each in a surplice with a blue cross on the back. Upon the high altar are placed a large crucifix, candelabra with lights, &c. At a portion of the Mass a curtain is drawn before the altar, whilst the priest silently and alone prays for the sanctification of the Sacrament; he then re-appears, "bids peace to all the people," and blesses them. The sermon is preached in the pulpit, the priest wearing a black robe and a black hat; this is covered with the *καλυπτρα*, or veil, to indicate that the wearer is under the influence of the Gospel. The church at London Wall (designed by T. E. Owen, of Portsmouth), cost about 10,000*l.*; yet the number of Greek residents at the date of its opening, in 1850, did not exceed 220.

**RUSSIAN EMBASSY CHAPEL**, Welbeck-street, James Thomson, architect, has some points of special interest, not only on account of being one of the only two places in the metropolis devoted to divine service according to the Greek ritual, the other being in London Wall; but also in a class of architecture of which we have fewer examples than of most others. The style is Byzantine, and the distinctive feature it aims to embody, is that of firmamental expanse, as contradistinguished from the flat ceilings of the Latin or pointed roofs of Gothic churches. This is effected by means of arched ceilings throughout, the centre having a domical roof or cupola superimposed upon a polygonal tambour. The chapel consists of a parallelogram: the length is divided into three compartments, of which two are devoted to the auditorium, and the third, formed into

an apse, is limited to the sanctum. This latter is raised and approached by three circular steps, on each side of which is a small platform for the choristers, the whole being enclosed with a dwarf metal railing. Between this and the altar is erected an ornamental screen formed of solid masonry, with carved mouldings and marble pillars, having alabaster caps and bases: this, while on the one hand it represents the veil of the temple, separating the body of the chapel from the "Holy of Holies," serves also as an Iconostasis, not for sculptured images, but for *paintings*, in niches: they are the production of Russian artists, and represent the Saviour, the Virgin, St. Nicholas (patron saint of Russia), St. George, and the archangels Gabriel and St. Michael; and in the crowning panel of the screen is a picture of the Holy Supper, after the eminent Russian painter, Bruloff. The holy doors are carved and splendidly gilt, and inlaid with metals of different hue. They contain small heads of the Evangelists, and a picture of the Annunciation. The folding of these doors is managed so that, when closed, they appear as an impassable barrier, which, at the proper time, the high priest is able to unfold with ease, so as to give access to the altar. The whole of the paintings and screen are the gift of H. Basil Gromoff, a Russian gentleman of St. Petersburg. Behind the screen doors is the customary curtain of damask silk, which, when drawn aside, displays the sacred altar and its insignia. The Russian mode of worship being wholly a standing or kneeling service, there are no pews or stall seats provided. The cupola is constructed of iron, and contains twelve lunettes five feet high; four have glass paintings, representing figures of the four great prophets, Isaiah, Jeremiah, Daniel, and Ezekiel, and eight of the minor prophets; above these, in mural painting, are heads of the twelve Apostles upon gold discs.

A gilt band encircles the upper part of the cupola, on which is inscribed, in Slavonic characters:—"Turn Thee again, thou God of hosts; look down from heaven; behold and visit this vine and the place of the vineyard which Thy right hand hath planted." At the east end is a semicircular apse, having a vaulted ceiling, painted azure and studded with gold stars, which are embossed on the surface, graduating and concentrating from the base upwards to the apex, where the monogram representing the name of Jehovah is placed. The fittings of the apse consist of the altar table, within the holy doors; the screen, or Iconostasis, corresponding to the veil of the Temple; and, behind the altar, a triangular pedestal of oak, fitted with a bronze socket, to hold the seven-branch candlestick. To terminate the apse, a freestone arch, supported on black marble pillars, with carved capitals, contains a stained glass window, representing the Saviour, at whose feet, upon a verde-antique marble slab, is inscribed, in Greek characters:—"Come unto me, all ye that labour and are heavy laden, and I will give you rest." A large niche on each side contains tables and small enshrined pictures formerly belonging to churches at Bomarsund, presented by the British Government. A credence or empboard of oak, fashioned as a miniature ark, with sloping roof, contains the chalice, patens, and other holy vessels used in the celebration of the Eucharist. Other pictures on the side wall are St. Alexander Nevsky and St. Mary Magdalen; the latter figure bearing the alabaster box of precious ointment. In advance of all are placed two elegant barriers of graceful pattern and rich material, mounted on brass standards 16ft. high, with crosslets carved and gilt; upon them are painted, as medallions, representations of the Baptism and Resurrection.

### JEW'S SYNAGOGUES.

**BEVIS MARKS**, St. Mary Axe: here is the Spanish and Portuguese Synagogue, which occupies part of the site of the ancient house and gardens of the Bassets, then of the Abbots of Bury, or Burie's Marks, corruptly Bevis Markes.

**DUKE'S-PLACE**.—When the Jews returned to England, at the time of the Commonwealth, most of the settlers being Portuguese, they built the first Synagogue in King-street, Duke's-place, in 1656; and in 1691, was built in Duke's-place the first German Synagogue.

**NEW SYNAGOGUE**, in Great St. Helen's, Bishopsgate, was built by Davies, in 1838. It is in rich Italian style, with an open loggia of three arches resting upon Tuscan columns. The sides have Doric piers, and Corinthian columns above, behind which are ladies' galleries, fronted with rich brasswork. There are no pews; the centre floor has a platform, and seats for the principal officers, with four large brass-gilt candelabra.

At the south end is the *Ark*, a lofty semicircular-domed recess, consisting of Italian Doric pilasters, with *verde antico* and porphyry shafts, and gilt capitals; and Corinthian columns, with sienna shafts, and capitals and entablature in white and gold. In the upper story the intercolumns are filled with three arched windows of stained glass, arabesque pattern, by Nixon; the centre one having Jehovah, in Hebrew, and the Tables of the Law. The semi-dome is decorated with gilded rosettes on an azure ground; there are rich festoons of fruit and flowers between the capitals of the Corinthian columns, and ornaments on the frieze above, on which is inscribed in Hebrew, "Know in whose presence thou standest." The centre of the lower part is fitted up with recesses for Books of the Law, enclosed with

polished mahogany doors, and partly concealed by a rich velvet curtain fringed with gold; there are massive gilt candelabra; and the pavement and steps to the Ark are of fine veined Italian marble, partly carpeted. Externally, the Ark is flanked with an arched panel; that on the east containing a prayer for the Queen and Royal Family in Hebrew, and the other a similar one in English. Above the Ark is a rich fan-painted window, and a corresponding one, though less brilliant, at the north end. The ceiling, which is flat, is decorated with thirty coffers, each containing a large flower aperture for ventilation.

This congregation had been previously established about eighty years in Leadenhall-street, and there known as the "New Synagogue."

NEW SYNAGOGUE, UPPER BRYANSTONE-STREET, was erected in 1861, for the convenience and use of those members of the Jews of the Spanish and Portuguese congregations who reside at the west end of London; Lett, architect. The general character of the building is Saracenic freely treated. The elevation to Bryanstone-street is composed of a centre and two wings; the west wing being gabled, with cornice supported by cut tresses, and the east rising as a tower and spire. The façade is built of parti-coloured bricks, with stone dressings. The porch leads to a loggia or vestibule, from which branch off on either side Portland stone stairs leading to the ladies' galleries, as by the requirements of the Jewish ritual the sexes are separated during divine worship. The "Synagogue" itself is entered from this loggia, and affords accommodation on the ground-floor for 240 males.

The interior of the Synagogue is divided into nave and side aisles, by light ornamental columns in two stages, the first supporting the ladies' gallery and the upper arches of a slight horseshoe form, above which is a clerestory with semicircular windows filled in with stained glass. Between the windows and over each column are ornamental brackets, from which spring arched ribs, dividing the ceiling into coffers, the centre of each of which is occupied by a flower communicating with ventilating apparatus.

At the east end of the Synagogue an elliptical recess or apex forms the sanctuary, which is approached by a flight of marble steps. The lower portion of the sanctuary is formed into closets, in which are deposited the sacred scrolls of the Law, the upper part being formed with windows filled with painted glass, having inscribed there, in Hebrew characters, the Ten Commandments, &c. The ceiling of the sanctuary is formed in a domical shape, pierced with small star-shaped apertures, filled in with different coloured glass, which throw light on the scrolls of the law when the doors of the closet containing the same are thrown open.

WEST LONDON SYNAGOGUE, Margaret-street, Cavendish-square, designed by D. Mocatta, was completed in 1850. It is square in plan, and consists of Ionic columns supporting the ladies' gallery, whence rise other columns, receiving semicircular arches, crowned by a bold cornice and lantern-light. The Ark composes cleverly with the semicircular arches, which hang as pendants before it, and complete the fourth side of the building; the steps, platform, stylobate, and columns, are all of scagliola surmounted by a decorated entablature, which supports a niche-head, in which are placed the tablets of the Ten Commandments, surrounded and shadowed by the palm-leaf.

There are in London other Synagogues: the chief one is the German, in Duke's-place, Houndsditch, in the midst of the Jewish population. The Sabbath commences at sunset on Friday, when the Synagogue is opened; and again at ten o'clock on Saturday morning. The singing, handed down from the Temple service, and the chanting of the Law, said to be the manner in which it was revealed to Moses, are impressive. The Jews, and the officers in attendance, are most kind and polite to strangers. The interest of the visit is enhanced by procuring a Jewish prayer-book, with the English translation on the opposite page. Strangers are reminded not to take off their hats as they enter: it is an abomination to the Jews, who worship with their heads covered.

#### ROMAN CATHOLIC CHURCHES AND CHAPELS.

**A**MBASSADORS' CHAPELS: *Spanish Place Chapel* is attended by the members of the Spanish Embassy; *Warwick-street*, Golden-square, by the Bavarian Embassy (the former Chapel was destroyed in the Riots of 1780); *Duke-street*; *Lincoln's-inn-fields*, by the Sardinian; and *Little George-street*, King-street, Portman-square, by the French. Celebrated foreign preachers are occasionally heard here, chiefly in Lent.

BAVARIAN CHAPEL, *Warwick-street*, *Regent-street*, has an altar-piece, occupying the whole space of the end of the chapel, with four Corinthian columns, six pilasters, and sub-pilasters running the whole height. In the centre is a large sculptured tablet, 14 feet high and 7 feet wide, representing the Virgin Mary, and cherubim, by Carew, lighted from above.

ST. GEORGE'S CHURCH, St. George's Fields, nearly facing the eastern wing of Bethlehem Hospital, is built upon the site of the focus of the "No Popery" Riots of 1780: it is the largest Roman Catholic Church erected in England since the Reformation; and with the quaint conventional buildings (priests' houses and schools, and a convent for Sisters of Mercy) at the north end, was designed by A. W. Pugin. The church is a high example of Roman Catholic symbolic details: it is in the Decorated style (*temp.* Edward III.), is cruciform in plan, and consists of a nave and aisles, chancel, and two chapels; and a tower at the north-west end, to be surmounted by a rich hexagonal spire, 320 feet high.

The church is about 235 feet in length, and will seat 3000 persons. It is lit by traceried windows, some filled with stained glass, by Wailles, of Newcastle; the great chancel-window was given by John Earl of Shrewsbury, and represents the root of Jesse, or genealogy of our Lord. The large window over the principal entrance, in the great tower, has figures of St. George, St. Michael, and other saints. There is no clerestory, but each roof is gabled; slender pillars and arches divide the nave and side aisles, in which are confessionals; and between the nave and chancel is a double stone screen bearing a rood-loft, with a crucifix of Belgian fifteenth-century work, and images of the Virgin and St. John, nearly life-size, and coloured. The chancel is panelled with oak, with crocketed arches round the sanctuary; the high altar has bas-reliefs of the Transfiguration, Resurrection, and Ascension; the tabernacle is richly dignified and painted, the metal doors being chased and gilt, and studded with large crystals. Behind the altar is an elaborately-carved stone reredos, with niches filled with images of angels, and the Saints Peter and Paul. The high altar furniture is very superb and massive; the chancel is floored with encaustic tiles; and the chapels are superbly decorated in gold and colour. In the baptistery is an octagonal stone font, with sculpture and Gothic panelling. Outside the church, between two confessionals, is a Perpendicular chantry to the late Hon. Edmund Petre, for the repose of whose soul Mass is offered herein daily; this being the first foundation for the support of the church. "The Adorable Presence is day and night in the Chapel of the Blessed Sacrament. Look for the red light; it is there."

St. George's was opened with great pomp, July 4, 1848; and was the scene of the solemn enthronization of Cardinal Wiseman, Archbishop of Westminster, Dec. 6, 1850. The cost of this church to July, 1848, had been 38,000*l.* The number of persons attending this church is stated at from 12,000 to 13,000 persons.

IMMACULATE CONCEPTION CHURCH, Farm-street, Berkeley-square, designed by Scoles, and built at the expense of Jesuits, is the first ever possessed by the Order in London: it was opened 1849. The style is the Decorated, the south front much resembling that of Beauvais Cathedral. The altar and organ-loft windows are filled with brilliant stained glass: the rose in the latter is very elegant; and each of the 22 flank windows has different tracery. The interior is large and lofty, and has no aisles or rood-screen: the high altar, designed by A. W. Pugin, cost about 1000*l.*, and was presented by Miss Monica Tempest, of Broughton Hall, Yorkshire; and her brother, Sir Charles Tempest, presented the Missal, which cost about 50*l.* "Confraternities of the Bona Mors of the Sacred Heart of Jesus, and of the Immaculate Heart of Mary, are established in this church." The services are performed by Jesuits.

"Roman Catholic churches seem to be distinguished from those of the national faith, at present, only by the occupation of niches that in the latter would be left vacant. It is remarkable, however, that they all seem to affect the style of one period, viz., the first half of the fourteenth century, their designers apparently disdaining the representation of either an immature or a declining form of art; but fixing always on the fully developed Gothic, just at the turning point of its career."—*Companion to the Almanac*, 1851.

ST. JOHN OF JERUSALEM, Great Ormond-street, was generously founded by Sir George Bowyer, Bart., M.P., and built from the designs of Goldie. The façade of the exterior, of Portland stone, is of two orders, Ionic and Corinthian: upon the upper cornice is inscribed:

"Servi: Dominorum: Pauperum: Infirmorum:"

and on the lower are the following words:

"Eeclesia: S: Milit: ord: S: Johan: Hierosol:?"

In the pediment is the cross of the Order of St. John; and the Imperial crown and shield adorn the window, which forms a feature in the upper order, flanked by two sculptured wreaths. The principal entrance doorway is surmounted by a marble tablet, on which is commemorated, in an inscription, the fact of the foundation. The church within presents a parallelogram. Slight recesses stand in the place of transepts, and beyond them is the choir for the religious of the adjoining Convent and Hospital, whilst between rises the cupola above the ceiling of the church. An elaborate cornice runs round the church below the ceiling, and rests on pilasters of the Corinthian order, all formed of polished red marble, with marble bases and plinths. At the upper

end of the Nave a doorway gives access to the Hospital; and above it, carried on carved stone consols, is a tribune of polished alabaster, opening into the lowest ward for the use of the sick. The floor of the Nave is of coloured tiles, arranged in a fret pattern. A marble step lifts the sanctuary floor above the nave level, and this upper floor is entirely composed of white marble. The high altar is placed beneath a marble canopy, under a cupola, adorned with the same materials, the most frequent decoration being the Maltese Cross of eight points, in white, inlaid in the brown veined marble; it stands immediately beneath the centre of the dome, and is surmounted by a baldachino of marbles of various colours, with a panelled ceiling of wood. Two side altars, both ancient, stand on either side in the small transeptal recesses. The nuns' choir, behind the high altar, is supported by marble scrolls, and is fitted up on three sides with stalls, and inlaid crosses of the Order of St. John, all polished. The front bears the arms of the founder, who has presented this church to the Hospital. Against the extreme end wall of the church is a large tribune, carried on stone brackets, with a gilt lattice front, for the Organ. The whole of the interior is decorated with gilding and colour.

**ITALIAN (ST. PETER'S) CHURCH**, Hatton-wall; architect, J. M. Bryson. The walls are of grey stock bricks. The triforium arches are supported by York stone columns, of the Ionic order, in the Roman Basilica style, and is the only church of the same style in the kingdom. There are two side aisles, a Nave and a Chancel: in the latter are statues of the four Evangelists. There are two galleries, one over each of the side aisles (as triforia), with access by stone stairs. Under the Chancel is a subterraneous church, or crypt, capable of holding 200 persons. The ceilings are flat, in panels, which will eventually be painted, as also will be the walls. There will be a tower at the south-west end of the church, carried up to a height of 100 feet, where will be hung a bell weighing four tons. The high altar has four polished black and gold marble columns, standing on pedestals, with white marble caps and bases of the Composite order, surmounted with a cornice wreath, crown canopy, and cross, which will be gilt. The tabernacle and steps of the high altar are of different coloured marbles, all of which have been obtained from Italy. The body of the church is lighted by clerestory windows, in each of which is a design in the shape of a cross, made of iron and wood. The chancel is lighted by windows of a similar design. The church is planned to hold 3400 persons. The funds have been collected abroad by the priests connected with the church. It was opened in 1863.

**ST. JOHN THE EVANGELIST'S**, Duncan-terrace, Islington, was opened in 1843. It was designed by Scoles, in the Anglo-Norman style, and has an eastern gable, flanked by two spires, each 130 feet high. The church itself is a large structure, Basilican in plan, very lofty and effective in composition; its aisles are narrow, set off for chapels and special altars. In one of these is the fresco, painted by Armitage, against the external wall of the church.

"The figures are life-size; the subject, St. Francis of Assisi, in 1210, receiving the approval of Pope Innocent the Third to the Rule of the Order of the Fratres Minores, or Franciscans, as they are now called. Their founder stands, his head humbly bent, his hands held together before the enthroned Pope, who reads article by article the Rule of the Order. A monk on each side of the saint kneels, as do others behind him. The Pope is supported by a cardinal on each side, seated all splendidly dressed. Attendants stand behind the throne. The scene is an open-sided hall in the Capitol, where the Pope is presumed to have lived at the period in question. Through the arcade we look over Rome and its ruins as in the thirteenth century. Following that sound rule of Art which demands character everywhere, Mr. Armitage has given a portrait-like character to his heads, which in the broad style he follows individualizes each figure and face, and gives a striking look of truth to the whole. The expressions are effective, without anything of the theatre; the design, large and simple in composition, suits the subject and the material perfectly."—*Athenæum*.

In the apse of the church is the fresco representing Christ and the Apostles. In the semi-dome above the last is a fresco representing God the Father with the Angels, &c., painted by A. Aglio about 1844. Under the chancel is a crypt, or mortuary chapel: and adjoining is a spacious cemetery. This church has a Holy Guild attached; the Rev. Frederick Oakeley officiates.

**ST. MARY'S**, Moorfields, corner of East-street, Finsbury-circus, opened in 1820, has an embellished entrance façade, in the pediment of which are sculptured two figures kneeling at the Cross. The interior is very superb: it was re-decorated throughout by Charles Kuckuck, in 1858.

It is divided transversely, by a series of columns, into a spacious Nave and side aisles, the ceiling of the former being elliptical and the latter flat, and the latter terminated at the western ends by alcoves, which form minor altars. Over the high altar is a semi-elliptical dome, supported by six fluted columns, which have gilded capitals, modelled from the example of the monument of Lysicrates, at Athens. The surface of this semi-dome is embellished by thirteen oak-panels, which are filled with foliage and fruit and flowers, in admirable imitation of reliefs. Behind this semi-dome, on a curved ground, which is the extreme termination of the church, and forms the back of the high altar, ingeniously lighted from the roof, is a magnificent large painting of the Crucifixion, which produces a splendid effect. In the centre of the ceiling of the Nave is a large painting in fresco, representing the Assumption of the Virgin Mary, attended by the heavenly choir, and the Four Evangelists; and on each side of the springing of the arched ceiling are oblong panels painted with figures in bas-relief of the Nativity, the Adoration of the Magi, the Infant Saviour, &c.

The ceilings of the aisles are divided into various compartments, and painted in white, to resemble moulded panels and enrichments in plaster, on a deep gold ground. The series of columns, with their surmounting entablature, are profusely decorated, their bases being to imitate white and their shafts sienna marble. The capitals, together with the dentals of the cornice, are gilded. The moulded portion of the entablature is relieved with white, green, red, and blue, picked in with deep brown, and the front of the corona is painted to resemble rouge royale marble. The general surfaces of the walls above the subbase mouldings are of a lavender tint, and underneath the cornice around the windows is a richly-ornamented border. The lower portions of the altar are very richly decorated, their pilasters having enriched silver ornaments on their faces, picked out with brilliant colours on a solid gilt ground, and the base and back of the altar under the large picture of the Crucifixion, to which we have previously adverted, is formed in imitation of various kinds of marble.

The sacramental plate was presented by Pope Pius VII. Carl Maria von Weber was buried in the vaults of this chapel, June 21, 1826; but his remains have since been removed to the Catholic churchyard in the Frierichstadt, Dresden.

ST. MONICA'S is in connexion with the Irish Augustinian Monastery, in Hoxton-square. It is a curious fact that the old house inhabited by the Fathers was formerly a favourite place of resort of King Charles II., who had a house not far distant, between which and the house in question a subterranean passage communicated. Some traces of the passage are still discernible.

ORATORY OF ST. PHILIP NERI, King William-street, Strand, was originally an Assembly Room: here the Rev. F. W. Faber, author of the *Cherwell Water Lily*, and other poems, preached (in 1850) to a large and deeply-moved audience. About thirteen years ago, a Roman Catholic builder purchased a plot of ground, three acres, beside the church of the Holy Trinity at Brompton, and here commenced buildings for the future residence and church of the Oratorian Fathers.

"The Roman Catholic population in the parish, or mission, under the spiritual direction of the Fathers of the Oratory, now comprises between 7000 and 8000 souls. The average attendance at Mass on Sundays is about 5000, and the average number of communions for two years has been about 45,000 annually. In the schools attached are 1000 pupils."—*Tablet*, 1865.

OUR LADY'S, Grove-end-road, St. John's Wood, designed by Scoles, 1834, was built and endowed by two ladies, the Misses Gallini. The site formerly belonged to the Knights of St. John of Jerusalem (whence St. John's Wood), whose predecessors, the Knights Templar, held the same estate, and built the Temple Church, the prototype of the present cross church, which is Early Pointed, thirteenth century. The western front, with its three gables and crosses, Catherine-wheel and lancet windows, and pinnaced turrets, is a fine composition. The gables of the north and south fronts are surmounted with canopied niches, containing sculptured groups of the Madonna and Child; and the east front has a large window filled with stained glass. The interior has acutely-arched and richly-bossed roofs, springing from slender shafts; and the high altar is backed by a rich open screen. In the schools are educated and clothed, gratuitously, three hundred poor children.

ST. PATRICK'S, Sutton-street, Soho, is much frequented by the poor Catholic population of St. Giles's. The festival of St. Patrick (March 17) is observed here as a double of the first class, with High Mass.

SARDINIAN CHAPEL (the), Duke-street, Lincoln's-inn-fields, is the oldest foundation of the metropolitan places of worship now in the hands of the Roman Catholics of London. It was built in the year before Charles I. was beheaded: that is, in 1648, just at the close of the Great Rebellion, and the practical commencement of Oliver Cromwell's rule. During the existence of the penal laws, the only entrance to the chapel was through the Sardinian ambassador's house, in Lincoln's-inn-fields. The Riots of 1780 commenced with the partial demolition of this building: the mob were especially savage in attacking it it being the mother-chapel, the oldest in London, and at that

time the resort of all the leading Roman Catholics. In derision of their worship, a cat was dressed in the miniature vestments of a priest, an imitative host or wafer was placed in its paws, and thus it was hung to the lamp-post of the chapel. The edifice was rebuilt after the Riots, and was enlarged by adding to it at the west end the Ambassador's stables. It has some painted glass, a finely-toned organ, and splendid church-plate, used only on solemn festivals: the altar-furniture was presented by the late King of Sardinia, and cost 1000 guineas; and the painting over the altar, "The Taking down from the Cross," is valued at 700*l*. The choir was formerly maintained at a great expense; though on Whitsunday, during Dr. Baldaconi's chief chaplaincy, Malibran, Persiani, Lablache, and Rubini, and the principals of the Italian Opera orchestra, gave their aid gratuitously. The choir is now scarcely above mediocrity; but the services are conducted with great solemnity. All-Saints' day (Nov. 1) is one of the best in the year on which to witness the splendour of the worship. About thirty years ago the district of the chapel extended to Islington, and the congregation numbered about 12,000 souls. This district has been much diminished by the building of other chapels; but the Sardinian congregation is very large. There are four resident priests, one expressly for the Italians. The Savoyard organ-boys much resort here.

SPANISH CHAPEL, Spanish-place, Manchester-square, was built in 1797, by Joseph Bonomi, and enlarged in 1846, when a picturesque campanile, 70 feet high, was added by C. Parker: its interior is a Lady Chapel, and forms a second south aisle. The chapel is lighted from the roof with a most captivating effect of architectural chiaro-scuro, and is divided by Corinthian columns.

#### CITY WALLS AND GATES.

THE small space within the Walls of old London has been described as almost exactly of the same shape and the same area as Hyde Park. It was, in fact, a *dun*, or Celtic hill-fortress, formed by Tower-hill, Cornhill, and Ludgate-hill; and effectually protected by the Thames on the south, the Fleet on the west, the great fen of Moorfields and Finsbury on the north, and by the Houndsditch and the Tower on the east.—Taylor's *Words and Places*.

The City Wall is believed to have been a work of the later Roman period, when London was not unfrequently exposed to hostile attacks. Its direct course was as follows:—Beginning at a fort on part of the site of the present Tower of London, the line was continued by the Minories, between Poor Jury-lane and the Vineyard (where now is Vine-street), to *Ald-gate*. Thence, forming a curve to the north-west, between Shoemaker-row, Bevis-marks, and Houndsditch, it abutted on *Bishop's-gate*, from which it extended nearly in a straight line, through Bishopsgate churchyard, and behind Bethlem Hospital and Fore-street, to *Cripple-gate*. At a short distance further, it turned southward, by the back of Hart-street and Cripplegate churchyard; and thence, continuing between Monkwell-street and Castle-street, led by the back of Barber-Surgeons' Hall and Noble-street to Dolphin-court, opposite Oat-lane, where, turning westerly, it approached *Alders'-gate*. Proceeding hence, towards the south-west, it curved along the back of St. Botolph's churchyard, Christ's Hospital, and Old *New-gate*, from which it continued southward to *Lud-gate*, passing at the back of the College of Physicians, Warwick-square, Stationers' Hall, and the London Coffee-house, on Ludgate-hill. From Ludgate it proceeded westerly by Cock-court to Little Bridge-street, where, turning south, it skirted the Fleet-Brook to the Thames, near which it was guarded by another fort. The circuit of the whole line, according to Stow, was two miles and one furlong nearly. Another wall, defended by towers, extended the whole distance along the banks of the Thames between the two forts. The walls were defended by strong towers and bastions; the remains of three of which, of Roman masonry, were, in Maitland's time, to be seen in the vicinity, of Houndsditch and Aldgate. The height of the perfect wall is considered to have been 22 feet, and that of the towers 40 feet.

The following course of the Wall is shown in a plan drawn by order of the Corporation of London, to ascertain the extent of the Great Fire, and now preserved in the Comptroller's Office, Guildhall. It may be distinctly traced as the southern boundary

of the churchyard of St. Botolph, at the back of Bull-and-Mouth-street. Hence it proceeded due east, across Aldersgate-street, to Aldersgate, whence it continued, in the same direction perhaps, about 200 feet, where it formed an angle, and had a curious bastion. It then went rather to the north-north-east of Falcon-square, eastward of Castle-street, where it is now standing, externally incorporated with the walls of the houses (a semi-circular tower was uncovered in the rear of No. 27, in the year 1865); thence it proceeds, and exhibits large remains in the churchyard of St. Giles's, Cripplegate.

"The latter, including a bastion, are the most perfect relics. The base of the Wall is composed of small rough flints, to the height of one foot six inches, resting on a fine loam, upon which are placed four feet six inches of rough Kentish ragstone (the green sandstone of geologists), with pieces of ferruginous sandstone irregularly interposed. Then come two courses of bricks, each measuring eighteen inches by twelve, and one and three-quarters thick, on which is laid more of the ragstone for two feet six inches; again a double course of tiles, and above that one foot six inches of the ragstone. Total existing height, nineteen feet seven inches. It is nine feet six inches in width at the base, and two feet at the top."—*W. D. Sauls, F.G.S.*

Mr. Roach Smith has shown that the area and dimensions of the Roman city may be conjecturally mapped out from the masses of masonry forming portions of its boundaries, and many of which have come to light in the progress of City improvements.

The position of the Gates, besides intervening remains, enables us to trace the course of the Wall on the western, northern, and eastern sides of London. Mr. Roach Smith shows that it runs in a straight line from the Tower to Aldgate, where, making an angle, it takes again the straight line to Bishopsgate; from Bishopsgate it runs eastward to St. Giles's churchyard, where it turns to the south as far as Falcon-square, and at this point pursues a westerly direction by Aldersgate, running under Christ's Hospital towards Giltspur-street, near which it forms an angle, and proceeds directly south by Ludgate towards the Thames. From Ludgate, however, it did not take a direct line towards the river, but traversed the ground now occupied by *The Times* offices, and from this spot diverged towards St. Andrew's-hill. Excavations in Upper Thames-street have brought to light a portion of it nine feet below the level of the present street, at the foot of Lambeth-hill. Hence it continued as far as Queenhithe; and it is curious to observe, that though this portion of the wall had disappeared from above the surface as early as the days of Fitzstephen, many of the large stones which formed its lower part were found to be sculptured and ornamented with mouldings, denoting their use in the friezes or entablatures of edifices at some period antecedent to its construction. Excavations have also proved that within the area thus enclosed most of the streets of the present day run upon the ruins of Roman houses, and "we may safely conclude that the streets and buildings of the Roman city, if not quite so dense and continuous as those of the modern city, left but little space throughout the entire area unoccupied, except a portion of the district between Lothbury and Prince's-street, and London-wall, and the ground adjoining the wall from Moorgate-street towards Bishopsgate."

Mr. Tite, the architect of the Royal Exchange, in 1853, unearthed a beautiful tessellated pavement under Gresham House, in Old Broad-street; and next, in Trinity-square, Tower-hill, a portion of the ancient wall still existed above ground, which, though not Roman, was supposed to rest on Roman foundations. In 1841, the Blackwall Railway, much further north than this point, cut through Roman remains of the great wall; but it was not until the autumn of 1864 that further traces were found. Then, in some large works in Cooper's-row, was discovered a very extensive fragment of a Norman wall, with narrow slits for archers to shoot their arrows. This fragment was 110 feet long, and in height, from the bottom of the foundation to the top of the parapet, 41 feet. All the foundations, and a considerable portion of the lower wall, were undoubtedly Roman, built of square stones, in regular courses, with bonding-courses of Roman brick of intense hardness, and excellent cement, as hard as any red earthenware; and was, as was always the case with the Roman, more of what we should call a tile, being 1 foot square and  $1\frac{1}{2}$  in. thick. The mortar between the bricks was nearly as thick as the bricks themselves, and abounding in portions of pounded brick. The exact place of these remains Mr. Tite has shown in an ancient plan of London in the reign of Elizabeth, when the walls and gates were in existence. Undoubted Roman remains of these walls are traceable, viz., Canonile-street (found by Dr. Woodward, in 1707); the street still called London-

wall (portions removed 1817-18, when Bethlem Hospital was taken down); and near Moorgate. Mr. Tite points out that there could have been no walls at the time when Suetonius abandoned London, A.D. 61. Some Norman historians refer the walls to a period as late as the Empress Helena; but Mr. Tite's opinion seems to be that they dated about the second century of our era. The distinctly Norman work above this level Mr. Tite attributes to the troubled times of King John, when the associated Barons arrived at Aldgate, in 1215, the Sunday before Ascension Day, and entered the City while the inhabitants were at Divine service. After this, the walls being in a ruinous state, they restored them, using the materials of the Jews' houses existing in the neighbourhood, and then destroyed to build up the defences, which, as chroniclers relate, were in a subsequent reign in a high state of excellence. In 1257, Henry III. caused the whole of the walls of the City to be repaired at the common charge. In 1282 and 1310, the walls were again repaired; and, in 1477, the patriotic Mayor, Ralph Joscelyne, completely restored all the walls, gates, and towers, in which work he was assisted by the Grocers' and other companies, and by Sir John Crosby. "The goldsmiths," says Stow, "repaired from Cripplegate towards Aldersgate, and there the work ceased." The total area inclosed by the Walls which still constitute "the City of London" is only about 380 acres.—*Proc. Soc. Antiq.*

Mr. W. H. Black, F.S.A., in describing the primitive site of Roman London, cites Roman authors, as Tacitus and Antoninus, to prove that *Londinium* was not a *colonia*, but an *oppidum*, surrounded by walls, for the protection of its commerce and trade, and having a treasurer. He entirely refutes the opinions to prove that primitive London was situate upon the south side of the Thames, by showing that the whole of that low ground was covered by a lake, which extended from the high ground of Greenwich, Camberwell, Brixton, and so on to Lambeth; and he is confirmed in this opinion by the direction of the principal streets, which all converge to a centre on the north side. From the measures he has taken, in his opinion the primitive site of London was between Walbrook on the east, and Fleet River on the west. The north wall, he believes, ran from Aldersgate, through Lad-lane, to the Walbrook, and from Doctors' Commons to the same brook, through Old Fish-street, on the south. The discovery of several pieces of old Roman wall on the line confirms this view. The *forum*, or market-place, would be in Cheap, from which the principal roads diverged. The commerce of the city increasing, it necessitated the enlarging of the city, and we find many of the streets were altered, as for instance, Broad-street used to be the way to Bishopsgate, which was changed for Threadneedle-street; and a new street was formed from Cheapside to Aldgate.

In the Sutherland View, 1543, and in Tapperell and Innes's large Map, the Great Wall is seen entire, with its embrasures, its large and lofty gates, and intervening towers. These gates are minutely described by Stow. Chamberlayne, in his *Magna Britaniæ Notitia*, 1726, says: "Most of the gates of that old Wall still remain: those which were burnt down at Ludgate and Newgate are rebuilt with great solidity and magnificence; and those which escaped, as Aldersgate, Cripplegate, Moorgate, Aldgate, are kept in good repair, and are shut up at every night, with great diligence and a sufficient watch, at ten o'clock; none being suffered to go in or out without examination. Most of these gates are of good architecture, and adorned with statues of some of our kings and queens; as is that, likewise, called Temple Bar, in Fleet-street, near the Middle Temple Gate." The Gates, except the latter, were taken down 1760-62: a statue of Queen Elizabeth, from Ludgate, is now placed on the outer wall of the church of St. Dunstan-in-the-West; and the statues of Lud and his sons, from the same gate, are in the grounds of St. Dunstan's Villa, Regent's Park (the Marquis of Hertford's). These statues were supposed by Flaxman to have preserved the likeness of the originals, as copies, or possibly liberal restorations, of the actual figures. (Archer's *Vestiges of Old London*, part iv., with six views.) Four of the figures from New-gate are in the south front of the present prison of that name.

The City of London, properly so called, consists of that part anciently *within the Walls*, together with that termed the *Liberties*, which immediately surrounded them. The Liberties are encompassed by the *Line of Separation*, the boundary between them and the county of Middlesex: and marked by the *Bars*, which formerly consisted of posts and chains, but are now denoted by lofty stone obelisks, bearing the City arms, which may be seen, eastward, in Whitechapel, the Minories, and Bishopsgate-street; northward, in Goswell-street, at the end of Fan-alley, and in St. John's-street; and westward,

at Middle-row, Holborn; while at the western end of Fleet-street the boundary is the stone gateway called Temple Bar.—*G. J. Augier.*

See also a Comparative Plan of that part of the City of London which was destroyed by the Great Fire in 1666, and its altered condition in 1849, by Francis Whishaw, C.E.; wherein old London is shown by strong lines, and modern London by dotted lines.

### CLERKENWELL,

A LARGE parish north-east of High Holborn, and named from a well around which the parish clerks, or clerken, were wont to assemble to act Scripture plays. The whole district was originally a village, which grew up around the priory of St. John of Jerusalem, north, and the Nunnery of St. Mary, south, of what is now Clerkenwell-green. It was then a succession of gentle pastures and slopes, with the "River of Wells," or "Fleet," flowing between two hills on its western border: and its rural character is kept in mind by its Coppice and Wilderness rows, Saffron-hill, Vineyard-gardens, Field-lane, Clerkenwell-green, and Cow-cross; whilst Turnmill-street recalls the "noise of the water-wheels" mentioned by Fitzstephen in 1190. In the Sutherland View of London, 1543, we see St. John's with a lofty spire, with trees extending to St. Bartholomew's, Smithfield; and westward the village green and St. James's Church, formerly of St. Mary's Nunnery, and then just made parochial. The nave, aisles, and bell-tower of St. John's were, however, pulled down to supply materials for building the proud Protector Somerset's palace. Aggas's map, in 1563, shows us a few houses bounded on three sides by little else than fields. By 1617, however, a number of fine houses had been built in the district, and were inhabited by persons of note. Hence to the village of Islington lay through green fields and country paths; and so lately as 1780, "persons walking from the City to Islington in the evening, waited near the end of St. John's-street, in what is now termed Northampton-street (but was then a rural avenue planted with trees, called Wood's Close), until a sufficient party had collected, who were then escorted by an armed patrol." (Storer and Cromwell's *Clerkenwell*.) The whole locality is covered with crowded streets. Here is still a large house, once the town residence of the Northampton family; the garden-ground is now Northampton-square; and Compton, Percival, Spencer, Wynyatt, and Ashby streets are named from the titles of the Marquis of Northampton, the principal ground-landlord of the district.

Passing to olden Clerkenwell, the Priory-gate of St. John has been transformed into a tavern; and the Square, once part of the Priory precincts, and afterwards the residence of the titled and wealthy, is now mostly tenanted by watchmakers and jewellers: in this Square died Bishop Burnet. Jerusalem-passage leads to Aylesbury-street, between which and St. John's Church stood the town-house of the Earl of Aylesbury, in the reign of Charles II. At the corner of Jerusalem-passage and Aylesbury-street, Thomas Britton, the "musical small coal-man," held his music meetings from 1678 to 1714, in a low and narrow room over the coal-shop, to which all the fashion of the age flocked; Britton himself playing in the orchestra the viol-di-gamba. In Woodbridge-street, branching from Aylesbury-street, was the celebrated Red Bull Theatre, conjectured to have been originally an inn-yard, used for performances late in the reign of Queen Elizabeth, and where the King's Players under Killigrew acted until they removed to Drury-lane. At the Red Bull, women first acted on the English stage: its site is probably now occupied by part of a distillery. St. James's Church was rebuilt in 1788 as we now see it. The Nunnery Close became Clerkenwell-close, on the east side of which was Newcastle House, built by the Earl of Newcastle, and where the eccentric literary Duchess Margaret held a sort of academic court for many years after the Restoration. "Of all the riders of Pegasus," says Walpole, "there have not been a more fantastic couple than his Grace and his faithful Duchess, who was never off her pillion." Pepys notes a visit of Charles II. to her Grace at Newcastle House, in April, 1667.

Another eccentric inhabitant of Newcastle House was Elizabeth Duchess of Albemarle, and afterwards of Montague. She was married in 1669 to Christopher Monck, second Duke of Albemarle, then a youth of 16, whom her inordinate pride drove to the bottle and other dissipation. After his death, in 1698, at Jamaica, the Duchess, whose vast estate so inflated her vanity as to produce mental aberration, resolved never again to give her hand to any but a sovereign prince. She had many suitors; but true to her resolution, she rejected them all, until Ralph Montague, third Lord and first Duke of that name,

achieved the conquest by courting her as *Emperor of China*: and the anecdote has been dramatised by Colley Cibber, in his comedy of "The Double Gallant, or Sick Lady's Cure." Lord Montague married the lady as "Emperor," but afterwards played the truant, and kept her in such strict confinement, that her relations compelled him to produce her in open court, to prove that she was alive. Richard Lord Ross, one of her rejected suitors, addressed to Lord Montague on his match:

"Insulting rival, never boast  
Thy conquest lately won;  
No wonder that her heart was lost,—  
Her senses first were gone.

From one that's under Bedlam's laws  
What glory can be had?  
For love of thee was not the cause:  
It proves that she was mad."

The Duchess survived her second husband nearly thirty years, and at last "died of mere old age," at Newcastle House, August 28, 1738, aged 96 years. Until her decease, she is said to have been constantly served on the knee as a sovereign.

On the east side of the Close stood a large house, by unauthorized tradition said to have been inhabited by Oliver Cromwell; but Cromwell-place, built upon the house-site, has been named from this story. Another inhabitant of the Close was Weever, the antiquary, who dates the Epistle to the first edition of his *Ancient Funerall Monuments* from his "House in Clerkenwell-close," May 28, 1631: he died in the next year, and was buried in old St. James's Church. On Clerkenwell-green is the Middlesex Sessions-House (Rogers, architect), built in 1779-82: it has a handsome east front, and a large hall, with a lofty dome. Here the County Sitings were removed from "Hicks's Hall," in St. John's-street, opposite the Windmill Inn, and named after Sir Baptist Hicks, of Kensington, one of the justices of the county, afterwards Viscount Campden, who built the Hall in 1612; from this site, "the spot where Hicks's Hall formerly stood," the distances on the mile-stones on the Great North Road were formerly measured. In this Hall, the patriotic William, Lord Russell, was tried, 1683. In St. John's-lane are the remains of an Elizabethan house, with the sign of the Baptist's Head (probably in compliment to Sir Baptist Hicks): it is said to have been frequented by Samuel Johnson and Oliver Goldsmith, in their transactions with Cave, the printer, at St. John's Gate; and in the taproom is a fine old armorial chimney-piece, engraved in Archer's *Vestiges of Old London*, part iii.

Upon the site of Back-hill and Ray-street was the Bear-garden of Hockley-in-the-Hole, not only the resort of the mob, but of noblemen and ambassadors, to witness the cruelties of bear and bull baiting by greater brutes, and "the noble science of defence;" for, says Mrs. Peachum (*Beggar's Opera*), "You should go to Hockley-in-the-Hole to learn valour;" but the nuisance was abolished soon after 1728. The locality, however, still retains its foul stain of moral degradation and squalid misery in its alleys and courts, several with but one narrow entrance; and three-storied houses let in tenements, where men, women, and donkeys find shelter together.

The tract immediately eastward of the Fleet River was rich in springs, many of them medicinal: hence Coldbath-fields, Bagnigge-wells, Sadler's-wells, Islington Spa, the London Spa, and the "Wells" of the earlier topographers. Spa-fields, the hot-bed of Radical riot in 1817, is now covered with streets.

Bagnigge Wells was another of these springs, and became a place of public resort in 1767. Near the Pindar of Wakefield, in Gray's-inn-road, was Bagnigge House, a picturesque gabled house, covered with vines, traditionally said to have been the summer residence of Nell Gwynne; and here was a memorial stone, inscribed "This is Bagnigge House, near the Pindar of Wakefield, 1680."

The Clerks' Well (whence the parish had its name), in Ray-street, now taken down, was left by gift by the Earl of Northampton, in 1673, for the use of the poor of St. James's parish, but was let by the authorities, for 40s. a year. The property was neglected, when the churchwardens, in 1800, placed here a pump, with a tablet, giving a brief historical account of the Well. Fitzstephen tells us that "London, in place of stage plays and scenic decorations, hath dramas of more sacred subjects—representations of those miracles which the holy confessors wrought; or of the sufferings wherein the glorious constancy of martyrs did appear;" and it is an undoubted fact that sacred dramas were performed on this spot before the reigns of Henry II. and Richard I., which were the era of Fitzstephen. Cromwell, in his History of this parish, suggests that the observance of this custom here may be of more remote antiquity; that *Clerken* being an Anglo-Saxon compound, the custom must be referred to that period. In Aggas's *Civitas Londinensis*, 1560, is a rude representation of the Clerks' Well in the time of Elizabeth; it was the spring of St. Mary's Nunnery. The Clerks' Well be-

came neglected. Near it was the Skinners' Well, now no longer to be recognised, nor its precise situation determined. In a narrow thoroughfare leading from Baker's-row into Ray-street, is a small public-house, known as the Pickled Egg, from a former landlord selling here pickled eggs, such as are still prepared in Hants and Dorset. Charles II. is said to have halted here, and partaken of a pickled egg. The house had formerly a noted cockpit; in 1775 there were cocking-matches here "between the gentlemen of London and Essex."

West of Ray-street is Vine-street, formerly Mutton-hill, thought, in *Pinks's History of Clerkenwell*, p. 111, to be derived from the word meeting, anciently spoken *moteing*, in reference to the Clerks' Mote (Saxon) or meeting-place by the Well.

Cold Bath-square, hard by, is named from the famous Cold Bath discovered here in 1697: it is now surrounded with houses. In this square, near the Cold Bath, in 1733-36, lived Eustace Budgell, the relative and friend of Addison, for whom he wrote in the *Spectator*. Here, too, for ninety years, lived the eccentric "Lady Lewson." She died here, in 1816, at the reputed age of 116.

At the corner of Cobham-row and Cold Bath-square, there stood to our day a noble horse-chestnut tree, which, tradition tells us, was one of a grove of trees that once grew here in the extensive grounds of the ill-fated Sir John Oldcastle, afterwards Lord Cobham, the great Reformer; and who, by the barbarous inhumanity and persecuting spirit of the age in which he lived, was hung in chains as a heretic, and burned in St. Giles's-in-the-Fields, in the year 1418, for his noble advocacy of the doctrines of Wyckliffe, and an alleged conspiracy against the government of Henry V. His family mansion became Sir John Oldcastle's Tavern; subsequently a Small-pox Hospital, specially for the reception of patients in the incipient stages of that disease, and such as caught it naturally. The building was afterwards reconstructed, and continued to be used as a hospital till 1795, when the charity was removed to the chief establishment at King's-cross. At a later period the property passed into the hands of the Countess of Huntingdon's connexion, when the hospital building was converted into private dwelling-houses, on the north side of the thoroughfare well known as Cobham-row. Mr. Pinks could not, however, trace Sir John Oldcastle's residence here.

Watchmakers, clockmakers, and jewellers settled in Clerkenwell in great numbers early in the last century, and several streets are mostly occupied by them; as "escapement-maker," "engine-turner," "fusee-cutter," "springer," "secret-springer," "finisher," and "joint-finisher," inscribed upon door-plates, attest; for in no trade is the division of labour carried to a greater extent than in watchmaking. (*See* ST. JOHN'S GATE.)

The *History of Clerkenwell* had been compiled and written, with rare fidelity and minuteness, by William J. Pinks, who, dying before the completion of the work, it was finished by E. J. Wood; it originally appeared in the *Clerkenwell News*, and was reproduced in a large handsome volume of 800 pages, by Mr. Peckburn, Myddelton House, Clerkenwell. The author spent six years in collecting his materials: and the editor nearly three years in his labours. The *History* is mainly the work of Mr. Pinks: it is one of those laborious results of devotedness, which can scarcely be overrated. The book is rich in sketches of eccentric persons, who seem to have abounded in Clerkenwell, from early times.

#### CLIMATE OF LONDON.

THE temperature of the air in the metropolis is raised by the artificial sources of heat existing in it no less than two degrees on the annual mean above that of its immediate vicinity. Mr. Howard, in his work on *Climate*, has fully established this fact, by a comparison of a long series of observations made at Plaistow, Stratford, and Tottenham Green (all within five miles of London), with those made at the apartments of the Royal Society in London, and periodically recorded in the *Philosophical Transactions*. In explanation, Mr. Howard refers to the heat induced by the population (just as the temperature of a hive of bees), and from the domestic fires, and from the foundries, breweries, steam-engines, and other manufactories. "When we consider that all these artificial sources of heat, with the exception of the domestic fires, continue in full operation throughout the summer, it should seem that the excess of the London temperature must be still greater in June than it is in January, but the fact is otherwise. The excess of the City temperature is greater in winter, and at that period seems to belong entirely to the nights, which average  $3^{\circ}710^{\circ}$  warmer than the country; while the heat of the days, owing, without doubt, to the interception of a portion of

the solar rays by a constant veil of smoke, falls, on a mean of years, about a third of a degree short of that in the open plains."

In the winter of 1835, Mr. W. H. White ascertained the temperature in the City to be 3° higher than three miles south of London Bridge; and *after the gas had been lighted in the City* four or five hours, the temperature increased full 3°, thus making 6° difference in the three miles.

Dr. Prout found that when his observations were made during the prevalence of wind (his station being at the western extremity of London), the air blowing from the east contained a minute portion of oxygen less than that which blew from the west. The difference was exceedingly small; still, it tended to show that the air which has passed over the busy streets of the metropolis differs in its amount, not only of carbonic acid, but also of oxygen, from the air which has not reached those scenes.

Change of air in the metropolis is mostly effected by the mixture of the gases composing it. There are hundreds of places in London into which the *wind* never finds admission; and even among the wider streets there are many through which a free current is rarely blown. It is only in the night, when combustion in some measure ceases, and the whole surface of the earth is cooled, that the gases are gradually removed, and the whole atmosphere of the City is brought nearly to an equality. Nothing, indeed, can be more striking than the difference even in the *sensible* qualities of the air of London in the early morning and in the evening: in the former it has a coolness and refreshing clearness, which those who know it in the heat of later hour can scarcely imagine.

Every one has observed upon dirty windows in the metropolis small tree-like crystallizations: these consist of sulphate of ammonia, which is produced in the atmosphere by the burning of vast quantities of coal, combining with the sulphurous acid in the atmosphere.

Owing to the smoke, many species of flowers (the yellow rose, for instance), will not bloom within ten miles of London; Paris, on the contrary (where wood is almost universally burnt), produces the finest flowers, not alone in the gardens of the Tuileries and Luxembourg, but in the nursery-grounds of the famous rose-growers, Noisette and Laffay; which, in the Faubourg St. Germain, enjoy advantages such as it would be necessary to retreat some miles from London to secure.

In London, in sunny weather, some fine effects of light and shade may be witnessed in the neighbourhood of the public buildings. Miss Landon refers to a bright day in spring as "a very spendthrift of sunshine, when the darkest alley in London wins a golden glimpse, and the eternal mist around St. Paul's turns to a glittering haze."

#### CLUBS AND CLUB-HOUSES.

**A**LTHOUGH the Club was a social feature of the last century, to the present age is due the establishment of a system of Club Living upon a scale of splendour and completeness hitherto unattainable. Formerly the Club resembled an ill-appointed coffee-house or tavern; often, however, redeemed by the brilliancy of the wit which was "wont to set the table in a roar," and animated by a conversational spirit comparatively little indulged in the present day.

There has been an excess of controversy and surmise as to the origin of the Club; but neither of the guesses reaches the good sense of Addison, who truly said, "all celebrated Clubs were founded upon eating and drinking, which are points where most men agree, and in which the learned and the illiterate, the dull and the airy, the philosopher and the buffoon, can all of them bear a part."

It has been pleasantly observed, that Clubs are gradually working as complete a revolution in the constitution of society as they have already effected in the architectural appearance of our streets. In the year 1800, there were only White's, as old as Hogarth's time; Brooks's and Boodle's; the Cocoa-Tree, Graham's, and another: now there are nearly fifty Clubs, each possessing a well-appointed mansion. The facilities of living have been wonderfully increased by them, whilst the expense has been greatly diminished; and for a few pounds a-year, advantages are to be enjoyed which no fortune except the most ample can procure.

ALFRED CLUB, the, No. 23, Albemarle-street, established in 1808, is described by Earl Dudley, in his time, as the dullest place in existence, "the asylum of doting Tories and drivelling quidnuncs." It was at this Club that "Mr. Canning, whilst in the zenith of his fame, dropped in accidentally at a house-dinner of twelve or fourteen, stayed out the evening, and made himself remarkably agreeable, without any of the party suspecting who he was." (*Quarterly Review*, No. 110.)

The Alfred had, *ab initio*, been remarkable for the number of travellers and men of letters, who formed a considerable proportion of its members. Yet, strangely enough, its cockney appellation was *Half-read*. Lord Byron was a member, and he tells us that "it was pleasant, a little too sober and literary, and bored with Sotheby and Francis D'Ivernois; but one met Rich, and Ward, and Valentin, and many other pleasant or known people; and it was, in the whole, a decent resource in a rainy day, in a dearth of parties, or Parliament, or in an empty season." The Alfred joined the Oriental in 1855.

ALMACK'S CLUB, the original Brooks's, was founded in Pall Mall, in 1764 (on the site of what is now the British Institution), as a gaming Club. Some of its members were Maccaronis, the "curled darlings" of the day: they were so called from their affectation of foreign tastes and fashions, and were celebrated for their long curls and eye-glasses. "At Almack's," writes Walpole in 1770, "which has taken the *pas* of White's, is worthy the decline of our empire, or commonwealth, which you please: the young men of the age lose ten, fifteen, twenty thousand pounds in an evening." The play at this gaming club was only for rouleaus of 50*l.* each, and generally there was 10,000*l.* in specie on the table. The gamesters began by pulling off their embroidered clothes, and put on frieze greatcoats, or turned their coats inside outwards for luck. They put on pieces of leather (such as are worn by footmen when they clean the knives) to save their laced ruffles; and to guard their eyes from the light and to prevent tumbling their hair, wore high-crowned straw hats with broad brims, and adorned with flowers and ribbons; masks to conceal their emotions when they played at quinz. Each gamester had a small neat stand by him, to hold his tea; or a wooden bowl with an edge of ormolu, to hold the rouleaus. Almack's was subsequently Goosetree's.

In the year 1780, Pitt was then an habitual frequenter, and here his personal adherents mustered strongly. The members, we are told in the *Life of Wilberforce*, were about twenty-five in number, and included Pratt (afterwards Lord Camden), Lords Euston, Chatham, Graham, Duncannon, Althorp, Apsley, G. Cavendish, and Lennox; Messrs. Eliot, Sir Andrew St. John, Bridgeman (afterwards Lord Bradford), Morris Robinson (afterwards Lord Rokeby), R. Smith (afterwards Lord Carrington), W. Grenville (afterwards Lord Grenville), Pepper Arden (afterwards Lord Alvanley); Mr. Edwards, Mr. Marsham, Mr. Pitt, Mr. Wilberforce, Mr. Banks, Mr. Thomas Steele, General Smith, Mr. Windham. Gibbon, the historian, was a member, and he dated several letters from here.

ALPINE CLUB, 8, St. Martin's-place, a small Society founded in order to bring together those who, whether as explorers, artists, or men of science, take an interest in the Alps, or in any of the other great mountain ranges. During the winter and spring, meetings are held, at which are read papers descriptive of mountain excursions, glacier phenomena, and other cognate subjects. See the *Alpine Journal*.

APOLLO CLUB was held at the Devil Tavern, Fleet-street, between Temple-bar and Middle Temple-gate, a house of great resort in the reign of James I., and then kept by Simon Wadloe. Ben Jonson wrote *The Devil is an Asse*, played in 1616, when he "drank bad wine at the Devil." The principal room, called "the Oracle of Apollo," was spacious, and apart from the tavern. Above the door was a bust of Apollo; and at the entrance, in gold letters on a black board, was inscribed the famous—

"Welcome all, who lead or follow,  
To the Oracle of Apollo," &c.

Beneath these verses was the name of the author, thus inscribed—"O Rare Ben Jonson," a posthumous tribute from his grave in Westminster Abbey. The bust appears modelled from the Apollo Belvedere, by some skilful person of the olden day, but has been several times painted. "The Welcome," originally inscribed in gold letters, on a thick black-painted board, has since been wholly repainted and gilded; but the old thickly-lettered inscription of Ben's day may be seen as an embossment upon the modern painted background. These poetic memorials are both preserved in the banking-house of the Messrs. Child.

“The Welcome,” says Mr. Burn, “it may be inferred, was placed in the interior of the room; so also, above the fireplace, were the Rules of the Club, said by early writers to have been inscribed in marble, but were in truth gilded letters upon a black-painted board, similar to the verses of the Welcome. These Rules are justly admired for the conciseness and elegance of the Latinity.” They have been felicitously translated by Alexander Broome, one of the wits who frequented the Devil, and who was one of Ben Jonson’s twelve adopted poetical sons. Latin inscriptions were also placed in other directions, to adorn the house; over the clock in the kitchen there remained one in 1731. In the Rules of the Apollo Club, women of character were not excluded from attending the meetings.

ARMY AND NAVY CLUB-HOUSE, Pall Mall, corner of George-street, designed by Parnell and Smith, was opened February, 1851. The exterior is a combination from Sansovino’s Palazzo Cornaro, and Library of St. Mark at Venice; but varying in the upper part, which has Corinthian columns, with windows resembling arcades filling up the intercolumns; and over their arched headings are groups of naval and military symbols, weapons, and defensive armour—very picturesque. The frieze has also effective groups symbolic of the Army and Navy; the cornice, likewise very bold, is crowned by a massive balustrade. The basement, from the Cornaro, is rusticated: the entrance being in the centre of the east or George-street front, by three open arches, similar in character to those in the Strand front of Somerset House. The whole is extremely rich in ornamental detail. The hall is fine; the coffee-room, eighty-two feet by thirty-nine feet, is panelled with scagliola, and has a ceiling enriched with flowers, and pierced for ventilation by heated flues above; adjoining is a room lighted by a glazed plafond; next is the house dining-room, decorated in the Munich style; and more superb is the morning room, with its arched windows, and mirrors forming arcades and vistas innumerable. A magnificent stone staircase leads to the library and evening rooms; and in the third story are billiard and card rooms; and a smoking-room, with a lofty dome elaborately decorated in traceried Moresque. The apartments are adorned with an equestrian portrait of Queen Victoria, painted by Grant, R.A.; a piece of Gobelin’s tapestry (Sacrifice to Diana), presented to the club in 1849 by Prince Louis Napoleon; marble busts of William IV. and the Dukes of Kent and Cambridge; and several life-size portraits of naval and military heroes. The Club-house is provided with twenty lines of Whishaw’s Telekoulphona, or Speaking Telegraph, which communicate from the Secretary’s room to the various apartments. The cost of this superb edifice, exclusive of fittings, was 35,000*l.*; the plot of ground on which it stands cost the Club 52,000*l.*

ARTS CLUB, Hanover-square, was instituted, 1863, for facilitating the social intercourse of those who are connected either professionally or as amateurs with Art, Literature, or Science.

ARTHUR’S CLUB-HOUSE, 69, St. James’s-street, is named from Mr. Arthur, the keeper of White’s Chocolate-house, who died 1761. The present Club-house is by Hopper; the principal windows are decorated with fluted Corinthian columns.

ATHENÆUM CLUB, Waterloo-place, Pall Mall, was established in 1823: the members are chosen by ballot, one black ball in ten excluding. The present Club-house, designed by Decimus Burton, was built in 1829-30, on a portion of the court-yard of Carlton Palace; the architecture is Grecian, with a frieze exactly copied from the Panathenaic procession in the frieze of the Parthenon—the flower and beauty of Athenian youth gracefully seated on the most exquisitely-sculptured horses,—which Flaxman regarded as the most precious examples of Grecian power in the sculpture of animals. Over the Roman-Doric entrance-portico is a colossal figure of Minerva, by Baily, R.A.; and the interior has some fine casts from *chef-d’œuvres* of sculpture: the style of the hall, staircase, gallery, and apartments, is grand, massive, and severe. The Athenæum is a good illustration of the Club system. The number of ordinary members is fixed at 1200; they are mostly eminent persons, civil, military, and ecclesiastical; peers spiritual and temporal; men of the learned professions, science, the arts, and commerce; and the distinguished who do not belong to any particular class. Many of these are to be met with every day, living with the same freedom as in their own houses. For thirty guineas entrance, and six guineas a-year, every member has the command of an excellent library (the best Club library in London), with maps; of newspapers, English and foreign; the principal periodicals; writing materials, and attendance. The building is a sort of palace, and is kept with the same exactness and comfort as a private dwelling. Every member is master, without any of the trouble of a master: he can

come when he pleases, and stay away when he pleases, without anything going wrong; he has the command of regular servants, without having to pay or manage them; he can have whatever meal or refreshment he wants, at all hours, and served up as in his own house. From an account of the expenses at the Athenæum in the year 1832, it appears that 17,323 dinners cost, on an average, 2s. 9½d. each, and that the average quantity of wine for each person was a small fraction more than half-a-pint. The expense of building the Club-house was 35,000l., and 5000l. for furnishing; the plate, linen, and glass cost 2500l.; library 21,398l.; and the stock of wine in cellar is usually worth about 5000l.: yearly revenue about 10,000l. The principal rooms are lighted by chandeliers fitted with Faraday's perfect ventilation apparatus. In the library is an unfinished portrait of George IV., which Sir Thomas Lawrence was painting but a few hours before his decease, the last bit of colour that he ever put upon canvas being that on the hilt and sword-knot of the girdle.

At the preliminary meeting for the formation of the Athenæum, February 16, 1824, were present Sir Humphry Davy, Bart., P.R.S., the Right Hon. John Wilson Croker, Sir Francis Chantrey, R.A., Richard Heber, Sir Thomas Lawrence, P.R.A., Dr. Thomas Young, F.R.S., Lord Dover, Davies Gilbert, the Earl of Aberdeen, P.S.A., Sir Henry Hallford, Sir Walter Scott, Bart., Joseph Jekyll, Thomas Moore, Charles Hatchett, F.R.S.; Secretary, Professor Faraday.

"The mixture of Whigs, Radicals, *savans*, foreigners, dandies, authors, soldiers, sailors, lawyers, artists, doctors, and Members of both Houses of Parliament, together with an exceedingly good average supply of bishops, render the *mélange* very agreeable, despite of some two or three bores, who 'continually do dine,' and who, not satisfied with getting a 6s. dinner for 3s. 6d., 'continually do complain.'" —*New Monthly Magazine*, 1834.

At the Athenæum, Theodore Hook was a great card; and in a note to the sketch of him in the *Quarterly Review*, it is stated that the number of dinners at this Club fell off by upwards of three hundred per annum after Hook disappeared from his favourite corner, near the door of the coffee-room. That is to say, there must have been some dozens of gentlemen who chose to dine there once or twice every week of the season, merely for the chance of Hook's being there, and permitting them to draw their chairs to his little table in the course of the evening. The *corner* alluded to will, we suppose, long retain the name which it derived from him—*Temperance Corner*. Many grave and dignified personages being frequent guests, it would hardly have been seemly to be calling for repeated supplies of a certain description; but the waiters well understood what the oracle of the corner meant by "Another glass of toast and water," or, "A little more lemonade."

ATHENEUM, JUNIOR, the, *pro tem*. St. James's-square, was originated in 1864, and consists of members of both Houses of Parliament, members of the Universities, fellows of the learned and scientific societies, or gentlemen connected with literature, science, and art. The device adopted by the Club is the Bird of Minerva, a copy of the reverse of the *drachma* of the Greeks.

BOODLE'S, 28, St. James's-street, is the noted "Savoir vivre" Club-house designed by Holland. It contains portraits of C. J. Fox and the Duke of Devonshire. Gibbon, the historian, was one of its early members. Next door, 29, Gillray, the caricaturist, in 1815, threw himself from an upstairs window, and died in consequence.

BROOKS'S, the Whig Club-house, at 60, west side of St. James's-street, was designed by Holland, and opened in 1778; but was originally established in Pall Mall, in 1764, by the Duke of Portland, C. J. Fox, and others. It was formerly a gaming-club, kept by Ahnack, and then by Brooks, a wine-merchant and money-lender, who left the Club soon after the present house was built, and died in poverty about 1782. Among the early members were C. J. Fox, Burke, Sir Joshua Reynolds, Garrick, Horace Walpole, Hume, Gibbon, and Sheridan. When Wilberforce was young and gay, he played here at faro; but his usual resort was at Goosetree's, in Pall Mall, where he one night kept the bank and won 600l.; but this weaned him from gaming. On March 21, 1772, Mr. Thynne retired from Brooks's in disgust, because he had won only 12,000 guineas in two months. The Club was famous for wagers; and the old betting-book is an oddity. Lord Crewe, one of the founders of the Club in Pall Mall, died in 1829, after sixty-five years' membership of Brooks's. The Fox Club meet here.

"At Brooks's, for nearly half a century, the play was of a more gambling character than at White's. . . . On one occasion, Lord Robert Spencer contrived to lose the last shilling of his considerable fortune given him by his brother, the Duke of Marlborough. General Fitzpatrick being much in the same condition, they agreed to raise a sum of money, in order that they might keep a faro-bank. The

members of the Club made no objection, and ere long they carried out their design. As is generally the case, the bank was a winner, and Lord Robert bagged, as his share of the proceeds, 100,000*l.* He retired, strange to say, from the fetid atmosphere of play, with the money in his pocket, and never again gambled. George Harley Drummond, of the famous banking-house, Charing-cross, only played once in his whole life at White's Club, at which, on which occasion he lost 20,000*l.* to Brummell. This event caused him to retire from the banking-house, of which he was a partner."—*Capt. Gronov.* 6-5

**BEEF-STEAK SOCIETY**, "the sublime Society of Beef-steaks" (but disdaining to be thought a Club), consists of twenty-four members, noblemen and gentlemen, who dine together off beef-steaks at five o'clock on Saturdays, from November until the end of June, at their rooms in the Lyceum Theatre. The dining-room is lined with oak, and decorated with emblematic gridirons, and in the middle of the ceiling is the gridiron first used by the cook. The orthodox accompaniment to the steaks is arrack punch. Each member may invite a friend. The Society originated with George Lambert, the scene-painter of Covent Garden Theatre during Rich's management, where Lambert often dined from a steak cooked on the fire in his painting-room, in which he was frequently joined by his visitors. This led to the founding of the Society by Rich and Lambert in 1735, in a room in the theatre. After its rebuilding, the place of meeting was changed to the Shakespeare Tavern, in the Piazza; afterwards to the Lyceum Theatre; and on its destruction by fire in 1830, to the Bedford Hotel; and thence to the Lyceum, rebuilt in 1834. The number of members was increased to twenty-five, to admit the Prince of Wales, afterwards George IV. Charles Howard, Duke of Norfolk, was a leading member; and Captain Morris was the laureat, the sun of this "jovial system:" in 1831 he bade adieu to the Society, but in 1835 revisited it, and was presented with an elegant silver bowl; at the age of ninety he sung:

"When my spirits are low, for relief and delight,  
I still place your splendid memorial in sight;  
And call to my muse, when care strives to pursue,  
'Bring the steaks to my mem'ry, and the bowl to my view.'"

The liquors are limited to port and punch, in quantity unlimited. The Club-button bears the Club-blazon—a gridiron *fumant, odorant*. Song, give-and-take jest—not always of the smoothest—and fun—the more rampant, the welcomer—follow the feast of steaks. At the sale of the Curiosities belonging to Mr. Harley, the comedian, in Gower-street, in November, 1858, a silver gridiron, won by a member of the Steaks, was sold for 1*l.* 3*s.* The gridiron upon which Rich broiled his solitary steak was saved from the fire at Covent Garden Theatre, in 1808, and is still preserved. In the above fire was lost the valuable stock of wine of the Club, and its original archives. Formerly, the damask table-cloths were figured with gridirons; and so were the drinking glasses and plates. Among the presents made to the Society are a punch-ladle, from Barrington Bradshaw; Sir John Boyd, six spoons; mustard-pot, by John Trevanion, M.P.; two dozen water-plates and eight dishes, given by the Duke of Sussex; cruet-stand, by W. Bolland; vinegar-cruet, by Thomas Scott. Lord Suffolk gave a silver cheese-toaster; toasted or stewed cheese being the wind-up of the dinner.—(See the fullest account of the Beef-steak Society, in *Club Life of London*, vol. i. pp. 123—149: 1868. See, also, Ned Ward's account of the Society, in its early days.)

There was also a Beef-steak *Club*, which is mentioned by Ned Ward in 1709; Peg Woffington was a member, and the president wore an emblem, a gold gridiron.

Among the other Beef-steak Societies or Clubs was the Club in Ivy-lane, of which Dr. Johnson was a member; a political Club, "the Rump-steak or Liberty Club," in existence in 1733-4, in eager opposition to Sir Robert Walpole; and at the Bell Tavern, Houndsditch, was held the Beef-steak Club, established by Beard, Woodward, &c.—See *Memoirs of Charles Lee Lewis*, vol. ii. p. 196.

**BLUE-STOCKING CLUB**, the, met at the house of Mrs. Montague, at the north-west angle of Portman-square. Forbes, in his *Life of Beattie*, gives the following account: "This Society consisted originally of Mrs. Montague, Mrs. Vesey, Miss Boscawen, and Mrs. Carter, Lord Lyttelton, Mr. Pulteney, Horace Walpole, and Mr. Stillingfleet. To the latter this constellation of talents owed that whimsical appellation of 'Bas-Bleu.' Mr. Stillingfleet being somewhat of a humorist in his habits and manners, and a little negligent in his dress, literally wore grey stockings; from which circumstance Admiral Boscawen used, by way of pleasantry, to call them 'The Blue-Stocking Society,' as if to intimate that when these brilliant friends met it was not for the purpose of forming a dressed assembly. A foreigner of distinction hearing the expression, translated it literally 'Bas-Bleu,' by which these meetings came to be afterwards distinguished." Dr. Johnson sometimes joined this circle. The last of the Club was the lively Miss Monckton, afterwards Countess of Cork, "who used to have the finest *bit of blue* at the house of her mother Lady Galway." Lady Cork died at upwards of ninety years of age at her house in New Burlington-street, in 1850.

BRITISH AND FOREIGN INSTITUTE, George-street, Hanover-square, was formed by James Silk Buckingham, under the patronage of Prince Albert, who was present at the opening, in 1844. The leading object of the Institute was to afford a point of union for literary and scientific men from all quarters of the globe, without distinction of nation, politics, or creed; to give facilities of introduction to strangers visiting the metropolis from the country; and to add to the attractions of literature, science, and art, the refinements and grace of female society. The Club-rooms had the accommodations of a family hotel. The Institute did not long exist.

BROTHERS' CLUB, the, was founded in 1711, by Lord Bolingbroke, for conversation and moderate conviviality, but intended to eschew the drunkenness and extravagance of the Kit Kat and Beefsteak Clubs. Among the other members, besides himself and Swift, were Arbuthnot, Prior, Sir William Windham, Orrery, and the Duke of Ormond; Masham and his brother-in-law Hill (?) were also Brothers. They used to dine at the Star and Garter, in Pall Mall, latterly, to which tavern they had been induced to transfer their custom, owing to the dearness of their previous landlord.

CARLTON CLUB, the, Pall Mall, is a purely political Club, and was founded by the late Duke of Wellington, and a few of his most influential political friends. It first held its meetings in Charles-street, St. James's, in the year 1831. In the following year it removed to larger premises, Lord Kensington's house, in Carlton-gardens. In 1836 an entirely new house was built for the club, in Pall Mall, by Sir Robert Smirke, R.A., small in extent, and plain and inexpensive in its architecture. As the Club grew in numbers and importance, the building soon became inadequate to its wants. In 1846, a very large addition was made to it by Mr. Sydney Smirke; and in 1854 the whole of the original building was taken down and rebuilt by Mr. Smirke, upon a sumptuous scale, in florid Italian style, nearly a fac-simile of Sansovino's Library of St. Mark, at Venice: the lower order Doric, the upper Ionic; the six intercolumniations occupied by arched windows, with bold keystones, and the upper window spandrels, filled with sculpture; above are a decorated frieze, rich cornice, and massive balustrade. The façade is of Caen stone, but the shafts and pilasters are of polished Peterhead granite. This new portion is intended to form one-third of the entire façade.

CAVENDISH CLUB, the, 307, Regent-street, occupies one-half of the upper façade of the Polytechnic Institution, the entrance being wholly distinct. The Reading-room, 42 feet square, and 20 feet high, has a larger supply of foreign and colonial newspapers and literature than any other Club in the metropolis; the Cavendish presents all the usual conveniences of a Club, except dinners.

CHESS CLUBS, see page 95.

CITY CLUB-HOUSE, 19, Old Broad-street, occupying the site of the old South Sea House, was built in 1833, from the design of Hardwick, R.A. The style is handsome Palladian; the only sculpture is a rich festooned garland over the doorway. The Club consists of merchants, bankers, and professional men of the City.

CITY CLUB, NEW, George-yard, Lombard-street, intended for merchants in the City, was erected from a design by J. H. Rowley, architect, at the cost of 50,000*l.*: it is the property of a company of merchants, who reserve to themselves the power of admitting fresh members. The front is of Portland stone, and in the centre the columns and pilasters are of polished red granite. The frontage in George-yard is upwards of 100 feet, and there is an additional frontage and entrance in Bell-yard, Gracechurch-street. The club-house is approached from George-yard through a Doric portico and vestibule with granite columns and pilasters. The windows have carved key-stones, and fruits and flowers over the architraves. The frieze and cornice are also enriched. An agreeable novelty in decoration has been introduced by means of enamelled slate in panels, imitating malachite and other marble, on the staircase walls. The rooms are all decorated in gilding and colours, each having its own distinctive character as to colour.

CIVIL SERVICE CLUB, the, upon the site of the Thatched House Tavern, St. James's-street, James Knowles, jun., architect, is occupied by an association of gentlemen connected with the several branches of the Civil Service. The façade, 99 feet high, is entirely of stone, and has a very elegant bay window; the decorative carving, by Daymond, represents real foliage and birds instead of mere conventional ornaments.

In excavating the foundations—which were carried 30ft. below the level of the street, their superficial extent being about 7500 square feet—a collection of fossils was discovered, including a good specimen of a lion's jaw and a variety of mammoth bones, the ancient denizens of the spot in centuries long passed; below this surface the earth was pierced another 80 ft., to which depth the main tube of the hydraulic apparatus descends, its lifting power being obtained by the gradual rise of water let into the tube as required. The Club-house rises above the surrounding buildings; there is an extensive panoramic view of town and country from its upper rooms, to which access is obtained by two staircases, or by an hydraulic lift, which communicates with every floor, and is of the newest and safest construction.

**CIVIL CLUB**, established in 1669, three years after the Great Fire, exists to this day. One of the fundamental rules was, that but one person of the same trade or profession should be a member, the design being to render mutual assistance in business matters—a very desirable object, especially after the great calamity above referred to. The Club appears to have been a sort of court of appeal also. Thus, if one member in his dealings with another did not feel satisfied with the quality or quantity of the goods served to him, he could lay his grievance before the Club, who would decide the matter. Of course, the rules have been somewhat modified, to meet the advanced spirit of the times. The law excluding two of a trade is adhered to, to some extent. The Civil Club met for many years at the Old Ship Tavern, Water-lane, whence it removed to the New Corn Exchange Tavern, Mark-lane. The records show that among former members were Parliament-men, baronets, and aldermen; the chaplain is the incumbent of St. Olave-by-the-Tower, Hart-street. Two high carved chairs, bearing date 1669, are used by the Stewards. This is the oldest Club in existence.

**CLIFFORD-STREET CLUB** was, in the last century, a debating Society, which met once a month at the Clifford-street Coffee-house, at the corner of Bond-street. The debaters were chiefly Mackintosh, Richard Sharp, a Mr. Ollyett Woodhouse; Charles Moore, son of the celebrated traveller; and Lord Charles Townshend, fourth son of the facetious and eccentric Marquis. The great primitive principles of civil government were then much discussed. 'It was before the French Revolution had "brought death into the world and all its woe."

At the Clifford-street Society, Canning generally took "the Liberal side" of the above questions. His earliest prepossessions are well known to have inclined to this side; but he evidently considered the Society rather as a school of rhetorical exercise, where he might acquire the use of his weapons, than a forum, where the serious profession of opinions, and a consistent adherence to them, could be fairly expected of him.

**CLUB CHAMBERS**, St. James's-square, north corner of King-street (formerly the mansion of Lord Castlereagh, d. 1822), has been refronted in cement, in the Italian *palazzo* style (Johnson, architect): the ground-floor has some good vermiculated rustic-work, and the windows of the King-street front are piquant.

**CLUB CHAMBERS**, Regent-street, west side, between Pall Mall and Piccadilly, was built in 1839, by Decimus Burton, cost 26,000*l.* The style is Italian; the ground-story is rusticated, and terminated by a lace band, or string-course, enriched with the Vitruvian scroll; this forms a basement to three other stories, surmounted by a bold and enriched cornice. The principal floor has handsome balconies, Corinthian columns, and pediments; but the whole façade is too narrow for its height. The entrance is beneath a portico with coupled Doric columns. The building contains 77 chambers, coffee and dining-rooms, and offices. The whole is ventilated, and warmed by hot water, with complete skill; and is supplied with water from a well 250 feet deep, which is raised to the attic story by a steam-engine, also employed for lifting coals, furniture, &c. The Chambers are let in suites by the proprietors. They occupy the site of a house built by Mr. Nash for Charles Blicke, Esq.; it was filled with articles of *vertu* and superb decoration; among which was a small circular temple, supported by Corinthian columns with brass capitals; and a conservatory embellished with models from Canova. Altogether, this was one of the most elaborately-decorated houses in the metropolis.

**COCOA-TREE CLUB**, the, was the Tory Chocolate-house of Queen Anne's reign; the

Whig Coffee-house was the St. James's, lower down, in the same street, St. James's. The party distinction is thus defined:—"A Whig will no more go to the Cocoa-tree or Ozinda's, than a Tory will be seen at the coffee-house of St. James's." The Cocoa-tree Chocolate-house was converted into a Club, probably before 1746, when the house was the head-quarters of the Jacobite party in Parliament. Horace Walpole, in a letter to George Montagu, says:—"The Duke has given Brigadier Mordaunt the Pretender's coach, on condition he rode up to London in it. 'That I will, sir,' said he; 'and drive till it stops of its own accord at the Cocoa-tree.'" Gibbon was a member of this Club, and has left this entry, in his journal of 1762:—

"Nov. 24.—I dined at the Cocoa-tree with \* \* \*, who, under a great appearance of oddity, conceals more real humour, good sense, and even knowledge, than half those who laugh at him. We went thence to the play (*The Spanish Friar*); and, when it was over, retired to the Cocoa-tree. That respectable body, of which I have the honour of being a member, affords every evening a sight truly English. Twenty or thirty, perhaps, of the first men in the kingdom in point of fashion and fortune, supping at little tables covered with a napkin, in the middle of a coffee-room, upon a bit of cold meat, or a sandwich, and drinking a glass of punch. At present we are full of King's counsellors and lords of the bed-chamber, who, having jumped into the ministry, make a very singular medley of their old principles and language with their modern ones."

Bribery, high play, and foul play, were common at the Cocoa-tree. Walpole tells, in 1780, of a cast at hazard here to 180,000*l.* The Cocoa-tree was one of the Clubs to which Lord Byron belonged.

CONSERVATIVE CLUB-HOUSE, on the site of the old Thatched House Tavern, 74, St. James's-street, was designed by Sydney Smirke and George Basevi, 1845. The upper portion is Corinthian, with columns and pilasters, and a frieze sculptured with the imperial crown and oak-wreaths; the lower order is Roman Doric; and the wings are slightly advanced, with an enriched entrance-porch north, and a bow-window south. The interior is superbly decorated in colour by Sang: the coved hall, with a gallery round it, and the domed vestibule above it, is a fine specimen of German encaustic embellishment, in the arches, soffites, spandrels, and ceilings; and the hall floor is tessellated, around a noble star of marqueterie. The evening room, on the first floor, nearly 100 feet in length and 26 in breadth, has an enriched coved ceiling, and a beautiful frieze of the rose, shamrock, and thistle, supported by scagliola Corinthian columns; the morning room, beneath, is of the same dimensions, with Ionic pillars. The library, in the upper story north, has columns and pilasters with bronzed capitals; and beneath is the coffee-room. Here is no grained or imitative wood-work, the doors and fittings being wainscot-oak, bird's-eye maple, and sycamore. The kitchen is skilfully planned; exceeding the Reform Club kitchen in completeness.

This is the second Club of the Conservative party, and many of its chiefs are honorary members, but rarely enter it; the late Sir Robert Peel is said never to have entered this Club-house, except to view the interior.

COUNTY CLUB, the (Proprietary), 43 and 44, Albemarle-street, consists of noblemen, members of the Church, the learned professions, officers of the army and navy, and gentlemen, without reference to political distinction. The Duke of Wellington, president of the committee, 1866.

COVENTRY HOUSE CLUB (the AMBASSADORS') was at 106, Piccadilly: the mansion occupies the site of the old Greyhound Inn, and was bought by the Earl of Coventry of Sir Hugh Hunlock, in 1764, for 10,000*l.*, and 75*l.* per annum ground rent.

CROCKFORD'S CLUB-HOUSE, 50, west side of St. James's-street, was built for Crockford in 1827; B. and P. Wyatt, architect. It consists of two wings and a centre, with four Corinthian pilasters with entablature, and a balustrade throughout; the ground-floor has Venetian windows, and the upper story large French windows. The entrance hall has a screen of Roman-Ionic scagliola columns with gilt capitals, and a cupola of gilding and stained glass. The coffee-room and library have Ionic columns, from the Temple of Minerva Polias; the staircase is panelled with scagliola, and enriched with Corinthian columns. The grand drawing-room is in the style of Louis Quatorze: azure ground, with elaborate cove, ceiling enrichments bronze-gilt, doorway paintings *à la Watteau*; and panelling, masks, and terminals heavily gilt. The interior was redecorated in 1849, and opened for the Military, Naval, and County Service Club, but was closed in 1851. It is now "the Wellington" Dining-rooms.

Crockford started in life as a fishmonger, in the old bulk-shop next door to Temple Bar Without, which he quitted for "play" in St. James's. He began by taking Watier's old Club-house, where he set up a hazard-bank, and won a great deal of money; he then separated from his partner, who had a bad year, and failed. Crockford now removed to St. James's-street, had a good year, and built the magnificent Club-house which bore his name; the decorations alone are said to have cost him 94,000*l.* The election of the Club members was vested in a committee; the house appointments were superb, and Ude was engaged as *maitre d'hôtel*. "Crockford's" now became the high fashion. Card-tables were regularly placed, and whist was played occasionally; but the aim, end, and final cause of the whole was the hazard-bank, at which the proprietor took his nightly stand, prepared for all comers. His speculation was eminently successful. During several years, everything that any body had to lose and cared to risk was swallowed up; and Crockford became a *millionaire*. He retired in 1840, "much as an Indian chief retires from a hunting country when there is not game enough left for his tribe;" and the Club then tottered to its fall. After Crockford's death, the lease of the Club-house (thirty-two years, rent 1400*l.*) was sold for 2900*l.*

DILETTANTI SOCIETY originated in 1734, with a party of *Dilettanti* (lovers of the fine arts), who had travelled or resided in Italy. In 1764, they commissioned certain artists to journey to the East, to illustrate its antiquities; and by the aid of the Society several important works, including Stuart's *Athens*, have been published. The Dilettanti met at Parsloe's, in St. James's-street, whence they removed to the Thatched House, in 1799, where they dined on Sundays from February to July.

In the list of members, between 1770 and 1790, occur the names of Sir Joshua Reynolds, Earl Fitzwilliam, Charles James Fox, Hon. Stephen Fox (Lord Holland), Hon. Mr. Fitzpatrick, Charles Howard, Duke of Norfolk, Lord Robert Spencer, George Selwyn, Colonel Fitzgerald, Hon. H. Conway, Joseph Banks, Duke of Dorset, Sir William Hamilton, David Garrick, George Colman, Joseph Windham, R. Payne Knight, Sir George Beaumont, Towneley, and others of less posthumous fame.

The funds of the Society were largely benefited by the payment of fines. Those paid "on increase of income, by inheritance, legacy, marriage, or preferment," are very odd: as, five guineas by Lord Grosvenor, on his marriage with Miss Leveson Gower; eleven guineas by the Duke of Bedford, on being appointed First Lord of the Admiralty; ten guineas compounded for by Bubb Dodington, as Treasurer of the Navy; two guineas by the Duke of Kingston for a Colonelcy of Horse (then valued at 400*l.* per annum); twenty-one pounds by Lord Sandwich on going out as Ambassador to the Congress at Aix-la-Chapelle; and twopence three-farthings by the same nobleman, on becoming Recorder of Huntingdon; thirteen shillings and fourpence by the Duke of Bedford, on getting the Garter; and sixteen shillings and eightpence (Scotch) by the Duke of Buccleuch, on getting the Thistle; twenty-one pounds by the Earl of Holderness, as Secretary of State; and nine pounds, nineteen shillings and sixpence, by Charles James Fox, as a Lord of the Admiralty.

The Society, in 1835, included, among a list of sixty-four names, those of Sir William Gell, Mr. Towneley, Richard Westmacott, Henry Hallam, the Duke of Bedford, Sir M. A. Shee, P.R.A., Henry T. Hope; and Lord Prudhoe, afterwards Duke of Northumberland.

The Dilettanti have never built themselves a mansion. They continued to meet at the Thatched House Tavern, the large room of which was hung with portraits of the Dilettanti. Sir Joshua Reynolds painted for the Society three capital pictures:—

1. A group, in the manner of Paul Veronese, containing the portraits of the Duke of Leeds, Lord Dundas, Constantine Lord Mulgrave, Lord Seaforth, the Hon. Charles Greville, Charles Crowle, Esq., and Sir Joseph Banks. 2. A group, in the manner of the same master, containing portraits of Sir William Hamilton, Sir Watkin W. Wynne, Richard Thomson, Esq., Sir John Taylor, Payne Galway, Esq., John Smythe, Esq., and Spencer S. Stanhope, Esq. 3. Head of Sir Joshua, dressed in a loose robe, in his own hand. The earlier portraits in the collection are by Hudson, Reynolds's master.

There is a mixture of the convivial in the portraits; many are using wine-glasses, and of a small size. Lord Sandwich, in a Turkish costume, has a brimming goblet in his left hand, and a capacious flask in his right. Sir Bouchier Wray is mixing punch in the cabin of a ship; the Earl of Holderness, in a red cap, as a gondolier, Venice in the background; Charles Sackville, Duke of Dorset, as a Roman senator, dated 1738; Lord Galloway, in the dress of a Cardinal; Lord Le Despencer as a monk at his devotions. The late Lord Aberdeen, the Marquises of Northampton and Lansdowne, Colonel Lecky, Mr. Broderip, and Lord Northwick, were members. The Society now meet at the Clarendon Hotel; the Thatched House being taken down. An excellent account of the Dilettanti Society will be found in the *Edinburgh Review*, No. 214. The character of the Club, however, became changed; the members being originally persons almost exclusively devoted to art and antiquarian studies. The Dilettanti are now a publishing society, like the Roxburghe, the Camden, and others.

EAST INDIA UNITED SERVICE CLUB-HOUSE, St. James's-square, was erected in

1866, upon the site of two houses, No. 14 and 15. The style is handsome Italian; architect, Charles Lee. The East India United Service Club was founded, in 1848, to meet the wants of the various services which administer the Indian Government. It has, however, gradually lost its exclusively Indian character, especially since the transfer of our Eastern Empire to the Queen, and it has now on its rolls many officers belonging to the home forces. The Club numbers upwards of 1760 members, of whom generally about 800 are in England. The new building has been designed to accommodate over 1000 members. The classic façade next the new Club-house was built by Athenian Stuart for Lord Anson; and No. 15 was the residence of Lady Francis, who lent the house to Caroline, Queen of George IV.

**ECCENTRIC CLUBS.**—In Ward's *Secret History*, we read of the Golden Fleece Club, a rattle-brained society, originally held at a house in Cornhill, so entitled. They were a merry company of tipping citizens and jocular change-brokers. Each member on his admission had a characteristic name assigned to him; as, Sir Timothy Addlepat, Sir Nimmy Sneer, Sir Talkative Do-little, Sir Skinny Fretwell, Sir Rumbus Rattle, Sir Boozy Prate-all, Sir Nicholas Ninny Sipall, Sir Gregory Growler, Sir Pay-little, &c. The Club flourished until the decease of the leading member; when they adjourned to the Three Tuns, Southwark. "It appears, by their books in general, that, since their first institution, they have smoked fifty tons of tobacco, drunk thirty thousand butts of ale, one thousand hogsheads of red port, two hundred barrels of brandy, and one kilderkin of small beer. There had been likewise a great consumption of cards."

**ECCENTRICS, THE.**—Late in the last century, there met at a tavern kept by one Fulham, in Chandos-street, Covent-garden, a convivial club called "The Eccentrics," which was an offshoot of "The Brilliants." They next removed to Tom Rees's, in May's-buildings, St. Martin's-lane; and here they were flourishing at all hours, some five-and-twenty years since. Amongst the members were many celebrities of the literary and political world; they were always treated with indulgence by the authorities. An inaugural ceremony was performed upon the making of a member, which terminated with a jubilation from the president. The books of the Club, up to the time of its removal from May's-buildings, are stated to have passed into the possession of Mr. Lloyd, the latter, of the Strand, who, by the way, was eccentric in his business, and published a small work descriptive of the various fashions of hats worn in his time, illustrated with characteristic engravings. From its commencement, the Eccentrics are said to have numbered upwards of 40,000 members, many of them holding high social position: among others, Fox, Sheridan, Lord Melbourne, and Lord Brougham. On the same memorable night that Sheridan and Lord Petersham were admitted, Hook was also enrolled; and through this Club membership, Theodore is believed to have obtained some of his high connexions. In a novel, published in numbers, some five-and-twenty years since, the author, F. W. N. Bayley, sketched with graphic vigour the meetings of the Eccentrics at the old tavern in May's-buildings.—*Club Life of London*, vol. i. p. 308, 1866.

**ERECHTHEIUM CLUB-HOUSE**, was in St. James's-square (entrance, 8, York-street), and was the house of Wedgwood, whose beautiful "ware" was shown in its rooms. It was formerly the site of Romney House; and from its windows William III. used to witness the fireworks in the Square at public rejoicings. The Club, long extinct, was established by Sir John Dean Paul, Bart., the banker, and became somewhat noted for its good dinners.

**ESSEX HEAD CLUB**, the, was established by Dr. Johnson, at the Essex Head, in Essex-street, Strand, then kept by Samuel Greaves, an old servant of Mr. Thrale's: it was called "Sam's." Sir Joshua Reynolds refused to join it; but Daines Barrington, Dr. Brocklesby, Arthur Murphy, John Nichols, Dr. Hursley, and Mr. Windham, and Boswell, were of the Club. Dr. Johnson wrote the Rules, when he invented the word "clubbable." Alderman Clark, Lord Mayor and Chamberlain, was, probably, the last surviving member of this Club; he died in 1831, aged 92.

**FARMERS' CLUB**, the, originally formed at the York Hotel, Bridge-street, Blackfriars, "open to practical farmers and scientific men of all countries," has now a handsome Club-house (the Salisbury Hotel), Salisbury-square, Fleet-street; architect, Giles; built 1865.

FIELDING CLUB, Maiden-lane, Covent-garden. Albert Smith was a leading member; and the Club gave several amateur representations "for the immediate relief of emergencies in the literary or theatrical world."

FOUR-IN-HAND CLUB, the, originated some seventy years ago, when the Hon. Charles Finch, brother to the Earl of Aylesford, used to drive his own coach-and-four, disguised in a livery great-coat. Soon after, "Tommy Onslow," Sir John Lade, and others, mounted the box in their own characters. The Four-in-Hand combined gastronomy with equestrianism and chariotteering: they always drove out of town to dinner. The vehicles of the Club which were formerly used, are described as of a hybrid class, quite as elegant as private carriages, and lighter than even the mails. They were horsed with the finest animals that money could secure. In general, the whole four in each carriage were admirably matched; grey and chestnut were the favourite colours, but occasionally very black horses, or such as were freely flecked with white, were preferred. The master generally drove the team, often a nobleman of high rank, who commonly copied the dress of a mail-coachman. The company usually rode outside, but two footmen in rich liveries were indispensable on the back seat; nor was it at all uncommon to see some splendidly-attired female on the box. A rule of the Club was, that all members should turn out three times a week; and the start was made at mid-day, from the neighbourhood of Piccadilly, through which they passed to the Windsor-road—the attendants of each carriage playing on their silver bugles. From twelve to twenty of these handsome vehicles often left London together. Forty years back, there were from thirty-four to forty four-in-hand equipages to be seen constantly about town. Their number is now considerably less.

GARRICK CLUB-HOUSE, Garrick-street, Covent Garden, contains a collection of theatrical paintings and drawings, assembled by Charles Mathews, the elder, and bequeathed by a member of the Club: they include:

Elliston as Octavian, by Singleton; Macklin (aged 93), by Opie; Mrs. Pritchard, by Hayman; Peg Woffington, by R. Wilson; Nell Gwynne, by Sir Peter Lely; Mrs. Abington; Samuel Foote, by Sir Joshua Reynolds; Colley Cibber as Lord Foppington; Mrs. Bracegirdle; Kitty Clive; Mrs. Robinson, after Reynolds; Garrick as Macbeth, and Mrs. Pritchard, Lady Macbeth, by Zoffany; Garrick as Richard III., by Morland, sen.; Young Roscius, by Opie; Quin, by Hogarth; Rich and his Family, by Hogarth; Charles Mathews, four characters, by Harlowe; Nat Lee, painted in Bedlam; Anthony Leigh as the Spanish Friar, by Kneller; John Liston, by Clint; Munden, by Opie; John Johnstone, by Shee; Laey in three characters, by Wright; Scene from Charles II., by Clint; Mrs. Siddons as Lady Macbeth, by Harlowe; J. P. Kemble as Cato, by Lawrence; Macready as Henry IV., by Jackson; Edwin, by Gainsborough; the twelve of the School of Garrick; Kean, Young, Elliston, and Mrs. Inchbald, by Harlowe; Garrick as Richard III., by Loutherboung; Rich as Harlequin; Moody and Parsons in the "Committee," by Vandergucht; King as Touchstone, by Zoffany; Thomas Dogget; Henderson, by Gainsborough; Elder Colman, by Reynolds; Mrs. Oldfield, by Kneller; Mrs. Billington; Nancy Dawson; Scene from the "School for Scandal," as originally cast; Scene from "Venice Preserved" (Garrick and Mrs. Cibber), by Zoffany; Scene from "Macbeth" (Henderson); Scene from "Love, Law, and Physic" (Mathews, Liston, Blanchard, and Emery), by Clint; Scene from the "Clandestine Marriage" (King and Mr. and Mrs. Baddeley), by Zoffany; Weston as Billy Button, by Zoffany. The following have been presented to the Club: Busts of Mrs. Siddons and J. P. Kemble, by Mrs. Siddons; of Garrick, Captain Marryat, Dr. Kitchiner, and Malbran; Garrick, by Roubiliac; Griffin and Johnson in the "Alchemist," by Von Bleeck; miniatures of Mrs. Robinson and Peg Woffington; Sketch of Kean, by Lambert; Garrick Mulberry-tree Snuff-box; Joseph Harris as Cardinal Wolsey, from the Strawberry-hill Collection; proof print of the Trial of Queen Katharine, by Harlowe. In the Smoking-room is a splendid sea-piece, by Stanfield; and Balbec, by David Roberts; portrait of R. Keeley, by O'Neil; Frederick Yates and Mrs. Davison; also a statuette of Thackeray; and a most valuable collection of theatrical prints.

The pictures may be seen by the personal introduction of a member of the Club on Wednesdays (except in September), between eleven and three o'clock. The Garrick Club was instituted in 1831, "for the general patronage of the Drama; the formation of a Theatrical Library, and Works, and Costume; and for bringing together the patrons of the Drama," &c. The Garrick is noted for its summer gin-punch, thus made: Pour half-a-pint of gin on the outer peel of a lemon, then a little lemon-juice, a glass of maraschino, a pint and a quarter of water, and two bottles of iced soda-water. The Club originally met at 29, King-street, Covent Garden, previously "Probat's" hotel. The old place, inconvenient as it was, will long preserve the interest of association for the older members of the Garrick. From James Smith (of *Rejected Addresses*) to Thackeray, there is a long series of names of distinguished men who have made the Garrick their favourite haunt, and whose memories are connected with those rooms. The Club removed to their present mansion, built for them; Marrantable, architect. The style is elegant Italian.

**GRESHAM CLUB-HOUSE**, St. Swithin's-lane, King William-street, City, was built in 1844, for the Club named after Sir Thomas Gresham, who founded the Royal Exchange. The Club consists chiefly of merchants and professional men. The style of the Club-house (H. Flower, architect) is Italian, from portions of two palaces in Venice.

**GRILLION'S CLUB**, of which the Fiftieth Anniversary was celebrated, May 6, 1863, by a banquet at the Clarendon, the Earl of Derby in the chair, was founded half a century since, by the Parliamentary men of the time, as a neutral ground on which they might meet. Politics are strictly excluded from the Club: its name is derived from Grillion's Hotel, in Albemarle-street, at which the Club originally met. On Jan. 30, 1860, there was sold at Puttick and Simpson's a series of seventy-nine portraits of members of this Club, comprising statesmen, members of the Government, and other highly distinguished persons during the last half century. These portraits, all of which were private plates, were engraved by Lewis, after drawings by J. Slater and G. Richmond. There were also four duplicate portraits, a vignette title, Rules of the Club, and list of its members. In this list, the only original surviving members are four.—*Notes and Queries*, 3rd S.; May 23, 1863.

The members present at the 50th Anniversary were the Earl of Derby, K.G., chairman, supported by the Duke of Newcastle, K.G.; the Earls of St. Germans, G.C.B., of Devon, of Clarendon, K.G., G.C.B., of Carnarvon, of Harrowby, K.G., Somers, and of Gosford; Viscounts Sydney, G.C.B., and Eversley; the Bishop of Oxford; Lords Stanley, Elcho, Robert Cecil, Clinton, Lyttelton, Wodehouse, Monteagle, Cranworth, Ebury, Chelmsford, and Taunton; the Secretaries of State for the Home and Indian Departments; the Hons. John Ashley, E. Pleydell Bouvier, and G. M. Fortescue; the Right Hons. Sir F. Baring, Sir Thomas Fremantle, Spencer Walpole, Edward Cardwell, Sir Edmund Head, and C. B. Adderley; Vice-Chancellor Sir W. Page Wood; the Lord Advocate; Sirs P. De Grey Egerton, Thomas Dyke Acland, W. Heathcote, James East, J. Shaw Lefevre, K.C.B., and Hugh Cairns; Messrs. Hastings Russell and Thomas Dyke Acland; Colonel Wilson Patten; Messrs. Baring, Buller, Childers, C. C. Greville, Monckton Milnes, Morier, Ker Seymour, W. Stirling, Wrightson, and Richmond. The unmentioned members were unavoidably absent:—The Marquis of Westminster, K.G.; Earls De Grey, Russell, and Grosvenor; Viscounts Sandon, Stratford de Redcliffe, G.C.B., and Lovaine; Lord Kingsdown, the Hon. E. Curzon, Sir C. Lemon, Sir Roundell Palmer, and the Rev. H. Wellesley.

**GUARDS' CLUB**, the, was formerly housed in St. James's-street, next Crockford's; but, in 1850, they removed to Pall Mall, No. 70. The new Club-house was designed for them by Henry Harrison, and is remarkable for compactness and convenience. The architect has adopted some portion of a design of Sansovino's in the lower part or basement.

**INDEPENDENTS**, the, established in 1780, was a Club of about forty members of the House of Commons, opponents of the Coalition Ministry, whose principle of union was a resolution to take neither place, pension, nor peerage. In a few years, Wilberforce and Bankes were the only ones of the incorruptible forty who were not either peers, pensioners, or placemen.

**IVY-LANE CLUB**, Paternoster-row, was formed by Dr. Johnson; his friend, Dr. Richard Bathurst; Hawksworth; and Hawkins, the attorney, afterwards Sir John Hawkins. The Club was shut up the year before Johnson's death. About this time he instituted a Club at the Queen's Arms, St. Paul's Churchyard.

**JUNIOR CARLTON**, the, was instituted in 1864, and "is a political Club in strict connexion with the Conservative party, and designed to promote its objects. The only persons eligible for admission are those who profess Conservative principles, and acknowledge the recognised leaders of the Conservative party," which Rule each member, on joining, signs. The Club is temporarily located at 14, Regent-street; but a freehold site on the north side of Pall Mall has been secured for a new Club-house, to cost 37,000*l.*, and to be ready in 1868. The Club, in May, 1866, consisted of 1624 members; the subscriptions in 1865 amounted to 17,081*l.*; cost of wines and spirits, 3109*l.*; cigars, 458*l.*

**KING OF CLUBS**, the, set on foot about 1801, by Bobus Smith (brother of Sydney), met at the Crown and Anchor Tavern, Strand. Among the members were "Conversation Sharp;" Scarlett, afterwards Lord Abinger; Rogers, the poet; honest John Allen; Dumont, the French emigrant; Wishart, and Charles Butler. Curran often met Erskine here.

**KIT-KAT CLUB**, a society of thirty-nine noblemen and gentlemen, zealously attached to the Protestant succession in the House of Hanover. The Club is said to have originated about 1700, in Shire-lane, Temple Bar, at the house of Christopher Kat, a

pastrycook, where the members dined: he excelled in making mutton-pies, always in the bill of fare, and called Kit-kats; hence the name of the Society.

Jacob Tonson, the bookseller, was secretary. Among the members were the Dukes of Somerset, Richmond, Grafton, Devonshire, and Marlborough; and (after the accession of George I.) the Duke of Newcastle, the Earls of Dorset, Sunderland, Manchester, Wharton, and Kingston; Lords Halifax and Somers; Sir Robert Walpole, Garth, Vanbrugh, Congreve, Granville, Addison, Maynwaring, Stepney, and Walsh. Pope tells us that "the day Lord Mohun and the Earl of Berkeley were entered of the Club, Jacob said he saw they were just going to be ruined. When Lord Mohun broke down the gilded emblem on the top of his chair, Jacob complained to his friends, and said that a man who could do that would cut a man's throat. So that he had the good and the forms of the Society at heart. The paper was all in Lord Halifax's writing, of a subscription of 400 guineas for the encouragement of good comedies, and was dated 1709. Soon after that they broke up."—(Spence's *Anecdotes*.) Tonson had his own and all their portraits painted by Sir Godfrey Kneller; each member gave him his; and, to suit the room, a shorter canvas was used (viz., 36 by 28 inches), but sufficiently long to admit a hand, and still known as the Kit-kat size. The pictures, 42 in number, were removed to Tonson's seat at Barn Elms, where he built a handsome room for their reception. At his death in 1736, Tonson left them to his great-nephew, also an eminent bookseller, who died in 1767. The pictures were then removed to the house of his brother, at Water-Oakley, near Windsor; and, on his death, to the house of Mr. Baker, of Hertingfordbury, where they now remain.

Walpole speaks of the Club as "the patriots that saved Britain," as having "its beginning about the Trial of the Seven Bishops in the reign of James II.," and consisting of "the most eminent men who opposed the reign of that arbitrary monarch." Garth wrote some verses for the toasting-glass of the Club, which have immortalized four of the reigning beauties at the commencement of the last century: the Ladies Carlisle, Essex, Hyde, and Wharton. Halifax similarly commemorated the charms of the Duchesses of St. Albans, Beaufort, and Richmond; Ladies Sunderland and Mary Churchill; and Mdlle. Spanheim.

LAW INSTITUTION, the, west side of Chancery-lane, was built in 1832 (Vulliamy, architect), for the Law Society of the United Kingdom; and combines a valuable library with a hall and office of registry, with Club accommodation. The Chancery-lane front has a Grecian-Ionic portico, with a pediment of considerable beauty; and the Club front in Bell-yard resembles that of an Italian palace. The Society consists of attorneys, solicitors, and proctors practising in Great Britain and Ireland, and of Writers to the Scottish Signet and Courts of Justice; and certificates of attorneys and solicitors must be registered here before granted by the Commissioners of Stamps. Law lectures, limited to one hour, are delivered here during term in the Great Hall.

LITERARY CLUB, the, was founded in 1764 by a knot of good and great men, who met at the Turk's Head Tavern, in Soho, first at the corner of Greek-street and Compton-street, and subsequently in Gerard-street, the founders being Sir Joshua Reynolds and Dr. Johnson. The members were limited to nine, including Reynolds, Johnson, Hawkins, and Burke, and Goldsmith, notwithstanding Hawkins's objection to Oliver as "a mere literary drudge." The members met one evening at seven for supper, in 1772. The supper was changed to a dinner, and the members increased to twenty, and it was at length resolved that it should never exceed forty. In 1783 the landlord died, and the tavern was converted into a private house. The members then removed to Prince's, in Sackville-street; and on this house being soon shut up they removed to Baxter's, afterwards Thomas's, in Dover-street. In 1792 they removed to Parsloe's, in St. James's-street, and thence to the Thatched House, in the same street. The reader will recollect Lord Chancellor Thurlow's rough reply to the prim Peer, who, in a debate in the House of Lords, having pompously cited certain resolutions passed by a party of noblemen and gentlemen at the Thatched House, said, "As to what the noble Lord in the red ribbon told us he had heard at the *ale-house*," &c. From the time of Garrick's death, the Club was known as "The Literary Club," since which it has certainly lost its claim to this epithet. It was originally a club of authors *by profession*; it now numbers few except titled members, which was very far from the intention of the founders. The name of the Club is now "The Johnson."

The centenary of the Club was commemorated in 1864 at the Clarendon, when were present—in the chair, the Dean of St. Paul's; his Excellency M. van de Weyer, Earls Clarendon and Stanhope, the Bishops of London and Oxford; Lords Brougham, Stanley, Cranworth, Kingsdown, and Harry Vane; the Right Hon. Sir Edmund Head, Spencer Walpole, and Robert Lowe; Sir Henry Holland, Sir C. Eastlake, Sir Roderick Murchison, Vice-Chancellor Sir W. Page Wood, the Master of Trinity, Professor Owen, Mr. G. Grote, Mr. C. Austen, Mr. H. Reeve, and Mr. G. Richmond. Among the few members prevented from attending were the Duke of Argyll, the Earl of Carlisle, Earl Russell, the Chancellor of the Exchequer, Lord Overstone, Lord Glenelg, and Mr. W. Stirling. Mr. N. W. Senior, who was the political economist of the Club, died a few days previously. The Secretary is Dr. Milman, Dean of St. Paul's; who keeps the books and archives of the Club; the autographs are valuable. Among the memorials is the portrait of Sir Joshua Reynolds, with spectacles on, which he painted and presented to the Club.—See *Club Life of London*, vol. i. pp. 204—218. 1866.

MERMAID CLUB, the, was long said to have been held in Friday-street, Cheap-side; but Ben Jonson has settled it in Bread-street; and Mr. W. Hunter, in his *Notes on Shakspeare*, has, in a schedule of 1603, "Mr. Johnson, at the Mermaid, in Bread-street." Mr. Burn, in the *Beaufoy Catalogue*, explains: "The Mermaid in Bread-street, the Mermaid in Friday-street, and the Mermaid in Cheap, were all one and the same. The tavern, situated behind, had a way to it from these thoroughfares, but was nearer to Bread-street than Friday-street." Mr. Burn adds, in a note, "The site of the Mermaid is clearly defined, from the circumstance of W. R., a haberdasher of small wares, 'twixt Wood-street and Milk-street,' adopting the same sign 'over against the Mermaid Tavern in Cheapside.'" The tavern was destroyed in the Great Fire.

Here Sir Walter Raleigh is traditionally said to have instituted "The Mermaid Club." Gifford has thus described the Club, adopting the tradition and the Friday-street location:—"About this time [1603] Jonson probably began to acquire that turn for conviviality for which he was afterwards noted, Sir Walter Raleigh, previously to his unfortunate engagement with the wretched Cobham and others, had instituted a meeting of *beaux esprits* at the Mermaid, a celebrated tavern in Friday-street. Of this Club, which combined more talent and genius than ever met together before or since, our author was a member; and here for many years he regularly repaired, with Shakspeare, Beaumont, Fletcher, Selden, Cotton, Carew, Martin, Donne, and many others, whose names, even at this distant period, call up a mingled feeling of reverence and respect." But this is doubted. A writer in the *Athenæum*, Sept. 16, 1865, states:—"The origin of the common tale of Raleigh founding the Mermaid Club, of which Shakspeare is said to have been a member, has not been traced. Is it older than Gifford?" Again: "Gifford's apparent invention of the Mermaid Club. Prove to us that Raleigh founded the Mermaid Club, that the wits attended it under his presidency, and you will have made a real contribution to our knowledge of Shakspeare's time, even if you fail to show that our Poet was a member of that Club." The tradition, it is thought, must be added to the long list of Shakspearian doubts. Nevertheless, Fuller has described the wit-combats between Shakspeare and Ben Jonson, which he beheld—meaning with his mind's eye; for he was only eight years old when Shakspeare died.—*Club Life of London*, vol. 1. p. 91. 1866.

MULBERRIES, the, a Club originated in 1824, at the Wrekin Tavern, Covent-garden, with the regulation that some paper, or poem, or conceit, bearing upon Shakspeare, should be contributed by each member. Hither came Douglas Jerrold and Laman Blanchard, William Godwin, Kenny Meadows; Elton, the actor; and Chatfield, the artist; "that knot of wise and jocund men, then unknown, but gaily struggling." The Mulberries' Club gathered a number of contributions, "mulberry-leaves," but they have not been printed. The name of the Club was changed to the Shakspeare, when it was joined by Charles Dickens, Justice Talfourd, Maclise, Maeready, Frank Stone, &c. The Mulberries' meetings are embalmed in Jerrold's *Cakes and Ale*. There were other Clubs of this class, as the Gratis and the Rationals, the Hooks and Eyes and Our Club.

MUSEUM CLUB, the, at the north end of Northumberland-street, was established in 1847, as "a properly modest and real literary Club." Jerrold, and Mahony (Father Prout) enjoyed their "intellectual gladiatorship" at the Museum; but its life was brief.

NATIONAL CLUB-HOUSE, 1, Whitehall-gardens, has a noble saloon, 80 feet in length, hung with large tapestry pictures, in the manner of Teniers: they are of considerable age, yet fresh in colour.

NAVAL CLUB, THE ROYAL, originated as follows:—About the year 1674, according to a document in the possession of Mr. Fitch, of Norwich, a Naval Club was started "for the improvement of a mutuall Society, and an increase of Love and Kindness amongst them;" and that consummate seaman, Admiral Sir John Kempthorne, was declared Steward of the institution. This was the precursor of the Royal Naval Club of 1765, which, whether considered for its amenities or its extensive charities, may be justly cited as a model establishment. (Admiral Smyth's *Rise and Progress of the Royal Society Club*, p. 9.) The members of this Club annually distribute a considerable sum among the distressed widows and orphans of those who have spent their days in the naval service of their country. The Club was accustomed to dine together at the Thatched House Tavern, on the anniversary of the Battle of the Nile. It is confined exclusively to members of the Naval Service: it has numbered among its members men from the days of Boscawen, Rodney, and the 'first of June' downwards. It was a favourite retreat for William IV. when Duke of Clarence; and his comrade, Sir Philip Durham, the survivor of Nelson, and almost the last of the "old school," frequented it.

NAVAL AND MILITARY CLUB, the, 94, Piccadilly—Cambridge House, the town residence of the late Viscount Palmerston.

NOVIOMAGIANS.—The more convivially-disposed members of learned London Societies have, from time to time, formed themselves into Clubs. The Royals have done so, *ab initio*. The Antiquaries appear to have given up their Club and their Anniversary Dinner; but certain of the Fellows, resolving not to remain *impransi*, many years since, formed a Club, styled “Noviomagians,” from the identification of the Roman station of Noviomagus being just then reputedly discovered.

One of the Club-founders was Mr. A. J. Kempe; and Mr. Crofton Croker was president more than twenty years. Lord Londeshorough, Mr. Corner, the Southwark antiquary, and Mr. Fairholt, were also Noviomagians; and in the present Club-list are Sir William Betham, Mr. Godwin, Mr. S. C. Hall, Mr. Lemon, &c. The Members dine together once a month, during the season. Joking minutes are kept, among which are found many known names, either as visitors or associates:—Theodore Hook, Sir Henry Ellis, Britton, Dickens, Thackeray, John Bruce, Jerdan, Planché, Bell, Maclise, &c. The wits have found Arms for the Club, with a butter-boat rampant for the crest. In 1855, Lord Mayor Moon, F.S.A., entertained the Noviomagians at the Mansion House.

OCTOBER CLUB, named from its “October ale,” was formed at the Bell Tavern, King-street, Westminster, and, in 1710, were for impeaching every member of the Whig party, and for turning out every placeman who did not wear their colours, and shout their cries. Swift was great at the October Club: in a letter, February 10, 1710-11, he says:

“We are plagued here with an October Club; that is, a set of above a hundred Parliament-men of the country, who drink October beer at home, and meet every evening at a tavern near the Parliament, to consult affairs, and drive things on to extremes against the Whigs, to call the old ministry to account, and get off five or six heads.” Swift’s *Advice humbly offered to the Members of the October Club* had the desired effect of softening some, and convincing others, until the whole body of malcontents was first divided and finally dissolved.

The red-hot “tantivies,” for whose loyalty the October Club was not thorough-going enough, seceded from the original body, and formed the March Club, more Jacobite and rampant in its hatred of the Whigs than the Society from which it branched.

ORIENTAL CLUB, the, was established in 1824, by Sir John Malcolm, the traveller and brave soldier. The members were noblemen and gentlemen associated with the administration of our Eastern empire, or who had travelled or resided in Asia, at St. Helena, in Egypt, at the Cape of Good Hope, the Mauritius, or at Constantinople. The Oriental was erected in 1827-8, by B. and P. Wyatt, and has the usual Club characteristic of only one tier of windows above the ground-floor; the interior has since been redecorated and embellished by Collman. The *Alfred*, in 1855, joined the *Oriental*, which had been designated by hackney-coachmen as “the Horizontal Club.” “Enter it,” said the *New Monthly Magazine*, some thirty years since, “it looks like an hospital, in which a smell of curry-powder pervades the ‘wards’—wards filled with venerable patients, dressed in nankeen shorts, yellow stockings and gaiters, and facings to match. *There* may still be seen pigtailed in all their pristine perfection. It is the region of calico shirts, returned writers, and guinea-pigs grown into bores. Such is the *nabobery* into which Harley-street, Wimpole-street, and Gloucester-place daily empty their precious stores of bilious humanity.” Time has blunted the point of this satiric picture, the individualities of which had passed away, even before the amalgamation of the Oriental with the Alfred.

OXFORD AND CAMBRIDGE CLUB-HOUSE, 71, Pall Mall, for members of the two Universities, was designed by Sir Robert Smirke, R.A., and his brother, Sydney Smirke, 1835-8. The Pall Mall façade is 80 feet in width by 75 in height, and the rear lies over against the court of Marlborough House. The ornamental detail is very rich: as the entrance-portico, with Corinthian columns; the balcony, with its panels of metal foliage; and the ground-story frieze, and arms of Oxford and Cambridge Universities over the portico columns. The upper part of the building has a delicate Corinthian entablature and balustrade; and above the principal windows are bas-reliefs in panels, executed in cement by Nicholl, from designs by Sir R. Smirke, R.A.

Centre panel: Minerva and Apollo presiding on Mount Farnassus; and the river Helicon, surrounded by the Muses. Extreme panels: Homer singing to a warrior, a female, and a youth; Virgil singing his Georgics to a group of peasants. Other four panels: Milton reciting to his daughter; Shakspeare attended by Tragedy and Comedy; Newton explaining his system; Bacon, his philosophy.

Beneath the ground-floor is a basement of offices, and an entresol or mezzanine of chambers. The principal apartments are tastefully decorated: the drawing-room is

panelled with *papier-maché*; and the libraries are filled with book-cases of beautifully-marked Russian birch-wood. From the library rearward is a view of Marlborough House and its gardens.

PALL MALL was noted for its tavern Clubs more than two centuries since. "The first time that Pepys mentions Pell Mell," writes Cunningham, "is under the 26th of July, 1660, where he says, 'We went to Wood's' (our old house for clubbing), 'and there we spent till ten at night.' This is not only one of the earliest references to Pall Mall as an inhabited locality, but one of the earliest uses of the word 'clubbing,' in its modern signification of a Club, and additionally interesting, seeing that the street still maintains what Johnson would have called its 'clubbable' character. In *Spence's Anecdotes (Supplemental)*, we read: "There was a Club held at the King's Head, in Pall Mall, that arrogantly called itself 'The World.' Lord Stanhope then (now Lord Chesterfield), Lord Herbert, &c., were members. Epigrams were proposed to be written on the glasses, by each member, after dinner; once, when Dr. Young was invited thither, the Doctor would have declined writing, because he had no diamond; Lord Stanhope lent him his, and he wrote immediately:

"Accept a miracle, instead of wit;  
See two dull lines with Stanhope's pencil writ."

The first modern Club mansion in Pall Mall was No. 86, opened as a subscription house, called the Albion Hotel. It was originally built for Edward Duke of York, brother of George III., and is now the office of Ordnance (correspondence).

The south side of Pall Mall has a truly patrician air in its seven costly Club-houses, of exceedingly rich architectural character, and reminding one of Captain Morris's luxurious resource:

"In town let me live then, in town let me die;  
For in truth I can't relish the country, not I.  
If one must have a villa in summer to dwell,  
Oh, give me the sweet shady side of Pall Mall."

PARTHENON CLUB-HOUSE, east side of Regent-street, nearly facing St. Philip's Chapel, was designed by Nash: the first floor is elegant Corinthian. The south division was built by Mr. Nash for his own residence; it has a long gallery, decorated from a *loggia* of the Vatican at Rome: it is now the "Gallery of Illustration." The Parthenon Club, now no longer in existence, was taken by Mr. Poole, for his memorable paper, "The Miseries of a Club," in the *New Monthly Magazine*.

PHENIX CLUB, 17, St. James's-place, consists of the Public Schools' Club, amalgamated with the Universities Union, and intended to include gentlemen educated at the Universities and Public Schools, together with Woolwich, Sandhurst, and Royal Naval College.

PORTLAND CLUB, 1, Stratford-place, Oxford-street.

PRINCE OF WALES'S CLUB, 43, Albemarle-street.

PRINCE OF WALES'S YACHT CLUB, Freemasons' Tavern.

REFORM CLUB-HOUSE, between the *Travellers'* and *Carlton* Club-houses, has a frontage in Pall Mall of 135 feet, being nearly equal to that of the *Athenæum* (76 feet) and *Travellers'* (74 feet). The Reform Club was established by Liberal Members of the two Houses of Parliament, to aid the carrying of the Reform Bill, 1830-32. The Reform was built in 1838-39, from the designs of Barry, R.A.; and resembles the Farnese Palace at Rome, designed by Michael Angelo Buonarroti, in 1545. The Club-house contains six floors and 134 apartments: the basement and mezzanine below the street pavement, and the chambers in the roof, are not seen.

The points most admired are extreme simplicity and unity of design, combined with very unusual richness. The breadth of the piers between the windows contributes not a little to that repose which is so essential to simplicity, and hardly less so to stateliness. The string-courses are particularly beautiful, while the cornice (68 feet from the pavement) gives extraordinary majesty and grandeur to the whole. The roof is covered with Italian tiles; the edifice is faced throughout with Portland stone, and is a very fine specimen of masonry.

In the centre of the interior is a grand hall, 56 feet by 50, resembling an Italian *cortile*, surrounded by colonnades, below Ionic, and above Corinthian; the latter is a picture-gallery, where, inserted in the scagliola walls, are whole-length portraits of eminent

political Reformers. The floor of the hall is tessellated; and the entire roof is strong diapered flint glass, by Pellatt & Co. The staircase, like that of an Italian palace, leads to the upper gallery of the hall, opening into the principal drawing-room, which is over the coffee-room in the garden front, both being the entire length of the building; adjoining are a library, card-room, &c., over the library and dining-rooms. Above are a billiard-room and lodging-rooms for members of the Club; there being a separate entrance to the latter by a lodge adjoining the Travellers' Club.

The basement comprises two-storied wine-cellars beneath the hall, besides the Kitchen Department, planned by Alexis Soyer, originally *chef-de-cuisine* of the Club: it contains novel employments of steam and gas, and mechanical applications of practical ingenuity, the inspection of which was long one of the privileged sights of London. The *cuisine*, under M. Soyer, enjoyed European fame, fully testified in a magnificent banquet given by the Club to Ibrahim Pasha, July 3, 1846. Another famous banquet was that given July 20, 1850, to Viscount Palmerston, who was a popular leader of the Reform. This festival was, gastronomically as well as politically, a brilliant triumph.

REFORM CLUB, JUNIOR; Club-house to be erected in Jermyn-street.

ROBIN HOOD, the, was a Debating Society, which met, in the reign of George II., at a house in Essex-street, Strand, at which questions were proposed for discussion, and any member might speak seven minutes; after which, "the baker," who presided with a hammer, summed up the arguments. Arthur Mainwaring and Dr. Hugh Chamberlain were early members; and the Club was visited by M. Beaumont, as a curiosity, in 1761. This was the scene of Burke's earliest eloquence. Goldsmith came here, and was struck by the imposing aspect of the President, who sat in a large gilt chair.

ROTA, the, or COFFEE CLUB, as Pepys calls it, was founded in 1659, as a kind of Debating Society for the dissemination of republican opinions, which Harrington had painted in their fairest colours in his *Oceana*. It met in New Palace Yard, at the then Turk's Head, "where they take water, the next house to the staires, at one Miles's, where was made purposely a large oval-table, with a passage in the middle for Miles to deliver his coffee." Here Harrington gave nightly lectures on the advantage of a commonwealth and of the ballot. The Club derived its name from a plan, which it was its design to promote, for changing a certain number of Members of Parliament annually by *rotation*. Sir William Petty was one of its members. Round the table, "in a room every evening as full as it could be crammed," says Aubrey, sat Milton and Marvell, Cyriac Skinner, Harrington, Nevill, and their friends, discussing abstract political questions. Aubrey calls them "disciples and *virtuosi*." The Club was broken up at the Restoration.

Dr. Nash notes: "Mr. James Harrington, sometime in the service of Charles I., drew up and printed a form of popular government, after the King's death, entitled the Commonwealth of *Oceana*. He endeavoured likewise to promote his scheme by public discourses, at a nightly Club of several curious gentlemen, Henry Nevill, Charles Wolsey, John Wildman, Dr. (afterwards Sir William) Petty, who met in New Palace-yard, Westminster. Mr. Henry Nevill proposed to the House of Commons that a third part of its members should rote out by ballot every year, and be incapable of reelection for three years to come. This Club was called the Rota."

ROXBURGHE CLUB, the, was founded by the Rev. T. Froggnall (afterwards Dr.) Dibdin, at the St. Albans Tavern, St. James's, on June 17, 1812, immediately after the sale of the rarest lot in the Roxburghe Library, viz., *Il Decamerone di Boccaccio*, which produced 2260*l*. The members were limited to 24, subsequently extended to 31.

The President of this Club was the second Earl Spencer. Among the most celebrated members were the Duke of Devonshire, the Marquis of Blandford (the late Duke of Marlborough), Lord Althorp (late Earl Spencer), Lord Morpeth (afterwards Earl of Carlisle), Lord Gower (afterwards Earl of Carlisle), Sir Masterman Sykes, Sir Egerton Brydges, Mr. (afterwards Baron) Bolland, Mr. Dent, Mr. Townley, Rev. T. C. Heber, Rev. Rob. Holwell Carr, Sir Walter Scott, &c.: Dr. Dibdin being Secretary. The avowed object of the Club was the reprinting of rare and neglected pieces of ancient literature; and, at one of the early meetings, "it was proposed and concluded for each member of the Club to reprint a scarce piece of ancient lore, to be given to the members, one copy being on vellum for the chairman, and only as many copies as members." It may, however, be questioned whether the "dinners" of the Club were not more important than the literature. They were given at the St. Albans's, at Grillion's, at the Clarendon, and the Albion Taverns. Of these entertainments some curious details have been recorded by Mr. Joseph Haslewood, one of the members, in a MS., entitled "*Roxburghe Revels; or, an Account of the Annual Display, culinary and festive, interspersed with Matters of Moment or Merriment*:" a selection from its rarities has appeared in the *Athenæum*: at the second dinner, Mr. Heber in the chair, a few carried until, "on arriving at home, the eliek of time bespoke a quarter to four." Among the early members was the Rev. Mr. Dodd, one of the masters of Westminster School, who, until 1818 (when he died), enlivened the Club with Robin Hood ditties. At the fourth dinner, at Grillion's, Sir Masterman Sykes

chairman, 20 members present, the bill was 57*l.* At the Anniversary, 1818, at the Albion, Mr. Heber in the chair, 15 present, the bill was 85*l.* 9*s.* 6*d.*, or 5*l.* 14*s.* each; including turtle, 12*l.* 10*s.*; venison, 10*l.* 10*s.*; and wine, 30*l.* 17*s.* "Ancients, believe it," says Haslewood, "we were not dead drunk, and therefore lie quiet under the table for once, and let a few moderns be uppermost."

The Roxburghe Club still exists: it may justly be considered to have suggested the publishing Societies of the present day; as the Camden, Shakspeare, Percy, &c.

ROYAL SOCIETY CLUB, the, was founded in 1743, and was at first styled "the Club of Royal Philosophers." It originated some years earlier with Dr. Halley and a few friends, who dined together once a week; at length, they removed to the Mitre Tavern, No. 39, Fleet-street, to be handy to the Royal Society, which then met in Crane-court. In 1780, the Club removed to the Crown and Anchor Tavern, in the Strand; in 1818, to the Freemasons' Tavern: and thence, when the Royal Society removed to Burlington House, Piccadilly, the Club removed to the Thatched House Tavern, St. James's-street. The dinners were plain, black-puddings figuring for many years at each repast. The presents made to the Club became very numerous; and haunches of venison, turtle, and game, were rewarded by the donors' healths being drunk in claret. The circumnavigator, Lord Anson, presented the Club with a magnificent turtle; and on another occasion with a turtle which weighed 400*lbs.* James Watt dined at one of these turtle-feasts; "and never was turtle eaten with greater sobriety and temperance, or with more good fellowship." Then we find mighty chins of beef, and large carp among the presents; and Lord Macartney sent "two pigs of the China breed." Fruits were presented for dessert; and Philip Miller, who wrote the *Gardener's Dictionary*, sent Egyptian Cos lettuces, the best kind known; and Cantaloupe melons, equal in flavour to pine-apples. For thirty years the Club received these presents in lieu of admission-money, until thinking it undignified to do so, the practice was discontinued. The charge for dinner rose from 1*s.* 6*d.* to 10*s.*, and 2*d.* to the waiter! Then, the Club laid in its own wine, at 1*s.* 6*d.* per bottle, and the landlord charged 2*s.* 6*d.* The consumption of wine, per head, of late, averaged less than a pint each.

"Among the distinguished guests of the Club are many celebrities. Here the chivalrous Sir Sidney Smith described the atrocities of Djezza Pasha; and here that cheerful baronet—Admiral Sir Isaac Coffin—by relating the result of his going in a jolly-boat to attack a whale, and in narrating the advantages specified in his proposed patent for fattening fowls, kept "the table in a roar." At this board, also, our famous circumnavigators and oriental voyagers met with countenance and fellowship—as Cook, Furneaux, Clerke, King, *Bounty* Bligh, Vancouver, *Guardian* Riou, Flinders, Broughton, Lestock, Wilson, Huddart, Bass, Tuckey, Horsburgh, &c.; while the Polar explorers, from the Hon. Constantine Phipps in 1773, down to Sir Leopold McClintock, in 1860, were severally and individually welcomed as guests. But, besides our sterling sea-worthies, we find in ranging through the documents that some rather outlandish visitors were introduced through their means, as Chet Quang and Wang Tong, *Chinese*; Ejuntak and Tuklivina, *Esquimaux*; Thayen-danega, the *Mohawk* chief; while Omai, of Ularetea, the celebrated and popular savage, of *Cook's Voyages*, was so frequently invited, that he is latterly entered on the Club papers simply as *Mr. Omai*."—Admiral Smyth's *Account of the Royal Society Club; Club Life of London*, vol. i. pp. 65-81. 1866.

ROYAL THAMES YACHT CLUB, 49, St. James's-street,

SCRIBLERUS CLUB, the, was founded by Swift, in 1714, in place of "the Brothers;" it was rather of a literary than political character. Oxford and St. John, Swift, Arbuthnot, Pope, and Gay, were members. Oxford and Bolingbroke led the way, by their mutual animosity, to the dissolution of the Club; when Swift made a final effort at reconciliation, but failing, retreated in dudgeon.—See BROTHERS CLUB, p. 244.

SMITHFIELD CLUB, the, Half-moon-street, has the management of the Cattle Show held annually at the Agricultural Hall, Islington, and the award of Silver Cups and Gold and Silver Medals as prizes for Stock, Implements, &c., exhibited.

"The Smithfield Cattle and Sheep Society" was instituted December 17, 1798, by a party of noblemen and gentlemen, amongst whom were most conspicuous Francis, Duke of Bedford; the Earl of Winchelsea, Lord Somerville, and Sir Joseph Banks.

The Club has shifted its scene of annual display several times. In 1799 and 1800, the Club exhibited in Wootton's Livery-stables, Dolphin-yard, Smithfield; in 1804, the Show was held in the Swan-yard; in 1805, at Dixon's Repository, Barbican; in 1808, in Sadler's-yard, Goswell-street; and in 1839, the Club, moving westward, gave its first exhibition in Baker-street. From Mr. Brandreth Gibbs's *History of the Origin and Progress of the Smithfield Club*, we learn that, at the first exhibition, the Club only received from the public 40*l.* 3*s.* The receipts of the first Baker-street Show were 300*l.*; and in 1857, no less a sum than 700*l.* was taken at the doors. The prizes annually distributed have increased as follows: value in 1799, 50 guineas; 1800, 120 guineas; 1810, 220 guineas; and in 1840, plate and money, 330*l.*; and in 1857, 1050*l.* Concurrent with the early career of the Smithfield Club were the Spring Cattle Shows, established by Lord Somerville, who, in 1805, at his own cost, gave six prizes; amongst the exhibitors was George the Third.

The Duchess of Rutland became a member of the Smithfield Club in 1823; and the Queen visited the Show in Baker-street in 1844, and again in 1850. The Royal visit in 1844 is believed to be the first occasion of an agricultural show being attended by the Sovereign of Great Britain; but it was not the first time that Royalty took an interest in the Club shows. George the Third was an exhibitor in 1800; the Duke of York gained a prize in 1806; and the Prince Consort, who, together with the late Duke of Cambridge, became a member of the Club in 1841, carried off several prizes at the Baker-street exhibitions with animals fed at the "Royal Flemish" and "Royal Shaw" farms. The silver-cup and the shepherd-smock schools combined for the same good end—the production of delicious meat at moderate prices; and he will not act inappropriately who, whilst thanking God for his Christmas-dinner, has a grateful recollection of the men who contributed to bring the Roast Beef of Old England to its present perfection.—*Athenæum*, No. 1723, abridged.

**THATCHED HOUSE.**—Admiral Smyth, in 1860, gave the following list of Clubs, which then dined at the Thatched House Tavern, St. James's-street:—

Actuaries, Institute of; Catch Club; Johnson's Club; Dilettanti Society; Farmers' Club; Geographical Club; Geological Club; Linnæan Club; Literary Society; Navy Club; Philosophical Club; Physicians, College of, Club; Political Economy Club; Royal Academy Club; Royal Astronomical Club; Royal Institution Club; Royal London Yacht Club; Royal Naval Club (1765); Royal Society Club; St. Alban's Medical Club; St. Bartholomew's Contemporaries; Star Club; Statistical Club; Sussex Club; Union Society, St. James's.—*Account of the Royal Society Club*, privately printed.

**TOM'S COFFEE-HOUSE CLUB**, the, was held at 17, north side of Russell-street, Covent-garden; the house was taken down in 1865. The original proprietor was Thomas West, who died in 1722. The upper portion of the premises was the coffee-house, under which lived T. Lewis, the original publisher, in 1711, of Pope's *Essay on Criticism*. In *The Journey through England*, 1714, we read, "There was at Tom's Coffee-house playing at piquet, and the best conversation till midnight; blue and green ribbons with stars, sitting and talking familiarly." M. Grignon, sen., had seen "the balcony of Tom's crowded with noblemen in their stars and garters, drinking their tea and coffee, exposed to the people." In 1764 was formed here, by a guinea subscription, a Club of nearly 700 members.

On the Club-books we find "Long Sir Thomas Robinson;" Samuel Foote; Arthur Murphy, lately called to the Bar; David Garrick, who then lived in Southampton-street (though he was not a clubbable man); John Beard, the fine tenor singer; John Webb; Sir Richard Glymne; Robert Gosling, the banker; Colonel Eyre, of Marylebone; Earl Percy; Sir John Fielding, the justice; Paul Methuen, of Corsham; Richard Clive; the great Lord Clive; the eccentric Duke of Montagu; Sir Fletcher Norton, the ill-mannered; Lord Edward Bentinck; Dr. Samuel Johnson; the celebrated Marquis of Granby; Sir F. B. Delaval, the friend of Foote; William Tooke, the solicitor; the Hon. Charles Howard, sen.; the Duke of Northumberland; Sir Francis Gosling; the Earl of Anglesey; Sir George Brydges Rodney (afterwards Lord Rodney); Peter Burrell; Walpole Eyre; Lewis Mendez; Dr. Swinney; Stephen Lushington; John Gunning; Henry Brougham, father of Lord Brougham; Dr. Macnamara; Sir John Trevelyan; Captain Donellan; Sir W. Wolsley; Walter Chetwynd; Viscount Gage, &c.; Thomas Payne, Esq., of Leicester House; Dr. Schomberg, of Pall Mall; George Colman, the dramatist, then living in Great Queen-street; Dr. Dodd, in Southampton-row; James Payne, the architect, Salisbury-street, which he rebuilt; William Bowyer, the printer, Bloomsbury-square; Count Bruhl, the Polish Minister; Dr. Goldsmith, Temple (1773), &c. Many a noted name in the list of 700 is very suggestive of the gay society of the period. Among the Club masters, Samuel Foote, Sir Thomas Robinson, and Dr. Dodd are very frequent: indeed, Sir Thomas seems to have been something like a proposer-general.

Dance painted the elder Haines, the landlord, who, for his polite address, was called among the Club "Lord Chesterfield." The coffee-house business closed in 1814, when the premises became occupied by Mr. William Till, the well-known numismatist; the card-room and club-tables in their original condition. On the death of Mr. Till, Mr. Webster succeeded to the tenancy and collection of coins and medals, which he removed to No. 6, Henrietta-street; he possesses, by marriage with the grand-daughter of the second Mr. Haines, the Club-books; as well as the Club-room snuff-box, of large size, tortoiseshell; upon the lid, in high relief, in silver, are the portraits of Charles I. and Queen Anne, the Boscobel oak, with Charles II. amid its branches, &c.—See *Illustrated London News*, 1865.

**TRAVELLERS' CLUB-HOUSE**, adjoining the *Athenæum*, in Pall Mall, was designed by Barry, R.A., and built in 1832. The architecture is the nobler Italian, resembling a Roman palace: the plan is a quadrangle, with an open area in the middle, so that all the rooms are well lighted. The Pall Mall front has a bold and rich cornice, and the windows are decorated with Corinthian pilasters; the garden-front varies in the windows; but the Italian taste is preserved throughout, with the most careful finish: the roof is Italian tiles. The Travellers' Club originated shortly after the Peace of 1814, in a suggestion of the late Marquis of Londonderry, then Lord Castlereagh, with a view to a resort for gentlemen who had resided or travelled abroad; as well as to the

accommodation of foreigners, who, when properly recommended, receive an invitation for the period of their stay. (*Quarterly Review*, No. 110, 1836.) By one of the rules, "no person is eligible to the Travellers' Club who shall not have travelled out of the British Islands to a distance of at least 500 miles from London in a direct line." Prince Talleyrand, during his residence in London, generally joined the muster of whist-players at this Club.

**TREASON CLUB**, the, at the time of the Revolution, met at the Rose Tavern, Covent-garden, to consult with Lord Colchester, Mr. Thomas Wharton, and many others; and it was then resolved that the regiment under Lieutenant-Colonel Langdale's command should desert entire, as it did, on a Sunday, November, 1688.

**UNION CLUB-HOUSE**, Cockspur-street, and west side of Trafalgar-square, was completed in 1824, from designs by Sir R. Smirke, R.A. James Smith ("Rejected Addresses") has left us a sketch of his every-day life at this Club:—

"At three o'clock I walk to the Union Club, read the journals, hear Lord John Russell deified or diabolised, do the same with Sir Robert Peel or the Duke of Wellington, and then join a knot of conversationists by the fire till six o'clock, consisting of lawyers, merchants, and gentlemen at large. We then and there discuss the Three per Cent. Consols (some of us preferring Dutch two-and-a-half per Cents.), and speculate upon the probable rise, shape, and cost of the New Exchange. If Lady Harrington happen to drive past our window in her landau, we compare her equipage to the Algerine Ambassador's; and when politics happen to be discussed, rally Whigs, Radicals, and Conservatives alternately, but never seriously, such subjects having a tendency to create acrimony. At six, the room begins to be deserted; wherefore I adjourn to the dining-room, and gravely looking over the bill of fare, exclaim to the waiter, 'Haunch of mutton and apple-tart!' These viands despatched, with the accompanying liquids and water, I mount upward to the library, take a book and my seat in the arm-chair, and read till nine. Then call for a cup of coffee and a biscuit, resuming my book till eleven; afterwards return home to bed."—*Comic Miscellanies*.

The Union has a capital smoking-room, with paintings by Stanfield and Roberts. The Club has ever been famed for its *cuisine*, upon the strength of which we [are told that next door to the Club-house, in Cockspur-street, was established the Union Hotel, which speedily became renowned for its turtle; it was opened in 1823, and was one of the best-appointed hotels of its day; Lord Panmure, a *gourmet* of the highest order, is said to have taken up his quarters in this hotel, for several successive seasons, for the sake of the soup.\*—Adams's *London Clubs*.

**UNITED SERVICE CLUB**, the, one of the oldest of modern Clubs, was instituted the year after the Peace of 1815, when a few officers of influence in both branches of the Service had built for them, by Sir R. Smirke, a Club-house at the corner of Charles-street and Regent-street—a frigid design, somewhat relieved by sculpture on the entrance-front, of Britannia distributing laurels to her brave sons by land and sea. Thence the Club removed to a more spacious house, in Waterloo-place, facing the Athenæum, the Club-house in Charles-street being entered on by the Junior United Service Club; but Smirke's cold design has been displaced by an edifice of much more ornate exterior and luxurious internal appliances. The United Service Club (Senior) was designed by Nash, and has a well-planned interior, exhibiting the architect's well-known excellence in this branch of his profession. The principal front facing Pall Mall has a Roman-Doric portico; and above it a Corinthian portico, with pediment. One of the patriarchal members of the Club was Lord Lynedoch, the hero of the Peninsular War, who lived under five sovereigns: he died in his 93rd year. Stanfield's fine picture of the Battle of Trafalgar; and a copy by Lane (painted 1851) of a contemporary portrait of Sir Francis Drake; are among the Club pictures.

The *Windham* was once considered the most expensive Club, and the *United Service* the cheapest; the latter, probably, from the number of absent members. The Duke of Wellington might often be seen dining at this Club on a joint; "and on one occasion, when he was charged 15*d.* instead of 1*s.* for it, he bestirred himself till the odd threepence was struck off. The motive was obvious; he took the trouble of objecting to give his sanction to the principle."—*Quarterly Review*, No. 110, 1836.

**UNITED SERVICE CLUB**, the **JUNIOR**, at the corner of Charles-street and Regent-street, was erected upon the site of the former Club-house, by Sir R. Smirke, R.A., in 1855-57, Nelson and James, architects, and is enriched with characteristic sculpture by John Thomas. The design is in the Italian style of architecture, the bay-window

\* The West-end Clubs contribute largely to the feeding of the poor. The Union Club distributed in the year 1844, to the poor of St. Martin's-in-the-Fields, no less than 3104 lbs. of broken bread, 4556 lbs. of broken meat, 1147 pints of tea-leaves, and 1153 pints of coffee-grounds.

in Regent-street forming a prominent feature in the composition, above which is a sculptured group allegorical of the Army and Navy. The whole of the sculpture and ornamental details throughout the building are characteristic of the professions of the members of the Club. Upon the angle-pieces of the balustrade are bronze lamps, supported by figures. The staircase is lighted from the top by a handsome lantern, filled with painted glass. On the landing of the half-space are two pairs of caryatid figures, and single figures against the walls, supporting three semicircular arches. On the upper landing of the staircase is the celebrated picture, by Allan, of the Battle of Waterloo. The evening-room, which is also used as a picture-gallery, 24 feet high, has a bay-window fronting Regent-street. Here are portraits of military and naval commanders; Queen Victoria and Prince Albert; the Emperor Napoleon, and an allegorical group in silver, presented to the Club by his Imperial Majesty.

UNIVERSITY CLUB, the, Suffolk-street, Pall Mall East, was instituted in 1824; and the Club-house, designed by Deering and Wilkins, architects, was opened 1826. It is of the Grecian Doric and Ionic orders; and the staircase walls have casts from the Parthenon frieze. The Club consists chiefly of Members of Parliament who have received University education; several of the judges, and a large number of beneficed clergymen. This Club has the reputation of possessing the best-stocked wine-cellar in London, which is of no small importance to members, clerical or lay.

UNIVERSITIES UNION CLUB-HOUSE, the, is at 20, Cockspur-street, Charing Cross; and its sphere is intended to embrace all gentlemen whose names have been on the books of any college at Oxford or Cambridge, or Durham, or on those of the Scotch Universities, or of Trinity College, Dublin.

URBAN CLUB, the, held at St. John's Gate, Clerkenwell, consists of authors, actors, and artists, who meet in the great room of the Tavern over the gateway.

VOLUNTEER SERVICE CLUB, 49, St. James's-street.

WATIER'S CLUB was the great Macao gambling-house of a very short period. Mr. Thomas Raikes, who understood all its mysteries, describes it as very genteel, adding that no one ever quarrelled there. "The Club did not endure for twelve years altogether; the pace was too quick to last: it died a natural death in 1819, from the paralysed state of its members; the house was then taken by a set of blacklegs, who instituted a common bank for gambling. To form an idea of the ruin produced by this short-lived establishment among men whom I have so intimately known, a cursory glance to the past suggests the following melancholy list, which only forms a part of its deplorable results. . . . None of the dead reached the average age of man."

In the old days, when gaming was in fashion, at Watier's Club, princes and nobles lost or gained fortunes between themselves. Captain Gronow also relates the following account of the origin of this noted but short-lived Club:—

"Upon one occasion, some gentlemen of both White's and Brooks's had the honour to dine with the Prince Regent, and during the conversation the Prince inquired what sort of dinners they got at their Clubs; upon which Sir Thomas Stepney, one of the guests, observed 'that their dinners were always the same, the eternal joints or beef-steaks, the boiled fowl with oyster-sauce, and an apple-tart: this is what we have at our Clubs, and very monotonous fare it is.' The Prince, without further remark, rang the bell for his cook Watier, and, in the presence of those who dined at the Royal table, asked him whether he would take a house, and organize a dinner-club. Watier assented, and named Madison, the Prince's page, manager; and Labourie, the cook, from the Royal kitchen. The Club flourished only a few years, owing to the night-play that was carried on there. The Duke of York patronized it, and was a member. The dinners were exquisite: the best Parisian cooks could not beat Labourie. The favourite game played there was Macao."

WEDNESDAY CLUB, in Friday-street, Cheapside. Here, in 1695, certain conferences took place under the direction of William Paterson, which ultimately led to the establishment of the Bank of England. Such is the general belief; but Mr. Saxe Bannister, in his *Life of Paterson*, p. 93, observes:—"It has been a matter of much doubt whether the Bank of England was originally proposed from a Club or Society in the City of London. The *Dialogue Conferences of the Wednesday Club*, in *Friday-street*, have been quoted as if first published in 1695. No such publication has been met with of a date before 1706;" and Mr. Bannister states his reasons for supposing it was not preceded by any other book. Still, Paterson wrote the papers entitled the *Wednesday Club Conferences*.

There was likewise a *Wednesday Club* held at the Globe Tavern, in Fleet-street, where songs, jokes, dramatic imitations, burlesque parodies, and broad sallies of humour were the entertainments; and Oliver Goldsmith was in his glory. Here was first heard the celebrated epitaph (Goldsmith had been reading Pope and Swift's *Miscellanies*) on Edward Purdon:—

“Here lies poor Ned Purdon, from misery freed,  
Who long was a bookseller's hack;  
He had led such a damnable life in this world,  
I don't think he'll wish to come back.”

WESTMINSTER CLUB, 23, Albemarle-street.

WHIST CLUBS originated with whist becoming popular in England about 1730, when it was closely studied by a party of gentlemen, who formed a sort of Club at the Crown Coffee-house, in Bedford-row. Hoyle is said to have given instructions in the game, for which his charge was a guinea a lesson. A Committee, including members of several of the best London Clubs, well known as whist-players, has drawn up a code of rules for the game; and these rules, as governing the best modern practice, have been accepted by the Arlington, the Army and Navy, Arthur's, Boodle's, Brooks's, Carlton, Conservative, Garrick, Guards', Junior Carlton, Portland, Oxford and Cambridge, Reform, St. James's, White's, &c. The *Laws of Short Whist* were, in 1865, published in a small volume; and to this strictly legal portion of the book is appended *A Treatise on the Game*, by Mr. J. Clay, M.P. for Hull, one of the best modern whist-players.

WHITE'S (Tory) CLUB-HOUSE, 36 and 37, St. James's-street, has an elegant front, designed by James Wyatt, restored and enriched in 1851: the medallions of the Four Seasons above the drawing-room story are classic compositions. The Club, as White's Chocolate-house, was originally established about 1698, near the bottom of the west side of St. James's-street: the Club-house, then kept by Mr. Arthur, was burnt down April 28, 1773; and plate 6 of Hogarth's "Rake's Progress" shows a room at White's so intent upon their play, as neither to see the flames nor hear the watchmen, who are bursting into the room to give the alarm. Sir Andrew Fountayne's collection of pictures, valued at 3000*l.*, was destroyed in the fire; and the King and the Prince of Wales were present, encouraging the firemen and people to work the engines. In 1736, the principal members of the Club were the Duke of Devonshire, Lord Chesterfield, Sir John Cope, Bubb Doddington, and Colley Cibber: before this date it was an open Chocolate-house. It soon became a gaming Club and a noted supper-house, the dinner-hour being early a century since. Betting was another of its pastimes; and a book for entering wagers was always laid upon the table. The play here was frightful; it was for White's that Walpole and his friends composed the famous heraldic satire.

Walpole writes to Sir Horace Mann, Sept. 1, 1750: "They have put into the papers a good story made at White's. A man dropped down dead at the door, and was carried in; the Club immediately made bets whether he was dead or not; and when they were going to bleed him, the wagers for his death interposed, and said it would affect the fairness of the bet."

"At the time that White's Chocolate-house was opened at the bottom of St. James's-street—the close of the last century—it was probably thought vulgar; for there was a garden attached, and it had a suburban air. At the tables in the house or garden more than one highwayman took his chocolate, or threw his main, before he quietly mounted his horse, and rode slowly down Piccadilly towards Bagshot. The celebrated Lord Chesterfield there 'gamed, and pronounced witticisms among the boys of quality.' Steele dated all his love news in the *Tatler* from White's. It was stigmatized as 'the common rendezvous of infamous sharpers and noble cullics;' and bets were laid to the effect that Sir William Burdett, one of its members, would be the first baronet who would be hanged. The gambling went on till dawn of day; and Pelham, when Prime Minister, was not ashamed to divide his time between his official table and the quiet table at White's. White's ceased to be an open Chocolate-house in 1736."—Dr. Doran's *Table Traits*.

The Club, on June 20, 1814, gave at Burlington-house, to the Allied Sovereigns then in England, a ball, which cost 9489*l.* 2*s.* 6*d.*; and on July 6 following, the Club gave a dinner to the Duke of Wellington, which cost 2480*l.* 10*s.* 9*d.*—(See Cunningham's *Handbook* ("White's")) for several very interesting extracts from the Club-books, and from writers of the middle of the last century, "curiously characteristic of the state of society at the time."

WHITTINGTON CLUB and METROPOLITAN ATHENÆUM, Arundel-street, originated in 1846 with Mr. Douglas Jerrold, who became its first president. It combines a literary society with a Club-house, upon an economical scale, for the middle classes; con-

taining dining and coffee-rooms, library and reading-rooms, smoking and chess-rooms; and a large room for balls, concerts, and *soirées*. Lectures are given here, and classes held for the higher branches of education, fencing and dancing, &c. In the ball-room is a picture of Whittington listening to Bow-bells, painted by F. Newenham, and presented to the Club by its founder. All the original Crown and Anchor premises, wherein the Club first met, were destroyed by fire in 1854: they have been rebuilt, and the establishment is now styled the Whittington Club.

WINDHAM CLUB, 11, St. James's-square, was founded by the late Lord Nugent, for gentlemen "connected with each other by a common bond of literary or personal acquaintance." The mansion was the residence of William Windham; next, of the accomplished John Duke of Roxburghe; and here the Roxburghe Library was sold in 1812, the sale commencing May 18, and extending to forty-one days. Lord Chief-Justice Ellenborough lived here in 1814; and subsequently, the Earl of Blessington, who possessed a fine collection of pictures.

## COFFEE-HOUSES.

COFFEE was first drunk in London about the middle of the seventeenth century. "The first coffee-house in London," says Aubrey (MS. in the Bodleian Library), "was in St. Michael's-alley, in Cornhill, opposite to the church, which was set up by one — Bowman (coachman to Mr. Hodges, a Turkey merchant, who putt him upon it), in or about the year 1652. 'Twas about four yeares before any other was sett up, and that was by Mr. Farr. Jonathan Paynter, over-against to St. Michael's Church, was the first apprentice to the trade, viz., to Bowman."

Another account states that one Edwards, a Turkey merchant, on his return from the East in 1657, brought with him a Ragusan Greek servant, Pasqua Rosee, who prepared coffee every morning for his master, and with the coachman above named set up the first coffee-house in St. Michael's-alley; but they soon quarrelled and separated, the coachman establishing himself in St. Michael's churchyard.

Sir Hans Sloane had in his Museum in Bloomsbury-square, "part of a coffee-tree, with the berries and leaves thereon; it was brought over from Moco, in Arabia, by Mr. E. Clive, of London, merchant," who has described it in *Philos. Trans.* No. 208.

Coffee is first mentioned in our statute-book anno 1660 (12 Car. II., c. 24), when a duty of 4*d.* was laid upon every gallon of coffee made and sold. A statute of 1663 directs that all coffee-houses should be licensed at the Quarter Sessions. In 1675, Charles II. issued a proclamation to shut up the coffee-houses, charged with being seminaries of sedition; but in a few days he suspended this proclamation by a second.

As coffee declined in fashion, the Coffee-houses mostly became Taverns and Dining-houses, or Chop-houses. The first on our list is an instance.

BAKER'S COFFEE-HOUSE, 1, Change-alley, Lombard-street, was originally for the sale of coffee, but has been for nearly half a century noted for its chops and steaks, broiled in the coffee-room, and eaten hot from the gridiron.

BALTIC COFFEE-HOUSE, 58, Threadneedle-street, is the rendezvous of merchants and brokers connected with the Russian trade, or that in tallow, oil, hemp, and seeds. The supply of news to the subscription-room is, with the exception of the chief London, Liverpool, and Hull papers, confined to that from the north of Europe and the tallow-producing countries on the South American coast. In the upper part of the Baltic Coffee-house is the auction sale-room for tallow, oils, &c.

BEDFORD COFFEE-HOUSE, "under the Piazza, in Covent Garden," north-east corner, in *Memoirs of the Bedford Coffee-house*, two editions, 1751-1763, is described as having been "signalized for many years as the emporium of wit, the seat of criticism, and the standard of taste. Names of those who frequented the house:—Foote, Mr. Fielding, Mr. Woodward, who mostly lived here, Mr. Leone, Mr. Murphy, Mopsy, Dr. Arne. Dr. Arne was the only man in a suit of velvet in the dog-days. Stacie kept the Bedford when John and Henry Fielding, Hogarth, Churchill, Woodward, Lloyd, Dr. Goldsmith, and many others met there and held a gossiping shilling-rubber club. Henry Fielding was a very merry fellow." In the *Connoisseur*, No. 2, we read:

"This Coffee-house is every night crowded with men of parts. Almost every one you meet is a polite scholar and a wit. Jokes and *bon-mots* are echoed from box to box: every branch of literature is critically examined, and the merit of every production of the press, or performance of the theatres, weighed and determined." Foote and Garrick often met here. Garrick, in early life, had been in the wine-trade, and had supplied the Bedford with wine; he was thus described by Foote as living in Durham-yard, with three quarts of vinegar in the cellar, calling himself a wine-merchant. Churchill's quarrel with Hogarth began at the shilling-rubber club, in the Bedford parlour: "Never," says Walpole, "did two angry men of their abilities throw mud with less dexterity." Young Collins, the poet, who came to town in 1744 to seek his fortune, made his way to the Bedford, where Foote was supreme among the wits and critics. Like Foote, Collins was fond of fine clothes, and walked about with a feather in his hat, very unlike a young man who had not a single guinea he could call his own. A letter of the time tells us that "Collins was an acceptable companion everywhere; and among the gentlemen who loved him for a genius may be reckoned the Doctors Armstrong, Barrowby, Hill, Messrs. Quin, Garrick, and Foote, who frequently took his opinion upon their pieces before they were seen by the public. He was particularly noticed by the geniuses who frequented the Bedford and Slaughter's Coffee-houses." (*Memoir*, by Moy Thomas.) In 1754, Foote was supreme in his critical corner at the Bedford. The regular frequenters of the room strove to get admitted to his party at supper; and others got as nearly as they could to the table, as the only humour flowed from Foote's tongue. The Bedford was now in its highest repute: Dr. Barrowby was the great newsmonger of the day.

Of two houses in the Piazza, built for Francis, Earl of Bedford, we obtain some minute information from the lease granted in 1634 to Sir Edmund Verney, Knight Marshal to King Charles I.; these two houses being just then erected as part of the Piazza. There are also included in the lease the "yards, stables, coachhouses, and gardens now layd, or hereafter to be layd, to the said messuages," which description of the premises seems to identify them as the two houses at the southern end of the Piazza, adjoining to Great Russell-street, and now occupied as the Bedford Coffee-house and Hotel. They are either the same premises, or they immediately adjoin the premises, occupied a century later as the Bedford Coffee-house. (Mr. John Bruce, *Archæologia*, xxxv. 195.) The lease contained a minute specification of the landlord's fittings and customary accommodations of what were then some of the most fashionable residences in the metropolis. In the attached schedule is the use of the wainscot, enumerating separately every piece of wainscot on the premises. The tenant is bound to keep in repair the "Portico Walke" underneath the premises; he is at all times to have "ingresse, egressse and regressse" through the Portico Walk; and he may "expel, put, or drive away out of the said walke any youth or other person whatsoever which shall eyther play or be in the said Portico Walke in offence or disturbance to the said Sir Edmund Verney."—*Club Life of London*, vol. ii., p. 81, 1866.

At the present Bedford Coffee-house, or Hotel, the Beef-steak Society met before their removal to the Lyceum Theatre.

BRITISH COFFEE-HOUSE, Cockspur-street, "long a house of call for Scotchmen," has been fortunate in its landladies. In 1759, it was kept by the sister of Bishop Douglas, so well known for his works against Lauder and Bower, which may explain its Scottish fame. At another period it was kept by Mrs. Anderson, described in Mackenzie's *Life of Home* as "a woman of uncommon talents, and the most agreeable conversation."

BUTTON'S COFFEE-HOUSE, "over against Tom's, in Covent-garden," was established in 1712, and thither Addison transferred much company from Tom's. In July, 1713, a Lion's Head, "a proper emblem of knowledge and action, being all head and paws," was set up at Button's, in imitation of the celebrated Lion at Venice, to receive letters and papers for the *Guardian*. Here the wits of that time used to assemble; and among them, Addison, Pope, Steele, Swift, Arbuthnot, Count Viviani, Savage, Budgell, Philips, Davenant, and Colonel Brett; and here it was that Philips hung up a birchen rod, with which he threatened to chastise Pope for "a biting epigram." Button, the master of the Coffee-house, had been a servant in the Countess of Warwick's family; and it is said that when Addison suffered any vexation from the Countess, he withdrew the company from Button's house. Just after Queen Anne's accession, Swift made acquaintance with the leaders of the wits at Button's. Ambrose Philips refers to him as the strange clergyman whom the frequenters of the Coffee-house had observed for some days. He knew no one, no one knew him. He would lay his hat down on a table, and walk up and down at a brisk pace for half an hour without speaking to any one. Then he would snatch up his hat, pay his money at the bar, and walk off, with-

out having opened his lips. He was called in the room "the mad parson." Here Swift first saw Addison.

Sir Walter Scott gives, upon the authority of Dr. Wall, of Worcester, who had it from Dr. Arbuthnot himself, the following anecdote, less coarse than the version usually told. Swift was seated at the fire at Button's: there was sand on the floor of the coffee-room, and Arbuthnot offered him a letter which he had been just addressing, saying at the same time—"There, sand that." "I have no sand," answered Swift; "but I can help you to a little gravel." This he said so significantly, that Arbuthnot hastily snatched back the letter, to save it from the fate of the capital of Lilliput.

At Button's the leading company, particularly Addison and Steele, met in large flowing flaxen wigs. Sir Godfrey Kneller, too, was a well-dressed frequenter. The master died in 1731, when in the *Daily Advertiser*, October 5, appeared the following:—"On Sunday morning, died, after three days' illness, Mr. Button, who formerly kept Button's Coffee-house, in Russell-street, Covent-garden; a very noted house for wits, being the place where the Lyon produced the famous *Talters* and *Spectators*, written by the late Mr. Secretary Addison and Sir Richard Steele, Knt., which works will transmit their names with honour to posterity." Mr. Cunningham found in the vestry-books of St. Paul's, Covent-garden:—"1719, April 16. Received of Mr. Daniel Button, for two places in the pew No. 18, on the south side of the north Isle, 2l. 2s." J. T. Smith states that Button's name appears in the books of St. Paul's as receiving an allowance from the parish. (See *Streets of London*, Part I. p. 159.)

Button's continued in vogue until Addison's death and Steele's retirement into Wales, after which the house was deserted; the coffee-drinkers went to the Bedford Coffee-house, the dinner-parties to the Shakspeare. In 1720, Hogarth mentions "four drawings in Indian ink" of the characters at Button's Coffee-house. In these were sketches of Arbuthnot, Addison, Pope, (as it is conjectured,) and a certain Count Viviani, identified years afterwards by Horace Walpole, when the drawings came under his notice. They subsequently came into Ireland's possession.—(Sala's vivid *William Hogarth*, *Cornhill Magazine*, vol. i. 428.) Jemmy Maclaime, or McClean, the fashionable highwayman, was a frequent visitor at Button's, which subsequently became a private house; and here Mrs. Inchbald lodged, probably, after the death of her sister, for whose support she practised such noble and generous self-denial. Phillips, the publisher, offered her a thousand pounds for her Memoirs, which she declined.

The memorable *Lion's Head* is tolerably well carved: through the month the letters were dropped into a till at Button's; and beneath were inscribed these two lines from Martial:—

"Cervantur magnis isti Cervicibus ungues:  
Non nisi delictâ pascitur ille ferâ."

The head was designed by Hogarth, and is etched in Ireland's *Illustrations*. Lord Chesterfield is said to have once offered for the Head fifty guineas. From Button's it was removed to the Shakspeare Head Tavern, under the Piazza, kept by a person named Tomkyns; and in 1751, was, for a short time, placed in the Bedford Coffee-house immediately adjoining the Shakspeare, and there employed as a letter-box by Dr. John Hill, for his *Inspector*. In 1769, Tomkyns was succeeded by his waiter, Campbell, as proprietor of the tavern and *Lion's head*, and by him the latter was retained until Nov. 8, 1804, when it was purchased by Mr. Charles Richardson, of Richardson's Hotel, for 17l. 10s., who also possessed the original sign of the Shakspeare Head. After Mr. Richardson's death in 1827, the *Lion's Head* devolved to his son, of whom it was bought by the Duke of Bedford, and deposited at Woburn Abbey, where it still remains.—Communicated by Mr. John Green.—See also *Guardian*, Nos. 85, 93, 114, 142.

CHAPTER COFFEE-HOUSE, 50, Paternoster-row, is mentioned in No. 1 of the *Connoisseur*, January 31, 1754, as the resort of "those encouragers of literature, and not the worst judges of merit, the booksellers." Chatterton dates several letters from the *Chapter*. Goldsmith frequented the coffee-room, and always occupied one place, which, for many years after, was the seat of literary honour there. The Chapter had its leather token.

Alexander Stephens left some reminiscences of the many literati and politicians who frequented the Chapter from 1797 to 1805. The box in the north-east corner was called the *Witenagemot*, and was occupied by the "Wet Paper Club." Here assembled Dr. Buchan, author of *Domestic Medicine*; Dr. Berdmore, Master of the Charter-house; Walker, the rhetorician; and Dr. Towers, the political writer; Dr. George Fordyce, and Dr. Gower of "the Middlesex," who, with Buchan, prescribed the Chapter punch; Robinson, King of the Booksellers, and his brother John; Joseph Johnson, the friend of Priestley and Paine, and Cowper and Fuseli; Alexander Chalmers, the workman of the Robinsons; the two Parrys, of the *Courier*, then the organ of Jacobinism; Lowndes, the electrician; Dr. Busby, the writer on music; Jacob, an Alderman and M.P.; Waithman, then Common Councilman; Mr. Blake, the banker, of Lombard-street; Mr. Patterson, a North Briton, who taught Pitt mathematics; Alexander Stephens; and Phillips (afterwards Sir Richard), who here recruited for contributors to his *Monthly Magazine*. The *Witenagemot* lost its literary celebrities; but the *Chapter* maintained its reputation for good punch and coffee, scarce pamphlets, and liberal supply of town and country newspapers.

Mrs. Gaskell has left the following account of the Chapter in 1848 :—

"It latterly became the tavern frequented by university men, and country clergymen, who were up in London for a few days, and, having no private friends or access into society, were glad to learn what was going on in the world of letters, from the conversation which they were sure to hear in the coffee-room. It was a place solely frequented by men; I believe there was but one female servant in the house. Few people slept there: some of the stated meetings of the trade were held in it, as they had been for more than a century; and occasionally country booksellers, with now and then a clergyman, resorted to it. In the long, low, dingy room upstairs, the meetings of the trade were held." The Chapter is now a modernized public-house.

CHILD'S COFFEE-HOUSE, St. Paul's Churchyard, was one of the *Spectator's* houses, who smoked a pipe here, and whilst he seemed attentive to nothing but the *Postman*, overheard the conversation of every table in the room. It was much frequented by the clergy, and Fellows of the Royal Society. Dr. Mead often came here. Child's was, in one respect, superseded by the Chapter, in Paternoster-row.

CLIFFORD-STREET COFFEE-HOUSE, corner of Bond-street, had its debating club. (See *ante* p. 245.) During a debate, the refreshment was porter, to a pot of which Canning compared the eloquence of Mirabeau, as empty and rapid as his patriotism—"foam and froth at the top, heavy and muddy within."

COCOA-TREE, 64, St. James's-street. (See COCOA-TREE CLUB, p. 246.)

DICK'S COFFEE-HOUSE (now a Tavern), 8, Fleet-street, near Temple Bar, was originally called Richard's, from its landlord, Richard Torver, or Turver, in 1680. Here Steele takes the "Twaddlers," in the *Tatler*, Nos. 86 and 132. The coffee-room was frequented by the poet Cowper, when he lived in the Temple. The room retains its olden panelling, and the staircase its original balusters.

"In 1737, Dick's was kept by a Mrs. Yarrow and her daughter, who were the reigning toasts with the frequenters, and were supposed to be ridiculed in the comedy of 'The Coffee-house,' by the Rev. James Miller. This was stoutly denied by the author: but the engraver having inadvertently fixed upon Dick's Coffee-house as the frontispiece scene, the Templars, with whom the ladies were great favourites, became by his accident so confirmed in their suspicions, that they united to damn the piece, and even extended their resentment to everything suspected to be this author's for a considerable time after."—*Biographia Dramatica*.

The Coffee-house was, wholly or in part, the original printing-office of Richard Tottel, law-printer to Edward VI., Queens Mary and Elizabeth; the premises were attached to No. 7, Fleet-street, which bore the sign of "The Hand and Starre," where Tottel lived, and published the law and other works he printed. No. 7 was subsequently occupied by Jaggard and Joel Stephens, eminent law-writers, temp. Geo. I.—III.; and at the present day the house is most appropriately occupied by Messrs. Butterworth, who follow the occupation Tottel did in the days of Edward VI., being law-publishers to Queen Victoria; and they possess the original leases, from the earliest grant, in the reign of Henry VIII., to the period of their own purchase.

GEORGE'S COFFEE-HOUSE (now a hotel), 213, Strand, near Essex-street, is mentioned by Foote, in his *Life of A. Murphy*, as an evening meeting-place of the town wits of 1751. Shenstone was a frequenter of George's, where, for a shilling subscription, he read "all pamphlets under a three shillings' dimension." It was closed in 1843.

GRECIAN COFFEE-HOUSE, Devereux-court, Strand, was originally kept by one Constantine, a Grecian. From this house Steele proposed to date his learned articles in the *Tatler*; it is mentioned in No. 1 of the *Spectator*; and it was much frequented by Goldsmith and the Irish and Lancashire Templars. The *Spectator's* face was very well known at the Grecian, "adjacent to the law." Occasionally it was the scene of learned discussion. Thus, Dr. King relates that one evening, two gentlemen, who were constant companions, were disputing here, concerning the accent of a Greek word. This dispute was carried to such a length, that the two friends thought proper to determine it by their swords: for this purpose they stepped into Devereux-court, where one of them (Dr. King thinks his name was Fitzgerald) was run through the body, and died on the spot. The Grecian was Foote's morning lounge. Here Goldsmith occasionally wound up his "Shoemaker's Holiday" with snpper. The house was also

frequented by Fellows of the Royal Society. The premises have, since 1843, been the "Grecian Chambers;" and over the door is the bust of Devereux, Earl of Essex.

GARRAWAY'S COFFEE-HOUSE, 3, Change-alley, Cornhill, had a threefold celebrity: tea was first sold in England here; it was a place of great resort in the time of the South Sea Bubble; and was throughout a house of great mercantile transactions. The original proprietor was Thomas Garway, tobacconist and coffee-man, the first who retailed tea, recommending it for the cure of all disorders; the following is the substance of his shop-bill:—

"Tea in England hath been sold in the leaf for six pounds, and sometimes for ten pounds the pound weight, and in respect of its former scarceness and dearness, it hath been only used as a regalia in high treatments and entertainments, and presents made thereof to princes and grandees till the year 1651. The said Thomas Garway did purchase a quantity thereof, and first publicly sold the said tea in leaf and drink, made according to the directions of the most knowing merchants and travellers into those Eastern countries; and upon knowledge and experience of the said Garway's continued care and industry in obtaining the best tea, and making drink thereof, very many noblemen, physicians, merchants, and gentlemen of quality, have ever since sent to him for the said leaf, and daily resort to his house in Exchange-alley, aforesaid, to drink the drink thereof; and to the end that all persons of eminence and quality, gentlemen, and others, who have occasion for tea in leaf, may be supplied, these are to give notice that the said Thomas Garway hath tea to sell from sixteen to fifty shillings per pound." (See the document entire in Ellis's *Letters*, series iv. 58.)

Ogilby, the compiler of the *Britannia*, had his standing lottery of books at Garway's from April 7, 1673, till wholly drawn off; and, in the *Journey through England*, 1722, Garraway's, Robins's, and Joe's, are described as the three celebrated Coffee-houses: the first, the people of quality, who have business in the City, and the most considerable and wealthy citizens, frequent; the second, the foreign banquiers, and often even foreign ministers; and the third, the buyers and sellers of stock. Wines were sold at Garraway's in 1673, "by the candle"—that is, by auction, while an inch of candle burns. Swift, in his "Ballad on the South Sea Scheme," 1721, did not forget this Coffee-house:—

"Meanwhile, secure on Garway's cliffs,  
A savage race by shipwrecks fed,  
Lie waiting for the founder'd skiffs,  
And strip the bodies of the dead."

The reader may recollect with what realistic power of incident and character Mr. E. M. Ward painted, some twenty years ago, the strange scene in the Alley; and his characteristic picture is, fortunately, placed in our National Gallery, as a lesson for all time. In the background is shown the Garraway's of 1720.

Dr. Radcliffe, who was a rash speculator, was usually planted at a table at Garraway's, to watch the turn of the market. One of his ventures was five thousand guineas upon one project. When he was told at Garraway's that it was all lost, "Why," said he, "'tis but going up five thousand pair of stairs more." "This answer," says Tom Brown, "deserved a statue."

Garraway's was long famous as a sandwich and drinking-room, for sherry, pale ale, and punch. Tea and coffee were also served. It is said that the sandwich-maker was occupied two hours in cutting and arranging the sandwiches before the day's consumption commenced. The large sale-room was an old-fashioned first-floor apartment, with a small rostrum for the seller, and a few commonly-grained settles for the buyers; there were also other sale-rooms. Here sales of drugs, mahogany, and timber were periodically held. Twenty or thirty property and other sales sometimes took place in a day. The walls and windows of the lower room were covered with auction placards.

The first Garway's Coffee-house was destroyed in the Great Fire; the house was rebuilt, and again burnt in the fire in Cornhill, in 1748; and again rebuilt, and finally closed August 18, 1866. The basement, used as wine-vaults, was ancient, of fourteenth and sixteenth century architecture, of ecclesiastical character, and had a piscina. It is remarkable that Garraway's, where tea was first sold, and the Angel, at Oxford, where coffee was first sold, were both taken down in 1866.—*Illustrated London News*.

GRAY'S-INN COFFEE-HOUSE, eastern corner of Gray's-inn Gate, Holborn: here were formerly held the Commissions *De Lunatico inquirendo*. It was closed in 1865.

ST. JAMES'S COFFEE-HOUSE, the famous Whig Coffee-house from the time of Queen

Anne till late in the reign of George III. It was the last house but one on the south-west corner of St. James's-street, and is thus mentioned in No. 1 of the *Tatler*: "Foreign and domestic news you will have from St. James's Coffee-house." It occurs also in the *Spectator*. The St. James's was much frequented by Swift; letters for him were left there. Here Swift christened the coffee-man Elliot's child, "when," says he, "the rogue had a most noble supper, and Steele and I sat amongst some scurvy company over a bowl of punch." Lady Mary Wortley Montague's *Town Eclogues* were first read over at the St. James's Coffee-house. From its proximity to the Palace, it was much visited by the Guards.

But the St. James's is more memorable as the house where originated Goldsmith's celebrated poem, *Retaliation*. The poet belonged to a temporary association of men of talent, some of them members of the Club, who dined together occasionally here. At these dinners he was generally the last to arrive. On one occasion, when he was later than usual, a whim seized the company to write epitaphs on him, as "the late Dr. Goldsmith," and several were thrown off in a playful vein. The only one extant was written by Garrick, and has been preserved, very probably, by its pungency:—

"Here lies poet Goldsmith, for shortness called Noll;  
He wrote like an angel, but talked like poor Poll."

Goldsmith did not relish the sarcasm, especially coming from such a quarter; and, by way of *retaliation*, he produced the famous poem, of which Cumberland has left a very interesting account, but which Mr. Forster, in his *Life of Goldsmith*, states to be "pure romance." The poem itself, however, with what was prefixed to it when published, sufficiently explains its own origin.

The St. James's was closed about 1806, and a large pile of buildings looking down Pall Mall erected on its site. The globular oil-lamp was first exhibited by its inventor, Michael Cole, at the door of the St. James's Coffee-house, in 1709: in the patent he obtained, it is mentioned as "a new kind of light."

JAMAICA COFFEE-HOUSE, 1, St. Michael's-alley, Cornhill, is noted for the accuracy and fulness of its West India intelligence. The subscribers are merchants trading with Madeira and the West Indies. It is the best place for information as to the mail-packets on the West India station, or the merchant vessels making these voyages.

JERUSALEM COFFEE-HOUSE, 1, Cowper's-court, Cornhill, is one of the oldest of the City news-rooms, and is frequented by merchants and captains connected with the commerce of China, India, and Australia.

"The subscription-room is well furnished with files of the principal Canton, Hong Kong, Macao, Penang, Singapore, Calcutta, Bombay, Madras, Sydney, Hobart Town, Launceston, Adelaide, and Port Philip papers, and Prices Current; besides shipping-lists and papers from the various intermediate stations or ports touched at, as St. Helena, the Cape of Good Hope, &c. The books of East India shipping include arrivals, departures, casualties, &c. The full business is between two and three o'clock, P.M. In 1845, John Tawell, the Slough murderer, was captured at the Jerusalem, which he was in the habit of visiting, to ascertain information of the state of his property in Sydney."—*The City*, 2nd edit., 1848.

JONATHAN'S, Change-alley Coffee-house, is described in the *Tatler*, No. 38, as "the general mart of stock-jobbers;" and the *Spectator*, No. 1, tells us that he "sometimes passes for a Jew in the assembly of stock-jobbers at Jonathan's." This was the rendezvous where gambling of all sorts was carried on; notwithstanding a formal prohibition against the assemblage of the jobbers, issued by the City of London, which prohibition continued unrepealed until 1825. Mrs. Centlivre, in her comedy of *A Bold Stroke for a Wife*, has a scene from Jonathan's at the above period: while the stock-jobbers are talking, the coffee boys are crying, "Fresh coffee, gentlemen, fresh coffee! Bohea tea, gentlemen!"

LANGBOURN COFFEE-HOUSE, Ball-alley, Lombard-street, rebuilt in 1850, has a broiling-stove in the coffee-room, whence chops and steaks are served hot from the gridiron; and here is a wine and cigar room, embellished in handsome old French taste.

LLOYD'S, Royal Exchange, celebrated for its priority of shipping intelligence, and

its marine insurance, originated with one Lloyd, who kept a coffee-house in Lombard-street. One of the apartments in the Exchange is fitted up as Lloyd's Coffee-room. (See EXCHANGES.)

LONDON COFFEE-HOUSE, Ludgate-hill (now a hotel and tavern), was opened May, 1731, as "a punch house, Dorchester Beer, and Welsh Ale Warehouse, where the finest and best old Arrack, Rum, and French Brandy is made into Punch." In front of the London Coffee-house, immediately west of St. Martin's Church, stood Ludgate; and on the site of the church Wren found the monument of a Roman soldier of the Second Legion, which is preserved in the Arundelian Collection. The London Coffee-house is noted for its publishers' sales of stock and copyrights. It was within the rules of the Fleet Prison: and in the Coffee-house are "locked up" for the night such juries from the Old Bailey Sessions as cannot agree upon verdicts. The house was long kept by the grandfather and father of Mr. John Leech, the celebrated artist. At the bar of the London Coffee-house was sold Rowley's British Cephalic Snuff. A singular incident occurred here many years since; Mr. Brayley, the topographer, was present at a party, when Mr. Broadhurst, the famous tenor, by singing a high note, caused a wine-glass on the table to break, the bowl being separated from the stem.

MAN'S COFFEE-HOUSE, in Scotland-yard, near the water-side, took its name from the proprietor, Alexander Man, and was sometimes known as Old Man's, or the Royal Coffee-house, to distinguish it from Young Man's and Little Man's minor establishments in the neighbourhood.

MILES'S COFFEE-HOUSE, New Palace-yard, Westminster, was the place of meeting of the noted Rota Club. (See CLUBS, p. 255.)

MUNDAY'S COFFEE-HOUSE, Maiden-lane, was a noted sporting resort in the days of Captain England, Dennis O'Kelly, Hull, the Clarkes, and others of turf notoriety. It was one of Sheridan's retreats, secure from his creditors.

NANDO'S COFFEE-HOUSE was the house at the east corner of Inner Temple-lane, 17, Fleet-street, and next door to the shop of Bernard Lintot, the bookseller; though it has been by some confused with Groom's house, next door. Nando's was the favourite haunt of Lord Thurlow, before he dashed into law practice. At this Coffee-house a large attendance of professional loungers was attracted by the fame of the punch and the charms of the landlady, which, with the small wits, were duly admired by and at the bar. The house, formerly Nando's, was also the depository of Mr. Salmon's Waxwork. It has been for many years a hair-dresser's. It is inscribed, "Formerly the Palace of Henry VIII. and Cardinal Wolsey." But the structure is of the time of James I., when it was the Council Office of the Duchy of Cornwall; an entry in 1619 is from "Prince's Council Chamber, Fleet-street."

NEW ENGLAND AND NORTH AND SOUTH AMERICAN COFFEE-HOUSE, 59 and 60, Threadneedle-street, had a subscription-room, with newspapers from every quarter of the globe. Here the first information could be obtained of the arrival and departure of steamers, packets, and traders engaged in the commerce of America, whether at Montreal and Quebec, or Boston, Halifax, and New York. The heads of the chief American and continental firms were on the subscription-list, and the representatives of Barings, Rothschilds, and other wealthy establishments, attended the room as regularly as 'Change; as did also American captains, and the "City Correspondents" of the morning and evening press. From 300 to 400 files of newspapers were kept here, ranging from America to the East or West Indies, thence to Australia, the Havana, France, Germany, Holland, Russia, Spain, and Portugal. (Abridged from *The City*, 2nd edit.)

Adjoining was the Cock Tavern, with a large soup-room, named after the Cock, which faced the north gate of the old Royal Exchange, and was long celebrated for the excellence of its soups, served in silver. This house was taken down in 1841; when, in a claim for compensation made by the proprietor, the trade in three years was proved to have been 344,720 basins of various soups—viz., 166,240 moek turtle, 3920 giblet, 59,360 ox-tail, 31,072 bouilli, 84,123 gravy and other soups: sometimes 500 basins of soup were sold in a day.

PEELE'S, 177 and 178, Fleet-street, east corner of Fetter-lane, was one of the coffee-houses of the Johnsonian period; and here was long preserved a portrait of Dr.

Johnson, on the keystone of a chimney-piece, stated to have been painted by Sir Joshua Reynolds. Peele's was noted for its files of newspapers from these dates: *Gazette*, 1759; *Times*, 1780; *Morning Chronicle*, 1773; *Morning Post*, 1773; *Morning Herald*, 1784; *Morning Advertiser*, 1794. Peele's is now a tavern and hotel.

PERCY COFFEE-HOUSE, the, Rathbone-place; Oxford-street, no longer exists; but it will be kept in recollection for its having given name to one of the most popular publications, of its class, in our time, namely, the *Percy Anecdotes*, "by Sholto and Reuben Percy, Brothers of the Benedictine Monastery of Mont Bengier," in 44 parts, commencing in 1820. So said the title-pages; but the names and the locality were *supposé*. Reuben Percy was Thomas Byerley, who died in 1824; Sholto Percy was Joseph Clinton Robertson, who died in 1852. The name of the collection of *Anecdotes* was not taken, as at the time supposed, from the popularity of the *Percy Reliques*, but from the Percy Coffee-house, where Byerley and Robertson were accustomed to meet to talk over the joint work.

PIAZZA COFFEE-HOUSE, the, was opened in that portion of the Piazza houses in Covent-garden which is now the Tavistock Hotel. Here Macklin fitted up a large Coffee-room, or theatre for oratory; a three-shilling ordinary, and a shilling lecture: he presided at the dinner-table, and carved for the company, after which he played a sort of "Oracle of Eloquence." Fielding has happily sketched him in his *Voyage to Lisbon*: "Unfortunately for the fishmongers of London, the Dory only resides in the Devonshire seas; for could any of this company only convey one to the Temple of Luxury under the Piazza, where Macklin, the high priest, daily serves up his rich offerings, great would be the reward of that fishmonger."

Foote, in his fun upon Macklin's Lectures, took up his notion of applying Greek tragedy to modern subjects, and the squib was so successful, that Foote cleared by it 500*l.* in five nights, while the great Piazza Coffee-room in Covent-garden was shut up, and Macklin in the *Gazette* as a bankrupt. Eastward was the Piazza Coffee-house, much frequented by Sheridan and John Kemble; and here is located the well-known anecdote told of Sheridan's coolness during the burning of Drury-lane Theatre, in 1809. It is said that as he sat at the Piazza, during the fire, taking some refreshment, a friend of his having remarked on the philosophical calmness with which he bore his misfortune, Sheridan replied: "A man may surely be allowed to take a glass of wine *by his own fireside*." The Piazza façade and its interior were of Gothic design: the house has been taken down, and in its place is built the Floral Hall, after the Crystal Palace model, thus breaking the continuity of Inigo Jones's arcade.

RAINBOW COFFEE-HOUSE (now a tavern), 15, Fleet-street, by the Inner Temple Gate, was the second Coffee-house opened in London, and had its token-money:—

"JAMES FARR, 1666. A Rainbow. *R. IN FLEET-STREET.* In the centre, HIS HALFPENNY. It is well known that James Farr kept the Rainbow, in Fleet-street, at the time of the Great Fire, the very year of which is marked on this token. Farr was a barber; and in the year 1657 was presented by the Inquest of St. Dunstan's-in-the-West for making and selling 'a sort of liquor called "coffee," whereby in making the same he annoyeth his neighbours by evill smells; and for keeping of fire for the most part night and day, whereby his chimney and chamber hath been set on fire, to the great danger and afflictment of his neighbours.'"

However, Farr was not ousted; he probably promised reform, or amended the alleged annoyance: he remained at the Rainbow, and rose to be a person of eminence and repute in the parish. He issued the above token, date 1666—an arched rainbow based on clouds, doubtless, from the Great Fire—to indicate that with him all was yet safe, and the Rainbow still radiant. There is one of his tokens in the Beaufoy collection, at Guildhall, and so far as is known to Mr. Burn, the Rainbow does not occur on any other tradesman's token. The house was let off into tenements: books were printed here at this very time "for Samuel Speed, at the sign of the Rainbow, near the Inner Temple Gate, in Fleet-street." The Phoenix Fire Office was established here about 1682. Hatton, in 1708, evidently attributed Farr's nuisance to the *coffee itself*, saying: "Who would have thought London would ever have had three thousand such nuisances, and that coffee would have been (as now) so much drunk by the best of quality, and physicians?" The nuisance was in Farr's chimney and carelessness, not

in the coffee. The *Spectator*, No. 16, notices some gay frequenters of the Rainbow: "I have received a letter desiring me to be very satirical upon the little muff that is now in fashion; another informs me of a pair of silver garters, buckled below the knee, that have lately been seen at the Rainbow Coffee-house, in Fleet-street." Mr. Moncrieff, the dramatist, used to tell that about 1780 this house was kept by his grandfather, Alexander Moncrieff, when it retained its original title of "The Rainbow Coffee-house." It has vaulted cellars, excellent for keeping stout; the old coffee-room originally had a lofty bay-window at the south end, looking into the Temple; in the bay was the large table for the elders. The room was separated by a glazed partition from the kitchen, where was a clock with a large wooden dial. The house has long been a tavern: all the old rooms have been swept away, and a large and lofty dining-room erected in their place. There are views of the old entrance to the Rainbow in Hughson and Malcolm's *London*, 1807 and 1808.

SALTERO'S (DON) COFFEE-HOUSE, 18, Cheyne-walk, Chelsea, was opened by a barber named Salter, in 1695. Sir Hans Sloane, whose valet Salter had been, contributed some of the refuse gimcracks of his own collection; and Vice-Admiral Munden, who had been long on the coast of Spain, named the keeper of the house *Don Saltero*, and his coffee-house and museum, *Don Saltero's*. Steele, in the thirty-fourth number of the *Tatler*, describes Salter as "carrying on the avocations of barber and dentist. You see the barber in *Don Quixote* is one of the principal characters in the history, which gave me satisfaction on the doubt why *Don Saltero* writ his name with a Spanish termination. Ten thousand were gimcracks round the room, and on the ceiling; and a sage of thin and meagre countenance, of that sort which the ancients call 'gingivister,' in our language, 'tooth-drawers.'" Among the curiosities presented by Admiral Munden was a coffin, containing the body or relics of a Spanish saint, who had wrought miracles; also, "a straw hat, which," says Steele, "I know to be made by Madge Peskad, within three miles of Bedford; and he tells you 'It is Pontius Pilate's wife's chambermaid's sister's hat.'" The Don was famous for his punch and his skill on the fiddle; he also drew teeth, and wrote verses; he described his museum in several stanzas, one of which is—

"Monsters of all sorts here are seen:  
Strange things in nature as they grew so;  
Some relics of the Sheba queen,  
And fragments of the fam'd Bob Crusoe."

Don Saltero's proved very attractive as an exhibition, and drew crowds to the Coffee-house. A Catalogue was published, of which were printed more than forty editions. Smollett, the novelist, was among the donors. The edition of 1760 comprehended the following rarities:—

Tigers' tusks; the Pope's candle; the skeleton of a Guinea-pig; a fly-cap monkey; a piece of the true Cross; the Four Evangelists' heads cut on a cherry-stone; the King of Morocco's tobacco-pipe; Mary Queen of Scots' pincushion; Queen Elizabeth's prayer-book; a pair of nun's stockings; Job's ears, which grew on a tree; a frog in a tobacco-stopper; and five hundred more odd relics! The Don had a rival, as appears by "A Catalogue of the Rarities to be seen at Adams's, at the Royal Swan, in Kingsland-road, leading from Shoreditch Church, 1756." Mr. Adams exhibited, for the entertainment of the curious, "Miss Jenny Cameron's shoes; Adam's eldest daughter's hat; the heart of the famous Bess Adams, that was hanged at Tyburn with Lawyer Carr, January 18, 1736-7; Sir Walter Raleigh's tobacco-pipe; Vicar of Bray's clogs; engine to shell green peas with; teeth that grew in a fish's belly; Black Jack's ribs; the very comb that Abraham combed his son Isaac and Jacob's head with; Wat Tyler's spurs; rope that cured Captain Lowry of the head-ach, ear-ach, tooth-ach, and belly-ach; Adam's key of the fore and back door of the Garden of Eden;" &c. &c. These are only a few out of five hundred others equally marvellous.

In Dr. Franklin's *Life* we read:—"Some gentlemen from the country went by water to see the College, and Don Saltero's Curiosities, at Chelsea." These were shown in the coffee-room till August, 1799, when the collection was mostly sold or dispersed; a few gimcracks were left until about 1825, when we were informed on the premises, they were thrown away! The house was taken down in 1866. (See CHELSEA, p. 90.)

SAM'S COFFEE-HOUSE, in Exchange-alley; and in Ludgate-street. The latter is mentioned in *State Poems*, 1697 and 1703; and in 1722 there were two large mulberry-trees growing in a little yard in the rear of the house in Ludgate-street.

SERLE'S COFFEE-HOUSE, Carey-street, is thus mentioned in No. 49 of the *Spectator*: "I do not know that I meet in any of my walks, objects which move both my spleen and laughter so effectually as those young fellows at the Grecian, Squire's, Serle's, and all other Coffee-houses adjacent to the Law, who rise for no other purpose but to publish their laziness."

SLAUGHTER'S COFFEE-HOUSE, famous as the resort of painters and sculptors, in the last century, was situated at the upper end of the west side of St. Martin's-lane, three doors from Newport-street. Its first landlord was Thomas Slaughter, 1692. A second Slaughter's (New Slaughter's) was established in the same street about 1760, when the original establishment adopted the name of "Old Slaughter's," by which designation it was known till within a few years of the final demolition of the house to make way for the new avenue between Long-acre and Leicester-square, formed 1843-44. For many years previous to the streets of London being completely paved, "Slaughter's" was called "The Coffee-house on the Pavement." Besides being the resort of artists, Old Slaughter's was the house of call for Frenchmen. Hogarth was a constant visitor here: he lived at the Golden Head, on the eastern side of Leicester-fields, in the northern half of the Sablonière Hotel. Roubiliac was often to be found at Slaughter's; and young Gainsborough and Cipriani; Jervis and Hayman met here, and seldom parted till daylight. Wilkie, in early life, was the last dropper-in here for a dinner; and Haydon was often his companion. J. T. Smith refers to Slaughter's as "formerly the rendezvous of Pope, Dryden, and other wits." Thither came Ware, the architect of Chesterfield House; also Gwynn, who competed with Mylne for Blackfriars Bridge; and Gravelot, who kept a Drawing-school in the Strand. Hudson, who painted the Dilettanti portraits; M'Ardell, the mezzotinto-scraper; and Luke Sullivan, the engraver of Hogarth's March to Finchley, also frequented Old Slaughter's; likewise Theodore Gardell, the portrait-painter, who was executed for the murder of his landlady; and Old Moser, keeper of the Drawing-academy in Peter's-court. Richard Wilson, the landscape painter, was not a regular customer here. Parry, the Welsh harper, though totally blind, was one of the first draught-players in England, and occasionally played with the frequenters of Old Slaughter's; and here, in consequence of a bet, Roubiliac introduced Nathaniel Smith (father of John Thomas), to play at draughts with Parry, when Smith won. Rawle, the inseparable companion of Capt. Grose, the antiquary, came often to Slaughter's; as did also Collins, the young poet.

SMYRNA COFFEE-HOUSE, Pall Mall, is frequently alluded to by the writers of Queen Anne's reign; and was one of the most celebrated of the West-end houses. Prior and Swift were among its most distinguished frequenters; its "seat of learning," and "cluster of wise heads." Prior and Swift were much together at the Smyrna; we read of their sitting there two hours, "receiving acquaintance." It seemed also to be a place to talk politics. Subscriptions were received there by Thomson, for publishing his *Four Seasons*; with a *Hymn on their Succession*." We find the Smyrna in a list of Coffee-houses, in 1810.

SOMERSET COFFEE-HOUSE, 162, Strand, has a literary association, from the Letters of Junius having been sometimes left at the bar.

SQUIRE'S COFFEE-HOUSE was in Fulwood's-rents, Holborn, running up to Gray's Inn, and described by Strype as "a place of good resort, and taken up by coffee-houses, ale-houses, and houses of entertainment;" among which were the Castle Tavern and the Golden Griffin Tavern. Here was John's, one of the earliest Coffee-houses; and adjoining Gray's-inn-gate, a deep-coloured red brick house, once Squire's Coffee house, kept by Squire, who died in 1717. The house is very roomy; it has been handsome, and has a wide staircase.

Squire's was one of the receiving-houses of the *Spectator*: in No. 260, January 8, 1711-12, he accepts Sir Roger de Coverley's invitation to "smoke a pipe with him over a dish of coffee at Squire's. As I love the old man, I take delight in complying with everything that is agreeable to him, and accordingly waited on him to the Coffee-house, where his venerable figure drew upon us the eyes of the whole room. He had no sooner seated himself at the upper end of the high table, but he called for a clean pipe, a paper of tobacco, a dish of coffee, a wax candle, and the *Supplement* (a periodical paper of that time), with such an air of cheerfulness and good humour, that all the boys in the coffee-room (who seemed to take pleasure in serving him) were at once employed on his several errands, insomuch that nobody else could come at a dish of tea until the Knight had got all his conveniences about him."

Gray's-inn Walks, to which the Rents led, across Field-court, were then a fashionable promenade; and here Sir Roger could "clear his pipes in good air;" for scarcely a house intervened thence to Hampstead.

TOM'S COFFEE-HOUSE, Birchin-lane, Cornhill, though in the main a mercantile resort, acquired some celebrity from its having been frequented by Garrick, who, to keep up an interest in the City, appeared here about twice in a winter at 'Change time, when it was the rendezvous of young merchants. Hawkins says:—"After all that has been said of Mr. Garrick, envy must own that he owed his celebrity to his merit; and yet of that himself seemed so diffident, that he practised sundry little but innocent arts to insure the favour of the public:" yet he did more. When a rising actor complained to Mrs. Garrick that the newspapers abused him, the widow replied, "You should write your own criticisms; David always did." Tom's was also frequented by Chatterton, as a place "of the best resort;" here was first established "the London Chess-Club." (See CHESS-CLUBS, p. 95.) The premises were long held on lease from Lord Cowper, at a rent of 150*l.* per annum, but had been sublet at 1000*l.*

TOM'S COFFEE-HOUSE, Devereux-court, Strand, was much resorted to by men of letters; among whom were Dr. Birch, who wrote the *History of the Royal Society*; also Akenside, the poet; and there is in print a letter of Pope's, addressed to Fortescue, his "counsel learned in the law," at this Coffee-house.

TOM'S COFFEE-HOUSE, 17, Russell-street, Covent-garden, opposite Button's, was kept by Thomas West, and was in the reign of Queen Anne, and more than half a century after, a celebrated resort. (See CLUBS, p. 257.)

TOM KING'S COFFEE-HOUSE was one of the old night-houses of Covent-garden Market: it was a rude shed immediately beneath the portico of St. Paul's Church, and was one "well known to all gentlemen to whom beds are unknown." Fielding, in one of his prologues, says: "What rake is ignorant of King's Coffee-house?" It is in the background of Hogarth's print of "Morning," where the prim maiden lady, walking to church, is soured with seeing two fuddled *beaux* from King's Coffee-house caressing two frail women. At the door is a drunken row, in which swords and cudgels are the weapons. Harwood's *Alumni Etonenses*, p. 293, in the account of the boys elected from Eton to King's College, contains this entry: "A.D. 1713, Thomas King, born at West Ashton, in Wiltshire, went away scholar in apprehension that his fellowship would be denied him; and afterwards kept that Coffee-house in Covent-garden, which was called by his own name." Moll King was landlady after Tom's death: she was witty, and her house was much frequented, though it was little better than a shed. "Noblemen and the first *beaux*," said Stacie, "after leaving Court, would go to her house in full dress, with swords and bags, and in rich brocaded silk coats, and walked and conversed with persons of every description. She would serve chimney-sweepers, gardeners, and the market-people in common with her lords of the highest rank." Captain Laroon, an amateur painter of the time of Hogarth, who often witnessed the nocturnal revels at Moll King's, made a large and spirited drawing of the interior of her Coffee-house, which was at Strawberry Hill: it was bought for Walpole by his printer. There is also an engraving of the same room, which is extremely rare.

TURK'S HEAD COFFEE-HOUSE, Change-alley, established in 1662; the sign was Morat the Great, who figures as a tyrant in Dryden's *Aureng Zebe*. There is a token of this house with the Sultan's Head in the Beaufoy Collection. Another token, in the same collection, is of unusual excellence, probably by John Roettier. It has on the obverse, "Morat ye Great Men did mee call,—Sultan's Head;" reverse, "Where eare I came I conquered all.—In the field, Coffee, Tobacco, Sherbet, Tea, Chocolat, Retail in Exchange Alee." "The word 'tea,'" says Mr. Burn, "occurs on no other tokens than those issued from 'the Great Turk' Coffee-house, in Exchange-alley." In a newspaper of 1662, customers and acquaintances are invited the New Year's-day to the *Great Turk* new Coffee-house, in Exchange-alley, "where coffee will be free of cost." There was also a Sultan Morat's Head Coffee-house, which had a token, *rev.* "In *Barbican* formerly in *Pannyer Alley*."

TURK'S HEAD COFFEE-HOUSE, 142, in the Strand, was a favourite supping-

house with Dr. Johnson and Boswell, in whose *Life of Johnson* are several entries, commencing with 1763—"At night, Mr. Johnson and I supped in a private room at the Turk's Head Coffee-house, in the Strand. 'I encourage this house,' said he, 'for the mistress of it is a good civil woman, and has not much business.'" Another entry is—"We concluded the day at the Turk's Head Coffee-house very socially." And, August 3, 1673—"We had our last social meeting at the Turk's Head Coffee-house, before my setting out for foreign parts." The name was afterwards changed to "The Turk's Head, Canada and Bath Coffee-house," and lasted as a well-frequented tavern until the house was rebuilt, at the cost of 8000*l.* as "Wright's Hotel:" it is now an insurance office. The house has two stories below the level of the street.

WILL'S COFFEE-HOUSE,\* the predecessor of Button's, and even more celebrated than that Coffee-house, was so called from William Urwin, who kept it, and was the house on the north side of Russell-street at the corner of Bow-street—the corner house (rebuilt)—now occupied as a ham-and-beef shop, and numbered 21. Pepys, in his *Diary*, records his first visit to Will's, 3 Feb. 1663-4, "where Dryden the poet (I knew at Cambridge), and all the wits of the town, and Harris the player, and Mr. Hoole of our college," with "very witty and pleasant discourse." Ned Ward sarcastically calls it "the Wits' Coffee-house." Wycherley, Gay, and Dennis were frequenters. "It was Dryden who made Will's Coffee-house the great resort of the wits of his time." (*Pope and Spence*.) The room in which the poet was accustomed to sit was on the first floor; and his place was the place of honour by the fireside in the winter; and at the corner of the balcony, looking over the street, in fine weather; he called the two places his winter and his summer seat. This was called the dining-room floor in the last century. The company did not sit in boxes, as subsequently, but at various tables which were dispersed through the room. Smoking was permitted in the public room: it was then so much in vogue that it does not seem to have been considered a nuisance. Here, as in other similar places of meeting, the visitors divided themselves into parties; and we are told by Ward that the beaux and wits, who seldom approached the principal table, thought it a great honour to have a pinch out of Dryden's snuff-box. Tom Brown describes "a Wit and a Beau set up with little or no expense. A pair of red stockings and a sword-knot set up one, and peeping once a day in at Will's, and two or three second-hand sayings, the other."

Addison passed each day alike, and much in the manner that Dryden did. Dryden employed his morning in writing, dined *en famille*, and then went to Will's, "only he came home earlier o' nights." Pope, when very young, was impressed with such veneration for Dryden, that he persuaded some friends to take him to Will's Coffee-house, and was delighted that he could say that he had seen Dryden. Sir Charles Wogan, too, brought up Pope from the forest of Windsor, to dress *à la mode*, and introduce at Will's Coffee-house. Pope afterwards described Dryden as "a plump man with a down look, and not very conversible;" and Cibber remembered him "a decent old man, arbiter of critical disputes at Will's." Prior sings of—

"the younger Stiles,  
Whom Dryden pedagogues at Will's!"

Most of the hostile criticisms on his plays, which Dryden has noticed in his various prefaces, appear to have been made at his favourite haunt, Will's. Swift was accustomed to speak disparagingly of Will's, as in his *Rhapsody on Poetry*:—

"Be sure at Will's the following day  
Lie snug, and hear what critics say."

Swift thought little of the frequenters: he used to say that "the worst conversation he ever heard in his life was at Will's." In the first number of the *Tatler*, poetry is promised under the article of Will's Coffee-house. The place, however, changed after Dryden's time. "You used to see songs, epigrams, and satires in the hands of every man you met; you have now only a pack of cards; and instead of the

\* Will's Coffee-house first had the title of the Red Cow (says Sir Walter Scott), then of the Rose, and, we believe, is the same house alluded to in the pleasant story in the second number of the *Tatler*:—

"Supper and friends expect we at the Rose."

The Rose, however, was a common sign for houses of public entertainment.

cavils about the turn of the expression, the elegance of the style, and the like, the learned now dispute only about the truth of the game." The *Spectator* is sometimes seen "thrusting his head into a round of politicians at Will's, and listening with great attention to the narratives that are made in these little circular audiences." Although no exclusive subscription belonged to any of these, we find by the account which Colley Cibber gives of his first visit to Will's, in Covent-garden, that it required an introduction to this society not to be considered as an impertinent intruder. Will's was the open market for libels and lampoons. One Julian attended Will's, and dispersed among the crowds who frequented that place of gay resort copies of the lampoons which had been privately communicated to him by their authors.

After Dryden's death, in 1701, Will's continued for about ten years to be still the Wits' Coffee-house. Pope, it is well known, courted the correspondence of the town wits and Coffee-house critics.

WILL'S COFFEE-HOUSE, 7, Serle-street, Lincoln's-inn, was much frequented by the legal profession, and by actors and gay company when Portugal-street had its theatre. In the *Epicure's Almanac*, 1813, it is described as "a house of the first-class for turtle and venison, matured port, double-voyaged Madeira, and princely claret; wherewithal to wash down the dust of making law-books, and take out the inky blots from rotten parchment bonds." It no longer exists.

There are in the metropolis about 1000 Coffee-shops or Coffee-rooms; the establishment of the majority of which may be traced to the cheapening of coffee and sugar, and to the increase of newspapers and periodicals. About the year 1815, the London Coffee-shops did not amount to 20, and there was scarcely a Coffee-house where coffee could be had under 6*d.* a cup; it may now be had at Coffee-shops at from 1*d.* to 3*d.* Some of these shops have from 700 to 1600 customers daily; 40 copies of the daily newspapers are taken in, besides provincial and foreign papers, and magazines. Cooked meat is also to be had at Coffee-shops, at one of which three cwt. of ham and beef are sometimes sold weekly.

### COLLEGES.

ST. BARNABAS COLLEGE, Queen-street, Pimlico, consists of a church, schools, and residentiary house for the clergy, built 1846-50, in the Pointed Early English style, Cnudý, architect. The residentiary house is for clergymen who attend to the parochial duties of the district, minister in the church, teach in the schools, and superintend the twelve choristers. The schools were opened on St. Barnabas Day, 1847, and the church in 1850. (See CHURCHES, p. 151.) The freehold site of the College was given by the first Marquis of Westminster, and is in the poorest part of the district. The College was built by subscription, to which the Rev. W. J. E. Bennett, then incumbent of the district, contributed the bulk of his fortune, and the most zealous pastoral care. A "Home of Refuge," under the management of the clergy of the parish, is situated in the Commercial-road.—Davis's *Knightsbridge*, p. 253.

CHURCH OF ENGLAND METROPOLITAN TRAINING INSTITUTION, Highbury (late Highbury College), was instituted 1849, to train pious persons as masters and mistresses of juvenile schools connected with the Established Church, "upon principles Scriptural, Evangelical, and Protestant."

CHURCH MISSIONARY COLLEGE, the, Barnsbury-place, Upper Islington, is an important branch of the Church Missionary Society for Africa and the East; and here the students are trained for future missionaries. Among the early founders of this Society were Wilberforce, Scott, Cecil, Newton, Venn, and Pratt: it was chiefly matured at the "Eclectic Society" assembling then at the vestry of St. John's Chapel, Bedford-row. The annual cost of the College operations averages 100,000*l.*, or about 1000*l.* for every station. (See Low's *Charities of London*, pp. 412-13.)

CHEMISTRY, COLLEGE OF (ROYAL), 16, Hanover-square, was founded in 1845, for instruction in Practical Chemistry at a moderate expense, and for the general advancement of Chemical Science. The first stone of the three new laboratories was laid by Prince Albert, President of the College, June 16, 1846; James Lockyer, architect.

The Oxford-street front has a rusticated ground-floor, and an upper story decorated with six Ionic columns.

DULWICH COLLEGE, in the pleasant hamlet of Dulwich, exactly five miles south of Cornhill, was built and endowed in 1613-19, by Edward Alleyn, "bred a stage-player;" he became a celebrated actor, erected the Fortune Theatre, and with Henslowe, was co-proprietor of the Paris Bear-Garden at Bankside. Alleyn named the foundation at Dulwich "the College of God's Gift;" for a master and warden, four fellows, six poor brethren, six sisters, and twelve scholars; and thirty out-members lodged in almshouses. By the founder's statutes, the master and warden should bear the name of Alleyn, or Allen, and both continue unmarried, or be removed from the College; yet the first master and warden (Alleyn's kinsmen) were both married, and Alleyn himself was twice married. He bequeathed his books and musical instruments, and his "sealing with his arms, to be worn by the master." The gross annual income of the College is about 8000*l.*, or nearly tenfold the value settled by the founder. The only eminent master or warden was John Allen, one of the earliest writers in the *Edinburgh Review*. Little of the old buildings remains in the present structure, three sides of a quadrangle; the entrance gates are curiously wrought with the founder's arms, crest, and motto "God's Gift." In the centre is the Chapel, with a low tower; the altarpiece is a copy, by Julio Romano, of Raphael's *Transfiguration*; the front is inscribed with a Greek anagram, the same read either way. Alleyn (d. 1626) is buried here. Adjoining the College is "the Grammar-school of God's Gift College," built by Barry, R.A., in 1842; and the Dulwich Gallery of Pictures, famous for its Cuyps and Murillos; Soane, R.A., architect.

In the College and Master's Apartments are several portraits, including Alleyn the founder, full length, in a black gown; also left by Cartwright, player and bookseller, 1687, portraits of "the Actors" Richard Burbage, Nat. Field, Richard Perkins, Thomas Bond, &c.; and of the poet Drayton; Lovelace the poet, and "Althea" with her hair dishevelled; a Lady in a richly-flowered dress, large ruff, and pearls; and a Merchant and his Lady on panel, their hands resting upon a human skull placed on a tomb, below which is a naked corpse. The library chimney-piece is made out of "the upper part of the Queen's barge," purchased by Alleyn in 1618. The books number about 4200 volumes; those relating to the theatre have been exchanged or filched away; and a very valuable collection of old plays was exchanged by the College with Garrick for modern works, and eventually purchased for the British Museum. The College possesses an original letter written by Alleyn to his first wife, Joan Woodward, from Chelmsford, in 1593, when he was one of "the Lord's strange Players." Here also is the MS. Diary and Account Book of Phillip Henslowe, printed by the Shakspeare Society; and in the old carved Treasury Chest, a memorandum-book in Alleyn's handwriting; besides other "Dulwich papers."—See Collier's *Memoirs of Alleyn*.

When the office of Master of the College becomes vacant, the Warden immediately succeeds to it, and a new Warden is elected by the Master, the four Fellows, and six Assistants; the latter being two churchwardens from each of the parishes of St. Botolph's, Bishopsgate; St. Luke's, Old-street-road; and St. Saviour's, Southwark.

In 1851, the Archbishop of Canterbury, as official Visitor of the College, extended the education at the School to surveying, chemistry, engineering, and the allied sciences. In 1858 was passed an Act of Parliament, by which its educational system will be kept expanding in proportion to its wealth. There are now two Schools; an upper, which provides a more advanced education for boys of the better class, and a lower, intended for the preparation of youths for commercial life; each school about 300. The fees in the upper school amount to 8*l.* per annum for each boy, and in the lower to 1*l.* In addition to these scholars there are foundation-boys in both schools, boarded and lodged at the expense of the charity. To provide for this extension, new buildings were commenced in 1866, on a site of 30 acres, between the present College and the Crystal Palace. The centre of the building is a large hall for dining and for the general gathering of the boys; there are a cloister between the two schools, and official residences for the masters. There is a Speech-day for classic and dramatic orations; and the performance of a play, preference being given to Shakspeare's.

GRESHAM COLLEGE, Basinghall-street, a handsome stone edifice, designed by George Smith, was opened Nov. 2, 1843, for the Gresham Lectures. It is in the enriched Roman style, and has a Corinthian entrance-portico. The interior contains a large library, and professors' rooms; and on the first floor a lecture-room, or theatre, to hold 500 persons. The building cost upwards of 7000*l.* The Lectures, on Astronomy, Physic, Law, Divinity, Rhetoric, Geometry, and Music, are here read to the public gratis, during "Term Time," daily, except Sundays; in Latin, at 12 noon; English, at

1 P.M.; the Geometry and Music Lectures at 7 P.M. Gresham College was founded by Sir Thomas Gresham, who, in 1575, gave his mansion-house and the rents arising from the Royal Exchange, which, on the death of Lady Gresham, in 1597, were vested in the Corporation of London and the Mercers' Company, who were conjointly to nominate seven professors, to lecture successively, one on each day of the week; their salaries being 50*l.* per annum: a more liberal remuneration than Henry VIII. had appointed for the Regius Professors of Divinity at Oxford and Cambridge, and equivalent to 400*l.* or 500*l.* at the present day. The Lectures commenced June 1597, in Gresham's mansion, which, with almshouses and gardens, extended from Bishopsgate-street westward into Broad-street. Here the Royal Society originated in 1645, and met (with interruptions) until 1710. The buildings were then neglected, and in 1768 were taken down, and the Excise Office built upon their site; the reading of the Lectures was then removed to a room on the south-east side of the Royal Exchange; the lecturers' salaries being raised to 100*l.* each, in place of the lodging they had in the old College, of which there is a view, by Vertue, in Ward's *Lives of the Gresham Professors*, 1740.\* On the rebuilding of the Royal Exchange, the Gresham Committee provided a separate edifice for the College, as above. Above its entrance portico are sculptured the following arms:

*City of London.*  
Arg. a cross, and in the dexter chief a sword erect gu.

*Gresham.*  
Arg. a chev. erm. betw. three mullets pierced sa.

*Mercers' Company.*  
Gu. a demi-*virgin* couped below the shoulders, issuing from clouds, all ppr. veiled or crowned with an eastern coronet of the last, her hair dishevelled, all within a bordure nebuly arg.

**HERALDS' COLLEGE** (College of Arms), College of Advocates, and Doctors of Law, east side of Benet's hill, Doctors' Commons, was built in 1683, from the design of Sir Christopher Wren, upon the site of the former College (Derby House), destroyed in the Great Fire; but all the valuable documents and books were fortunately saved. Sir William Dugdale, then Norroy King-of-Arms, built the north-west corner at his own expense: the hollow arch of the gateway on Benet's-hill is a curiosity. On the north side of the court-yard is the grand hall, in which the Court of Chivalry was formerly held. On the right is the old library, opening into a fire-proof record-room, built in 1844: to contain the MS. collection of Heralds' visitations, records of grants of arms, royal licenses, official funeral certificates, and public ceremonials. Here, too, were several portraits, including those of Sir Gilbert Dethick, Garter King-at-Arms; John Anstis, Garter; Peter Le Neve, Norroy; John Talbot, Earl of Shrewsbury, &c. In the grand hall was the judicial seat of the Earl Marshal; "but the chair is empty, and the sword unsworded." On the south side of the quadrangle is a paved terrace, on the wall of which are two escutcheons; one bearing the arms (and legs) of Man, and the other the Eagle's claw—both ensigns of the house of Stanley, and denoting the site of old Derby House, though they are not ancient.

The College of Arms received the first charter of incorporation from Richard III., who gave them for the residence and assembling of the Heralds, Poultney's Inn, "a righte fayre and stately house," in Coldharbour. They were dispossessed of this property by Henry VII., when they removed to the Hospital of Our Lady of Rounceval, at Charing Cross, where now stands Northumberland House. They next removed to Derby or Stanley House, on St. Benet's-hill, granted by Queen Mary, July 18, 1555, to Sir Gilbert Dethick, Garter King-of-Arms, and to the other Heralds and Pursuivants at Arms, and their successors. The service of the Pursuivants, and of the Heralds, and of the whole College, is used in marshalling and ordering Coronations, Marriages, Christenings, Funerals, Interviews, Feasts of Kings and Princes, Cavalcades, Shows, Justs, Tournaments, Combats, before the Constable and Marshal, &c. Also they take care of the Coats of Arms, and of the Genealogies of the Nobility and Gentry. Anciently, the Kings-at-Arms were solemnly crowned before the sovereign, and took an oath: during which the Earl Marshal poured a bowl of wine on his head, put on him a richly embroidered velvet Coat of Arms, a Collar of Esses, a jewel and gold chain, and a crown of gold.—Chamberlayne's *Magna Britannia Notitia*, 1726.

The College has, since 1622, consisted of thirteen officers:—*Kings*: Garter, Principal; Clarencieux; Norroy. *Heralds*: Lancaster, Somerset, Richmond, Windsor, York, Chester. *Pursuivants*: Rouge Croix, Blue Mantle, Portcullis, Blue Dragon. These hold their places by appointment of the Duke of Norfolk, as Hereditary Earl Marshal. Few rulers have been insensible to the pageantry of arms: even the royalty-hating

\* In Vertue's print, at the entrance archway are two figures, designed for Dr. Woodward and Dr. Mead, Professors, who having quarrelled and drawn swords, Mead obtained the advantage, and commanded Woodward to beg his life: "No, Doctor, that I will not, till I am your patient," was the witty reply; but he yielded, and is here shewn tendering his sword to Mead.

Cromwell appointed his King-at-Arms; and the heraldic expenses of his funeral were between 400*l.* and 500*l.* The *Court of Chivalry* was nearly as oppressive as the detestable Star Chamber; for we read of its imprisoning and ruining a merchant-citizen for calling a swan a goose; and fining Sir George Markham 10,000*l.* for saying, after he had horse-whipped the saucy huntsman of Lord Darcy, that if his master justified his insolence, he would horse-whip him also. The severest punishment of the Court is the degradation from the honour of knighthood, of which only three instances are recorded in three centuries: this consisted in breaking and defacing the knight's sword and gilt spurs, and pronouncing him "an infamous errant knave." In our time, the banner of a Knight of the Bath has been pulled down by the heralds, and kicked out of Henry VII.'s Chapel at Westminster. The herald's visitations were liable to strange abuses, and ceased with the seventeenth century. Another trusty service of the Officers-at-Arms is the bearing of letters and messages to sovereign princes and persons in authority; these officers were the "Chivalers of Armës," or Knights Riders, the original King's Messengers; and adjoining the College is Knight-Rider-street.

Among the *Curiosities* of the College are, the Warwick Roll, with figures of all the Earls of Warwick from the Conquest to Richard III.; a Tournament Roll of Henry VIII.'s time; a sword, dagger, and turkoi ring, said to have belonged to James IV. of Scotland, who fell at Flodden-field; portrait of the warrior Talbôt, Earl of Shrewsbury, from his tomb in Old St. Paul's; pedigree of the Saxon kings from Adam, with beautiful pen-and-ink illustrations (*temp.* Henry VIII.); and a volume in the handwriting of "the learned Camden," created Clarenceux in 1597. Among the other officers of note were Sir William Dugdale, Garter; Elias Ashmole, Windsor Herald, who wrote the *History of the Order of the Garter*; John Anstis, Garter; Francis Sandford, Lancaster Herald, who wrote an excellent Genealogical History of England; Sir John Vanbrugh, who was made Clarenceux as a compliment for building Castle Howard, but sold the situation for 2000*l.*; Francis Grose, Richmond Herald; and Edmund Lodge, Lancaster Herald. (See the excellent paper by J. R. Planché, Somerset Herald, in *Knight's London*, vol. vi.)

*A Grant of Arms is thus obtained:* The applicant employs any member he pleases of the Herald's Office, and through him, presents a memorial to the Earl Marshal, setting forth that he the memorialist is not entitled to arms, or cannot *prove* his right to such; and praying that his Grace will issue his warrant to the King of Arms authorizing them to grant and confirm to him due and proper armorial ensigns, to be borne according to the laws of heraldry by him and his descendants. This memorial is presented, and a warrant is issued by the Earl Marshal, under which a patent is made out, exhibiting in the corner a painting of the armorial ensigns granted, and describing in official terms the proceedings that have taken place, and the correct blazon of the arms. This patent is registered in the books of the Herald's College, and receives the signatures of the Garter and of one the Provincial Kings of Arms. Thus an "Armiger" is made. The fees on a Grant of Arms amount to seventy-five guineas; an ordinary search of the records is 5*s.*; a general search, one guinea. Arms that are not held under a Grant must descend to the bearer from an ancestor recorded in the Herald's visitations. No prescription, however long, will confer a right to a coat-armour. If the grantee be resident in any place *north* of the Trent, his patent is signed by Garter and *Norroy* Kings of Arms; if he reside *south* of that river the signatures are those of Garter and Clarenceux Kings of Arms.

The arrangement of the College consists of several houses occupied by the Doctors of Law, with the Courts, noble Dining-room and Library, large open quadrangular area and garden; exclusive of which the number of rooms is 140. The total area is 34,138 feet, or more than three-quarters of an acre. The whole of the buildings are to be taken down in forming the new street from Blackfriars Bridge to the Mansion House.

KING'S COLLEGE AND SCHOOL, Somerset House, extend from the principal entrance in the Strand to the east wing of the river-front, designed by Sir William Chambers, but left unfinished by him: its completion by the College being one of the conditions of the grant of the site: here resided the Principal and Professors. The College façade, designed by Sir Robert Smirke, R.A., is 304 feet in length, and consists of a centre, decorated with Corinthian columns and pilasters; and two wings with pilasters, upon a basement of piers supporting arches, which extend the whole length of the building. On the interior ground-floor are the theatres or lecture-rooms, and the hall, with two grand staircases, which ascend to the Museum and Library; the Chapel occupying the centre. Over the lofty entrance-arch in the Strand are the arms of the College: motto, "Sancte et sapienter." (See MUSEUMS.)

King's College and Schools are proprietary. The College was founded in 1823, for the education of youth of the metropolis in the principles of the Established Church. There are five departments: 1. Theological; 2. General Literature; 3. Applied Sciences; 4. Medical; 5. The School. The age for admission to the latter is from 9 to 16; and each proprietor can nominate two pupils to the School, or one to the School and one to the College at the same time. The first Conferree of Degrees by the University of London took place in the hall of King's College, May 1, 1850. In connexion with the Medical Schools has been established King's College Hospital, in Portugal-street, Lincoln's-Inn-fields.

ST. MARK'S TRAINING COLLEGE, Chelsea, was established for training school-masters for the National Society. The College, fronting King's-road, is of Italian design; the Chapel, facing the Fulham-road, is Byzantine; and to the west is an octagonal Practising School; and the grounds contain about fifteen acres. The term of training is three years: it comprises, with general education, the industrial system, as the business of male servants in the house, managing the farm produce, and gardening. Still, the religious service of the Chapel is, as it were, the keystone of the system of the College. (See CHAPELS, p. 214.) There are also other training institutions connected with the National Society.\*

NEW COLLEGE, St. John's Wood, was commenced building in 1850, when the first stone was laid, May 11, by the Rev. Dr. John Pye Smith, known as a divine, and as a man of science from his work on Scripture and Geology. The building was completed in 1851, and opened October 8. It has been erected by the Independent Dissenters for the education of their ministers, and is founded on the union of Homerton Old College and Coward and Highbury Colleges. The classes are divided into two faculties, Arts and Theology; the former open to lay students, and having chairs of Latin and Greek, mathematics, moral and mental philosophy, and natural history. The building, of Bath stone, designed by Emmett, in the Tudor (Henry VII.) style, is situated about a mile and a half north of Regent's-park, between the Finchley-road and Bellsizes-lane. The frontage is 270 feet, having a central tower 80 feet high. The interior dressings are of Caen stone, and the fittings of oak; some of the ceilings are of wrought wood-work, and the windows of elaborate beauty. The main building contains lecture-room, council-room, laboratory, museum, and students' day-rooms; at the north end is the Principal's residence, and at the south a library of more than 20,000 volumes.

PHYSICIANS, COLLEGE OF, was founded in 1518, by Linaere, physician to Henry VII. and VIII., who lived in Knight-Rider-street, and there received his friends, Erasmus, Latimer, and Sir Thomas More. Linaere was the first President of the College, and the members met at his house, which he bequeathed to them; the estate is still the property of the College. Thence they removed to a house in Amen Corner, where Harvey lectured on his great discovery, and built in the College garden a Museum, upon the site of the present Stationers' Hall. The old College and Museum being destroyed in the Great Fire, the members met for a time at the President's house, until Wren built for them a College, in Warwick-lane, upon part of the site of the mansion of the famed Earls of Warwick; the new College was commenced in 1674, but not completed until 1689. It had an octangular porch of entrance, 40 feet in diameter, the most striking portion of Wren's design. The interior, above the porch, formed the lecture-room, which was light, and very lofty, being open upwards to the roof of the edifice. It was opened in 1689: the entrance-porch was surmounted by a dome, as described by Garth in his satire on the quarrel between the Apothecaries' Company and the College:

“Not far from that most celebrated place†  
Where angry Justice shews her awful face,  
Where little villains must submit to fate,  
That great ones may enjoy the world in state,  
There stands a Dome, majestic to the sight,  
And sumptuous arches bear its oval height;  
A golden globe, plac'd high with artful skill,  
Seems to the distant sight—a gilded pill.”—*The Dispensary*.

“The theatre was amphitheatrical in plan, and one of the best that can be imagined

\* Kneller Hall (between Hounslow and Twickenham) was formerly in the possession of Sir Godfrey Kneller, who pulled down the manor-house and erected a new house on the same site, as inscribed upon a stone: “The building of this house was begun by Sir Godfrey Kneller, Bart., A.D. 1709.” It had a sumptuously painted staircase, by Kneller's own hand. The hall was almost wholly taken down, and a Training School was built upon its site.

† Newgate.

for seeing, hearing, and the due classification of the students, and for the display of anatomical demonstrations or philosophical experiments upon a table in the centre of the arena, of any building of its size in existence." (*Elmes*.) This portion was latterly occupied as a meat-market, and the other College buildings by braziers and brass-founders. The buildings comprised a lofty hall, with a magnificent staircase; a dining-room, with a ceiling elaborately enriched with foliage and flowers in stucco, and carved oak chimney-piece and gallery. On the north and south were the residences of the College officers; on the west, the principal front, consisting of two stories, the lower decorated with Ionic pillars, the upper by Corinthian and by a pediment in the centre at the top. Immediately beneath the pediment was the statue of Charles II., with a Latin inscription. On the east was the octangular side, with the gilt ball above, and a statue of Sir John Cutler below. It appears by the College books that, in 1675, Sir John Cutler, a near relation of Dr. Whistler, the President, was desirous of contributing towards the building of the College, and a committee was appointed to thank him for his kind intentions. Cutler accepted their thanks, renewed his promise, and specified parts of the building of which he intended to bear the expense. In 1680, statues in honour of the King and Sir John were voted by the members; and nine years afterwards, the College being then completed, it was resolved to borrow money of Sir John Cutler to discharge the debt incurred; but the sum is not specified. It appears, however, that in 1699 Sir John's executors made a demand on the College for 7000*l.*, supposed to include money actually lent, money pretended to be given, but set down as a debt in *Sir John's books*, and the interest on both. The executors, however, accepted 2000*l.*, and dropped their claim to the other five. Thus Sir John's promise, which he never performed, had obtained him the statue; but the College wisely obliterated the inscription which, in the warmth of gratitude, had been placed beneath the figure:—

"Omnis Cutleri cedat Labor Amphitheatro."

Hence it was called Cutler's Theatre, in Warwick-lane. The miser Baronet has, however, received a more enduring monument from the hand of Pope, in his *Moral Essay*:—

"His Grace's fate sage Cutler could foresee,  
And well (he thought) advised him, 'Live like me.'  
As well his Grace replied, 'Like you, Sir John?  
That I can do, when all I have is gone.'"

The College buildings were mostly taken down in 1866; the carved oak fittings and a celebrated stucco ceiling being preserved, with the statue of Cutler. In the garrets of the old College were formerly dried the herbs for the use of the dispensary; and, on the left of the entrance portico, beneath a bell-handle, there remained till the last, the inscription, "Mr. Lawrence, surgeon—night bell," recalling the days when the house belonged to a learned institution. We remember it leased to the Equitable Loan (or Pawnbroking) Company, when the "Golden Globe" was partially symbolical of its appropriation.

The Physicians, in 1825, had emigrated westward, where Sir Robert Smirke built for them a College of classic design, in Pall Mall East and Trafalgar-square, at the cost of 30,000*l.* It was opened June 25, 1825, with a Latin oration by the President, Sir Henry Hallford. The style is Grecian-Ionic, with an elegant hexastyle Ionic portico. The interior is sumptuous. In the dining-room are portraits of Dr. Hamey, the Commonwealth physician; of Dr. Freind, imprisoned in the Tower; and of Sir Edmund King, who bled Charles II., in a fit, without consulting the Royal physicians, and who was promised for the service 1000*l.* by the Council, which was never paid. In the oak-panelled Censors' Room is a portrait of Dr. Sydenham, by Mary Beale; of Linacre, surmounted by the College arms in oak, and richly-emblazoned shield; of the thoughtful Sir Thomas Browne, who wrote *Religio Medici*; of the good-humoured Sir Samuel Garth, by Kneller; and of Cardinal Wolsey and Henry VIII. (after Holbein), and Andreas Vesalius, the Italian anatomist; other portraits; and a marble bust of Sir Henry Hallford. In the Library, lighted by three beautiful lanterns, is a fine portrait of Radcliffe, by Kneller; and of Harvey, by Jansen. Here is a gallery filled with cases, containing preparations, including some of the nerves and blood-vessels, by

Harvey, and used by him in his lectures on the discovery of the circulation of the blood. Adjoining is a small theatre, or lecture-room, where are busts—of George IV., by Chantrey; Dr. Mead, by Roubiliac; Dr. Sydenham, by Wilton; Harvey, by Scheemakers; Dr. Baillie, by Chantrey; Dr. Babington, by Behnes. Here also is a picture of Hunter lecturing on Anatomy before Royal Academicians (portraits), by Zoffany; besides a collection of physicians' canes. The whole may be seen by the order of a physician, Fellow of the College. The Harveian Oration (in Latin) is delivered annually by a Fellow, usually on June 25.

In the Library is a copy of the *Iliad* published at Florence in 1483, an immortal work for this early period of typography: in the whiteness and strength of the paper, the fineness of the character, the elegant disposition of the matter, the exact distance between the lines, the large margin, and various ornaments.

PRECEPTORS, COLLEGE OF (the), 28, Bloomsbury-square, a proprietary institution, established 1847, to elevate the character of the profession of teachers, irrespective of distinctions of sects and parties; and to grant certificates and diplomas to candidates duly qualified, after examination.

QUEEN'S COLLEGE, LONDON, 67, Harley-street, was established 1848, for general female education, and for granting to Governesses certificates of qualification. The instruction is given in lectures by gentlemen connected with King's College, and other professors; there are also preparatory classes and evening classes, the latter gratuitously: the whole superintended by ladies as visitors.

SION COLLEGE, London Wall, is built on the site of the Priory of Elsing Spital, and consists of a college for the clergy of London, and almshouses for twenty poor persons, founded 1623, by the will of Dr. Thomas White, vicar of St. Dunstan's-in-the-West; to which one of his executors, the Rev. John Simson, rector of St. Olave's, Hart-street, added a library. "Here," says Defoe, "expectants may lodge till they are provided with houses in the several parishes in which they serve cure;" and the Fellows of the College are the incumbents of parishes within the City and Liberties of London. The library is their property: a third of the books was destroyed in the Great Fire, which consumed great part of the College. The collection contains more than 50,000 volumes, mostly theological, among which are the Jesuits' books seized in 1679. By the Copyright Act, 8 Anne c. 19, the library received a gratuitous copy of every published work till 1836, when this privilege was commuted for a Treasury grant of 363*l.* a year, now its chief maintenance. It is open to the clergy of the diocese and their friends, and to the public by an order from one of the Fellows; but books are not allowed to be taken out, except by Fellows. Here are several pictures, including a costume-portrait of Mrs. James, a citizen's wife in the reign of William and Mary.

SURGEONS, ROYAL COLLEGE OF, on the south side of Lincoln's-inn-fields, was originally built by Dance, R.A., for the College, who removed here from their Hall on the site of the New Sessions House, Old Bailey, on their incorporation by royal charter in 1800. It was almost entirely rebuilt by Barry, R.A., in 1835-37, when the stone front was extended from 84 to 108 feet, and a noble Ionic entablature added, with this inscription: *ÆDES · COLLEGII · CHIRVRGORVM · LONDINENSIS · DIPLOMATE · REGIO · CORPORATI · A. D. MDCCC.*

The interior contains two Museums, a Theatre, Library, and vestibule with screens of Ionic columns. On the staircase-landing are busts of Cheselden and Sir W. Banks. In the Library are portraits of Sir Cæsar Hawkins, by Hogarth; Serjeant-Surgeon Wiseman (Charles II.'s time); and the cartoon of Holbein's picture of the granting of the charter to the Barber-Surgeons. In the Council Room (where sits the Court of Examiners) are Reynolds's celebrated portrait of John Hunter, and other pictures: bust of John Hunter, by Flaxman; of Cline, Sir W. Blizard, Abernethy, and George III. and George IV., by Chantrey; of Pott, by Hollins; and Samuel Cooper, by Butler. The Museum, with Hunter's collection for its nucleus, was erected in 1836; and the College has since been enlarged by adding to it the site of the Portugal-street Theatre, late Copeland's china warehouse, taken down in 1848. (*See* MUSEUMS.) In the Theatre is annually delivered the Hunterian Oration (in Latin), by a Fellow of the College, on Feb. 14, John Hunter's birthday.

UNIVERSITY COLLEGE, east side of Upper Gower-street, was designed by Wilkins, R.A.; the first stone laid by the Duke of Sussex, April 30, 1827; and the College opened Oct. 1, 1828. It has a bold and rich central portico of twelve Corinthian columns and a pediment, elevated on a plinth 19 feet, and approached by numerous steps, arranged with fine effect. Behind the pediment is a cupola with a lantern light, in imitation of a peripteral temple; in the Great Hall under which are the original models of the principal works of John Flaxman, R.A., presented by Miss Denman. In the vestibule is Flaxman's restoration of the Farnese Hercules; beneath the dome is his grand life-size Michael and Satan; and around the walls are his various monumental and other bas-reliefs; "in all the monumental compositions there is a touching story, and the sublimity of the poetic subjects is of a quality which the Greeks themselves have never excelled."—(*Art Journal*.) An adjoining room contains Flaxman's Shield of Achilles, and other works.

The University building extends about 400 feet in length: in the ground-floor are lecture-rooms, cloisters for the exercise of the pupils, two semicircular theatres, chemical laboratory, museum of materia medica, &c. In the upper floor, on entering by the great door of the portico, the whole extent of the building is seen. Here are the great hall, museums of natural history and anatomy, two theatres, two libraries, and rooms with naturo-philosophical apparatus. The principal library is richly decorated in the Italian style; here is a marble statue of Locke. The Laboratory, completed from the plan of Prof. Donaldson, in 1845, combines all the recent improvements of our own schools with that of Professor Liebig, at Giessen.

University College is proprietary, and was founded in 1828, principally aided by Lord Brougham, the poet Campbell, and Dr. Birkbeck, for affording "literary and scientific education at a moderate expense;" but Divinity is not taught. There is a Junior School. The graduates of the University of London from University College are entitled Doctors of Laws, Masters of Arts, and Bachelors of Law, Medicine, and Art. The School of Medicine is highly distinguished; and under the superintendence of its professors has been founded University College Hospital, opposite the College, in which the medical students receive improved instruction in medicine and surgery.

Wilkins also designed the National Gallery, a far less happy work than University College, which is unfinished; the original design comprised two additional smaller cupolas. The works seem hardly to be the production of the same architect; in the National Gallery the dome being as unsightly a feature in composition as in the College it is graceful.

In the rear of the College, on the west side of Gordon-square, is *University Hall*, designed by Prof. Donaldson, 1849, and built for instruction in Theology and Moral Philosophy, which are excluded by the College. The architecture is Elizabethan-Tudor, in red brick and stone; the grouping of the windows is cleverly managed. In the Great Hall the students breakfast and dine; and the establishment is a sort of students' club-house or model lodging-establishment.

WESLEYAN NORMAL COLLEGE, Horseferry-road, Westminster (James Wilson, architect), has been erected for the training of schoolmasters and mistresses, and the education of the children in the locality. It is in the Late Perpendicular style, of brick, with stone dressings; and consists of a Principal's Residence, a quadrangular Normal College for 100 students, with Lecture and Dining Halls; Practising Schools, and Masters' Houses: beyond is the Model School, in Early English style, with porch and lancet windows: the buildings and playgrounds occupying upwards of 15 acres, with a large central octagonal tower, which, with the embattled parapets, pointed gables, and traceried oriel-windows, forms a picturesque architectural group.

### COLOSSEUM (THE).

THE Colosseum, upon the east side of the Regent's-park, was originally planned by Mr. Hornor, a land-surveyor; and the building was commenced for him 1824, by Peto and Grissell, from the designs of Decimus Burton. The chief portion is a polygon of sixteen faces, 126 feet in diameter externally, the walls being 3 feet thick at the ground; and the height to the glazed dome is 112 feet. Fronting the west is an entrance portico, with six Grecian-Doric fluted columns, said to be full-sized models of those of the Parthenon. The external dome is supported by a hemispherical dome, constructed of ribs formed of thin deals in thicknesses, breaking joint and bolted together, on the principle educed by M. Philibert de l'Orme in the 14th century, and

stated to be introduced here for the first time in England. The second dome also supports a third, which forms a ceiling of the picture, to be presently described. The building resembles a miniature of the Pantheon, and has been named from its colossal size, and not from any resemblance to the Colosseum at Rome; but it more closely resembles the Roman Catholic Church at Berlin.\*

The building is lighted entirely by the glazed dome, there being no side windows. Upon the canvassed walls was painted the Panoramic View of London, completed in 1829; for which Mr. Hornor, in 1821-2, made the sketches at several feet above the present cross of St. Paul's Cathedral (as described at p. 115). The view of the picture was obtained from two galleries: the *first* corresponds, in relation to the prospect, with the first gallery at the summit of the dome of St. Paul's; the *second* with the upper gallery of the cathedral. Upon this last gallery is placed the identical copper ball which formerly occupied the summit of St. Paul's; above it is a fac-simile of the cross; and over these is hung the small wooden cabin in which Mr. Hornor made his drawings. A small flight of stairs leads from this spot to the open parapet gallery which surrounds the domed roof of the Colosseum. The communication with the galleries is by spiral staircases, built on the outside of a lofty cylindrical core in the centre of the rotunda; within which is also the "Ascending Room," capable of containing ten or twelve persons. This chamber is decorated in the Elizabethan style, and lighted through a stained-glass ceiling; it is raised by secret machinery to the required elevation, or gallery, whence the company viewed the panorama. The hoisting mechanism is a long shaft connected with a steam-engine outside the building, working a chain upon a drum-barrel, and counterbalanced by two other chains, the ascending motion being almost imperceptible.

The painting of the picture was a marvel of art. It covers upwards of 46,000 square feet, or *more than an acre of canvas*; the dome on which the sky is painted is 30 feet more in diameter than the cupola of St. Paul's; and the circumference of the horizon from the point of view is nearly 130 miles. Excepting the dome of St. Paul's Cathedral, there is no painted surface in Great Britain to compare with this in magnitude or shape, and even that offers but a small extent in comparison. It is inferred that the scaffolding used for constructing St. Paul's cupola was left for Sir James Thornhill, in painting the interior; and his design consisted of several compartments, each complete in itself. Not so this Panorama of London, which, as one subject, required unity, harmony, accuracy of linear and aerial perspective; the commencement and finishing of lines, colours, and forms, and their nice unity; the perpendicular canvas and concave ceiling of stucco was not to be seen by, or even known to, the spectator; and the union of a horizontal and vertical surface, though used, was not to be detected. After the sketches were completed upon 2000 sheets of paper, and the building finished, no individual could be found to paint the picture in a sufficiently short period, and many artists were of necessity employed: thus, by the use of platforms slung by ropes, with baskets for conveying the colours, temporary bridges, and other ingenious contrivances, the painting was executed, but in the peculiar style, taste, and notion of each artist; to reconcile which, or bring them to form one vast whole, was a novel, intricate, and hazardous task, which many persons tried, but ineffectually. At length, Mr. E. T. Parris, possessing an accurate knowledge of mechanics and perspective, and practical execution in painting, combined with great enthusiasm and perseverance, accomplished the labour principally with his own hands; standing in a cradle or box, suspended from cross poles or shears, and lifted as required, by ropes.

The Panorama was viewed from a balustraded gallery, with a projecting frame

\* In 1769, there was constructed in the Champs Elysées, at Paris, a vast building called *Le Colisée*, for fêtes in honour of the marriage of the Dauphin, afterwards Louis XVI. Here were dances, hydraulics, pyrotechnics, &c.; the building did not resemble the Pantheon, as ours in the Regent's-park, but the Colosseum at Rome. It contained a rotunda, saloons, and circular galleries, skirted with shops, besides trellis-work apartments and four *cafés*. In the centre of *Le Cirque* was a vast basin of water, with fountains; beyond which fireworks were displayed. The whole edifice was completely covered with green trellis-work; the entire space occupied by the buildings, courts, and gardens, was sixteen acres; and the cost was two and a half millions of money. There were prize exhibitions of pictures; and Mr. Hornor projected similar displays at the Colosseum, but the idea was not taken up by the British artists. In 1778, the Parisian building was closed, and two years afterwards was taken down. It is mentioned by Dr. Johnson, in his *Tour*, in 1775.

beneath it, in exact imitation of the outer dome of St. Paul's Cathedral, the perspective and light and shade of the campanile towers in the western front being admirably managed. The spectator was recommended to take four distinct stations in the gallery, and then inspect in succession the views towards the north, east, south, and west; altogether representing the Metropolis of 1821, the date of the sketches.

*The North* comprises Newgate-market, the old College of Physicians, Christ's Hospital (before the rebuilding of the Great Hall), St. Bartholomew's Hospital, and Smithfield Market; and the New General Post-Office, then building. These are the objects near the foreground: beyond them are Clerkenwell, the Charterhouse, and the lines of Goswell-street, St. John-street, Pentonville, Islington, and Hoxton. In the next, or third distance, are Primrose-hill, Chalk Farm, Hampstead, and a continued line of wooded hills to Highgate, where are the bold Archway and the line of the Great North Road from Islington; whilst Stamford-hill, Muswell-hill, part of Epping Forest, and portions of Essex, Hertfordshire, and Middlesex bound the horizon.

*The East* displays a succession of objects all differing from the former view in effect, character, and associations. Whilst the north exhibits the rustic scenery of the environs of London, the east presents us with the Thames, and its massive warehouses and spacious docks; the one a scene of rural quiet, the other a focus of commercial activity. In the foreground is St. Paul's School-house; whilst the lines of Cheapside, Cornhill, Leadenhall-street, and Whitechapel carry the eye through the very heart of the City, and thence to Bow, Stratford, and a fine tract of woodlands, in Essex. On the right and left of this line are the towers and steeples of Bow Church, St. Mary Woolnoth; St. Michael, Cornhill; St. Ethelburga, Bishopsgate, and others of subordinate height; the Bank, Mansion-house, Royal Exchange (since destroyed by fire), East India House, and several of the Companies' Halls. Another line, nearly parallel, but a little to the east, extends through Watling-street (the old Roman road) to Cannon-street, Tower-street, and the prison, palace, fortress, and museum—the Tower. The course of the Thames, with its vessels and wilderness of masts, the docks and warehouses on its banks; the palace-hospital of Greenwich and the beautiful country beyond it, contrasted with the levels of the Essex bank—are all defined in this direction.

*Southward*, the eye traces the undulating line of the Surrey hills in the distance; and in the foreground of the picture the Thames, with its countless craft, among which are civic barges and steamers, characteristic of ancient and modern London. Here also are shown old London-bridge, and Southwark, Blackfriars, Waterloo, Westminster, and Vauxhall Bridges, whilst the river-banks are crowded with interesting structures, among which are the old Houses of Parliament.

*The Western view* presents a new and different series of objects. First, in effect, in beauty of execution and imposing character, are the two *campanili*, the pediment, and the roof of the western end, of St. Paul's Cathedral. The painting here is masterly and magical; it so deceives the eye and the imagination, that the spectator can scarcely believe these towers to be depicted on the same canvas and the same surface as the whole line of objects from Ludgate Hill to St. James's-Park. This view to the west embraces the long lines of Ludgate-hill, Fleet-street, and the Strand, Piccadilly, &c.; Holborn-hill and Oxford-street, with the Inns of Court; Westminster; numerous churches and public buildings, right and left; and Hyde-park, Kensington-gardens, and a long stretch of flat country to Windsor.—*Brief Account*, by John Britton, F.S.A., 1829.

A staircase leads to the upper gallery, whence the spectator again commanded the whole picture in a sort of bird's-eye view. Another flight of stairs communicates with the room containing the copper ball and fac-simile cross of St. Paul's. A few more steps conduct to the outer gallery at the summit; where, in fine weather, the spectator might compare the colouring, perspective, and effects of nature with those of art within.

The Panorama was first exhibited in the spring of 1829. It was almost repainted by Mr. Parris in 1845; when also a Panorama of London by Night, essentially the same as the day view, was exhibited in front of the latter, and had to be erected and illuminated every evening: the moonlight effect upon the rippling river; the floating, fleecy clouds and twinkling stars; the lights upon the bridges, in the shops, and in the open markets, formed a rare triumph of artistic illusion. In May, 1848, a moonlight Panorama of Paris, of the same dimensions as the night view of London, was painted by Danson, and was very attractive in illustration of the localities of the recent Revolution. In 1850, both views gave way to a Panorama of the Lake of Thun, in Switzerland, painted in tempera by Danson and Son; and in 1851, the Panorama of London was reproduced as a more appropriate sight for visitors during the International Exhibition season.

The Picture, however, was but one of the many features of the Colosseum. The basement of the Rotunda has a superb Ionic colonnade, as a sculpture-gallery, named the Glyptotheca: the columns and entablature are richly gilt; and the frieze, nearly 300 feet in circumference, is adorned with bas-reliefs from the Pantheonic friezes of the Parthenon, exquisitely modelled by Henning; the ribbed roof being filled with embossed glass.

Southward and eastward of the Rotunda are large Conservatories, a Swiss *chalet*, and mountain scenery interspersed with real water: these were executed by Mr. Hornor, whose enthusiasm led him to project a tunnel beneath the Regent's-park-

road, and to anticipate a grant from the opposite enclosure to be added to the Colosseum grounds. But the ingenious projector failed: the property passed into the hands of trustees; after which it lost much of its status as a place of public amusement; but on May 11, 1843, it was bought for 23,000 guineas by Mr. David Montague, who altogether retrieved and elevated the artistic character of the establishment.

The Colosseum, as altered, with the exception of the Panorama, was principally executed in 1845, from the designs of the late Mr. W. Bradwell, formerly chief machinist of Covent Garden Theatre. The eastern entrance, in Albany-street, was then added, with an arched corridor in the style of the Vatican, and leading to the Glyptotheca, the Arabesque Conservatories, and the Gothic Aviary, the exterior promenade, with its model ruins of the Temple of Vesta and Arch of Titus, the Temple of Theseus, and golden pinnacles and eastern domes,—a chaos of classic relics of the antique world. A romantic pass leads to the *chalet*, or Swiss Cottage, originally designed by P. F. Robinson: the roof, walls, and projecting fireplace are fancifully carved; and the bay-window looks upon a mass of rock-scenery, a mountain-torrent and lake,—a model picture of the sublime. In another direction lies a large model of the Stalactite Cavern at Adelsberg, in Carniola; constructed by Bradwell and Telbin.

At Christmas, 1848, was added a superb theatre, with a picturesque rustic armoury as an ante-room. The spectatory, designed and erected by Bradwell, resembles the vestibule of a regal mansion fitted up for the performance of a masque: it is decorated with colossal Sienna columns, and copies of three of Raphael's cartoons in the Vatican (School of Athens, and Constantine and the Pope), by Horner, of Rathbone-place; the ceilings are gorgeously painted with allegorical groups; and upon the fronts of the boxes is a Bacchanalian procession, in richly-gilt relief. Upon the stage passed the Cyclorama of Lisbon, depicting in ten scenes the terrific spectacle of the great earthquake of 1755—the uplifting sea and o'ertopping city, and all the frightful devastation of flood and fire; accompanied by characteristic performances upon Bevington's Apollonicon. The scenes are painted by Danson, in the manner of Louthembourg's Eidophusicon, which not only anticipated, but in part surpassed, our present dioramas. The entire exhibition has long been closed.

In March, 1855, the Colosseum, with the Cyclorama, were put up to auction by the Messrs. Winstanley. It was then stated that the Colosseum was erected at a cost of 23,000*l.* for Mr. Thomas Hornor, who held a lease of it direct from the Crown, at a ground rent of 262*l.* 18*s.* for a period of ninety-nine years, sixty-nine of which were unexpired on the 10th of October, 1854. He subsequently expended above 100,000*l.* to carry out the objects for which it was intended, by decorating the interior, purchasing pictures, &c. In August, 1836, the lease was sold to Messrs. Braham and Yates. Mr. Braham laid out about 50,000*l.* on the building, which in a few years afterwards became the property of Mr. Turner, who added the Cyclorama, which cost 20,000*l.*, to the establishment, with many decorations, at several thousand pounds' expense; so that the entire edifice has cost above 200,000*l.* The sum of 20,000*l.* was bid, but the property was not sold.

### COLUMNS.

**N**ELSON COLUMN (the), south side of Trafalgar-square, was erected between 1839 and 1852, by public subscription and the aid of the Government. It was designed by W. Railton, and is of the exact proportion of a column of the Corinthian temple of Mars Ultor at Rome: Mr. Railton choosing the Corinthian order from its being the most lofty and elegant in its proportions, and having never been used in England for this purpose; whilst it is in keeping with the surrounding buildings, and tends more than any other species of monument to bring the entire scene into general harmony, without destroying the effect of any portion of it. The foundation rests upon a 6-foot layer of concrete in a compact stratum of clay, about twelve feet below the pavement; upon which is the frustrum of a brick-work pyramid, 48 feet square at the base, and 13 feet high, upon which the superstructure commences with the graduated stylobate of the pedestal, the first step of which is 33 feet 4 inches wide. From this

point to the foot of the statue, the work is of solid granite, in large blocks admirably dressed; and in the shaft they are so well connected as to give the fabric almost the cohesion of a monolith. The granite was brought from Foggin Tor, on the coast of Devon; and was selected for its equable particles and intimate distribution of mica, feldspar, and quartz. The shaft (lower diameter 10 feet) is fluted throughout, the base being richly ornamented—the lower torus with a cable, the upper with oak-leaves. The pedestal is raised upon a flight of steps; and at the angles are massive cippi, or blocks, intended to receive four recumbent African lions. The capital is of bronze, and was cast from old ordnance in the Arsenal foundry at Woolwich, from full-sized models carefully prepared by C. H. Smith. "The foliage is connected to the bell of the cap by three large belts of metal lying in grooves, and rendering it needless to fix plugs into the work, with the concomitant risk of damage from the galvanic action of metals." (*G. Godwin, jun., F.R.S.*) One of the lower tiers of leaves weighs about 900 lbs. Upon a circular pedestal on the abacus is a colossal statue of Nelson, with a coiled cable on his left; E. H. Baily, R.A., sculptor. The figure is of Cragleith stone, in three massive blocks, presented by the Duke of Buccleuch; the largest block weighing upwards of 30 tons. The statue measures 17 feet from its plinth to the top of the hat; it was raised on Nov. 3 and 4, 1843; and on Oct. 23 previous, fourteen persons partook of a dinner on the abacus of the Column.

The scaffolding used in constructing this Column was a novelty of mechanical skill. Instead of the usual forest of small round poles, there were five grand uprights or standards on the east and west sides, in six stages or stories, marked by horizontal beams and curbs, at nearly equal intervals, the base being greatly extended, and the sides strengthened by diagonal and raking braces. By means of a powerful engine moving on a railway, and a travelling platform, blocks of stone from six to ten tons weight, were, at a rate of progression scarcely more perceptible than the motion of a clock-weight (being only thirty feet in the hour), raised to a great elevation, and set down with less muscular exertion than would be expended on a lamp-post; one mason thus setting as much work in one day as was done in three days by the old system, even without the aid of six labourers, who are now dispensed with. The timber used in erecting this scaffold was 7700 cubic feet, and its cost was 240*l.* for labour in erecting.

The pedestal has on its four sides the following bronze reliefs:

*North* (facing the National Gallery), *Battle of the Nile*: designed by W. F. Woodington. Nelson, having received a severe wound in the head, was caught by Captain Berry in his arms, as he was falling, and carried into the cockpit; the surgeon is quitting a wounded sailor that he may instantly attend the Admiral. "No," said Nelson; "I will take my turn with my brave fellows." Some of the parts project 15 inches, and the figures are 8 feet high: the casting weighs 2 tons 15 cwt. 2 qrs.; and the metal is three-eighths of an inch thick.

*South* (facing Whitehall), *Death of Nelson at Trafalgar*: designed by C. E. Carew. Nelson is being carried from the quarter-deck to the cockpit by a marine and two seamen. "Well, Hardy," said Nelson to his captain, "they have done for me at last." "I hope not," was the reply. "Yes; they have shot me through the backbone." At the back of the centre group is the surgeon. To the left are three sailors tightening some of the ship's cordage; another kneels, holding a handspike and leaning on a gun, arrested by the conversation between the dying hero and Captain Hardy. In the front, lying on the deck, are an officer and marines, who have fallen to rise no more. Behind stand two marines and a negro sailor. One of the former has detected the marksman by whose shot Nelson fell, and is pointing him out to his companion. The latter has raised his musket, and has evidently covered his mark; whilst the black, who stands just before the two marines, is grasping his firelock. The figures are of life-size; the casting weighs about five tons. Beneath are Nelson's memorable words, "England expects every man will do his duty."

*East* (facing the Strand), *Bombardment of Copenhagen*: designed by the late Mr. Ternouth. Nelson is sealing, on the end of a gun, his despatch, to send by the flag of truce; a group of officers surround him, and a sailor holds a candle and lantern: in the foreground are wounded groups; and in the distance are a church and city (Copenhagen) in flames.

*West* (facing Pall Mall), *Battle of St. Vincent*: commenced by Watson and finished by Woodington. Nelson, on board the *San Josef*, is receiving from the Spanish admirals their swords, which an old Agamemnon man is putting under his arm; in the foreground is a dying sailor clasping a broken flag-staff.

A monument to Nelson was first proposed in 1805 (the year of his death), when the Committee of the Patriotic Fund raised 1330*l.* Reduced 3 per Cents, which, with the accumulated dividends, amounted in June, 1838, to 5545*l.* 19*s.* Meanwhile, in 1816, the monument was proposed in Parliament, as "a duty which the nation ought, perhaps, to have discharged not less than thirty years ago." The subject, however, rested until 1838, when a subscription was raised, Trafalgar-square chosen as the site, and a column recommended by the Duke of Wellington. In January, 1839, 118 drawings and 41 models were submitted, and the first prize, 250*l.*, awarded to Mr. Railton for his column; in May following, a second series of designs (167) was exhibited, but the Committee adhered to their former choice. In 1844, the subscriptions,\* 20,483*l.* 11*s.* 2*d.*, had been expended; and the Government undertook the comple-

\* To which Nicholas, Emperor of Russia, contributed 500*l.*

tion of the monument, estimated at 12,000*l.* additional. The column itself cost 23,000*l.* building; the statue, capital, and reliefs, 5000*l.*; 2000*l.* architect's commission; four lions have been estimated at 3000*l.* Trafalgar-square was much objected to as the site: in the Parliamentary examination, eight architects and sculptors were in favour of it, and four architects were against it. Chantrey considered Trafalgar-square to be "the most favourable that could be found or imagined for any national work of art; its aspect is nearly south, and sufficiently open to give the object placed on that identical spot all the advantage of light and shade that can be desired; to this may be added the advantage of a happy combination of unobtrusive buildings around: but to conceive a national monument worthy of this magnificent site is no easy task." Chantrey objected to a column as a monument, unless treated as a biographical volume, with the acts of the hero sculptured on the shaft, as on the columns of Trajan and Antoninus. Annexed are the comparative dimensions of the principal monumental columns:

Date.	Climate.	Site.	Order.	Height to the top of Capital.	Diameter.
A.D.				Feet.	Feet.
118	Trajan . . .	Rome . .	Doric . .	115	12
162	Antoninus . .	Rome . .	Doric . .	123	13
1671	Monument . .	London .	Doric . .	172	15
1806	Napoleon . .	Paris . .	Doric . .	115	12
1832	Duke of York .	London .	Tuscan .	111	11
1839	Nelson . . .	London .	Corinthian	145·6	10·1 $\frac{1}{2}$ —11·7 $\frac{1}{2}$

Nelson Column, 145 feet 6 inches; statue and plinth, 17 feet; = 162 feet 6 inches.

YORK COLUMN, Carlton-gardens, built 1830–33, in memory of the Duke of York (d. 1827), Commander-in-Chief of the army, and forty-six years a soldier; whose statue is placed on the summit. The building fund, about 25,000*l.*, was raised by subscription, to which each individual of the service contributed one day's pay. The Column (Tuscan), designed by B. Wyatt, is of fine Aberdeenshire granite, the lower pedestal grey, and the shaft of red Peterhead; the surface fine-axed, or not polished. The abacus of the capital is enclosed with iron railing, and in its centre is the pedestal for the statue. Within the pedestal and shaft is a spiral staircase of 168 steps, which, with the newel, or central pillar, and outer casing, are cut from the solid block. The masonry throughout, by Nowell, is remarkably good. The statue, of bronze, by Sir Richard Westmacott, R.A., represents the Duke in the robes of the Order of the Garter. The weight is 7 tons 800 lbs., or 16,480 lbs.; it was raised April 8, 1834, between the column and the scaffolding, seven hours labour, at a cost of 400*l.* The column may be ascended from 12 to 4, from May to Sept. 24, 6*d.* each person: the view from the gallery of the Surrey hills and western London is fine; the latter showed the magnificence of Regent-street, and the skill of the architect, Nash, in the junction of the lines by the Quadrant. On May 14, 1850, Henri Joseph Stephan, a French musician, committed suicide by throwing himself from the gallery, which has since been entirely enclosed with iron caging. The height of the column is 123 feet 6 inches; of the statue, 13 feet 6 inches = 137 feet; or viewed from the bottom of the steps, at the level of St. James's Park, 156 feet: upper diameter of shaft, 10 feet 1 $\frac{3}{4}$  inches; lower diameter, 11 feet 7 $\frac{1}{2}$  inches. The foundation, laid in <sup>d</sup> concrete, is pyramidal, 53 feet square at the base.

The height of the balcony of the York Column is very nearly that of the under side of the great tube of the Britannia Bridge, over the Menai Straits, above high water. The entire length of the bridge is 1832 feet 8 inches; considerably more than that of Waterloo-place, from the York Column to the foot of the Quadrant.—*Proceedings of the Society of Arts*, 1851.

Dr. Waagen condemns this monument as a bad imitation of Trajan's Column, very mean and poor in appearance, with a naked shaft, and without an entasis: whereas the bas-reliefs on the shaft of Trajan's Pillar give it, at least, the impression of a lavish profusion of art. Besides, the statue on the York Column, though as colossal as the size of the base will allow, appears little and puppet-like compared with the column; and the features and expression of the countenance seem wholly lost to the spectator.

## COMMON COUNCIL.

THE constitution of the Corporation of London presents a remote and illusory resemblance to the constitution of the State. There are the Lord Mayor, the Court of Aldermen, and the Court of Common Council. Strictly speaking, the Court of Common Council includes the Chief Magistrate and the Aldermen; but in ordinary language it is understood to mean the Commons of the City, being somewhat like the House of Commons: the Court of Aldermen bearing some analogy to the House of Lords: and the Lord Mayor to the Sovereign.—*Lord Brougham*, 1843.

The two corporate assemblies can be traced back to a very distant period, and there are records of disputes between the two Courts six centuries ago. In the reigns of Edward I. and II., a body analogous to the Common Council was formed by the representatives from the different Wards of the City. But the Common Council appears to have been first constituted in its present form only in the reign of Richard II., by a civic ordinance; whilst in an Act of Parliament of the previous reign (28 Edw. III. c. 10), the Mayor, Sheriffs, and Aldermen are invested with the redress and correction of errors, &c., in the City of London, for default of good government.

Altogether there are 26 Wards, but the custom of holding an election in each was not originally the mode of representation, though it is said to have been customary for nearly five centuries. Before that period the election of the Common Council rested with the trades, or guilds, and the whole body of liverymen used to assemble in Guildhall yearly to send delegates there. It is said there are ancient records in the Corporation Library which show that those meetings were commonly so turbulent, that in 1386, early in the reign of Richard II., the plan of voting by wards was tried as an experiment, and has ever since obtained without interruption. Still the trades, to some extent, continued to be represented as such in the Court of Common Council, as the names of many of the Wards yet prove, as in the cases of Candlewick, Cordwainer and Vintry Wards, it being a usage for divers trades and crafts to be carried on in fixed localities; but now, as for many ages, it is a settled rule for the Lord Mayor to issue a precept directing the election of Councilmen in the various Wards on St. Thomas's Day, December 21, and the ceremony of election takes place before the Alderman of each Ward, who invariably wears his robes of office on the occasion; and, if he has been chief magistrate, his gold chain and badge. Of all the several 26 members of the Court of Aldermen, the only one without a constituency, or with but a small one, if any at all, sits for the Ward of Bridge, so called after London-bridge, of which it is chiefly, if not solely, composed. In the time of old London-bridge, when there were many inhabited houses on that structure, the Alderman of the Ward represented an actual community of citizens, though small in comparison; now it is not so, though the custom of its sending a delegate to the Court of Aldermen is maintained.

The City laws against foreigners appear to have been formerly very stringent. An order of Common Council, 1605, enjoins a penalty of 5*l.* per day on any foreigner or stranger, not free, keeping a retail shop in the City or liberty; and if any freeman employs a foreigner to work for him in the City or liberty, he forfeits 5*l.* per day. By stat. 21 Hen. VIII., a stranger, artificer in London, &c., shall not keep above two stranger servants, but he may have as many English servants and apprentices as he can get. It is an ancient custom of London, that if one stranger or foreigner buys any thing of another stranger, it shall be forfeited to the mayor and commonalty of the City.—*Vide Jacob's City Liberties*, 1732.

The number of members of the Common Council have been, from time to time, altered as follows:—1273. 1st Edward I., 40 men elected from all the Wards—the original number.—1317. 2nd Edward II., the Commonalty elected from the following Wards: Vintry, Bread-street, Cripplegate, Farringdon, Aldersgate, Queenhithe, and Coleman-street=72 men.—1322. 16th Edward II., 2 men from each Ward=48.—1347. 20th Edward III., 3, 6, or 4 men elected, according to the size of the Ward: 133.—1351. 25th Edward III., elected from the 13 Mysterics=54.—1376. 50th Edward III., from 47 Mysterics=156.—1383. 7th Richard II., 4 persons from each Ward=96.—1533. 25th Henry VIII., Cornhill Ward to return 6 instead of 4.—1549. Edward VI., total, 187; but there is nothing to show how the number increased, except the 2 for Cornhill.—1639. 15th Charles I., 5 added to Farringdon Without.—1641. 17th Charles I., 1 added to Portsoken.—1645. 21st Charles I., 4 added to Coleman-street Ward.—1654. 6th Charles II., Cheap Ward to choose 12 members.—1656. 8th Charles II., 4 added to Tower Ward=231.—1736. 10th George II., 2 added to Farringdon Within; total, 236.—1826. 7th George IV., 4 added to Cripplegate Without; total, 240.—1840. 8th May. The number fixed at 206, the present number.

From 1660 to 1676, several attempts were made by the Aldermen to limit the choice of the Wardmote to citizens of the higher class; but no permanent regulation was the result. In 1831, a Committee reported that persons convicted of defrauding in weights or measures, or having compounded with their creditors, or of having been bankrupt, without paying 20*s.* in the pound, were ineligible as Common Councilmen.

Each Common Councilman wears a gown of Mazarine-blue silk, trimmed with badger's fur—a costume, probably, of the reign of Edward VI. They formerly wore black gowns; the change is thus alluded to in the chorus to a political song of 1766:

“Oh, London is the town of towns! Oh, how improved a city!

Since chang'd her Common Council's gowns from black to blue so pretty!”

They, however, discontinued wearing their gowns in Court in 1775; perhaps in consequence of a Common Councilman being called “a Mazarine.” Nor has he escaped the severer whipping of the satirist:

“The cit—a Common-Councilman by place,  
 Ten thousand mighty nothings in his face.  
 By situation, as by nature, great,  
 With wise precision parcels out the state;  
 Proves and disproves, affirms and then denies,  
 Objects himself, and to himself replies;  
 Wielding aloft the politician rod,  
 Makes Pitt by turns a devil and a god;  
 Maintains, ev'n to the very teeth of pow'r,  
 The same thing right and wrong in half-an-hour.  
 Now all is well, now he suspects a plot,  
 And plainly proves whatever is—is not:  
 Fearfully wise, he shakes his empty head,  
 And deals out empires as he deals out thread:  
 His useless scales are in a corner flung,  
 And Europe's balance hangs upon his tongue.”—*Churchill*.

The Court held their sittings in a Chamber on the north side of the Guildhall, where the Lord Mayor presides in a chair of state; and visitors are admitted below the bar, at which petitions, &c., are presented in due legislative form. The entire Court were entertained by George I. at a banquet at St. James's Palace in 1727.

## CONDUITS.

SPRING water was formerly conveyed to public reservoirs in the City by leaden pipes from various sources in the suburbs—viz., from Tyburn in 1236, from Highbury in 1438, from Hackney in 1535, from Hampstead in 1543, and from Hoxton in 1546. For these useful works the citizens were indebted to the munificence of mayors, sheriffs, and other individuals. Stow devotes a section of his *Survey* to “ancient and present rivers, brooks, bowers, pools, wells, and conduits of fresh water, serving the City:” he also gives a long list of benefactors to the Conduits, the principal of which were in Aldgate, Leadenhall, Cornhill, West Cheape, Aldermanbury, Dowgate, London Wall, Cripplegate, Paul's-gate, Old Fish-street, Oldbourne, &c. In a large Map and Drawing\* of London and Westminster, early in the reign of Queen Elizabeth, the several Conduits occupy central positions in the roadways.

BAYSWATER was noted for its Conduit-Heads; and the association is preserved in Conduit-street, Tyburnia, the town built between 1839 and 1849, in the rear of Hyde Park Gardens.

CANONBURY.—The Priory of St. Bartholomew was supplied from Canonbury; for a water-course is specified in the grant made to Sir Richard Rich, Knight, at the Suppression, as “the water from the Conduit-head of St. Bartholomew, within the manor of Canonbury, as enjoyed by Prior Bolton and his predecessors.”

CHEAPSIDE.—The Great Conduit stood at the east end of Cheapside, at its junction with the Poultry; and, says Stow, “was the first sweete water that was conveyed by pipes of lead under ground to this place in the cite from Paddington.” Another Great Conduit stood in West Cheape, at the west end of Cheapside, facing Foster-lane and Old 'Change.

CONDUIT-MEAD.—“New Bond-street was, in 1760, an open field, called *Conduit-mead*, from one of the conduits which supplied this part of the town with water; and Conduit-street received its name for the same reason.” (*Pennant*). Carew Mildmay, who died between 1780 and 1785, told Pennant that he remembered killing a woodcock on the site of Conduit-street, when it was open country.

CORNHILL.—The Conduit, “castellated in the midst” of Cornhill, opposite the south entrance to the present Royal Exchange, was called the Tun, from its being like a tun standing on one end. It was a prison-house until 1401, when “it was made a cistern for sweet water, conveyed by pipes of lead from Tiborne, was from thenceforth called the Conduit upon Cornhill.” (*Stow*.) A well, which adjoined, was then planked over, and a timber cage, pillory, and stocks, set upon it; these were removed in 1546, the well revived, and made a pump; since renewed, with the following inscription: “On this spot a well was first made, and a House of Correction built by Henry Wallis, Mayor of London in 1285. The well was discovered, much enlarged, and this pump

\* Dimensions, 6 feet 3 inches by 2 feet 6 inches, with References and Historical Notes. Published by Taperell and Innes, 2, Winchester-building, Old Broad-street, 1850.

erected in 1799, by the contributions of the Bank of England, East India Company, and the neighbouring Fire Offices, together with the Bankers and Traders of the ward of Cornhill." Round the head of the pump are the devices of the Fire Offices. "The Standard in Cornhill" was a sort of Conduit, set up in 1582, by Peter Morris, who, by an "artificial forcer," conveyed Thames water in pipes of lead over the steeple of St. Magnus' Church, and from thence to the north-west corner of London Wall, the highest ground of all the City, where the waste of the main-pipe rising into the Standard at every tide, ran by four mouths, and thus served the inhabitants, and cleansed the streets towards Bishopgate, Aldgate, London Bridge, and Stocks Market. This Conduit appears only to have run from 1598 to 1603: from its site have since been measured distances, and hence "the Standard in Cornhill" on our old milestones.

DALSTON and ISLINGTON had their Conduit-heads; and the Report of a View of them, dated 1692, describes the entire course of this supply until it reaches the Conduit at Aldgate. This Report mentions "the White Conduit," fed by sundry springs, in a field at Islington, and resorted to by the Carthusian friars of the monastery upon the site of which Sutton founded the Charterhouse, supplied also from the above conduit. It likewise gave name to White Conduit House. (See AMUSEMENTS, Tea-gardens, p. 17.) The small stone house built over the well or conduit in 1641 was taken down in 1832. It was, however, survived by the Old Conduit at Dalston, the remains of which, in 1849, served as a tool-house in the nursery-ground of Mr. Smith. The Charter-house Conduit was rebuilt by the executors of Thomas Sutton; it bore the date 1641, and upon it were sculptured the arms and initials of Sutton; no vestige of it now remains.

FLEET-STREET.—Another famous Conduit stood at the south end of Shoe-lane, Fleet-street, surmounted with automaton figures, chimes, &c.

ST. JAMES'S.—A print by Godfrey, after a drawing by Hollar (probably *temp.* Charles I.), shows a stone conduit in St. James's-square, on or near the spot now occupied by Bacon's equestrian bronze statue of William III.: the whole of Pall Mall was then clear of houses, from the village of Charing to St. James's Palace. The above conduit is mentioned by Francis Bacon (*Works*, vol. ii.) in connexion with one of his experiments. In 1720, a basin of water, with a fountain and pleasure-boat, had taken the place of the conduit; into this basin were thrown the keys of Newgate Prison during the riots of 1780.

KENSINGTON.—On the Palace-green was formerly a four-gabled Conduit, built *temp.* Henry VIII.; and a Water Tower, erected by Sir John Vanbrugh, *temp.* Queen Anne; both were very fine specimens of brickwork, and communicating by pipes with the wells on the green, supplying the Palace with water, which was raised in the tower by a horse and wheel. By forming the great sewer for Palace Gardens adjoining, all the wells on the green, except one, were unexpectedly drained: the Conduit and tower were taken down, and the Palace has since been supplied from Chelsea Water-works.

LAMB'S CONDUIT was founded by William Lamb, sometime a Gentleman of the Chapel to Henry VIII., citizen and clothworker: "neere unto Holborn," says Stow, "he founded a faire conduit and a standard, with a cocke at Holborn-bridge, to conveye thence the waste," in 1577.

The conduit is described by Hatton, in 1718, as "near the fields (now Lamb's Conduit-street), affording plenty of water, clear as crystal, which is chiefly used for drinking. It belongs to St. Sepulchre's parish, the fountain-head being under a stone, marked S. S. P., in the vacant ground a little south of Ormond-street, whence the water comes in a drain to this conduit; and it runs thence in lead pipes (2000 yards long) to the conduit on Snow-hill, which has the figure of a Lamb upon it, denoting that its water comes from Lamb's Conduit.

The sign of the Lamb public-house, at the north-east end of Lamb's Conduit-street, is the effigy of a lamb cut in stone, believed to be one of the figures which stood upon Lamb's Conduit, as a rebus on his name. When the Foundling Hospital was erected, we learn from Hatton that the Conduit was taken down, and the water conveyed to the east side of Red Lion-street, at the end (now Lamb's Conduit-street); an inscription stating the waters to be preserved "by building *an arch* over the same;" and in 1851, Mr. J. Wykeham Archer discovered, beneath a trap-door in the pavement of the Lamb-yard, a short flight of steps, a brick vault, and the covered well; as well as on

the north wall of the next yard southward, this inscription cut in wood, over a recess now bricked up: "Lamb's Conduit, the property of the City of London. This pump is erected for the benefit of the publick." The water is perfectly clear, and is slightly astringent; and the Mansion House is said still to derive a supply from this source. In the garden of the house, No. 30, East-street, Lamb's Conduit-street, are a pump and spring; and on the opposite wall a stone stating this to be "the head of the spring Lamb's Conduit Water."

Tyburn furnished nine Conduits, and with Bayswater, was viewed periodically by the Lord Mayor on horseback, accompanied by ladies in wagons.

Strype notes that on Sept. 18, 1562, "the Lord Mayor, Aldermen, and many worshipful persons, rode to the Conduit-heads to see them, according to the old custom; and then they went and hunted a hare before dinner, and killed her; and thence went to dinner at the Banqueting House at the head of the Conduit, where a great number were handsomely entertained by their Chamberlain. After dinner they went to hunt the fox. There was a great cry for a mile, and at length the hounds killed him at the end of St. Giles's, with great hollowing and blowing of horns at his death; and thence the Lord Mayor, with all his company, rode through London to his place in Lombard-street." The Banqueting House was at the end of the street now Stratford-place, Oxford-road; and when the mansion was taken down in 1737, the cisterns beneath were arched over.

The establishment of the Waterworks at London Bridge, in 1512, and the subsequent introduction of the New River in 1618, having superseded the use of the Tyburn water, the Corporation let the water of these Conduits on a lease for forty-three years, for the sum of 700*l.* per annum.

Many of the City Conduits were destroyed in the Great Fire of 1666; and others were removed in 1728, it is stated, to compel the public to have the New River water laid on to their houses. Upon great festal occasions, the Conduits flowed with wine instead of water: at the procession of Anne Boleyn, June 1, 1533, the Great Cheap Conduit ran with white and claret wine all the afternoon. Probably the last of these prodigal events was in 1727, on the anniversary of the Coronation of George I., when Lamb's Conduit ran with wine.

Westminster Abbey has been, from a very distant period, supplied with spring-water from a Conduit-head at Bayswater, communicating with a Gothic conduit, erected by the Dean and Chapter (bearing their arms), at the lower end of the Serpentine in Hyde Park. West of the Lodge at Hyde Park-corner, and facing the Knightsbridge-road, is a square building, inclosing a tank filled from the above Conduit-head, for the supply of Buckingham and St. James's Palaces; the water is remarkably fine, and the building bears on a tablet "IV. G. R., 1820," the date of its repair. The leaden pipes pass through the Green Park, and the end of the ornamental water in St. James's Park, at a spot denoted by a stone, and through Queen-square to the Abbey.

Westminster Palace had its Conduit. In the Close Rolls (Hen. III. 1244) the king commands a payment to be made out of his treasury to Edward of Westminster, on account of "our conduit;" and by a singular precept of the same year is a grant to Edward, that "from the aqueduct which the king had constructed to the Great Hall at Westminster, he might have a pipe to his own court at Westminster, of the size of a goose-quill." In a memorandum of works executed (Edw. II. 1307-1310), is the following entry:—

"The Conduit of water coming into the palace, and into the King's Mews, for the falcons, which in various places was obstructed and injured, and the underground pipes stolen, was completely repaired, and the water returned to its proper courses and issues, both at the palace and at the mews."

"A beautiful fountain, which fell in large cascades, and on jubilee days was made to pour forth streams of choice wine, stood rather towards the west, and on the north side of the court. Permission to make use of the surplus water which flowed from this conduit was granted, on Feb. 3 (25 Hen. VI.), to the parish. Under the date 1524, the churchwardens for the time being note, 'Mem<sup>m</sup>, the King's charter for the Conduett at the Pales'-gate remayneth in the custody of the churchwardens.' The fountain was removed in the reign of King Charles II.—Walcott's *Westminster*. Lastly, in the very curious Harleian MS., numbered 433 (Rich. III. 1484), we find mentioned, "the lytell water conduct."

#### CONVENTS.

**R**ELIGIOUS Houses and Hospitals, for ages before the Reformation, occupied nearly two-thirds of the entire area of London. Independently of St. Paul's Cathedral and Westminster Abbey, the following Friaries and Abbeys existed almost immediately prior to the Reformation:—

*Friaries:* Black Friars, between Ludgate and the Thames; Grey Friars, near old Newgate, now Christ's Hospital; Augustine Friars, now Austin Friars, near Broad-street; White Friars, near Salis-

bury-square; Crouched or Crossed Friars, St. Olave's, Hart-street, near Tower-hill: Carthusian Friars, now the Charter House; Cistercian Friars, or New Abbey, East Smithfield; Brethren de Sacco, or *Bon Hommes*, Old Jewry.

*Priories*: St. John's of Jerusalem, Clerkenwell; Holy Trinity, or Christ Church, on the site of Duke's-place, and near Aldgate; St. Bartholomew the Great, near Smithfield; St. Mary Overie's, Southwark; St. Saviour's, Bermondsey.

*Nunneries*: Benedictines, or Black Nuns, Clerkenwell; St. Helen's, Bishopsgate-street; St. Clare's, Minorcs; Holy-well, between Holywell-lane and Norton-foigate.

*Colleges, &c.*: St. Martin's-le-Grand; St. Thomas of Acres, Westcheap; Whittington's College and Hospital, Vintry Ward; St. Michael's College and Chapel, Crooked-lane; Jesus Commons, Dowgate.

*Hospitals* (having resident Brotherhoods): St. Giles's in the Fields, near St. Giles's Church; St. James's, now St. James's Palace: Our Lady of Rounceval, near Charing-cross; St. Mary, Savoy, Strand; Elsing Spital, now Sion College; Corpus Christi, in St. Lawrence Pountney; St. Passey, near Bevis Marks; St. Mary Axe; Trinity, without Aldgate; St. Thomas, Mercers' Chapel; St. Bartholomew the Less, near Smithfield: St. Giles's, and Corpus Christi, without Cripplegate; St. Mary of Bethlehem, on the eastern side of Moorfields; St. Mary Spital, without Bishopsgate; St. Thomas, Southwark; Lok Spital, or Lazar, Kent-street, Southwark; St. Katherine's, below the Tower.

*Fraternities*: St. Nicholas, Bishopsgate-street; St. Fabian and St. Sebastian, or the Holy Trinity, Aldersgate-street; St. Giles, Whitecross-street; the Holy Trinity, Leadenhall; St. Ursula-le-Strand; Hermitage, Nightingale-lane, East Smithfield; Corpus Christi, St. Mary Spital; the same at Mary Bethlehem, and St. Mary Poultry.

The majority of these establishments disappeared at the Reformation; but a glance at the Sutherland View of London in 1543, and at Tapperell and Innes's Map (early in the reign of Elizabeth), shows us many of these important buildings entire, and others lying distant in the fields. Almost the only remains now traceable are around the Abbey Church at Westminster, where some of the monastic offices are tenanted as the School; of Grey Friars, the cloisters exist; of the Augustine Friars, the church; of the Carthusian Friars, the wooden gate and a few other relics; of St. John of Jerusalem, the gateway; of St. Bartholomew the Great, the church cloister and crypt; of St. Mary Overie's, the church-choir and lady-chapel; and at Bermondsey, the great gate-house remained nearly entire till 1807; of St. Helen's, Bishopsgate, the church remains; of St. Bartholomew the Less, the church-tower; and St. Katherine's "by the Tower" disappeared in 1827. Such are the principal *Monastic Remains* in the metropolis.

Since the relaxation of the penal laws, Roman Catholic Convents have been erected in London and the suburbs. Of these, one of the earliest was the Convent for the Order of the Sisters of Mercy, founded by subscription, at Dockhead, Bermondsey, in 1838, and opened for the Sisterhood December 12, 1839; when Sister Mary, the Lady Barbara Eyre, sister to Francis the eighth Earl of Newburgh, took the vows, with five other ladies of fortune, and liberal benefactresses to the chapel and convent. In addition to the services of their religion, the Sisters devote themselves to the education of poor girls, the visitation and comfort of the sick and afflicted, and the protection of distressed reputable females.

The reception of a postulant into the Sisterhood, or the "taking of the veil," is an impressive ceremony performed in the chapel of the convent, or in the church adjoining; when the whole sisterhood walk in procession, dressed in the habit of their order, each bearing a lighted taper, and followed by the postulants, in white dresses, and head-wreaths of white flowers and evergreens. The choir then chant "Gloriosa virginum;" the priest invokes the prayers of the Virgin in behalf of the postulants, to each of whom he presents a lighted taper, "as a corporal emblem of inward light." The superioress and her assistant then conduct the postulants to the celebrant, who inquires if they enter the order by their own free will, and if it be "their firm intention to persevere in religion to the end of their lives." These questions being answered satisfactorily, the postulants withdraw with the superioress, put off their secular dress, and return wearing the sombre habit of the Order. The superioress then girds them with the cincture; and the celebrant holds a white veil over the head of each, requesting her to accept it as "the emblem of purity." They are subsequently habited with "the cloak of the Church;" each of the novices sings: "My heart hath uttered a good word; I speak my words to the King," &c.; each novice embraces the superioress and each member of the sisterhood, and they retire as they entered, in procession.

### CORNHILL,

A PRINCIPAL street of the City, extending from the western end of Leadenhall-street, crossing westward to the Mansion House. It was named "of a corn-market time out of mind there holden." (*Stow*.) Here was the "Tun" prison, built in 1283, upon the spot now occupied by a pump; also a castellated conduit, and its water "Standard" (1528) near the junction of the street with Leadenhall-street. Cornhill has been the site of the Merchants' Exchange for nearly three centuries. On the west side, adjoining the Bank of England, was St. Christopher-le-Stocks Church, with a lofty pinnacled tower, which escaped the Great Fire of 1666: the church was

rebuilt by Wren, but taken down in 1781, and its site included within the Bank. About the same time were erected Bank-buildings, designed by Sir Robert Taylor, wedge-like in plan, in place of a block of houses built after the Great Fire; the former were removed in 1844: the end house extended to the site of the equestrian statue of the Duke of Wellington. In excavating for the new Royal Exchange, in 1841, was discovered a gravel-pit, supposed by Mr. Tite, the architect, to have been sunk during the earliest Roman occupation of London; and then to have been a pond, gradually filled with rubbish. In it were found Roman work, stuccoed and painted; fragments of elegant Samian ware; an amphora, and terra-cotta lamps, 17 feet below the surface: also pine-wood table-books and metal styles, sandals and soldiers' shoes, a Roman strigil, coins of Vespasian and Domitian, &c.; and almost the very foot-marks of the Roman soldier. The locality is now the most embellished area of the City, and the nucleus of new streets and sumptuous architecture.

Cornhill was formerly noted for its shops of "much stolen gear," mentioned by Lydgate early in the fifteenth century, as well as for its taverns, where was "wine one pint for a pennie, and bread to drink it was given free in every tavern." Here was the famous Pope's-Head Tavern, whence Pope's-Head-alley.

*Finch-lane*, properly Finke-lane, is so called of the Finke family, the elder of whom new-built the parish church of St. Bennet (Finke). In Finch-lane, in the year 1765, James Watt obtained work with John Morgan, an instrument-maker. Here Watt became proficient in making quadrants, parallel rulers, compasses, theodolites, &c., and contrived to live upon eight shillings a week, exclusive of his lodging. *Birchin-lane*, properly Birchover-lane, from its builder, was anciently tenanted by wealthy drapers. Anderson states that, in the year 1372, in the reign of Edward III., at least twenty houses in Birchin-lane, in the very heart of the City, came under the denomination of cottages, and were so conveyed to St. Thomas's Hospital, in Southwark. The shops also, at this time, appear to have been detached and separate tenements, or, at least, unconnected with houses, as they are drawn to appear in Aggas's Map of London, where you may know the shops from the dwelling-houses by the signs attached. In Birchin-lane lived Major Graunt, said to have written *The Observations on the Bills of Mortality*, 1661-2. The houses in the lane were in our time small: twenty years ago it contained 23 houses, now it has but 16: what it has lost in number is made up in altitude. The lease for 80 years, from 1862, of the premises of the London and Middlesex Bank, No. 21, Finch-lane, with a frontage of 18ft. 6in., was sold by auction, in 1864, and realized 10,100*l.*, subject to a rental of 500*l.* per annum.

On the east side of Cornhill is *Change-alley*, a maze of thoroughfares. "With something like four or five entrances, two from Lombard-street, two from Cornhill, and one from Birchin-lane, there is great danger of losing your way either to the right or the left: you may possibly find that, instead of going as you intended through the Alley, and reaching Cornhill, you have in reality only taken another turning which leads you into Lombard-street, whence you started."—(*The City*, p. 169.) In Change-alley was Garraway's coffee-house, described at page 265.

No. 15, Cornhill, Birch's, the cook and confectioner's, is probably the oldest shop of its class in the metropolis. This business was established in the reign of King George I., by a Mr. Horton, who was succeeded by Mr. Lucas Birch, who, in his turn, was succeeded by his son, Mr. Samuel Birch, born in 1757; he was many years a member of the Common Council, and Alderman of the Ward of Candlewick. He was also Colonel of the City Militia, and served as Lord Mayor in 1815, the year of the battle of Waterloo. In his Mayoralty, he laid the first stone of the London Institution; and when Chantrey's marble statue of George III. was inaugurated in the Council Chamber, Guildhall, the inscription was written by Lord Mayor Birch. He possessed considerable literary taste, and wrote poems and musical dramas, of which *The Adopted Child* remained a stock piece to our time. The Alderman used annually to send, as a present, a Twelfth-cake to the Mansion House. The upper portion of the house in Cornhill has been rebuilt, but the ground-floor remains intact, a curious specimen of the decorated shop-front of the last century; and here are preserved two door-plates, inscribed, "Birch, Successor to Mr. Horton," which are 140 years old. Alderman Birch died in 1840, having been succeeded in the business in Cornhill, in 1836, by the present proprietors, Ring and Brymer. Dr. Kitchiner extols the soups of Birch, and his skill has long been famed in civic banquets.—*Chambers's Book of Days*, vol. ii. p. 164.

At a corner house, between Cornhill and Lombard-street, Thomas Guy, the wealthy stationer, commenced business. (*See HOSPITALS*.) This "lucky corner" was subsequently Pidding's Lottery-office. There were several other lottery-offices in Cornhill, including that of George Carroll, knighted as Sheriff in 1837; Lord Mayor in 1846.

Don Thomas Isturitz was one day walking near the Royal Exchange during the drawing of the lottery in 1815, and feeling an inclination to sport twenty pounds, went into the office of Martin & Co.,

Cornhill, where, referring to his pocket-book, he counted the number of days that had elapsed from that of his providential escape from Madrid (and the tender mercies prepared for him by the beloved Fernando), he found them amount to 261, and then demanded to buy *that* ticket; but it was nearly half an hour before it could be obtained, and only after a strict search amongst the lottery-offices in the city. At length, a half ticket of No. 261 was procured at two o'clock; and at five it was drawn a prize of forty thousand pounds, the only one ever exhibited to that amount in England. The lucky Don lay down that night twenty thousand pounds richer than he had risen.

Cornhill has been the scene of two calamitous fires—one, March 25, 1748, commenced at a peruke-maker's, in Exchange-alley, and burnt, within twelve hours, from 90 to 100 houses (200,000*l.* loss), including the London Assurance Office, the Fleece and Three Tuns Taverns, and Tom's and the Rainbow Coffee-houses, in Cornhill; the Swan Tavern, with Garraway's, Jonathan's, and the Jerusalem Coffee-houses, in Exchange-alley; besides the George and Vulture Tavern, and other coffee-houses: many lives were lost. Among the houses burnt was that in which was born the poet Gray, whose father was an Exchange broker; the house was rebuilt, and was, in 1774, occupied by one Natzell, a perfumer; and in 1824 it was still inhabited by a perfumer—No. 41, a few doors from Birchin-lane.

The second fire commenced also at a peruke-maker's, in Bishopsgate-street, adjoining Leadenhall-street, November 7, 1765, when all the houses from Cornhill to St. Martin Outwich Church were burnt; and the church, parsonage house, Merchant Tailors' Hall, and several houses in Threadneedle-street were much damaged. The White Lion Tavern, purchased for 3000*l.* on the preceding evening, and all the houses in White Lion-court, were burnt, together with five houses in Cornhill and others in Leadenhall-street, when several lives were lost.

#### COVENT GARDEN,

**L**YING between the north side of the Strand and Long-acre, has been a locality of great interest and celebrity for six centuries past. In 1222 most of the present parish of St. Paul, Covent-garden, was occupied by the garden of the Abbey at Westminster; *unde* Convent, corrupted to Covent-garden, which name occurs in a deed of 2 August, 9 Elizabeth. Strype also tells us that it "hath probably the name of Covent-garden because it was the garden and fields to that large convent or monastery where Exeter House formerly stood." Although this is the true orthography of the word, we see it commonly, if not invariably, written *Covent*, as being taken from the French *covent*, more immediately than from the Latin *conventus*; and in 1632 we find Sir Symond d'Ewes writing it "Coven or Common Garden." In 1627, only two persons were rated to the poor of the parish of St. Martin's-in-the-Fields, under the head Covent-garden. The parish of St. Paul, Covent-garden, is completely encircled by that of St. Martin's-in-the-Fields; but the boundary of each, upon the site of Bedford House and grounds, towards the lower end of Southampton-street, has been contested since the eighteenth century. Although the Market dates from the reign of Charles II., in 1726 and later, it was called Convent-garden; and by the vulgar "Common-garden" (Sir John Fielding, 1776). In digging for the foundations of the new market, in 1829, a quantity of human bodies was exhumed on the north side of the area, supposed to have been the Convent burial-ground. After the Dissolution, this garden, and the lands belonging to it, were granted by Edward VI. to his uncle, the Duke of Somerset, upon whose attainder they reverted to the Crown. In 1552, they were granted by patent, with seven acres, called Long-acre, of the yearly value of 6*l.* 6*s.* *8d.*, to John Earl of Bedford, who built a town residence, principally of wood, upon the site of Southampton-street, where it remained till 1704; the garden extending northward nearly to the site of the present market. Southampton-street was then built, and named after Lady William Russell, daughter of the Earl of Southampton; and other streets were named from the Russell family—as Russell, Bedford, Tavistock, Chandos; King and Henrietta streets, from Charles I. and his queen; and James and York streets, from the Duke of York, afterwards James II.

In 1634, Francis Earl of Bedford cleared the area; in 1640, Inigo Jones built for his lordship the church of St. Paul, on the west side (*see* CHURCHES, p. 195); and lines of lofty houses upon arcades on the north and east sides, a near imitation of the piazza at Livorno; Tavistock-row being built, in 1704, upon the south. The area was

inclosed with railings, at 60 feet from the buildings; and in the centre was a dial, with a gilt ball, raised upon a column. One of Hollar's prints, *temp.* Charles II., shows the place as above, with uniform houses, one on each side of the church. In 1671, the Earl of Bedford obtained a patent for the Market, which, however, was for a long time only held on the south side, against the garden-wall of Bedford House; for we read of "bonfires" and fire-works in the square in 1690 and 1691.

From its contiguity to the Cockpit and Drury-lane theatre, Covent-garden, "amorous and herbivorous," became surrounded with taverns. Here, in 1711, stood "Punch's Theatre," which thinned the congregation in the church; quacks used here to harangue the mob, and give advice gratis. These adventitious notorieties did not improve the morals of the locality—

"Where holy friars told their beads,  
And nuns confess'd their evil deeds:  
But, oh, sad change! oh, shame to tell  
How soon a prey to vice it fell!  
How?—since its justest appellation  
Is Grand Seraglio to the nation."—*Satire*, 1756.

"The convent becomes a playhouse; monks and nuns turn actors and actresses. The garden, formal and quiet, where a salad was cut for a lady abbess, and flowers were gathered to adorn images, becomes a market, noisy and full of life, distributing thousands of fruits and flowers to a vicious metropolis."—*W. S. Landor*.

Covent-garden was the first square inhabited by the great; for immediately upon the completion of the houses on the north and east sides, after Inigo Jones's design, they were *every one* of them inhabited by persons of the first title and rank, as appears by the parish-books of the rates at that time. Part of the east side was destroyed by fire, but not rebuilt in corresponding manner.

The chambers occupied by Richard Wilson, now the Tavistock breakfast-rooms, were portions of the house successively inhabited by Sir Peter Lely, Sir Godfrey Kneller, and Sir James Thornhill. Covent-garden, even so late as Pope's time, retained its fashion, as may be seen in the *Morning Advertiser*, March 6th, 1730:—"The Lady Wortley Montague, who has been greatly indisposed at her house in Covent-garden for some time, is now perfectly recovered, and takes the benefit of the air in Hyde Park every morning, by advice of her physicians." The parish of St. Paul was at that time the only fashionable part of the town, and the residence of a great number of persons of rank and title, and artists of the first eminence. A concourse of wits, literary characters, and other men of genius, frequented the numerous coffee-houses, wine and cider-cellars, jelly-shops, &c., within the boundaries of Covent-garden; the list of whom particularly includes the names of Butler, Addison, Sir Richard Steele, Otway, Dryden, Pope, Warburton, Cibber, Fielding, Churchill, Bolingbroke, and Dr. Samuel Johnson; Rich, Woodward, Booth, Wilkes, Garrick, and Macklin; Kitty Clive, Peg Woffington, Mrs. Pritchard, the Duchess of Bolton, Lady Derby, Lady Thurlow, and the Duchess of St. Albans; Sir Peter Lely, Sir Godfrey Kneller, and Sir James Thornhill; Vandevelde, Zincke, Lambert, Hogarth, Hayman, Wilson, Dance, Meyer, and Samuel Foote.

The Garden became *un-famous* when its opulent inhabitants exchanged their residences for the newly-built mansions in Hanover, Grosvenor, and Cavendish squares, and Holles and the other streets adjacent. It was at that period that Mother Needham, Mother Douglas (*alias*, according to Foote's *Minor*, Mother Cole), and Moll King, the tavern-keepers and gamblers, took possession of the abdicated premises. Beneath St. Paul's portico was "Tom King's Coffee-house." Upon the south side of the market-sheds was the noted "Finish," originally the Queen's Head, kept by Mrs. Butler, open all night—the last of the Garden night taverns, and only cleared away in 1829. Shuter was pot-boy here and elsewhere in the Garden, and, from carrying beer to the players behind the scenes, joined them as an actor.

The north and east sides are principally occupied as hotels and taverns. At the Old Hummums (in Arabic, "hammam"), when a bagnio, died Parson Ford, who conspicuously figures in Hogarth's *Midnight Modern Conversation*. There is a capital ghost-story connected with his exit, told in Croker's edition of Boswell's *Life of Dr. Johnson*. (See *BEDFORD COFFEE-HOUSE*, p. 261.)

The scene of Dryden's *Sir Martin Mar-all* is laid in this once fashionable quarter of the town; and the allusions to the square, the church, and the piazza are of constant

occurrence in the dramas of the age of Charles II. and Queen Anne. Gay, in his *Trivia*, gives this picture of the place :—

“Where Covent-garden’s famous temple stands,  
That boasts the work of Jones’ immortal hands,  
Columns with plain magnificence appear,  
And graceful porches lead along the square.  
Here oft my course I bend, when lo! from far  
I spy the furies of the foot-ball war :  
The ’prentice quits his shop to join the crew—  
Increasing crowds the flying game pursue.  
Oh! whither shall I run? the throng draws nigh;  
The ball now skims the street, now soars on high;  
The dexterous glazier strong returns the bound,  
And jingling sashes on the penthouse sound.”

The *Piazza* was very fashionable when first erected, and much admired. However, a century ago, it must have been “a sad place.” Shenstone writes in 1774 :—

“London is really dangerous at this time; the pickpockets, formerly content with mere filching, make no scruple to knock people down with bludgeons in Fleet-street, in the Strand, and that at no later hour than eight o’clock at night; but in the *Piazas*, Covent-garden, they come in large bodies, armed with cutteans, and attack whole parties, so that the danger of coming out of the playhouse is of some weight in the opposite scale, when I am disposed to go to them oftenier than I ought.”

Otway has laid a scene in the *Soldier’s Fortune* in Covent-garden *Piazza*; and Wycherley, a scene in the *Country Wife*. Thomas Killigrew, the wit, lived in the north-west and north-east angles; in the latter (corner of James-street), in 1676, dwelt Viscountess Muskerry, the celebrated Princess of Babylon of De Grammont’s *Memoirs*. The famous George Robins, of the *Piazza*, for fifty years, by his hammer, dispersed more property than any other man of his time. Lord Byron used to say his order could not go on long without George Robins to set their affairs right: he was beloved in literary and theatrical circles. His auction-rooms were formerly the studio of Zoffany, who painted here Foote, in the character of Major Sturgeon. Hogarth’s *Marriage-à-la-Mode* pictures were exhibited here gratis. One of the earliest records of artistic Covent-garden, is that of Charles I. establishing at the house of Sir Francis Kynaston, in “the Garden,” an academy called “Museum Minervæ,” for the instruction of gentlemen in arts and sciences, knowledge of medals, antiquities, painting, architecture, and foreign languages. Mr. Cunningham’s *Handbook* is pleasantly anecdotic of the residence of many eminent persons resident in this locality. Till the present century, the neighbouring streets were a fashionable quarter; and Tavistock and Henrietta streets, famed for *perruquiers*, were crowded with carriages at shopping hours.

In *Russell-street*, eastward, were WILL’S, BUTTON’S, and TOM’S COFFEE-HOUSES. (See pp. 272, 262, 271). In *James-street*, northward, was formerly held a Bird-market on Sunday mornings. In the house which occupied the site of Evans’s Hotel, at the south-west corner of the *Piazza*, lived Sir Harry Vane, the younger; and next Sir Kenelm Digby, of “Sympathetic Powder” fame. Aubrey says :—

“Since the Restoration of Charles II., he (Sir Kenelm Digby) lived in the last faire house westward in the north portico of Covent-garden, where my Lord Denzil Holles lived since. He had a laboratory there. I think he dyed in this house.”

In the same house, from 1681 to 1689, lived Lord Crewe, Bishop of Durham; and it appears from the books of St. Paul’s, Covent-garden, that almost all the foundlings of the parish were laid at the door of the bishop’s house. The exterior was much altered for Russell, Earl of Orford, the English Admiral, who, in 1692, defeated the French off Cape la Hogue; and people are found who see a fancied resemblance in the front of the house to the hull of a ship. Lord Orford’s house was subsequently occupied by Thomas Lord Archer; and by James West, the great collector of books, prints, drawings, &c., the sale of whose collection in this house occupied the auctioneer six weeks. After this sale, in the house was established the first family hotel in London, by David Low. About 1790, Mrs. Hudson, the proprietor, advertised her house, “with stabling, for one hundred noblemen and horses.” In the garden was formerly a small cottage, in which the Kembles, when in the zenith of their fame at Covent Garden Theatre, occasionally took up their abode; and here was born the gifted Fanny Kemble, in the chamber which now forms the gallery to the Music-room of Evans’s Hotel. Evans was succeeded by Mr. John Green, for whom was built the magnificent room, designed by Finch Hall, and opened in 1855. Here is a very interesting collection of portraits of eminent dramatists, actors, and actresses.

In *King-street* lived the lady for whom mahogany was first used in England; and a few of the houses in the street have doors of solid mahogany.

Next door, westward of the original Garrick Club-house, in *King-street*, lived Arne, the upholsterer; his son, Dr. Arne, the composer, and his daughter, Mrs. Cibber, were born in this house; where had lodged the Indian Kings, commemorated in the *Tatler* and *Spectator*. The house has long been tenanted by Mr. William Cribb, who was the first to appreciate the genius of Mr. Thomas Sydney Cooper, R.A.

It was in *Rose-street* (Dec. 18th, 1679) that Dryden, returning to his house in Long-acre, over against Rose-street, was barbarously assaulted and wounded by three persons, hired by Wilmot, Earl of Rochester. There are many allusions to this Rose-alley Ambuscade, as it is called, in our old State Poems. Butler, the author of *Hudibras*, lived, in the latter part of his life, in Rose-street, "in a studious and retired manner," and died there in 1680: the house was taken down in 1863. Butler is said to have been buried at the expense of Mr. William Longueville, "though he did not die in debt." Some of his friends wished to have interred him in Westminster Abbey with proper solemnity; but not finding others willing to contribute to the expense, his corpse was deposited privately, "in the churchyard of St. Paul's, Covent-garden." In 1786 a marble monument was placed on the inside south wall of the church, with this inscription:

"This little monument was erected in the year 1786, by some of the parishioners of Covent-garden, in memory of the celebrated Samuel Butler, who was buried in this church, A.D. 1680.

"A few plain men, to pomp and state unknown,  
O'er a poor bard have raised this humble stone;  
Whose wants alone his genius could surpass—  
Victim of zeal! the matchless Hudibras!  
What though fair freedom suffer'd in his page,  
Reader, forgive the author for the age!  
How few, alas! disdain to cringe and cant,  
When 'tis the mode to play the sycophant.  
But, oh! let all be taught from Butler's fate,  
Who hope to make their fortunes by the great,  
That wit and pride are always dangerous things,  
And little faith is due to courts and kings."

In 1721, Alderman Barber erected to Butler a monument in Westminster Abbey, upon its epitaph Samuel Wesley wrote these stinging lines:—

"While Butler, needy wretch, was still alive,  
No generous patron would a dinner give;  
See him, when starved to death, and turned to dust,  
Presented with a monumental bust.  
The poet's fate is here in emblem shown:  
He ask'd for bread, and he received a stone."

It was soon after this proposed to erect a monument in Covent-garden Church, for which Dennis, the critic, wrote an inscription, with these lines:

"He was a whole species of poet in one:  
Admirable in a manner  
In which no one else has been tolerable:  
A manner which began and ended in him,  
In which he knew no guide,  
And has found no followers."

In *Tavistock-row*, No. 4, lived Miss Reay, the mistress of Lord Sandwich: she was shot in the Piazza, in 1779, by the Rev. W. Hackman, in a fit of jealousy:

"A Sandwich favourite was his fair,  
And her he dearly loved;  
By whom six children had, we hear;  
This story fatal proved.  
A clergyman, O wicked one!  
In Covent-garden shot her;  
No time to ery upon her God,  
It's hoped He's not forgot her."—*Grub-street Ballad*.

In *Southampton-street* is a bar-gate; the Duke of Bedford having power to erect walls and gates at the end of every thoroughfare on his estate. Here, in 1711, Bohea-tea was sold at 26s. per pound, at the sign of the Barber's Pole. At No. 27 lived David Garrick, before he removed to the Adelphi. No. 31, late Godfrey and Cooke's, was the oldest chemist's and druggist's shop in London; but was removed from here in 1863. *Here phosphorus was first manufactured in England*; the above

premises having been the house, shop, and laboratory of Ambrose Godfrey Hanckwitz, who, immediately after the discovery of phosphorus by Brandt, the alchemist, under the instructions of the celebrated Robert Boyle, succeeded in preparing an ounce of solid phosphorus; such as he subsequently sold at 50s. and 60s. an ounce. His laboratory was a fashionable resort in the afternoon on certain occasions, when he performed popular experiments for the amusement of his friends. It opened into a garden, which extended as far as the Strand. Curious prints exist of the laboratory in its former state; also a portrait of Hanckwitz, engraved by Vertue (1718), which he had distributed among his customers as a keepsake. Hanckwitz died in 1741. His successors, Godfrey and Cooke, maintained the date 1680 on their premises in Southampton-street, and over the entrance to the laboratory, in the rear.

In *Maiden-lane*, Andrew Marvell lodged in a second-floor while he sat in Parliament for Hull, and refused a Treasury order for 1000*l.*, brought to him by Lord Danby from the king. Voltaire lodged at the White Peruke. More in character with the place was the Cyder Cellar, opened about 1730, and described in *Adventures Underground*, 1750; and by *Charles Lamb* in the *London Magazine*. In the house, No. 26, nearly opposite, lived William Turner, who dressed wigs, shaved beards, and, in the days of queues, topknots, and hair-powder, waited on the gentlemen of the Garden at their own houses. A door under the arched passage on the right led to the shop, in the room above which was born, in 1775, his son, Joseph Mallord William Turner, landscape-painter. The great painter's natal house has been taken down: here, and in the above house, Turner painted 59 pictures, which he exhibited at the Royal Academy.

At the house at the south-east corner of *Bedford-street*, Clay sold his *papier-mâché*. Clay was a pupil of Baskerville, of Birmingham, and first applied *papier-mâché* to tea-trays in 1760, by which he realized a fortune of 80,000*l.* Some of the finest of his trays were painted by early members of the Royal Academy, among whom was Wheatley. "At the Riding-hood Shop, the corner of Chandos and Bedford-street," Humphry Wanley, the antiquary, was lodging in 1718.

#### CRANE-COURT.

OF the four-and-thirty streets, lanes, courts, and alleys leading from Fleet-street, the most notable is Crane-court, eastward of Fetter-lane; though this court does not lead anywhere, it being a *cul-de-sac*. It was originally named Two Crane-court. It was rebuilt immediately after the Great Fire, and contains a few specimens of fine brickwork. Strype describes Crane-court as "a very handsome open place, graced with good buildings, well inhabited by persons of repute." Until about 1782 it was paved with black and white marble. The large end house was built by Sir Christopher Wren, and was inhabited by Dr. Edward Brown, an eminent physician, until 1710, when it was purchased, with the "adjoining little house," by the Royal Society; the President, Sir Isaac Newton, recommending it as being "in the middle of the town, and out of noise." On the meeting-nights, a lamp was hung out over the entrance to the court from Fleet-street. The Society met here until 1782, when they removed to Somerset House, and sold that in Crane-court to the Scottish Hospital and Corporation, who now occupy it. This Company originated in "the Scottish Box," in 1613: the members then numbered only 20, and met in Lamb's Conduit-street; their Charter dates from 1665. The Hospital now distributes about 2200*l.* a year, chiefly in 10*l.* pensions to old people; and the princely bequest of 76,495*l.*, by Mr. W. Kinloch, allows 1800*l.* being given in pensions of 4*l.* to disabled soldiers and sailors. The monthly meetings of the Society are preceded by Divine service in the chapel, in the rear of the house. The meeting-room has an enriched ceiling of finely-carved oak. The walls are hung with portraits of the Duke of Lauderdale, by Lely; Mary Queen of Scots, by Zuechero; the Earl of Bedford; the Duke of Queensberry; the second Duke of Sutherland; James, third Duke of Montrose; the Scottish Regalia; and a large whole-length portrait of William IV., painted by Wilkie, and presented by him to the Scottish Hospital, &c.

Crane-court had a few other notabilities. In the first house on the right (now rebuilt) lived Dryden Leach, the printer, who, in 1763, was arrested on a general warrant, upon suspicion of having printed Wilkes's *North Briton*, No. 45: Leach was

taken out of his bed in the night, his papers were seized, and even his journeymen and servants were apprehended; the only foundation for the arrest being a hearsay that Wilkes had been seen going into Leach's house. Wilkes had been sent to the Tower for the No. 45; after much litigation he obtained a verdict of 4000*l.*, and Leach 300*l.* damages from three of the king's messengers, who had executed the illegal warrant. Crane-court has long been a sort of nursery for newspapers: here was the office of the *Commercial Chronicle*; the *Traveller* removed to No. 9 from Fleet-street, and remained here until its junction with the *Globe*. In the basement of another house were printed the early numbers of *Punch*; or, *the London Charivari*; and in No. 10 (Palmer and Clayton's), immediately opposite, was first printed the *Illustrated London News*, projected and established by Herbert Ingram, in the spring of 1842. The Society of Arts first met in apartments over a circulating library in Crane-court; and here the Society awarded its first prize (15*l.*) to Cosway, then a boy of fifteen, and afterwards a fashionable miniature-painter. The circulating library in the court was one of the earliest established in the metropolis; the first was Batho's, about 1740, at No. 132, Strand; in 1770 there were but four.

### CROSBY HALL,

**I**N Bishopsgate-street, and north of the entrance into Crosby-square, is a portion of Crosby Place, built upon ground leased of the Prioress of St. Helen's in 1466, by Sir John Crosby, alderman, one of the sheriffs in 1471, knighted by Edward IV. in the same year, and deceased in 1475: "so short a time enjoyed he that his large and sumptuous building; he was buried in St. Helen's, the parish church; a fair monument to him and his lady was raised there."—(*Stow*.)

The next possessor of Crosby Place was Richard Duke of Gloucester, afterwards King Richard III.; and here Shakspeare has laid a portion of his drama of that name; though "the historian is compelled to say, that neither at the death of Henry VI. in 1471, nor at the marriage of Richard with the Lady Anne in 1473, is it probable that Richard was in possession of Crosby Place;" but here he determined upon the deposition, and perhaps the death, of the young King Edward V., and here plotted his own elevation to the vacant throne.

The Rev. Joseph Hunter, in his *New Illustrations of Shakspeare*, says:—"In the course of my researches only one document has presented itself which is entirely unknown, containing a notice of Shakspeare during the course of his London life. It shows us, what has hitherto remained undiscovered, in what part of London he had fixed his residence at the period of his life when he was producing the choicest of his works. We have evidence of the most decisive nature, that on October 1, in the fortieth year of Queen Elizabeth, which answers to the year 1593, Shakspeare was one of the inhabitants of St. Helen, Bishopsgate, and consequently a near neighbour of Crosby Hall. In an assessment-roll of that date, for levying the first of three entire subsidies which were granted to the Queen in the thirty-ninth year of her reign, the name of William Shakspeare occurs in connexion with that of Sir John Spencer, and other inhabitants of the parish of St. Helen's, with the sum *5*l.* 13*s.* 4*d.**, the assessment, against the poet's name. This document gives us the names of his neighbours; among whom we find Sir John Spencer; Dr. Richard Taylor, Dr. Peter Turner, Dr. Edward Jordan, all well-known physicians; Dr. Cullimore, Robert Honeywood, and the heads of the wealthy families of Read and Robinson."

Crosby Place was next purchased by Sir Bartholomew Read, who kept here his mayoralty, 1501. Its next possessor was Sir John Best, Mayor in 1516 (the year of Evil May-day), and by him it was sold to Sir Thomas More, in what year is uncertain; but it was probably soon after his return from his mission to Bruges, in 1514 and 1515; and as this journey forms the groundwork of the *Utopia*, there is reason to infer this charming romance to have been written at Crosby Place, to which the picture in the preface of Sir Thomas's domestic habits may apply. There is little or no doubt that More wrote his *History of Richard the Third* at Crosby Place, however it may be with the *Utopia*. Here, too, More probably received Henry VIII.; for this was just the time he was in high favour with the king, who then kept his court at Castle Baynard's, and St. Bride's. In 1523 More sold Crosby Place to his dearest friend Antonio Bonvisi, a rich merchant of Lucca, who leased the mansion to William Rastell, More's nephew; and to William Roper, the husband of More's favourite daughter Margaret. In the reign of Edward VI., Bonvisi, Rastell, and Roper were driven abroad by religious persecution, and Crosby Place was forfeited, but restored on the accession of Mary. The next proprietors were Jermyn Cioll, who married a cousin

of Sir Thomas Gresham ; and Alderman Bond, who added to the edifice a lofty turret, though no traces of it are now to be found.

In 1594, Sir John Spencer purchased Crosby Place, and in it kept his mayoralty that year. He greatly improved the Place, and "buildd a most large warehouse near thereunto." He was the "rich Spencer," worth nearly a million of money ; and here he entertained Sully, when he came on a special embassy from Henry IV. of France to James I. Sir John Spencer's daughter and sole heiress married William, the second Lord Compton, afterwards Earl of Northampton, and ancestor of the present Marquis. During Lord Compton's proprietorship, the celebrated Countess of Pembroke, "Sidney's sister, Pembroke's mother," lived many years in Crosby Place. Spencer, Earl of Northampton, son of the last-mentioned proprietor, resided here in 1638. Two years previously, the property was leased to Sir John Langham, sheriff in 1642, during whose occupation it was frequently used as a prison for Royalists. His son, Sir Stephen Langham, succeeded him ; and during his tenancy, Crosby Place was so injured by fire, that it was never afterwards used as a dwelling. In 1672, the Upper Hall was converted into a Presbyterian meeting-house by the Rev. T. Watson ; he was followed by Stephen Charnock ; Dr. Grosvenor, a pupil of Benjamin Keach ; and Edmund Calamy, jun. The congregation continued to meet here till 1769, when it was dispersed ; previously to which a farewell sermon was preached here by the Rev. Mr. Jones, the predecessor of the Rev. Dr. Collyer, of Peckham.

The Hall was then let as a packer's warehouse. In 1677, the present houses in Crosby-square were built on the ruins of the old mansion. In 1831, the packer's lease of the Hall expired ; when public attention was drawn to its restoration, as the finest example in the metropolis of the domestic mansion of Perpendicular work. Its long list of distinguished tenants,—above all, its association with Richard III., greatly popularized the proposed restoration ; and, on June 27, 1836, the first stone of the new work was laid by Lord Mayor Copeland, alderman of Bishopsgate Ward ; when the Hall was fitted up with banners, strewed with rushes, and an Elizabethan breakfast served upon the long tables.

On July 12, 1838, a musical performance was given in the Hall, after service in St. Helen's Church, in commemoration of Sir Thomas Gresham : the place is fraught with musical memories, for under its shadow once lived Byrde, Wilbye, and Morley, the celebrated madrigalists.

The restoration was completed in 1842 : repairs have been made, and much of the original mansion has been built : the Hall, the Council-chamber, with the Throne-room above, remain ; and the vaults are a fine specimen of early brickwork. The entrance to Crosby-square is through a small gateway from Bishopsgate-street. The Hall consists of one story only, lighted by lofty and elegant windows, and a beautiful oriel window, reaching from the floor to the roof. The Council-chamber\* was stripped of many of its decorations in 1816 by the proprietor, who removed them to adorn a dairy at his seat, Fawley Court, Bucks ; but the finely-coved ceiling became the property of Mr. Yarnold, of Great St. Helen's, at the sale of whose Collection, in 1825, this lot was purchased by Mr. Cottingham, the architect, who fitted it as the ceiling of his Elizabethan Museum at No. 43, Waterloo-bridge-road : at the dispersion of which, in 1851, the relic was again sold. The Throne-room has an oak-ribbed rounded roof ; and among its windows, is one reaching the entire height of the apartment.

The Great Hall, the innermost sanctuary, is 54 ft. long, 27½ broad, and 40 feet high. It has a minstrels' gallery, but not a dais.

The glory of the place is, however, the roof, which is an elaborate architectural study, and decidedly one of the finest specimens of timber-work in existence. It differs from many other examples in being an inner roof ; it is of cork or chestnut, of low pointed arches, approaching to an ellipse. From the main points of intersection hang pendants, which end in octagonal ornaments, pierced with small niches, each pendant forming the centre of four arches ; so that, in whatever point it is viewed, the design presents a series of arches of elegant construction, whilst the spandrels are pierced with perpendicular trefoil-headed niches. The principal timbers are ornamented with small flowers, or knots of foliage, in a hollow ; and the whole springs from octangular corbels of stone attached to the piers between the windows. Here the superior taste of the architect is strikingly displayed in the method by which he has avoided an horizontal import to his ceiling, by constructing arches of timber corre-

\* In 1794, Mr. Capon painted for John Philip Kemble, at New Drury-lane Theatre, the Council Chamber, for the play of *Jane Shore* ; a correct restoration of the original apartment, as far as existing documents would warrant.

sponding with the ornamental portions of the roof above the lateral windows, and thus completely avoiding a horizontal line, which was as much the abomination of our ancient architects as it is the favourite of our modern ones. These arches are surmounted by an elegant entablature, of a moulded architrave, a frieze of pierced quatrefoils in square panels, and an embattled cornice; each quatrefoil contained a small flower, of which fifty-six originally existed on each side of the Hall, the designs being dissimilar.

The oriel, forming an ornamented recess in the side of the Hall, has ever been regarded as one of its best features: it is vaulted with stone, beautifully groined, the ribs springing from small pillars attached to the angles; while knots of foliage and bosses are at the points of intersection. Among them is a ram trippant, the crest of Sir John Crosby. This and the other windows have been, for the most part, filled with stained glass, decorated with the armorial bearings of the several personages famous in the history of Crosby Place, as well as of persons of taste who have contributed to its restoration. The lower aperture has been closed by the same piece of wood-work that was formerly elevated above it. The floor is paved with stone in small squares arranged diagonally. In the north wall is a fire-place, which is at least singular, if not unique, in a Hall of this age.

Crosby Hall, in its restored state, has been let for musical performances and lectures; and it was, for some time, the meeting-place of a Literary Society. The west front of the premises, next Bishopsgate-street, has been composed in the style of the half-timbered houses of the Crosby period. Here is a statue of Sir John Crosby, by Nixon; with his arms and crest.

#### CRUTCHED FRIARS.

THIS picturesque fragment of old London, which Hatton describes "as a very considerable, though crooked street," lies between Jewry-street and Hart-street, the oldest portion being a short distance towards Tower-hill, from Fenchurch-street. Here remained till lately a group of houses, but little altered since Queen Elizabeth's days; the quaint gables, the highly-pitched roofs, the peculiar arrangement of the water-troughs, the projections over the shop windows little more than seven feet in height, the thick window-frames and small squares of glass—all denoted the considerable age of the structure.

The street derives its name from being on the site of the ancient monastery of *Crouched* or *Crossed Friars* (*Fratres Sanctæ Crucis*), founded in 1298, by Ralph Hosier and William Sabernes, who became friars here. Originally they carried in their hands an iron cross, which they afterwards exchanged for one of silver. They wore a cross, made of red cloth, on their garment, which at first was grey, and in later times altered to blue. One Adams was the first prior, and Edmund Streatham the last. Their annual income seems to have been small. Henry VIII. granted their house to Sir Thomas Wyatt, the elder, who built a handsome mansion on part of the site. This house afterwards became the residence of John Lord Lumley, a celebrated warrior in the time of Henry VIII., who greatly distinguished himself at the battle of Flodden, by his valour and the number of men he brought into the field. "John Lord Lumley, grandson to the first," says Pennant, "was amongst the few of the nobility of that time who had a taste for literature." He married his sister Barbary to Humphrey Llwyd, of Denbigh, and by his assistance formed a considerable library, which at present makes a valuable part of the British Museum. The refectory was converted into the first glass-house ever established in England, which was burned down in 1575. On the site was subsequently erected a stupendous tea-warehouse for the East India Company.

Near this place stood a Northumberland House, which was inhabited in the reign of Henry VI. by two of the Earls of Northumberland. One lost his life at the battle of St. Albans, and the other his son in that of Toulon. Being deserted by the Percies, the gardens were converted into bowling-alleys, "and other parts," says Stow, "into dicing-bouses." This was probably one of the first of those evil places of resort.

In the valley, now crossed by a viaduct of the Blackwall Railway, were the Almshouses of the Drapers' Company, erected and endowed in 1521, by Sir John Milborne. They were taken down in 1862; they are described under ALMSHOUSES, p. 8.

The neighbourhood has, however, a far more remote antiquity, for an inscribed stone

found in the Tenter-ground, in Goodman's-fields, while making an excavation in a garden at a depth of about seven feet below the surface, takes us back to the Roman occupation of Britain. Several fragments of urns were found at the same time. The inscription connects it with the Sixth Legion; and from it this portion of the Roman army is presumed to have been stationed for a time in or near London.

In 1865, there was excavated in Jewry-street a portion of the western wall of old London. Almost upon the very day that the above discovery was made of the *western* wall, near Aldersgate-street was excavated a portion of the *eastern*. The wall runs in a straight line from the Tower to Aldgate, by Trinity-square, where a portion has been discovered, which, though not Roman, was supposed to rest on Roman foundations. In 1841, the Blackwall Railway, much further north than this point, cut through Roman remains of the great Wall, nearly opposite Milborne's Almshouses. These remains are engraved in *Knight's London*, vol. i. p. 164, where the fragment is described as "recently excavated behind the Minories." In August, 1864, was discovered an extensive fragment of a Norman wall, upon undoubtedly Roman foundations; and partly behind the Minories, on the east side of the lower end of Jewry-street, which had been cleared of a number of small houses, remains were found at various levels; as, masses of Roman stonework, with bondings of Roman bricks, or, as we should call them, tiles; a superstructure of earlier date; and in the lowest depths horns of oxen and other remains in abundance. East of the site is Vine-street, named from a vineyard anciently there, in the rear of the Minories. Some of the entire Roman bricks, cleared of cement, &c., were fine specimens of the building materials of our conquerors. (See GOODMAN'S FIELDS.)

#### CRYPTS.

THE Crypts, vaults, or undercrofts remaining in the metropolis, are interesting specimens of its ecclesiastical and domestic architecture.

The Crypt or Lower Chapel of Old London Bridge belongs to the past: it was constructed in the tenth or great pier, and was entered both from the upper apartment and the street, as well as by a flight of stone stairs winding round a pillar which led into it from outside the pier: whilst in front of this latter entrance the sterling formed a platform at low-water, which thus rendered it accessible from the river. This Crypt was about 60 feet in length, 20 feet high, and had a groined roof, supported by stone ribs springing from clustered columns; at the intersections were bosses sculptured with cherubs, episcopal heads, and a crowned head (probably Richard Cœur-de-Lion), grouped with four masks; and near the entrance was a piscina for holy water. Here was a rich series of windows looking on to the water, and the floor was paved with black and white marble: herein was buried Peter of Colechureh, the priest-architect of the bridge. The Chapel was taken down in 1700: the Crypt had been many years used as a paper warehouse; and though the floor was always from 8 to 10 feet under the surface at high-water mark, yet the masonry was so good that no water ever penetrated. In front of the bridge-pier a square fish-pond was formed in the sterling, into which the fish were carried by the tide, and there detained by a wire grating placed over it; and "an ancient servant of London Bridge, now (1827) verging upon his hundredth summer, well remembers to have gone down through the Chapel to fish in the pond."—*Thomson's Chronicles*, p. 517.

ST. BARTHOLOMEW'S CRYPT, Smithfield, exists in good preservation under the dining-hall or refectory of the priory, of which also there remain other appurtenances. The crypt is of great length, has a double row of beautiful aisles, with Early-Pointed arches, divided by Middlesex-passage, leading from Great to Little Bartholomew-close; a door at the extremity is traditionally said to have communicated by a subterranean passage with Canonbury, at Islington. Beneath the "Coach and Horses" public-house, probably once the *hospitium*, within the west gate of the monastery, is the remains of another crypt.

BISHOPSGATE-STREET WITHIN, No. 66 (taken down in 1865), was built upon a crypt, of ecclesiastical architecture.

BOW CHURCH CRYPT, Cheapside, consists of columns and simple Romanesque groinings, said to be of the age of the Conqueror; it is the crypt of the ancient Norman church, but it was mistaken by Wren for Roman workmanship. It has long been used as a dead-house, is ventilated, and the coffins are put in fair order. At Messrs. Growcock's, in Bow Churchyard, is a small portion of another crypt or undercroft. It is difficult to understand how Wren was led to the belief that the above remains were Roman; unless, as was pointed out by Mr. Gwilt, in an admirable description of the crypt (*Vetusta Monumenta*, vol. v. plates 61 to 65), Wren was deceived by the fact

that Roman bricks are used in the construction of the arches; or did he mean that they were *more Romano*, or in the Roman manner?

ST. ETHELREDA'S CHAPEL CRYPT, Ely-place, originally a burial-place, is not vaulted, but has for its roof the chapel-floor, supported by enormous chestnut posts and girders. During the Interregnum, when Ely House and its offices were converted into a prison and hospital, this crypt became a kind of military canteen; it was subsequently used as a public cellar to vend drink in; and here were frequently revellings heard during divine service in the chapel above.

GARRAWAY'S COFFEE-HOUSE, 3, Change-alley, Cornhill, had a crypt of fourteenth and sixteenth century architecture, was of ecclesiastical character, and had a piscina; it was used as the coffee-house wine-cellar, and extended under Change-alley.

GERARD'S HALL CRYPT, Basing-lane, was the only remaining vestige of the mansion of John Gisors, pepperer, Mayor of London in 1245; "a great house of old time, builded upon arched vaults, and with arched gates of stone brought from Cane in Normandy" (*Stow*); Gisors' Hall being corrupted to Gerard's Hall. The date of this crypt was probably late in the thirteenth century. The groined roof was supported by sixteen columns: the crypt, although generally resembling a subterranean ecclesiastical edifice, was constructed solely for the stowage of merchandize, and was thus an example of the warehouse of the wealthy London merchant of the thirteenth century. The great house called the Vintrie stood upon similar vaults, which were used for the stowage of French wines; it was likewise occupied, in 1314, by Sir John Gisors, who was a vintner. Gerard's Hall Crypt, with the modern inn which had replaced the hall, was removed in forming a new street in 1859, when some curious old merchant's marks were found.

Here was preserved the tutelar effigies of "Gerard the gyant," a fair specimen of a London sign, *temp.* Charles II. Here also was shown the staff used by Gerard in the wars, and a ladder to ascend to the top of the staff; and in the neighbouring church of St. Mildred, Bread-street, hangs a huge tilting-helmet, said to have been worn by the said *gyant*. The staff, *Stow* thinks, may rather have been used as a May-pole, and to stand in the hall decked with evergreens at Christmas; the ladder serving for decking the pole and hall-roof.—*J. W. Archer.*

GUILDHALL CRYPT is the finest and most extensive undercroft remaining in London, and is the only portion of the ancient hall (erected in 1411) which escaped the Great Fire. It extends the whole length beneath the Guildhall from east to west, divided nearly equally by a wall, having an ancient Pointed door. The crypt is further divided into aisles by clustered columns, from which spring the stone-ribbed groins of the vaulting, composed partly of chalk and bricks; the principal intersections being covered with carved bosses of flowers, heads, and shields. The north and south aisles had formerly mullioned windows, now walled up. At the eastern end is a fine Early-English arched entrance, in fair preservation; and in the south-eastern angle is an octangular recess, which formerly was ceiled by an elegantly groined roof; height, 13 feet. The vaulting, with four-centred arches, is very striking, and is probably some of the earliest of the sort, which seems peculiar to this country. Though called the Tudor arch, the time of its introduction was Lancastrian. (*See Weale's London*, p. 159.) In 1851 the stone-work was rubbed down and cleaned, and the clustered shafts and capitals were repaired; and on the visit of Queen Victoria to Guildhall, July 9, 1851, a banquet was served to her Majesty and suite in this crypt, which was characteristically decorated for the occasion. Opposite the north entrance is a large antique bowl, of Egyptian red granite, which was presented to the Corporation by Major Cookson in 1802, as a memorial of the British achievements in Egypt.

"GUY FAWKES'S CELLAR" was a crypt-like apartment beneath the old House of Lords, the ancient Parliament-chamber at Westminster, believed to have been rebuilt by King Henry II. on the ancient foundations of Edward the Confessor's reign. "The walls of this building were nearly seven feet in thickness, and the vaults below ('Guy Fawkes's Cellar') were very massive. Piers of brickwork (possibly of Charles the Second's time) had been raised to strengthen the ceiling and sustain the weight of the Parliament-chamber floor, together with strong rafters of oak, supported by twelve octagonal oak posts, on stone plinths. This building was taken down about the year

1823, when it was ascertained that the vaults had been the ancient kitchen of the Old Palace; and near the south end the original buttery-hatch was discovered, together with an adjoining pantry or cupboard." (Britton and Bailey's *Westminster Palace*, p. 421.) The conspirators obtained access to the vaults through a house in the south-east corner of Old Palace-yard, which was at one time occupied as the Ordnance Office, and afterwards as the entrance to the House of Lords.

After the Gunpowder Plot, Nov. 5, 1605, it became the custom to search and carefully examine all the vaults and passages under the Houses of Parliament, previous to the Sovereign opening the Session. This precautionary inspection, continued to our time, was performed by certain officers of Parliament, headed by the Usher of the Black Rod, who went through the vaults, and examined the various nooks and recesses that might, if conspirators were so inclined, again hold combustibles, with the intent, "suddenly and with one blast, to blow up and tear in pieces" those assembled on the occasion in Parliament. The search took place on the morning of the day of the Royal ceremonial.

HOSTELRY OF THE PRIORS OF LEWES CRYPT, the, was discovered in Carter-lane, Southwark, in 1832. This vaulted chamber was supported by six demi-columns, attached to the side walls; the columns and arches of wrought stone, and the vaultings of chalk. In 1834 was discovered another cryptal chamber, with a plain massive round pillar in the centre, from which sprang elliptic-ribbed arches, forming a groined roof. This vault is supposed to have been the cellar of "the Hostelry for Travellers, which had the sign of the 'Walnut Tree.'" (*Stow*.) Both Crypts originally belonged to the town-lodging of the Priors of Lewes; the larger Crypt being under the great Hall, which had been used as the grammar school-room of St. Olave's, founded by Queen Elizabeth. These crypts were destroyed in making the approaches to the New London Bridge.

ST. JOHN'S CRYPT, Clerkenwell, is semi-Norman and Early English, and part of the magnificent Priory Church of St. John of Jerusalem; the superstructure of the present Church of St. John being mostly the patched-up remains of the choir. This Crypt in modern times (1762) has been rendered notorious by the detection of the imposture known as the Cock-lane Ghost. The most interesting remaining portions of the Crypt comprise the central avenue and a small compartment on each side of it by the entrance at the east end. The Crypt appears to have been originally above ground, and not subterraneous: an entrance to it may be seen in Hollar's view of the east end as it appeared in 1661 from St. John-street, with the hospital gardens and boundary-wall. The central portion of the crypt consists of four severays or bays: two simple and plain, being semi-Norman, and two Early English, and very perfect, the details and mouldings being worthy of careful examination. The ribs of the Early-English bays spring from triple-clustered columns, in each angle of the bays, with moulded capitals and bases; the upper moulding horizontally fluted, similar to some Grecian-Ionic bases. The central shafts of the clustered columns are pointed, and the diagonal ribs have three mouldings: the central one is pointed and the outer are rolls. This pointed bowtell occurs frequently in semi-Norman and Early-English work, and is coeval with the introduction of the pointed arch. Suspended from the keystone of each arch is an iron ring. On each side of the two western bays of the central aisle is a deeply-recessed pointed widow: the doorways are trefoil-headed.

LAMBETH PALACE CRYPT, or Under-chapel, is considered to be the oldest portion of the Palace. It consists of a series of strongly-groined stone arches, supported centrally by a short, massive column, and by brackets in the side walls. These vaults are now converted into cellars; they might, possibly, have been originally used for Divine worship, as there are two entrances to them from the cloisters.

"Lambeth Palace Chapel retains a Crypt, a doorway, and windows of great beauty, but the Chapel has otherwise been quite barbarised; and the remainder of this archiepiscopal residence, though founded as early as the reign of Richard Cœur-de-Lion (before which it was a residence of the Bishop of Rochester), now forms only a confused medley of buildings, with no fragment older than the fifteenth century." Weale's *London*, p. 145.

LAMB'S CHAPEL CRYPT, Monkwell-street, is a remarkably pure and finished specimen of the Norman style. The vaulted roof has been supported by nine short columns, six of which remain, with very ornate capitals; and the interesting ribs of the groining are decorated with zig-zag mouldings and a spiral ornament. The carved work is of Caen stone. The chapel was originally "the Hermitage of St. James's" in the wall,

a cell to the Abbey of Quorndon, in Leicestershire, and said to have been founded by Henry III., but evidently upwards of a century earlier. The Chapel and its appurtenances were granted by Henry VIII. to William Lamb, who bequeathed and endowed it at his death for the benefit of the Clothworkers' Company, of which he was a member. (See LAMB'S CONDUIT, p. 288.)

LEATHER-SELLERS' HALL CRYPT, at the east end of St. Helen's-place, Bishopsgate, adjoins the church of St. Helen on the north side, and extends beneath the present hall: it is boldly groined. In the wall which separated this Crypt from the church were two ranges of small apertures, made in an oblique direction, so that the high altar might be seen by those in the Crypt when mass was performing. The position of one set of these openings ("The Nuns' Grating") is marked out within the present church by a stone-canopied altar affixed to the wall. The Crypt has been engraved by J. T. Smith.

ST. MARTIN'S-LE-GRAND CRYPT was laid open in clearing for the site of the new General Post-Office, in 1818, the area formerly occupied by the Church and Sanctuary of St. Martin. There were then found two ranges of vaults, which had served as cellars to the houses above; one of these being the crypt of St. Martin's (taken down in 1547), and afterwards the cellar of a large wine-tavern, the "Queen's Head," This was in the Pointed style of Edward III., and was most likely the work of William of Wykeham. The second or westernmost range, which must have supported the nave, was of earlier date, and was a square, vaulted chamber, divided by piers six feet square: here were found a coin of Constantine, and a stone coffin containing a skeleton; and in digging somewhat lower down, Roman remains were met with in abundance. In St. Martin's-le-Grand also, between Aldersgate and St. Ann's-lane end, was the large tavern of the "Mourning Bush," whose vaulted cellars, as they remain from the Great Fire of 1666, disclose the foundation-wall of Aldersgate, and a remarkably fine specimen of early brick arch-work.

ST. MARY ALDERMARY, Bow-lane.—In 1835, upon the removal of some houses in Watling-street, at the east end of this church, a building, thought to be the Crypt of the old church commenced by Sir Henry Keble in 1510, was brought to light. In 1851, in widening the thoroughfare by way of Cannon-street, just opposite St. Swithin's Church and London Stone, an ancient vault or crypt, of considerable length, was opened; it had stone cross-springers, forming a Pointed arch, and was vaulted with chalk.

MERCHANT TAILORS' HALL CRYPT was brought under notice during some repairs in 1855, this being the crypt of the former Hall, destroyed by the Great Fire. The kitchen, seen in the way to the Crypt, may be older than the time of the fire, probably about the time of Henry VIII. On a conspicuous part of the wall is the excellent motto—"WASTE NOT, WANT NOT." There are some Pointed arches and windows, and also two corbels, visible. The Crypt is at a considerable depth below the kitchen, and has been used for some time past as a coal-cellar: the walls and filling in between the groins are of chalk. The Company have preserved it. About seven feet from this Crypt, and under the late open yard of the Hall, another old vault has been since discovered: it is 7 feet wide, and quite full of garden-mould. The walls are of chalk-rubble, and the voussours of Kentish rag.

ST. MICHAEL, ALDgate.—A subterranean passage is said to conduct from the Tower to the ancient Chapel or Crypt of St. Michael at Aldgate, situated under the house at the south-east corner of London Wall-street, hard by Aldgate pump. It has some marks of the semi-Norman, or Transition style, but it is assigned to Prior Norman, in 1108. The central clustered column is Norman; the bosses remain perfect, and contain roses and grotesque heads. A means of approach from the street has existed; and there are indications of two other passages, one said to have run to Duke's-place, and the other to the Tower.

ST. PAUL'S CRYPT extends beneath the whole of the church, and, like the body of the Cathedral, is divided into three avenues by massive pillars and arches; except the portion beneath the area of the dome, it is well lighted and ventilated by windows

opening into the churchyard. The north aisle is a place of sepulture for the parishioners of St. Faith. (*See CHURCHES*, p. 113.) In the crypt of Old St. Paul's the stationers of Paternoster-row had warehoused their stocks of books, which were destroyed in the Great Fire.

ST. STEPHEN'S CRYPT, WESTMINSTER PALACE, also called "St. Mary's Chapel in the Vaults," formed the basement of St. Stephen's Chapel, founded by King Stephen, and rebuilt by Edward I. in 1292: a roll of this date records the purchase of two shiploads of chalk, besides burnt lime, ashes, and sand, for the foundation of the chapel, thus proving it to have been raised on a *concrete* basis; and how substantially is proved by the Crypt remaining in excellent preservation, notwithstanding the superstructure has been twice destroyed by fire—in 1298 and 1834. Like other crypts, this is of low proportions, but has no division by detached pillars; the masses projecting inwards, and dividing window from window in short massive clusters, the vault-ribs and all other members partaking of the same bold, thick character; whilst the tracery of the windows is exquisitely beautiful. Strength, solidity, fine proportions, and skilful execution, are the characteristics of this basement chapel" (*Britton and Brayley*), which "is the last fragment in London that can be decidedly classed in the first or progressive period of English architecture."—(*Weale's London*.) This Crypt was fitted up as the state dining-room of the Speaker of the House of Commons; it was much damaged in the great fire of 1834, but has been restored as a chapel for the officers of the House of Commons; and during the works, on January 17, 1852, the workmen discovered, beneath a window-seat, the embalmed body of an ecclesiastic, without any coffin. The corpse lay with the feet towards the east (said to be an unusual position for an ecclesiastic); it was wrapped in several folds of waxed cloth sewn together with coarse twine; its right hand, on which was probably the ring or jewelled glove, was lying on the breast. Over the left arm was the pastoral staff—a crook—of oak, beautifully carved. On the feet were sandals, with leathern soles sharply pointed. Upon removing the cere-cloth, the face proved to be in remarkable preservation, with hair on the chin and upper lip. The remains are presumed to be those of William Lyndwoode, Bishop of St. David's, who founded a chantry in St. Stephen's Chapel, and died in 1446; and in the patent roll of 32 Henry VI. there is a license to the bishop's executors for one or two chaplains to celebrate divine service daily "for the soul of the aforesaid bishop, whose body lies buried in the said under-chapel," &c. The relics were inspected by a deputation from the Society of Antiquaries on Jan. 31, 1852; and a cast of the face having been taken for Her Majesty, the remains were placed in an elm coffin, and buried in a grave in the north cloister of Westminster Abbey; the pastoral staff and sandals being sent to the British Museum.

TOWER OF LONDON.—The Crypt, or large range of vaults, beneath the White Tower, is half underground, and now covered by modern brickwork. These vaults were formerly occupied as prisons; and among the inscriptions still remaining on a wall of a subterranean cell is one cut by the unfortunate Bishop of Rochester, John Fisher, who was beheaded for his opposition to the Reformation.

### CURIOSITY-SHOPS.

THE principal locality for dealers in *Curiosities*, including ancient furniture and carvings, pictures, china and enamels, painted glass, metal-work, and church-furniture, has long been in Wardour-street, Soho, and Oxford-street. Formerly it was also noted for its book-stalls; but in the spreading taste for *Curiosities* within the last quarter of a century, the book-stalls have mostly disappeared, and the *Curiosity*-dealers here now number sixteen. Wardour-street is especially famous for old furniture and carvings; Hanway-street (formerly Hanway-yard, at the east end of Oxford-street), being more exclusively celebrated for its china-dealers. There are also good specimens of well-stocked *Curiosity*-shops towards the middle of the Strand. These several shops are principally supplied from the Continent; but it is a profitable business to collect specimens from our provinces, where an Elizabethan bedstead has been bought for five shillings, and sold for twice as many pounds in Wardour-street.

The marks on porcelain denote its age and manufacture; but there is no such warrant for genuine old furniture; and rough work which has just left the carver's hands, and has been pickled and charred, *ante-dated*, and even shattered, to imitate age, is often sold for the ingenuity of the two preceding centuries.

The revival of the style of Louis XV. has done much to foster this false taste; and our collectors, "not content with ransacking every pawnbroker's shop in London and Paris for old buhl, old porcelain, and old plate, old tapestry and old frames, even set every manufacturer to work, and corrupt the taste of every modern artist by the renovation of this wretched style."—Hope's *Hist. Architecture*.

The dispersion of famed collections (as Strawberry Hill, in 1842; Mr. Beckford's, in 1845; Stowe, in 1849; and Bernal's in 1855;) is a benefit, direct and indirect, to Curiosity-dealers. The taste for Mediæval art in church-fittings and painted glass has also greatly encouraged this trade, as well as the copying of olden works in new materials. Certain auction-rooms are noted for the sale of Curiosities: as Christie and Manson's, King-street, St. James's, especially for pictures. Phillips's, New Bond-street; Foster, Pall-mall; and Oxenham's, Oxford-street, are known for their sales of articles of *vertu*, and collections, as well as "importation sales." Here the accumulation of a lifetime is often distributed in a week or a day. (See CARVINGS IN WOOD, pp. 78-81, and CHELSEA PORCELAIN, p. 94.)

The Fox public-house, in Wardour-street, was formerly kept by Sam House, "publican and republican," who commenced politician in 1763, and became conspicuous in the memorable Westminster election-contest between Lord Lincoln and Mr. Fox, in 1790: a picture, with Fox arm-in-arm with House, was sold by Christie and Manson in 1845. In the widow of Harrison, the pawnbroker, 95, Wardour-street, the writer remembers to have seen the Ireland Shakspearean MSS. ("great and impudent forgery," *Dr. Parr*) lying for sale upon a family Bible. With Harrison, who was a liberal man, Sheridan was accustomed occasionally to deposit his valuables.

### CUSTOM-HOUSE (THE),

LOWER THAMES-STREET, immediately east of Billingsgate-dock, was originally designed by David Laing: the foundations were laid in 1813, upon piles driven into the old bed of the river, and extending eastward beyond the site of the Custom-house, destroyed by fire Feb. 12, 1814, when the greater part of the trade records were consumed. The northern elevation, fronting Thames-street, is plain; but the south front towards the Thames has in the wings Ionic colonnades and a projecting centre, the attic of which was decorated with terra-cotta bas-relief figures of the Arts and Sciences, Commerce and Industry; and natives of the principal countries of the globe, with emblems of their arts. The clock-dial, nine feet in diameter, was supported by colossal figures of Industry and Plenty; and the royal arms by Ocean and Commerce. Unfortunately, the piling gave way; and in 1825 the re-centre was taken down, the foundation relaid, and the Thames front erected as we now see it, by Sir Robert Smirke. The expense was 180,000*l.*, which, added to the original expenditure, 255,000*l.*, made the total cost of the edifice nearly half a million, or two-thirds the cost of St. Paul's Cathedral. The river façade is 488 feet in length, or nearly one tenth of a mile. It is fronted by a noble esplanade, or quay; but as the breadth of this quay is not equal to the height of the Custom-house, its façade, which is of Portland stone, is not seen to advantage from that point, but from London Bridge or the middle of the river.

The interior contains, besides warehouses and cellars, about 170 apartments, classified for contiguity and convenience of the several departments. In the Board-room are portraits of George III. and George IV., the latter by Lawrence. The Long Room, in the centre of the building, is probably the largest apartment of its kind in Europe: its length is 190 feet, width 66 feet, and height between 30 and 40 feet; but it is not so handsome as the "Long Room" taken down after the failure of the foundation. The officers and clerks form three divisions: the inward department, with its collectors, clerks of rates, clerks of ships' entries, computers of duties, receivers of plantation duties, wine duties, &c.; the outward department, with its cocket-writers, &c.; and the coast department. Here a Trinity-house officer sits for the collection of lighthouse dues; and here is a constant succession of ship-brokers and ship-owners, and their clerks, and of skippers and wholesale merchants. Defoe relates Count Tallard to have said, that nothing gave him so true and great an idea of the richness and grandeur of England as seeing the multitude of payments made in a morning in the Long Room; since this was said, the Customs have increased tenfold.

On the ground-floor is the Queen's Warehouse, with diagonal-ribbed roof. The cellars in the basement form a groined crypt, and are fire-proof; the walls are extraordinarily thick; and here are kept the wines and spirits seized by the officers of the Custom-house. The condemned articles are disposed of quarterly by auctions or "Custom-house Sales," at which the lots are not produced, but have been previously viewed in the Queen's Warehouse and at the Docks.

The following is an average *daily report* of the principal articles passed through the Custom House, and issued to the public for consumption; and to arrive at a year's amount these figures must be multiplied in many instances 300 times:—Anchovies, 1455 lbs.; arrow-root, 101 ewt.; cattle, 172; eocoa and coffee, 78,634 lbs.; corahs, 1042 pieces; elephants' teeth, 395; gloves, 2237 pairs; gum, 450 packages; handkerchiefs, 791 pieces; hemp, 587 bales; hides, 780; honey, 17 ewt.; horns, 1500; indigo, 274 chests; iron, 5760 bars; isinglass, 6 ewt.; jute, 636 bales; leeches, 180*l.* value; lemon-peel, 20 pipes; lithographic stones, 953; manufactures, 6352*l.* value; marble, 12 blocks; molasses, 1176 ewt.; nutmegs, 414 lbs.; oil, 546 packages; oil, scented, 810 lbs.; onions, 800 bushels; pepper, 11,832 lbs.; quicksilver, 4039 bottles; rags, 67 bales; rice, 215 ewt.; sago, 70 ewt.; sheep, 65; silk, 382 bales; spelter, 638 cakes; spirits, 19,875 gallons; sugar, 11,151 ewt.; tallow, 327 ewt.; tea, 89,742 lbs.; timber, 1900 loads; tobacco, 14,143 lbs.; whale-fins, 279 bundles; wine, 10,765 gallons; wool, 354 bales. Warehoused in one day: anchovies, 250 barrels; butter, 639 casks; coffee, 2650 bags; cork, 19 bales; hams, 500; manufactures, 168 packages; marble mortars, 50; mats, 1000; raisins, 750 drums; rice, 581 bags; rum, 111 casks; spirits, 554 cases or casks; sugar, 1345 packages; tallow, 191 packages; tobacco, 990 packages; tin, 1075 slabs; timber, 12,635 deals and pieces; wine, 896 cases or casks.

The present is the fifth Custom-house built nearly upon the same site. The *first* was erected by John Churehman, Sheriff of London in 1385. (*Stow.*) The *second* was built in the reign of Elizabeth, and appears in the 1543 View of London with several high-pitched gables and a water-gate: it was burnt in the Great Fire of 1666. It was rebuilt by Wren, at a cost of 10,000*l.*; and this *third* House was consumed by fire in 1718, and was the only one of Wren's buildings that in his long life was destroyed. Wren's Custom-house was replaced by Ripley, who introduced the "Long Room," and embellished the river front with Ionic columns, pediments, and a Tuscan colonnade: this *fourth* House was burnt in 1814.

The taxes levied on imported and exported commodities having been repeatedly altered, to meet the necessities of the State, or serve political purposes, their amount at different periods is not of itself a correct test of the increase of trade. In 1613, the date of one of the earliest notices preserved, the Customs duties collected in London amounted to 109,572*l.*, being nearly thrice as much as was collected in all the rest of the kingdom (England), the whole Customs duties then amounting to 143,075*l.* There are now no heaps of money at the Custom-house such as excited Tallard's admiration. The duties are paid into the Receiver-General's Office in the Custom-house, and almost invariably in paper, so that only very small sums of metallic money pass in collecting the twenty-two millions.

The value of the Exports and Imports at the Port of London in 1700 was about 10,000,000*l.*; in 1794 the amount increased to 31,000,000*l.* London is distinguished among the ports of the world by the enormous quantity and value of its imports, rather than of its exports, yet the value of the exports alone reached, in 1864, to above 36,000,000*l.* The gross Customs revenue of the United Kingdom in 1864 was 22,493,210*l.*, of which London contributed 11,491,412*l.* Thus, the London Customs Duties are nearly double the amount levied at all the other ports of England put together, and more than double the amount taken in all Scotland and Ireland.

### DAGUERRETYPE (THE).

THE first experiment made in England with the Daguerreotype was exhibited by M. St. Croix, on Friday, September 13, 1839, at No. 7, Piccadilly, nearly opposite the southern Circus of Regent-street; when the picture produced was a beautiful miniature representation of the houses, pathway, sky, &c., resembling an exquisite mezzotint. M. St. Croix subsequently removed to the Argyll Rooms, Regent-street, where his experimental results became a scientific exhibition. One of the earliest operators was Mr. Goddard. The discovery was patented by Mr. Miles Berry, who sold the first licence to M. Claudet for 100*l.* or 200*l.* a-year; and in twelve months after disposed of the patent to Dr. Beard, who, however, did not take a Daguerreotype *portrait* until after Dr. Draper had sent from New York a portrait to the Editor of the *Philosophical Magazine*, with a paper on the subject.

With reference to the conditions of a London atmosphere, as regards its influence upon Daguerreotypic or Photographic processes, there are some very peculiar phenomena; for the following details of which we are indebted to Mr. Robert Hunt, F.R.S., the author of many valuable researches in Photography.

The yellow haze which not infrequently prevails, even when there is no actual fog over the town itself, is fatal to all chemical change. This haze is, without doubt, an accumulation, at a considerable elevation, of the carbonaceous matter from the coal-fires, &c. Although a day may appear moderately clear, if the sun assume a red or orange colour, it will be almost impossible to obtain a good Daguerreotype. Notwithstanding in some of the days of spring our photographers obtain very fine portraits

or views, it must be evident to all who examine an extensive series of Daguerrotypes, that those which are obtained in Paris and New York are very much more intense than those which are generally procured in London. This is mainly dependent upon the different amounts and kinds of smoke diffused through the atmospheres respectively of these cities. At the same time, there is no doubt the peculiarly humid character of the English climate interferes with the free passage of those solar rays which are active in producing photographic change. It was observed by Sir John Herschel, when he resided at Slough, that a sudden change of wind to the east almost immediately checked his photographic experiments at that place, by bringing over it the yellow atmosphere of London: this is called by the Berkshire farmers *blight*, from their imagining that smut and other diseases in grain are produced by it.

It is a curious circumstance, that the summer months, June, July, and August, notwithstanding the increase of light, are not favourable to the Daguerrotype. This arises from the fact, now clearly demonstrable, that the luminous powers of the sunbeam are in antagonism to the chemical radiations, and as the one increases, the other diminishes. This may be imitated by a pale yellow glass, which, although it obstructs no light completely, cuts off the chemical rays, and entirely prevents any photographic change taking place.

#### DEAF AND DUMB ASYLUM.

THE first Asylum or School established in England for the Deaf and Dumb was opened in 1792, in Fort-place, Bermondsey, under the auspices of the Rev. John Townsend, of Jamaica-row Chapel; and of the Rev. H. Cox Mason, then curate of Bermondsey. The teacher was Joseph Watson, LL.D., who held the situation upwards of thirty-seven years, and taught upwards of 1000 pupils, who were thus able to read articulately, and to write and cipher. This tuition was commenced with six pupils only. In 1807 the first stone of a new building was laid in the Old Kent-road, whither the establishment was removed October 5, 1809; when the Society celebrated the event by a public thanksgiving at the church of St. Mary Magdalen, Bermondsey, the Rev. C. Crowther preaching the sermon. A memorial bust of the Rev. Mr. Townsend is placed in the committee-room. The pupils, male and female, are such children only as are deaf and dumb, not being deficient in intellect. Other children are admitted on payment of 20*l.* annually for board; and private pupils are also received. The term of each pupil's stay is five years: they are taught to read, write, draw, and cipher; to speak by signs, and in many instances to articulate so as to be clearly understood. They are wholly clothed and maintained by the charity, are instructed in working trades, and in some cases apprentice-fees are given. The Asylum is amply supported by the wealthy; and besides its annual receipts from subscriptions, donations, and legacies, &c., it has a funded stock. The pupils are elected half-yearly, without reference to locality, sect, or persuasion. The importance of this Asylum is attested by the fact that in 1833, in 20 families of 159 children, 90 were deaf and dumb.

There is also at 26, Red-lion-square, Bloomsbury, an Institution for the Employment, Relief, and Religious Instruction of the Adult Deaf and Dumb; who are taught shoemaking, tailoring, dressmaking, shoebinding, fancy-work, &c., the produce of their labour being added to the funds of the Society. In the chapel the Scriptures are expounded, and church services regularly held, at which the deaf and dumb are ready and interested attendants.

#### DIORAMA AND COSMORAMA.

THE Diorama, on the eastern side of Park-square, Regent's-park, was exhibited in Paris long before it was brought to London, by its originators, MM. Bouton and Daguerre; the latter, the inventor of the Daguerrotype, died 1851. The exhibition-house, with the theatre in the rear, was designed by Morgan and Pugin: the spectatory had a circular ceiling, with transparent medallion portraits; the whole was built in four months, and cost 10,000*l.*

The Diorama consisted of two pictures, eighty feet in length and forty feet in height, painted in solid and in transparency, arranged so as to exhibit changes of light and shade, and a variety of natural phenomena; the spectators being kept in comparative darkness, while the picture received a concentrated light from a ground-glass roof. The contrivance was partly optical, partly mechanical; and consisted in placing the pictures within the building so constructed, that the saloon containing the spectators revolved at intervals, and brought in succession the two distinct scenes into the field of view, without the necessity of the spectators removing from their seats; while the scenery itself remained stationary, and the light was distributed by transparent and

movable blinds—some placed behind the picture, for intercepting and changing the colour of the rays of light, which passed through the semi-transparent parts. Similar blinds, above and in front of the picture were movable by cords, so as to distribute or direct the rays of light. The revolving motion given to the saloon was an arc of about  $73^{\circ}$ ; and while the spectators were thus passing round, no person was permitted to go in or out. The revolution of the saloon was effected by means of a sector, or portion of a wheel, with teeth which worked in a series of wheels and pinions; one man, by turning a winch, moved the whole. The space between the saloon and each of the two pictures was occupied on either side by a partition, forming a kind of avenue, proportioned in width to the size of the picture. Without such a precaution, the eye of the spectator, being thirty or forty feet distant from the canvas, would, by anything intervening, have been estranged from the object.

The combination of transparent, semi-transparent, and opaque colouring, still further assisted by the power of varying both the effects and the degree of light and shade, rendered the Diorama the most perfect scenic representation of nature; and adapted it peculiarly for moonlight subjects, or for showing such accidents in landscape as sudden gleams of sunshine or lightning. It was also unrivalled for representing architecture, particularly interiors, as powerful relief might be obtained without that exaggeration in the shadows which is almost inevitable in every other mode of painting. The interior of Canterbury Cathedral, the first picture exhibited, in 1823, was a triumph of this class; and the companion picture, the Valley of Sarnen, equally admirable in atmospheric effects. In one day (Easter Monday, 1824), the receipts exceeded 200*l*.

In viewing the Diorama, the spectator was placed, as it were, at the extremity of the scene, and thus had a view *across* or *through* it. Hence the inventor of the term compounded it of the Greek preposition *dia*, through, and *orama*, scene; though, from there being two paintings under the same roof in the building in the Regent's-park, it is supposed the term was from *dis*, twice, and *orama*; but if several paintings of the same kind were exhibited, each would be a *Diorama*. (*Black*.)

Although the Regent's-park Diorama was artistically successful, it was not commercially so. In September, 1848, the building and ground in the rear, with the machinery and pictures, was sold for 6750*l*.; again, in June, 1849, for 4800*l*.; and the property, with sixteen pictures, rolled on large cylinders, was next sold for 3000*l*. The building has since been converted into a Chapel for the Baptist denomination at the expense of Sir Morton Peto, Bart.

Dioramas have also been painted for our theatres by Stanfield and Roberts, the Grieves, and other artists. Other Dioramic exhibitions have been opened in the metropolis. In 1828, one was exhibited at the Queen's Bazaar, Oxford-street; in 1829, the picture was "The Destruction of York-Minster by Fire," during the exhibition of which, May 28, the scenery took fire, and the premises were entirely burnt. In 1841, there was exhibited at the Bazaar, St. James's-street, a Diorama, of five large scenes, of the second funeral of Napoleon; but, though most effectively painted by members of "The Board of Arts for the Ceremony," and accompanied by funeral music by Anber, the spectacle excited little interest. At Easter, 1849, was opened the Gallery of Illustration, in the large saloon of the late residence of Mr. Nash, the architect, No. 14, Regent-street, a series of thirty-one Dioramic pictures of the Overland Mail Route from Southampton to Calcutta; the general scenery painted by T. Grieve and W. Telbin, human figures by John Absolon, and animals by J. F. Herring and H. Weir: in picturesque, aerial effect, characteristic grouping, variety of incident, richness of colour, and in pictures skilfully varied with the several countries, this Diorama has, perhaps, scarcely been equalled: it was exhibited between 1600 and 1700 times, and visited by upwards of 250,000 persons.

THE COSMORAMA, though named from the Greek (*Kosmos*, world; and *orama*, view, because of the great variety of views), is but an enlargement of the street peep-show; the difference not being in the construction of the apparatus, but in the quality of the pictures exhibited. In the common shows, coarsely-coloured prints are sufficiently good; in the Cosmorama a moderately good oil-painting is employed. The pictures are placed beyond what appear like common windows, but of which the panes are really large convex lenses, fitted to correct the errors of appearance which the nearness of the pictures would else produce. The optical part of the exhibition is thus complete; but as the frame of the picture would be seen, and thus the illusion be destroyed, it is necessary to place between the lens and the view a square wooden frame, which, being painted black, prevents the rays of light passing beyond a certain line, according to its distance from the eye: on looking through the lens, the picture is seen as if through an opening, which adds very much to the effect. Upon the top

of the frame is a lamp, which illuminates the picture, while all extraneous light is carefully excluded by the lamp being in a box, open in front and top.

A Cosmorama was long shown at Nos. 207 and 209, Regent-street, where the most effective scenes were views of cities and public buildings. Cosmoramas have also formed part of other exhibitions. At the Lowther Bazaar, 35, Strand, the "Magic Cave" (cosmoramic pictures) realized 1500*l.* per annum, at 6*d.* for each admission.

## DOCKS.

THE Docks of London are entirely the growth of the present century, and the result of the vast increase in the commerce of the preceding 25 years, which was as great as in the first 70 years of the century: a hundred years since, London had not one-twentieth of its present trade. Hitherto, merchandize was kept afloat in barges, from want of room to discharge it at the legal quays, when the plunder was frightful—lightermen, watermen, labourers, the crews of ships, the mates and officers, and the revenue officers, combining in this nefarious system, which neither the police nor the terrors of Execution Dock could repress. At length, in 1789, Mr. Perry, a shipbuilder, constructed at Blackwall the Brunswick Dock, to contain 28 East Indiamen and 50 or 60 smaller ships; and in ten years after, the construction of public Docks was commenced.

The district north and south of the Thames, from the Tower to Blackwall, is the most remarkable portion of London. Here have been formed for the reception, discharge, and loading of vessels, on the north, St. Katharine's Docks, the London Docks, the West-India Docks, the East-India Docks, the Victoria Docks; and on the south the Grand Surrey Docks and the Commercial Docks; these comprise hundreds of acres of water, surrounded by miles of walls, and sheltering thousands of ships; here have been spent, not simply thousands, but millions of pounds, and all this has been effected in about half a century. Before there were any Docks, an East Indiaman of 800 tons was not usually delivered of her cargo in less than *a month*, and then the goods had to be taken in lighters from Blackwall nearly to London Bridge. For the delivery of a ship of 350 tons, not 70 years ago, eight days were necessary in summer and fourteen in winter: now, a ship of 500 tons may be discharged without any difficulty in two or three days. The mass of shipping, the vastness of the many-storied warehouses, and the heaps of merchandize from every region of the globe, justify the glory of London as "the great emporium of nations," and "the metropolis of the most intelligent and wealthy empire the sun ever shone upon, and of which the boast is, as of Spain of old, that upon its dominions the sun never sets."

These several Docks have been constructed at the expense of Joint-stock Companies, and have been moderately profitable to their projectors, but more advantageous to the Port of London.

COMMERCIAL DOCKS, Rotherhithe, on the south bank of the Thames, are, upon the authority of Stow, said to include the commencement of Canute's trench, cut early in the 11th century from thence to Battersea; and into which the river was diverted when the first stone bridge across the Thames was built, *temp.* King John. The present Commercial Docks, however, originated in the "Howland Great Wet Dock," which existed in 1660, and extended about 10 acres in Queen Anne's time, larger than the famous basin of Dunkirk. It was then engaged for the Greenland whale-fishery vessels, next for the Baltic trade in timber, deals, tar, corn, &c.; and in 1809 was opened as the Commercial Docks. One of the timber ponds covers 7 acres, and will float above 6000 boards. The Docks, seven in number, extend over 150 acres; the ponds will float 50,000 loads of timber, and the yards hold 4,000,000 deals. The cargo of one timber ship would cover 32 acres, were the deals placed side by side.

EAST INDIA DOCKS, Blackwall, lie below the West India Docks, and immediately adjoin the Blackwall Railway and Brunswick Wharf. These Docks, designed by Ralph Walker, C.E., were originally constructed for the East India Company, and completed in 1808. Since the opening of the trade to India, they have been the property of the East and West India Company. Their water area is 30 acres, and their great depth (24 feet) accommodates vessels of very large size; they have a cast-iron wharf, 750 feet in length, in which are more than 900 tons of metal.

GRAND SURREY DOCKS, on the south bank of the Thames: new works, in 1858, cost upwards of 100,000*l*.

ST. KATHARINE'S DOCKS, just below the Tower, were planned by Telford, and constructed by Hardwick: in clearing the ground, the fine old church and other remains of the Hospital of St. Katharine (founded 1148 by Matilda of Boulogne, wife of King Stephen), with 1250 houses and tenements, inhabited by 11,300 persons, were purchased and pulled down: the Hospital and Church were rebuilt in the Regent's-park. (See CHURCHES, p. 166.) The Docks were commenced May 3, 1827, and upwards of 2500 men worked at them till their opening, Oct. 25, 1828; a labour of unexampled rapidity. The excavated earth was carried by water to Millbank, and there used to fill up the reservoirs of the Chelsea Water-works, upon which has been built a new town south of Pimlico. The cost of St. Katharine's Docks was 1,700,000*l*.; or at the rate of 195,640*l*. per acre. The lofty walls constitute it a place of "special security," and surround 23 acres, of which 11 acres are water, and will accommodate 120 ships, besides barges and other craft. The lock from the Thames is crossed by a vast iron swing-bridge 23 feet wide: it can be filled or emptied by a steam-engine of 200-horse power, and 14 feet depth can be made by the gate-paddles in six minutes. This lock is sunk so deep that ships of 700 tons burden may enter at any time of the tide; and the depth of water at spring-tides is 28 feet, or equal to that in any other dock of London: the machinery of the gates, by Bramah, is very fine. At these Docks was first provided accommodation for landing and embarking passengers without using small wherries. The frontage of the quays is paved with cast-iron. The warehouses, five and six stories high, are supported on cast-iron columns, 3 feet 9 inches diameter; they have massive granite stairs, huge machinery over the wells or shafts, and powerful cranes on the quays, so that goods can be taken out at once into the warehouses from the ships, and in one-fifth of the time required in the earlier-constructed docks. A ship of 250 tons burden can be discharged at St. Katharine's in twelve hours, and one of 500 tons in two or three days. One of the cranes cost about 2000*l*., is worked by ten or twelve men, and will raise from 30 to 40 tons. The vaults below for wine and spirits have crypt-like arches: "lights are distributed to the travellers who prepare to visit these cellars, as if they were setting out to visit the catacombs of Naples or Rome." (*Baron Dupin*.) From the vaultings hang vinous fungi, like dark woolly clouds, light as gossamer, and a yard or more in length, a piece of which applied to flame will burn like tinder; in the spirit-vaults the Davy safety-lamp is used.

LONDON DOCKS lie immediately below St. Katharine's Docks, and were opened in 1805; John Rennie, engineer. They comprise 90 acres: 35 acres of water, and 12,980 feet of quay and jetty frontage; with three entrances from the Thames—Hermitage, Wapping, and Shadwell, where the depth of water at spring-tides is 27 feet. The western Dock comprises 20 acres, the eastern 7 acres, and the Wapping Basin 3 acres, besides a small dock exclusively for ships laden with tobacco. The two large Docks afford water-room for 302 sail of vessels, exclusive of lighters; warehouse-room for 220,000 tons of goods; and vault-room for 80,000 pipes of wine and spirits. The superficial area of the vault-room is 890,545 feet; of the warehouse-room, 1,402,115 feet. The enclosing walls cost 65,000*l*.. The capital of the Company is four millions of money. Six weeks are allowed for unloading, beyond which period a farthing per ton is charged for the first two weeks, and then a halfpenny per week per ton. In 1839 a magnificent jetty and sheds cost 60,000*l*.; and in the previous twelve years a million of money had been expended in extensions and improvements. In 1858 two new locks were constructed to admit the immense vessels now built: each has 28 feet depth of water, and they are probably the most perfect works of their kind yet erected; engineers, Messrs. Rendell.

In these Docks are especially warehoused wine, wool, spices, tea, ivory, drugs, tobacco, sugars, dye-stuffs, imported metals, and other articles. These, except the wine, tea, spices, and ivory, may be inspected by an order from the Secretary; for the wine a "tasting order" must be obtained from the owners. The shipping and people at work may be seen without any order. Rummage sales are those by order of the Dock Company, for payment of charges, pursuant to Act 9 Geo. IV., cap. 116, sec. 106.

Of the Wine-vaults, one alone, formerly 7 acres, now extends under Gravel-Jane,

and contains upwards of 12 acres : above is the mixing-house, the largest vat containing 23,250 gallons. The Wool-floors were considerably enlarged and glass-roofed in 1850 : the annual importation is 130,000 bales ; value, 2,600,000*l.* A vast Tea-warehouse was completed in 1845 ; cost, 100,000*l.* ; stowage for 120,000 chests of tea. To inspect the Ivory-warehouse requires a special order : here lie heaps of elephant and rhinoceros tusks, the ivory weapons of sword-fish, &c.

The great Tobacco-warehouse, "the Queen's," is rented by Government for 14,000*l.* per annum : it is five acres in extent, and is covered by a skilfully iron-framed roof, supported by slender columns : it will contain 24,000 hogsheads of tobacco, value 4,800,000*l.* ; the huge casks are piled two in height, intersected by passages and alleys, each several hundred feet long. There is another warehouse for finer tobacco ; and a cigar-floor, in which are frequently 1500 chests of cigars, value 150,000*l.*

Near the north-east corner of the Queen's Warehouse, a guide-post, inscribed "To the Kiln," directs you to "the Queen's Pipe," or chimney of the furnace ; on the door of the latter and of the room are painted the crown-royal and V.R. In this kiln are burnt all such goods as do not fetch the amount of their duties and the Customs' charges : tea, having once set the chimney of the kiln on fire, is rarely burnt ; and the wine and spirits are emptied into the Docks. The huge mass of fire in the furnace is fed night and day with condemned goods : on one occasion, 900 Austrian mutton-hams were burnt ; on another, 45,000 pairs of French gloves ; and silks and satins, tobacco and cigars, are here consumed in vast quantities : the ashes being sold by the ton as manure, for killing insects, and to soap-boilers and chemical manufacturers. Nails and other pieces of iron, sifted from the ashes, are prized for their toughness in making gun-barrels ; gold and silver, the remains of plate, watches, and jewellery thrown into the furnace, are also found in the ashes.

Lastly, in the London Docks in brisk times are employed nearly 3000 men : and this is one of the few places in the metropolis where men can get employment without either character or recommendation. At the Dock-gates, at half-past seven in the morning, "may be seen congregated swarms of men, of all grades, looks, and kinds. There are decayed and bankrupt master-butchers, master-bakers, publicans, grocers, old soldiers, old sailors, Polish refugees, broken-down gentlemen, discharged lawyers'-clerks, suspended government-clerks, almsmen, pensioners, servants, thieves—indeed, every one who wants a loaf and is willing to work for it."—*Henry Mayhew.*

The two Companies of the St. Katharine's Docks and the London Docks are now amalgamated, and have offices in Leadenhall-street, built in 1866.

MILLWALL CANAL AND GRAVING DOCKS, engineer, Wilson, extend across the Isle of Dogs, from east to west, with a branch projecting at right angles from the centre.

VICTORIA LONDON DOCKS, the, in the Plaistow Marshes, Bidder, engineer, opened 1855, provide a much larger area of water, and will admit larger vessels, than the other London Docks. The lock-gates, cranes, and capstans, are all worked by hydraulic power. The first estimate of cost was a million of money. The basin covers 90 acres, and contains more than a mile of quay and wharfage : contractors, Peto, Betts, and Brassey. In the course of the works, various ancient British and Roman coins were discovered, some Roman urns, a circular shield of tin, bones of deer and some other animals. The ground, which was excavated, consisted of the deposit of the Thames, which, like a huge lake or sea, formerly covered all the now green marshes of Essex. The Victoria Docks, from the peculiarity of position, cost less, it is said, than any hitherto formed.

Names of Docks.	Capital.	Area of Water Accommodation.	
		Acres.	£
St. Katharine's . . . . .	2,152,800	11	195,640
London Docks . . . . .	3,933,310	23	140,654
East and West India Docks including Canal and Pond . . . . .	2,003,000	112	17,884
Victoria Docks, estimate for Works and Land, to be occupied therewith . . . . .	450,000	90	5,000

WEST INDIA DOCKS, the, lie between Limehouse and Blackwall, and their long lines of warehouses, and lofty wall, 5 feet thick, are well seen from the Blackwall Railway. These Docks were designed by Ralph Walker, C.E., as "the Merchants' Place," in 1799, and were commenced 1800, when the Rt. Hon. William Pitt laid the first stone; they were opened 1802. Their extent is (including the canal, made to avoid the bend of the river at the Isle of Dogs) 295 acres; this canal is nearly three-quarters of a mile long, with lock-gates, 45 feet wide, and is used as a dock for timber-ships. The northern or Import Dock will hold 250 vessels of 300 tons each: when originally opened, it took ten hours to fill, 24 feet deep, though the water was admitted at 800 gallons per second. The southern or Export Dock will hold 195 vessels. Here the ship is seen to the greatest advantage, fresh-painted, standing-rigging up, colour-flying, &c.; whereas in the Import Dock, the vessels, though more picturesque, have their rigging down and loose, the sides whitened by the sea, and contrasting with outward-bound vessels. The warehouses will contain 180,000 tons of merchandize; and there have been at one time, on the quays and in the sheds, vaults, and warehouses, colonial produce worth 20,000,000*l.* sterling; comprising 148,563 casks of sugar, 70,875 barrels and 433,648 bags of coffee, 35,158 pipes of rum and Madeira, 14,000 logs of mahogany, and 21,000 tons of logwood, &c. In the wood-sheds are enormous quantities of mahogany, ebony, rosewood, &c., logs of which, four or five tons weight, are lifted with locomotive cranes, by four or five men. For twenty years from their construction, these Docks were compulsorily frequented by all West India ships trading to the Port of London, when the maximum revenues amounted to 449,421*l.*, in 1813; since the expiry of this privilege, and the depreciation of the West India trade, the revenues have much declined. The Docks are now used by every kind of shipping, and belong to the East and West India Dock Company.

#### · DOCTORS' COMMONS,

A COLLEGE of Doctors of Civil Law, and for the study and practice of the Civil Law, is situated in Great Knight-rider-street, south of St. Paul's Churchyard; in the south-west corner of which is an arched gateway, and within it the Lodge of Porters to direct strangers to "the Commons." The civilians and canonists were originally lodged in a house, subsequently the Queen's Head tavern, in Paternoster-row; whence they removed to a house purchased for them in Elizabeth's reign by Dr. Harvey, Dean of the Arches; here they "were living (for diet and lodging) in a collegiate manner, and *commoning* together," whence the college was named Doctors' Commons: and the doctors still dine together on every court-day. This house was destroyed by the Great Fire of 1666; when the College removed to Exeter House, Strand, till the rebuilding of the edifice in Great Knight-rider-street, in 1672, as we now see it, with a side entrance on Benet's-hill, nearly opposite Heralds' College. The buildings are of brick, and consist of two quadrangles, chiefly occupied by the Doctors; a hall for the hearing of causes, &c.

In Doctors' Commons are—the Court of Arches, named from having been formerly kept in Bow Church, Cheapside, originally built upon arches (*see* CHURCHES, p. 183), and the supreme ecclesiastical court of the whole province; the Probate Court, which has supplanted the Prerogative Court; the Consistory Court of the Bishop of London; and the High Court of Admiralty: all these courts hold, or held, their sittings in the College Hall, the walls of which above the wainscot are covered with the richly-embazoned coats of arms of all the doctors for a century or two past.

The COURT of ARCHES has jurisdiction over thirteen parishes or peculiars, which form a deanery exempt from the Bishop of London, and attached to the Archbishop of Canterbury: hence the judge is named *Dean of the Arches*. The business included, in Chaucer's time, and down nearly to the present, cases

"Of defamation and avouterie,  
Of church revcs and of testaments,  
Of contracts and lack of sacraments,  
Of usury and simony also;"

beside those of sacrilege, blasphemy, apostacy from Christianity, adultery, partial or entire divorce, &c.; also, brawling and smiting in churches or vestries: but the

majority of cases were matrimonial, and all these are now transferred to the Divorce Court, and Wills to the Probate Court.

The DIVORCE COURT, established by the 20th and 21st Victoria, cap. 85, whether sitting in the City of London or Westminster, is now the only Court of original jurisdiction for the trial of causes matrimonial, and for breaking the marriage tie. There may be from this court an appeal to the House of Lords in decrees of absolute divorce; otherwise the House of Lords only hears questions of divorce, as one of the members of the Legislature, which has to pass a special Act of Parliament to effect a divorce.

In the PREROGATIVE COURT Wills (until the establishment of the COURT OF PROBATE by the 20th and 21st Victoria, cap. 77) were proved, and all administrations granted, that were the prerogative of the Archbishop of Canterbury.

There are several Registries in Doctors' Commons, under the jurisdiction of the Archbishop of Canterbury and the Bishops. Some of the very old documents connected with them are deposited for security in St. Paul's Cathedral and Lambeth Palace. At the Bishop of London's Registry, and the Registry for the Commission of Surrey, Wills (until the 20 and 21 Vict., cap. 77, the Probate Act) were proved for the respective dioceses, and Marriage Licenses are granted. At the *Vicar-General's Office* and the *Faculty Office*, Marriage Licenses are granted for any part of England. The Faculty Office also grant Faculties to notaries public, and dispensations to the clergy; and formerly granted privilege to eat flesh upon prohibited days. At the Vicar-General's Office, records are kept of the confirmation and consecration of bishops.

*Marriage Licenses*, special and general, if to be solemnized according to the laws of the Established Church, are procured upon personal application to a proctor by one of the parties: a residence of fifteen days is necessary by either party in the parish or district where the marriage is to be performed. The expense of an ordinary license is 2*l.* 12*s.* 6*d.*; but if either is a minor, 10*s.* 6*d.* further charge; and the party appearing swears he has obtained the consent of the proper person having authority in law to give it: there is no necessity for either parents or minor to attend. A Special License for Marriage is issued after a fiat or consent has been obtained from the archbishop; and is granted only to persons of rank, judges, and Members of Parliament, the archbishop having a right to exercise his own discretion. The expense of a Special License is usually twenty-eight guineas. This gives privilege to marry at any time or place, in private residence, or at any church or chapel situate in England; but the ceremony must be performed by a priest in holy orders, and of the Established Church. With the marriages of Dissenters, including Roman Catholics, Jews, and Quakers, the Commons has nothing to do, their licenses being obtainable of the Superintendent-Registrar. A *Divorce* when sought was carried through one of the courts in the profession (according to the diocese), and was conducted by a proctor; the evidence of witnesses was taken privately before an examiner of the court, and neither the husband, wife, nor any of the witnesses had to appear personally in court. This is now all altered in the DIVORCE COURT.

The HIGH COURT OF ADMIRALTY consists of the Instance Court and the Prize Court. The Instance Court has a criminal and civil jurisdiction: to the former belong piracy and other indictable offences on the high seas, which are now tried at the Old Bailey; to the latter, suits arising from ships running foul of each other, disputes about seamen's wages, bottomry, and salvage. The Prize Court applies to naval captures in war, proceeds of captured slave-vessels, &c. A silver oar is carried before the judge as an emblem of his office. The business is very onerous, as in embargoes and the provisional detention of vessels, when incautious decision might involve the country in war; the right of search is another weighty question. Lord Stowell, the judge, in one year (1806) pronounced 2206 decrees. The *Admiralty Registry* is in Paul's Bakehouse-court, Doctors' Commons, where are kept records of prizes adjudicated. The practitioners in this Court are advocates (D.D.C.L.) or counsel, and proctors or solicitors. The judge and advocates wear in court, if of Oxford, scarlet robes and hoods lined with taffety; and if of Cambridge, white minever and round black velvet caps. The proctors wear black robes and hoods lined with fur.

The College has a good library in civil law and history, bequeathed by an ancestor of Sir John Gibson, judge of the Prerogative Court; and every bishop at his consecration makes a present of books.

The PRINCIPAL REGISTRY of the COURT OF PROBATE is a most interesting establishment. Wills are always to be found here, and generally in a few minutes. They are kept in a fire-proof "strong-room." The original Wills begin with the date 1483, and the copies from 1383. The latter are on parchment, strongly bound, with brass clasps, and fill the public-room and other apartments. The searches amount to an

enormous number each year. Some entries of early wills, engrossed by the monks, are beautifully illuminated, the colours remaining fresh to this day.

*To obtain Perusal of a Will.*—Having obtained a shilling probate stamp, apply, on entering the office at the first small box or recess on the right hand, where a clerk, on receiving the stamp, and the surname of the maker of the Will required, directs the applicant to the *Calendars*, which are arranged chronologically and alphabetically on the left-hand side of the room. A search must then be made through these volumes for the entry of the Will; which being found, a clerk at the further end of the room, on being furnished with the exact title and date of the Will, ushers the inquirer into another apartment, lit by a skylight, and furnished with a table and benches. Here two clerks are seated; and the actual Will being brought to the inquirer, he may inspect it at his leisure. He must not, however, copy any thing from it, or make even a pencil memorandum; and if he attempt to do so, he will be checked by the clerks.

*To obtain the Copy of a Will.*—Apply to the clerks in the room, and they will state the expense per folio. The order for a copy must be left at the box at the entrance of the office, where the time will be named for the delivery of the copy within a few days, on payment of the cost. To insure correctness, the copy is read out to the applicant in the office, and compared with the original will; and the copy is moreover duly attested by public authority.

*If the applicant merely desires to see the copy of a Will*, the clerk in the outer room, on being shown the entry in the *Calendar*, will refer him by a written note to an attendant, who will at once bring the copy to him; the same rules against copying and making extracts prevail here also.

The principal Registry of Wills is open daily from 10 to 4.

Within the last five years, Wills, up to the year 1699, have been, on permission obtained from the judge of the Court of Probate, allowed to be inspected or copied for literary or historical purposes. Under this privilege, a volume of Wills has been published by the Camden Society.

*The Wills of celebrated persons* are the *Curiosities* of the place. Here is the Will of Shakspeare, on three folios of paper, each with his signature, and with this interlineation in his own handwriting: "I give unto my wife my brown best bed, with the furniture." Shakspeare's Will, which consists of three sheets of brief-paper, has been carefully cleaned, and each sheet has been placed in a polished oak frame, between sheets of plate glass. The frames are made air-tight, and on the top of each is a brass plate, engraved, "Shakspeare's Will, March 25, 1616," and each one is fastened with a patent lock. Next is the Will of Milton, a nuncupative one, the great poet being blind; but which was set aside by a decree of Sir Leoline Jenkins, the judge of the Prerogative Court. The Will of Edmund Burke is here, leaving nearly every thing he had in the world to his "entirely beloved, faithful, and affectionate wife." The Will of Napoleon I., deposited here, has been surrendered on the application of his nephew, the Emperor Napoleon III.

#### DOMESDAY-BOOK.

THE Register of the lands of England, framed by order of William the Conqueror, the earliest English record, and "not only the most ancient, but beyond dispute the most noble monument of the whole of Britain" (*Spelman*), is preserved to this day in its pristine freshness, fair and legible as when first written. It is comprised in two volumes—one a large folio, the other a quarto. The first is written on 382 double pages of vellum, in one and the same hand, in a small but plain character, each page having a double column. Some of the capital letters and principal passages are touched with red ink, and others are crossed with lines of red ink. The second volume, in quarto, is written in 450 pages of vellum, but in a single column, and in a large fair character. At the end of the second volume is the following memorial, in capital letters, of the time of its completion: "Anno Millesimo Octogesimo Sexto ab Incarnatione Domini, vigesimo vero regni Willielmi, facta est ista Descriptio, non solum per hos tres Comitatus, sed etiam per alios." From internal evidence, the same year, 1086, is assignable as the date of the first volume.

Although in early times Domesday, precious as it was always deemed, occasionally travelled, like other records, to distant parts, till 1696 it was usually kept with the King's Seal at Westminster, by the side of the Tally Court, in the Exchequer, under three locks and keys; in the charge of the auditors, the chamberlains, and deputy-chamberlains, of the Exchequer. In 1696 it was deposited among other valuable records in the Chapter House, where it long remained, and was kept "in the vaulted porch never warmed by fire. From the first deposit of Domesday volume in the Treasury at Winchester, in the reign of the Conqueror, it certainly never felt or saw a fire, yet every page of the vellum is bright, sound, and perfect." (*Sir F. Palgrave*.) In making

searches or transcript, you are not allowed to touch the text, a rule which has been kept from time immemorial, and to which the excellent condition of the record may be partly ascribed.

It is a remarkable fact that Domesday-Book, which is usually so minute in regard to our principal towns and cities, is deficient in respect to London. It only mentions a vineyard in Holborn belonging to the Crown; and ten acres of land near Bishopsgate, belonging to the Dean and Chapter of St. Paul's: yet certainly, observes Sir Henry Ellis, in his Introduction to Domesday, no mutilation of the manuscript has taken place; since the account of Middlesex is entire, and is exactly coincident with the abridged copy of the Survey taken at the time, and now lodged in the office of the King's Remembrancer in the Exchequer. Still, a distinct and independent survey of the City itself might have been made at the time of the general Survey, although now lost or destroyed, if not remaining among the unexplored archives of the Crown.

The parish of St. Giles's-in-the-Fields possesses a Book of Record, called Domesday-Book, which is of vellum, and was made in 1624, by direction of the then Bishop of London, as a perpetual parish record; entitled "Treasure deposited in Heaven, or the Book of God's House; of things worthy to be remembered in this parish of St. Giles-in-the-Fields, and in the first place of the church now lately restored, some account."

### DRURY-LANE,

IN Aggas's plans, of about 1570 and 1584, Drury-lane is represented at the north end, as containing a cluster of farm and other houses, a cottage, and a blacksmith's shop; and the lane in continuity to Drury-place forms a separation from the fields by embankments of earth, something like those of Maiden-lane, Battle-bridge. It was, in fact, a country-road to Drury-place, the Strand, and its vicinity. A low public-house, bearing the sign of the "Cock and Pye," two centuries ago, was almost the only house in the eastern part of Drury-lane, except the mansion of the Druries.

The Lane extends from the north side of the Strand to Broad-street, Bloomsbury, and was originally in the "Via de Aldwych," still preserved in Wych-street. At this end was the mansion of the Druries, wherein Dr. Donne had apartments assigned him by Sir Robert Drury; and here, in 1612, Mrs. Donne died of childbirth, at the same day and hour that Dr. Donne, then at Paris, saw her in a vision pass twice before him, "with her hair hanging about her shoulders, and a dead child in her arms." William Lord Craven, the hero of Creutznach, became the next owner of Drury House, which he rebuilt in four stories—a large square pile of brick, afterwards called Craven House, where the Earl died in 1697. This mansion was taken down in 1803, and the ground purchased by Philip Astley for the site of his Olympic Pavilion. In its latter time, the Craven mansion was a public-house with the sign of "The Queen of Bohemia"—a reminiscence of its former occupancy by the daughter of James I., through whom the family of Brunswick succeeded to the throne of England, and who is suspected to have been secretly married to her heroic champion, Lord Craven. Craven-buildings, erected in 1723, occupy a portion of the grounds of Craven House.

On the end wall of Craven-buildings was formerly a fresco portrait of Earl Craven in armour, with a truncheon in his hand, and mounted on his white charger; on each side was an earl's and a baron's coronet, and the letters "W. C." This portrait was twice or thrice repainted in oil, the last time by Edward Edwards, A.R.A. (Brayley's *Londiniana*, vol. iv. p. 301.) Hayman, the painter, once lived in Craven-buildings; Mrs. Bracegirdle, the actress, had here a house, afterwards tenanted by the equally celebrated Mrs. Fritchard; and in the back parlour of No. 17, Dr. Arne composed the music of *Comus*.

The Cock and Pye public-house (opposite Craven-buildings) above mentioned, still remains, and is now a book-shop. Next door is one of the few panelled houses existing; and the east side of Drury-court, facing the church of St. Mary-le-Strand, is a range of old houses, apparently contemporary with the Cock and Pye, or probably two centuries and a half old. Wych-street, which runs at an obtuse angle with this passage, likewise contains some houses of considerable antiquity.—Archer's *Vestiges*, part v.

In the Coal-yard, at the Holborn end of Drury-lane, was born Nell Gwynne; and in Maypole-alley (now Drury-court) she lodged when Pepys saw her looking at the dance around the Strand Maypole:—

"1st May, 1667. To Westminster, in the way meeting many milkmaids with their garlands upon their pails, dancing with a fiddler before them; and saw pretty Nelly standing at her lodging-door, in Drury-lane, in her smock-sleeves and bodice, looking upon one: she seemed a mighty pretty creature."

Drury-lane was nobly tenanted till late in the seventeenth century; but a paper by Steele in the *Tatler*, No. 46, represents the lane in its decline; and Gay's propitiatory lines—

"Oh, may thy virtue guard thee through the roads  
Of Drury's mazy courts and dark abodes!"

are almost as applicable now as at the day they were written: Hogarth has made it the locality of the "Harlot's Progress." Pitt-place (above Princes-street) was the site of the Cock-pit, the first Drury-lane Theatre. (See THEATRES.)

### EARTHQUAKES IN LONDON.

FROM Mr. Milne's elaborate Register of Earthquakes in Great Britain,\* the most complete record of its class, we select the majority of the following details of shocks felt in the metropolis:—

1692, September 8, London and Flanders.

1750, February 8, London and Westminster. Motion of ground from W. to E. Several chimneys thrown down and walls rent. A shepherd at Kensington heard the noise rush past him, and instantly he saw the ground, a dry and solid spot, wave under him like the face of the river; the tall trees of the avenue where he was nodded their tops very sensibly, and quivered.—*Philos. Trans.* vol. xlvi.

1750, February 8, between 12 and 1 P.M., all over Westminster. "Stacks of heavy chimneys were dislodged, and the Thames became greatly agitated. The barristers were greatly alarmed, for they thought that Westminster Hall was falling down."—Walcott's *Westminster*, p. 22.

1750, March 8. Motion from E. to W.; houses near the Thames were most shaken. Near London there was a continued and confused lightning till within a minute or two of the shock; dogs howled, fish jumped three feet out of water; sound in air preceded concussions; flashes of lightning and a ball of fire were seen just before explosion. The President of the Royal Society (Martin Folkes) stated that he did not on this occasion perceive that lifting motion which he was sensible of on 8th February, but he felt very quick shakes or tremors horizontally. A boatman on the Thames felt his boat receive a blow at the bottom, and the whole river seemed agitated. The Rev. Mr. Pickering stated that he was lying awake in his bed, which stood N. and S. He first "heard a sound like that of a blast of wind. I then perceived myself raised in my bed, and the motion began on my right side, and inclined me towards the left." In the Temple Gardens, the noise in the air was greater than the loudest report of cannon. At the same instant, the buildings inclined over from the perpendicular several degrees. The general impression was, that the whole city was violently pushed to S.E., and then brought back again. The sound preceded the concussions, resembling the discharge of several cannon, or distant thunder in the air, and not a subterranean explosion. Flashes of lightning were observed an hour (before?) and a vast ball of fire. At Kensington, the bailiff of Mr. Fox, at a quarter past five A.M., heard (when in the open air) a noise much like thunder at a distance, which, coming from N.W., grew louder, and gave a crack over his head, and then gradually died away. The sky was clear, and he saw no fire or appearances of lightning. Immediately after the crack, the ground shook, and it moved like a quagmire. The whole lasted a minute.—*Philosophical Transactions*, vol. xlvi.

"At half-past five A.M. the whole city of Westminster was alarmed by another shock more severe than the former (Feb. 8), accompanied by a hollow rumbling noise; and numbers of people were awakened in amazement and fear from their sleep. Great stones were thrown from the 'new spire' of Westminster Abbey, and fish jumped half a yard above the water; and in several steeples the bells were struck by chime-hammers. An impostor pretended to foretel an earthquake on a particular day, which would lay Westminster in ruins; and when the appointed time arrived, the people ran out in crowds into the country to escape such a terrible catastrophe. The churches could scarcely contain the throngs of worshippers. The pulpits and public prints were employed in deprecating God's wrath and calling a degenerate people to repentance. But, unhappily, it was a devotion as shortlived only as their fear."—Walcott's *Westminster*, p. 22.

Horace Walpole writes to Sir Horace Mann, March 11, 1750:—"In the night, between Wednesday and Thursday last (exactly a month since the first shock), the earth had a shivering fit between one and two; but so slight, that if no more had followed, I don't believe it would have been noticed. I had been awake, and had scarce dozed again, when on a sudden I felt my bolster lift up my head; I thought somebody was getting from under my bed, but soon found it was a strong earthquake, that lasted near

\* Notices of Earthquake Shocks felt in Great Britain. By David Milne, Esq., F.R.S.E., M.W.S. F.G.S., &c. Communicated to *Jameson's Journal*, No. 61.

half a minute, with a violent vibration and great roaring. I rang my bell, my servant came in frightened out of his senses: in an instant we heard all the windows in the neighbourhood flung up. I got up, and found people running into the streets, but saw no mischief done; there has been some—two old houses flung down, several chimneys, and much china-ware. The bells rung in several houses. Admiral Knowles, who had lived long in Jamaica, and felt seven there, says this was more violent than any of them. Francesco prefers it to the dreadful one at Leghorn. \* \* \* It has nowhere reached above ten miles from London. The only visible effect it has had was on the Ridotto, at which, being the following night, there were but 400 people. A person who came into White's the morning of earthquake the first, and heard bets laid on whether it was an earthquake or the blowing up of powder-mills, went away exceedingly scandalized, and said, 'I protest they are such an impious set of people, that I believe if the last trumpet was to sound, they would be puppet-show against Judgment.'

1756, February 8. About 8 A.M., a shock felt at Dover and London.

1761, February 8. A shock most sensibly felt along the banks of the Thames from Greenwich near to Richmond. At Limehouse and Poplar, chimneys were thrown down; and in several parts of London, the furniture was shaken, and the pewter fell to the ground: at Hampstead and Highgate, it was also very perceptible.

1761, March 8. A more violent shock, between five and six A.M., the air being very warm, and the atmosphere clear and serene; though, till within a few minutes preceding, there had been strong but confused lightning in quick succession. The violence of the motion caused many persons to start from their beds and flee to the street, under the impression that their houses were falling. In St. James's Park, and in the squares and open places about the West-end of the town, the tremulous vibration of the earth was most distinguishable; it seemed to move in a south and north direction, with a quick return towards the centre, and was accompanied with a loud noise as of rushing wind.

A crazy life-guardsmen predicted a third earthquake within a month from the above, and drove thousands of persons from the metropolis; whilst another wight advertised pills "good against earthquakes."

In 1842, an absurd report gained credence among the weak-minded, that London would be destroyed by earthquake on the 17th of March, St. Patrick's Day. This rumour was founded on certain doggerel prophecies: one pretended to be pronounced in the year 1203, and contained in the Harleian Collection (British Museum), 800 b. folio 319; the other by Dr. Dee, the astrologer (1598, MS. in the British Museum). The rhymes, with these "authorities," inserted in the newspapers, actually excited some alarm, and a great number of timid persons left the metropolis before the 17th. Upon reference to the British Museum, the "prophecies" were not, however, to be found; and their forger has confessed them to have been an experiment upon public credulity.

In 1863, Oct. 6, the centre and western parts of England were shaken; and in London and the suburbs the shock was slightly felt.

### EASTCHEAP.

THIS ancient thoroughfare originally extended from Tower-street westward to the south end of Clement's-lane, where Cannon-street begins. It was the Eastern Cheap or Market, as distinguished from West Cheap, now Cheapside; and was crossed by Fish-street-hill, the eastern portion being Little Eastcheap (now Eastcheap), and the western Great Eastcheap: the latter, with St. Michael's Church, Crooked-lane, disappeared in the formation of the new London Bridge approaches.

Mr. Kempe, F.S.A., considers Eastcheap to have been the principal or Prætorian gate of the Roman garrison, leading into the Roman Forum; and in 1831 there were found here a Roman roadway, two wells, the architrave of a Roman Building, &c.; in Miles-lane, a piece of the Roman wall, cinerary urns, coins of Claudius and Vespasian; and in Bush-lane, remains of the Prætorium itself, in fragments of brick, with inscriptions designating them as formed under the Prætorship of Agricola.—*Gent. Mag.* March, 1842.

Eastcheap was next the Saxon Market, celebrated from the time of Fitzstephen to the days of Lydgate for the provisions sold there:

"Then I hyed me into Est-Chepe,  
One cryes ribbes of befe and many a pye;  
Pewter pottes they clattered on a heape."—*London Lyckpenny.*

In Great Eastcheap was the *Boar's Head Tavern*, first mentioned *temp.* Richard II.; the scene of the revels of Falstaff and Henry V., when Prince of Wales, in Shakspeare's *Henry IV.*, Part 2. Stow relates a riot in "the cooks' dwellings" here on St. John's Eve, 1410, by Princes John and Thomas, for unceremoniously quelling

which the mayor, aldermen, and sheriffs were cited before Chief Justice Gascoigne, but discharged honourably, the king reproving his own sons. The tavern was destroyed in the Great Fire, but was rebuilt within two years, as attested by a boar's head cut in stone, with the initials of the landlord, I. T., and the date 1668, above the first-floor window. This sign-stone is now in the Guildhall library. The house stood between Small-alley and St. Michael's-lane, and in the rear looked upon St. Michael's churchyard, where was buried a *drawer*, or waiter, at the tavern, d. 1720: in the church was interred John Rhodoway, "Vintner at the Bore's Head," 1623.

Maitland, in 1739, mentions the Boar's Head, with "This is the chief tavern in London" under the sign. Goldsmith (*Essays*), Boswell (*Life of Dr. Johnson*), and Washington Irving (*Sketch-book*), have idealized the house as the identical place which Falstaff frequented, forgetting its destruction in the Great Fire. The site of the Boar's Head is very nearly that of the statue of King William IV.

In 1834, Mr. Kempe, F.S.A., exhibited to the Society of Antiquaries a carved oak figure of Sir John Falstaff, in the costume of the sixteenth century. It supported an ornamental bracket over one side of the door of the Boar's Head, a figure of Prince Henry sustaining that on the other. The Falstaff was the property of Mr. Thomas Shelton, brazier, Great Eastcheap, whose ancestors had lived in the shop he then occupied ever since the Great Fire. He well remembered the last Grand Shakspearean Dinner-party at the Boar's Head, about 1784. A boar's head with silver tusks, which had been suspended in some room in the tavern, perhaps the Half-Moon or Pomegranate (*see Henry IV., act ii. sc. 4*), at the Great Fire fell down with the ruins of the house, and was conveyed to Whitechapel Mount, where, many years after, it was recovered and identified with its former locality. At a public-house, No. 12, Miles-lane, was long preserved a tobacco-box with a painting of the original Boar's Head Tavern on the lid.

### EAST INDIA HOUSE,

OR the House of the East India Company, "the most celebrated commercial Association of ancient or modern times, and which has extended its sway over the whole of the Mogul Empire," was situated on the south side of Leadenhall-street, and was taken down in 1862.

The tradition of the House is, that the Company, incorporated December 31, 1600, first transacted their business in the great room of the Nag's Head Inn, opposite St. Botolph's Church, Bishopsgate-street. The maps of London, soon after the Great Fire, place the India House on a part of its late site in Leadenhall-street. Here originally stood the mansion of Alderman Kerton, built in the reign of Edward VI., rebuilt on the accession of Elizabeth, enlarged by its next purchaser, Sir William Craven, lord mayor in 1610: here was born the great Lord Craven, who in 1701 leased his house and a tenement in Lime-street to the Company, at 100*l.* a-year. A scarce Dutch etching in the British Museum shows this house to have been half-timbered, its lofty gable surmounted with two dolphins and a figure of a mariner, or, as some say, of the first Governor; beneath are merchant-ships at sea, the Royal arms, and those of the Company. This grotesque structure was taken down in 1726, and upon its site was erected "the old East India House," to which, in 1799 and 1800, was built a handsome stone front, 200 feet long, by Jupp, and other enlargements by Cockerell, R.A., and Wilkins, R.A. It had a hexastyle Ionic portico of six fluted columns, from the ancient temple of Apollo Didymæus, and in the tympanum of the pediment were sculptured by Bacon, jun., figures emblematic of the commerce of the East, shielded by George III.: on the upper acroterium was a statue of Britannia; and on the two lower, a figure of Europe on a horse, and Asia on a camel.

The interior contained many fine statues and pictures. The new Sale-room approached in interest the Rotunda of the Bank of England. The Court-room (Directors') was an exact cube of 30 feet; was richly gilt, and was hung with six pictures of the Cape, St. Helena, and Tellicherry: and over the chimney was a large marble group of figures, supported by caryatides. The general Court-room (Proprietors') had in niches statues of Lord Clive, Warren Hastings, the Marquis Cornwallis, Sir Eyre Coote, General Lawrance, Sir George Pococke, and the Marquis Wellesley. The Finance and Home Committee-room had one wall entirely occupied by a picture of the grant of the Dewanee to the Company in 1765, the foundation of the British power in India: here also were portraits of Warren Hastings and the Marquis Cornwallis; Mirza Abul Hassan, the Persian envoy to London in 1809, &c. The Library contained, perhaps,

the most splendid assemblage of Oriental MSS. in Europe, many with illuminated drawings; Tippoo Sultan's Register of Dreams (with interpretations), and his Koran; a large collection of Chinese printed books; and a MS. Sanscrit tract on the Astrolabe, of which Chaucer's celebrated *treatise* is a literal translation, though the poet may have translated it from an Arabic or a Latin version.

The auction sale of the materials of the India House occupied five days; the most valuable of the contents having been transferred to the temporary quarters of the Indian Government, in Victoria-street, Westminster. There were 15,000 feet of York and Portland paving; 4000 feet run of Portland coping, stone sills, stringing, cornice, and other stonework; 2000 feet of sheet copper, 200 tons of lead on the roofs, 2000 squares of flooring boards; 1700 doors of all kinds, including some of solid mahogany; and an immense variety of other materials, covering an acre and a half of ground. The Museum, with elegantly slender, moulded, and decorated columns, supporting the interior of an arcaded quadrangle, surmounted by an ornamental domed lantern, and paved in mosaic work, was a beautiful example of Moorish and Indian architecture, erected about three years previously from the designs of Digby Wyatt: it cost several thousand pounds, and was sold for 79*l.* 10*s.* The site was subsequently sold for 155,000*l.*, at the rate of something more than 100,000*l.* per acre; 10,000*l.* per acre more than was given for the site of Gresham House. Hereupon has been erected a vast collection of Chambers, principal front 300 feet long; E. N. Clifton, architect: the structure is a very fine piece of Italian street architecture.

In clearing the site were found the remains of a Roman house, at a considerable depth; opposite the East India House portico, in 1803, was found *the most magnificent Roman tessellated pavement yet discovered in London.*

It lay at only 9½ feet below the street, but a third side had been cut away for a sewer; it appeared to have been the floor of a room more than twenty feet square. In the centre was Bacchus upon a tiger, encircled with three borders (inflexions of serpents, cornucopiæ, and squares diagonally concave), and drinking-cups and plants at the angles. Surrounding the whole was a square border of a bandeau of oak, and lozenge figures and true-lovers' knots, and a five-feet outer margin of plain red tiles. The pavement was broken in taking up, but the pieces are preserved in the library of the East India Company; a fragment of an urn and a jaw-bone were found beneath one corner. "In this beautiful specimen of Roman mosaic," says Mr. Fisher, who published a coloured print of it, "the drawing, colouring, and shadows are all effected by about twenty separate tints, composed of tessellæ of different materials, the major part of which are baked earths; but the more brilliant colours of green and purple, which form the drapery, are of glass. These tessellæ are of different sizes and figures, adapted to the situations they occupy in the design."

Mr. W. H. Black, F.S.A., accounts for various discoveries of tessellated pavement and other remains in the neighbourhood of Leadenhall-street, by these places being outside Walbrook, the eastern boundary of what Mr. Black regards as Roman London. He contends that these remains, in all probability, belong to the villas of Roman citizens, in what, until the time of Constantine, were the suburbs of the City.—*Proc. Soc. Antiq.*, 1864.

The East India Company became an exclusively political institution; the Act 3 & 4 Will. IV., prolonging the charter till 1854, debarring the Company from the privilege of trading. Before this reduction, nearly 400 men were employed in the warehouses, and the number of clerks was above 400. The fifteen warehouses often contained 50,000,000 lbs. (above 22,000 tons) of tea; and 1,200,000 lbs. have been sold in one day. (In 1663, the Company ordered "one hundred pounds weight of good tey" to be sent home on speculation!) The clerks' business was very heavy: from 1793 to 1813, the explanatory matter from the Indian Government filled 9094 large folio volumes; and from that year to 1829, 14,414; and a military despatch has been accompanied with 199 papers, containing 13,511 pages. In 1826, the patronage of each East India Director for the year was estimated at 20,000*l.* sterling.

The twenty-four Directors received 300*l.* each, and 500*l.* for their "chairs," being a charge on the Hindoos of 7700*l.* per annum. Except a few satrapies, cadies, high-priests, and teachers of hosts, the directors exercised the whole patronage of nomination to Indian office, civil, military, and clerical. Hoole, the translator of Tasso; Charles Lamb, the author of *Elia*; and James Mill, the historian of British India, were clerks in the East India House. "My printed works," said Lamb, "were my recreations—my true works may be found on the shelves in Leadenhall-street, filling some hundred folios."

The Company's Museum has been removed to Fife House, Whitehall. (See MUSEUMS, &c.)

### EGYPTIAN HALL, PICCADILLY.

THIS edifice, and a smaller structure in Welbeck-street, are, in single features and details, the only specimens of Egyptian architecture in London. The latter was, as originally erected, the most correct in character, but has since been almost spoiled. The Hall in Piccadilly conforms to the style in the columns and general outline, as indicated by the inclined torus-moulding at the extremity of the front, the cornice, &c.;

though the composition itself is at variance with the principles of genuine Egyptian architecture, the front being divided into two floors, with wide instead of narrow windows to both. The details are mostly from the great temple of Tentyra, with the scarabæus, winged mundus, hieroglyphics, &c. The architect's name, G. F. Robinson, is inscribed upon the façade. The entablature is supported by colossal figures of Isis and Osiris, sculptured by L. Gahagan. The Hall cost 16,000*l.*, and was built in 1812 for a museum of natural history collected by W. Bullock, F.L.S., during thirty years' travel in Central America, which was exhibited here until 1819, when it was sold in 2248 lots.\*

The Egyptian Hall contains lecture-rooms, a bazaar, and a large central room, "the Waterloo Gallery." As the Hall has been a sort of Ark of Exhibitions, we enumerate the *Curiosities* which have been shown here:—

1816. *The Judgment of Brutus*, painted by Le Thiere, president of the Academy of St. Luke, at Rome.—*Water-colour Paintings of Minerals and Shells*, by Chev. de Barde.—*Napoleon's Travelling Chariot*, built for his Russian campaign, and adapted for a bed-room, dressing-room, pantry, kitchen, &c.; captured at Waterloo: seen at the Egyptian Hall by 800,000 persons; transferred to the Tussaud Exhibition, in Baker-street, Portman-square.

1819. Sale of Bullock's Museum: produce, 9974*l.* 13*s.*; cost, 30,000*l.*

1821. *Fac-simile of the Tomb of Psammuthis, King of Thebes*, discovered by Belzoni; constructed and painted from drawings and wax-impressions taken by him of all the original figures, hieroglyphics, emblems, &c.; the two principal chambers illuminated: first day, 1900 admissions, at 2*s.* 6*d.* each.

1822. *Laplanders and Reindeer*: 100*l.* per day taken for six weeks.—*Pair of Wapeti*, or Elks, from the Upper Missouri; and a pretended *Mermaid*, visited by 300 and 400 persons daily.†

1824. *Mexican Museum*, ancient and modern.—*Esquimaux Man and Woman*.—*Hatching Chickens by Artificial Heat*.

1825. *Rath, or Burmese, Imperial State Carriage*, captured by the British in 1824: the coach and the throne-seat, studded with 20,000 gems, are stated to have cost 12,500*l.* at Tavoy.—*Model of Switzerland*.

1826. *The Musical Sisters*, four and six years old, harpist and pianist.—*Altar-piece*, by Murillo.—*The Pecilorama*, views painted by Stanfield.

1827. *The Tyrolese Minstrels*, four males and one female.

1828. *Pictures of Battles of the French Armies*, painted by General Le Jenne.—*The Death of Virginia*, painted by Le Thiere.—Haydon's *Picture of the Mock Election in the King's Bench*, bought by George IV. for 500 guineas, and sent from the Egyptian Hall to St. James's Palace.

1829. *Troubadours* (singers).—*The Siamese Twins*, two youths of eighteen, natives of Siam, united by a short band at the pit of the stomach—"two perfect bodies, bound together by an inseparable link."

1830. *Vox Bipartitus*, or two voices in one.—*Sculpture*, by Lough.—*Tableaux Vivans* (ancient pictures by living figures).—*Michael Boai*, or the chin-chopper, *à la Buehrose*.

1831. *Model of the Théâtre Français*, Paris.—*A Cobra di Capello*, the first brought alive to Europe.—*Two Orang-outangs and a Chimpanzee*.—*A Double-sighted Boy*, M'Kean, aged eight years.—*Scrymgeour's Picture of the First Sign in Egypt*.—*Double-sighted Boy*.—The Egyptian Hall converted into a Bazaar.

1832. *Museum of Etruscan Antiquities*.—*Royal Clarence Vase*, of glass, made at Birmingham.—*The Brothers Koeller*, singers, from Switzerland.—Haydon's *Pictures of Xenophon and the 10,000*; and his *Mock Election*, lent by George IV. for exhibition; *Death of Euclæ*, &c.

1835. *Views of Paris*, painted by M. Dupressoir.

1837. *A Living Male Child*, with four hands, four arms, four legs, four feet, and two bodies, born at Staleybridge, Manchester.—*Masquerades*.

1838. *Le Brun's Picture of the Battle of Arbela*, embossed on copper, by Szentpety.—Captain Siborne's *Model of the Battle of Waterloo*, with 190,000 figures; now in the Museum of the United Service Institution.

1839. *Skeleton of a Mammoth Ox*.—*Pictorial Storm at Sea*, introducing Grace Darling and the "Forfarshire Wreck."

1840. *Aubusson Carpets*.—*Ung-ka-puti* (Gibbon monkey), from Sumatra.—*Bioplulax*, or Life and Property Protector.—Haydon's large *Picture of the General Anti-Slavery Convention*.

1841. *Catlin's North American Indian Gallery* of 310 portraits of chiefs, and 200 views of villages, religious ceremonies, dances, ball-plays, buffalo-hunts—in all, 3000 full-length figures, with costumes and other produce, from a wigwam to a rattle, filling a room 106 feet long.—*The Missouri Leviathan Skeleton*.—*The Great Pennard Cheese*, presented to the Queen.

1843. *Sir George Hayter's Great Picture of the First Reformed Parliament*, figures half-life size.—*Model of Venice*.—*The Napoleon Museum*.

1844. *The American Dwarf*, "Tom Thumb," whose exhibition often realized 125*l.* a day; while, in sickening contrast, in an adjoining room, the pictures of Haydon (to whom Wordsworth wrote "High is our calling, friend") were scarcely visited by a dozen persons in a week. The "Banishment of Aristides," Haydon's last picture, was shown here, and its failure hastened the painter to his awful end.—*Nine Ojibbeway Indians*, from Lake Huron, in their native costumes, exhibiting their war-dances and sports.—*German Dwarfs*.

1845. *The Eureka*, a machine for composing hexameter Latin verses; a practical illustration of the law of evolution.—Second Exhibition of Captain Siborne's *Model of the Battle of Waterloo*.

\* Bullock's "Liverpool Museum" was opened at 22, Piccadilly, in 1805, in the room originally occupied by Astley for his evening performance of horsemanship; his amphitheatre not being roofed until 1780, and therefore allowing only day exhibitions.

† In *Manners and Customs of the Japanese*, published in 1841, the above "Mermaid" (the head and shoulders of a monkey neatly attached to a headless fish) is proved to have been *manufactured* in Japan, brought to Europe by an American adventurer, and valued at 1000*l.* A pretended Mermaid was also exhibited in London in 1775; and in Broad-court, Covent-garden, in 1794.

1846. *Prof. Faber's Euphonia*, or speaking automaton, enunciating sounds and words; played by keys.—*Mammoth Horse*.—*Polar Dog*.—*Bozjesman Family*.—*The Rock Harmonicon*.—*Curiosities from Australia*.—*Professor Kist's Poses Plastiques*.—A Dwarf dressed in a bear-skin; the "What is it?" immediately detected.

1847. *Second Family of Bozjesmen* (Bushmen), from Southern Africa.—*Models of Ancient and Modern Jerusalem*, by Brunctti.—*Exhibition of Modern Paintings*; free to artists.

1848. *Pictures of Recent Political Events in Paris*.—*The Mysterious Lady*.—*Figure of a Russian Lady in veined marbles*.—*Banvard's Dioramic Picture of the Mississippi and Missouri Rivers*, 3000 miles, stated to be painted on three miles of canvas (!); sketched before the painter was of age.

1850. *Panorama of Fremont's Overland Route to California*.—*Bonomi's Panorama of the Nile*, 800 feet long; representing 1720 miles distance, closing with the Pyramids and Sphinx.

1852. March 15. Mr. Albert Smith first gave the narrative of his *Ascent of Mont Blanc* in 1851, accompanying the exhibition of cleverly-painted moving dioramic pictures of its perils and sublimities. Mr. Smith continued to give, at the Egyptian Hall, his popular representations until within a few days of his lamented death, May 23, 1860, the day before he attained the age of 41.

1860. A "Miraculous Cabinet," invented and produced by H. Nadolsky. This cabinet measures only 5 feet high, 3 feet wide, and 18 inches deep; it contains 150 pieces of furniture, of the same size as in ordinary use; namely, a judge's-table, with ornaments, books, and 6 chairs; 4 card-tables, 2 Chinese-tables, a smoking-table, a lady's work-table, 2 Chinese toilet-tables, a chess-table, 4 work-boxes, 4 flower-pots with flowers; a what-not, candelabrum, bed with hangings, and a swing-cot; toilet-table, embroidery-frame, flower-table, 7 Chinese lamps, 2 Chinese candlesticks, 12 fancy boxes, 1 footstool, a painter's easel, 4 music-stands, dining-table laid with 26 covers; 4 dishes, 28 plates, 30 cups, salt-cellars, &c.; a chandelier with 12 wax-lights; 9 garden-chairs, 4 candlesticks; Chinese writing-desk, inkstand and tapers, rulers, and bell; tea-tray table, throne, throne-chair, 4 flower-tables; and a large table inlaid with shells, glass top, &c. When the various articles were taken out of the cabinet, and spread over the apartment, the notion of putting them back again into the same cabinet seemed almost absurd.

The Hall was subsequently let for various performances and exhibitions; including Mr. Arthur Sketchley's Entertainment; Colonel Stodare's Mystery and Magic; Mrs. Fanny Kemble's Readings; Madame Lind-Goldschmidt's Concert; the Exhibition of Chang, the Chinese Giant; a Panorama of the Holy Land; Exhibition of Mr. John Leech's Sketches; and the General Society of Painters in Water-colours. Here, in the "Dudley Gallery," was deposited the valuable collection of Pictures belonging to the Earl of Dudley, during the erection of his own Gallery at Dudley House, Park-lane.

### ELY-PLACE.

ALL that remains of this celebrated palace, anciently Ely House, which stood on the north side of Holborn-hill, and was the town mansion of the Bishops of Ely, is the chapel of St. Ethelreda, already described at page 161. The site is otherwise occupied by two rows of houses known as Ely-place, and a knot of tenements, streets, and alleys; but the locality is fraught with the various historic associations of five centuries. Its first occupier, Bishop John de Kirkby, dying in 1290, bequeathed a message and nine cottages on this spot to his successors in the see of Ely. William de Luda, the next bishop, annexed some lands, added to the residence, and in 1297 devised them to the see, on condition that his successor should provide for the service of St. Ethelreda's Chapel. John de Hotham, who died in 1336, planted a vineyard, kitchen-garden, orchard, &c. Thomas de Arundel, preferred to the see in 1374, re-edified the episcopal buildings and the Chapel; and erected a large gate-house towards Holborn, the stone-work of which remained in Stow's time. Ely House was in part let by the see to noblemen. Here "old John of Gaunt, time-honoured Lancaster," died Feb. 13, 1399; and Shakspeare has made it the scene of Lancaster's last interview with Richard II. Following Hall and Holinshed, too, Shakspeare refers to this Place when Richard Duke of Gloucester, at the Council in the Tower, thus addresses the Bishop:—

"*D. of Glou.* My lord of Ely, when I was last in Holborn,  
I saw good strawberries in your garden there;  
I do beseech you send for some of them.

*B. of Ely.* Marry, and will, my lord, with all my heart."

*Richard III.*, act iii. se. 4.

At Ely House were kept divers feasts by the Serjeants-at-Law: at one, in 1495, Henry VII. was present with his queen; and at another feast in 1531, on making eleven new Serjeants, Henry VIII. and Queen Katharine were banquetted here with sumptuousness wanting "little of a feast at a coronation;" and open-house was kept for five days. In 1576, at the mandatory request of Queen Elizabeth, Bishop Cox leased to Sir Christopher Hatton for twenty-one years the greater portion of the demesne, on payment at Midsummer-day of a red rose, ten loads of hay, and 10*l.* per annum; the Bishop reserving to himself and his successors the right of walking in the gardens, and gathering twenty bushels of roses yearly. Hatton largely improved the estate, and then petitioned the Queen to require the Bishop to make over the whole property; whereupon ensued the Bishop's remonstrance, and Elizabeth's indignified threat to "unfrock" him: and in 1578, the entire property being conveyed to Hatton,

Elizabeth further retaliated by keeping the see of Ely vacant for eighteen years from the death of Bishop Cox in 1591.

Aggas's map shows the vineyard, meadow, kitchen-garden, and orchard, of Ely Place to have extended northward from Holborn-hill to the present Hatton-wall and Vine-street; and east and west, from Saffron-hill to nearly the present Leather-lane: but except a cluster of houses (Ely Rents) on Holborn-hill, the surrounding ground was entirely open and unbuilt on; the names of Saffron-hill, Field-lane, and Lily, Turumill, and Vine streets, carry the mind's eye back to this suburban appropriation. The Sutherland View, 1543, also shows the gate-house, chapel, great banquetting-hall, &c. Sir Christopher lived in great state in Hatton House, as Ely Place was now called; but Elizabeth "which seldom gave loans, and never forgave due debts," pressed the payment of some 40,000*l.* arrears, which the Chancellor could not meet; so it went to his heart, and he died Nov. 20, 1591. He was succeeded by his nephew, whose widow, the strange Lady Hatton, in 1598 was married to Sir Edward Coke, then Attorney-general, but who could not gain admission to Hatton House: she died "at her house in Holbourne," Jan. 3, 1646. The Bishops of Ely made several attempts to recover the entire property; but, during the imprisonment of Bishop Wren by the Long Parliament, most of the palatial buildings were taken down, and upon the garden were built Hatton-garden, Great and Little Kiröy-streets, Charles-street, Cross-street, and Hatton-wall. During the Interrugnum, Hatton House and Offices were used as a prison and hospital. In 1772 the estate was purchased by the Crown; a town-house was built for the Bishop, No. 27, Dover-street, Piccadilly; and about 1773, the present Ely-place was built, the chapel remaining on the west side. A fragment of the episcopal residence is preserved in, and has given name to, Mitre-court, leading from Hatton-garden to Ely-place. Here, worked into the wall, as the sign of a public-house, is a mitre, sculptured in stone, with the date 1546; which probably once decorated Ely Palace, or the precinct gateway.

The stage-play of *Christ's Passion* was acted in the reign of James I. "at Elie House in Holborn, when Gondomar (the Spanish ambassador), lay there on Good Friday at night, at which there were thousands present" (Prynne's *Histriomastix*, p. 117, *note*); this being the last performance of a Religious Mystery in England. At Ely House, also, was arranged the the grand Masque given by the four Inns of Court to Charles I. and Queen Henrietta Maria, at Whitehall, on Candlemas-day, 1634, at the cost of 21,000*l.*; when the masquers, horsemen, musicians, dancers, with the grand committee—including the great lawyers Whitelocke, Hyde (afterwards Lord Clarendon), and Selden—went in procession by torchlight from Ely House, down Chancery-lane, along the Strand to Whitehall.

#### EXCHANGES.

THE Royal Exchange, at the north-western extremity of Cornhill, is the *third* Exchange built nearly on the same site, for the meeting of merchants and bankers. The first "goodely Burse" was projected by Sir James Gresham, Lord Mayor in 1538, who submitted to Thomas Cromwell, Lord Privy-Seal, a plan taken from the Burse at Antwerp. This application failed; but the project was renewed twenty years later by Thomas Gresham, the younger son of Sir James, born in London in 1519, apprenticed to his uncle, Sir John Gresham, and admitted in 1543 to the Mercers' Company; in their Hall is a contemporary portrait of Sir Thomas Gresham, who was royal agent at Antwerp to Henry VIII., Edward VI., and Elizabeth, and was knighted when ambassador at the court of the Duchess of Parma. Like other bankers and merchants of that day, Gresham had his shop in Lombard-street, as yet the only Exchange. The house was on the site of No. 68, the banking-house of Martin, Stone, and Co.: over the door was Gresham's crest,\* a grasshopper, as a sign, which was seen by Pennant, but disappeared by piecemeal.

\* The letters of James Gresham, in the Paston Collection, are *sealed* with a grasshopper; sufficient refutation of a tradition accounting for the adoption of that heraldic symbol by Sir Thomas Gresham, from a grasshopper having saved his life when he was a poor famished boy, by attracting a person to the spot where he lay in a helpless condition! Still, it were almost a pity to disturb the popular legend, teaching, as it simply does, reliance upon God's providence.

On June 6, 1566, the first stone of the Burse was laid in Cornhill, by Sir Thomas Gresham and several aldermen, each of whom "laid a piece of gold, which the workmen picked up." The City had previously purchased and taken down eighty houses, and prepared the site; the whole having been conveyed to Sir Thomas Gresham, who "most frankly and lovingly" promised, that within a month after the Burse should be finished, he would present it in equal moieties to the City and the Mercers' Company; as a pledge of which Gresham, before Alderman Rivers and other citizens, gave his hand to Sir William Garrard, and *drank a carouse* to his kinsmen Thomas Rowe. "How rarely do ancient documents furnish us with such a picture of ancient manners!" By November, 1567, the Burse was finished. As Flemish materials, Flemish workmen, and a Flemish architect (Henryke) had been employed, so the design closely imitated a Flemish building, the Great Burse of Antwerp. Two prints, date 1569, and probably engraved by Gresham's order, show the exterior and interior: a quadrangle, with an arcade; a corridor, or *pawne*\* of stalls above; and in the high-pitched roof, chambers with dormer-windows. On the east side of the Cornhill entrance was a lofty bell-tower, from which, at twelve at noon and at six in the evening, was rung a bell, the merchants' call to 'Change; on the north side, a Corinthian column rose twice the height of the building; and both tower and column surmounted by a grasshopper, also placed at each corner of the quadrangle. The columns of the court were marble; the upper portion was laid out in a hundred shops, the lower in *walks* and rooms for the merchants, with shops on the exterior. Thus there were the "Scotch Walk," "Hambro'," and the "Irish," "East Country," "Swedish," "Norway," "American," "Jamaica," "Spanish," "Portugal," "French," "Greek," and "Dutch and Jewellers" walks. Long after the opening of the Burse, the shops remained "in a manner empty;" when, upon a report that the Queen was about to visit it, Gresham prevailed upon the shopkeepers in the upper *pawne* to furnish their shops with "wares and waxlights," on promise of "one year rent-free." The rent was then 40s. a shop, in two years raised to four marks, and then to 4*l.* 10s. a-year, all the shops being let. "Then the milliners or haberdashers sold mouse-traps, bird-cages, shoeing-horns, Jews' trumps, &c.; armourers, that sold both old and new armour; apothecaries, booksellers, goldsmiths, and glass-sellers." (*Howes*.) All being prepared, on Jan. 23, 1570-1, amidst the ringing of bells in every part of the City, "the Queen's Majesty, attended with the nobility, came from her house in the Strand called Somerset House, and entered the City by Temple Bar, through Fleet-street, Cheap, and so by the north side of the Burse, through Threadneedle-street, to Sir Thomas Gresham's house in Bishops-gate-street, where she dined. After dinner, her Majesty returning through Cornhill, entered the Burse on the south side" (*Stow*); and having viewed the whole, especially the *pawne*, which was richly furnished with the finest wares, the Queen caused the Burse, by herald and trumpet, to be proclaimed "The Royal Exchange:—

"Proclaim through every high street of the city,  
This place be no longer called a Burse;  
But since the building's stately, fair, and strange,  
Be it for ever called—the Royal Exchange."

*Queen Elizabeth's Troubles*, Part 2.—A Play, by Thomas Heywood, 1609.

Sir Thomas Gresham died suddenly, Nov. 21, 1579, in the evening, on his return from the Exchange; "being cut off by untymely death, having left a part of his royal monument unperformed: that is, xxx. pictures (statues) of kings and queenes of this land; and to that purpose left thirty roomes (niches) to place them in." It was then proposed that before any citizen should be elected alderman, he should be "enjoynd to pay the charge of makyng and fynishing one of the forsaied kings or queenes their pictures, to be erected in the places aforesaid in the Exchange, not exceeding 100 nobles (6*l.* 6s. 8*d.*); the pictures to be graven on wood, covered with lead, and then gilded and paynted with oyle-cullors;" and the Court of Common Council subsequently made the erection of one such statue a part of the fine for being freed from the office

\* Corrupted from *bahn*, German for a path or walk. There is a curious tradition, not unsupported by facts, that the framework of the Exchange was constructed upon Gresham's estate at Rinxhall, near Battsford, Suffolk, formerly rich in wood; the remains of saw-pits are still discernible. The stone, slates, iron, wainscot, and glass, were brought from Antwerp.

of Sheriff. The building was often in danger from feather-makers, and others that kept shops in the upper pawne, using "pannes of fyer," which were therefore forbidden by an order of the Court of Aldermen. A print by Hollar, date 1644, shows the merchants in full 'Change, with the picturesque costumes of the respective countries:—

"The new-come traveller,  
With his disguised coat and ringed ear,  
Trampling the Bourse's marble twice a day."

The statues, from Edward the Confessor to Queen Elizabeth, were thus provided: and subsequently James I., Charles I., and Charles II. The statue of Charles I. was removed immediately after his execution, and on its pedestal was inscribed *Exit tyrannorum ultimus*; which was in turn removed, and replaced with a new statue, after the Restoration. Here also, on May 28, 1661, the acts for establishing the Commonwealth were burned by the hands of the common hangman.

Gresham's Exchange was almost entirely destroyed in the Great Fire of 1666; "when the kings fell down upon their faces, and the greater part of the building after them, the founder's statue only remaining." Pepys refers to "Sir Thomas Gresham in the corner" as the only statue that was left standing. After the death of Sir Thomas Gresham, the affairs of the Royal Exchange passed under the management of the Gresham Committee, as the trustees appointed under his will, with certain members nominated by the Corporation. Thus originated the Grand or Joint Committee, under whose direction the Exchange was rebuilt after the Great Fire upon the old foundations, by Edward Jerman, one of the City Surveyors, and not by Sir Christopher Wren, as often stated; but Wren was consulted in the project of the rebuilding. Mr. Jupp, of Carpenters' Hall, possesses two large and beautiful drawings of Jerman's design for the building, executed in Indian ink upon vellum. Meanwhile, the merchants met "in the gardens or walks of Gresham College," being the site of the great court-yard of the Excise Office; on which a temporary Exchange was erected for a similar purpose, after the burning of the second Exchange in 1838.

Among the payments for Jerman's buildings is one by the Committee to Sir John Denham, the poet, "His Majesty's Surveyor-General of his Workes, for his trouble from time to time in coming down to view the Exchange and streetes adjoining; as also in furthering their addresses to his Majesty, and giving them full warrants for Portland stone; the Committee therefore ordered provision to be made "of six or eight dishes of meate att the Sun Tavern, on Wednesday next, to intertayne him withal at his coming downe, and to present him with thirty guinney-pieces of gold, as a token of their gratitude."

Among other entries, we find that Cains Gabriel Cibber was appointed carver; the clock was to be set up by Edward Stanton, under the direction of Dr. Hooke, having ehimes with four bells, playing six tunes; William Wightman was to furnish a set of sound and tuneable bells, at 6*l.* 5*s.* per cwt.; four balconies were to be made from the inner pawn into the quadrangle, at a charge of not more than 300*l.*; and the signs to the shops in the pawns were not to be hung forth, but set over the frieze of each shop.

The celebrated Sir Robert Viner, on March 22nd, 1668 (1669), proffered to give his Majesty's statue on horseback, cut in white marble, to stand upon the Royal Exchange: this offer was declined, because of the "bignesse" of the statue, which Sir Robert Viner afterwards gave to be erected over the conduit at Stocks'-market; though the royal figure was an altered John Sobieski.

The King interested himself so far in the architectural appearance of the edifice as to desire that portions might be built on all sides of the Exchange; and hence the difficulties which arose between the Committee and the possessors of the property required; and in especial with Van Swieten, or Sweetings, as he is usually called. About seven hundred superficial feet were wanted of his ground at the east end of the Exchange, and about one thousand four hundred feet more for a street or passage; for which he declared that he expected to be paid according to the *cheapest* rate that any other ground should be bought at. When, however, he appeared before the sub-committee, he demanded 1000*l.* for six hundred and twenty-seven feet, which was thought so unreasonable that they laid it aside.

On Oct. 23rd, 1667, Charles II. fixed the first pillar on the west side of the north entrance to the Exchange. "The King was entertained by the City and Company with a chine of beef, grand dish of fowl, gammon of bacon, dried tongues, anchovies, caviare, etc., and plenty of several sorts of wine. He gave 20*l.* in gold to the workmen. The intertynment was in a shedd built and adorned on purpose, upon the Scotch walke." On the 31st, the Duke of York founded the corresponding pier; and on Nov. 18th, Prince Rupert fixed the pillar on the east side of the south entrance; both princes being similarly entertained.

This *second Exchange* was opened Sept. 28, 1669; its cost, 58,962*l.*, being defrayed in equal moieties by the City and the Mercers' Company. It was quadrangular in plan, and had its arcades, pawn above, and statues in niches, like Gresham's Exchange;

it had also a three-storied tower, with lantern and gilt grasshopper vane. The edifice thus remained until the extensive repairs of 1820-26 (George Smith, architect), when a stone tower, 128 feet high, was built on the south front, in place of the timber one: these repairs cost 33,000*l.*, including 6000*l.* for stone staircases and floors. The Cornhill front had a lofty archway, with four Corinthian columns; emblematic statues of the four quarters of the globe; statues of Charles I. and II. by Bushnell; statue of Gresham by E. Pierce; four busts of Queen Elizabeth; alto-relievs of Britannia, the Arts and Sciences, &c., and of Queen Elizabeth and her heralds proclaiming the original Exchange. The area within the quadrangle was paved with "Turkey stones;" in the centre was a statue of Charles II. by Gibbons; in the arcade was a statue of Gresham by Cibber; and of Sir John Barnard, placed there in his lifetime (*temp.* George II.). The arcade and area were arranged, nominally, into distinct walks for the merchants.

"For half an hour he feeds: and when he's done,  
In 's elbow-chair he takes a nap till one;  
From thence to 'Change he hurries in a heat  
(Where knaves and fools in mighty numbers meet,  
And kindly mix the bubble with the cheat);  
There barbers, buys and sells, receives and pays,  
And turns the pence a hundred several ways.  
In that great hive, where markets rise and fall,  
And swarms of muck worms round its pillars crawl,  
He, like the rest, as busy as a bee,  
Remains among the heupeek'd herd till three."

*Wealthy Shopkeeper, 1700.*

The royal statues were, on the south side, Edward I., Edward III., Henry V., and Henry VI.; on the west, Edward IV., Edward V., Henry VII., and Henry VIII.; on the north, Edward VI., Queen Mary, Queen Elizabeth, James I., Charles I., Charles II., and James II.; on the east were William and Mary, in a double niche, George I., George II., and George III. These figures were in armour and Roman costume, the Queens in the dresses of their respective times; most of them were originally gilt. George III. was sculptured by Wilton, George I. and George II. by Rysbrack, and the major part of the others by Caius Gabriel Cibber.

Originally, the offices in the upper floors were let as shops for rich and showy articles; but they were forsaken in 1739 (*Maitland*), and the galleries were subsequently occupied by the Royal Exchange Assurance Offices, Lloyd's Coffee-house, the Merchant Seamen's Office, the Gresham Lecture-room, and the Lord Mayor's Court Office: the latter a row of offices divided by glazed partitions, the name of the attorney being inscribed in large capitals upon a projecting board. The vaults beneath the Exchange were let to different bankers; and the East India Company, for the stowage of pepper. Surrounding the exterior were shops, chiefly tenanted by lottery-office keepers, newspaper-offices, watch and clock makers, notaries, stock-brokers, &c. The tower contained a clock, with four dials, and chimes, and four wind-dials.

On Jan. 18th, 1838, this Exchange was entirely burnt: the fire commenced in Lloyd's Rooms shortly after 10 P.M., and before three next morning the clock-tower alone remained, the dials indicating the exact times at which the flames reached them: north at 1h. 25m.; south, 2h. 5m.: the last air, played by the chimes at 12, was, "There's nae luck about the house."\* The conflagration was seen twenty-four miles round London; the roar of the wind, and the rush and crackling of the flames, the falling of huge timbers, and the crash of roof and walls, were a fearful spectacle.

At the sale of the salvage, the porter's large hand-bell, rung daily before closing the 'Change (with the handle burnt), fetched 3*l.* 3*s.*; City Griffins, 30*l.* and 35*l.* the pair; busts of Queen Elizabeth, 10*l.* 15*s.* and 18*l.* the pair; figures of Europe, Asia, Africa, and America, 110*l.*; the statue of—Anne, 10*l.* 5*s.*; George II., 9*l.* 5*s.*; George III. and Elizabeth, 11*l.* 15*s.* each; Charles II., 9*l.*; and the sixteen other royal statues similar sums. The copper-gilt grasshopper vane was reserved.

Mr. Scott, the Chamberlain of London, states, that if, from the Great Fire in 1666, when the first Royal Exchange was destroyed, down to 1838, when it was a second time destroyed by fire, a sum equivalent to the fire-insurance rate of 2*s.* per cent. and 3*s.* duty had been annually raised and allowed to accumulate, it would have been sufficient to defray forty-seven and a half times over the cost of 200,000*l.* for rebuilding the Exchange as it now exists.

After an interval of nearly four years, the rebuilding of the Exchange was com-

\* The chimes played at 3, 6, 9, and 12 o'clock—on Sunday, the 104th Psalm; Monday, "God save the King;" Tuesday, "Waterloo March;" Wednesday, "There's nae luck about the house;" Thursday, "See the conquering hero comes;" Friday, "Life let us cherish;" Saturday, "Foot-Guards' March."

menced from the designs of William Tite, F.R.S.; the site being enlarged by the removal of Bank-buildings, west of the old Exchange, and the buildings eastward, nearly to Finch-lane. In excavating for the foundations was found a deep pit full of remains of Roman London, specimens of which are preserved in the Museum at Guildhall. (See CORNHILL, p. 291.) Mr. Tite thinks it probable that "this pit had been sunk during the earliest times of the Roman occupation of London, for the mere purpose of obtaining the gravel, required perhaps for making a causeway or road across the banks of the adjoining marshy stream of the Wall-Brook. When the excavation had served this purpose, it remained for years (perhaps centuries), forming a dirty pond to receive the refuse and rubbish of all the neighbourhood, and in this way it must have been gradually filled up; at the time of building the Roman wall the accumulation was firm enough again to receive a bed of gravel, slightly concreted, laid on the top of the mud, so as to be covered up and become apparently solid ground. The builders of the Old Exchange, however, found out its deficiency, and supported their work on piles, which had evidently yielded." The foundation-stone of the new Exchange was laid by Prince Albert, on Monday, Jan. 17th, 1842, in the mayoralty of Alderman Pirie; the circumstances being recorded in a Latin and English inscription upon a zinc plate, placed in the foundation-stone. The Exchange was completed within the short space of three years, for somewhat less than the architect's estimate, 137,600*l.*; or, including the sculpture, architect's commission, &c., 150,000*l.*

The new Exchange was formally opened by her Majesty, Oct. 23, 1844, when the Royal and Civic Processions joined within Temple Bar; the Aldermen in gowns and chains, and the Lord Mayor in a crimson velvet robe, collar, and jewel, on horseback; his Lordship bearing immediately before the Queen's state-carriage the great pearl sword presented to the City of London by Queen Elizabeth on her opening the first Exchange. The procession of 1844 was altogether the most magnificent pageant of the present reign. At the Exchange, an address was presented to the Queen, followed by a breakfast, distribution of commemorative medals, and a procession to the centre of the quadrangle, where the Queen, surrounded by her Ministers and the City authorities, said: "It is my Royal will and pleasure that this building be hereafter called 'The Royal Exchange.'" The event was commemorated with great civic festivity; and the Lord Mayor, Magnay, received a patent of baronetcy.

The Royal Exchange, first opened for business Jan. 1, 1845, stands nearly due east and west; extreme length, 308 feet; west width, 119 feet; east, 175 feet. The foundation is concrete, in parts 18 feet thick; and the walls and piers are tied together by arches, the piers strengthened by beds of wrought-iron hooping. The foundation of Gresham's Exchange, as just stated, was laid upon piles. The architecture is florid, and even exuberant, characteristic of commercial opulence and civic state. The leading idea of the plan is from the Pantheon at Rome: material, finest Portland stone.

*The West front* has a portico "very superior in dimensions to any in Great Britain, and not inferior to any in the world." It is 96 feet wide and 74 high, and has eight columns (the architect's Composite), 4 feet 2 inches in diameter and 41 feet high, with two intercolumniations in actual projection, and the centre also deeply recessed; the interior of the portico is strikingly magnificent, in the vastness of the columns, and the beauty of the roof of three arches, enriched after a Roman palace. Flanking the central doorway are two Venetian windows, with the architect's monogram, W. T., beneath.

On the frieze of the portico is inscribed: ANNO XIII. ELIZABETHÆ R. CONDITVM. ANNO VIII. VICTORIAE. RESTAVRATVM. Over the central doorway are the Royal arms, by Carew. The key-stone has the merchant's mark of Gresham; and the key-stones of the side arches, the arms of the merchant adventurers of his day, and the staple of Calais. North and south of the portico, and in the attic, are the City sword and mace, with the date of Queen Elizabeth's reign and 1844; and in the lower panels, mantles bearing the initials of Queen Elizabeth and Queen Victoria respectively: the imperial crown is 12 inches in relief, and 7 feet high. The tympanum of the pediment of the portico is filled with sculpture, by Richard Westmacott, R.A.; consisting of 17 figures, carved in limestone, nearly all entire and detached. The centre figure is Commerce, with her mural crown, 10 feet high, upon two dolphins and a shell; she holds the charter of the Exchange: on her right is a group of three British merchants, as lord mayor, alderman, and common-councillor; a Hindoo and a Mahomedan, a Greek bearing a jar, and a Turkish merchant: on the left are two British merchants and a Persian, a Chinese, a Levant sailor, a negro, a British sailor, and a supercargo: the opposite angles are filled with anchors, jars, packages, &c. Upon the pedestal of Commerce is this inscription: "THE EARTH IS THE LORD'S, AND THE FULLNESS THEREOF."—Psalm xxiv. 1. The ascent to the portico is by thirteen granite steps.

*The East front* has four composite columns, which support the tower, in the first story of which is a statue of Sir Thomas Gresham, 14 feet 6 inches high, by Behnes; above are the clock-faces; and next a circular story, with Composite columns and a

dome carved in leaves, surmounted by the original grasshopper vane, of copper gilt, 11 feet long; height of tower and vane, 177 feet. Beneath the tower is the great eastern entrance to an oblong open area, where are the entrances to Lloyd's Rooms and the Merchants' Area.

*The Clock* was manufactured by Mr. Dent in 1843, and has since been pronounced by the Astronomer Royal to be the best public clock in the world; the pendulum, which weighs nearly 4 cwt., is compensated, and the first stroke of the hour is true to a second. This clock has Mr. Airey's construction of the going-fuzee introduced, by which the winding is effected without stopping the motion. This clock is a great improvement on that placed in this building in Sir Thomas Gresham's days, respecting which it was reported, in 1624, that "the Exchange clocke was p'rsented for not being kept well, it standing in one of the most eminent places in the Cittie, and being the worst kept of any clock in that Cittie."

*The Chimes* consist of a set of fifteen bells, by Mears, cost 500*l.*; the largest being also the hour-bell of the clock. In the chime-work, by Dent, there are two hammers to several of the bells, so as to play rapid passages; and three and five hammers strike different bells simultaneously. All irregularity of force is avoided by driving the chime-barrel through wheels and pinions; there are no wheels between the weight that pulls and the hammer to be raised; the lifts on the chime-barrel are all epicycloidal curves; and there are 6000 holes pierced upon the barrel for the lifts, so as to allow the tunes to be varied: the present airs are, "God save the Queen," "The Roast Beef of Old England," "Rule Britannia," and the 104th Psalm. The bells, in substance, form, dimensions, &c., are from the Bow-bells patterns; still, they are thought to be too large for the tower.

*The South front* has a line of pilasters, upon ground-floor rusticated arches; the three middle spaces deeply recessed, and having richly-embellished windows, a cornice, balustrade and attic. Above the three centre arches are the Gresham, City, and Mercers' Company arms, which are repeated on the east front entablature.

*The North front* has a projecting centre, and otherwise differs from the south: in niches are statues of Sir Hugh Myddelton, by Joseph; and Sir Richard Whittington, by Carew. Over the centre arch is Gresham's motto, *Fortun à my*; on the dexter, the City motto, *Dne. dirige nos*; and on the sinister, the Mercers' Company, *Honor Deo*.

*The principal or First floor* has four suites of apartments:—1. Lloyd's, east and north; 2. Royal Exchange Assurance, west; 3. London Assurance Corporation, south; 4. Offices originally intended for Gresham College, south and west.

*The Ground-floor* externally, as in the two former Exchanges, is occupied by shops and offices, each having a mezzanine and basement.

*The Interior* consists of the open Merchants' Area, resembling the *cortile* of an Italian palace; its form, as that of the building, is parallelogram, and the inner area exactly a double square. The ground-floor is a Doric colonnade, and rusticated arches; the upper floor has Ionic columns, with arches and windows, and an enriched parapet, pierced. The key-stones of the upper arches are sculptured with national arms, in the order determined at the Congress of Vienna. At the north-east angle is a statue of Elizabeth, by Watson; at the south-east, Gibbons's marble statue of Charles II., formerly in the centre of the old Exchange, nearly upon the spot where is now a marble statue of Queen Victoria, by Lough: the sovereigns in whose reigns the three Exchanges were built.

The encaustic decorations of the Ambulatories having become obscured, the plaster-work was removed in 1859-60, and replaced by fresco-painting, designed by Sang, executed by Beensen, of Munich. Above the west and principal entrance, are placed the Gresham arms; those of Sir Thomas Gresham, the founder of the institution, in combination with the arms of the Mercers' Company, to which he belonged; together with the City arms. On the panel of the ceiling immediately within this entrance are the Royal arms. To the right are the national arms of Sweden and Norway; and proceeding round by the right, next are the following national and distinguished arms, emblazoned on the various panels in the order:—Prussia, the East Indies, Australia, Brazil, America, Portugal, Naples, Spain, Italy, Greece, France, Austria, Holland; followed by those of Brandenburg, Hamburg, and Lubeck, conjoined with and succeeded by those of Hanover, Bavaria, Scotland, Ireland, Denmark, Schleswig-Holstein, China, Turkey, and Russia. On the upper corners of the panels crests of various members of the Gresham committee, under whose direction the building is maintained, have been placed; their names will be found recorded on a granite slab which occupies the south-west corner of the building. The ceiling panels are interspersed with the Gresham, the Mercers', and the City arms, together with the mottoes of the two latter, "*Honor Deo*" and "*Domine dirige nos*," in numerous designs and combinations; while above the statues of Elizabeth and Charles II. the Royal arms are again conspicuous. The different Walks of the Merchants and their peculiar trades are in these new decorations much more readily recognisable by the coats of arms of the respective countries, and each particular trade is represented according to the ancient custom resorted to by the frequenters of the Royal Exchange. The temporary decorations had little or no reference to this important question, but now the coats of arms form the chief ornaments of the large arched panels of the walls, the borders of which are filled with a rich Raphaelaean margin upon a purple ground, intersected with emblematic medallions, the main or central leading colour being an aërial and sunny yellow of the most cheerful hue.

"Here are the same old-favoured spots, changed though they be in appearance; and notwithstanding we have lost the great Rothschild, Jeremiah Harman, Daniel Hardcastle (the Page No. 1 of the *Times*), the younger Rothschilds occupy a pillar on the south side of the Exchange, much in the same place as their father; and the Barings, the Bateses, the Salomons, the Doxats, the Durrants, the Crawshays, the Curries, and the Wilsons, and other influential merchants, still come and go, as in olden days."—(*City*, 2nd edit.) Many sea-captains and brokers still go on 'Change; but the "Walks" are disregarded. The hour of High 'Change is from  $\frac{1}{2}$  past 3 to  $\frac{1}{2}$  past 4 P.M., the two great days being Tuesday and Friday for foreign exchanges.

*Lloyd's Subscription Rooms* are approached by a fine Italian staircase; the stairs are each a single block of Cragleith granite, 14 feet long. In the vestibule is a marble statue of Prince Albert, by Lough; a marble statue, by Gibson, R.A., of the late Mr. Huskisson, presented by his widow; a mural testimonial to the *Times'* exposure of a fraudulent conspiracy in 1851; and a monument to John Lydekker, Esq., who bequeathed 58,000*l.* to the Seamen's Hospital Society: it has figures of disabled scamen, and a scene from the Southern Whale Fishery.

Lloyd's is the rendezvous of the most eminent merchants, shipowners, underwriters, insurance, stock, and exchange brokers, &c. Here is obtained the earliest news of the arrival and sailing of vessels, losses at sea, captures, re-captures, engagements, and other shipping intelligence; and the proprietors of ships and freights are insured by the underwriters.

Lloyd's originated with a coffee-house keeper of that name, at the corner of Abchurch-lane, Lombard-street:—

"To Lloyd's Coffee-house, he never fails  
To read the letters and attend the sales."—*Wealthy Shopkeeper*, 1700.

In 1710, Steele dates from Lloyd's (*Tatler*, No. 246) his Petition on Coffee-house Orators and Newsvenders; and Addison, in *Spectator*, April 23, 1711, speaks of the auction pulpit at Lloyd's: but the auction business was transferred to Garraway's Coffee-house. Lloyd's was subsequently removed to Pope's Head-alley, and in 1774 to the north-west corner of the Royal Exchange, where it remained until the fire in 1838; the subscribers then met at the South-Sea House, till they returned to their present location in the new Exchange. The rooms are in the Venetian style, with Roman enrichments. They are:—1. The Subscribers' or Underwriters', the Merchants', and the Captains' Room. *The Subscribers' Room* is 100 feet long by 48 feet wide, and is opened at 10 o'clock and closed at 5: annual subscription, four guineas; if an underwriter or insurance-broker, he pays also an entrance-fee of twenty-five guineas; admissions and questions determined by ballot, each underwriter having his own seat. At the entrance of the room are exhibited the Shipping Lists, received from Lloyd's agents at home and abroad, and affording particulars of departures or arrivals of vessels, wrecks, salvage, or sale of property saved, &c. To the right and left are "Lloyd's Books," two enormous ledgers: right hand, ships "spoken with," or arrived at their destined ports; left hand, records of wrecks, fires, or severe collisions, written in a fine Roman hand, in "double lines." To assist the underwriters in their calculations, at the end of the room is an Anemometer, which registers the state of the wind day and night; attached is a rain-gauge.

On the roof of the Exchange is a sort of mast, at the top of which is a fan, like that of a windmill, the object of which is to keep a plate of metal with its face presented to the wind. Attached to this plate are springs, which, joined to a rod, descend into the Underwriters' Room upon a large sheet of paper placed against the wall. To this end of the rod a lead-pencil is attached, which slowly traverses the paper horizontally, by means of clock-work. When the wind blows very hard against the plate outside, the spring, being pressed, pushes down the rod, and the pencil makes a long line down the paper vertically, which denotes a high wind. At the bottom of the sheet, another pencil moves, guided by a vane on the outside, which so directs its course horizontally that the direction of the wind is shown. The sheet of paper is divided into squares, numbered with the hours of night and day; and the clock-work so moves the pencils, that they take exactly an hour to traverse each square: hence the strength and direction of the wind at any hour of the twenty-four are easily seen.

The subscribers number about 1900; and, with the underwriters, represent the greater part of the mercantile wealth of the country. (See *City*, 2nd edit, pp. 108 to 122.) Above the Subscribers' Room is the *Chart-room*, where hangs an extensive collection of maps and charts.

*The Merchants' Room* is superintended by a master, who can speak several languages: here are duplicate copies of the books in the underwriters' room, and files of English and foreign newspapers.

*The Captains' Room* is a kind of coffee-room, where merchants and ship-owners meet captains, and sales of ships, &c. take place.

The members of Lloyd's have ever been distinguished by their loyalty and benevolent spirit. In 1802, they voted 2000*l.* to the Life-boat subscription. On July 20, 1803, at the invasion panic, they commenced the Patriotic Fund with 20,000*l.* 3 per cent. consols; besides 70,312*l.* 7*s.* individual subscriptions, and 15,000*l.* additional donations. After the battle of the Nile, in 1798, they collected for the widows and wounded seamen 32,423*l.*; and after Lord Howe's victory, June 1, 1794, for similar purposes, 21,281*l.* They have also contributed 5000*l.* to the London Hospital; 1000*l.* for the suffering inhabitants of Russia in 1813; 1000*l.* for the relief of the militia in our North American colonies, 1813; and 10,000*l.* for the Waterloo subscription, in 1815. The Committee vote medals and rewards to those who distinguish themselves in saving life from shipwreck.

*Lloyd's Register of British and Foreign Shipping*, No. 2, White-lion-court, Cornhill, was originally established in 1760, and re-established in 1834, and gives the class and standing of vessels, date of building and where built, materials, &c., ascertained by careful surveys; but is a distinct body from Lloyd's Subscription Rooms.

The entrance-gates in each front of the Exchange are fine specimens of iron-casting, bronzed. The western or principal gates, cast by Grissell, are 22½ feet high, 11 feet 4 inches wide. The design is Elizabethan: on the flanks and around the semicircle, are the shields of the twelve great City companies; in the crown of the arch, Gresham's arms, and beneath is his bust, upon a mural crown, backed by the civic mace and sword; on the panels are the arms of Elizabeth and Victoria.

The cost of enlarging the site, including improvements and widening of Cornhill, Freeman's-court, Broad-street, and removal of the church of St. Benet Fink, the French Protestant Church, Bank-buildings, Sweeting's-alley, &c., was 223,578*l.* 1*s.* 10*d.*—*City Chamberlain's Return*, October 30, 1851.

"Sir Thomas Gresham left the Exchange during the life of his widow to her use; and at her death, he left his mansion in Threadneedle-street, since occupied by the Excise Office, for a college, to be called Gresham College, as a London University, the funds for its support being provided by the rents of the shops and pawns of the Exchange. By the Great Fire, this source of income was entirely cut off; and not only so, but the two Corporations of the City of London and the Mercers' Company incurred a debt of nearly 60,000*l.* in rebuilding the Exchange. They, notwithstanding, out of their own resources continued the College until the year 1745, when the debt amounted to 111,000*l.* In 1763, the College was put an end to by an Act of Parliament, and the site let to the Commissioners of Excise. The Gresham Professors were always continued, and gave their lectures in a room in the Exchange up to the fire of 1838. The Gresham Committee have, from their own funds, rebuilt Gresham College, in Gresham-street, at an expense of upwards of 15,000*l.*: and the debt incurred by the two Corporations, in maintaining the Exchange and rebuilding it twice, in maintaining the Gresham Professors, and some almshouses founded also by Sir Thomas Gresham, amounts now to considerably more than 200,000*l.*"—*W. Tite, F.R.S.*

A large medal, by Wyon, R.A., bears on the obverse Lough's statue of the Queen in profile; on the reverse is a bust in high relief of Gresham, in the cap and starched frill of his period.

In the neighbourhood of the Exchange are the finest architectural objects in the City. Westward is the Bank of England, an elaborately-enriched pile, very picturesque in parts; and beyond it are the palatial edifices of the Alliance and Sun Insurance Offices. Southward is the Mansion House, in effect a massive Italian palace. Northward is Royal Exchange-buildings, an enriched specimen of street architecture. Before the Exchange portico is an equestrian statue of the Duke of Wellington (the last work modelled by Chantrey), placed here by the citizens in gratitude for the Government grant of 1,000,000*l.* for improvements in their ancient City. From this spot radiate Moorgate and Prince's-streets; the former with Italian *palazzo* offices, less showy but of far better architectural character than Regent-street; and King William-street, highly embellished, but more interesting as leading to London-bridge, which contests with another structure across the same stream the distinction of "the finest bridge in the world."

**COAL EXCHANGE.**—Three hundred years ago, when the use of coal instead of wood had only just commenced in the metropolis, two or three ships were enough for the supply. A charter of Edward II. shows Derbyshire coal to have been then used in London, though a proclamation of Edward I. shows its introduction as a substitute for wood to have been much opposed; and in the reign of Elizabeth, the burning of stone-coal was prohibited during the sitting of Parliament, lest it should affect the health of the members. An Exchange for the trade in the new fuel was early established.

The "Coal Exchange," up to 1807, was in the hands of private individuals; in that year it was purchased by the Corporation for 25,600*l.* In 1845, the coal-trade petitioned for the enlargement and rebuilding of the Exchange. This was done by the City architect, J. B. Bunning; and the new Exchange was opened with great *éclat*, by Prince Albert, accompanied by the Prince of Wales and the Princess Royal, Oct. 29,

1849; when the Lord Mayor (Duke), himself a coal-merchant, received a patent of baronety. The Exchange has two principal fronts of Portland stone, in the Italian style,—one in Lower Thames-street, and the other in St. Mary-at-Hill; with an entrance at the corner by a semicircular portico, with Roman-Doric columns, and a tower 106 feet high, within which is the principal staircase. The public hall, or area for the merchants, is a rotunda 60 feet in diameter, covered by a glazed dome, 74 feet from the floor. This circular hall has three tiers of projecting galleries running round it; the stanchions, galleries, ribs of dome, &c. are iron, of which about 300 tons are used. The floor of the rotunda is composed of 4000 pieces of inlaid woods, in the form of a mariner's compass, within a border of Greek fret: in the centre are the City shield, anchor, &c.; the dagger-blade in the arms being a piece of a mulberry-tree planted by Peter the Great, when he is stated to have worked as a shipwright in Deptford Dockyard.

The entrance vestibule is richly embellished with vases of fruit, arabesque foliage, terminal figures, &c. In the rotunda, between the Raphaelesque scroll supports, are panels painted with impersonations of the coal-bearing rivers of England: the Thames, Mersey, Severn, Trent, Humber, Aire, Tyne, &c.: and above them, within flower-borders, are figures of Wisdom, Fortitude, Vigilance, Temperance, Perseverance, Watchfulness, Justice, and Faith. The arabesques in the first story are views of coal-mines: Wallsend, Percy Pit-Main, Regent's Pit, &c. The second and third story panels are painted with miners at work: and the twenty-four ovals at the springing of the dome have upon a turquoise-blue ground figures of fossil plants found in coal-formations. The minor ornamentation is flowers, shells, snakes, lizards, and other reptiles, and nautical subjects. The whole is in polychrome, by Sang. The gallery-fronts and other iron-work are cable pattern. The cost of the enlarged site, the building, and approaches, was 91,167*l.* 11*s.* 8*d.*

In a basement on the east side of the Exchange are the remains of a Roman bath, in excellent preservation, discovered in excavating the foundations of the new building; there is a convenient access to this interesting relic of Roman London.

CORN EXCHANGE (the), Mark-lane, was established in 1747, when the present system of factorage commenced. It consists of an open Doric colonnade, within which the factors have their stands; it resembles the *atrium*, or place of audience, in a Pompeian house; with its *impluvium*, the place in the centre in which the rain fell. (*W. H. Leeds.*) In 1827-8, adjoining was built a second Corn Exchange (G. Smith, architect): it has a central Grecian-Doric portico, surmounted by the imperial arms and agricultural emblems; the ends have corresponding pilasters. Here lightermen and granary-keepers have stands, as well as corn-merchants, factors and millers; the ceed market is in another part of the building.

"This is the only metropolitan market for corn, grain, and seeds. The market-days are Monday, Wednesday, and Friday; hours, ten to three. Wheat is paid for in bills at one month, and other corn and grain in bills at two months. The Kentish 'hoymen,' distinguishable by their sailor's jackets, have stands free of expense, and pay less for metage and dues than others; and the Essex dealers enjoy some privileges: in both cases said to be in consideration of the men of Kent and Essex having continued to supply the City when it was ravaged by the Plague."—Knight's *London*, vol. iii. p. 365.

KING'S EXCHANGE (the), "for the receipt of bullion to be coined," was in Old Exchange, now Old 'Change, Cheapside.

"It was here that one of those ancient officers, known as the King's Exchanger, was placed; whose duty it was to attend to the supply of the Mints with bullion, to distribute the new coinage, and to regulate the exchange of foreign coin. Of these officers there were anciently three: two in London, at the Tower and Old Exchange, and one in the City of Canterbury. Subsequently, another was appointed with an establishment in Lombard-street, the ancient rendezvous of the merchants; and it appears not improbable that Queen Elizabeth's intention was to have removed this functionary to what was pre-eminently designated by her 'the Royal Exchange,' and hence the reason for the change of the name of this edifice by Elizabeth."—*W. Tite, F.R.S.*

No. 36, Old 'Change was formerly the "Three Morrice-Dancers" public-house, with the three figures sculptured on a stone as the sign and an ornament, (*temp.* James I.): the house was taken down about 1801: there is an etching of this very characteristic sign-stone.

NEW EXCHANGE, on the south side of the Strand, was built by the Earl of Salisbury on the site of the stables of Durham House, and was opened by James I. and his

queen, who named it "the Bourse of Britain." It was erected partly on the plan of the Royal Exchange, with vaults beneath, over which was an open paved arcade; and above were walks of shops occupied by perfumers and publishers, milliners and sempstresses:

"The sempstress speeds to 'Change with red-tipt nose."—*Gay's Trivia*, b. ii. l. 337.

When, at the Restoration, Covent Garden rose to be a fashionable quarter, the New Exchange became very popular. It is a favourite scene with the dramatists of the reign of Charles II., and was the great resort of the gallants of that day. At the "Three Spanish Gipsies," in the New Exchange, lived Anne Clarges, married to Thomas Ratford, who there sold wash-balls, powder, gloves, &c., and she taught girls plain work. Anne became sempstress to Colonel Monk, and used to carry him linen: "she was a woman," says Lord Clarendon, "of the lowest extraction, without either wit or beauty;" but who contrived to captivate Monk, "old George," and was married to him at St. George's Church, Southwark, in 1652, it is believed while her first husband was living. "She became the laughing-stock of the court, and gave general disgust." (*Pepys*, iii. 75.) She died Duchess of Albemarle, leaving a son, Christopher, who succeeded to the Dukedom; he is said to have been "suckled by Honour Mills, who sold apples, herbs, oysters, &c." At the Revolution, in 1688, there sat in the New Exchange, as a sempstress, Francis Jennings, the reduced Duchess of Tyrconnel, wife to Richard Talbot, lord-deputy of Ireland under James II.: she supported herself for a few days (till she was known, and otherwise provided for) by the little trade of this place: to avoid detection, she sat in a white mask and a white dress, and was therefore known as "the white widow."\* Another romantic story is told of the place. In November, 1653, a quarrel having arisen in the public walk of the Exchange between M. Gerard (at that time engaged in a plot against Cromwell) and Don Pantaleon Sa (brother to the Portuguese ambassador); the latter next day came to the Exchange, accompanied by assassins, who mistaking another person, then walking with his sister and mistress, for M. Gerard, seized upon him, and stabbed him to death with their poniards. For this crime Don Pantaleon was condemned to death; and, by a strange coincidence, he suffered on the same scaffold with M. Gerard, whose plot had been discovered.

The Exchange latterly became famous for its exhibitions of waxwork, and for a magnificent stock of English and foreign china kept for sale; but by the intrigues, assignations, and indecent licenses of the fops with the milliners, the place lost its character, was little resorted to after the death of Queen Anne, and in 1737 was taken down, and the site covered with houses; the name is retained in Exchange-court.

In the Strand, exactly opposite Ivy Bridge (a short distance east of the New Exchange site), Thomas Parr, the "olde olde man," had lodgings, when he came to London to be shewn as a curiosity to Charles I. The authority for this fact is a Mr. Greening, who in the year 1814, being then about 90 years of age, mentioned it to the author, saying that he perfectly well remembered, when a boy, having been shown the house by his grandfather, then 88 years of age. The house, which stood at the commencement of the present century, had been known for more than 50 years as the "Queen's Head" public-house.—*Smith's Streets of London*, edit. 1849, p. 145.

STOCK EXCHANGE, the heart of "the Bank for the whole world" (*Rothschild*), is in Capel-court, Bartholomew-lane, facing the eastern front of the Bank of England. The speculators in stock, who greatly increased with the National Debt, hitherto met at Jonathan's Coffee-house, Change-alley; then at a room in Threadneedle-street, admission 6*d.*; and bargains in stocks were next made in the Bank rotunda. In 1801, the present building was commenced by subscription (James Peacock, architect), in Capel-court, the site of the offices and residence of Sir William Capel, lord mayor in 1504. The inscription placed beneath the foundation-stone states, "at this era the public funded debt had accumulated in five successive reigns to 552,730,924*l.*;" adding propitiatorily, "the inviolate faith of the British nation, and the principles of the constitution, sanction and secure the property embarked in this undertaking. May the blessing of that constitution be secured to the latest posterity!" The building was opened March, 1802; and in 1822 the business in the foreign funds was removed here from the Royal Exchange.

The Stock Exchange was considerably enlarged in 1854, at the expense of 20,000*l.*

\* This anecdote was ingeniously dramatised by Mr. Douglas Jerrold; and produced at Covent-garden Theatre, in 1840, as "The White Milliner."

The fabric belongs to a private Company, consisting of 400 shareholders; and the shares were originally of 50*l.* each, but are now of uncertain amount. The affairs of this Company are conducted, under a deed of settlement, by nine "managers," elected for life by the shareholders. The members or subscribers, however, entirely conduct their own affairs by a Committee of thirty of their own body. There are three branches, or houses: the English, for stocks and Exchequer-bills; the Foreign, for stocks; and the Railway or Share-market, a market for mining shares being added in 1850. Lists are daily published of the prices of stocks and shares, and twice a week of bullion and foreign exchanges. The members give security to the Stock Exchange Committee, partly as a guarantee of their own individual respectability, and partly of their good faith. In some cases they give sureties to the amount of 900*l.*, and in others of 500*l.* or 600*l.*; the smaller amount being required of brokers who have for some time before been recognised clerks of members of the Stock Exchange; but in all cases, the time during which such security lasts is limited to two years. The money received in the event of defalcation by a broker from his sureties goes solely to the members of the Stock Exchange; and the bonds given to the Stock Exchange are required for the protection of that body only, and not for the public. Each member, as well as the Committee, has to meet the probation of re-election every Lady-day. A bankrupt ceases to be a member, and cannot be re-admitted unless he pays 6*s.* 8*d.* in the pound beyond that collected from his debtors. The names of defaulters are posted on the "black board," and they are termed "lame ducks;" this rule was established in 1787, when twenty-five "lame ducks waddled out of the Alley." To avoid a libel, the notice runs thus: "Any person transacting business with A. B. is requested to communicate with C. D." Only members are allowed to transact business at the Stock Exchange, as notified at each entrance; and strangers who stray in are quickly hustled out: but a view of the Exchange can be obtained through the glass-doors in the entrance from Hercules-court. The brokers usually deal with the jobbers; and among the Exchange cries are, "Borrow money?" "What are Exchequer?" "Five with me," "Ten with me," making up a strange Babel. "A thousand pounds' consols at 96½-96¼." ("Take 'em at 96½," is the voluciferous reply of a buyer.) "Mexican at 27½-27; Portuguese fours at 32½-32¼; Spanish fives at 21; Dutch two-and-a-halves at 50½-50¼;" and so on till the hour for closing strikes. Railway companies and bankers often lend large sums, and bankers are sometimes borrowers, as are also the Bank of England and were the East India Company. The fluctuations in the rate of interest enjoin "watching the turn of the market;" for, on the same day, money has been lent at 4 per cent. in the morning, and at 2 o'clock could scarcely be borrowed at 10 per cent.

The Stock Exchange has had its vocabulary of terms for than a century—traceable to the early transactions in the stock of the East India Company.

A *Bull* is one who speculates for a rise; whereas a *Bear* is he who speculates for a fall. The *Bull* would, for instance, buy 100,000*l.* consols for the account, with the object of selling them again during the intervening time at a higher price. The *Bear*, on the contrary, would sell the 100,000*l.* stock (which, however, he does not possess) for the same time, with the view of buying in and balancing the transaction at a lower price than that at which he originally sold them. If consols fall, the *Bull* finds himself on the wrong side of the hedge; and if they rise, the poor *Bear* is compelled to buy in his stock at a sacrifice.—*The City*, 2nd edit.

Certain of the legitimate dealers and brokers, originally formed themselves into a Stock Exchange, on the principle of admitting only those who could give assurance of their respectability, and of dismissing summarily any of their own body who should be guilty of irregularity. On the whole, the scheme has worked greatly to the public advantage, and has rendered the London Money-market the resort of all the world. Notwithstanding the transactions are so enormous, the amounts so large, and the confidence reposed so unlimited, the instances of delinquency in the members are surprisingly few. Nevertheless, the reminiscences of the "Alley," together with the equivocal conduct of the "stags" who haunt its purlieus, still attach, though unjustly, to the Stock Exchange itself. The benevolence and charity of the members are well known: in any sudden calamity, the Stock Exchange men are always amongst the first to succour the afflicted. There is, moreover, a fund subscribed by the members for their decayed associates, the invested capital of which, exclusive of annual contributions, amounts to upwards of 50,000*l.*—*The Builder*.

The Stock Exchange has many startling episodes of fraud and panic, rise and ruin. Speculation often produces permanent benefit to the public: to the fever of 1807 and 1808, London owes Vauxhall and Waterloo Bridges. Late in Napoleon's career the funds varied 8 and 10 per cent. within an hour; but the immediate effect of the battle of Waterloo news on the funds was only 3 per cent.: the decrease of the public expenditure was two millions per month. At the panic of 1825, which more affected the public funds than did the news of Napoleon's escape from Elba, the entrance to the Stock Exchange became so choked up, that a fine of 5*l.* was imposed upon each person who stopped the way. Pigeon-expresses for the earliest intelligence were chiefly worked from May to September; the birds generally used were the Antwerp breed, strong on the wing, and fully feathered: they are, however, superseded by the electric telegraph and the cable. Exchequer-bills let in fraud the year after their creation. The last fraud in Exchequer-bills was that committed by Beaumont Smith, chief clerk in the Audit Office, and the victim of Rapallo, an Italian jobber.

Political hoaxes, from the reported death of Queen Anne to the fraud of 1814, in which Lord Cochrane was implicated, chequer the Stock-Exchange chronicles; and victims flit about its gates—from the Goldsmids, whose credit was whiskered away by envy, to the poor Miss Whitehead, whose wits were turned to melancholy by the forgeries of her brother. The recollection of large loans raised here reminds one of

the mighty power which reigns supreme on this very spot, once the most opulent part of Roman London.

"The warlike power of every country depends on their Three-per-Cents. If Cæsar were to re-appear on earth, Wettenthal's List would be more important than his Commentaries; Rothschild would open and shut the Temple of Janus; Thomas Baring, or Bates, would probably command the Tenth Legion; and the soldiers would march to battle with loud cries of 'Scrip and Omnium reduced!' 'Consols and Cæsar!'"—*Rev. Sydney Smith.*

The most remarkable man among the stockbrokers of our time was the late Mr. Francis Baily, F.R.S., the astronomer, who retired from the Stock Exchange, in 1825. In 1838, in the garden of his house, Tavistock-place, Russell-square, was constructed a small observatory, wherein Mr. Baily repeated the "Cavendish experiment," the Government having granted 500*l.* towards the expense of the apparatus, &c. This is the building in which the earth was weighed, and its bulk and figure calculated; the standard measure of the British nation perpetuated, and the pendulum experiments rescued from their chief source of inaccuracy. Mr. Baily died President of the Astronomical Society, in 1844.

The Stock Exchange, as rebuilt by Allason, architect, 1853, stands in the centre of the block of buildings fronting Bartholomew-lane, Threadneedle-street, Old Broad-street, and Throgmorton-street. The principal entrance is from Bartholomew-lane, through Capel-court: there are also three entrances from Throgmorton-street and one from Threadneedle-street. The area of the new house is about 75 squares, and it would contain 1100 or 1200 members: there are, however, seldom more than half that number present. The site is very irregular, and has enforced some peculiar construction in covering it, into which iron enters largely. For the cupola, laminated ribs are used. The vault which covers the centre of the building, 39 feet in span, is of timber and iron. The whole of this, together with the dome, &c., is covered with lead to the extent of about 80 tons. The vitiated air is got rid of by an extracting-chamber on the apex of the dome, heated by a sunburner with 500 jets: during the day the sunburner is concealed from view by a perforated sliding metal screen; but, when required, sufficient illuminating power is to be obtained by withdrawing the screen, to light up the house without further burners.—*The Builder.*

#### EXCHANGE-ALLEY.

EXCHANGE-ALLEY now 'Change-alley, between No. 24, Cornhill, and No. 70, Lombard-street, is described by Strype as "a place of a very considerable concourse of merchants, seafaring men, and other traders, occasioned by the great coffee-houses that stand there. Chiefly now brokers, and such as deal in the buying and selling of stocks, frequent it." Thither Jews and Gentiles migrated in 1700: for a century it was the focus of all the monetary operations of England, and in great part of Europe; and even to this hour, the Stock Exchange bears the generic designation of "the Alley." It was the great arena of the South-Sea Bubble of 1720. In a print called the "Bubblers' Melody" are "stock-jobbing cards, or the humours of 'Change-alley."

"The headlong fool that wants to be a swopper  
Of gold and silver coin for English copper,  
May in 'Change-alley prove himself an ass,  
And give rich metal for adulterate brass."

*Nine of Hearts, in a Pack of Bubble Cards.*

1766 was a South-Sea year in East India stock, when patriots were made or marred by jobbing: "from the Alley to the House," said Walpole, "is like a path of ants."

"The centre of the jobbing is in the kingdom of Exchange-alley and its adjacencies. The limits are easily surrounded in about a minute and a half, viz., stepping out of Jonathan's into the Alley, you turn your face full south; moving on a few paces, and then turning due east, you advance to Garraway's; from thence, going out at the other door, you go on still east into Birchin-lane; and then halting a little at the Sword-blade Bank, to do much mischief in fewest words, you immediately face to the north, enter Cornhill, visit two or three petty provinces there in your way west; and thus having boxed your compass, and sailed round the whole stock-jobbing globe, you turn into Jonathan's again; and so, as most of the great follies of life oblige us to do, you end just where you began."—*The Anatomy of Exchange-alley, 1719.*

#### EXCISE OFFICE (THE),

OLD Broad-street (Dance, sen., architect), occupies the site of Gresham College, which the Gresham trustees sold, in 1768, to the Crown for a perpetual rent of 500*l.* per annum; when 18,000*l.* was also paid out of the Gresham fund to the Commissioners towards pulling down the College, and building an Excise Office! (*Burgon.*) The business was removed in 1843 to the Inland Revenue Office, Somerset House. In

the court-yard of the Broad-street Excise Office a temporary Exchange was put up for the merchants in 1838; and was used during the rebuilding of the Royal Exchange. (See GRESHAM COLLEGE, p. 274.)

The Excise system was established by the Long Parliament, in 1643, to raise funds for the war against the King! The Commissioners first sat in Haberdashers' Hall, and then at their office in Smithfield, which was taken down in 1647, the mob carrying off the materials in triumph. In 1680, the office was at Cockaigne House, formerly the mansion of Elish, the brother of Dr. William Harvey, the illustrator of the Circulation of the Blood. Thence the Excise Office was removed to Sir John Frederick's mansion, Old Jewry; and then to Old Broad-street.

#### EXETER HALL,

NO. 372, on the north side of the Strand, a large proprietary establishment, was commenced in 1829 (Gandy Deering, architect), and was originally intended for religious and charitable Societies, and their meetings. It has a narrow frontage in the Strand, but the premises extend in the rear nearly from Burleigh-street to Exeter-street. The Strand entrance is Græco-Corinthian, and has two columns and pilasters. and the word ΦΙΛΑΔΕΛΦΕΙΟΝ (Loving Brothers) sculptured in the attic. A double staircase leads to the Great Hall, beneath which are a smaller one, and passages leading to the offices of several Societies.

The Great Hall, opened in 1831, is now used for the "May Meetings" of religious societies, and for the Sacred Harmonic Society's and other concerts. This Hall has been twice enlarged, is now 131 ft. 6 in. long, 76 ft. 9 in. wide, and 45 ft. high, and will accommodate upwards of 3000 persons. At the east end is an organ and orchestra, the property of the Sacred Harmonic Society; at the west end is a large gallery, extending partly along the sides; and on the floor are seats rising in part amphitheatrically; also a platform for the speakers, and a large carved chair. In 1850, the area of the hall was lengthened nearly forty feet; the flat-panelled ceiling was also removed, and a coved one inserted, without disturbing the slating in the roof; S. W. Daukes, architect. Nearly eighty tons of iron were introduced into the roof, which, with the new ceiling, is one-third less weight than the original roof.

Thus the ceiling gained 15 feet in height at the ends, and 12 feet in the centre; and the sound and ventilation are much improved. The *Orchestra* is on the acoustic principle successfully adopted by Mr. Costa at the Philharmonic Society; it is 76 feet wide, 11 feet more than the Birmingham Town-Hall orchestra. Every member can see the conductor; the organ-player sees his *baton* in a glass, among the phalanx of instrumentalists. The works of Handel, Haydn, and Mozart are here given with mighty effect; and Spolir and Mendelssohn have here conducted their own productions. The *Organ*, built by Walker in 1840, is 30 feet wide and 40 feet high: it has 2187 pipes; the longest are 20 feet from the base, diameter 15 inches, weight of each 4 cwt.; in gilding one-half of each pipe 750 leaves of gold were used: there are three rows of keys and two octaves of pedals.

From April to the end of May, various Societies hold their anniversary meetings at Exeter Hall. The smaller hall holds about 1000 persons, and a third hall 250, Haydon has painted the Meeting of Anti-Slavery Delegates in the Great Hall, June 12, 1840, under the presidency of the venerable Thomas Clarkson, then in his 81st year. On June 1, 1840, Prince Albert presided in the Great Hall at the first public meeting of the Society for the Extinction of the Slave Trade, this being the Prince's first appearance at any public meeting in England.

Exeter Hall, with its various religious and benevolent aggregations, is one field with many encampments of distinct tribes. "Wesleyan, Church, Baptist missionary societies, all maintain a certain degree of reserve towards each other, all are jealous of the claims of rival sects, and yet all are attracted by a common sense of religious earnestness. The independent and often mutually repelling bodies who congregate in Exeter Hall are one in spirit, with all their differences. Without a pervading organization, they are a church."—*Spectator newspaper*.

Mr. Hullal's system of popular Singing was formerly illustrated here, when 2000 pupils combined their voices in the performances.

## EXETER HOUSE AND EXETER 'CHANGE.

EXETER 'CHANGE is now only kept in remembrance by a clock-dial, inscribed with its name in place of figures, upon the attic-front of the house No. 353, eastward of the 'Change site, on the north side of the Strand. Here was formerly the parsonage-house of the parish of St. Martin, with a garden, and a close for the parson's horse; till Sir Thomas Palmer (*temp.* Edward VI.) obtained it by composition, and began to build here "a magnificent house of brick and timber" (*Stow*). But upon his attainder for high treason (1 Queen Mary), the property reverted to the Crown, and so remained until Queen Elizabeth presented it to Sir William Cecil, lord treasurer, and the great Lord Burleigh (properly Burghley), who completed the mansion, with four square turrets; whence it was called Cecil House and Burleigh House, and afterwards Exeter House, from the son of the great statesman Thomas Cecil, Earl of Exeter. The mansion fronted the Strand, and extended from the garden-wall of Wimbledon House (on the site of D'Oyley's warehouse) to a green lane, the site of the present Southampton-street, westward. Queen Elizabeth visited Lord Burleigh at Exeter House; and here his obsequies were celebrated by a lying-in-state.\* In the chapel attached, the pious John Evelyn, on Christmas-day, 1657, was seized by the soldiers of the Commonwealth for having observed "the superstitious time of the Nativity," and was temporarily shut up in Exeter House. Here lived the first Earl of Shaftesbury, and here was born his grandson, who wrote the *Characteristics*. After the Great Fire, the courts of Doctors' Commons were held in Exeter House until 1672.

Exeter 'Change was built, as a sort of bazaar, by Dr. Barbon, the speculator in houses, *temp.* William and Mary, when Exeter House was taken down; and probably some of the old materials were used for the 'Change, including a pair of large Corinthian columns at the eastern end. (*See a View*, by G. Cooke.) About the same time, Exeter-street was erected. The 'Change extended from the house No. 352 to the site of the present Burleigh-street: it projected into the Strand, the northern foot-thoroughfare of which lay through the shops or stands of the lower floor, first occupied by sempsters, milliners, hosiers, &c.

The body of the poet Gay lay in state in an upper room of the 'Change; here, too, were upholsterers' shops, the offices of Law's Land Bank, auction-rooms, &c. Cutlery then became the merchandise of the lower floor.

Thomas Clark, "the King of Exeter 'Change," took a stall here in 1765 with 100*l.* lent him by a stranger. By parsimony and trade, he grew so rich that he once returned his income at 6000*l.* a year; and long before his death, in 1816, he had rented the whole ground-floor of the 'Change. He left nearly half a million of money, and one of his daughters married Mr. Hamlet, the celebrated jeweller.

The upper rooms of Exeter 'Change were occupied as a menagerie successively by Pidcock, Polito, and Cross; admission to Pidcock's, in 1810, 2*s.* 6*d.* The roar of the lions and tigers could be distinctly heard in the street, and often frightened horses in the roadway. During Cross' tenancy, in 1826, Chunee, the stupendous elephant shown here since 1809, in an oak den which cost 350*l.*, was shot, and his skin sold for 50*l.*; his skeleton, sold for 100*l.*, is now at the College of Surgeons. (*See MUSEUMS.*) Cross' Menagerie was removed in 1828 to the Kings' Mews, Charing-cross; and Exeter 'Change was entirely taken down in 1829.

NEW EXETER CHANGE, an Arcade, which led from Catherine-street to Wellington-street, Strand, is described at page 20.

## FETTER-LANE,

FLEET-STREET, eastward of St. Dunstan's Church, extending to Holborn-hill, "is so called of fewters (or idle people) lying there, as in a way leading to gardens" (*Stow*) before the street was built; but when he wrote "it was built through on both sides with many fair houses." Here lived the leatherseller of the Revolution, "Praise God Barebones," and his brother, "Damned Barebones," both in the same house.

\* Burghley died at Theobalds, Aug. 4, 1598, where the body lay. Hentzer, however, states that when he called to see Theobalds at Cheshunt, there was "nobody to shew the palace, as the family was in town attending the funeral of their lord."

Hobbes of Malmesbury had a house in this street. In No. 16, over Fleur-de-lis-court, Dryden is said to have lived; but not by his biographers. His name does not appear in the parish books; but he may have been a lodger. "This period in Dryden's life may have been about the time when he wrote prefaces and other pieces for Heringham, the bookseller in the New Exchange, or soon after."—*J. W. Archer*, whose impression was that the authority consisted in a letter of Dryden's, dated from Fetter-lane, and in Mr. Upcott's collection of autographs. At the right-hand corner of Fleur-de-lis-court, the infamous Mrs. Brownrigg murdered her apprentices in 1767; the cellar-grating, whence the poor child's cries issued, is on the side of the court:—

"She whipped two female 'prentices to death,  
And hid them in the coal-hole. . . .  
For this act,  
Did Brownrigg swing."—Canning, *Anti-jacobin*.

On the Rolls estate, nearly opposite, was commenced a new Record Office, by Penne-thorne, in 1851. No. 32, Fetter-lane is the entrance to the Moravian Chapel, which was attacked and dismantled in the Sacheverel riots. (See *DISSENTERS' CHAPELS*, p. 220.) The Fleet-street and Holborn ends of Fetter-lane were, for more than two centuries, places of public execution. At the Holborn end, Nathaniel Tomkins was executed, July 5, 1643, for his share in Waller's plot to surprise the City. At the Fleet-street end Sarah Malcolm was executed, March 1733, for the murder of three women. (See Mr. Serjeant Burke's *Romance of the Forum*, vol. i. pp. 224–38.) Hogarth painted and engraved Sarah Malcolm: the print, for which the Duke of Roxburghe gave 8*l.* 5*s.*, is the rarest of Hogarth's portraits: this impression is now in Mr. Holbert Wilson's collection.

"Immediately after Sarah Malcolm underwent the extreme penalty of the law, a confession made by her was published in a pamphlet form; the edition was exhausted at once, and as much as twenty guineas is said to have been offered for an impression."—*Romance of the Forum*, 2nd series, vol. i. p. 237.

"After her execution her corpse was carried to an undertaker's on Snow-hill, where multitudes of people resorted, and gave money to see it; among the rest, a gentleman in deep mourning kissed her, and gave the attendants half-a-crown."—*Ireland*, vol. ii. p. 320. Quoted in Mr. Holbert Wilson's *Catalogue*, privately printed.

Fetter-lane has still a few old houses: towards the Holborn end are some of the oldest chambers of Barnard's Inn. Strange labyrinths of courts and alleys lie between Chancery, Fetter, and Shoe lanes, which, in the reign of Queen Elizabeth, intersected gardens and straggling cottages. This district was the principal part of Saxon London, and was nearly all burnt A.D. 982, when the City had "most buildings from Ludgate towards Westminster, and little or none where the heart of the City now is; except in divers places was housing that stood without order." (*Stow*.)

The White Horse Inn, Fetter-lane (now a cheap lodging-house), was formerly the great Oxford house: here Lord Eldon, when he left school and came to London, in 1776, met his brother, Lord Stowell. "He took me," says Lord Eldon, "to see the play at Drury-lane. Love played *Jobson* in the farce; and Miss Pope played *Nell*. When we came out of the house it rained hard. There were then few hackney-coaches, and we both got into one sedan-chair. Turning out of Fleet-street into Fetter-lane, there was a sort of contest between our chairman and some persons who were coming up Fleet-street, whether they should first pass Fleet-street, or we in our chair first get out of Fleet-street into Fetter-lane. In the struggle, the sedan-chair was overset, with us in it."—Lord Eldon's *Anecdote-Book*.

### FIELD-LANE,

AN infamous rookery of "the dangerous classes," extended from the foot of Holborn-hill, northward, parallel with the Fleet Ditch, but has been mostly taken down since it was thus vividly painted in 1837:—

"Near to the spot on which Snow-hill and Holborn meet, there opens, upon the right hand as you come out of the City, a narrow and dismal alley leading to Saffron-hill. In its filthy shops are exposed for sale huge bunches of pocket-handkerchiefs of all sizes and patterns—for here reside the traders who purchase them from pickpockets. Hundreds of these handkerchiefs hang dangling from pegs outside the windows, or flaunting from the door-posts; and the shelves within are piled with them. Confined as the limits of Field-lane are, it has its barber, its coffee-shop, its beer-shop, and its fried-fish warehouse. It is a commercial colony of itself—the emporium of petty larceny, visited, at early morning and setting-in of dusk, by silent merchants, who traffic in dark back-parlours, and go as strangely as they come. Here the clothesman, the shoe-vamper, and the rag-merchant, display their goods as sign-boards to the petty thief; and stores of old iron and bones, and heaps of midwhey fragments of woollen-stuff and linen, rust and rot in the grimy cellars."—Charles Dickens's *Oliver Twist*, 1837.

From Field-lane, northward, runs Saffron-hill, named from the saffron which it once

bore; next is Vine-street, the site of Ely-house vineyard. Strype (1720) describes this locality as "of small account both as to buildings and inhabitants, and pestered with small and ordinary alleys and courts, taken up by the meaner sort of people;" others are "nasty and inconsiderable."

In 1844 was taken down part of Old Chick-lane, which debouched into Field-lane. Here was a notorious thieves' lodging-house, formerly the Red-Lion Tavern: it had various contrivances for concealment; and the Fleet Ditch in the rear, across which the pursued often escaped by a plank into the opposite knot of courts and alleys.

#### FIELD OF FORTY FOOTSTEPS.

THE fields behind Montague House, Bloomsbury, appear to have been originally called Long Fields; and afterwards (about Strype's time) Southampton Fields. On St. John Baptist's Day, 1694, Aubrey saw at midnight twenty-three young women in the pasture behind Montague House, looking for a coal, beneath the root of a plantain, to put under their heads that night, and they should dream who would be their husbands. The fields were the resort of depraved wretches, chiefly for fighting pitched battles, especially on the Sabbath-day: such was the turbulent state of the place up to 1800.

A legendary story of the period of the Duke of Monmouth's Rebellion relates a mortal conflict here between two brothers, on account of a lady, who sat by: the combatants fought so ferociously as to destroy each other; after which their footsteps, imprinted on the ground in the vengeful struggle, were said to remain, with the indentations produced by their advancing and receding; nor would any grass or vegetation ever grow over these *forty footsteps*. Miss Porter and her sister, upon this fiction, founded their ingenious romance, *Coming Out, or the Field of Forty Footsteps*; but they entirely depart from the local tradition. At the Tottenham-street Theatre was produced, many years since, an effective melodrama, by Messrs. Mayhew, founded upon the same incident, entitled the *Field of Forty Footsteps*.

Southey records this strange story in his *Commonplace Book* (second series, p. 21). After quoting a letter from a friend, recommending him to "take a view of those wonderful marks of the Lord's hatred to *duelling*, called *The Brothers' Steps*," and describing the locality, Southey thus narrates his own visit to the spot: "We sought for near half an hour in vain. We could find no steps at all within a quarter of a mile, no, nor half a mile, of Montague House. We were almost out of hope, when an honest man, who was at work, directed us to the next ground, adjoining to a pond. There we found what we sought, about three-quarters of a mile north of Montague House, and 500 yards east of Tottenham-court-road. The steps are of the size of a large human foot, about three inches deep, and lie nearly from north-east to south-west. We counted only seventy-six; but we were not exact in counting. The place where one or both the brothers are supposed to have fallen is still bare of grass. The labourer also showed us where (the tradition is) the wretched woman sat to see the combat." Southey adds his full confidence in the tradition of the indestructibility of the steps, even after ploughing up, and of the conclusions to be drawn from the circumstance.—*Notes and Queries*, No. 12.

Joseph Moser, in one of his *Commonplace Books*, gives this account of the *footsteps*, just previous to their being built over: "June 16, 1800. Went into the fields at the back of Montague House, and there saw, for the last time, the *forty footsteps*; the building materials are there, ready to cover them from the sight of man. I counted more than *forty*, but they might be the footprints of the workmen."—Dobie's *St. Giles-in-the-Fields and St. George, Bloomsbury*; and Dr. Rimbault, in *Notes and Queries*, No. 14.

#### FINSBURY,

OR *Fensbury*, named from its fenny ground, is a manor of high antiquity, which abuts in part upon the City, Cripplegate, and Moorgate boundaries, and was anciently named *Ynesbury*. A great part of the manor is held by the Corporation of London, by virtue of a lease dated 22nd May, 1315, from Robert de Baidok, pre-

bendary of Haliwell and Finsbury, in St. Paul's Cathedral, at an annual rent of 20s. The lease, which has been renewed from time to time, will expire in the year 1867. The Corporation appoints the steward and other officers of the manorial courts; but the manor is not within the jurisdiction of the City. The Finsbury court leet and baron are holden in October every year, before the senior Common Pleader, to whose office the stewardship of the manor of Finsbury is incident. (*Municipal Corporation Report*, pp. 3, 136; and *Maitland's London*, vol. ii. 1369.) Finsbury has been drained and built over, and is now a populous parliamentary borough, including the ancient district of Moorfields, to be described hereafter.

In early times, the chief magistrate of London was no more than a provost. Afterwards, the title of Mayor—that is, *Major Chief*—was given to him; but in all the olden chronicles and documents he is simply called by that name, without the prefix of Lord. When the manor of Finsbury was annexed to the City property, and the mere marsh was turned into a place of general recreation, he was, in virtue of his office, Lord of the Manor of Finsbury. Hence, in process of time, the compound title of Lord Mayor: Mayor, that is, of London, and Lord of the Manor of Finsbury.

Aggas's Plan, 1560, shows Finsbury as a rural suburb; with "Finsburie Fyeld," with its four wind-mills; its archers; drying-grounds, with women spreading clothes on the grass; the "dogge-house," &c. "Moor-gate opens to the moor, or fen—hence the district name *Fin*, or Fensbury, and that of the near-to-hand Moor-lane. Fore-street appears *before* the City wall. The City-road is a footpath, near the junction of which with Old-street, another footpath, stands Finsbury-court. Tenter-street still attests the presence of the 'tenters,' whose frames in Aggas's Plan are sketched on the site which is now so styled; thus also do Ropemaker and Skinner-streets indicate old trades of suburban custom. Cherry-terrace, Crabtree-row, Willow-walk and Wilderness, Windmill, Lamb, Pear, Rose, Primrose, Acorn, Ivy, Elder, Blossom, Orchard, and Beech-streets, all in the neighbourhood, suggest odours and sights that have long left the spot. Tabernacle, Chapel, Worship, Mark, Luke, John, Paul, Paradise, Quaker, Providence, and *Great Pearl*-streets hint at later occupants."—*Athenæum*, 1866.

In the reigns of Queen Elizabeth and James I. (says Cunningham), Finsbury was a favourite walk with the citizens of London on a Sunday: hence Hotspur's allusion to Lady Percy:—

"And giv'st such sarcenet security for thy oaths,  
As if you never walk'st further than Finsbury."

Shakspeare, *First Part of Henry IV.*

The Prebend of Finsbury now (1866) has revenues of 7000*l.* per annum; they will shortly be eight or nine times that amount. (See BUNHILL FIELDS, p. 76.) The City's proportion of the net proceeds of the Finsbury Estate is, annually, 42,977*l.*

### FIRE OF LONDON (THE),

OR the GREAT FIRE of 1666, broke out about one o'clock on Sunday morning, September 2, and raged nearly four days and nights. It commenced at the house of one Farryner, the "King's Baker," in Pudding-lane, near New Fish-street-hill, and within ten houses of Lower Thames-street, into which it spread within a short time; nearly all the contiguous buildings being of lath and plaster, and the whole neighbourhood mostly close passages and narrow lanes and alleys, of wooden pitched houses. Driven by a strong east-north-east wind, the flames spread with great rapidity: however, it was proposed to the Lord Mayor (Sir Thomas Bludworth), who came before three o'clock, to pull down some houses, to prevent their extending; but he neglected this advice, and before eight o'clock the fire had reached London Bridge.

The tremendous event is finely described by Evelyn in his *Diary*, wherein he tells us that it made the atmosphere as light as day "for ten miles round about; . . . all the skie was of a fiery aspect, like the top of a burning oven, the light seen above forty miles round about. Above 10,000 houses all in one flame; the noise and cracking and thunder of the impetuous flames, y<sup>e</sup> shrieking of women and children, the hurry of people, the fall of towers, houses, and churches, was like an hideous storme, and the air all about so hot and inflam'd, that at last one was not able to approach it, so that they were fore'd to stand still and let y<sup>e</sup> flames burn on, w<sup>ch</sup> they did for neere two miles in length, and one in bredth. The clouds of smoke were dismall, and reached upon computation neer 50 miles in length."

On the 5th, Evelyn writes: "In this calamitous condition, I return'd with a sad heart to my house, blessing and adoring the mercy of God to me and mine, who, in the midst of all this ruine, was like Lot, in my little Zoar, safe and sound."

Pepys's account, in his *Diary*, is fully as minute as that of Evelyn, but is mingled with various personal and official circumstances. Pepys was then clerk of the Acts

of the Navy: his house and office were in Seething-lane, Crutched Friars; he was called up at three in the morning, Sept. 2, by his maid Jane, and so rose and slipped on his nightgown, and went to her window; but thought the fire far enough off, and so went to bed again, and to sleep. Next morning, Jane told him that she heard above 300 houses had been burnt down by the fire they saw, and that it was then burning down all Fish-street, by London Bridge. "So," he writes, "I made myself ready presently, and walked to the Tower, and there got up upon one of the high places, and saw the houses at that end of the bridge all on fire, and an infinite great fire on this and the other side of the bridge," &c. On Sept. 5, he notes: "about two in the morning my wife calls me up, and tells me of new cries of fire, it being come to Barking Church, which is at the bottom of our Lane." The fire was, however, stopped, "as well at Mark-lane end as ours; it having only burnt the dyall of Barking Church, and part of the porch, and there was quenched."

The limits of the Great Fire, according to the *London Gazette*, Sept. 8, 1666, were: "at the Temple Church, near Holborn Bridge, Pye Corner, Aldersgate, Cripplegate, near the lower end of Coleman-street, at the end of Basinghall-street, by the Postern; at the upper end of Bishopsgate-street and Leadenhall-street, at the Standard in Cornhill, at the Church in Fenchurch-street, near Clothworkers' Hall, in Mincing-lane, at the middle of Mark-lane, and at the Tower Dock."

"It is observed and is true, in the late Fire of London, that the Fire burned just as many parish churches as there were hours from the beginning to the end of the Fire; and next, that there were just as many churches left standing in the rest of the City that was not burned, being, I think, thirteen in all of each; which is pretty to observe."—*Pepys' Diary*, Jan. 7, 1667-8.

The Fire consumed almost five-sixths of the whole City; and without the walls, it cleared a space nearly as extensive as the one-sixth part left unburnt within. Public edifices, churches, and dwelling-houses were alike consumed; and it may be stated that the flames extended their ravages over a space of ground equal to an oblong square of a mile and a half in length, and half a mile in breadth. In one of the inscriptions on the Monument, which was drawn up from the reports of the surveyors appointed after the Fire, it is stated that "the ruins of the City were 436 acres (*viz.* 373 acres within the walls, and 63 without them, but within the liberties); that of the six-and-twenty wards, it utterly destroyed fifteen, and left eight others shattered and half burnt; and that it consumed eighty-nine churches, four of the City gates, Guildhall, many public structures, hospitals, schools, libraries, a great number of stately edifices, 13,200 dwelling-houses, and 460 streets.

Lord Clarendon says, that "the value or estimate of what that devouring Fire consumed could never be computed in any degree." A curious pamphlet upon the *Burning of London*, first published in 1667, however, estimates the loss at 7,335,000*l.*; but it is believed to have been nearer ten millions sterling.

Whether the Great Fire were the effect of design or of accident, has been much controverted. Lord Clarendon admits the public impression to have been, "that the Fire was occasioned by conspiracy and combination;" and although he himself maintains the negative, his own account furnishes opposite testimony. "It could not be conceived," he says, "how a house that was distant a mile from any part of the Fire could suddenly be in a flame, without some particular malice; and *this case fell out every night.*" One Robert Hubert, a French Papist, seized in Essex, confessed to have begun the Fire; and was hanged accordingly: he stated that he had been, "suborned at Paris to this action;" that there "were three more combined with him to do the same thing," and that "he had set the first house on fire." Yet Lord Clarendon strangely remarks, that "neither the judges, nor any present at the trial, did believe him guilty, but that he was a poor distracted wretch weary of his life, and chose to part with it in this way." This was not credited by Howell, then recorder of London. "Tillotson believed the City was burnt on design." (*Burnet.*)

On the 26th of April, 1666, a plot was discovered for taking the Tower and firing the City, which was to have been put in execution on the 3rd of September, a day regarded as peculiarly lucky to the anti-royalist faction. It is worthy of remark that the "Great Fire of London" broke out on the 2nd of September in that year, the very day before that appointed by the conspirators.

An extremely impressive narrative of the progress of the conflagration, and of the distress and confusion it occasioned, has been given by the Rev. T. Vincent, a nonconformist divine, in his tract, *God's Terrible Advice to the City by Plague and Fire*, of which thirteen editions were published within five years.

The stationers and booksellers lost their stocks, which they had deposited in St. Paul's crypt: too eager to ascertain its condition, as the fire subsided, they caused an

aperture to be made in the smouldering pile, when a stream of wind rushed in and consumed the whole:—

“Heavens, what a pile! whole ages perish'd there;  
And one bright blaze turn'd learning into air.”

Aubrey relates that on St. Andrew's Day (Nov. 30), 1666, as he was riding in a coach towards Gresham College, at the corner of Holborn Bridge, a cellar of coals was opened by the labourers, and “there were burning coals which burnt ever since the Great Fire; but being pent so close from air, there was very little waste.”—*Nat. Hist. Wilts.*

Westminster Hall was filled with the citizens' goods and merchandize; and Pepys oddly complains that he could not “find any place in Westminster to buy a shirt or pair of gloves; Westminster Hall being full of people's goods.”

A Court of Judicature was appointed by Parliament, to settle all differences arising in respect to the destroyed premises: and the judges of this Court gave such satisfaction, that their portraits were painted, at the expense of the citizens, for 60*l.* a piece, and are now in the Courts of Common Pleas and Queen's Bench, Guildhall.

Not more than six persons lost their lives in the Fire; one of whom was a watchmaker, living in Shoe-lane, behind the Globe Tavern, and who would not leave his house, which sunk him with the ruins into the cellar, where his bones, with his keys, were found.

(See Hollar's small view of London before and after the Fire; and an ingenious picture-plan by F. Wishaw, C.E., showing the part of the City destroyed, and its altered condition in 1839.)

Whilst the City was rebuilding, temporary edifices were raised, both for divine worship and the general business. Gresham College, which had escaped the flames, was converted into an Exchange and Guildhall; and the Royal Society removed its sittings to Arundel House. The affairs of the Custom-house were transacted in Mark-lane; of the Excise Office in Southampton-fields, near Bedford House; the General Post-Office was removed to Brydges-street, Covent-garden; Doctors' Commons to Exeter House, Strand; and the King's Wardrobe was consigned from Puddle Wharf to York-buildings. The inhabitants, for a time, were mostly lodged in small huts, built in Finsbury and Moorfields, in Smithfield, and on all the open spaces in the neighbourhood of the metropolis. The whole calamity was bravely borne: Evelyn mentions that the merchants complied with their foreign correspondence as if no disaster had happened, and not one failure was heard of. Within two days after the conflagration, both Wren and Evelyn had presented to the King plans for a new City: neither of these was accepted; but London was principally rebuilt within little more than four years after its destruction.—(See MONUMENT, the.)

### MEMORABLE FIRES.

Southwark burnt by William the Conqueror, about twenty years before the Domesday Survey.

982.—St. Paul's Minster burnt.

1036.—All the houses and churches from the west to the east gate burnt.—(*Baker's Chronicle.*)

1087.—The *Winchester Chronicle* makes entry of the burning of the Church of St. Paul's and of London. The *Waverley Chronicle* says that St. Paul's, with many other churches, and the greater and better part of the whole City, were then destroyed by fire.

1093.—The wooden houses and straw roofs of the London citizens again in flames, and great part of the City destroyed.

1102.—“London was twice burnt,” a phrase which shows how quickly the City could then be rebuilt, and that the houses must have been made of very combustible materials.

1104.—London and Lincoln were burnt.

1113.—The Tower of London partially destroyed by fire.

1131.—“*Londonia tota combusta est*.”—London entirely burnt.

1135.—The first year of Stephen. A great fire broke out at the Bridge, and destroyed not only all the wooden and thatched houses, but every

edifice, including St. Paul's, between the bridge and St. Clement Danes.

1136.—The houses burnt from near London-stone eastward as far as Aldgate; and to the shrine of St. Erkenwald, in St. Paul's Cathedral, west.

1161.—By the *Winchester Chronicle*, not only London burnt, but Winchester, Canterbury, and Exeter.

1212.—July 10. Southwark, with the Chapel of St. Thomas (on London Bridge) and the Priory of St. Mary Overie, was consumed. The *Waverley Chronicle* says:—“A great part of London in the neighbourhood of the Bridge, with the Southwark Priory, was burnt down.” Three thousand bodies, some half-burnt, were found in the river Thames: besides those who perished altogether by fire. “It broke out on the south side of the Bridge. Multitudes of people rushed to the rescue of the inhabitants of houses on the bridge, and while thus engaged the fire broke out on the north side also, and hemmed them in, making a holocaust of those who were not killed by leaping into the Thames. The fire spread north and south; from John's reign to that of Charles the Second it was known as the Great Fire, but that name is now only

applied to the conflagration of 1666, which extended from the north-east gate to Holborn-bridge, and from the Tower to the Temple Church, leaving between four and five hundred acres covered with ruins of many thousands of houses to mark its devastation."—*Athenæum*, 1866.

1512.—Great part of the Palace of Westminster "once again" burnt (4 Hen. VIII.), and not since re-edified; only the Great Hall, with adjoining offices, kept in good repair.

1534.—Aug. 16. The Mews, Charing Cross, burnt.

1613.—June 29. The Globe Theatre, Bankside, burnt.

1619.—Jan. 12. The old Banqueting-house, Whitehall Palace, burnt.

1621.—Dec. 9. The Fortune Theatre burnt.

Dec. 20. Six Clerks' Office, Chancery-lane, burnt.

1691.—April 10. At Whitehall Palace all the buildings over the stone gallery to the water-side burnt; 150 houses, chiefly of the nobility, consumed, and 20 blown up.

1697.—Jan. 4. Whitehall Palace, except Inigo Jones's Banqueting-house, burnt; all its pictures destroyed, and 12 persons perished.

1632-33.—Feb. 3. More than one-third of the houses on London Bridge burnt; the Thames almost frozen.

1666.—THE GREAT FIRE. (See preceding article.)

1671-2.—The King's Theatre, Drury-lane, burnt.

1676.—May 26. The Town-hall and part of Southwark (600 houses) burnt.

1718.—Custom-house (Wren's) burnt.

1726.—Great fire at the South-end of London Bridge; stopped by the Stone Gate.

1743.—March 25. In Cornhill ward: 200 houses burnt; commenced in Change-alley, and was the largest since the Great Fire of 1666. (See CORNHILL, p. 235.)

1758.—April 11. The temporary wooden London Bridge destroyed by fire, stopping all communication between the City and Southwark. This produced the Act of Parliament making any wilful attempt to destroy the Bridge or its works to be death without benefit of clergy.

1760.—April 18. Fresh Wharf and part of St. Magnus' Church, London Bridge, burnt.

1765.—Nov. 7. The southern half of Bishops-gate-street Within, including St. Martin Outwith Church, destroyed by fire; the four corners of Cornhill, Bishops-gate-street, Leadenhall-street, and Gracechurch-street, were in flames at the same time.

1789.—June 17. Italian Opera-house (Van-brugh's) burnt.

1794.—June 18. At Limehouse Hole, many houses burnt. July 22, 23. At Ratcliffe Cross; 630 houses and an East India warehouse burnt: loss, 1,000,000.

1808.—Sept. 20. Covent-garden Theatre burnt.

1809.—Feb. 24. Drury-lane Theatre burnt.

1814.—Feb. 12. The Custom-house and adjoining houses destroyed. Aug. 28. Oil and mustard mills, Bankside, burnt; remains of Winchester Palace discovered in the ruins.

1834.—Oct. 16. Both Houses of Parliament destroyed by a fire which was not extinguished several days: libraries and state papers preserved. In 1828, Sir John Soane, noticing the great quantity of timber used in the House of Lords, prophetically asked: "Should a fire happen, what would become of the Painted Chamber, the House of Commons, and Westminster Hall? Where would the progress of the fire be arrested?" The latter was saved by the favourable direction of the wind; for had the flames and flakes of fire from the two Houses been wafted towards the vast timber roof of the Hall, it must have been inevitably destroyed. Among the strange stories in support of the fire being the work of political incendiaries, is the statement of Mr. Cooper, an ironmonger, of Drury-lane, that he heard at Dudley, in Worcestershire (119 miles from London), a report of the conflagration about three hours after it broke out.

1838.—Jan. 10. The Royal Exchange burnt within five hours; with a great amount of property, documents of corporations, &c.

1841.—Oct. 30. Conflagration in the Tower; the great storehouse, with 250,000 stand of arms, and the Bowyer and Butler Towers, burnt.

1843.—Aug. 17. Great fire at Topping's Wharf, London Bridge: Watson's telegraph tower and St. Olave's Church burnt.

1849.—March 29. The Olympic Theatre and a dozen other buildings burnt in three hours. Oct. 6. Extensive fire at London-wall; Carpenters' Hall injured: loss, 100,000.

1850.—March 29. St. Anne's Church, Limehouse, destroyed. Sept. 19. Great fire in Mark-lane and Seething-lane; loss, 100,000. In the ruins was discovered a tablet, inscribed: "This was rebuilt in 1792. The foundation, or 'base courts,' are the remains of the original palace where the City standard of weights and measures were formerly kept, and designated, in Saxon phraseology, 'Assay Thing Court,' the entrance to which was in, as is now called, 'Seething-lane.'"

1861.—June 22. Conflagration in Tooley-street, London Bridge; property destroyed half a million.

### FIRE BRIGADE.

THE early precautions for the prevention of Fires in the metropolis were remarkable. A householder, within the liberty of the City, who dared to cover his house with thatch, was sure to see his dwelling razed to the ground by the authorities. From the time of the Fire in Stephen's reign, it was forbidden to bakers to light their oven-fires at night (brewers were under similar stringent regulations) with reeds or loose straw; nothing but wood was legal. Lead, tile, or stones, were alone permitted in Edward the Third's time for roofing.

In the first year of Richard I., the Wardnotes ordered:—"Item, that all persons who dwell in great houses within the ward have a ladder or two ready and prepared to succour their neighbours in case misadventure should occur from fire. Item, that all persons who occupy such houses, have in summer-time, and especially between the Feast of Pentecost and the Feast of St. Bartholomew (August 24th), before their doors a barrel full of water for quenching such fire, if it be not a house which has a fountain of its own. Item, that the reputable men of the ward, with the aldermen, provide a strong crook of iron, with a wooden handle, together with two chains and two strong cords, and that the bedel have a good horn and loudly sounding. Of persons wander-

ing by night, it is forbidden that any person shall be so daring as to be found wandering about the streets of the City after the curfew rung out at St. Martin's-le-Grand, St. Lurance, or at Berkyngchirch, upon pain of being arrested."

The earliest mechanical contrivance for the extinction of fires in London appears to have been a syringe or squirt, numbers of which were kept by the parochial authorities. In the vestry-room of St. Dionis, Back-church, Fenchurch-street, are preserved three of these squirts: each is about 2 feet 3 inches long, and when used was attached by straps to the body of a man: others were worked by three men, two holding the squirt by the handles and nozzle, while a third worked the piston within it. Such was the rudiment of our first fire-engine.

"Now streets grow throug'd, and busy as by day:  
Some run for buckets to the hallow'd quire;  
Some cut the pipes, and some the engines play,  
And some, more bold, mount ladders to the fire."

Dryden's *Annus Mirabilis* (1686).

The "engines" were the syringes, which were greatly increased after the Great Fire, but were shortly afterwards superseded by regular fire-engines. By order of the Corporation of London, a Fire Police was established in 1668; the several parishes were provided with leathern buckets, ladders, pickaxes, sledges, shovels, and *hand-squirts* of brass; which supply the companies, aldermen, and subsidy-men contributed; and among other provisions was the ringing of a bell. The fire-cocks, and the "F.P." and "W.M." upon houses to denote the place of the fire-plug and water-main; and the rewards for bringing the parish-engines, date from stat. 6 Anne, cap. 31.

The Great Fire led to the establishment of Insurance Offices against losses by fire: in 1681, the Court of Common Council attempted to establish one, but unsuccessfully; the earliest was the Phœnix, at the Rainbow Coffee-house, Fleet-street, in 1682; the Friendly Society, 1684 (badge a sheath of arrows); and the Hand-in-Hand, established in 1696; next was the Sun, projected by one Povey, about 1706, and by the present Company in 1710; the Westminster Fire Office, 1717; each office keeping its firemen in liveries, with silver badges; and their fire-engines, which they from time to time improved. In 1676 was patented an engine with leathern pipes, for quenching fire; and about 1720 two Germans had at Bethnal-green a manufactory of water-tight seamless hose. Here is Gay's mock-heroic picture of a fire of this period:—

"Now with thick crowds th' enlighten'd pavement swarms,  
The fireman sweats beneath his crooked arms;  
A leathern casque his vent'rous head defends,  
Boldly he climbs where thickest smoke ascends.  
Mov'd by the mother's streaming eyes and prayers,  
The helpless infant through the flame he bears,  
With no less virtue than through hostile fire  
The Dardan hero bore his aged sire.  
See forceful engines spout their leveled streams,  
To quench the blaze that runs along the beams;  
The grappling-hook plucks rafters from the walls,  
And heaps on heaps the smoky ruin falls.

\* \* \* \* \*  
Hark! the drum thunders! far, ye crowds, retire:  
Behold! the ready match is tipt with fire,  
The nitrous store is laid, the smutty train  
With running blaze awakes the barrell'd grain,  
Flames sudden wrap the walls; with sullen sound  
The shatter'd pile sinks on the smoky ground."—*Trivia*, b. iii.

In 1798 was formed the Fire-watch or Fire-guard of London; the Insurance Offices still keeping their separate engine establishments. In 1808, Sir F. M. Eden, then chairman of the Globe Insurance Company, proposed to form a general fire-engine establishment, but the attempt failed. About 1825, the Sun, Union, and Royal Exchange formed a brigade. In 1832, eight Insurance Companies formed an alliance for assisting each other at fires; hence the "London Fire-Engine Establishment," which commenced operations in 1833. By the rules, London was divided into five districts: in each were engine-stations: besides a floating-engine off Rotherhithe and Southwark Bridge; these required more than 100 men each for working, and threw up two tuns of water per minute. A certain number of the men or "Fire Brigade," superintended by Mr. Braidwood, were ready at all hours of the day and night, as were also the engines, to depart at a minute's alarm, in case of fire. The Associations awarded gra-

tivities to policemen who gave an alarm to the nearest engine-station; and the director or captain of each engine paid strangers or bystanders for aid: it required from twenty to thirty men to work each engine; and at a large fire, 500 strangers were sometimes thus employed. Sometimes the engines were summoned by electric telegraph, and conveyed by railway to fires in the country.

The number of engines kept was 37; of the Fire Brigade, 96. The men wore a dark grey uniform, trimmed with red, black leather waist-belts, hardened leather helmets, reminding one of the leathern casque and "the Dardan hero" of Gay's *Trivia*. The engines were provided with scaling ladders; a canvas sheet, with handles of rope round the edge, to form a fire-escape; besides ropes, hose, branch-pipes, suction-pipes, a flat rose, goose-neck, dam-board, boat-hook, saw, shovel, mattock, pole-axe, screw-wrench, crowbar, portable cistern, two dog-tails, strips of sheep-skin, small cord, instruments for opening the fire-plugs, and keys for turning the stop-cocks of the water-mains.

Another ingenious provision was a smoke-proof dress, consisting of a leathern jacket and head covering, fastened at the waist and wrist, so that the interior is smoke-proof: two glass windows served for the eyes to look through, and a pipe attached to the girdle allowed fresh air to be pumped into the interior of the jacket, to support the respiration of the wearer: thus equipped, the fireman could dare the densest smoke.

Steam-power was first applied to work a fire-engine in 1830. (See ARGYLL ROOMS, p. 22.) There is also on the Thames a steam floating-engine, the machinery of which either propels the vessel, or works the pumps, as required. Subsequently were introduced the land steam fire-engines, by which is diminished damage by water, which is driven by such force by steam that almost every drop does its full duty.

The Royal Society for the Protection of Life from Fire was first established in 1836; re-organized in 1843; for establishing Fire-escape Stations and Conductors; supported by voluntary subscriptions and parochial vestries.

As London grows and grows, the number of Fires recorded every year in the vast agglomeration of brick and mortar increases also. Thus in 1863 the total was 1404, being 101 more than in 1862. In the latter year, the Parliamentary Committee appointed to inquire into the existing arrangements for the Protection of Life and Property against Fire in the Metropolis, reported that twenty years previously the number of fires in London was about 450, and in 1862 the total number was 1183. According to Sir Richard Mayne's estimate, the whole of the Metropolitan Police area and the City of London together, extending over 700 square miles, may be considered as containing rather above 3,000,000 of inhabitants, residing in about 475,000 houses, and the rental for taxation about 14,800,000*l.* The magnitude of the interest at stake was also shown by Mr. Newmarch, who stated in his evidence that the total value of property insurable against fire within six miles of Charing Cross was not less than 900,000,000*l.*, and of this not more than about 300,000,000*l.* were insured.

A new force, under the management of the Board of Works, and with the title of the Metropolitan Fire Brigade, embodying the whole of the present force and engines of the London Fire Establishment, is doubly strengthened. The plan decided on is that of Captain Shaw, who has been appointed its chief superintendent. The force consists of chiefs and 350 officers and men, 4 steam floating-engines, 4 large land-steamers, 27 small land-steamers, and 37 large manual engines, with horses, drivers, &c. These are distributed among 33 large and 56 small fire-stations, protecting an area of about 117 square miles. Compared with the previous Fire Brigade, the increase is 72 additional stations, 219 extra firemen, 2 large floating and 2 large land-steamers, 21 small land-steamers, and 61 manual engines. The cost of its maintenance is not to exceed 50,000*l.* per annum, partly contributed by a public rate of  $\frac{1}{2}$ *d.* in the pound, 10,000*l.* contributed by the various metropolitan fire-insurance companies, and 10,000*l.* from the Government. There are nearly 500 parish engines in the metropolis, but not more than 20 were considered to be sufficiently efficient to be accepted in the new force.

By the establishment of telegraphic communication between the central station in Watling-street and the other principal stations, the necessary force of men and engines can be despatched to the required spot in a much shorter time than formerly. There are also telegraph lines to docks, railways, wharves, and warehouses.

By the aid of the telegraph the firemen at each station can now be informed of the locality of a fire with much greater certainty than formerly. By means of fixed compasses at each observatory, "cross-bearings are taken from distant points," and the results sent to the central station in Watling-street. The exact locality is then ascertained by observing on a map the spot at which the lines converge. The process is simply the reverse of that by which a ship's position is ascertained at sea, and can be easily accomplished in the three minutes occupied in turning out an engine.—(Capt. Shaw's Report, 1864.) The crowds at fires are now kept off by stretched wire-ropes.

## FLEET PRISON (THE),

ABOLISHED and removed in 1846, after nearly eight centuries' existence, was indisputably named from the creek or stream of the Fleet, upon the eastern bank of which it was erected. This was once a busy river covered with ships and small craft; now it is a dark, hidden stream.

The prison was formerly held in conjunction with the manor of Leveland, in Kent, and with "the king's houses at Westminster:" the whole being part of the ancient possessions of the See of Canterbury, traceable in a grant from Archbishop Lanfranc, soon after the accession of William the Conqueror. The wardenship or serjeancy of the prison was anciently held by several eminent personages, who also had custody of the king's palace at Westminster.\* It was "a place," in the worst sense of the phrase; for, so long ago as 1586, the persons to whom the Warden had underlet it were guilty of cruelty and extortion—crimes, however, characteristic of the Court of Star Chamber, of which the Fleet was at this time the prison. Up to this period, its history is little better than a sealed book; the burning of the prison by the followers of Wat Tyler seeming to have been the only noticeable event.

In the reigns of Edward VI. and Mary, the Fleet was tenanted by several victims of religious bigotry. Bishop Hooper was twice committed to the Fleet, which he only quitted (1555) for the stake and the fire at Gloucester; upon his way whither, he slept at the Angel Inn, St. Clement's: in the Fleet, his bed was "a little pad of straw, with a rotten covering;" his "chamber was vile and stinking."

The Warden's fees in the reign of Elizabeth were: an Archbishop, Duke, or Duchess, for his commitment-fee, and the first week's "dyett," 21*l.* 10*s.*; a lord, spiritual or temporal, 10*l.* 5*s.* 10*d.*; a knight, 5*l.*; an esquire, 3*l.* 6*s.* 8*d.*; and even "a poor man in the wards, that hath a part at the box, to pay for his fee, having no dyett, 7*s.* 4*d.*" The Warden's charge for license to a prisoner "to go abroad" was 20*d.* per diem.

From the reign of Elizabeth to the sixteenth year of Charles I. (1641), the Star-Chamber Court was in full activity; and several bishops and other persons of distinction were imprisoned in the Fleet for their religious opinions. Thither, too, were consigned the political victims of the Star Chamber: two of the most interesting cases of this period being those of Prynne and Lilburne. Prynne was taken out of the prison, and, after suffering pillory, branding, mutilation of the nose and loss of ears, was remanded to the Fleet. Lilburne—"Freeborn John"—and his printer, were committed to the Fleet for libel and sedition: the former was smartly whipped at the cart's tail, from the prison to the pillory, placed between Westminster Hall and the Star Chamber; and subsequently double ironed in the prison wards.

Another tenant of the Fleet at this period was James Howel, the author of the *Familiar Letters*, several of which are dated from the prison. By a letter "to the Earl of B., from the Fleet," Nov. 20, 1643, Howel was arrested "one morning betimes," by five men armed with "swords, pistols, and bills," and some days after committed to the Fleet; "and," he adds, "as far as I see, I must lie at dead anchor in this Fleet a long time unlessse some gentle gale blow thence to make me launch out." Then we find him consoling himself with the reflection that the English people are in effect but prisoners, as all other islanders are. Other letters, by Howel, date from the Fleet, 1645-6-7.

After the abolition of the Star Chamber, in 1641, the Fleet became a prison for debtors only, and for contempt of the Court of Chancery, Common Pleas, and Exchequer. It appears to have been used for the confinement of debtors from the thirteenth century, at least, by a petition from John Frauncey, a debtor in the Fleet, A.D. 1290.

The prison was burnt down in the Great Fire; when the prisoners were removed to Caroon or Caron House, in South Lambeth, until the Fleet was rebuilt on the original site.

Long after the Star Chamber was abolished, the Wardens continued their extortionate fees, and loading debtors with iron: their cruelties were exposed in 1696. In 1727, after a parliamentary investigation, Bambridge and Huggins (Wardens) and some

\* To the Warden belonged the rents of the shops in Westminster Hall.

of their servants were tried for different murders, yet all escaped by a verdict of not guilty! Hogarth has, however, made them immortal in their infamy, by his picture of Bambridge under examination, whilst a prisoner is explaining how he has been tortured.

One Dance, the son of the architect, was imprisoned in the Fleet as a debtor, and, in a poem entitled the *Humours of the Fleet*, 1749, has described the inmates of "this poor but merry place," its rackets, or wrestle, billiards, backgammon, and whist; the rough justice of drenching disturbers of the peace beneath the pump. Dance's book has a frontispiece of the prison-yard: a new-comer treating the gaoler, cook, and others, to drink; racket-playing against the high brick-wall, with *chevaux-de-frise* mountings, and a pump and a tree in one corner. Dance tells of a "wind-up to-day in a prison,"—that watchmen repeated, *Who goes out?* from half-past nine till St. Paul's clock struck ten, to give visitors notice to depart; when the last stroke was given, they cried, *All told*; the gates were locked, and nobody suffered to go out upon any account. The reader will, doubtless, recollect Mr. Dickens's life-like pictures of the Fleet, in his *Pickwick Papers*.

In the Riots of 1780, the Fleet was destroyed by fire, and the prisoners liberated by the rioters. Most of the papers and Prison records were lost; though there remain scattered books and documents of several centuries back. The Warden had been directed by the Lord Mayor not to make any resistance to the mob, which, as an eye-witness informed the writer of a short History of the Fleet published in 1845, might have been easily dispersed by a few soldiers. The rioters were polite enough to send notice to the prisoners of the period of their coming; and, on being informed it would be inconvenient on account of the lateness of the hour, postponed their visit to the following day.

Immediately after "the Riots," the prison was rebuilt: it consisted chiefly of one long brick pile parallel with Farringdon-street, and standing in an irregularly-shaped area, so as to leave open spaces before and behind, connected by passages round each other: this pile was called the Master's Side. The front in Farringdon-street had an arched opening into a room, and was technically called "the grate," from its crossed iron bars. Above was inscribed, "Pray remember the poor prisoners having no allowance;" a small box was placed at the window-sill, to receive the charity of passengers in the street, while a prisoner within shouted in suppliant tone the above prayer. This was a relic of the ancient prison, corresponding with the "begging at the grate" in some old comedies; and "having a part at the box" already mentioned. Disorderly prisoners were put in the stocks, or strong-room; and those who attempted to escape were confined in a tub at the prison-gate. There was likewise "the Running Box;" that is, a man running to and fro in the neighbouring streets, shaking a box, and begging the passengers to put money into it, for the poor prisoners in the Fleet. In Tempest's *Cries of London*, 1710, is a representation of the bearer of the Running Box, inscribed, "Remember the poor prisoners." At his back is suspended, by leathern straps, a covered basket for broken victuals; he carries in one hand a staff, and in the other a small round deep box, with an aperture in the lid for receiving alms in money.

Above the entrance to the prison was the figure 9; so that a delicate address given by the prisoners was "No. 9, Fleet Market."

Alack! what "strange bedfellows" did debt—a phase of misery—make men acquainted with in the Fleet! If a prisoner was unwilling to go to the Common Side (for which he paid nothing), he had the choice of going down into "Bartholomew Fair," the lowest and sunken story, where he paid 1s. 3d. for the undisturbed use of a room; or up to some of the better apartments, where he paid the same rent, but was subject to chummage—i.e., a fellow-prisoner put into his room, or "chummed upon him," but who might be got rid of by a payment of 4s. 6d. per week, or more, according to the fulness of the prison. The latter prisoner would then provide himself with a common lodging, by letting which prisoners in the Fleet were known to have accumulated hundreds of pounds in the course of a few years. The prison sometimes had 1000 inmates.

It was throughout a sad scene of recreant waste, vagabondism, and ruffian recklessness: it had a skittle-shed; and a racket-ground, where Cavanagh was a noted fives-player. (See Hazlitt's life of him, *Examiner*, Feb. 17, 1819.) Here you might hear the roar of the great town from without, in contrast with the stagnant life within the prison-walls, above the *chevaux-de-frise* of which might be seen a church-spire or two.

Happily, this pest of a prison, the Fleet, by Act of Parliament, 1842, was abolished, and its few inmates were drafted to the Queen's Prison. The property, covering nearly

an acre of ground, was purchased of the Government by the Corporation of London for 25,000*l.* The prison was taken down, and the materials sold, in 1846; comprising nearly three millions of bricks, 50 tons of lead, 40,000 feet of paving, &c. The ground, after lying almost useless for 17 years, was sold to the London, Chatham, and Dover Railway Company for the erection of their Ludgate station.

The liberty of the *Rules* and the *Day-Rules* of the Fleet may be traced to the time of Richard II., when prisoners were allowed to go at large by bail, or with a boston (tipstaff), for nights and days together. This license was paid for at 8*d.* per day, and 12*d.* for his keep that shall be with him. These were Day-rules. However, they were confirmed by a rule of Court during the reign of James I. The Rules wherein prisoners were allowed to lodge were enlarged in 1824, so as to include the churches of St. Bride's and St. Martin's, Ludgate; New Bridge-street, Blackfriars, to the Thames; Dorset-street and Salisbury-square, and part of Fleet-street, Ludgate-hill and street, to the entrance of St. Paul's Churchyard, the Old Bailey, and the lanes, courts, &c., in the vicinity of the above; the extreme circumference of the liberty about a mile and a half. Those requiring the rules had to provide sureties for their forthcoming, and keeping within the boundaries, and to pay a percentage on the amount of debts for which they were detained; which also entitled them to the liberty of the Day-rules, enabling them during term, or the sitting of the Courts at Westminster, to go abroad during the day, to transact or arrange their affairs, &c. The Fleet and the Queen's Bench were the only prisons in the kingdom to which these privileges had for centuries been attached.

*Fleet Marriages*, i.e. clandestine marriages, were performed in this prison previously to the year 1754; and though not legal and regular, they were tacitly recognised as being valid and indissoluble. Many of these weddings were really performed in the chapel of the prison; though, as the practice extended, "the Fleet parsons" and tavern-keepers in the neighbourhood fitted up a room in their lodgings or houses as a chapel; and most of the taverns near the Fleet kept their own registers. In 1702, the Bishop of London interfered to prevent this scandalous practice, but with little effect; and it was not until the Act of Parliament came into operation, March 25, 1754, that the custom was put an end to. On the day previously (March 24.), in one register-book alone, were recorded 217 marriages, which were the last of the Fleet weddings. In 1821, a collection of these register-books, weighing more than a ton (recording Fleet marriages between 1686 and 1754), was purchased by Government, and deposited in the Registry Office of the Bishop of London, Godliman-street, Doctors' Commons. Many celebrated names figure in these registers; and although they are not now, as formerly, received in evidence on trials, they are not altogether useless as matters of record, &c. For their history, their parsons, and registers, see Mr. J. Burn's volume.

Pope commemorates the Fleet Prison as a "Haunt of the Muses." Lord Surrey, the poet, was twice imprisoned here; as was Nash for writing the satirical play of the *Isle of Dogs*. Wycherley, the wit and dramatist, lay in the Fleet seven years, ruined through his Countess' settlement being disputed. Sir Richard Baker was one of the most unfortunate debtors confined here: he married in 1620, and soon after got into pecuniary difficulties, and was thrown into the Fleet, where he spent the remaining years of his life, writing his *Chronicle* and other works as a means of subsistence; he died in 1644-5, in extreme poverty, and was interred in old St. Bride's Church. Francis Sandford, author of the *Genealogical History*, died in the Fleet, in 1693. Passing to another class of committals—Keys was sent here for marrying the Lady Mary Grey, the sister of Lady Jane Grey; Dr. Donne for marrying Sir George More's daughter without her father's knowledge; Sir Robert Killigrew, for speaking to Sir Thomas Overbury, as he came from visiting Sir Walter Raleigh; the Countess of Dorset, for pressing into the Privy Chamber, and importuning James I., "contrary to commandment;" and Lucius Carey, Viscount Falkland, for sending a challenge. Curl's Corinna (Mrs. Thomas) was a prisoner in the Fleet for some time; Mrs. Cornelys died here in 1797; and Parson Ford, in 1731. Parson Keith, of May Fair, was here in 1758; and Robert Lloyd, Churchill's friend, in 1764. Arthur Murphy, provoked by the satires of Churchill and Lloyd, describes them as among the poor hacks

"On Ludgate-hill who bloody murders write,  
Or pass in Fleet-street supperless the night."

Howel's *Letters*, already mentioned, have had a parallel in our time, in Richard Oastler's *Fleet Papers*, "a weekly epistle on public matters," inscribed to Thomas Thornhill, Esq., of Fixby Hall, Yorkshire, whose steward Oastler had been, and at whose suit he was imprisoned here; he was liberated by subscription, Feb. 12, 1844: and a bronze group, by Philip, has been erected at Bradford, in memory of his advocacy of the Ten Hours' Factory Bill. Mr. Rowerost also wrote a volume of *Fleet Papers*.

#### FLEET RIVER AND FLEET DITCH.

THE small, rapid stream *Fleet*, which has given name to the Prison and Street, and the portion of the City Wall ditch from Holborn to the Thames, has its origin in a nursery-ground on the eastern ridge of Hampstead Hill. Here it becomes a sewer, after which it issues from the side of a bank below Well Walk; and then flows down a small valley of gardens and orchards to near the reservoir of the Hampstead water-heads, to feed which the springs of the Fleet were collected in 1589, and were afterwards leased

out by the City of London. From Hampstead the Fleet may be traced to the upper part of Kentish Town, after which it is diverted from its original course for the sewerage of Camden Town; but its ancient channel may be traced at the back of the Castle Tavern, Kentish Town, next in the King's-road, near St. Pancras Workhouse; and about 1825, the Fleet was conspicuous all along the Bagnigge-wells-road, but is now covered over. Its further course is under the walls of the House of Correction, in Cold-bath-fields, thence to the workhouse in Coppice-row, under Eyre-street (formerly Hockley-in-the-Hole), having here been formerly joined by "the River of the Wells," formed by Clerken, Skinners', and other wells; and thus to the bottom of Holborn. Here it received the waters of the Old Bourne, which rose near Middle-row, and the channel of which forms the sewer of Holborn Hill to this day. Thence the united streams flowed beneath what is now called Farringdon-street into the Thames.

Stow mentions "that a Parliament being holden at Carlisle in the year 1307, the 35 Edward I., Henry Lacy Earle of Lincolne complained, that whereas (in times past) the course of water, running at London under Old-borne Bridge, and Fleet Bridge, into the Thames, had bene of such bredth and depth that ten or twelwe ships, Navies at once, with Merchandises, were wont to come to the aforesaid bridge of Fleet, and some of them unto Old-borne Bridge," &c. An anchor has been discovered as high as the present Bagnigge-wells-road; and even, it is said, the remains of a ship, in the bed of this ancient river, near Camden Town. The upper supply of water being diverted, the ditch became stagnant, and into it were thrown all sorts of offal, dogs and cats, and meased hogs, which Ben Jonson has minutely described: it became also a kind of *cloaca maxima*, impassable with boats; in 1652 it was ordered to be cleansed, but the nuisance was scarcely abated.

The Fleet was anciently crossed by four bridges within the boundary of the City: the first of these, Holborn Bridge, was covered up in 1802, but the arch and part of the parapet were discovered during the repair of the ditch, in 1841.

In the bed of the Fleet many Roman and Saxon coins have been discovered. In 1670 various Roman utensils were found between Holborn and Fleet Bridge; besides Roman coins, including silver ring-money. At Holborn Bridge were dug up two brazen *lares*, about four inches long,—Bacchus and Ceres; also arrow-heads, scales, and seals, with the proprietors' names upon them in Saxon characters; sparrow-keys, and daggers; medals, crosses, crucifixes, &c.

The second was Fleet-lane Bridge, near the Prison. Fleet Bridge, the third, connected Fleet-street with Ludgate-hill: it was destroyed in the Great Fire of 1666; and in its place, another, the breadth of the street (Strype), was erected, ornamented with pine-apples and the City arms; it was finally removed in 1765. The fourth bridge crossed the Fleet opposite Bridewell, formerly the site of a tower, supposed to have appertained to the Saxon kings of England.

After the Great Fire, the Fleet, or Town Ditch, between Holborn and the Thames, was cleansed and deepened by the Corporation, so that barges ascended to Holborn Bridge, as formerly: wharfs and landing places were constructed; and Seacoal and Newcastle lanes, and large inn-yards, remaining to this day, attest the barge traffic. Seacoal-lane is mentioned under that name (*Secol-lane*), as early as 1253; where, doubtless, the coal was brought in barges up the Fleet river, and stored for domestic purposes. This "New Canal," as it was called, cost 27,777*l.*, but proved unprofitable: it became choked with Thames mud, and again relapsed into a common sewer. Gay sings of its "muddy current; and Pope points

"To where Fleet-ditch, with disemboгуing streams  
Rolls the large tribute of dead dogs to Thames,  
The king of dykes! than whom no sluice of mud  
With deeper sable blots the silver flood."—*The Dunciad*, book ii.

Swift thus revels in its *deliciae*, in his *City Shower*:—

"Now from all parts the swelling kennels flow,  
And bear their trophies with them as they go;  
Filth of all hues and odours seem to tell  
What street they sail'd from by their sight and smell.  
They, as each torrent drives its rapid force,  
From Smithfield to St. 'Pulchre's shape their course,  
And in huge confluence joined at Snowhill ridge,  
Fall from the Conduit prone to Holborn Bridge;  
Sweepings from butchers' stalls, dung, guts, and blood,  
Drown'd puppies, stinking sprats, all drench'd in mud,  
Dead cats, and turnip-tops, come tumbling down the flood."

Fleet Ditch is engraved as the frontispiece to Warburton's *Pope*, vol. v. (*The Dunciad*.) The ditch grew to be so pestilential a nuisance,\* its slime smothering many persons who fell into it, that the space between Holborn Bridge and Fleet-street was arched over, and Stocks Market removed here, changed to Fleet Market, and opened for the sale of meat, fish, and vegetables, Sept, 30, 1737; and upon the site of Stocks Market was built the Mansion House. The remaining portion of the Fleet, the mouth of which Pennant describes as "a muddy and genuine ditch," continued open until 1765, at the building of Blackfriars Bridge; the foul stream was then arched over, and entered the Thames on the west side of the bridge, to be conveyed some distance into the river by a culvert; the vaulting at this end is 12 feet high, and the channel 18 feet wide. (*See SEWERS*.)

Since 1841, Fleet Ditch, parallel with Field-lane, has been covered over; but it might be traced in the alleys at the back of Cow-cross, whence it continued open to Ray-street, Clerkenwell; while Brookhill and Turnmill streets kept in memory the brook which ran here into the Fleet, and the mill belonging to the Knights of St. John of Jerusalem, which was turned by its waters.

In 1829 was completed a new market between the north end of Farringdon-street and Shoe-lane; whither, on Nov. 20, was removed Fleet Market, the premises of which were then taken down. At the south end of Farringdon-street is a granite obelisk, erected in 1839 to the memory of Alderman Waithman, who commenced business as a linendraper close to this spot in 1785; was Lord Mayor in 1823-24, and was returned six times to Parliament for the City of London. Opposite Waithman's obelisk is a monument which bears the name of a much less worthy citizen, John Wilkes, and the year of his mayoralty, 1775.

In 1855, the valley of the Fleet, from Coppice-row to Farringdon-street, was cleared of many old and decaying dwellings, many of a date anterior to the Fire of London. From Coppice-row a fine view of St. Paul's Cathedral was opened by the removal of these buildings.

In making the excavation for the great sewer which now conveys from view the Fleet Ditch, at a depth of about 13 feet below the surface in Ray-street, near the corner of Little Saffron-hill, the workmen came upon the pavement of an old street, consisting of very large blocks of ragstone of irregular shape. An examination of the paving-stones showed that the street had been well used: they are worn quite smooth by the footsteps and traffic of a past generation. Below the old street was found another phase of Old London. Thickly covered with slime were piles of oak, hard and black, which had seemingly been portions of a mill-dam. A few feet below were very old wooden water-pipes, nothing but the rough trunks of trees. The course of time and the weight of matter above the old pavement had pressed the gravel, clay, granite, portions of tiles, &c., into a hard and almost solid mass, and it was curious to observe that near the old surface were great numbers of pins. Whither have the pins gone? is a query which has puzzled many. The now hard concrete, stuck with these useful articles, almost like a pin-cushion, is a partial reply to the query. The 13 feet of newer deposit would seem to have accumulated in two or three centuries: it is not unlikely that a portion of the rubbish from the City after the Great Fire was shot here.—*The Builder*.

### FLEET-STREET,

**N**AMED from the river Fleet, and extending from the junction of Farringdon-street and New Bridge-street, is one of the most ancient and celebrated thoroughfares in London. For many centuries it has been noted for its exhibitions and processions; its printers, stationers, and booksellers; its early coffee-houses and taverns, and banking-houses. It has leading from it thirty-four streets, lanes, and courts.

Fleet-street was noted for its signs: the counting of them, "from Temple Bar to the furthest conduit in Cheapside," &c., is quoted as a remarkable instance of Fuller's memory. (*Life*, &c., p. 76, ed. 1662.) The swinging of one of these broad signs, in a high wind, and the weight of iron on which it acted, sometimes brought the wall down; and one front-fall of this kind in Fleet-street maimed several persons, and killed two young ladies, a cobbler, and the King's jeweller.—*The Doctor*, by R. Southey, one vol. edit. p. 237.

Before the Great Fire, and long after, Fleet-street was badly paved; the houses, mostly of timber, overhung in all imaginable positions; and the shops were rude sheds with a penthouse, beneath which the tradesmen unceasingly called "What d'ye lack, gentles? What d'ye lack?" It was then but a suburb. Temple-bar was originally

\* Chamberlayne (1727), however, mentions it as "a mighty chargeable and beautiful work: the curious stone bridges over it; the many huge vaults on each side thereof, to treasure up Newcastle coals for the use of the poor."

a wooden gatehouse across the road to divide the City from Westminster; and often in Fleet-street might be seen men playing at football.

The street was encumbered with posts, upon which the performances at the theatres were announced; hence posting-bills. Taylor, the water-poet, relates that Master Field, the player, riding up Fleet-street at a great pace, a gentleman called him, and asked him what play was to be played that day? He being angry to be stayed on so frivolous a demand, answered that he might see what play was to be played on every post. "I cry your mercy," said the gentleman; "I took you for a post, you rode so fast."

Fleet-street retains its celebrity for printing-offices in the adjoining lanes and courts, greatly increased by the newspapers of the last half century. The Great Fire stopped three houses eastward of St. Dunstan's, and within a few doors of the Inner Temple-gate, nearly opposite.

No. 103 (now *Sunday Times* office) was formerly the shop of Alderman Waithman, whither he removed from the south end of Fleet-market. At No. 106, the sign of the Red Lion, Hardham's 37-snuff was first made and sold by John Hardham, *olim* Garrick's "numberer." In 1824, Nov. 14, several old houses on the south side of the street were destroyed by fire, besides that in which Milton had lodged, in St. Bride's Churchyard. Subsequently was opened the present architectural avenue to St. Bride's Church, designed by J. B. Papworth: cost, 10,000*l.* At the east corner, No. 86, was published by D. Bogue, in 1855, the first edition of the *Curiosities of London*, of which 3000 copies were sold.

In *Bride-lane* is the ancient St. Bride's Well, over which is a pump; and here is Cogers' Hall, a tavern, where the Cogers met from 1756. Curran made his first oratorical effort among the Cogers; Daniel O'Connell was a member; as was also Judge Keogh.

In *Shoe-lane*, leading to Holborn-hill, was a notorious cockpit in Pepys's time. At the north end, from 1378 to 1647, was the town-house of the Bishop of Bangor; and a part of the garden, with lime-trees and a rookery, existed in 1759; the mansion was taken down in 1828. Shoe-lane is associated with four poets: in the burial-ground of St. Andrew's Workhouse, now covered by Farringdon Market, was buried Chatterton; in St. Andrew's Churchyard lies Henry Neele; in Gunpowder-alley, in 1658, died in abject poverty, Richard Lovelace, the cavalier poet, "the most amiable and beautiful person that eyes ever beheld;"\* in 1749, in a wretched lodging-house off Shoe-lane, died Richard Boyce. In Gunpowder-alley, too, lived Evans, the astrologer, the friend and instructor of Lilly, the "Sidrophel" of *Hudibras*.

Opposite Shoe-lane was the famous Fleet-street Conduit. (See p. 288.) At No. 134, the Globe tavern, frequented by Goldsmith, and Macklin the actor, was held the Robin Hood Club. *Salisbury-court*, nearly facing, was once the inn of the bishops of Salisbury; then of the Sackvilles, and was called Sackville House and Dorset House; whence Dorset-street. After the Great Fire, Wren built for Davenant "the Duke's Theatre," opened 1671, where Betterton played: it had a picturesque front to the Thames; upon its site are the City Gas-works. Salisbury or Dorset-court had also its play-house, originally the granary of Salisbury House; it was pulled about by sectarian soldiers in 1649, rebuilt in 1660, but destroyed in the Great Fire. The court was a scene of the Mug-house Riots of 1716, and here was a noted Mug-house. In Salisbury-court (now square) Richardson wrote his *Pamela*, and printed his own novels; his printing-office being at the top of the court, now No. 76, Fleet-street: Goldsmith was once Richardson's "reader;" and here was printed Maitland's *London*, folio, 1739. Richardson was visited here by Hogarth, Dr. Johnson, Dr. Young; Secker, Archbishop of Canterbury; and Mrs. Barbauld, when a playful child. Here was also the printing-office of Gillett, twice destroyed, in 1805 and 1810, by fire: the premises were rebuilt; and here, in 1814 were burnt 10,000 copies of the Memoir of the notorious Mary Anne Clarke, upon condition of her debts being paid, and an annuity of 400*l.* granted her: the burning occupied three entire days.

*Water-lane* (now *Whitefriars-street*) leads to Whitefriars, named from a convent of white-robed Carmelites, and called Alsatia from 1608 to 1696 (see Scott's *Fortunes of Nigel*); extending from Fleet-street to the Thames, and from the western side of Water-lane to the Temple: it was a privileged sanctuary, abolished in 1697: a notorious

\* George Petty, haberdasher, in Fleet-street, carried twenty shillings to Lovelace every Monday morning, from Sir — Many, and Charles Cotton, Esq., for months, until the poet's death.

retreat for cheating creditors, had its cant Lombard-street; and had many a Cheatly, Shamwell, Hackum, and Scapeall. (See Shadwell's *Squire of Alsatia*.) At the Harrow, in Water-lane, lived Filby, Goldsmith's tailor. No. 64, Fleet-street, much altered, is the Bolt-in-Tun Inn, mentioned in a grant to the White Friars in 1443, as "*Hospitium vocatum Le Boltenton*;" the sign is an arrow, or *bolt*, partly in a tun. In Whitefriars-street, adjoining, is the Black Lion, a small inn-yard, with the exterior wooden gallery in part remaining.

At the east corner of *Peterborough-court* was one of the earliest shops for the Instantaneous Light apparatus, "Hertner's Eupyrion" (phosphorus and oxy muriate matches, to be dipped in sulphuric acid and asbestos), the costly predecessor of the Lucifer-match. Nearly opposite were the works of Jacob Perkins, the engineer of the steam-gun, exhibited at the Adelaide Gallery, Strand; and which the Duke of Wellington truly foretold would never be advantageously employed in warfare. About midway on the north side lived Thomas Hardy, the bootmaker, who was tried with Horne Tooke, in 1794, for treason; he was also one of the three who commenced the London Corresponding Society, and its secretary: he died in his 82nd year, and is buried in Bunhill-fields, beneath a semi-political monument.

On the north side is *Bolt-court*, where, at No. 8, Dr. Johnson lived from 1776 till his death in 1784; while here, Johnson unsuccessfully applied (in 1776) to the Earl of Hertford, requesting apartments in Hampton Court Palace. Johnson's house was subsequently Bensley's printing-office, and was burnt June 26, 1819. The *Johnson's Head* tavern was not contemporary with the Doctor. (See *Notes and Queries*, No. 123.) At No. 4, Ferguson, the astronomer, died Nov. 1776. In the court, Cobbett wrote, printed, and published his *Political Register*, and sold Indian corn. The *Register* was subsequently published at No. 83, Fleet-street, where was exhibited a large iron *Gridiron*, which Cobbett had made for his political sign. No. 3, Bolt-court, was bequeathed to the Medical Society of London by Dr. Lettsom; over the door is an emblematic bas-relief. The Society removed, in 1851, to 33, George-street, Hanover-square.

*Wine-office-court*: Goldsmith lodged here in 1761, when Johnson first visited him; Goldsmith then wrote for the *Public Ledger* newspaper, and began the *Vicar of Wakefield*. Here is an old chop-house, the *Cheshire Cheese*, long noted for punch.

*Johnson's-court*: at No. 7, Samuel Johnson lived 1765 to 1776; the *John Bull* newspaper was commenced here, at No. 11, in 1820, with Theodore Hook as editor. Northward is *Gough-square*, where, at No. 17, Johnson compiled the greater portion of his Dictionary, 1748 to 1758.

*Serjeants' Inn*, on the south side of Fleet-street, was formerly an inn of court; the handsome offices were designed by Adam. No. 13, Fleet-street, the Amicable Life Assurance office, was rebuilt in 1839; the Society was first chartered by Queen Anne.

CRANE-COURT. (See p. 296.)

*Red Lion-court*: printing-offices of John Nichols (*Gentleman's Magazine*), burnt Feb. 8, 1808; of Messrs. Valpy (*Classics*), where *Punch* was next printed; and of Richard Taylor, F.R.S. (*Philosophical Magazine*).

*Hare-court* (originally Ram-alley), opposite Fetter-lane, was noted for its public-houses and cook-shops, often mentioned in 17th century plays: it was a sanctuary until 1697.

No. 17, Fleet-street, is an interesting specimen of olden street-architecture; above the gateway to the Inner Temple, of plain Jacobean design, with a semicircular arch, and the Pegasus in the spandrels. It was built in 1609, and was not as inscribed, "Formerly the Palace of Henry VIII. and Cardinal Wolsey."

One of the *Curiosities* of Fleet-street was Mrs. Salmon's Moving Waxwork, originally established at the Golden Salmon, St. Martin's, near Aldersgate (Harl. MS. 5931: Brit. Mus.): "it would have been ridiculous for the ingenious Mrs. Salmon to have lived at the sign of the Trout." (*The Spectator*, No. 28.) Thence the Waxwork was removed to No. 189, Fleet-street, site of Messrs. Praed's banking-house. At the death of Mrs. Salmon, aged 90, the collection was purchased by Mr. Clarke, a surgeon (father of Sir Charles Mansfield Clarke, M.D.), as an investment for his wife. Mrs. Clarke continued the exhibition as Mrs. Salmon's, at No. 189, until 1795, when it was removed to No. 17, nearly opposite, at the east corner of Inner Temple-lane; and here shown, with a figure of Anne Siggs, on crutches, at the door, until Mrs. Clarke's death in 1812. The collection, much reduced, was then sold for 50*l.*, and subsequently shown at the west corner of Water-lane. Mrs. Salmon, with more probability, styled the above house "once the Palace of Henry Prince of Wales, son of King James I.;" but this residence is not mentioned

by his biographers: the first-floor front-room has, however, an enriched plaster ceiling, inscribed P. (triple plume) H., which, with part of the carved wainscoting, denote the house to be of the time of James I. Still, we do not find in the lives of Prince Henry any indication of this house as a royal palace. It appears that the house, though never the residence of Prince Henry, was the office in which the Council for the Management of the Duchy of Cornwall Estates held their sittings, in his time; and in the Calendar of State Papers, edited by Mrs. Green, we find entries dated from the Council-Chamber, in Fleet-street. The interior of the house is in the style of Inigo Jones, whose first office was Surveyor of the Works to Henry, Prince of Wales, until the year 1613.

In Fleet-street are the oldest banking firms, except Stone, Martin & Co., Lombard-street, who claim to be the successors of Sir Thomas Gresham. No. 1, Fleet-street (formerly the Marygold) is the banking-house of Child and Co., who date from soon after the Restoration; they occupy the rooms over Temple-bar for stowage of their books of accounts.

This firm was founded in the reign of Charles I., when Francis Child, apprentice to William Wheeler, a goldsmith, whose shop was on the site of the present banking-house, laid the foundation of his fortune by marrying his master's daughter, by which he succeeded to the estate and business. Messrs. Child have the accounts of Nell Gwynne; and among the records of the firm are the accounts of the partner, Alderman Backwell, for the sale of Dunkirk to the French. The principal of the firm is the Countess of Jersey, wife of George Child Villiers, Earl of Jersey, who assumed the name of Child upon his Countess inheriting the estates of her maternal grandfather, Robert Child, Esq., of Osterley Park, Middlesex. "In the catalogue of a sale of prints, &c., by Mr. Hodgson, 9th June, 1834, lot 270, is an original sketch in oil by Hogarth, representing a memorable occurrence in the house of Child and Co., when they were delivered by temporary munificence of the Duchess of Marlborough."

Next is Gosling's, No. 19, sign of Three Squirrels, in the iron-work of a window, originally on a lozenge shield.

Gosling, as founder of the house, is thus mentioned in the account of Secret Service Monies of Charles II. and James I.: "To Richard Bakenham, in full, for several parcels of gold and silver lace, bought of William Gosling and partners, on 2nd May, 1674, by the Dutches of Cleveland, for the wedding-clothes of Lady Sussex and Lichfield, 640*l.* 8*s.*"

Messrs. Hoares', No. 37 (Golden Bottle), dates from 1680.

The Golden Bottle is said to represent the flask carried by the founder of the establishment, when journeying to London, as the story-books say, to seek his fortune. Richard Hoare, Esq., the principal of the firm, succeeded Sir P. Child as Alderman of the Ward of Farringdon Without; was Sheriff in 1740-41, in which year there were three Lord Mayors. Mr. Hoare has left a manuscript journal of his shrievalty, illustrating various customs, privileges, and "treats" of the City, and concluding thus: "after being regaled with sack and walnuts, I returned to my own house in my private capacity, to my great consolation and comfort." He was Lord Mayor in 1746.

Fleet-street was long ago the abode of dentists and makers of artificial teeth. An Almanac of 1709, advertises, "John Watts, operator, who applies wholly to the said business, and lives in *Racquet-court*, Fleet-street."

Fleet-street has been the cradle of printing, almost from its first introduction: Wynkyn de Worde (assistant of Caxton), at the Golden Sun, Swan, and Falcon, the latter in Falcon-court; the imprint to the *Demaundes Joyous* is as follows:

"Emprynted at London in Fletestre  
te at the signe of the Swane by  
me Wynkyn de Worde  
In the yere of our  
lorde A M  
c c c o  
and xi  
..

There, however, exists a book inscribed: "emprynted by me Rieharde Pynson at the temple barre of London 1493." To these may be added Rastell, "at the signe of the Starre;" of Richard Tottel, the eminent law printer and publisher, "within Temple bar, at the signe of the Hande and Starre," now the house and property of Messrs. Butterworth, who possess all the original leases of the same, including Tottel's, in the reign of Henry VIII., to the present time.

The following were also contemporary printers in Fleet-street, viz.: Robert Copland, stationer, printer, bookseller, author, and translator: his sign, in 1515, was the Rose Garland. John Butler lived at the sign of St. John the Evangelist in 1529. Thomas Bertholit, King's printer, dwelt at the Lueretia Romana: he retired from business about 1541. John Bedel, stationer and printer, lived, in 1531, at the sign of Our Lady of Pity. John Waylond, citizen and stationer, lived at the Blue Garland, 1541. Lawrence Andrew, a native of Calais, was a printer at the Golden Press, by Fleet-bridge. Thomas Godfrey, the printer of Chaucer's works, lived near the Temple-bar.

Here, too, we find the cradle of steam-printing: Bensley, of Bolt-court, being the first to aid the labours of König, who had applied to German and other Continental printers unsuccessfully. König and Bensley were joined by Woodfall and Taylor, printers; and out of their joint exertions grew cylindrical printing, of which Mr. Walter, of the *Times* newspaper, was the first to avail himself, 28th of November, 1814; Bensley's inking apparatus was, however, superseded by Cowper's—a very important advance. Soon after the above date, we remember to have seen a large working cylinder-machine, which had been invented by Winch, a printer's joiner, while he was confined in the King's Bench Prison for debt.

Two of the most disastrous fires in Fleet-street were those at the printing-office of S. Hamilton, in Falcon-court, when printing materials, &c., were consumed to the value of 80,000*l.*, February 21, 1803; and at Bensley's, Bolt-court, June 1819, where the costly woodcuts and printed stock of Dalloway's elaborate *History of Sussex* were destroyed.—Abridged from *Walks and Talks about London*.

The old Fleet-street taverns and coffee-houses are mostly *up passages*. Upon the site of *Child's-place* was the Devil Tavern, sign St. Dunstan pulling the Devil's nose: here, in the Apollo chamber, over the door, were inscribed the verses by Jonson, commencing,

"Welcome, all who lead or follow,  
To the oracle of Apollo."

Here Ben Jonson and his sons used to make their liberal meetings; the rules of Ben's Club in gold letters over the chimney. (*Tatler*, No. 79.) These are preserved in the premises, at the back of Child's bank, No. 1, with a terra-cotta bust of Apollo: the contemporary landlord was Sim Wadlow, "the king of skinkers." (*Jonson*.) The club-room, fitted with a music-gallery, was afterwards used for balls and entertainments; and the house continued to be the resort of the wits of the last century: "I dined to-day" (Oct. 12, 1710) "with Dr. Garth and Mr. Addison, at the Devil Tavern, near Temple-bar; and Garth treated." (Swift's *Journal to Stella*.) Here Dr. Johnson presided at a supper celebrating the publication of Mrs. Lennox's first book, when the whole night was spent in festivity. The tavern was taken down in 1788: opposite is Apollo-court; and next door east, is the Cock Tavern, with an old carved and gilt sign-bird. (See TAVERNS.) The Horn Tavern, now Anderton's Hotel, No. 164, was famous in 1604. (See COFFEE-HOUSES: Dick's, Rainbow, and Peele's, pp. 264, 267, 268.)

No. 39 was "the Mitre, in Fleet-street," the tavern so often referred to in Boswell's *Life of Johnson*: the Mitre, in Mitre-court, was of much later date. At the Mitre, in Fleet-street, in 1640, Lilly met old Will Poole, the astrologer, then living in Ram-alley. The Royal Society Club dined at the Mitre from 1743 to 1750; and the Society of Antiquaries met here for some time: the house had its token. This was Dr. Johnson's favourite supper-house, the parties including Goldsmith, Percy, Hawkesworth, and Boswell. Chamberlain Clark, who died in 1831, aged 92, was the last surviving of Johnson's Mitre friends. It was a favourite house with Lord Stowell. The premises became Macklin's Poets' Gallery in 1788; and lastly Saunders's Auction-rooms: they were taken down to enlarge the site for Hoare's new Banking-house.

In the bay-windowed house, Nos. 184 and 185, lived Drayton, the poet. At No. 186, was commenced, Nov. 3, 1849, *Notes and Queries*. West of St. Dunstan's is the Law Life Assurance Office, of Jacobean street-architecture, built by Shaw in 1834: next is the passage to Clifford's Inn. Chaucer, when a student of the Inner Temple, was fined 2s. by the Society for beating a Franciscan friar in Fleet-street; so states Speght, the illustrator of the poet. Cowley was born near Chancery-lane; his father was an engrosser, not a grocer, as long stated. Isaac Walton lived two doors west of Chancery-lane, whither, in 1632, he removed. (See CHANCERY-LANE, p. 82.) At No. 197 was Rackstrow's Anatomical Museum, and collection of natural and artificial curiosities, natural magic, &c., exhibited from 1736 to 1798. *Bell-yard* and *Fetter-lane* were once noted for fishing-tackle shops.

*Shire-lane* (now Lower Serle's-place), hard by Temple-bar, named from its dividing the City from the Shire, was once a place of note. Here was born Sir Charles Sedley, the poet, and witty contemporary of Rochester; here lived Elias Ashmole, by turns astrologer, alchemist and antiquary, who called "father" one Backhouse, an adept, in Fleet-street, over against St. Dunstan's Church.

In 1658, Ashmole left the astrologers and alchemists; in 1660, he was called to the bar in Middle Temple Hall; and on Jan. 26, 1679, by a fire in his chambers in the Middle Temple, he lost most of his library, a cabinet of 9000 coins, besides, seals, charters, &c., and a curious collection of engraved portraits.

At the upper end of Shire-lane lived Isaac Bickerstaff, the *Tatler*, who led the deputation of "Twaddlers" down the lane, across Fleet-street, to Dick's Coffee-house. At the Trumpet (afterwards the Duke's Head) public-house, in Shire-lane, the *Tatler* met his club; and in the lane lived Christopher Kat, at whose house originated the Kit-Kat Club. (See pp. 250, 251.)

Fleet-street was the scene of the annual grand burning of the Pope (on November 17) in the reign of Charles II.; the torchlight procession beginning at Moorfields, and ending at Fleet-street, where the effigy of the Pope was burnt, opposite Middle Temple-gate. These saturnalia were kept up until after the expulsion of James II.; when the anti-popish mummery was transferred to Nov. 5. (See TEMPLE and TEMPLE BAR.)

Towards the west end of Fleet-street have been erected several buildings of highly

ornamental character; as at the junction of Chancery-lane and Fleet-street, handsome Italian; the Crown Insurance Offices, Venetian, of marble, granite, and coloured stone; No. 21, Italian, of the Palladian school; No. 29, of Portland stone, granite, marble, &c.

Among the Fleet-street booksellers of our time, William Hone must be mentioned: he commenced business at No. 55, about the year 1812; where he published a pamphlet in vindication of the ill-fated Eliza Fenning, who is now believed to have been guiltless of the crime for which she suffered: the mystery has been thus cleared up by one of Fenning's family attesting that a nephew of Mr. Turner, in Chancery-lane, when upon his death-bed, in Chelmsford, disclosed that, "many years since, irritated with his uncle and aunt, with whom he resided, for not supplying him with money, he availed himself of the absence for a few minutes of the servant-maid from the kitchen, stepped into it and deposited a quantity of powdered arsenic on some dough he found mixed in a pan. Eliza Fenning, he added, was wholly ignorant of these facts."

## FOG OF LONDON.

THIS phenomenon is caused by the millions of blazing coal-fires in the metropolis contributing a vast quantity of fuliginous matter, which, mingling with the vapour, partly arising from imperfect drainage, produces that foggy darkness which Londoners not inaptly term "awful." Sometimes it is of a bottle-green colour; but if the barometer rise, it will either totally disappear or change into a white mist. At other times it is of pea-soup yellow; in the midst of which the street gas-lights appear like the pin-head lamps of old. The latter is the genuine November London Fog.

"First at the dawn of lingering day,  
It rises of an ashy grey;  
Then deepening with a sordid stain  
Of yellow, like a lion's mane.  
Vapour importunate and dense,  
It wars at once with every sense.  
The ears escape not. All around  
Returns a dull, unwonted sound.  
Loath to stand still, afraid to stir,  
The chilled and puzzled passenger,  
Oft blundering from the pavement, fails  
To feel his way along the rails;  
Or at the crossings, in the roll  
Of every carriage dreads the pole.  
Scarce an eclipse with pall so dun  
Blots from the face of heaven the sun.  
But soon a thicker, darker cloak  
Wraps all the town, behold, in smoke,  
Which steam-compelling trade disgorges  
From all her furnaces and forges  
In pitchy clouds too dense to rise,  
Descends rejected from the skies;  
Till struggling day, extinguished quite,  
At noon gives place to candle-light.

Oh, Chemistry, attractive maid,  
Descend, in pity, to our aid:  
Come with thy all-pervading gases,  
Thy crucibles, retorts, and glasses,  
Thy fearful energies and wonders,  
Thy dazzling lights and mimic thunders;  
Let Carbon in thy train be seen,  
Dark Azote and fair Oxygen,  
And Wollaston and Davy guide  
The car that bears them at thy side,  
If any power can, any how,  
Abate these nuisances, 'tis thou;  
And see to aid thee in the blow,  
The bill of Michael Angelo,  
O join (success a thing of course is)  
Thy heavenly to his mortal forces;  
Make all chimneys chew the cud  
Like hungry cows, as chimneys should!  
And since 'tis only smoke we draw  
Within our lungs at common law,  
Into their thirsty tubes be sent  
Fresh air, by act of parliament."

Henry Luttrel.

The Fog, too, sensibly affects the organs of respiration: hence a Scotch physician has asked, "If a person require half a gallon of pure air per minute, how many gallons of this foul atmosphere must be, as it were, filtered by his lungs in the course of a day?"

Sometimes the Fog is caused by a very ordinary accident,—a change of wind, thus accounted for: the west wind carries the smoke of the town eastward in a long train, extending twenty or thirty miles, as may be seen on a clear day from an eminence five or six miles from the town,—say, from Harrow-on-the-Hill. In this case, suppose the wind to change suddenly to the east, the great body of smoke will be brought back in an accumulated mass; and as this repasses the town, augmented by the clouds of smoke from every fire therein, it causes the murky darkness.

By accurate observation of the height of the Fog, relatively with the higher edifices, whose elevation is known, it has been ascertained that the Fogs of London never rise more than from 200 to 240 feet above the same level. Hence the air of the more elevated environs of the metropolis is celebrated for its pure and invigorating qualities, being placed above the fogs of the plain, and removed from smoky and contaminated atmosphere. The height of the Norwood hills, for example is 390 feet above the sea-level at low water; and thus enjoys pre-eminent salubrity.

What is often called Fog, which darkens the metropolis in winter, is, in reality, the smoke of millions of coal-fires, which are much increased in very cold weather. To prevent this, a Correspondent of the *Times* recommends this simple plan:—Before you throw on coals, pull all the fire to the front of the grate towards the bars, fill up the cavity at the back with the cinders or ashes, which will be found under the grate, and then throw on the coals. The gas evolved in the process of roasting the coals will then be absorbed by the cinders—will render them, in an increased degree, combustible. The smoke will thus be burnt, and a fine glowing, smokeless fire will be the result. This rule should be enforced from the kitchen upwards.

#### FORTIFICATIONS.

THE defence of the City of London by the wall built by our later Roman colonists has been already described. (See CITY WALLS AND GATES, p. 233.) In later times, the metropolis had again to be fortified.

During the Civil Wars, in 1642, the Parliament ordered that trenches and ramparts should be made near the highways leading to the City, and in different parts about London and Westminster. These Fortifications consisted of a strong earthen rampart, flanked with bastions, redoubts, &c., surrounding the whole City and its liberties, including Southwark. In Tyburn-road, in 1643, there were three forts erected—viz., a redoubt, with two flanks, near St. Giles's Pound; a small fort at the east end of the road; and a large fort, with four half bulwarks, across the road opposite to Wardour-street. From *The Perfect Diurnal* of this period, we gather that many thousands of men, women, and servants assisted in the works; as did also a great company of the Common Council, and other chief men of the City; and the Trained Bands, with spades, shovels, and pickaxes; likewise feltmakers, cappers, shoemakers, and porters, to the number of many thousands, assisted in raising the defences.

Upon the site of Mount-street was the fort of "Oliver's Mount;" and on the ground now occupied by Hamilton-place at Hyde-park-corner was a large fort with four bastions.

"From ladies down to oyster-wenches,  
Labour'd like pioneers in trenches."

Butler's *Hudibras*, Part ii. canto 2.

The women, and even the ladies of rank and fortune, not only encouraged the men, but worked with their own hands. Lady Middlesex, Lady Foster, Lady Anne Walker, and Mrs. Dunch, have been particularly celebrated for their activity.—Dr. Nash's *Notes*.

There are in existence drawings of London Fortifications ascribed to Hollar, and Captain John Eyre of Oliver Cromwell's own regiment, dated 1643; but they are not, by competent judges, regarded as genuine. The latter have been etched.

The Parliamentary Fortifications of London are described in Maitland's *History*; a Plan of the City and Suburbs, 1642 and 1643, was engraved by George Vertue, 1738; and a small Plan of the same works appeared in the *Gentleman's Magazine*, a few years afterwards.

During the last Civil War, a Fortification was erected at the Brill Farm, near Old St. Pancras Church, where, 120 years later, Somers Town was built; a view of it is engraved.—*Notes and Queries*, No. 230.

#### FOUNDLING HOSPITAL (THE),

IN Guilford-street, was established by Royal Charter, granted in 1739 to Thomas Coram (master of a trading vessel), "for the reception, maintenance, and education of exposed and deserted young children," in a hospital erected "after the example of France, Holland, and other Christian countries." This shows that Coram contemplated the indiscriminate admission of all foundlings, as is the case in the above countries; and such was the practice up to the commencement of the present century. The Governors first opened a house in Hatton-garden, on March 25, 1740-1; and any person bringing a child, rang the bell at the inner door, and waited to hear if the infant was returned from disease or at once received, no question whatever being asked as to whom the child belonged, or whence it was brought; and when the full number of children had been taken in, a notice of "*The House is full*" was affixed over the door: often there were 100 children offered, when only 20 could be admitted; riots ensued, and thenceforth the women balloted for admission by drawing balls out of a bag.

The present Hospital was built by Jacobson; and the children, 600 in number, were removed there in 1745, when the expenses of the establishment were more than five

times the amount of the income. The Governors afterwards applied to Parliament, who voted them 10,000*l.*, and sanctioned the general admission of children, the establishment of country hospitals, &c.\* A basket was hung at the gate of the hospital in London, in which the children were deposited, after ringing a bell to give notice to the officers in attendance.† On June 2nd, 1756, the first day, 117 children were thus received. In 1757 printed bills were posted in the streets apprising the public of their privilege. The consequences were lamentable: prostitution was greatly increased by this easy means of disposing of illegitimate offspring; and from the want of means of rearing so many children, the greater number died: of 14,934 children received in three years and ten months, 10,389 perished. At length, in 1760, this indiscriminate admission was discontinued by Act of Parliament, the legislature undertaking to support all the children who had been already received at its suggestion. Still, so late as 1795 the practice of admitting children without inquiry, on payment of 100*l.*, had not become extinct; but it was abolished in 1801.

Hogarth, one of the earliest "Governors and Guardians," greatly assisted his friend Captain Coram, whose full-length portrait he painted and presented to the Hospital, with other pictures. These were shown to the public, and became very attractive; and out of this success grew the first Exhibition of the Royal Academy, in the Adelphi, in the year 1760. The painters often met at the Hospital; the exhibition of their pictures drew daily crowds of spectators, in their splendid equipages; and a visit to the Foundling became the most fashionable morning lounge of the reign of George II. The grounds in front of the Hospital were a favourite promenade; and brocaded silks, gold-headed canes, and laced three-cornered (Egham, Staines, and Windsor) hats formed a gay bevy in Lamb's-Conduit-fields.

The pictures represent the state of British art previously to the patronage of West by George III. In the collection is Hogarth's *March to Finchley*, and *Moses brought to Pharaoh's Daughter*; *Dr. Mead*, by Allan Ramsay; *Handel*, by Kneller; *Lord Dartmouth*, by Sir Joshua Reynolds; *Views of the Foundling and St. George's Hospitals*, by Richard Wilson; the *Charter-House (Sutton's Hospital)*, by Gainsborough; *Chelsea and Bethlem Hospitals*, by Haytley; *Christ's Hospital, St. Thomas's and Greenwich Hospitals*, by Wale; a bas-relief by Rysbrack; a bust of Handel, by Roubiliac; and a presumed original portrait of Shakspeare.

The Chapel has an altar-piece (Christ presenting a little Child), painted by West. At the suggestion of Handel, the musical service has been a source of great profit to the Hospital funds. (See CHAPELS, p. 210.) Dr. Burney attempted to found an "Academy of Music" on this basis, just as an Academy of Arts had been raised; but the project failed. Several blind children, who had been received into the Hospital during the indiscriminate admission, were trained as a choir. Mr. Grenville, the organist; Mr. Printer, Miss Thefford, and Jenny Freer, singers, were all blind foundlings.

Coram is buried in the vaults. Here also rest several benefactors, including Lord Chief-Justice Tenterden, whose bust is at the eastern entrance to the chapel: some verses written by his Lordship are sung at the Festival of the Governors. Upon the lodges are two characteristic bas-relief medallions, nicely executed.

From 1760, the Institution ceased to be a hospital for foundlings—

"A race unknown,  
At doors expos'd, whom matrons call their own."—*Dryden*.

Unfortunately, the name has been retained: hence great misapprehension in the public mind as to the present objects and purposes of the Charity. The present practice of admitting children requires that they be illegitimate; that the mother have borne a good character previous to her misfortune; and that she be poor and have no relations able or willing to maintain her child. There are other conditions enforced by the Governors; their benevolent object being, "to hide the shame of the mother, as well as to preserve the life of the child," and dismiss her from the Hospital with the charge to

\* Branch establishments were opened in the country; and at one of them (Ackworth, in Yorkshire) was made cloth, in suits of which several of the artist-patrons appeared at the Festival of 1761. Another branch Hospital was at Aylesbury: of this John Wilkes (M.P. for that borough) was appointed Treasurer; but when he left the kingdom in 1764, his accounts were deficient.

† An aged banker in the north of England, received into the Hospital, being desirous of ascertaining his origin, all the information afforded by the books of the establishment was, that he was put into the basket at the gate naked.

"sin no more." There are several eloquent defences of the objects of the Hospital. Sterne preached a sermon for the Charity in 1761; and the Rev. Sydney Smith was one of the appointed preachers.

There are at present 500 children supported by the Charity, from extreme infancy to the age of fifteen; the Governors have not the privilege of *presenting* children, after the manner of other establishments, the claim for admission depending upon the proven misery of the case. The general health of the children within the walls of the Hospital is remarkably good; indeed, the building occupies one of the healthiest sites in London. At an apprenticeable age, the girls are put out to domestic service, and the boys to trades.

The qualification of a Governor is a donation of 50*l.* The revenue of the Hospital is principally derived from the improved value of the Lamb's-Conduit estate (56 acres), which the Governors purchased as a site for the Hospital, in 1741, for the sum of 5500*l.*, collected by benefactions and legacies; when the Charity bought the whole estate, not because they required it, but because the Earl of Salisbury, its owner, would not sell any fractional part of it. As London increased, it approached this property; and the ground is now mostly covered with squares and streets of houses, the ground-rents producing an annual income equal to the purchase-money! The Governors have likewise established a Benevolent Fund, for the relief of aged and destitute persons who were inmates of the Hospital when infants. (See *Memoranda of the Foundling Hospital*, by John Brownlow, Secretary, third edition, 1865.) A stone portrait-statue of Coram, Calder Marshall, sculptor, is placed upon the central pier of the entrance-gates.

#### FOUNTAINS.

LONDON had, until lately, in comparison with Continental cities, but few decorative Fountains, of "the nature that sprinkleth or spouteth water." Early in the last century, however, the Fountains were more numerous. Hatton (1708) mentions in Privy Garden, at Somerset House, Middle Temple, Lincoln's Inn, and King's-square, "the most publick ones." The court-yards and gardens of mansions had also their fountains: Montague House was celebrated for them. The courts of the Companies' Halls and City-merchants' houses boasted of their fountains, but few of which remain. The private garden of Drapers' Hall had a basin, with a fountain and statue.

Old Somerset House had its geometrical water-garden and fountain.

Whitehall had its fountains; and Queen Elizabeth had a cascade made to play in her gardens, which, when touched by a distant spring, sprinkled all who approached it.

The King's (Soho) Square fountain had in the middle of the basin a stone statue of Charles II. in armour, on a pedestal enriched with crowns and foliage; on the four sides of the base were as many figures, with inscriptions, of the Thames, Severn, Tyne, and Humber rivers, spouting water. The statue of Charles remains, but the basin has been filled up, and is now a flower-garden.

St. James's-square had in its centre, in 1720, a basin with a jet of water 15 feet high; the basin was filled from York-buildings, was 6 or 7 feet deep, and 150 feet in diameter, and upon it was kept a pleasure-boat: the site is now occupied by an equestrian statue of William III.

The fountain was a popular ornament of our old tea-gardens: Bagnigge Wells had a curious specimen—half fountain, half grotto; and the fountain lingered among the cool delights of Vauxhall Gardens to the last.

Kensington Gardens had a lofty sculptured fountain in the basin opposite the palace; but here, and in the Parks, the *jets-d'eau* were, until lately, tasteless and unornamental.

In the middle of New-square, Lincoln's Inn, was a fluted Corinthian column, and a clock with three dials near its vertex; and at each angle of the pedestal was a Cupid blowing water through a short twisted shell. In the Benchers' Garden, Lincoln's Inn, in the centre of a basin, was the figure of a mermaid rising out of reeds, with a lofty jet of water.

The fountain in Fountain-court, Middle Temple, rises from a marble-bordered basin, and in Hatton's time was kept "in so good order as always to force its stream to a vast and almost incredible altitude. It is fenced with timber palisades, constituting a quadrangle, wherein grow several lofty trees, and without are walks extending on every side of the quadrangle, all paved with Purbeck, very pleasant and delightful." The timber palisades have given way to iron railing; the jet was half-inch, and threw the

water 10 feet high, and the effect of its sound and sparkle through the trees was very refreshing. Miss Landon has left a poem of pensive beauty, commencing thus:—

“The fountain’s low singing is heard on the wind,  
Like a melody bringing sweet fancies to mind;  
Some to grieve, some to gladden: around them they cast  
The hopes of the morrow, the dreams of the past.  
Away in the distance is heard the vast sound,  
From the streets of the city that compass it round,  
Like the echo of fountains or ocean’s deep call:  
Yet that fountain’s low singing is heard over all.”

A more decorated design has been substituted for the formal jet.

In the ornamental garden adjoining the Bank (of England) Parlour is a stone basin, with a jet of water 20 feet high; already described at p. 30.

The pair of fountains and basins in Trafalgar-square are the largest works of the kind in the metropolis. They were designed by Sir C. Barry, R.A., and executed in Peterhead granite by M'Donald and Leslie, Aberdeen. Around each base are four dolphins' heads and fins, supporting a large flat vase and a pedestal, with a smaller vase, in the centre of which is the jet whence the water is thrown up; while a flat stream issues from each of the dolphins' mouths. The water is supplied from two Artesian wells, one in Orange-street, 300 feet deep, and the other in front of the National Gallery, 395 feet, connected at 170 feet depth by a tunnel to contain 70,000 gallons of water; the wells and tunnel at rest holding about 122,000 gallons. The wells are worked, the jets of the fountains thrown, and the water otherwise supplied, by a large Cornish pumping steam-engine, and a small inverted direct-action engine: outlay 9000*l.*; annual rent 500*l.*; engineers, Easton and Amos, Southwark. The contract for “spouting water” is thirteen hours per day in summer, and in winter seven hours; the height of the jets varies with the weather, from 25 to 40 feet from the ground; supply, 500 gallons per minute; to the Treasury, Admiralty, Houses of Parliament, and other public offices, 100 gallons per minute.

Such were the original works. In 1862 was added to each of the semicircular bays of the basins a group of jets, consisting of a centre and 16 surrounding it. Thus there are 68 jets, throwing 300 gallons per minute, rising from the surface of the basins. Within each is an octagon, from each angle of which a jet throws the water 20 feet high into the upper basin of the central fountain. These 8 jets throw 200 gallons per minute, and their curve is about 30 feet in length. Here are again two inferior squares surrounding the central group, and from each of the angles a jet is thrown outwards, crossing those from the octagon, rising 20 feet, and curving about 17 feet: these throw together 200 gallons per minute. There are also 8 feather jets, which throw up 200 gallons per minute, and form a display resembling the Prince of Wales's Feathers. The whole may be played at once, in not less than 25 different continuations or changes. It has been the fashion to abuse the designs of these fountains, without making due allowance for the cause—the insufficiency of the sum voted for their erection, and desirable decorative character.

Hitherto, fountains had, in our time, been mostly ornamental, but they have of late been adapted for Drinking purposes, to promote temperance and sanitary benefits.

The first Drinking-fountain set up in the metropolis was that at St. Sepulchre's, the parish in which, nearly three centuries ago, Lamb, citizen and clothworker, and sometime gentleman of the chamber to Henry VIII., “founded a faire conduit and a standard, with a cocke, at Holborn-bridge, to convey thence the waste.” The conduit itself was in the fields—now Lamb's-Conduit-street. (See CONDUITS, p. 288.)

The Metropolitan Free Drinking-Fountains Association has set up in various quarters, by means of a public subscription, fountains in localities where they are most required. As many as 8000 persons have been known to drink at a single fountain in one day; and more than 30,000 have been estimated to drink daily in the summer at 140 fountains. Many of the contributions to this good work of the Association exhibit great liberality on the part of the donors, as well as an occasional tinge of eccentricity. Cattle-troughs and dog-troughs have been added to the fountains. Benevolent individuals have contributed to their own localities. Thus, we read of 60*l.* from a lady in Brompton, and 100*l.* from a gentleman in Pimlico, for the two fountains just opened by the Society

outside the Kensington Museum, and in the high road leading to Battersea Park. A gentleman in Fifeshire offered to pay the cost of a fountain near the Kensington Potteries, where, by the way, water was always wanted; and a lady at St. John's-wood sent to the Society a donation for the new cattle-trough just fixed in Finsbury-square. One of the Reports of the Society states that a lady, who requested that her name should be kept secret, sent 1000*l.* to the treasurer; and that an Indian Prince furnished a similar sum to be expended upon a fountain in Hyde Park. Mrs. Rosetta Waddell, amongst other bequests, left 500*l.* for the erection of a fountain in Warwick-square, Newgate-street. Mr. Gurney, the founder of the Association, contributed between 300*l.* and 400*l.* yearly towards the objects which it had in view. The Association requires 1000*l.* a-year to keep one hundred fountains in repair.

Some of these drinking-fountains, erected at the cost of private individuals, are admirable works of art, as well as acts of public spirit. Sir Morton Peto has erected on Islington-green a statue of Sir Hugh Myddelton, with two fountains, and the New River Company supply the water gratis; and the Company, in 1859, set up a fountain against their own wall. In the above year, the Association announced seventy sites, whereon they had erected fountains, or were under engagement to erect.

The Government have erected, very appropriately, drinking-fountains in the Parks. The largest and most important is placed in the geometrical garden in Hyde Park, nearly opposite Grosvenor-gate. This is a simple and massive fountain, with a group of a boy and dolphin, in Carrara marble, 6 feet high, sculptured by Alexander Munro. It is placed on a block of red granite chiselled to represent a rock. The basin, of polished Sicilian marble, is nine feet in diameter, and is believed to be the largest basin of a single block of marble in England. This rests on a square plinth of Dove marble, leading up to which are three circular steps in grey granite, the lowest step being eighteen feet in diameter. The whole work is upwards of twelve feet in height. The group represents a sturdy boy wrestling with a dolphin; the water issuing in jets from the nostrils of the dolphin.

On the south side of St. James's Park, near Storey's-gate, backed by trees, is a group, sculptured by R. Jackson, of a boy seated, with a pitcher at his side, and holding a scallop-shell as if to dip into the pitcher, and offer its contents to one towards whom his head is slightly turned. On the front of the granite pedestal is a relief of bulrushes and other water-plants, and from the mouth of a dolphin the water trickles into a conch-shell.

In the Regent's Park, a drinking-fountain has been erected from the designs of R. Westmacott, R.A.: it consists of a polished red granite column, on which is a female figure in bronze; the water flows from the bills of two bronze swans, at the base of the column, into a large tazza of black enamelled slate.

The Ornamental Waterworks, in Kensington Gardens, contain two large fountains, with some good sculpture, by John Thomas.

In Victoria Park, at the Hackney entrance, is a drinking-fountain, of unusual dimensions and costliness, a present from Miss Burdett Coutts. It is a Gothic octagonal structure, crowned by a cupola, nearly 60 feet high; the shafts and bases are of polished granite. Within are marble figures in niches, which pour water from vases into basins beneath; vases for flowers, and coloured marbles, complete the decoration: cost, above 5000*l.*; designer, H. A. Darbishire.

Another large and important design is the Buxton Memorial Drinking Fountain, at the corner of Great George-street and St. Margaret's Churchyard, Westminster. The base is octagonal, having open arches on the eight sides, supported on clustered shafts of polished Devonshire marble around a large central shaft, with four massive granite basins. Surmounting the pinnacles at the angles of the octagon are eight figures of bronze, representing different rulers of England: the Britons represented by Caractacus, the Romans by Constantine, the Danes by Canute, the Saxons by Alfred, the Normans by William the Conqueror, and so on, ending with Queen Victoria. The following is the inscription:—

“This fountain is intended as a memorial of those Members of Parliament who, with Mr. Wilberforce, advocated the Abolition of the British Slave Trade, achieved in 1807; and of those Members of Parliament who, with Sir T. Fowell Buxton, advocated the Emancipation of the Slaves throughout the

British dominions, achieved in 1834. It was designed and built, by Charles Buxton, M.P., in 1865, the year of the final extinction of the Slave Trade and of the Abolition of Slavery in the United States."

The upper portion is covered with plaques of iron, with raised patterns, giving shadow, and enamelled coloured surfaces. Superintendent architect, S. Teulon; stone-work and sculpture, by Earp; cost, upwards of 1200*l.*, exclusive of the water supply, undertaken by the Drinking-Fountains Association.

Another memorial monumental fountain has been erected in Guildhall-yard, by the vestry of the united parishes of St. Lawrence Jewry, and St. Mary Magdalene, Milk-street, to the memory of the benefactors of these parishes. This memorial, designed in the Pointed style of architecture which prevailed in Italy during the fourteenth century, is 9 ft. square at the base, and 32 ft. in height. The materials are Portland stone, and Bath stone, with polished granite shafts. On the east and west sides are statues of the patron saints of the two parishes; and on the other two sides are marble slabs, on which are engraved the names of the benefactors. On the east side, facing Guildhall-yard, is a bronze bas-relief of Moses striking the Rock, an admirable production, which forms the drinking-fountain; cost has been 665*l.*; designed by John Robinson, architect; statues and bas-relief are by Joseph Durham, R.A., sculptor.

Fountains are useful ornaments of markets. At Billingsgate is a cast-iron fountain, with a basin about 15 feet in diameter, and a stem of rushes whence the water rises: and around the basin-lip lie twelve dolphins, which discharge water for the use of the market-people.

### FREEMASONS' LODGES.

OUR glance at Freemasonry in the metropolis dates from two centuries back (1666), when Sir Christopher Wren was nominated Deputy-Grand-Master under Earl Rivers, and distinguished himself above all his predecessors in legislating for the body at large, and in promoting the interests of the Lodges under his immediate care. He was Master of the St. Paul's Lodge, which, during the rebuilding of the Cathedral after the Great Fire, assembled at the Goose and Gridiron, in St. Paul's Churchyard, and is now the Lodge of Antiquity, acting by immemorial prescription, and regularly presided at its meetings for upwards of eighteen years. During his presidency, he presented the Lodge with three mahogany candlesticks, beautifully carved, and the trowel and mallet which he used in laying the first stone of the Cathedral, June 21, 1675.

During the building of the City, Lodges were held by the fraternity in different places, and several new ones constituted, which were attended by the leading architects and best builders of the day, and amateur brethren of the mystic craft. In 1674 Earl Rivers resigned his grand-mastership, and George Villiers, Duke of Buckingham, was elected to the dignified office. He left the care of the Grand Lodge and the brotherhood to the Deputy-Grand-Master Wren and his Wardens. During the short reign of James II., who tolerated no secret societies but the Jesuits, the Lodges were but thinly attended; but in 1685 Sir Christopher Wren was elected Grand-Master of the Order, and nominated Gabriel Cibber, the sculptor, and Edward Strong, the master mason of St. Paul's and other of the City churches, as Grand-Wardens.

Many of the oldest Lodges are in the neighbourhood of St. Paul's; but the headquarters of Freemasonry is the Grand Hall in the rear of Freemasons' Tavern, 62, Queen-street, Lincoln's-inn-fields: it was commenced May 1, 1775, from the designs of Thomas Sandby, R.A., Professor of Architecture in the Royal Academy: 5000*l.* was raised by a Tontine towards the cost; and the Hall was opened and dedicated in solemn form, May 23, 1776; Lord Petre, Grand-Master. "It is the first house built in this country with the appropriate symbols of Masonry, and with the suitable apartments for the holding of Lodges, the initiating, passing, raising, and exalting of brethren." (*Elmes.*) Here are held the Grand and other Lodges, which hitherto assembled in the Halls of the City Companies.

Freemasons' Hall, as originally decorated, is shown in a print of the annual procession of Freemasons' Orphans, by T. Stothard, R.A. It is a finely-proportioned room, 92 feet by 43 feet, and 60 feet high; and will hold 1500 persons: it was re-decorated in 1846: the ceiling and coving are richly decorated; above the principal entrance is

a large gallery, with an organ; and at the opposite end is a coved recess, flanked by a pair of fluted Ionic columns, and Egyptian doorways; the sides are decorated with fluted Ionic pilasters; and throughout the room in the frieze are masonic emblems, gilt upon a transparent blue ground. In the intercolumniations are full-length royal and other Masonic portraits, including that of the Duke of Sussex, as Grand-Master, by Sir W. Beechey, R.A. In the end recess is a marble statue of the Duke of Sussex, executed for the Grand Lodge, by E. H. Baily, R.A. The statue is seven feet six inches high, and the pedestal six feet; the Duke wears the robes of a Knight of the Garter, and the Guelphic insignia; at his side is a small altar, sculptured with Masonic emblems.

Freemasons' Hall was, however, not reserved for the exclusive use of the Masons. In 1863, the erection of a great Masonic building was decided on; architect, F. P. Cockerell, son of the late Professor Cockerell, R.A.

The front, which is 89 ft. in length, is built entirely of Portland stone. The sculpture, including the four figures representing Wisdom, Fidelity, Charity, and Unity, are executed by W. G. Nicholl. The section, comprising the greater part of the Masonic building, was completed in May, 1866. The old hall is re-embellished in a corresponding style.

St. Paul's, 604, and St. Peter's, Westminster, 605, were built by Freemasons. Gundulph, Bishop of Rochester, who built Rochester Castle, and, it is said, the White Tower (of London), governed the Freemasons. Peter of Colechurch, architect of old London Bridge, was Grand-Master. Henry VII., in a lodge of Master Masons, founded his Chapel at Westminster Abbey. Hampton Court Palace was built by Freemasons, as appears from the accounts of the expenses of the fabric extant among the public records of London. Sir Thomas Gresham, who planned the Royal Exchange, was Grand-Master: as was also Inigo Jones, who built the Banqueting-House, Whitehall; Ashburnham House, Westminster, &c. Sir Christopher Wren, Grand-Master, founded St. Paul's with his Lodge of Masons, and the trowel and the mallet used are preserved. Covent Garden Theatre was founded, 1808, by the Prince of Wales, Grand-Master; and the Grand Lodge. Sir Francis Palgrave, however, maintains that "the connexion between the operative masons and a convivial society of good fellows—who, in the reign of Queen Anne, met at the 'Goose and Gridiron, in St. Paul his Church-yard'—appears to have been finally dissolved about the beginning of the eighteenth century. From an inventory of the contents of the chest of the Worshipful Company of Masons and Citizens of London, it appears not long since to have contained a book wrote on parchment, or bound or stitched in parchment, containing 113 annals of the antiquity, rise, and progress of the art and mystery of masonry. But this document is not now to be found.—Sir F. Palgrave, *Edinburgh Review*, April, 1839.

There is in existence, and known to persons who take an interest in the History of Freemasonry, a copperplate List of Freemasons' Lodges in London in the reign of Queen Anne, with a representation of the Signs, and some Masonic Ceremony, in which are eleven figures of well-dressed men, in the costume of the above period. There were then 129 Lodges, of which 86 were in London, 36 in English cities, and 7 abroad.

According to the books of the Grand Lodge of England, there are 53 Masonic Lodges in the City, distributed as follows: Albion Tavern, Aldersgate-street, 7; London Tavern, Bishopsgate, 9; Radley's Hotel, Bridge-street, 9; Anderton's Hotel, Fleet-street, 8; Ship and Turtle, Leadenhall-street, 8; London Coffee House, Ludgate-hill, 5; Masons' Hall, Basinghall-street, 3; Masons' Rooms, Little Bell-alley, Moorgate-street, 1; Cheshire Cheese, Crutched-friars, 1; Falcon Tavern, Fetter-lane, 1; and Dick's Tavern, Fleet-street, 1. Formerly the most ancient lodge in the City, and which dates from time immemorial, was the "Lodge of Antiquity" (No. 2), but having removed from the Goose and Gridiron, St. Paul's Churchyard, to the Freemasons' Hall, Great Queen-street, the Royal Athelstan (No. 19), became the most ancient City Lodge, while the most modern are the City of London (901), and Engineers (902). In the City there are also fourteen Lodges of Instruction. There are 333 Chapters of Royal Arch Masons, 12 of which are in the City.

"Three explanations, widely different, have been given of the origin and progress of Freemasonry. Some see in Freemasonry a secret system deriving its teaching from Egyptian mysteries, preserved through the night of history. Others see in it a secret body, exclusive in its formation, and passing through the world irrespective of the politics and religion of all countries, but advocating brotherly love and inculcating moral duties. There are others who, having regard to the principle of cause and effect, see in it a speculative brotherhood, the legitimate and lineal descendants of the operative guilds which flourished in the Middle and early ages. Whichever explanation or theory may be true, one thing is indubitable—namely, that the origin and duration of Freemasonry together furnish a most wonderful fact in the history of mankind. It is universal in its scope and expansive and tolerant in its tendency; it rejects all partisan theories and condemns all sectarian animosities; it forms a nucleus to all the nations of the world, and aims at linking all mankind in enduring friendship by inculcating moral responsibility and social duty, loyalty, peace, and good citizenship, and the relief of human sorrow and affliction."—Rev. A. F. Woodford, *Grand Chaplain*.

### FROSTS, AND FROST-FAIRS ON THE THAMES.

1281-2. "From this Christmas till the Purification of Our Lady, there was such a frost and snow, as no man living could remember the like: wherethrough, five arches of London Bridge, and all Rochester Bridge, were borne downe and carried away by the streame; and the like happened to many bridges in England. And, not long after, men passed over the Thames, between Westminster and Lambeth, dryshod."—*Stow*, edited by Howes, 1631.

1410. "Thys yere was the grete frost and ise and the most sharpest winter that

ever man sawe, and it duryd fourteen wekes, so that men myght in dyvers places both goo and ryde over the Temse.”—*Chronicle of the Grey Friars of London.*

1434-5. The Thames frozen from below London Bridge to Gravesend, from Dec. 25 to Feb. 10, when “the merchandise which came to the Thames mouth was carried to London by land.”—*Stow.*

1506. “Such a sore snowe and a frost that men myght goo with carttes over the Temse and horses, and it lastyd tylle Candlemas.”—*Chronicle of the Grey Friars of London.*

1515. The Thames frozen, when carriages passed over the ice from Lambeth to Westminster.

1564, Dec. 21. *Stow* and *Holinshed* state that on New-year’s eve—

“People went over and alongst the Thames on the ise from London Bridge to Westminster. Some played at the foot ball as holdie there, as if it had bene on the drie land; diverse of the Court being then at Westminster, shot dailie at prickes set upon the Thames; and the people, both men and women, went on the Thames in greater numbers than in anie street of the City of London. On the third daie of January at night it began to thaw, and on the fifth there was no ise to be seene between London Bridge and Lambeth, which suddin thaw caused great floods and high waters, that bare downe bridges and houses and drowned manie people in England.”

1608. Great frost described in *Howes’s* continuation of *Stow* :

“The 8th of December began a hard frost, and continued until the 15th of the same, and then thawed; and the 22d of December it began againe to freeze violently, so as divers persons went half-way over the Thames upon the ice; and the 30th of December, at every ebbe, many people went quite over the Thames in divers places, and so continued from that day until the 3d of January.” From Jan. 10th to 15th, the ice became firm, and men, women, and children went boldly upon it; some shot at prickes, others bowled and danced, and many “set up booths and standing upon the ice as fruitsellers, victuallers, that sold beere and wine, shoemakers, and a barber’s tent:” the ice lasting until Feb. 2. There is a very rare Tract, describing this frost, mentioned by *Gough*, in his *British Topography*, vol. I. p. 731, which has a woodcut representation of it, with London Bridge in the distance; it is entitled—“Cold Doings in London, except it be at the Lottery,” &c., 4to, 1608.

1609. Great frost commenced in October, and lasted four months. The Thames frozen, and heavy carriages driven over it.

1683-4. From the beginning of December until the 5th of February, frost “congealed the river Thames to that degree, that another city, as it were, was erected thereon; where, by the great number of streets and shops, with their rich furniture, it represented a great fair, with a variety of carriages, and diversions of all sorts; and near Whitehall, a whole ox was roasted on the ice.” (*Maitland.*) *Evclyn*, who was an eye-witness of the scene, thus describes it, Jan. 24, 1684:—

“The frost continuing more and more severe, the Thames before London was still planted with booties in formal streetes, all sorts of trades and shops furnished, and all full of commodities, even to a printing presse, where the people and ladies tooke a fancy to have their names printed on the Thames; this humour tooke so universally, that ’twas estimated the printer gained 5*l.* a day for printing a line only, at sixpence a name, besides what he got by ballads, &c. Coaches plied from Westminster to the Temple, and from several other staires, to and fro, as in the streetes; sheds, sliding with sketes, and bull-baiting, horse and coach races, puppet-plays and interludes, cookes, tipping, and other lewd places; so that it seemed to be a bacchanalian triumph, or carnival on the water.”

King Charles II. visited these diversions, and even had his name printed on the ice, with those of several other personages of the royal family. *Mr. Upcott* possessed a specimen—a quarter of a sheet of coarse Dutch paper; within a type border, were the names of—

CHARLES, KING.  
JAMES, DUKE.  
KATHERINE, QUEEN.  
MARY, DUTCHESS.  
ANNE, PRINCESS.  
GEORGE, PRINCE.  
HANS IN KELDER.

London: Printed by G. Croom, on the ICE, on  
the River of Thames, January 31, 1684.

Feb. 6, the day after the break-up of this great frost, Charles II. died.

In some curious verses, entitled “*Thamasis’s Advice to the Painter, from her frigid zone,*” &c., “printed by G. Croom, on the river of Thames,” occurs:

“ To the *Print-house* go,  
Where *Men* the *Art of Printing* soon do know ;  
Where, for a *Teaster*, you may have your *Names*  
Printed, hereafter for to show the same :  
And sure, in *former Ages*, ne'er was found  
A *Press to print*, where men so oft were dround !”

The principal scene of this “Blanket-Fair” was opposite the Temple-stairs, as we see in a pencil and Indian-ink sketch, supposed by Thomas Wyote, dated “Munday, February the 4th, 1683-4:” in front are various groups of figures, and a line of tents; “Temple-street” stretches across the Thames. This drawing, with some prints, &c., illustrative of this frost, is in the *Crowle Pennant*.

1688-9. Great frost, Dec. 20 to Feb. 6: pools frozen eighteen inches thick, and the Thames' ice covered with streets of shops, bull-baiting, shows, and tricks; hackney-coaches plied in the ice-roads, and a coach and six horses was driven from Whitehall almost to London-bridge; yet in two days all the ice disappeared.

1709. The Thames again frozen over, and some persons crossed it on the ice: in the *Crowle Pennant* is a coarse bill, within a woodcut border of rural subjects, containing, “Mr. John Heaton, printed on the Thames at Westminster, Jan. the 7th, 1709.”

1715. Severe frost, from the end of November until Feb. 9 following, when the sports of 1683 were all renewed: in the *Crowle Pennant* is a copperplate view, with a line of tents from Temple-stairs, and another marked “Thames-street;” “Printed on the Thames, 1715-16;” and above it, “Frost Fair on the River Thames.”

1739-40. Dec. 25, another severe frost: the Thames floated with rocks and shoals of ice; and when they fixed, represented a snowy field, everywhere rising in masses and hills of ice and snow. Several artists made sketches; tents and printing-presses were set up, and a complete Frost Fair was again held upon the river, over which multitudes walked, though some fell victims to their rashness. It was in this fair that Doll, the noted pippin-woman, lost her life:

“Doll every day had walk'd these treacherous roads;  
Her neck grew warp'd beneath autumnal loads  
Of various fruit; she now a basket bore;  
That head, alas! shall basket bear no more.  
Each booth she frequent past, in quest of gain,  
And boys with pleasure heard her thrilling strain.  
Ah, Doll! all mortals must resign their breath,  
And industry itself submit to death!  
The cracking crystal yields; she sinks, she dies,—  
Her head, chopt off from her lost shoulders, flies;  
Pippins, she cried, but death her voice confounds,  
And pip, pip, pip, along the ice resounds.”—*Gay's Trivia*, b. ii.

Another remarkable character, “Tiddy Doll,” died in the same place and manner. (*J. T. Smith*.) In the *Crowle Pennant* are several prints of this Frost and Ice Fair. Some vintners in the Strand bought a large ox in Smithfield, to be roasted whole on the ice; and one Hodgeson, a butcher in St. James's Market, claimed the privilege of felling or knocking down the beast as a right inherent in his family, his father having knocked down the ox roasted on the river in the Great Frost, 1684; as himself did that roasted in 1715, near Hungerford Stairs: Hodgeson to wear a laced cambric apron, a silver-handled steel, and a hat and feathers. The breaking-up of this frost was an odd scene; the booths, shops, and huts being carried away by the swell of the waters and the ice separating.

1768. A violent frost, Jan. 1-21, when the piles of London Bridge sterlings were much damaged by the ice; on Jan. 5, a French vessel was wrecked upon a sterling, and two others were driven through the centre arch, losing their main-masts, and carrying away the lamps from the parapet.

1789, Jan. 8. The Thames frozen over, several purl-booths erected, and many thousands of persons crossed upon the ice from Tower-wharf to the opposite shore. The frost had then lasted six weeks. No sooner had the Thames acquired a sufficient consistency, than booths, turnabouts, &c., were erected; the puppet-shows, wild-beasts, &c., were transported from every adjacent village; and the watermen broke in the ice close to the shore, and erected bridges, with toll-bars, to make every passenger pay a half-penny for getting to the ice. A large pig was roasted on one of the roads, and a young

bear hunted on the ice near Rotherhithe; and the printing-press was erected, as usual, to commemorate the strange scene. Vast quantities of boiling water were every morning poured upon the bridge water-works, to set the wheels in motion, and twenty-five horses were used daily to remove the ice from around them; while at Blackfriars the masses of ice were 18 feet thick. The sudden breaking-up of the ice, with the rush of the people to the shores, at night, was a fearful scene. A vessel lying off Rotherhithe, fastened by a cable and anchor to a beam of a public-house, in the night veered about and pulled the house to the ground, killing five sleeping inmates.

1811, January. The Thames frozen over.

1813-14. Great frost, commenced Dec. 27, with a thick fog, followed by two days' heavy fall of snow. During nearly four weeks' frost, the wind blew almost uninter-ruptedly from the north and north-east, and the cold was intense. The river was covered with vast heaps of floating ice, bearing piles of snow, which, Jan. 26-29, were floated down, filling the space between London and Blackfriars Bridges; next day, the frost recommenced, and lasted to Feb. 5, uniting the whole into a sheet of ice. Jan. 30, persons walked over it; and Feb. 1, the unemployed watermen commenced their ice-toll, by which many of them received 6*l.* per day. The Frost Fair now commenced: the street of tents, called the City-road, put forth its gay flags, inviting signs, and music and dancing: a sheep was roasted whole before sixpenny spectators, and the "Lapland mutton" sold at a shilling a slice! Printing-presses were set up, and among other records was printed the following:

### Frost Fair.

Amidst the Arts which on the THAMES appear  
To tell the wonders of this icy year  
PRINTING claims prior place, which at one view  
Erects a monument of THAT and YOU.

Printed on the River Thames, February 4, in the 54th year of the reign of King George III. Anno Domini 1814.

One of the invitations ran thus:

"You that walk here, and do design to tell  
Your children's children what this year befell,  
Come buy this print, and then it will be seen  
That such a year as this hath seldom been."

In the Fair were swings, book-stalls, dancing in a barge, 'suttlng-booths, playing at skittles, frying sausages, &c. The ice and snow, in upheaved masses, as a foreground to St. Paul's and the City, had a striking effect; and the scene, by moonlight, was singularly picturesque. On Feb. 5, the ice cracked, and floated away with booths, printing-presses, &c.; the last document printed being a *jeu-de-mot* "to Madame Tabitha Thaw." Among the memorials is a duodecimo volume, pp. 124, now before us: it is entitled, "*Frostiana; or, a History of the River Thames in a frozen state, with an Account of the late Severe Frost, &c.; to which is added the Art of Skating.*" London: Printed and published on the Ice on the River Thames, February 5, 1814, by G. Davis;" the title-page was worked upon a large ice-island between Blackfriars and Westminster Bridges. In the *Illustrated London News*, No. 138, is an engraving of the Frost Fair of 1814, from a sketch near London Bridge, by Luke Clennell.

### FULWOOD'S RENTS,

**V**ULGO, "Fuller's Rents," in Holborn, nearly opposite Chancery-lane, is a court, now meanly inhabited; but was of much better repute in the time of James I., when its possessor, Christopher Fulwood, Esq., resided here. Strype describes it as running up to Gray's Inn, "into which it has an entrance through the gate" (now closed); "a place of good resort, and taken up by coffee-houses, ale-houses, and houses of entertainment, by reason of its vicinity to Gray's Inn. On the east side is a handsome open place, with a freestone pavement, and better built, and inhabited by private housekeepers. At the upper end of this court is a passage into the Castle Tavern, a house of considerable trade, as is the Golden Griffin Tavern, on the west side." Here

was John's, one of the earliest coffee-houses; and adjoining Gray's Inn gate, on the west side, is a deep-coloured brick house, once Squire's Coffee-house, whence some of the *Spectators* are dated: it has been handsome and roomy, with a wide staircase. Within one door of Gray's Inn was Ned Ward's (*London Spy*) punch-house, much frequented by the wits of his day.

For some time before 1699, until his death in 1731, Ward kept this house, which he thus puffs in his *London Spy*; being a vintner, we may rest assured that he would have penned this in praise of no other but himself:—

“To speak but the truth of my honest friend Ned,  
The best of all vintners that ever God made;  
He's free of the beef, and as free of his bread,  
And washes both down with his glass of rare red,  
That tops all the town, and commands a good trade;  
Such wine as will cheer up the drooping King's head,  
And brisk up the soul, though our body's half-dead;  
He scorns to draw bad, as he hopes to be paid;  
And now his name's up, he may e'en lie abed;  
For he'll get an estate—there's no more to be said.”

The Castle Tavern, mentioned by Strype, was many years kept by Thomas Winter (“Tom Spring”), the pugilist, who died here, August 20, 1851.

About the centre of the east side of Fulwood's Rents is a curious gabled and projecting house, *temp* James I. Mr. Archer has engraved a ground-floor room, entirely panelled with oak; the mantelpiece is well carved in oak, with caryatides and arched niches; the ceiling beams are carved in panels; and the entire room is original, except the window. A larger room on the first floor contains another old mantelpiece, very florid. The front of the house is said to be covered with ornament, now concealed by plaster. (*Vestiges of Old London*, part v.)

#### GARDENS.

FITZSTEPHEN records that in the time of Henry II. (1154–1189) the citizens of London had large and beautiful gardens to their villas. The royal garden at Westminster was noted for its profusion of roses and lilies in 1276; and there is extant an order of Edward I. for pear-trees for his garden, and that at the Tower.

“Within the compass of one age, Somerset House and the buildings were called country-houses; and the open places about them were employed in gardens for profit: and also many parts within the City and liberties were occupied by working gardeners, and were sufficient to furnish the town with garden-ware; for then but a few herbs were used at the table in comparison to what are spent now.”  
—*Stow*.

About two and a half centuries since, the citizens took their noon-tide and evening walks in their gardens. Cornhill was then an open space, and the ground from thence to Bishopsgate-street was occupied as gardens, as were also the Minories. Goodman's Fields were an extensive inclosure; and most of East Smithfield was an open space, partly used for bleaching. Spitalfields were entirely open. From Houndsditch, a street, but interspersed with gardens, extended nearly to Shoreditch Church, then nearly the last building in that direction. Moorfields were used for drying linen; cattle grazed and archers shot in Finsbury Fields, at the verge of which were three windmills. Goswell-street was a lonely road; and Islington Church stood in the distance, with a few houses and gardens near it. In Smithfield, horses were exercised, and on the western side was a row of trees. Clerkenwell was mostly occupied by the precincts of St. John's Priory, beyond which, on the Islington-road, were a few detached houses, with gardens. From Cow Cross to Gray's Inn-lane, the ground was either waste or in gardens; and between Shoe-lane and Fetter-lane was much open ground. At Drury-lane commenced the *village* of St. Giles: near the church were a few houses surrounded with trees. Beyond the church all was open country, the main roads being distinguished by avenues of trees. Leicester Fields and Solio were open ground. Spring Garden was literally a garden, reaching to the site of the present Admiralty. The dwellings in the lower part of Westminster were inns and poor cottages, with small gardens. Whitehall-palace had its stately gardens, as had also the several noble mansions on the south side of the Strand. Isaac Walton quotes from a contemporary German poet:—

"So many gardens, dressed with curious care,  
That Thames with Royal Tiber may compare."

These gardens had their water-gates; one of which, York-house-gate, remains, with a terrace shaded by lime-trees.

Leicester House, at the north-east corner of Leicester-square, had its spacious gardens, now the site of Lisle-street, built in 1791.

Holborn (Old-bourne) was famed for its gardens: Ely-place had its kitchen and flower gardens, vineyard and orchard, and the bishops were celebrated for raising choice fruit. (See ELY PLACE, p. 321.) Gerarde was an apothecary, and, before the year 1597, had a large physic-garden near his house in Holborn, where he raised 1000 plants and trees; a proof "that our ground could produce other fruits besides hips and haws, acorns, and pignuts." Gerarde had another physic-garden, in Old-street: his earliest publication was the Catalogue (in Latin) of his own garden in Holborn, printed in 1596, 4to; reprinted in 4to, 1599. The first edition was dedicated to Lord Burghley, whose garden Gerarde had superintended for twenty years: the second edition was dedicated to Sir Walter Raleigh. A copy of the first edition (of extreme rarity) is in the British Museum; and it proved of great use to Mr. Aiton in preparing his *Hortus Kewensis*, by enabling him to ascertain the time when many old plants were first cultivated. Gerarde dated the first edition of his *Herbal* from Holborn. Wood calls him "the best herbalist of his time." Among the Lansdowne MSS. in the British Museum, is a letter of Gerarde's own drawing-up, for Lord Burghley to recommend to the University of Cambridge the establishment of a physic-garden there, to encourage the "facultie of simpling." Several London localities of Gerarde's *simpling* may be gathered from his *Herbal*. Thus, he says: "Of water violets I have not found any such plenty in any one place as in the water ditches adjoining to Saint George his field, near London." He describes Mile End, Whitechapel, as "the common near London where penny-royal grows in great abundance." "The small wild buglosse grows upon the drie ditch bank about Pickadilla;" and he found "white saxifrage, burr-reedes, &c.," in the ditch, right against the place of execution, St. Thomas-a-Waterings, now the Old Kent-road.

Baldwin's Gardens, between Leather-lane and Gray's-inn-lane, were, according to a stone upon a corner-house bearing the arms of Queen Elizabeth, named after Richard Baldwin, one of the royal gardeners, who began building here in 1589.

Montague House, Bloomsbury, had its spacious gardens, "after the French manner;" and the gardens of the houses in Great Russell-street were noted for their fragrance. Strype (1720) describes the north side as having gardens behind the houses, with the prospect of pleasant fields up to Hampstead and Highgate, "inasmuch as this place is esteemed the most healthful in London."

The garden of the Earl of Lincoln was highly kept, long before the mansion became an Inn of Court. The Earl's bailiff's accounts (24 Edward I.) show it to have produced apples, pears, large nuts, and cherries sufficient for the Earl's table, and to yield by sale in one year 135*l.*, modern currency. The vegetables grown were beans, onions, garlick, leeks; hemp was grown; the cuttings of the vines much prized; of pear-trees there were several varieties; the only flowers named are roses. (*T. Hudson Turner.*) The "walk under the elms," celebrated by Ben Jonson, was a favourite resort of Isaac Bickerstaff. In 1 and 2 Philip and Mary, the walk under the trees in the coney-garth\* or cottrel-garden was made; and in 15 Car. II. 1663, the said garden was enlarged, and a terrace-walk made on the left side; of which Pepys says: "to Lincoln's-Inn, to see the new garden which they are making, which will be very pretty." The garden-wall in Chancery-lane is said to have been partly the labour of Ben Jonson.

"Gray's Inn for walks, Lincoln's Inn for wall,  
The Inner Temple for a garden, and the Middle for a wall."

*Lincoln's Inn.* By W. H. Spilsbury, Librarian, 1850.

The Inns of Court always boasted of their gardens. The Middle Temple has its gardens with an avenue of limes; the Inner Temple, a more extensive garden and pro-

\* The coney-garth was "well stocked with rabbits and game," and by various ordinances of the Society, *temp.* Edw. IV., Henry VII., and Henry VIII., penalties were imposed on the students hunting the rabbits with bows and arrows, or darts.

menade. In "the Temple Garden," Shakspeare has laid the scene of the origin of the red and white roses as the cognisances of the houses of York and Lancaster: Richard Plantagenet plucks a *white* rose, and the Earl of Somerset a *red* one; an altercation ensues, when the Earl of Warwick thus addresses Plantagenet:—

"In signal of my love to thee,  
Against proud Somerset and William Poole,  
Will I upon thy party wear this rose:  
And here I prophesy,—this brawl to-day,  
Grown to this faction, in the Temple Garden,  
Shall send, between the red rose and the white,  
A thousand souls to death and deadly night."

*First Part of Henry VI., act ii. sc. 4.*

The red and white Provence rose no longer blossoms here; but both the Temple Gardens are well kept, and chrysanthemums here attain surprising perfection until mid-winter:—

"Still alone, 'mid the tumult, these gardens extend;  
The elm and the lime over flower-beds bend;  
\* \* \* \* \*  
The boat, and the barge, and the wave, have grown red;  
And the sunset has crimsoned the boughs over-head:  
But the lamps are now shining, the colours are gone,  
And the garden lies shadowy, silent and lone."—L. E. L.

Both Lincoln and Gray's Inn had an uninterrupted view over fields and gardens to Hampstead and Highgate, which had then scarcely lost the rich woodland scenery of the ancient forest of Middlesex. Gray's Inn Gardens were laid out under the direction of Francis Bacon, who wrote so practically upon gardening.

"In the 40 Eliz., at a pension of the bench, 'the summe of 7*l.* 15*s.* 4*d.* laid out for planting elm trees' in these gardens, was allowed to Mr. Bacon (afterwards Lord Verulam and Lord Chancellor). On the 14th November, in the following year, there was an order made for a supply of more young elms; and it was ordered 'that a new rayle and quickset hedges' should be set upon the upper long walk, at the discretion of Mr. Bacon and Mr. Wilbraham; the cost of which, as appeared by Bacon's account, allowed 20th April, 42 Eliz., was 60*l.* 6*s.* 8*d.* Mr. Bacon erected a summer-house on a small mount on the terrace, in which, if we may be allowed the conjecture, it is probable he frequently mused upon the subjects of those great works which have rendered his name immortal."—Pearce's *Inns of Court*.

To this day here is a *Catalpa* tree, raised from one planted by Lord Bacon, slips of which are much coveted. The walks were in high fashion in Charles II.'s time; and we read of Pepys and his wife, after church, walking "to Gray's Inne, to observe fashions of the ladies, because of my wife's making some clothes."

The City Halls, and mansions of the civic aristocracy, usually had their gardens, with terraces and lime-tree walks, fountains, and summer-houses, and decorative grottoes.

Grocers' Hall had in 1427 its pleasant garden, to which the citizens were admitted on petition to the Company: it contained alleys, hedge-rows, and a bowling-alley, but was reduced in 1802, as we now see it. Drapers' Hall had its garden in 1551, when rents were paid for admission-keys, and it became a fashionable promenade: it is now open to the public. Merchant Tailors' Hall had its garden, with alleys and a terrace, a treasury and summer banqueting-room. Salters' Hall (Oxford-place) had its large garden, into which the infamous Empson and Dudley (*temp.* Henry VII.), living in "two faire houses" in the rear, "had a dore of intercourse;" and here "they met and consulted of matters at their pleasures" (*Stow*); this being originally the garden of the Priors of Tortington. Ironmongers' Hall had also its garden, for which we find charges for "cutting of the vines and roses, and knots of rosemary."

Sir Paul Pindar, contemporary with Sir Thomas Gresham, had his garden and park, with an embellished lodge in the rear of his mansion, now a public-house in Bishops-gate-street; the grounds are covered with lanes, alleys, and blind courts, reaching to Finsbury-square. Gresham-house had also its spacious walks and gardens.

Finsbury-circus has a fine garden, which was threatened with devastation by a Railway Company, in 1862, when it was saved by the energy of the Directors, one of whom, Mr. Alfred Smee, F.R.S., thus successfully advocated the preservation of this lung of the City of London:—

The centre constitutes a circle planted with exquisite taste with the choicest trees, and forms a *tout ensemble* which might be admired in any part of the world. It challenges for beauty the garden of any square in London, and it is the admiration and astonishment of foreigners as an affair of private enterprise, and not a creation of the State.

A return made by the gardener shows that it contains three trees 60 feet high, and 180 feet in the circle of the head; 20 trees between 45 and 55 feet high: 34 trees between 35 and 45 feet high; 60 trees between 25 and 35 feet high; and 107 trees between 15 and 30 feet high; besides upwards of 700 fine shrubs, and several beautiful weeping trees, all of more than half a century of growth. The effect of trees in the centre of towns cannot be too much appreciated. They carry up large quantities

of water into the over-dried atmosphere, and this little forest of trees must play an important and beneficial part to the neighbourhood.

At the present time the City is too crowded, and contains by far too few open spaces and trees. There are two trees in the Bank of England and one in Cheapside, two or three smaller ones in St. Paul's-churchyard, but where are such trees as we possess in Finsbury Circus?

Clerkenwell was, in the present century, famous for its gardens. About the year 1830, the lined slope on the east side of Bagnigge-wells-road, had a pleasant rural aspect from its number of "Myddelton Gardens," which belonged to private individuals resident in Clerkenwell, who, in their leisure hours, cultivated here flowers and vegetables. On these extensive garden-grounds streets and squares of houses have been erected. Another famous group of Clerkenwell gardens, formerly belonging to the Hospital of St. John of Jerusalem, and adjoining Clerkenwell-green, were called Garden-alleys; after the Dissolution, the Hospital-close, of three acres, was converted into gardens.

Milton had a poetic liking for "garden-houses," of which there were many in his time: his house in Aldersgate-street opened into a garden; in 1651, he lived in Petty France, now Westminster (York-street, No. 19), "a pretty garden-house, opening into the Park;" a cotton-willow tree is said to have been planted here by the poet's hand. Aaron Hill had a house in Petty France, with a garden reaching to St. James's Park, and a grotto in it, described in his *Letters* at some length.

Sir John Hill's famous "physic-garden" was at Bayswater; here he cultivated medicinal plants, and prepared essences, tinctures, &c. The site, after being long converted into tea-gardens, is now covered with handsome houses.

Goring House, which occupied the site of Buckingham Palace, had a fountain-garden, westward of which was the cherry-garden and kitchen-garden of Hugh Audley, Esq., from whom Audley-street, Grosvenor-square, is named. Here, too, was a grove of mulberry-trees, planted by King James I.; afterwards "the Mulberry Garden." There was another mulberry plantation at Chelsea, upon part of the grounds of Beaufort House.

Waller describes the wall in St. James's Park as

"All with a border of rich fruit-trees crown'd."

Brompton-park Nursery can be traced from 1681. Evelyn describes it as a large and noble assembly of trees, evergreens, and shrubs, for planting the bosage, wilderness, or grove; with elms, limes, platans, Constantinople chestnuts, and black cherry-trees: its "potagere, meloniere, culiniere" garden; seeds, bulbs, roots, and slips, for the flowering garden: occupying about 56 acres. In 1705, its plants, at 1*d.* each, were valued at 40,000*l.*; and it had a wall half a mile long, covered with vines. London and Wise were the proprietors in 1694: they are praised by Addison in the *Spectator* for their laying out of Kensington-gardens, where we also see Kent's ha-ha. The "Brompton Stock" is a memorial of the celebrity of this district, which extended to Chelsea; but the gardens have mostly disappeared, and their ground is built upon: the site of Trinity Church, Brompton, was, in 1828, a market-garden. Chelsea Hospital, however, retains its terrace, little canals, shady lime-walks, and gigantic plane-trees—a curious specimen of the Dutch style, *temp.* William III.; it has an octagon summer-house, built by Sir John Vanbrugh. "The Old Men's Gardens" to the south-east, including a part of the site of old Ranelagh, were added in 1826, when Lord John Russell was Paymaster-General: here each pensioner had his garden, the dressing of which afforded society and employment; but these gardens have disappeared.

In a garden at Little Chelsea the *white* moss-rose was first discovered, and successfully cultivated. As the eighteenth century advanced, the Botanic Gardens at Chelsea, and its curator, Philip Miller, came into notice.

Buckingham-Palace Gardens comprise about forty acres, of which nearly five are a lake: upon a mount is a pavilion of Chinese design, the interior decorated in the Pompeian and Raphaellesque style, with paintings from Milton's *Comus*, and Scott's novels and poems, by Eastlake, Maclise, Ross, &c.: the grounds are secluded by majestic elms; whilst the principal front of the palace commands the landscape-garden of St. James's Park. The old palace of St. James's and Marlborough House, have their gardens; and in the same line were the grounds of Carlton House, with conservatories and rookery, now occupied by lofty terraces of mansions; but Buckingham House, and the several Club-houses on the south side of Pall Mall, have their gardens.

Kensington Palace has its flower-garden of quaint design. In this direction lies

Holland House, with its stately cedars, oaks, and planes; its flower-garden, with evergreens clipped into fantastic forms; beds of Italian and old English character, fountains and terraces befitting the architectural garden of this Elizabethan mansion: in the "French Garden," in 1804, was first raised in England the Dahlia, from seeds sent by Lord Holland from Spain.

Campden House, Kensington, had a sheltered garden, in which the wild olive once flourished; and here a caper-tree produced fruit yearly for a century.

Vauxhall, noticed by Evelyn in 1661, as "the New Spring Garden, a pretty-contriv'd plantation," is mentioned otherwise than as a mere promenade: Monoconys, about 1663, describes its squares "inclosed with hedges of gooseberries, within which were roses, beans, and asparagus."

Hard by was Tradescant's garden at South Lambeth, well stored with rare and curious plants collected in his travels: including roses from Rose Island, near Port St. Nicholas. This garden existed in 1749, and is described in *Philos. Trans.* vol. xlvi. Tradescant was "King's Gardener," *temp.* Charles I.; and, with his son, assembled at Lambeth the rarities which became the nucleus of the Ashmolean Museum.

In the Catalogue of their Garden, published by the second Tradescant, are Hollyhocks, Southernwood, Wormwood, the classical Acanthus, Prince's Feathers; that "great Flouramour, or purple flowre gentle;" Anemones of all sorts; Dogsbane; the "Arbor Judæ, or Judas Tree, with red flowres;" the Birthworts of the south; numerous North-American plants; Meadow Saffrons from Constantople; that "*Fragraria Novæ Angliæ nondam descripta*," the mother of our Keen's Seedlings, and Scarlet and British Queen Strawberries; the "*Hippomarathrum*," or Rhubarb of the Monks; Marvels of Peru; "*Paralysis fatua*, foolish Cowslip, or Jack-an-apes on Horseback," probably the green monster of the common Oxlip; Pappas, or Virginian Potatoes; "*Populus alba Virginiana Tradescanti*," apparently one of our Tacamahacs; Musk Roses, Double Yellow Roses, and "Muscovite Roses;" Fox Grapes, from Virginia; White and Red Burlett Grapes, Currant Grape, Muscadells, "Frontinack or Musked Grape, white and red;" and other rarities, filling more than 100 pages.—*Gardener's Chronicle*, 1852.

Lambeth was formerly noted for its public gardens. Here was Cuper's garden, laid out with walks and arbours by Boydell Cuper, gardener to Thomas Earl of Arundel, who gave Cuper some of the mutilated Arundelian marbles (statues), which he set up in his garden: it was suppressed in 1753: the site is now crossed by Waterloo-road. The site of St. John's Church, and Christ Church, Blackfriars-road, was formerly occupied by gardens, through which lay the old Halfpenny Hatch footpath. (See ST. GEORGE'S FIELDS, p. 376.)

Opposite the Asylum were the Apollo Gardens, opened about 1788: the old orchestra was removed to Sydney Gardens, Bath. In the present Southwark-bridge-road was Finch's Grotto and Garden, established about 1760: here Suett and Nan Cattley acted and sang: the old Grotto house was burnt in 1795, but was rebuilt, and a stone inserted with this inscription:—

"Here Herbs did grow,  
And Flowers sweet;  
But now 'tis call'd  
St. George's-street."

Attached to some of the modern mansions *in the town* are pleasant landscape-gardens: from the rear of Devonshire House is a *rus-in-urbe* seemingly extending to Berkeley-square, by means of the sunken passage between the grounds of Lansdowne and Devonshire Houses.

The gardens in the centres of the several Squares are oases highly kept. Mr. Loudon was one of the first to recommend the lighter trees, as the Oriental plane, the sycamore, the almond, and others, which now add greatly to the beauty of the London Squares.

The Nursery and Market Gardens around London have yielded to railways and the building of suburban towns.

The growth of London has pushed the Market Gardener gradually into the country; and now, instead of sending up his produce by his own waggons, he trusts it to the railway, and is often thrown into a market fever by a late delivery. To compensate him, however, for the altered state of the times, he often sells his crops like a merchant upon 'Change, without the trouble of bringing more than a few hand-samples in his pockets. He is nearly 70 years of age, but looks scarcely 50, and can remember the time when there were 10,000 acres of ground within four miles of Charing-cross under cultivation for vegetables, besides about 3000 acres planted with fruit to supply the London consumption. He has lived to see the Deptford and Bermondsey gardens curtailed; the Hoxton and Hackney gardens covered with houses; the Essex plantations pushed further off; and the Brompton and Kensington nurseries—the home of vegetables for centuries—dug up and sown with International Exhibition temples, and Italian gardens that will never grow a pea or send a single cauliflower to market. He has lived to see Guernsey and Jersey, Cornwall, the Scilly Islands, Holland, Belgium, and Portugal, with many other more distant places, competing with the remote outskirts of London bricks and mortar,

and has been staggered by seeing the market supplied with choice early peas from such an unexpected quarter as French Algeria.—*Cornhill Magazine*, 1866.

In the heart of London, some gardens are much frequented by birds. The garden attached to the house of Mr. John Britton, at the south end of Burton-street, St. Pancras, was much resorted to by the sparrow, robin, tomtit, wren, crow, starling, and whitethroat, the latter having bred here for several years.

In St. George's, Bloomsbury, and a few other parishes, are held Working Men's Flower-shows of window-sill floriculture—as fuchsias, geraniums, and other flowering plants; annuals are grown in pots by Sunday-school children, who thus rear dwarf orange and lemon-trees, walnut-trees, and even date-palms and locust-trees, from stones and seeds.

Churchyards, no longer used for interments, are now laid out as gardens. St. Botolph's, Bishopsgate, has its flower-beds enriched with terra-cotta tiles, instead of box edging; Virginia stocks, scarlet and yellow nasturtiums, are favourite flowers; the shrubs are mostly poplars and planes: a sum is yearly voted by the vestry to keep up this garden. The south-eastern portion of the burial-ground of St. Paul's Cathedral has also been laid out in flower-beds, and planted with shrubs.

**BOTANIC GARDENS.**—In Great Britain, the first Botanic Gardens were called Physic Gardens, and were used principally as places for growing and studying medical plants. The first English Botanic Garden of which we have any distinct account was at Syon House, where it was under the superintendence of Dr. Turner, one of our earliest English botanists. This was about the middle of the sixteenth century; but a few years later we find botany extensively cultivated in England; and L'Obel, after whom the genus *Lobelia* was named, was styled herbalist and botanist to James I. In the next reign, as we have seen, Tradescant had his botanic garden at South Lambeth; and in the reign of Charles II., that at Chelsea was established.

**BOTANIC GARDEN, OR "PHYSIC GARDEN," OF THE APOTHECARIES' COMPANY,** upon the Thames Bank at Chelsea, is maintained by the Company for the use of the medical students of London. The ground was first laid out in 1673. Evelyn saw here, in 1685, a tulip-tree and a tea-shrub, and the first hot-house known in England; "the subterranean heat conveyed by a stove under the conservatory, all vaulted with brick," so that "the doores and windowes" are open in the hardest frosts, excluding only the snow. On Sir Hans Sloane purchasing the manor of Chelsea in 1721, he granted the freehold of the Garden to the Apothecaries' Company, on condition that the Professor who gave the lectures to the medical students should deliver annually to the Royal Society fifty new plants, well cured and specifically described, and of the growth of the Garden, till the number should amount to 2000. This condition was complied with, and a list of the new plants published yearly in the *Philosophical Transactions*, for about fifty years, when, 2500 plants having been presented, the custom was discontinued. The garden is about three acres in extent: it contains a marble statue of Sir Hans Sloane, by Rysbrack, set up in 1733; and it formerly had two noble cedars, planted in 1683, when about three feet high: in 1766, they measured more than twelve feet in circumference at two feet from the ground, and their branches extended forty feet in diameter. One of these cedars is said to have been brought from Lebanon for Sir Hans Sloane; one was blown down in the year 1854. The Apothecaries' Company give annually a gold and silver medal to the best informed students in botany who have attended this Garden; and they still observe an old custom of summer *herbarizing*, or simpling excursions to the country, when the members are accompanied by apprentices or pupils.

**BOTANIC SOCIETY (ROYAL),** incorporated in 1839, have gardens occupying a portion of the Inner Circle, Regent's Park, formerly Jenkins's Nursery. They consist of about eighteen acres, but they have been laid out by Marnock with so much skill as to appear of very much greater extent: they contain a winter garden; besides a conservatory, entirely of glass and iron, covering 15,000 square feet, which cost about 6000*l.*, and will accommodate 2000 visitors. The Society hold exhibitions, and distribute prize medals. The Rock, Winter, and Landscape Gardens, with their lake and artificial mound, are very picturesque, and of the natural school. There are, also, a Library;

and an useful Museum, illustrative of the varieties of structure in the parts of plants, their products and uses. In several parts of the botanic ground are privet hedges, each forming the segment of a circle, and curiously cut so as to make each look like a miniature green wall. These hedges are for the purpose of sheltering some of the more tender plants from the wind. Beyond the arrangement of plants according to the Natural System, is a medical garden. Farther on is a collection of British plants, arranged according to the classes and orders of Linnæus, as an example of the Linnæan System.

HORTICULTURAL SOCIETY'S GARDENS, The, at Chiswick, are thirty-three acres in extent, and were commenced in 1821: they comprise Orchard and Kitchen, Hot-house and Tender and Hardy departments, the latter containing the arboretum and flower-garden; besides a conservatory, 184 feet long, 25 feet high, and about 30 feet wide. The arboretum contains the richest collection of trees and shrubs in Europe; the orchard is the most perfect ever formed; and the forcing-houses and hot-houses are complete. The Society distributes plants, seeds, and cuttings, to Members, foreign correspondents, and the British colonies. In 1861, the Horticultural Society decided upon forming another Garden at South Kensington, where the Commissioners of the Great Exhibition of 1851 let to the Society the upper part of the great centre square of their estate, about twenty-two acres; the Commissioners expending about 50,000*l.* in building arcades in the new Gardens; the Society expending an equal amount in terraces, fountains, conservatories, and in laying out the grounds. The arcades were designed by Sydney Smirke and Captain Fowke, and the Gardens were laid out by Nesfield. The great Conservatory, at the northern extremity of the Garden, is of glass and iron, and is 263 feet long, and 75 feet 6 inches in height: the span of the arched roof is 45 feet; the columns are 15 feet apart; there is an arcade, with flights of stairs, leading to the gallery and to the top of the upper arcades in the Garden. The arcade in the conservatory is formed with terra-cotta columns, and ornamented brick arches. The works are thus jocosely described:—"So the brave old trees which skirted the paddock of Gore House were felled, little ramps were raised, and little slopes sliced off, with a fiddling nicety of touch which would have delighted the imperial grandeur of the Summer Palace; and the tiny declivities thus manufactured were tortured into curvilinear patterns, where sea-sand, chopped coal, and powdered bricks atoned for the absence of flower or shrub." (*Quarterly Review*.) The area was inclosed with Mr. Smirke's Renaissance arcades, in brick at the upper portion, and the terra-cotta imitation of the Lateran cloister, produced by the Department round the southern half. Among the more prominent ornamental objects in the Gardens are the cascade and its stupendous basin, and Minton's superb Majolica Fountain. The Gardens are elaborately described in *The Book of the Royal Horticultural Society*, 1862-1863. (See MUSEUMS: South Kensington.)

Kew ROYAL BOTANICAL GARDENS are generally considered the richest in England, though comparatively of recent formation. The Prince of Wales, son of George II., and father of George III., lived at Kew House, which had extensive pleasure-grounds; and, after his death, his widow, the Princess Dowager, assisted by the Earl of Bute, established the Botanic Garden. Several years afterwards Sir Joseph Banks bestowed upon it the immense collection of plants and seeds he had obtained in his voyages; and other travellers following his example, the Gardens soon became filled with the rarest and choicest plants. The new Palm-house is 362 feet 6 inches long; the ribs and columns are of wrought iron, and the roofs are glazed with sheet glass, slightly tinged green; the floor is of perforated cast-iron, under which are laid the pipes, &c., for warming by hot water; and the smoke is conveyed from the furnaces by a flue, 479 feet, to an ornamental shaft or tower, 60 feet in height. The cost of this magnificent Palm-house has been upwards of 30,000*l.* The Gardens, under the judicious curatorship of Sir W. J. Hooker, were greatly extended and improved. Among the rarities here is a weeping willow, raised from that which overshadowed Napoleon's remains at St. Helena;\* the Egyptian papyrus; the bread-fruit-tree from the South Sea Islands;

\* Willows from slips brought from Napoleon's trees at St. Helena were, in the year 1836, flourishing in the garden of Captain Stevens, Beaumont-square, Mile End; in the grounds of the late Sir Thomas

the cocoa-nut, coffee, and cow trees; the banana and cycas (sago); the gigantic Tussack grass, &c. The Gardens are the richest in the world in New Holland plants. The Herbarium receives large collections from important Government expeditions; applications for advice from persons proceeding to take charge of plantations of tea, cinchona, cotton, coffee, &c.; and the redoubled activity of the colonies in the publication of their *Floras*, which, though paid for by the Colonial Government, can only be prepared at Kew, or by persons in direct and constant correspondence with its Herbaria and Museums. The *Flora* of the British possessions in India is proceeded with upon the same plan as the colonial *Floras*. Very satisfactory has been the success of the introduction of cinchona plantations in India, in the establishment of which Kew has had so large a share.

## GAS-LIGHTING.

THE Very Rev. Dr. Clayton, Dean of Kildare, having experimentally ascertained that a permanently elastic and *inflammable* æriform fluid is evolved from pit-coal; described the same in a letter to the Hon. Robert Boyle, who died in 1691; though the discovery was not published in the *Philosophical Transactions* till the year 1739. Hughes, in his *Treatise on Gas-works*, 1853, says:—"To the celebrated Dr. Watson, Bishop of Llandaff, we are indebted for the first notice of the important fact, that coal gas retains its inflammability after passing through water into which it was allowed to ascend through curved tubes;" but there is evidence in the *Miscellanea Curiosa*, 1705-6-7, vol. iii. p. 281, to show that Dr. Clayton also discovered that gas retains its inflammability after passing through water. (See *Notes and Queries*, 2nd S., No. 38, pp. 324-5.)

Although the Chinese have, for ages, employed natural Coal-Gas for lighting their streets and houses, only within the present century has Gas superseded in London the dim oil-lights and crystal-glass lamps of the preceding century. Dr. Johnson is said to have had a prevision of this change; when, one evening, from the window of his house in Bolt-court, he observed the parish lamplighter ascend a ladder to light one of the glimmering oil-lamps: he had scarcely descended the ladder halfway when the flame expired; quickly returning, he lifted the cover partially, and thrusting the end of his torch beneath it, the flame was instantly communicated to the wick by the thick vapour which issued from it. "Ah!" exclaimed the Doctor, "one of these days the streets of London will be *lighted by smoke!*" (*Notes and Queries*, No. 127.)

Coal-gas had been used for lighting by William Murdoch, in Cornwall, Birmingham, and Manchester as early as 1792, when F. A. Winsor, a German, after several experiments, lighted the old Lyceum Theatre in 1803-1804; he also established a New Light and Heat Company, with 50,000*l.* for further experiments; in 1807 he lighted one side of Pall Mall, and on the King's birthday (June 4,) brilliantly illuminated the wall between Pall Mall and St. James's Park; and next exhibited Gas-light at the Golden-lane Brewery, August 16, 1807.

In 1809 Winsor applied to Parliament for a charter, when the testimony of Accum, the chemist, was bitterly ridiculed by the Committee. In 1810-12 was established the Gas-Light and Coke Company, in Cannon-row, Westminster; removed to Peter-street, or Horseferry-road, then the site of a market-garden, poplars, and a tea-garden. In 1814 Westminster Bridge was lighted with gas; and the old oil-lamps were removed from St. Margaret's parish, and gas lanterns substituted; and on Christmas-day, 1814, commenced the general lighting of London with gas. Yet the scheme had been so ridiculed, that Sir Humphry Davy, F.R.S., asked "if it were intended to take the dome of St. Paul's for a gasometer." Dr. Arnott has truly said, with respect to the mistakes about gas-lighting, that "such scientific men as Davy, Wollaston, and Watt, at first gave an opinion that coal-gas could never be safely applied to the purposes of street lighting."

"Winsor's patent Gas" first illumined (Jan. 28, 1807,) the Carlton House side of

Farquhar at Roehampton; in the garden of the Roebuck Tavern, Richmond Hill; at No. 1, Canonbury-place, Islington; in Mr. Bentley's garden, Highbury Grange; at No. 10, King-street, St. James's; in the Surrey Zoological Gardens; at Kew; and at No. 11, Drompton-row.—J. H. Fennell, in Loudon's *Arboretum Britannicum*.

Pall Mall; the second, Bishopsgate-street. The writer attended a lecture given by the inventor; the charge of admittance was three shillings, but, as the inventor was about to apply to Parliament, members of both houses were admitted gratis. The writer and a fellow-jester assumed the parts of senators at a short notice. "Members of Parliament!" was their important ejaculation at the door of entrance. "What places, gentlemen?" "Old Sarum and Bridgewater." "Walk in, gentlemen." Luckily, the real Simon Pures did not attend. This Pall Mall illumination was further noticed in *Horace in London* :—

"And Winsor lights, with flame of gas,  
Home to King's-place his mother."

In the Peace Rejoicings of 1814, the Chinese bridge and pagoda on the canal, in St. James's Park, were lighted with gas. Mr. Jerdan, in his *Autobiography*, relates :—

"My friend, David Pollock, who was about the earliest promoter of the introduction of gas from the invention of Mr. Winsor—the first successful experimentalist with it in his own dwelling—and for 30 years Governor of the Chartered Gas Light and Coke Company, was so concerned in the application, that he hastened to London from the Circuit to be present at the lighting of the bridge and pagoda with this new flame. Mortifying to relate, it will be remembered that the pagoda caught fire: the gas was put out, happily without explosion, and every part thrown into smouldering darkness."

In 1814, a Committee of Members of the Royal Society was appointed to inquire into the causes which led to an explosion of the Gas-works in Westminster, which had only just been established. The Committee consisted of Sir Joseph Banks, Sir C. Blagden, Col. Congreve, Mr. Lawson, Mr. Rennie, Dr. Wollaston, and Dr. Young. They met several times at the Gas-works, for the purpose of examining the apparatus, and made a very elaborate Report. They were strongly of opinion that if gas-lighting was to become prevalent, the Gas-works ought to be placed at a considerable distance from all buildings, and that the reservoirs, or gasometers, should be small and numerous; and always separated from each other by mounds of earth, or strong party-walls. (Weld's *Hist. Royal Society*, vol. ii. pp. 235-6.)

In 1822, St. James's Park was first lighted with gas; and the last important locality to adopt gas lighting was Grosvenor-square in 1842.

Theatres were first lighted in 1817-18; church clock-dials in 1827. The Haymarket was the last of the London theatres into which gas was introduced, in consequence of some absurd prejudice of the proprietor of that theatre, who bound the lessee to adhere to the old-fashioned method of lighting with oil. The change took place April 15, 1853.

Coal-gas is made from coal enclosed in red-hot cast-iron or clay cylinders, or retorts; when hydro-carbon gases are evolved, and coke left behind; the gas being carried away by wide tubes, is next cooled and washed with water, and then exposed to lime in close purifiers. It is then stored in sheet-iron gas-holders, miscalled gasometers: some of which hold 700,000 cubic feet of gas; and the several London Companies have storage for millions of cubic feet of gas. Thence it is driven by the weight of the gas-holders through cast-iron mains or pipes under the streets, and from them by wrought-iron service-pipes to the lamps and burners.

The London Gas Company's works, Vauxhall, are the most powerful and complete in the world: from this point, their mains pass across Vauxhall-bridge to western London; and by Westminster and Waterloo Bridges to Hampstead and Highgate, seven miles distant, where they supply gas with the same precision and abundance as at Vauxhall.

Gas made from oil and resin is too costly for street-lighting, but has been used for large public establishments. Covent-garden Theatre was formerly lighted with oil-gas, made on the premises; and the London Institution, with resin-gas, first made by Mr. Daniell. The lime-ball, Bude, Boccus, and electric lights have been exhibited experimentally for street-lighting, but are too expensive. Upon the Patent Air-light (from the vapour of hydro-carbon, mixed with atmospheric air), proposed in 1838, upwards of 30,000*l.* were expended unsuccessfully.

What has the new light of all the preachers done for the morality and order of London, compared to what had been effected by gas lighting! Old Murdoch alone has suppressed more vice than the Suppression Society; and has been a greater police-officer into the bargain than old Colquhoun and Sir Richard Birnie united.—*Westminster Review*, 1829.

From a recent Parliamentary Return, it appears that in the year 1865, the total revenue paid by the

consumers and the public for gas in the metropolis, amounts to the large sum of 1,767,261*l.* 1*9s.* 9*d.* per annum. This total increases every year with the growth of the metropolis and the increased consumption of gas.

A public lamp has been kept up in a part of Billingsgate, where, upwards of 200 years ago, a citizen fell at night and broke his leg, and afterwards bequeathed a sum of 4*l.* a year for the maintenance there of a public light at night for all time. The money has been paid for two centuries; and, since the introduction of gas, to a gas company, who have kept up the light.

An ordinary candle consumes as much air while burning as a man in health while breathing; the same may be said with regard to gas, oil-lamps, &c., bearing a proportion to the amount of light evolved. One hour after the gas of London is lighted, the air is deoxygenized as much as if 500,000 people had been added to its population. During the combustion of oil, tallow, gas, &c., water is produced. In cold weather we see it condensed on the windows of ill-ventilated shops. By the burning of gas in London during twenty-four hours, more water is produced than would supply a ship laden with emigrants on a voyage from London to Adelaide.

#### GATE-HOUSE (THE), WESTMINSTER,

**B**UILT *temp.* Edward III. as the principal approach to the Monastery, stood at the western entrance of Tothill-street, and consisted of two gates, the southern, leading out of Great Dean's-yard, and a receptacle for felons. On the east side was the Bishop of London's prison for clerks-convict; the rooms over the other gate adjoining, but towards the west, being a prison-house for state, ecclesiastical, and parliamentary offenders, prisoners from the Court of Conscience, as well as for debtors and felons. The latter were brought hither through Thieving-lane and Union-street, to prevent escape by entering the liberties of Sanctuary.

Among the distinguished prisoners confined here were, Nicholas Vaux, for propagating the Romish religion—he died here of cold and hunger, 1571; Lady Purbeck, for adultery, 1622—she escaped to France, disguised in a man's dress; John Selden, 1630; Sir Walter Raleigh, his last prison-house, whence he was led to the block in Old Palace-yard; Lovelace, the Cavalier poet, who wrote here his loyal song, "To Althæa, from prison;" Sir Charles Lyttleton, whom Clarendon said was "worth his weight in gold;" in 1690, Pepys, the diarist, charged with being affected towards the abdicated James II.; Sir Jeffrey Hudson, the court-dwarf, suspected of joining the Popish Plot, died here; in 1701, five "men of Kent," for a "scandalous, insolent, and seditious" petition to the House of Commons; in 1716, Thomas Harley, for prevarication to the House of Commons; the nonjuring Jeremy Collier, 1692; and Richard Savage, the poet, committed here for the murder of Mr. Sinclair in a tavern fray. The debtors used to let down upon a pole an alms-box, to collect money from the passers in the street. The Gate-house was taken down in 1777; except one arch, which remained till 1836 in the wall of the house once inhabited by the Right Hon. Edmund Burke. (*See* Walcott's *Westminster*, p. 273.)

#### GEOLOGY OF LONDON.

**W**E give the views of certain of our leading geologists. The area on which the metropolis is situated, as well as the surrounding district to a distance varying from a radius of ten to twenty or thirty miles, consists of the marine tertiary *eocone* (dawn of recent) strata, which have been deposited in, and still occupy a depression or excavation of the chalk called the London basin. Around this formation the chalk forms a distinct boundary, on the south, west, and north rising up into chains of hills or downs, averaging 400 feet in height above the level of the Thames; but on the east the range is broken, and the tertiary basin lies open to the sea, affording a passage for the Thames and its tributary streams. (*Mantell.*)

The chalk, so prominent in the country around Gravesend, Croydon, and Epsom, passes beneath London at a depth not exceeding 150 to 250 feet. It is covered, first, by a series of beds of sand and mottled clays, 50 to 80 feet thick; and these are again overlaid by the London clay, from 100 to 400 feet thick: in the south-east corner of the county it is only 44 feet thick; while at White's Club-house, St. James's-street, it is 235 feet. This clay is usually very tough and tenacious, with the exception of a portion of its upper beds, which is mixed with sand. Mr. R. W. Mylne, F.G.S., in his

“Geological and Topographical Maps,” 1852, was the first to point out the exact extent of these higher beds, upon the nature of the surface on which the pleasant character of the country of Highgate and Hampstead is dependent.\* But the most remarkable variety in the geological features—a variety attended by a corresponding diversity of scenery—occurs in the district between Woolwich, Greenwich, Blackheath, and Lewisham. We there find the outcrops of no less than five different groups of strata, commencing with the chalk and ending with the London clay. Throughout a great part of London, this clay is overlaid by drift gravel, varying from 5 to 20 feet in thickness. The chalk basin, formed by the strata bending or dipping in the middle, contains pure water; into this formation the Artesian Wells of London are often carried down; but it is a question as to the quantity. (*See ARTESIAN WELLS*, p. 23.)

The gravel is not confined to the low grounds, but caps the highest summits of the districts—*e.g.*, Highgate on the north, and Shooter’s Hill on the south, of the Thames. To explain this distribution of the gravel by the operation of the actual rivers, we must first suppose that an uniform plain originally existed from the summit of Highgate to the Hertfordshire chalk downs, and from the top of Shooter’s Hill to those of Kent, on the surface of which the rivers once flowed; secondly, that these rivers have subsequently washed away all that immense mass of material which would be requisite thus to re-construct the surface; and thirdly, that after having worn down that surface into nearly its present form, the rivers perpetually shifted their channels, so as to distribute the gravel equally over the whole plain of London, yet remained long enough in each channel to lodge there deposits of this gravel 20 or 30 feet thick. (*Conybeare.*)

Mr. Prestwich, F.R.S., F.G.S., has, in three lectures, entitled *The Ground beneath Us*, most lucidly explained its geological phases and changes. Thus, immediately below the vegetable soil, in many parts of the metropolis, we find a bed of ochreous-coloured gravel, which is the great source of water-supply to all the historic pumps of the City and of Westminster. The greater part of this gravel was brought from the hills of Surrey and Sussex, which have sent us alike the flints, the sandstone and the chert, which compose the bulk of it. A few pebbles formed of quartz, slate and other substances, have evidently been brought from the north-west, by forces acting in a direction diametrically opposite to those which wore down the chalk of Southern England, and deposited its flints in the London basin. How the gravel came is explained by these hypotheses:—1. A great body of water may have swept from the southward into the valley of the Thames; 2, a large river flowing through Sussex and Surrey may have brought down fragments of the rocks over which it passed; 3, marine currents may have scattered the gravel over the surface of the country; 4, ice may have brought its vast, and, as yet, perhaps, imperfectly understood power to aid in the production of the phenomena around us. To all these theories there are objections; but we may provisionally accept them all, and allow that the force to which each would assign a too exclusive pre-eminence may have done its part in heaping up that mighty gravel-bed which is so important to the health of the “world-city on the banks of the Thames.” Mr. Prestwich has examined both the position of the gravel in the geological series, and the organic remains which are found in various parts of it; in which investigation he has drawn largely upon Professor Owen’s *British Fossil Mammals and Birds*. On the whole, he concludes that the gravel was spread over Clapham-common before the land in the neighbourhood of London had quite assumed its present configuration.

The London clay immediately underlies the gravel of the metropolis, at a depth generally of from three to twelve feet; although, of course, it is really separated from it by a vast interval of geological time, by part of the Eocene and by all the Miocene and Pliocene periods. The London clay is very homogeneous in its mass, and where fully developed it measures from 400 to 500 feet in thickness. In the middle of the Thames Valley a great portion of it has been swept away, and at Clapham it is only about 200 feet thick. After determining the position of the London clay in the geo-

\* Mr. Mylne has issued a “Map of the Geology and Contours of London and its Environs,” 1857, which, to a scale of 3¼ inches to one mile, exhibits an area of 176 square miles—extending from Kew-bridge on the west to Plumstead Marshes on the east, distant sixteen miles; and from Hornsey on the north, to the Crystal Palace on the south, distant eleven miles—showing the variations of level by contour lines, and the geological features of the surface of the ground in and around London, and giving much other useful information.

logical scale, Mr. Prestwich examines the organic remains of the formation, from the microscopic foraminifera up to pachyderms allied to the tapir of South America. The plants of Sheppey are also noticed. The characteristic pyritized fruits and twigs of the London clay may be found by tens of thousands upon the open beach at Sheerness.

Lower London Tertiaries are a much less homogeneous deposit than the mass of clay which lies above it. It is divided into three sub-groups, the highest of which is known as the "basement bed" of the London clay. This is a marine deposit, agreeing in mineralogical character with the strata which lie beneath it, but closely connected with the superincumbent mass by the character of its fossils. Next comes the "Woolwich and Reading Series," a group of fresh water and estuary origin. Still lower we have the "Thanet Sands," a small marine deposit.

The "Thanet Sands" are economically of great importance, as forming "underneath London and the adjacent districts a large water-bearing stratum—that which supplies all the early and many of the later Artesian wells." A large layer of chalk flints of a deep olive or bottle-green colour lies at the base of the "Thanet Sands," and separates them from the upper surface of the chalk. Mr. Prestwich sets before us that wonderful period, comparatively so near to us, when, during the period of the "London clay," under a sun such as now shines on Ternate and Tidore, tall palms and gigantic lianes, and stiff-leaved evergreens were haunted by great troops of monkeys and by huge pachyderms. There are also some very interesting remarks which bear likewise upon the phenomena of the coal period, as to the impossibility of accounting for the hot climate of the Lower Eocene by a mere change in the relative position of land and water.—Paper in *Saturday Review*, 1858.

Amongst the contents of the London basin are balls of imperfect ironstone (*septaria*), of which Parker's cement is made; branches and stems of trees, penetrated by the *teredo navalis*, are found here, as is also a species of resin. A fossil tree and nautili were found in digging the Primrose-hill railway-tunnel. Remains of turtles and crocodiles, and elephants' teeth and tusks, have been dug out of the clay at Highgate and Islington.

Fossils are occasionally found on the rising slopes near Holloway, formed by the earth thrown up in 1812, when the Highgate tunnel was made. Fine specimens of *echinus marinus* (sea urchin) have been picked up in a field contiguous to the archway, together with a fish resembling a sole; another fish, resembling a mackerel, in the brick-fields; and a narrow stratum of dusty earth abounds with mussels, peetines, and other fossil bivalves; with large quantities of iron combined with sulphur, in the form of pyrites. In a meadow behind Caen Wood is a spring highly impregnated with iron.

In 1813, Mr. Trimmer's brick-fields, at Brentford, yielded such a collection of sea-shells, sharks' teeth, bones of the elephant, hippopotamus, ox, and deer, together with fresh-water shells, as to remind one of the relics of a vast menagerie of animals from all quarters of the globe; and in 1840, in excavating 40 feet deep near Kew Bridge, were found several nautili, and smaller marine shells. For the disappearance of the British mammoths, whose remains are found here, Sir R. I. Murchison accounts by viewing England as the comparatively small island she was, when the ancient estuary of the Thames, including the plains of Hyde Park, Chelsea, Hounslow, and Uxbridge, were under water, and the country thus afforded but insufficient feeding-grounds for these stupendous quadrupeds. In the days of the Mammoths, we had in England a hippopotamus larger than the species which now inhabits the Nile. Of our British hippopotamus some remains were dug up by the workmen in preparing the foundations of the New Junior United Service Club-house, in Regent-street.

*Eocene* is Sir Charles Lyell's term for the lowest group of the Tertiary system in which the dawn of recent life appears; and any one who wishes to realize what was the aspect presented by this country during the Eocene period, need only go to Sheerness. If, leaving that place behind him, he walks down the Thames, keeping close to the edge of the water, he will find whole bushels of pyritized pieces of twigs and fruits. These fruits and twigs belong to plants nearly allied to the screw-pine and eustard-apple, and to various species of palms and spice-trees which now flourish in the Eastern Archipelago. At the time they were washed down from some neighbouring land, not only crocodilian reptiles, but sharks and innumerable turtles, inhabited a sea or estuary which now forms part of the London district; and huge boa-constrictors glided amongst the trees which fringed the adjoining shores.

### ST. GEORGE'S FIELDS,

**B**ETWEEN Lambeth and the borough of Southwark, were anciently an important district, occupied by the Romans, attested by the large quantities of coins, bricks, an urn full of bones, tessellated pavements, &c., found here; the urn is preserved in the Museum of the Royal Society. St. George's Fields were also crossed by the great Roman road, Watling-street, presumed to have passed from Kent through Old Croydon, or Woodcote (supposed to be the ancient Noviomagus), Streatham, and Newington, to Stone-street in Southwark; and thence by a ferry over the Thames to Dowgate and the Watling-street of our day. A branch of the Ermine-street, from Chichester in Sussex, is also conjectured to have assumed the name of Stone-street on entering Surrey;

and to have passed by Dorking, Woodcote, Streatham, Kennington, and Newington, across St. George's Fields, into Southwark. This Roman occupation is, however, disputed.

Maitland, who carefully examined this district, says, "It can hardly be supposed that the sagacious Romans would have made choice of so noisome a place for a station as St. George's-in-the-Fields must have been; for to me it is evident, that those fields must have been overflowed by every spring tide. Notwithstanding the river being at present confined by artificial banks, I have frequently at spring-tides seen the small current of water which issues from the river Thames through a common sewer at the Falcon not only fill all the neighbouring ditches, but also at the upper end of Gravel-lane, overflow its banks into St. George's Fields; and considering that a twelfth part of the water of the river is denied passage by the piers and sterlings of (old) London-bridge (it flowing at an ordinary spring-tide upwards of 19 inches higher on the east than on the west side of the said bridge), I think that this is a plain indication that before the Thames was confined by banks, St. George's-in-the-fields must have been considerably under water every high tide, and that that part of the said fields, called Lambeth-marsh was under water not an age ago.

St. George's Fields anciently included the whole space peninsulated by the bend of the river Thames, commencing at Greenwich, and terminating at Nine Elms. This was, probably, originally a large marshy bay, across which were several lines of transit at low water, leading from the rising grounds at Norwood, Camberwell, and Dulwich, to fords at various places across the Thames. Ptolemy (second century) mentions that the Romans had then settled south of the river, though the north bank was their original station: subsequently, the tract called St. George's Fields having been partially drained, and *cattleways* (as at Newington) through the marshes constructed, forts and other buildings were erected, and a southern suburb of London gradually arose.—Brayley's *Surrey*, vol. v. p. 337.

Nearly to the present century, the Fields lay waste, and were the scene of brutalizing sports, political meetings, and low places of entertainment. In their water-ditches Gerarde found plenty of water-violets: and scores of gardens existed here to our time. Here a riot was raised by the mobs who met to visit Wilkes in the King's Bench Prison, in 1768; and here Lord George Gordon's rioters met, June 2, 1780; and on the 7th, the 700 prisoners in the King's Bench were liberated, and the building set on fire by the populace. Here were the Dog and Duck Wells, in 1695, which grew to be a Sabbath-breaking tavern; the premises were last tenanted as the School for the Indigent Blind; the site is now included in Bethlem Hospital, and the sculptured sign-stone preserved in the boundary-wall denotes the site of the tavern-entrance. (See BETHLEM HOSPITAL, p. 51; BLIND SCHOOL, p. 58; and ST. GEORGE'S ROMAN CATHOLIC CHURCH, p. 238.)

### ST. GILES'S,

ORIGINALLY a village in the north-west suburbs of London, was named from an Hospital for lepers, dedicated to the Saint, built on the site of a small church or oratory, and nearly upon the site of the present church, about 1117, by Matilda, queen of Henry I. The gardens and precincts extended between High-street and Hog-lane (now Crown-street), and the Pound,\* west of Meux's brewery. In 1213, the village was laid out in garden-plots, with cottages; it had its ancient stone cross; and about 1225 there was a blacksmith's shop at the north-west end of Drury-lane, which remained long after the suppression of the Hospital,† or about 1600, when the "verie pleasant village" was built over; "on the High-street, Holborn," says Stow, "have ye many faire houses builded, and lodgings for gentlemen, inns for travellers, and such like, up almost, for it lacketh little, to St. Giles's-in-the-Fields."

Aggas's plan shows fields and gardens from St. Giles's Hospital wall to Chancery-lane, eastward, with a few houses at the north end of Drury-lane, and opposite the present Red Lion-street, Holborn. Thence to the north side of the Strand are two or three houses in Covent-garden; Drury House, at the bottom of Drury-lane; and cattle grazing on the site of Great Queen-street, Lincoln's-inn-fields. Early in the reign of Queen Anne, the whole parish of St. Giles's, except the neighbourhood of Bedford-square and the present Bloomsbury, was covered with houses.

The village of St. Giles's was noted for its early inns and houses of entertainment. Here was Croche House (*Le Croche Hose*, or the Crossed Stockings, sign), which belonged to the Hospital cook, anno 1300, and was opposite the north end of Monmouth-street. The Swan on the Hoop, in Holborn,

\* The exact site of St. Giles's Pound (whence miles on the Oxford road were measured), is an area of 30 feet of the broad space where St. Giles's, High-street, Tottenham-court-road, and Oxford-street, meet; around it was a nestling-place of crime:

"At Newgate-steps Jack Chance was found,  
And bred up near St. Giles's Pound."

† The celebrated Dr. Andrew Boorde rented for many years the Master's House, *temp.* Henry VIII.

east of Drury-lane, is mentioned 34 Edward III.; and the White Hart, corner of Holborn and Drury-lane, is shown in Aggas's plan, 1560, and was an inn till 1720. Not far eastward was the Rose, named in a deed, Edward III.; with the Vine, a little east of Kingsgate-street, supposed to have been on the site of the Vineyard in Holborn, named in Domesday Book. The Vine was taken down in 1817, and the house built on its site was occupied by Probert, the accomplice of the murderer John Thurtell. The Maidenhead inn, in Dyott-street, flourished early in the reign of Queen Elizabeth. The Turnstile Tavern, south-west corner of Great Turnstile, was bequeathed to the parish in 1640; and the Cock and Pye was in the fields of that name.

About the year 1413, the gallows was removed from the Elms in Smithfield to the north end of the garden-wall of St. Giles's Hospital; and it is figured in an ancient plan of the district.

1416. "Thys yere the xiiij day of December Sir John Oldecastell Knyghte was drawne from the tower of London un tozent Gylles in the felde and there was hongyd (on a gallows new made) and brent,—*Chronicle of the Grey Friars of London.*

The gallows was again removed westward to Tyburn, when St. Giles's became a sort of half-way house for condemned criminals, who stopped at the Hospital, and afterwards at a hostel built near its site, and were there presented with a large bowl of ale. This gave a moral taint to St. Giles's, and made it a retreat for noisome and squalid outcasts. The Puritans made stout efforts to reform its morals; and, as the parish books attest, "oppressed tipplers" were fined for drinking on the Lord's-day, and vintners for permitting them; fines were levied for swearing oaths, travelling and brewing on a fast-day, &c. Again, St. Giles's was a refuge for the persecuted tipplers and ragamuffins of London and Westminster in those days; and its blackguardism was increased by harsh treatment. It next became the abode of knots of disaffected foreigners, chiefly Frenchmen, of whom a club was held in Seven Dials. Smollett speaks, in 1740, of "two tatterdemalions from the purlieus of St. Giles's, and between them both there was but one shirt and a pair of breeches." Hogarth painted his moralities from St. Giles's: his "Gin-lane" has for its background St. George's Church, Bloomsbury, date 1751: "when," says Hogarth, "these two prints ('Gin-lane' and 'Beer-street') were designed and engraved, the dreadful consequences of gin-drinking appeared in every house in Gin-lane; every circumstance of its horrid effects is brought to view *in terrorem*—not a house in tolerable condition but the pawnbroker's and the gin-shop\*—the coffin-maker's in the distance." Again, the scene of Hogarth's "Harlot's Progress" is in Drury-lane; Tom Nero, in his "Four Stages of Cruelty," is a St. Giles's charity-boy; and in a night-cellar here the "Idle Apprentice" is taken up for murder. Here were often scenes of bloody fray, riot, and chance-medley; for in this wretched district were grouped herds of men but little removed from savagery. The Round-house (Watch-house) of St. Giles's was probably one of the last that remained: it stood in an angle of Kendrick-yard, and its back windows looked upon the burial-ground of St. Giles's Church; it was built in a cylindrical form, like a modern martello tower, though, from bulging, it resembled an enormous cask set on its end: it was two stories high, and had a flat roof, surmounted by a gilded vane, in the shape of a key. (*See W. H. Ainsworth's Jack Sheppard.*)

Seven Dials was built *temp.* Charles II. for wealthy tenants. Evelyn notes, 1694: "I went to see the building near St. Giles's, where Seven Dials make a star from a Doric pillar placed in the middle of a circular area, said to be by Mr. Neale (the introducer of the late lotteries), in imitation of Venice, now set up here for himself twice, and once for the state."

"Where famed St. Giles's ancient limits spread,  
An in-rail'd column rears its lofty head;  
Here to seven streets seven dials count their day,  
And from each other catch the circling ray:  
Here oft the peasant, with inquiring face,  
Bewilder'd trudges on from place to place;  
He dwells on every sign with stupid gaze,  
Enters the narrow alley's doubtful maze,  
Tries every winding court and street in vain,  
And doubles o'er his weary steps again."—GAY'S *Trivia*, book II.

The seven streets were Great and Little Earl, Great and Little White Lion, Great

\* A Middlesex magistrate said, in 1817: "In the early part of my life (I remember almost the time which Hogarth has pictured) every house in St. Giles's, whatever else they sold, sold gin; every chandler's shop sold gin: the situation of the people was dreadful."

and Little St. Andrew's, and Queen; though the dial-stone had but six faces, two of the streets opening into one angle. The column and dials were removed in June, 1773, to search for a treasure said to be concealed beneath the base: they were never replaced, but in 1822 were purchased of a stone-mason, and the column was surmounted with a ducal coronet, and set up on Weybridge Green as a memorial to the Duchess of York, who died at Oatlands in 1820. The dial is now a stepping-stone at the adjoining Ship Inn.

"Everybody whose affairs lead him to be constantly running about London knows the dirty labyrinth of Seven Dials; indeed, we might rather say everybody does not know it, for it takes a long apprenticeship in pavement-polishing to become acquainted with its bearings and intricacies. The respective gin-shops at its corners are the only guides. In other wildernesses of natural objects, instead of bricks and mortar, the sun and stars would serve to indicate points of the compass, but in Seven Dials the sun and the stars are seldom visible. A heavy tarpaulin of fog and smoke, and reeking odours, covers the entire district, shutting out the heavens by a murky medium, under which increases and multiplies the most unlovely race of the mammoth metropolis. They never get a lung-full of good air. The only innocuous atmosphere they breathe is that which sometimes surges down over the roofs of the many-peopled houses from the adjacent brewery, and even that is artificial."—*Albert Smith.*

Long Acre, the Seven Dials, and Soho, were Cock and Pie Fields, the resort of the idle and dissolute, until, *temp.* William III., Mr. Neale built upon the ground. Great Wild-street is named from the mansion here of the Welds, the Dorset Roman Catholic family; Bainbridge and Buckeridge streets, from their owners, men of wealth, *temp.* Charles II.; and Dyott-street (now George-street), from Sir Thomas Dyott, who died in the same reign, devising the property, since Dyott and other streets, upon the condition that it should be appropriated to the same style of building, and the same description of inhabitants that so long kept possession of it. Out of these very streets was formed the Rookery, removed for New Oxford-street. Here the Irish first colonized London, in the reign of Queen Elizabeth; hence St. Giles's has been called Little Dublin; and in 1637 cellars are first mentioned in the parish-books as places of residence.

On Sept. 27, 1841, died, aged 70, in the house in which he was born, Mr. Robert Smith, 12, Great St. Andrew-street, Seven Dials, a smith, possessed of £400,000 in funded, freehold, and leasehold property: he built between 150 and 200 houses in the Hampstead-road.

Monmouth (now Dudley) street, said to be named after the unfortunate Duke (who had a mansion on the site of Bateman's-buildings, Soho-square), was long noted for its sign-board painters; its dealers in amateur theatrical properties, singing-birds, old clothes, and second-hand boots and shoes; but the "laced and embroidered coats in Monmouth-street," mentioned by Lady Mary Wortley Montague, have become exchanged for the sombre suits of our fashion. Here also were public-houses noted for fancy-dog shows. Whole families and schools lived in the cellars. In 1797, many horse-shoes nailed to the thresholds to hinder the power of witches, were seen in Monmouth-street; in 1813, Sir Henry Ellis counted seventeen horse-shoes; in 1841 there were six; in 1852, eleven. Jews preponderate in this street, Irish abounding most in the lanes and courts.

The modern St. Giles's is bounded north by the brewery in Bainbridge-street; south by the brewery in Castle-street; and extends from Crown-street on the west to Drury-lane on the east. The literature of St. Giles's has long fixed its abode in the Seven Dials; and in Great White Lion-street, Mrs. Pilkington exhibited in her lodging window, "Letters written here." Printing-presses, booksellers, stationers, and circulating-libraries abounded here; Pitts and Catnach being the great ballad-printers. (*See BALLAD-SINGING*, p. 10.) One of their authors confessed to Mr. Henry Mayhew—

"The little knowledge I have, I have picked up bit by bit, so that I hardly know how I have come by it. I certainly knew my letters before I left home, and I have got the rest off the dead walls and out of the ballads and papers I have been selling. I write most of the Newgate ballads now for the printers in the Dials, and, indeed, anything that turns up. I get a shilling for a 'Copy of verses written by the wretched culprit the night previous to his execution.' I wrote Courvoisier's sorrowful lamentation: I called it 'A Voice from the Gaol.' I wrote a pathetic ballad on the respite of Annette Meyers. I did the helegy, too, on Rush's execution: it was supposed, like the rest, to be written by the culprit himself, and was particularly penitent. I didn't write that to order—I knew they would want a copy of verses from the culprit. The publisher read it over, and said, 'That's the thing for the street public.' I only got a shilling for Rush. Indeed, they are all the same price, no matter how popular they may be. I wrote the life of Manning in verse. Besides these, I have written the lament of Calcraft the Hangman on the decline of his trade, and many political songs."—*Morning Chronicle.*

"The Rookery" was a triangular space bounded by Bainbridge, George, and High

streets: it was one dense mass of houses, through which curved narrow tortuous lanes, from which again diverged close courts—one great mass, as if the houses had originally been one block of stone, eaten by slugs into numberless small chambers and connecting passages. The lanes were thronged with loiterers; and stagnant gutters, and piles of garbage and filth infested the air. In the windows, wisps of straw, old hats, and lumps of bed-tick or brown paper, alternated with shivered panes of broken glass; the walls were the colour of bleached soot, and doors fell from their hinges and worm-eaten posts. Many of the windows announced, "Lodgings at 3*d.* a night," where the wild wanderers from town to town held their nightly revels. With such scenes the public were familiarized by Pierce Egan's *Life in London* (1820), upon our minor metropolitan stages, where they excited as much curiosity as a romance of savage life. The Rookery has, however, almost entirely disappeared; and in its place stands a block of "Model Houses for Families," with perfect ventilation and drainage, and rents lower than the average paid for the airless, dark, and fetid rooms of the old Rookery. Elsewhere, lanes and alleys of squalid tenements have disappeared, and their site is now occupied by the embellished lines of New Oxford-street. (See *Rookeries of London*, 1850.)

"The degraded condition of the Seven Dials (says a Report of 1848) is notorious—vagrants, thieves, sharpers, scavengers, basket-women, charwomen, army-seamstresses, and prostitutes, compose its mass: infidels, Chartists, Socialists, and blasphemers exist there as in head-quarters. In addition to the street traffic on the Sabbath, there are 150 shops then open in the streets. Lodging-houses of the lowest and dirtiest description afford temporary shelter to the vagrant and the criminal. In the very heart of this debased and debasing locality is situated a Ragged School; its entrance-door in the extreme angle of an irregular, three-cornered yard—so uninviting that few respectable persons have courage to venture through it." The flagrant evil cannot be more formidably met; and the moral regeneration of the district is thus rapidly progressing.

We rarely pass St. Giles's Church without reflecting upon the great changes which have come over this locality within the last twenty years, by the sweeping away of the greater part of that festering spot of criminal London, known as St. Giles's. And when we look at the narrow gorge opposite the church, and remember that through it formerly poured the rabble rout with the Tyburn cart, which halted hereabout, for the condemned criminals to drink a bowl of ale, we say, with such a stream of pollution how could St. Giles's be otherwise than a nestling-place of crime and wretchedness? It could once show its pound, its cage, its round-house and watch-house, its stocks, and its whipping-post, and at one time its gallows. We have parted with all these terrors; and built here churches and chapels, schools, and reformatory institutions of every class.

Dr. Buchanan, medical officer of Health for the St. Giles' district, tracing its history from the dedication of a leper hospital to St. Giles in the twelfth century, shows that the district has always presented points of interest to the students of hygienic science. From the time of the earliest census an excess in the mortality of St. Giles's has been steadily conspicuous. The reason of this excess is mainly to be attributed to the extreme density of the population, which has from one cause and another been greater here than elsewhere since the days of Elizabeth. It was in St. Giles's that the Great Plague of 1665 first broke out, and two-thirds of the poorer inhabitants were destroyed in the year. The district declined from comparative opulence in the seventeenth century to the point of its lowest debasement, delineated by Hogarth and Fielding; thence again increasing in prosperity with the growth of Bloomsbury. In spite, however, of this new association, the entire district has maintained its evil pre-eminence on the death-registers down to the year 1857. In the most crowded localities the rate of mortality was uniformly the highest. Measures have been adopted in St. Giles's to remedy this fatal condition of "overcrowding." Among the results which have already followed the use of sanitary measures are: from mere drainage improvements, the deaths from fevers and other zymotic diseases, in Dudley-street, had fallen in 1858 to exactly one-half the number in 1857. In the whole district there were, in one year, fewer deaths than the average by 120, although the year was much less healthful than its predecessor to the metropolis at large. The evils of overcrowding have been much abated by these clearances.

In the southern district of St. Giles's there were on the night before the Census of 1861 was taken, 21 houses, not one of which had less than ten families sleeping in it, without counting single men and women at all. In a lodging-house in the same district of that parish 81 persons passed the night.

In 1831, there were, opposite each other, in George-street, St. Giles's, two barbers' shops, whose weekly customers averaged 3000; and in one of the shops was a man who frequently on a Sunday mowed 500 chairs, the majority being Irish labourers with beards of a week's growth.

The old map of St. Giles's and St. George's made in 1815, by Mr. Mawley, owing to the great alterations in every direction since that time, having been rendered entirely useless, has been re-drawn by Mr. George J. J. Mair, and handed over to the Vestry. A plan of each property is shown, and at a glance is distinguished from the adjoining properties by an arrangement of cross hatching; a book of reference gives a further description. The parishes contain 245 acres (38 of which are open ground in squares), and 4701 dwelling-houses.

## GILTSPUR-STREET

WAS in Stow's time also called Knight-riders'-street, "of the knights and others riding that way into Smithfield." The portion beyond the Compter prison was originally Pie-corner, "noted chiefly for cooks' shops and pigs drest there during Bartholomew Fair." (*Strype*.) Here the Great Fire of London ended; to commemorate which, was erected against a public-house (The Fortune of War) in Pie-corner, a carved wooden figure of a boy upon a bracket, his arms folded upon his breast, and the following inscription written from under the chin downward: "This boy is in memory put up for the late Fire of London, occasioned by the sin of gluttony, 1666." This is no longer legible. The whole is engraved by J. T. Smith, and in Lester's *Illustrations*, 1818. The houses that escaped the Fire on this spot were taken down in 1809. On the west side of Giltspur-street is Cock-lane, the scene of "the Cock-lane ghost" imposture in 1762: "the house is still standing, and the back room, where 'scratching Fanny' lay surrounded by princes and peers, is converted into a gas-meter manufactory." (*Notes and Queries*, No. 16.) An account of the detection of the imposture was printed by Dr. Johnson; a pamphlet describing the whole affair was written by Goldsmith, and is reprinted in Cunningham's edition of Goldsmith's *Works*. Churchill, in his poem, *The Ghost*, satirized the hoax, and caricatured Johnson as a believer in it; which Boswell has disproved.

## GOG AND MAGOG.

"THE two Giants in Guildhall" are supposed to have been originally made for carrying about in pageants, a custom not peculiar to London; for "the going of the giants at Midsummer" occurs among the ancient customs of Chester, before 1599. Puttenham (1589) speaks of "Midsummer pageants in London, where, to make the people wonder, are set forth great and uglye gyants, marching as if they were alive," &c. Again, "one of the gyants' stilts" that stalks before my Lord Mayor's Pageants occurs in the old play of the *Dutch Courtezan*. (*Marston's Works*, 1633.) Bishop Hall, in his *Satires*, compares an angry poet to

"The erab-tree porter of the Guildhall,  
While he his frightful Beetle elevates."

In 1415, when Henry V. entered London by Southwark, a male and female giant stood at the entrance of London Bridge; in 1432, here a "mighty giant" awaited Henry VI.; in 1554, at the entry of Philip and Mary, "Corinaeus and Gog-magog" stood upon London Bridge; and when Elizabeth passed through the City the day before her coronation (Jan. 12, 1558), these two giants were placed at Temple Bar. (*F. W. Fairholt, F.S.A.*) Jordan, in describing the Lord Mayor's Pageant for 1672, notices as exceeding rarities "two extreme great giants, at least 15 feet high, that do sit and are drawn by horses in two several chariots, talking and taking tobacco as they ride along, to the great admiration and delight of all spectators."

Ned Ward describes the Guildhall giants in his *London Spy*, 1699; and among the fireworks upon the Thames, at the coronation of James II. and his queen, April 24, 1685, "were placed the statues of the two giants of Guildhall." Bragg, in his *Observer*, Dec. 25, 1706, tells us that when the colours taken at Ramilies were put up in Guildhall, "the very giants stared with all the eyes they had, and smiled as well as they could." (*Malcolm*.)

"Before the present giants inhabited Guildhall, there were two giants made only of wicker-work and pasteboard, put together with great art and ingenuity; and those two terrible giants had the honour to grace my Lord Mayor's Show, being carried in great triumph in the time of the pageants; and when that eminent annual service was over, remounted their old stations in Guildhall—till by reason of their very great age, old Time, with the help of a number of City rats and mice, had eaten up all their entrails. The dissolution of the two old weak and feeble giants gave birth to the two present substantial and majestic giants; who, by order, and at the City charge, were formed and fashioned," by Captain Richard Saunders, an eminent carver in King-street, Cheapside; and then "were advanced to those lofty stations in Guildhall, which they have peaceably enjoyed ever since the year 1708." We quote this from a very rare "Gigantick History of the Two famous Giants in Guildhall, London," third edit. 1741, published within Guildhall, when shops were permitted there. This work also relates that "the first honour which the two ancient wicker-work giants were promoted to in the City, was at the Restoration of King Charles II., when, with great pomp and majesty, they graced a triumphal arch at the end of

King-street, in Cheapside." This was before the Great Fire, which the City Giants escaped, till their infirmities and the "City rats" rendered it necessary to supersede them; and the City accounts in the Chamberlain's Office contain a payment of 70*l.* to Saunders, the carver, in 1707.

The "Gigantick History" supposes the Guildhall giants to represent Corinæus and Gog-magog, in Geofroy of Monmouth's Chronicle, in Milton's *Early History of Britain*, and thus in a broadsheet of 1660 :

"And such stout *Corinæus* was, from whom  
Cornwall's first honour, and her name doth come,  
For though he showeth not so great nor tall,  
In his dimensions set forth at *Guildhall*,  
Know 'tis a poet, only a poet can define  
A gyant's posture in a gyant's line.  
\* \* \* \* \*

And thus attended by his direful dog,  
The gyant was (God bless us) *Gogmagog*."

*British Bibliogr.* iv. p. 227.

"Each of these giants," says Archdeacon Nares (*Glossary*), "measures upwards of 14 feet in height; the young one is believed to be Corinæus and the old one Gog-magog," whence "Gog and Magog."

The present costumes of the giants are in *rococo* taste, as follow :

GOG.—Body-armor à *la Romaine*, with a red scarf across the shoulder; plumed helmet, with the City Dragon for a crest; a sword by his side, and in his hands a halbert, and a shield ensigned with a spread eagle.

MAGOG.—Body-armor and scarf as Gog; sword at side, bow and arrows over his shoulder, and in his hand a "morning-star," his hair long and flowing, and encircled with a "*couronne d'honneur*."

In 1815, the Giants were removed from the north side of the Hall, when Mr. Hone examined them, and found them to be "made of wood, and hollow within; and from the method of joining and gluing the interior, are evidently of late construction; but they are too substantially built for the purpose of being either carried or drawn, or any way exhibited in a pageant." (Hone, on *Ancient Mysteries*.) In 1837, the dresses of the giants were renewed, their armour polished, &c. This year also, copies of the giants, 14 feet high, were introduced in the Lord Mayor's show: each walked by means of a man within side, who turned the giant's face, which was level with the first-floor windows.

### GOODMAN'S FIELDS

ARE described by Stow to have been, in his time, a farm belonging to the Abbey of the Nuns of St. Clare, called the Minories; "at the which farm (says Stow) I myself, in my youth, have fetched many a halfpennyworth of milk, and never had less than three ale pints for a halfpenny in the summer, nor less than one ale quart for a halfpenny in the winter, always hot from the kine, as the same was milked and strained." One Trolop, and afterwards Goodman were the farmers; and next Goodman's son, who let out the ground first for grazing of horses, and then for garden-plots. Strype (1720) describes the Fields covered with Pescod or Prescott, Ayliffe, Leman, and Maunsell streets, the initials of which names make the word *palm*; these streets are mostly inhabited by thriving Jews. Strype also mentions tenters for cloth-workers, and a roadway out of Whitechapel into Well-close. In digging the foundations for houses about 1678, were found a vast number of Roman funereal urns, some with ashes of bones in them, denoting Goodman's Fields to have been originally a Roman burying-place.

Goodman's-stile, Goodnan's-gardens, and Rosemary-lane, denote this rural district. On the site of Leman-street was the New Wells Spa, now denoted by Well-yard. (See THEATRES: Goodman's Fields.)

### GREY FRIARS.

IN 1224, four of the Friars Minors, or Grey Friars, arrived in London from Italy, and were first entertained in the house of the Friars Preachers, or Dominicans. Afterwards, they hired a house in Cornhill, of John Travers, then sheriff, where they made some small cells, and continued until the following summer; when the devotion of the citizens enabled the Friars to purchase the site of their future residence near Newgate. Their first and principal benefactor was John Iwyn, citizen and mercer,

who gave them some land and houses in the parish of St. Nicholas-in-the-Shambles, by deed 9th Henry III. Upon this they erected their original building. The first chapel, which became the choir of the church, was built at the cost of Sir William Joyner, mayor of London in 1239; the nave was added by Sir Henry Waleys, mayor during several years of the reign of Edward I.; the chapter-house by Walter the potter, citizen and alderman (sheriff in 1270 and 1273), who also presented all the brazen pots for the kitchen, infirmary, &c.: the dormitory was erected by Sir Gregory de Rokelsey, mayor from 1275 to 1282; the refectory by Bartholomew de Castro, another citizen; the infirmary by Peter de Helyland; and the studies by Bonde, king of the heralds. The convent was principally supplied with water by William, called from his trade the Taylor, and who served King Henry III. in that capacity.\*

A more magnificent church was commenced in 1301, and completed 1327: first, the choir was rebuilt, chiefly at the cost of Margaret of France, the second wife of King Edward I., who assigned it for her place of interment; and the nave was added from the benefactions of John of Brittany, Earl of Richmond, and his niece Mary, Countess of Pembroke: it was 300 feet long, 89 feet wide, and 64 feet high; all the columns and the pavement were of marble. In 1421, was added the library, "furnished with desks, settles, and wainscoting or ceiling," by Sir Richard Whittington, the celebrated mayor in the reign of Henry V.

On St. George's Day, 1502, the Grey Friars relinquished the "London russet," which they had for some time worn, and resumed the undyed *white-grey*, which had been their original habit. On the feast of Saint Francis, July 16, 1508, the mayor and aldermen were received with grand procession as founders, which custom continued long after; but not until 1522 did the convent provide a feast for the corporation on that anniversary. In 1524, King Henry and Cardinal Wolsey personally visited the house. In 1528, in the case of a prisoner who had broken away from the sessions at Newgate, the convent asserted its right of Sanctuary, a privilege that could scarcely be often put in requisition, as the much-frequented Sanctuary of St. Martin-le-Grand was in the immediate vicinity. The Franciscans seem to have passively acquiesced in the course of events: for, November 12, 1539, their warden, and twenty-five of his brethren, signed and sealed their deed of surrender to the king, being convinced "that the perfection of Christian living dothe not consist in doine ceremonies, wering of a grey coatte, disgeasing our selves after straunge fassions, dokynges, nodyngs, and bekynge, in gurding our selfes wythe a gurdle full of knots; and other like papisticall ceremonies," &c.

After the surrender, the house of the Grey Friars was not given up to immediate destruction; but remained unoccupied in the king's hands, until 1544, when, with the houses of the late Austin and Black Friars, it became a receptacle for the merchandize captured at sea from the French; every part of the Grey Friars Church being filled with wine: it was not, however, dismantled; for in 1546 the "partitions" or screens remained; the altars, pictures, images, and pulpit; the monuments and grave-stones; the candlesticks, organs, and desks. Subsequently, by the king's gift, the church of the Grey Friars was to become the parish church of "Christ's Church within Newgate;" but the king dying in the same year and month, the altars, stalls, &c., were removed, and the church reduced in length, the nave being rented to a schoolmaster for 10s. per annum. All the tombs and grave-stones were sold for about 5*l.*; and Weever states there to have been buried in the church four queens,† four duchesses, four countesses, one duke, two earls, eight barons, and some thirty-five knights; in all, 663 persons of quality: the catalogue of the monuments is preserved, and is a very valuable genealogical record.

These details are abridged principally from Mr. Nichols's Preface to the *Chronicle*

\* In the chapter of the Register, the main channel or pipe is traced under Newgate, through the rivulet at Holborn Bridge, up Leather-lane (Liworne-lane), and so to the Conduit-heads in the fields.

† The Queens were—the foundress of the church, Margaret, consort of Edward I.; Isabella, consort of Edward II.; Joan, Queen of Scots, daughter of Edward II.; and Isabella, Queen of Man. Besides these, the church had received the heart of a fifth Queen, Alianor, consort of Henry III.; and also the heart of King Edward II., deposited under the breast of his queen's effigy. The catalogue is not, however, complete; for, during some excavations on the site about 1834, were found two ancient inscribed grave-stones not in the Register: they commemorate a monk of Ely, and a supposed Italian merchant, and are preserved in the burial-ground of Christchurch.

of the *Grey Friars of London*, printed for the Camden Society (1852), from the register-book of the Fraternity. The history of the Grey Friars Convent next merges into that of the establishment of Christ's Hospital, which Mr. Nichols refers to Henry's grant of the Grey Friars' House to the City, aided by their subscriptions, and not to Edward VI., who merely recognised the hospital which the citizens themselves had set on foot.

"Moreover, Christ's Hospital was not founded as a school; its object was to rescue young children from the streets, to shelter, feed, and clothe, and *lastly*, to educate them—in short, to do exactly what in later times has been done by each individual parish for the orphan and destitute offspring of the poor."—*Nichols*.

The great picture in the hall of Christ's Hospital is commonly referred to as contemporary evidence of King Edward's share in the foundation. "This picture is usually attributed to Holbein, but in error. It is an amplification of Holbein's picture of the same subject which is at Bridewell Hospital. That picture contains only eleven figures, including the painter himself; the picture at Christ's Hospital has ninety or more, and not only is it very inferior as a work of art, but obviously of posterior date in point of costume." Mr. Nichols adds: "the picture at Christ's Hospital is derived from Holbein's, so far as the principal figures go: my own impresson is that it is of the period of James I. or Charles I."

Some of the buildings of the ancient convent, including the fratry and refectory, were standing in the early part of the present century. The walls and windows of Whittington's library were to be traced in a mutilated state on the north side of the cloisters. Even now, the southern walk of the friars' cloisters remains, and its pointed arches and buttresses may be seen from the exterior. The western walk of the cloisters was under the Great Hall, which was pulled down in 1827, as was Whittington's library about the same time. The shield of Whittington, with a quatrefoil, was inserted in various parts of this building; and a stone so carved has been preserved in the museum of Mr. E. B. Price, F.S.A., and is etched at the end of Mr. Nichols's Preface to the *Chronicle*. (See CHRIST'S HOSPITAL, pp. 95-101.)

#### GRUB-STREET,

CRIPPLEGATE, is now called Milton-street, "not after the great poet, as some persons have asserted, but from a respectable builder so called, who has taken the whole street on a repairing lease." Such was the statement of Mr. Elmes, in 1830, in his *Topographical Dictionary*; but it is contradicted by the editor of *Notes and Queries* (2nd S. ix.), who asserts, upon the authority of "a gentleman who was present at the meeting when the nomenclature was discussed, that it was named after the great poet, from his having resided in the locality." Grub-street was originally tenanted by bowyers, fletchers, makers of bow-strings, and of everything relating to archery. It is the last street shown in Aggas's map; all beyond, as far as Bishopsgate-street Without, being gardens, fields, or morass. After the Great Fire, the Goldsmiths' Company met in Grub-street, temporarily, in the house of Sir Thomas Allen, grocer, and Lord Mayor in 1659. Here, before the discovery of printing, lived the text-writers, who wrote all sorts of books then in use, namely, A. B. C. with the Paternoster, Ave, Crede, Grace, &c., and retailed by *stationers* at the corner of streets. In Grub-street lived John Foxe, the martyrologist.

"Many letters in the Harleian collection illustrate the influence of Foxe at this time. They are addressed to him in Grub-street, and must, therefore, though no date appears on them, have been written after 1572. A letter from Foxe to one of his neighbours, who had so built his house as to darken Foxe's windows, is curious as a specimen of religious expostulation, for an injury which possibly he could not afford to remedy by law."—Mr. Canon Townsend's *Life of John Foxe*, edit. 1641, p. 194.

It appears, however, very doubtful when Foxe went to Grub-street, and how long he resided there. He did not write there his *Book of Martyrs*, published in 1563, and the second edition in 1570. Here resided honest John Speed, the tailor and historian, the father of twelve sons and six daughters; there, too, lived Master Richard Smith, whose amusing *Obituary* has been edited by Sir Henry Ellis for the Camden Society—"A person," says Antony Wood, "infinitely curious in, and inquisitive after books." From this renowned and philosophic spot, celebrated as the Lyceum of the Academic Grove, issued many of the earliest of our English lyrics, and most of our miniature histories, and the flying sheets and volatile pages dispersed by such characters as Shakspeare's Autolyceus; and the Grubean sages first published *Jack the Giant Killer*, *Reynard the Fox*, *The Wise Men of Gotham*, *Tom Hickathrift*, and a hundred others.

Nor must we forget Henry Welby, Esq., "the Grub-street Hermit," who lived here forty-four years, during which he was only seen by his maid-servant, who died Oct. 23, 1636; and Welby, in six days after, aged 84: he owned a large estate in Lincolnshire, but betook himself to this seclusion in misanthropic resentment of an attempt made upon his life by a younger brother. In the old print of the Hermit, we see in the distance boys flying kites in the fields adjoining his house. His diet was bread, water, gruel, milk, and vegetables; and now and then the yolk of an egg. He passed his days in most exemplary charity and piety. There exists a rare quarto Tract, entitled *The Phoenix of these late Times*, showing "the first occasion and reasons" of Welby's seclusion, with Epitaphs and Elegies (the latter occupying several pages), by Shakerley Marmion, John Taylor, the Water-poet; Thomas Heywood, Thomas Brewer, &c., 1637. It has a full-length portrait, by W. Marshall, of Welby: the copy of this Tract in Sir Mark Sykes's library, sold for 5*l.* 5*s.*

In Grub-street, Dec. 9, 1695, one Stockden, a victualler, was murdered by four men, three of whom were revealed in three successive dreams to the victualler's widow, and were tried, condemned, and hanged; the narrative attested and published "by the Curate of Cripplegate!"

During the Commonwealth era a larger number than usual of seditious and libellous pamphlets and papers were surreptitiously printed. The authors of these were, for the most part, men whose indigent circumstances compelled them to live in the most obscure part of the town. Grub-street, then abounding with mean old houses let out in lodgings, afforded a fitting retreat for persons of this description. The offensive term *Grub-street* is thought to have been first applied to the writings of John Fox, the martyrologist, who, as we have seen, lived in Grub-street. However, there are various other conjectures, which it may be interesting to notice. The inquiry has been cleverly annotated by Mr. Henry Campkin, F.S.A.

Possibly, from Grub-street being the booksellers' suburb of Aldersgate and Little Britain it became the abode of small authors. In Goswell-street, to this day, several old or second-hand booksellers keep shop. Arbuthnot speaks of "the meridian of Grub-street;" and Gay of "Grub-street lays." In the *Tatler*, No. 41, the authors are mentioned as faithful historians of an exercise at arms of the Artillery Company. In the *Spectator*, No. 184, "one of the most eminent pens in Grub-street is employed in writing the dream of the miraculous sleeper," Nicholas Hart; and the orators of Grub-street dealt very much in plagues. (*Spectator*, 150.) There was also a *Grub-street Journal*; and Swift wrote a Grub-street Elegy on the pretended death of Partridge, the almanack-maker, and Advice to the Grub-street Versifiers. The halfpenny newspaper-stamp duty of 1712, however, occasioned "the fall of the leaf," and utter ruin among Grub-street authors.

"Do you know that all Grub-street is dead and gone last week? No more ghosts or murders now for love or money."—*Swift to Stella*, July 9, 1712, *et passim*.

The *Memoirs of the Grub-street Society* were commenced Jan. 8, 1730 (the year before the *Gentleman's Magazine*), and were published weekly until the close of 1737. The avowed objects of the work were to counteract the original Grubeans, who "made themselves most remarkably infamous for want of integrity, by wilfully publishing what they knew to be false;" and to repress "the exorbitances of Authors, Printers, Booksellers, and Publishers." The Society met once a week at the Pegasus, in Grub-street; and the principals of the staff were Dr. John Martin and Dr. Richard Russel\* (*Bavins* and *Mævius*), the latter being secretary until 1735. The work was then conducted by a committee, but was dropped in 1737, after a struggle of six years, eleven months, and two weeks: it was revived as the *Literary Courier of Grub-street*, of which only a few numbers were printed.

In these *Memoirs*, most of the personages of the *Dunciad* are unsparingly satirized, and the productions of Ensdon, Cibber, Concanen, Curll, Dennis, Henley, Ralph, Arnall, Theobald, Welsted, &c., are treated with great severity. The *Memoirs* "meeting with encouragement," says Sir John Hawkins, "Cave projected an improvement thereon in a pamphlet of his own;" and in the following year appeared the *Gentleman's Magazine*.

Grub-street thus figures in the *Dunciad*:—

"Not with less glory mighty Dulness crown'd,  
Shall take through Grub-street her triumphant round."

"Pope's arrows are so sharp, and his slaughter so wholesale, that the reader's sympathies are often enlisted on the side of the devoted inhabitants of Grub-street. He it was who brought the notion of a vile Grub-street before the minds of the general public; he it was who created such associations as author and rags—author and dirt—author and gin. The occupation of authorship became ignoble through his graphic description of misery, and the literary profession was for a long time destroyed."—*W. M. Thackeray*.

\* Dr. Russel subsequently settled at Brighthelmstone, and wrote a *Treatise on Sea-Water*, advocating the practice of sea-bathing, which laid the foundation of the unexampled prosperity of Brighton.

In his notes to the *Dunciad*, Bishop Warburton describes a libeller as "nothing but a Grub-street critic run to seed." Dr. Johnson's friend, John Hoole,\* received his early instruction in Grub-street, from his uncle "the metaphysical tailor," who used to draw squares and triangles on his shopboard. (Boswell's *Johnson*, vol. iv.)

Grub-street was formerly "much inhabited by writers of small histories, dictionaries, and temporary poems : whence any mean production is called Grub-street." (Johnson's *Dictionary*.) The Doctor himself "was but a Grub-street man, paid by the sheet, when Goldsmith entered Grub-street, periodical writer and reviewer." (Forster's *Life of Goldsmith*, p. 73.)

"Grub-street performances" had long been applied to "bad matter expressed in a bad manner, false confused histories, low creeping poetry, and grovelling prose," whether written in the Court or in the City, or elsewhere. Hence "a Grub-street author" became a term of common reproach, and we remember it in frequent use ; this however, has passed away with the change in the social position of men of letters, who no longer resemble the literary hacks of the reign of George II. : but literature takes rank with other learned professions ; and those authors who neglect it as a means of subsistence are, in a twofold sense, foremost in their abuse of it.

However, Grub-street was not always tenanted exclusively by low pretenders to learning ; for we read that James Whitelocke (Justice of the King's Bench), who was a Merchant-tailors' boy, and won honour at Oxford, went through a course of Hebrew with a professor of that ancient tongue, one Hopkinson, who lived in Grub-street "an obscure and simple man for worldly affairs, but expert in all the left-hand tongs." "Great learned men," we are told, came to consult Hopkinson in these languages, and "among them no less a person than Lancelot Andrews." (See notice of Whitelocke's *Liber Famelicus*, edited by Bruce ; *Athenæum*, No. 1612.)

Grub-street, now Milton-street, is noted for its great number of alleys, courts, and backways, and old inn-yards : in Hanover-court was a house, *temp.* Charles I., traditionally the residence of General Monk. Opposite Hanover-court is a large building, once the City Chapel ; in 1831 opened as a theatre, but with poor success. It next became the City Baths ; facing which, in odd contiguity, were the City Soap Works, established in 1712 ; the premises were burnt down in August, 1855, but have been rebuilt.

In one of the columns of *Town and Table Talk*, with which Mr. Peter Cunningham, in years past, used to regale the readers of the *Illustrated London News*, we find, Jan. 27, 1855, the following piquant parallel of Grub-street with our day :—

"This week has produced a remarkable proof that our Newgate Last Dying Words and Confession Poetry has not improved, or altered, indeed, in any way, since the times of Dick Turpin and Governor Wall. We have before us, while we write, the penny broadside which Grub-street has given us on the execution of Barthélémy, on Monday last. We have the same artless way of telling a story, with the same rough lines, and still rougher rhymes, common to the Catnach school of Old Bailey poetry. What is still more remarkable, the very cuts are the identical blocks of bygone times. The view of the dangling murderer, of St. Sepulchre's Church, and Newgate itself, is one that has done like duty on many other hanging occasions. The female costume of the cut is that in vogue long before (to use Mr. Thackeray's expression) Plancus was consul. Stranger still, the cut which represents the murderer shooting Mr. Moore, is the actual ballad-block of Bellingham shooting Mr. Perceval in the lobby of the House of Commons ! We may yet see it reproduced on an occasion of the same kind. The identical wood-cut of Tarlton, the famous clown, who drew tears of delight from the eyes of Queen Elizabeth, was in use in Grub-street between 1580 and 1820, or nearly two centuries and a half."

One of the most noted Grub-street traffickers was Curl, for whom the notorious Mrs. Thomas (Corinna of the *Dunciad*) got up the absurd story of young Jeffreys and the funeral of the poet Dryden, the groundlessness of which was fully exposed by Malone some sixty years since ; and Sir Walter Scott alludes to it in *Life of Dryden* as "a memorable romance." It formed one of Curl's "Grub-street pamphlets."

The first use of the term Grub-street in its offensive sense, was made by Andrew Marvell, in *The Rehearsal Transposed* : "He, honest man, was deep gone in Grub-street and polemized divinity." "Oh, these are your Nonconformist tricks ; oh, you have learnt this of the Puritans in Grub-street." "I am told that preparatory to that, they had frequent meetings in the City ; I know not whether in Grub-street, with the divines of the other party." Pope calls its versifiers "the Grub-street Choir."

\* Father of the Rev. Samuel Hoole, who was born in a hackney-coach, which was conveying his mother to Drury-lane Theatre to witness the performance of the tragedy of *Timanthes*, written by her husband. Mr. Samuel Hoole prayed with Johnson in his last illness : he long kept six memorials the chair in which the Doctor usually sat, and the desk upon which he mostly wrote his *Rambler*. Mr. Hoole died in March, 1839.

## GUILDHALL (THE).

AT the north end of King-street, Cheapside, is the "Town-hall" of the City of London, where the principal Corporation business is transacted, and its magnificent hospitality exercised. The first Alderman's Bery or Court-hall was a low and mean building, in the street named therefrom, Aldermanbury, which occurs in a deed of the year 1189: "the Courts of Maior and Aldermen were held here until the new Guildhall was built. I myself (says Stow) have seen the ruines of the old court-hall in Aldermanbery-streete." The first entry which Mr. Horace Jones, the City architect, was able to find, is in the year 1212, the 14th of John. It is in a roll of the Hustings Court, which was held here. The edifice must have been a very large building, from the number of persons stated to have been present. "This was, undoubtedly, the original Guildhall spoken of by Fabyan, Grafton, and Stow: the old Berry Court, or Hal continued, and the Courts of the Mair and Aldermen were continually holden there. They had an entrance in Aldermanbury. This we will call the first Guildhall."

The second Guildhall, according to the Corporation records, was built in 1326, the 20th Edward II. Part of the crypt of this building exists, though much defaced by fire; it extends beneath half the present hall, and adjoins the present crypt, being divided by a stout brick wall. We might reasonably infer from this evidence that the second building was a part, or occupied a part, of the present site. In Aggas's map, 1560, there is a representation of the old entry from Aldermanbury. There was no entry for carriages, or even an opening into Gresham-street, as now.

We now come to the present, or third Guildhall, "begun to be builded new," says Fabyan, in the year 1411, the 12th of Henry IV., "by Thomas Knoles, then Maior, and by his brethren the Aldermen; and the same was made of a little cottage and a large great house, as it now standeth." The cost was defrayed by benevolences, fees, fines, and ameracements for ten years. The Mayor's Court and Chambers were added, and a stately entrance-porch, "beautified with images of stone." Divers aldermen glazed the windows, as appeared by their arms painted on each. Among the individual contributions was the making and glazing of "two louvers," for which Sir W. Harryot, Mayor, gave 40*l*. The hall was twenty years in building; the kitchen was built "by procurement" from the companies, of Sir John Shaw, goldsmith, Mayor, knighted on Bosworth Field; the kitchen was first used for dressing Sir John's mayoralty banquet, in 1501; and he "was the first that kept his feast there;" "since which time the Mayor's feasts have been yearly kept there, which before time were kept in the Taylors' Hall and the Grocers' Hall." "Nicholas Alwin, grocer, Mayor, 1499, deceased 1505, gave by his testament for a hanging of tapestrie to serve for the principal daies in the Guildhall, seventy-three pounds 6*s*. 8*d*." In 1614-15 was erected a new Council Chamber, and Record-room over. Among the early entertainments given in the Guildhall, was that of 1357, when John, King of France, and Edward the Black Prince, were received and entertained most sumptuously by the Mayor and citizens, May 24. Again, in 1419, King Henry V. was entertained by the Corporation at the Guildhall, when, it is reported, the Mayor, Sir Richard Whittington, burnt the bonds for money lent to King Henry, to the value of 60,000*l*. Here, 1483, June 24, the Duke of Buckingham attended with the Mayor and Sheriffs, by command of Richard Duke of Gloster, and addressing a great multitude of Liverymen assembled in the Common Hall, pointed out to them the bastardy of King Edward V., and urged the superior claim of Richard Plantagenet, as depicted in Shakspeare's *Richard III.*, act iii. scene 5.

*Glo.* Go after, after, Cousin Buckingham,  
The Mayor towards Guild Hall hies him in all post;  
There, at the modest vantage of the time,  
Infer the bastardy of Edward's children:  
Tell them, how Edward put to death a citizen,  
Only for saying—he would make his son  
"Heir to the Crown." Meaning, indeed, his House,  
Which, by the sign thereof, was termed so.

And again:—

*Buck.* I go; and towards three or four o'clock  
Look for the news that the Guild Hall affords.

1843. Here took place the trial and condemnation of Anne Askew for heresy, before Bishop Bonner; she was burnt at the stake, in Smithfield. 1547.—Trial of the Earl of Surrey, and his conviction of high treason. 1553, Nov. 13.—Trial and condemnation of Lady Jane Grey and her husband. 1554, April 17.—Trial and acquittal of Sir Nicholas Throgmorton, for participation in Thomas Wyatt's rebellion against Queen Mary. 1606, March 28.—Trial and conviction of the Jesuit Garnet. (Gunpowder Plot.) 1642, Jan. 5.—Charles I. attended at a Common Council, and claimed their assistance in apprehending Hampden and other patriots, who had taken shelter in the City to avoid arrest. During the Civil War and the Commonwealth, the Guildhall was the arena of many a patriotic movement. In Pepys's Diary, 11th Feb. 1659-60, he records the reception of Gen. Monk at the Guildhall. After the abdication of James II. the Lords Parliament assembled here, and declared for the Prince of Orange.

In the Great Fire the oak roof was entirely destroyed, and the principal front much injured. "That night (Tuesday Sept. 4, 1666), the sight of Guildhall was a fearful spectacle, which stood the whole body of it together in view for several hours together, after the fire had taken it, without flames (I suppose because the timber was of such solid oake), in a bright shining coale, as if it had been a pällace of gold or a great building of burnished brasse." The roof was an open timber one, springing from the capitals of the clustered columns, which subsequently bore guideron shields with the arms of the twelve Great Companies. After the Fire an additional story was raised to the lofty pitch of the original roof, the ceiling covering this being flat and square panelled: eight circular-headed windows on each side were added. These reparations have been attributed to Sir Christopher Wren. Elmes acknowledges "the modern roof and ceiling of Guildhall" to be Wren's, but "built over it in haste and for immediate use, and evidently a temporary covering." (See *Wren and his Times*, p. 266.) The present mongrel front of Guildhall was erected by Mr. George Dance, the City architect, in 1789.

The chief approach to the Hall was by a two-storied porch, far in advance of the main building. It had been much altered in the reign of Elizabeth or James I. It had, on each side of the entrance, two ornamented niches, and two figures in other niches, with figures in the upper story. These figures were taken down by Dance in 1789, and they lay in a cellar until Alderman Boydell induced the Corporation, in 1794, to permit them to pass into the hands of Thomas Banks, the eminent sculptor, who held them in great estimation as works of art; and after his death, in 1809, they were purchased by Mr. Banks, M.P. These figures have been placed in the screen at the east end of the hall. The crypt beneath is the finest and most extensive now remaining in London. Its height is 13 feet from the ground to the crown of the arches. In 1851 the stonework was rubbed down and cleaned, and the clustered shafts and capitals were repaired; and, on the visit of her present Majesty to the City, July 9, 1851, a banquet was served to the Queen and suite in this crypt, which was characteristically decorated for the occasion. In the chambers and offices all sorts of styles and decorations of all periods prevail—poor Gothic and painted ceiling, and marble sculpture, and mean wall-decoration; and the floors are of various levels. The interior of the Great Hall, in coarse imitation of the nave of Winchester Cathedral, was also poor and mean. For more than 150 years did the citizens bear the reproach of having their noble hall disfigured by the incongruous upper story and flat roof. A pointed roof was modelled, but was proceeded with no further. With increasing public taste the anomaly became more and more condemned. The covering was dilapidated and unsightly, and its removal was long pressed upon the Court of Common Council, chiefly by Mr. Deputy Lott, F.S.A., as offensive to architectural and archaeological taste. At length, a committee of the Court of Common Council, to whom the subject had been referred, reported in favour of a series of extensive improvements, involving the entire reconstruction, on a new plan, of most, if not all, the offices of the Corporation. First, however, it was resolved to proceed with a new roof for the Great Hall; and the committee of the Corporation set about this great work, and determined upon an open oaken roof, with a central louvre and a tapering metal spire.

The roof and other restorations were confided to Mr. Horace Jones, the City architect, with the assistance of Mr. Digby Wyatt, F.S.A., and Mr. Edward Roberts, F.S.A. The new internal cornice of the roof was commenced, with some ceremony, on the 22nd day of June, 1864, when the members of the Improvement Committee, the chaplain to the Lord Mayor, and the principal officers of the Corporation, assembled on the roof, and laid the first stone.

The new roof and its general construction is as nearly as possible in accordance with the period in which the Hall was originally built; and with a drawing, still extant, of the old roof as it existed before its destruction in the Great Fire; a number of windows by which the interior of the building was lighted from both sides, and which had been closed for generations, have been reopened with excellent effect; and, by the removal of an unsightly coating of plaster and cement, all the characteristic outlines of the internal architectural embellishments have been brought prominently out. One of the southern windows has been filled with stained glass, designed by Mr. F. Halliday, and executed by Lavers and Barraud: the subjects refer to the granting of charter, coining money, Wat Tyler, and a Royal tournament. The new roof is of oak, with rather a high pitch: it is lighted by sixteen dormers, eight on each side, and from the centre springs a louvre for the purposes of light and ventilation, as well as ornament, and it will have a lofty spire. The following are the dimensions:—The fair average width of the Hall is 49 feet 6 inches. The cluster of shafts project about 2 feet on each side, and their height to the springing of the arch ribs is 34 feet. The height from the present pavement to the underside of the ridge is 89 feet. The total length is 152 feet, and there are eight bays and seven principals. The length of the collar between the queen post is 29 feet, and was cut out of timber about 2 feet 8 inches square. One peculiarity of the construction of the roof is that there is a double lining, one of 2-inch oak and another of 1½-inch deal: on this latter the slates are laid.

In a *History of London* by Allen and Wright, is a note stating that a Col. Smith, formerly Deputy-Governor of the Tower, had a painting, representing London after the Great Fire, in which about one-third of the roof of Guildhall appeared standing, showing a gable-roof; and that in Hollar's View of London, *circa* 1647, the roof appears with two lanterns arising from it.

At each end of the Hall is a large Gothic window occupying the whole width, the arches resting on short columns, and retaining perfect their rich tracery. The upper compartments are filled with painted glass (restored and modern) of the royal arms, and stars and jewels of the Garter, Bath, Thistle, and St. Patrick, in the east window; and the City arms, supporters, &c. in the west window. Beneath the eastern window, under canopies, and at the back of the spot where the ancient Court of Hustings was holden, are statues of Edward VI., Queen Elizabeth, and King Charles I. from the Guildhall chapel. By an entry in the City records, the figure of Charles I. originally occupied a place in the Royal Exchange.

In the angles at the opposite end of the hall, on lofty octagonal pedestals, are the celebrated colossal figures of the giants Gog and Magog, sometimes called Gogmagog and Corinaeus. (*See* p. 380.) They were placed in their present position during the alterations of 1815, having formerly stood on each side of the steps leading to the upper rooms, these steps being where now is placed Beckford's monument, which then stood against the great western window.

This old entrance was very picturesque: on each side of the steps was an octangular turreted gallery, balustraded, for the hall-keeper; each surrounded by iron-work palm-trees, supporting a balcony and ornamented three-dial clock, and a resplendent gilt sun underneath. The flanking giants, in their singular costume, gave the whole an unique character. At the sides of the steps, under the hall-keeper's offices, were two dark cells, or cages, in which unruly apprentices were occasionally confined, by order of the City Chamberlain: these were called *Little Ease*, for a boy could not stand upright in them. In 1706, Queen Anne made a present to the City, to be hung in the hall, of 26 standards, 63 colours, and a kettledrum, a part of the spoil from the field of Ramilies; these have been long removed. There are several sculptured monuments erected at the expense of the Corporation—to Admiral Lord Nelson, by J. Smith, 1810, inscription by Sheridan; Alderman Beckford, Lord Mayor in 1762 and 1769, by Moore; the Earl of Chatham, by Bacon, 1782, inscription by Burke; the Right Hon. W. Pitt, by Bubb, 1813, inscription by Canning. Upon Beckford's monument is the speech which was long believed to have been addressed by him to George III. on his throne.

Gifford (*Ben Jonson*, vol. vi. p. 481) denies this; and Isaac Reed asserts that "Beckford did not utter one syllable of this speech. It was penned by Horne Tooke, and by his art put on the records of the City and on Beckford's statue, as he told me, Mr. Braithwaite, Mr. Seyers, &c., at the Athenian Club."

The style of these monuments (which cost 3000 and 4000 guineas each) is ill adapted for a Tudor hall, and they rank low as works of art: for example, in that to Nelson, the only indication of its object is a small medallion of the hero; in Beckford's, the decline of the City and Commerce is represented by figures in a drooping state!—a literal allegory.

The memorial group of the great Duke of Wellington, by John Bell; central statue of the hero, and two emblematic figures; is in better taste.

The Guildhall will contain between 6000 and 7000 persons. Here have been held the Inauguration Dinners of the Lord Mayors since 1501. Charles I. was feasted here, in 1641, with a political object, which failed. Charles II. was *nine times* entertained here at dinner.

Charles II. dined with the citizens the year that Sir Robert Viner was mayor, who getting elated with continually toasting the royal family, grew a little fond of his majesty. "The king understood very well how to extricate himself in all kinds of difficulties, and, with an hint to the company to avoid ceremony, stole off, and made towards his coach, which stood ready for him in Guildhall-yard. But the mayor liked his company so well, and was grown so intimate, that he pursued him hastily, and catching him fast by the hand, cried out with a vehement oath and accent, 'Sir, you shall stay and take t'other bottle!' The airy monarch looked kindly at him over his shoulder, and with a smile and graceful air (for I saw him at the time, and do now) repeated this line of the old song:—

'He that is drunk is as great as a king,'

and immediately returned back and complied with his landlord."—*Spectator*, No. 462.

From 1660, with only three exceptions, our sovereign has dined at Guildhall on Lord Mayor's Day, after his or her accession or coronation. The exceptions were James II., who held the City Charter upon a writ of *quo warranto* at his accession; George IV., who was rendered unpopular by his quarrel with his Queen; and William IV., who apprehended political tumult. But George IV. (when Regent) was entertained here, June 18, 1814, with Alexander, Emperor of Russia, and Frederick-William III., King of Prussia, when the banquet cost 25,000*l.*, and the value of the plate used was 200,000*l.*: [on that day year was fought the Battle of Waterloo.] On July 9, 1814, the Duke of Wellington was entertained at dinner in Guildhall. The banquet to George III. cost 6898*l.*, when 1200 guests dined in the Hall; that to Queen Victoria, Nov. 9, 1837, cost 6870*l.*; and an evening entertainment to her Majesty, July 9, 1851, to celebrate the Great Exhibition, cost 5120*l.* 1*s.* 9*d.*, being 129*l.* 5*s.* 3*d.* less than the sum voted: invitations, 1452. Here, in 1831, were entertained the members of the Legislature, and others who promoted and supported Parliamentary Reform; in 1837, her present Majesty the Queen, on her accession to the throne; in 1838, the foreign Ambassadors and other distinguished personages, in celebration of her Majesty's coronation; in 1855, the Emperor and Empress of the French were fêted here (the Lord Mayor raised to the baronetcy as Sir Francis Graham Moon); in 1863, the Prince and Princess of Wales, shortly after their marriage.

The Guildhall is magnificently decorated for royal entertainments, when the sovereign is seated beneath a state canopy at the east end. The lighting of the vast Hall with gas is by stars, mottoes, and devices of 6000 or 7000 jets in the large windows, filled with planking and sheet-iron, to prevent accident by fire: a stupendous crystal star, and a Prince of Wales's plume in spun glass, nine feet high, are superb insignia; the architectural lines of the edifice were marked out with 5000 gas-jets; and from the roof hung two painted chandeliers, each 12 feet diameter; the whole flood of gaslight exceeding that of 45,000 wax-candles; this being the former mode of lighting: the present is by gas chandeliers, of appropriate design.

The *Dinner on Lord Mayor's Day* is a magnificent spectacle: the Lord Mayor and his distinguished guests advance to the banquet by sound of trumpet; and the superb dresses and official costumes of the company, about 1200 in number, with the display of costly plate, is very striking. The Hall is divided: at the upper, or hustings tables, the courses are served hot; at the lower tables the turtle only is hot. The baron of beef is brought in procession from the kitchen into the Hall in the morning, and being placed upon a pedestal, at night is cut up by "the City carver." The old Kitchen, wherein the dinner was dressed, was a vast apartment; the principal range was 16 feet long and 7 feet high, and a baron of beef (3 cwt.) upon the gigantic spit was turned by hand. There were 20 cooks, besides helpers; 14 tons of coals were consumed. Some 40 turtles are slaughtered for 250 tureens of soup; and the serving of the dinner requires about 200 persons and 8000 plate-changes. Next morning the fragments of the Great Feast are doled out to the poor.

The following, from Pepys's *Diary*, is the earliest account we have of the Lord Mayor's Inauguration Dinner:—

"29th Oct. 1663.—To Guildhall, and up and down to see the tables; where under every salt there was a bill of fare, and at the end of the table the persons proper for the table. Many were the tables, but none in the Hall but the Mayor's and Lords of the Privy Council that had napkins or knives, which was very strange. I sat at the Merchant Strangers' table, where ten good dishes to a messe, with plenty of wine of all sorts; but it was very displeasing that we had no napkins nor change of trenchers, and drank out of earthen pitchers and wooden dishes."

The Guildhall Inauguration Dinner, including wines, usually costs about 1500*l.*, which is supposed to be paid out of the public money; but the City contribute only 200*l.*, the remainder being paid half by the Lord Mayor and half by the two Sheriffs. The procession costs about 300*l.*, and the decoration of the hall 800*l.*, which is similarly apportioned.

*The Court of Hustings* held in the Guildhall, was the Saxon Folkmote: the word *Hustings* in Saxon signifies the *House of Causes*, a general Council or Court. The Court is considered the highest Court of Judicature; the presiding judges, the Lord Mayor and Sheriffs. The proceedings are similar to the County Courts, with the addition, anciently, of the enrolment of deeds and wills, &c. The following entries are from the *English Chronicle*, and show the uses the Hall was put to in the holding of this Court in past ages:—

In 1441 Maister Roger and Master Thomas were tried in the Guildhale of Londoun for tresons and sorcery. On the 18th of November, in the same year, Maister Roger Bollyngbrooke was arreymed for trespass agens the Kyngis persone, and thereof, by XII men of Londoun, he was founde guilty. Lord Say (Saye) was brought out of the Tour unto Gyldehalle to be tried, Saturday, July 4, 1450.

The following entries are from the Diary of Henry Machyn, Citizen and Merchant Taylor of London:—"In 1550-1, the xiiij day of Marche was rayned at the Yeld-halle a C (hundred) mayners for robyng on the see, and the Captayne, belyng a Skott, was eared to Nigate the same day, and certen east (condemned). In 1552, the vij day of June, the Duke of Northumberland and dyvers of the Kynges Consell sat at Yeld-hall to hear certain causys, and toke up my Lord Mayre and his brodurne for vetell, because he lokyd not to it, and for sellyng of the same, and oder causys. In 1559, the furst day of December, was raynyd at the Yeld-hall, Master Grymston, Captayn."

*The Entrance.*—The Hall is approached by a porch consisting of two divisions, formed by an arch and columns crossing in the centre; the wall on either side is subdivided into smaller compartments, with tracery and quatrefoil turns. The groined roof, with stone ribs springing from the sides, are intersected in the centre with sculptured bosses with various devices of the arms and bearings of Edward the Confessor.

*The Crypt*, already described on page 301, has, at each intersection of the groins, a boss, bearing shields with the arms of Edward the Confessor, the City arms, well-sculptured roses, &c.

*The Chapel.*—This ancient appendage to the Guildhall was founded by Peter Fanlove, Adam Francis, and Henry Frowick, citizens, and dedicated to St. Mary Magdalen and all Saints, and called London College, in 1299. In the records of the Corporation of the date of 1326, there is an account of timber and lead granted for the building, and in 1379, the surplus materials not used in the building of the Guildhall were given for the same purpose.

1413.—In Holinshed's *Chronicle*, vol. iii. p. 56, there is the following entry:—"He (Richard Whittington) also builded for the ease of the Maior of London, his brethren, and the worshipful citizens, on the solemne days of their assemblie, a Chapell adjoining to the Guildhall, to the intent that before they entered into any of their worldlie affaires, they should begin with prayer and invocation to God for his assistance."

In the mayoralty of John Welles, grocer, the Chapel was rebuilt, 1431.

From Machyn's *Diary*.—"The vj day of May (1554) was a goodly evyng song at Yeldhall Colege, by the Masters of the Clarke and ther felowshyppe of Clarke, with syngyng and playing, as youe have hard. [The morrow after was a great Mass at the same place, by the same fraternity, when every Clerk offered a halfpenny. The Mass was sung by divers of the Queen's Chapel and children.] The xxvij day of May (1555) was the Clarke Possessyon from Yeldhall Colege, and a goodly Masse he hard (or has been heard), and evere Clarke havyng a crosse and garland, with C. (hundred) shewers borne, and the whettes (waitis) playing round Chepe, and so to Ledyndhall (unto St. *Albro* Chyrche) (Ethelburga), and there they putt off their gayre (gear), and there was the blesseyd Sacrament borne with torche light about, and from thens unto Barbur-hall to dener. The tomb of Sir Thomas Kneesworth, late Mare of London, repaired by John Bullok, xvij of June, 1562."

This Chapel was not so much injured by the Great Fire as to lose its architectural features. It consisted of a main and side aisle; the latter, to the north, not having had any regular communication with the former. The west had a large window with tracery entire, and beneath it a handsome pointed arch entrance, under a square architrave, having sculptured capitals with quatrefoils and shields with arms in the spandrels;

against the windows were three niches, large and heavy. They contained good figures of King Edward VI.; Queen Elizabeth, with a Phoenix under her; and of Charles I., treading upon a globe, sculptured by Stone; the spaces of wall on each side, and under the window, were ornamented with panels. At the Dissolution of the religious houses the Chapel was purchased by the Mayor and Commonalty, and used as the Court of Requests. It was taken down in 1822 to make way for the present Courts of Law: the window is preserved in the Chamberlain's office; there are remains of the crypt, with the stairs leading to the Chapel.

North of the Hall is the *Court of Exchequer*, formerly the King's Bench Court. It was built immediately after the Great Hall (*temp.* Henry VI.) for the Mayor's Court, still held here. Some of the windows were glazed by the executors of Whittington, and emblazoned with his arms: Stow describes among the glass, "the Mayor pictured sitting in habite, party-coloured, and a hood on his head; his sword before him, with an hatte or cap of maintenance; the common clearke and other officers bare-headed, their hooles on their shoulders." This Court had at the back of the judges' seats paintings of Prudence, Justice, Religion and Fortitude. Here is a large picture by Alaux of Paris, presented by Louis-Philippe, representing his reception of an address from the City on his visit to England in 1844; Humphery, mayor, and many other portraits. Here also are portraits of George III. and Queen Charlotte, by Ramsay; and William III. and Queen Mary, by Van der Voort.

The *Common-Council Chamber* contains, in a niche behind the Mayor's chair, a marble statue of George III., by Chantrey, the inscription by Alderman Birch, in whose mayoralty, 1815, the statue was erected. On the right is a whole-length portrait of Queen Victoria, by Hayter; and left are half-lengths of Caroline, queen of George IV., and her daughter the Princess Charlotte, both by Lonsdale. Here are the following busts: Queen Victoria and the Prince Consort, J. Durham, sculptor; Prince of Wales, by Marshall Wood; H. B. Beaufof, F.R.S., by Calder Marshall; Thomas Clarkson, R. L. Jones, and Major-General Sir H. Havelock, by W. Behnes; T. H. Hall, by J. Durham; Lord Nelson, by the Hon. Mrs. Damer; Granville Sharp, by Chantrey; the Duke of Wellington, by Turnerelli.

North side: Portraits—Chamberlain Clarke, by Lawrence; Aldermen Waitman and Wood, by Patten; Nelson, by Beechey; Lord Denman, by Mrs. Pearson. Paintings—Defence of Gibraltar and burning of gun-boats, 1782, by Paton; Rodney's Victory, 1782, by Dodd; and Sir William Walworth killing Wat Tyler, in Smithfield, by Northcote. East side: Siege of Gibraltar, by Copley, father of Lord Lyndhurst: it covers the entire side, and was painted by the artist raised on a platform. South side: Alderman Boydell, by Beechey; Lord Heathfield, by Reynolds; Murder of Rizzio by Ople; Lord Cornwallis, by Copley; Defence and Relief of Gibraltar, by Paton; Rodney breaking the French line, 1782, by Dodd.

Here are also three pictures of municipal ceremonies and festivities: the Civic Oath administered to Alderman Newnham, as Lord Mayor, on the Hustings in the Guildhall, Nov. 8, 1782, with 140 portraits; the Lord Mayor's Show by Water-boats by Paton, figures by Wheatley; and the Royal Entertainment in Guildhall, June 18, 1813, by Daniell, R.A.

The *Court of Aldermen* is profusely gilded, and painted with allegorical figures of the City of London, Prudence, Justice, Temperance, and Fortitude, by Sir James Thornhill, who was presented by the Corporation with a gold cup, value 225*l.* 7*s.*

The *Chamberlain's Office* is on the north-east: he is keeper of the City cash, regalia, and trust-money; admits, on oath, persons to the freedom of London, and registers and enrolls all apprentices, adjudicates between them and their masters, and has power to commit either to Bridewell. The Chamberlain bears on state occasions an ancient staff, surmounted with a jewelled crown: this sceptre is presented with the City keys, mace, and sword, on the entry of the sovereign by Temple Bar; and is formally surrendered on the yearly re-election of the Chamberlain, November 18. There is neither record nor tradition of a defalcation in his office in upwards of 700 years. The Chamberlain's ancient seal is a royal crown, lion passant, the City sword, and two keys: legend, *Sigillum Camerae Londini*.\* In the office hangs the picture of the Battle of Towton, painted by Alderman Boydell; and here, where the City apprentices sign their indentures, suggestively hangs a fine set of Hogarth's prints of the

\* Wilkes was Chamberlain from 1779 until his death in 1797: he was succeeded by Alderman Richard Clark, who, when sheriff, took Dr. Johnson to a judges' dinner at the Old Bailey; the judges being Blackstone and Eyre. Mr. Clark, when 15, was introduced to Johnson, whom he last met at the Essex Head Club. Chamberlain Clark died in "Cowley's House," at Chertsey, in 1831, aged 92.

Industrious and Idle Apprentices. In the *Chamberlain's Parlour* are duplicate copies of the freedoms and thanks voted to distinguished personages by the City; they are fine specimens of penmanship, mostly by Mr. Tomkins, whose portrait, by Reynolds (and said to be his latest picture), hangs here. In the *Waiting Room*, among the pictures are Reynolds's portrait of the great Lord Camden, and Opie's Murder of James I. of Scotland.

A large folding screen, painted, it is said, by Copley, represents the Lord Mayor Beekford delivering the City sword to King George III. at Temple Bar; interesting for its portraits and record of the costumes of the period; presented by Alderman Salomons to the City in 1850. Here, too, is a large picture of the battle of Agincourt, painted by Sir Robert Ker Porter, when 19 years of age, assisted by Mr. Mulready, subsequently R.A., and presented to the City in 1808.

In the *Library*, rich in books, tracts, and MSS. relating to the City, and first opened in 1828, are portraits of several aldermen; and a Museum of relics discovered at Old London Bridge, the Royal Exchange, and elsewhere in the City. (See MUSEUMS.)

In the *Courts of Common Pleas and Queen's Bench*, built upon the site of Guildhall Chapel, by Montague, in 1823, are portraits of the judges who justly adjudicated the disputed properties of the citizens after the Great Fire. These and other pictures were formerly hung in the Guildhall: in stormy political times they were occasionally injured; for, in the *London Gazette* of 1681, the Lord Mayor and Court of Aldermen advertised a reward of 500*l.* for the discovery of the person who offered an indignity to the portrait of the Duke of York (James II.) in the Guildhall, to show their deep resentment at that "insolent and villanous act."

In the portraits of Sir Matthew Hale, and other judges of his time, hung up in the Courts at Guildhall, they are represented with beards and skull-caps; but these portraits are not much better painted than the portraits of the Scottish Kings at Holyrood, and may not be entitled to rank higher as authorities. The powdered wig gradually degenerated into an ordinary flaxen one; even that began to be left off about 1825; and since the death of Mr. Justice Littledale, not a single judge is distinguishable in a drawing-room from the ordinary mob of gentlemen by his dress. Bishops are degenerating in the same manner.

Two new Law Courts have been added to the Guildhall; and a portion of the ancient crypt has been appropriated as a kitchen; the site of the old kitchen being that of the north court. There being no external elevations to these new courts, the roof is of thick glass in ironwork frames.

Guildhall and the offices and buildings connected therewith, the Mansion House, the Sessions House, and other Corporation property are insured against fire in amounts not exceeding in the whole the sum of 200,000*l.* The several amounts expended upon the Guildhall and the buildings connected therewith, from the year 1800 to 1865, distinguishing the cost incurred in temporary buildings and erections upon special public occasions, were as follow: 72,101*l.* 7*s.* 5*d.* expended on repairs and alterations; 32,928*l.* 19*s.* 11*d.* upon fittings upon Lord Mayor's-day; 42,382*l.* 8*s.* 7*d.* for special entertainments; and for law courts the sum of 25,911*l.* 5*s.* 6*d.*, making a total of 173,323*l.* 14*s.* 5*d.* expended upon the Guildhall during the above period.

#### HACKNEY-COACHES.

COACHES were first let for hire in London in 1625, and were hence called hackney-coaches; that they were named from being first employed in conveying the citizens to their villas at Hackney, is a popular error, though supported by Maitland. The term is said to be from the French *haquenée*, a slow-paced or ambling nag; as, "he had in his stable an *hackenay*." (Chaucer's *Romaunt of the Rose*.) But *haquenée* "does not include the idea of hiring. To hack is to offer a thing for common sale or hire; and a coach (along with the horses) kept for hire is a hackney-coach." (David Booth's *Analytical Dictionary*, p. 304.) Hackney-coaches were first kept at inns, but soon got into the streets, as appears in *Strafford's Letters*, April, 1634:—

"One Captair. Bailey hath erected some four *Hackney-coaches*, put his men in livery, and appointed them to stand at the *May-Pole* in the Strand (where St. Mary's Church now is), giving them instructions at what rates to carry men into several parts of the town, where all the day they may be had. Other hackney-men seeing this way, they flocked to the same place, and perform their journeys at the same rate. So that sometimes there is twenty of them together, which disperse up and down; that they and others are to be had everywhere, as watermen are to be had by the water-side."

A successful rival, however, soon appeared; when Sir Saunders Duncombe, upon petition to Charles I., stated the streets to be greatly encumbered with the coaches

and that in many parts beyond sea people were much carried in chairs that are covered, whereby few coaches were used among them; and the king granted Duncombe "the sole privilege to use, let, or hire a number of the said covered chairs for fourteen years;" the fare being 1s. per mile. Yet the hackney-coaches had so increased in 1635, as to be considered a nuisance by the Court, and to be limited by Star-chamber. In 1637, however, Charles granted a special commission to his master of the horse to license fifty hackney-coachmen in London and Westminster, each to keep twelve horses, for about 200 coaches, which Sir William Davenant describes as "uneasily hung, and so narrow that he took them for sedans on wheels." Their rates were fixed by Act 14 Charles II. In 1694 they were limited to 700.

Hackney-coaches were first excluded from Hyde Park in 1695, when "several persons of quality having been affronted at the Ring by some of the persons that rode in hackney-coaches with masks, and complaint thereof being made to the Lord Justices, an order is made that no hackney-coaches be permitted to go into the said Park, and that none presume to appear there in masks." (*Post-Boy*, June 8, 1695.) And the exclusion continues to this day.

By coach was the usual mode of sight-seeing:—"I took (*Tatler*, June 18, 1709) three lads, who were under my guardianship, a-rambling in a hackney-coach, to shew them the town; as the lions, the tombs, Bedlam," &c. Gay's *Trivia* glances at this period:—

"When on his box the nodding coachman snores,  
And dreams of fancy'd fares."

In 1771 the number of coaches was fixed at 1000, and their fares were raised; again increased in 1799, and the office removed to Somerset House 1782; since 1833, their number has not been limited. In 1814 hackney-chariots were introduced; and in 1820 *cabriolets*, or *cabs*. The double-seated hackney-coach was usually a cast-off carriage, often to be seen covered with the emblazoned arms of its former noble owner; and the driver was notoriously "rude, exacting, and quarrelsome." Both coaches and chariots were drawn by a pair of horses; but the cab dispenses with one horse, and the fare is thus reduced half. The cab (from Paris) was at first open and chaise-like, with a pair of wheels, but very liable to accidents, which soon begat a host of "safety" improvements. The cab, or sedan-like coach-body upon four wheels, often reminds one of a seventeenth-century-coach, such as we see sculptured on Thynne's tomb in Westminster Abbey.

### HALLS OF THE CITY COMPANIES.

**F**OREMOST in vastness and antiquity is the Guildhall of the City of London, just described. The latter affords the best idea of the Companies' ancient halls, the majority of which were destroyed in the Great Fire. They were the guild-halls, from the *gild-hallas* of the Anglo-Saxons, wherein wares were exposed for sale, as in most towns of the Middle Ages.

The ancient Hall mostly had an open timber roof; whence the Fishmongers', and probably other Companies, suspended the properties of their pageants. In the centre of the roof was a *louvre*, or lantern; at the sides were Gothic windows, filled with painted glass; and beneath hung gorgeous tapestry, which, in the Merchant-Tailors' Hall, contained the history of their patron, St. John the Baptist. The floor was strewed with rushes; the tables were planks placed on tressels; a reredos, or grand screen, crossed the apartment, hiding the entrances to the buttery, larder, and kitchen; "the minstrales" were in a gallery aloft: and there were temporary platforms and stages for players. Other passages branched to the wine and ale cellars, and to the chambers. Annexed to the buttery were the bakehouse and brewhouse; the kitchen passage was guarded by a spiked hatch, and was well stored with "spittes, rakkes, and rollars." There is also named in Brewers' Hall, *temp.* Henry VI. "the tresauce," or cloister between the great kitchen and the hall; and an "almarie cupboard," for the Company's alms (apparently broken provisions), in the great kitchen.

The Companies possessed halls from the date of their first charters, under Edward III. The Merchant-tailors, however, had a hall at the back of the Red Lion, in Basing-lane, long before they bought their Hall in Threadneedle-street, in 1331. The Weavers, Bakers, Butchers, and other ancient guilds, must also have had halls in very remote times: these, and other meeting-places, particularly of the Minor Companies, were probably, at first, but mean buildings, as the original Guildhall in Aldermanbury;

and before the founding of their halls, the Companies met at various great mansions in the City, lent for the purpose.

In their Halls the Twelve Great Companies gave grand feasts to various monarchs, who enrolled themselves as members. In the Interregnum they were the meeting-places of the Government Commissioners; by the Parliamentary commanders they were converted into barracks; by the puritanical clergy into preaching-places; and by successive Lord Mayors into temporary mansion-houses. In Elizabeth's and the Stuarts' reigns, every Hall was obliged to have also a granary and an armoury; and the Company's almshouses adjoined the Hall, that the alms-folk might be ready to join in processions and pageants.

The donations of plate to the Companies included drinking-cups, gallon-pots, basins and ewers, large silver salvers, goblets and salts of "sylver, sylver-guylte, parcel-gylte, or sylver-white:" and to the entry of the name and gift was usually attached an ejaculatory prayer for the donor, as "Ih'u be mercyfull unto his soul;" "God send him long life and welfare," &c.

Liveries are not mentioned to have been worn by any of the Companies before *temp.* Edward I.; the hood, evidently copied from the monk's cowl, was an indispensable appendage; and the Company's "trade conizances" were embroidered conspicuously on the dress.

The Companies were, at first, half-ecclesiastical bodies. "This demi-religious character evidenced itself in the mode of their foundation: in their choosing patron-saints and chaplains; founding altars to such saints in the churches they held the advowson of, and in various other ways. None of the trades assembled to form fraternities, without ranging themselves under the banner of some saint; and, if possible, they chose a saint who either bore a relation to their trade, or to some other analogous circumstance. The Fishmongers adopted St. Peter, and met at St. Peter's Church; the Drapers chose the Virgin Mary, mother of the 'Holy Lamb,' or fleece, as the emblem of that trade, and appropriately assembled, in like manner at St. Mary Bethlem church, Bishopsgate; the Goldsmiths' patron was St. Dunstan, reported to have been a brother artisan; the Merchant-Tailors, another branch of the draping business, marked their connexion with it by selecting St. John Baptist, who was the harbinger of the holy Lamb, so adopted by the Drapers; and which, as being anciently cloth-dealers, still constitutes the crest of that Society.

"In other cases, the Companies denominated themselves fraternities of the particular saint in whose church or chapel they assembled, and had their altar. Thus, the Grocers called themselves the fraternity of St. Anthony, because they had their altar in St. Anthony's church; the Vintners, 'the fraternity of St. Martin,' from the like connexion with St. Martin's Vintry church; and the Skinners and the Salters, both societies of Corpus Christi, from meeting, the one at the altar of that name in St. Laurence Poultry church; and the other at Corpus Christi chapel, in All Saints, Bread-street."—(Herbert's *Hist. of the Twelve Great Livery Companies*, vol. i. pp. 666-7.) Nor until after the Reformation could the fraternities be regarded as strictly secular.

In their processions to church the Companies were joined by the religious orders in their rich costumes, bearing wax torches and singing, and frequently attended by the Lord Mayor and great civic authorities in state. Funerals were as religiously observed by them; and to celebrate with becoming grandeur the obsequies of deceased members, almost the whole of these fraternities kept a state-pall, or hearse-cloth, a few of which are preserved to this day; members of superior rank were followed to interment by the Lord Mayor and civic authorities; and it was customary to provide funeral dinners, with sums left by the deceased, or sent after death by the relatives to their Halls: such sums, *temp.* Elizabeth and James, were generally not less than 20*l.*

"The great Sir Philip Sidney, who was publicly buried at St. Paul's Cathedral in 1587, was a brother of the Grocers' Company, and was attended by that livery in all their formalities, who were preceded by the Lord Mayor, aldermen, and sheriffs, 'rydinge in purple.' The number of the Grocers' livery amounted to 120, and are represented in a print of the procession by De Brie."—Nichols's *Progresses of Queen Elizabeth*, ii. pp. 19-26.

At the funeral of Sir Thomas Lovell (of Shakspeare memory, at Holywell Nunnery, Shoreditch), "the gentlemen of the inns of court (Sir Thomas built Lincoln's Inn fine gateway), with certeyn *crafts of London*," received the corpse at the convent gate, accompanied by the Mayor and aldermen, who, on the body being placed under the hearse, or canopy, encircled the rails, and repeated the *De profundis*. Meanwhile, "there was a *drynkyng* in all the cloister, the nones, halls and parlors of the said place."

The Election Feasts in the Halls, *temp.* Henry IV., were partaken of by the first nobility, and even princes, besides the City dignitaries; when the luxuries included the mighty "baron" or "ribbes of beef," "frumentie with venison," brawn, fat swan, boar, conger, sea-hog, and other delicacies stored above *the salt*;\* whilst "sotilities" of

\* The *salt*, or salt-cellar, was a magnificent piece of plate, forming, in the Middle Ages, a division between the upper and lower part of the table. Mr. Fosbrooke believed one, in the Tower of London, and of silver-gilt, to belong to the Mercers' Company. To be seated above the salt was a mark of honour; and our ancestors seem often to have placed persons below it in order to mortify them.

the Company's patron, trade, or saint, recalled the origin of the fraternity; and there were "voysds of spice-bread, ypcoras, and confits," to the renewed "noise" (music) of the minstrels, or waits, or the higher merriment of the London clerks "playing some holy play."

Thus, 5th September, 1419, 17 Henry V., we have the following Election-dinner of the Brewers' Company, the "Ordinaire de la Feste," in Norman-French.

*First Course.*—Brawn with mustard; cabbages to the pottage; swan standard; capons roasted; great custards. (For the "fat swan" and the cygnet, the citizens had their annual swan upplings.)

*Second Course.*—Venison in broth, with white mottreids; cony standard; partridges with cocks roasted; leche lumbard, doucetts with little parneuse.

*Third Course.*—Pears in syrop; great birds with little ones together; fritters, paynpuffs with a cold baked meat.

The cost of another Election Feast of the Brewers, A.D. 1425, was 38*l.* 4*s.* 2*d.*, a very large sum, considering that money was then of five times its present value. Melted fat, or lard, was then used where we now use butter, then a great dainty, as was also sugar, the place of which was supplied by honey. Furmenty, the *furmentaria* of Ducange, was wheat boiled in milk, such as is eaten to this day. "Aromatising" the Hall with the precious Indian wood, sanders, and Brazil wood, by fumigation, greatly enlivened the table. Not only did widows, wives, and single women, who were members of the Company join the feast; but from the Grocers' ordinances of 1343, "bretherene" could introduce their wives or companions, and damsels; indeed, a wife was not to be excused, unless "*malade, ou grosse danfant, et pres sa delivrance.*"

The Election Ceremonies took place after the feast, when the newly-elected principals were crowned "with garlandes on their hedes." Then followed the "loving cup," as is still the custom;\* and next the minstrels and players; the minstrels including harpers, who played and sang in the intervals of the others sounding their cornets, shalms, flutes, horns, and pipes. The dramas then in fashion often consisted of single subjects; and this taste continued till long after the establishment of the regular theatres. In the Guildhall library is an original licence from the Master of the Revels, in 1662, authorizing "George Bailey, musitioner, and eight servants, his company, to play for one year a play called Noah's Flood;" these eight persons personating the patriarch and his family.

The Companies' Barges also formed stately pageants. Thus, at the coronation of the queen of Henry VII., she was attended "from Greenwich" by water, by "the Maior, shrifes, and alderman of the cite, and divers and many worshipful commoners, chosen out of every crafte, in their liverays, in barges freshly furnished with banners and stremers of silk, rechely beaton with the armes and bagges of their craftes." In the same reign, among "a great and goodly nombre of barges," either fastened up, or "roweing and skym'ying in the riv' and Thamys," was, "first for the cittie of London, the Mayer's barge, the sherevy's barge, aldermens dy'rs bargs; and then the crafts of the cylie, having their standards and stremers, w<sup>t</sup> their conizances right weel dekkyd, and replenyshid w<sup>t</sup> w<sup>sh</sup>ipfull company of the citizens."

The earliest Triumph, Pageant, or "Riding," connected with the trades, occurred in 1293, on the return of Edward I. from his victory over the Scots, when "every citizen, according to their severall trades, made their severall shew." They also joined in coronation processions, as that of Henry IV. in 1399, when Froissart states Cheapside to have had seven fountains running with red and white wine; the different Companies of London, led by their wardens, were clothed in their proper liveries, and bore banners of their trades. Chancer describes an idle City apprentice of his day:—

"When there any *ridings* were in Chepe,  
Out of the shoppe thider would he lepe;  
And till that he had all the sight ysein,  
And danced wel, he would not come again."

From this sketch of the early Halls of the Companies, and their ancient state and observances, we proceed to the City Halls of the present day, commencing with the

\* "*The Loving Cup*" is a splendid feature of the Hall-feasts of the City and Inns of Court. The Cup is of silver, or silver-gilt, and is filled with spiced wine, immemorially termed "sack." Immediately after the dinner and grace, the Masters and Wardens drink to their visitors a hearty welcome; the cup is then passed round the table, and each guest, after he has drunk, applies his napkin to the mouth of the cup before he passes it to his neighbour. The more formal practice is for "the person who pledges with the loving cup to stand up and bow to his neighbour, who, also standing, removes the cover with his right hand, and holds it while the other drinks; a custom said to have originated in the precaution to keep the right, or 'dagger-hand,' employed, that the person who drinks may be assured of no treachery, like that practised by Elfrida on the unsuspecting King Edward the Martyr, at Corfe Castle, who was slain while drinking. This was why the loving cup possessed a cover."—*F. W. Fairholt, F.S.A.*

## HALLS OF THE GREAT COMPANIES,

## IN THEIR ORDER OF PRECEDENCY.

1. **MERCERS' HALL.**—The Mercers is generally referred to as “the most ancient of all the great leading companies.” But several are of greater antiquity, although the Mercers Company takes precedence of rank.

Order of Precedence.	Charter granted.	Order of Precedence.	Charter granted.

Mercers' Hall, Cheapside, between Ironmonger-lane and Old Jewry, occupies the site of the ancient hospital of St. Thomas Acon's, whereon the Mercers first settled in London, hence called “the Mercery.” On the site of the present entrance to the Hall from Cheapside stood the house of Gilbert Becket, father of Becket, Archbishop of Canterbury; after whose murder his sister Agnes and her husband built here a chapel and hospital, destroyed in the Great Fire. Soon after were built upon the same site the present Hall and Chapel; the front of the latter, by Wren, now only remains: above the ornamented doorway are cherubim mantling the Virgin's head, the cognisance of the Company; the front has also figures of Faith, Hope, and Charity; the whole in stone kept in handsome repair.\* The chapel is at the extremity of the ante-chapel; over which, upon Doric columns, is the hall, handsomely wainscoted and carved: here are held the Gresham Committees. Among the paintings are original portraits of Sir Thomas Gresham and Dean Colet; and a fanciful portrait of Whittington. Among the Mercers' Trust-estates are St. Paul's and Mercers' Schools.

Of the Mercers' Company there have been several kings, princes, and nobility; and to 1703, ninety-eight had been lord mayors, and one as early as 1214; Richard II., who granted the first charter in 1393, was a mercer; as were also Whittington and the illustrious Gresham. Among the Company's documents are a curious illustration of Whittington dying (ordinances of his college), and portraits of the first three wardens. In 1513, the Mercers possessed Conduit Mead, now covered by New Bond-street, which, had they retained, it would more than quadruple the value of all their present estates. (*Herbert.*) Among their property is the north side of Long Acre (about 8½ acres), and the adjacent streets, including Mercer-street; in 1650, “part of the possessions of Charles Stuart, late King of England, for which the warden and company then paid to the Crown 13s. 4d. per annum. There is scarcely a single mercer in the Company at the present day.” (*Herbert.*) Sir Baptist Hicks (founder of the Campden family) was a great mercer in Cheapside, who supplied the Court when James I. and “his bare Scotch nobility and gentry came in:” he built the first Hicks's Hall, and was one of the first citizens that after knighthood kept their shops.

The Mercers' Company lend money to livery-men, or freemen, without interest, upon approved security. The Company also established the first insurance office for lives, in 1693. (*Utton.*) The Golden Lectureship is in their gift. William Caxton, England's first printer, was a liveryman of this Company.

The Mercers' Election-Cup, of early sixteenth-century work, is silver-gilt, decorated with fretwork and female busts; the feet, flasks; and on the cover is the popular legend of an unicorn yielding its horn to a maiden. The whole is enamelled with coats of arms and these lines:—

“To elect the master of the mercerie hither am I sent,  
And by Sir Thomas Leigh for the same intent.”

The Company also possess a silver-gilt Wagon and Tun, covered with arabesques and enamels, of sixteenth-century work. The Hall was originally decorated with carvings; the main stem of deal, the fruit, flowers, &c., of lime, pear, and beech; these becoming worm-eaten, were, long since, removed from the panelling, and put aside; but they have been restored by Mr. Henry Crace, who thus describes the process:

“The carving is of the same colour as when taken down. I merely washed it, and with a gimlet bored a number of holes in the back, and into every projecting piece of fruit and leaves, on the face, and placing the whole in a long trough, 15 inches deep, I covered it with a solution prepared in the following manner:—I took 16 gallons of linseed oil, with 2 lbs. of litharge, finely ground, 1 lb. of camphor, and 2 lbs. of red lead, which I boiled for six hours, keeping it stirred, that every ingredient might be perfectly incorporated. I then dissolved 6 lbs. of beeswax in a gallon of spirits of turpentine, and mixed the whole while warm, thoroughly together.

“In this solution the carving remained for twenty-four hours. When taken out, I kept the face

\* In a shop in the porch of Mercers' Chapel, Guy (founder of Guy's Hospital) was apprenticed to a bookseller in 1660; and the house, rebuilt after the Great Fire, was rented by Guy, then a master-bookseller.

downwards, that the oil in the hole might soak down to the face of the carving, and on cutting some of the wood nearly 9 inches deep, I found it had soaked through; for not any of the dust was blown out, as I considered it a valuable medium to form a substance for the future support of the wood; this has been accomplished, and as the dust became saturated with the oil, it increased in bulk, and rendered the carving perfectly solid.\*

2. GROCERS' HALL, Grocers' Hall-court, Poultry—anciently, "Conningshop-lane," *i.e.* cony-shop-lane, from the sign of three conies (rabbits), hanging over a poulterer's stall at the lane end—is the third edifice built for the Company, upon "voide grounde sum tyme the Lord Fitzwalter's halle:" the first was completed in 1428, in a large garden, and had an ancient turret, probably part of the Fitzwalter mansion, and one of the oldest buildings within the City walls. This Hall was let "for dinners, funerals, county feasts, and weddings;" in 1641, "the Grand Committee of Safety" removed its sittings from Guildhall here; Cromwell and Fairfax were feasted here by the Grocers; and at the Restoration, Gen. Monk. In the Great Fire, the roof and woodwork of the Hall only were destroyed; the old walls were then newly roofed, and in 1668-9, the parlour and dining-room were rebuilt by Sir John Cutler, four times master of the Company, who passed him "a strong vote of thanks," and his statue and picture, thus proving Cutler to have been the reverse of the miser described by Pope, whose satire, however, has reached far beyond the Grocers' gratitude. The old Hall, which had "a Gothic front and bow-windows," was renovated, in 1681, by Sir John Moore, who kept his mayoralty at Grocers' Hall, and paid the Company 200*l.* rent; and it was let for the same object till 1735. The Bank of England held their courts here from 1694 to 1734. The present Hall was built upon the ancient site between 1798 and 1802\* (T. Leverton, architect), and thoroughly repaired in 1827, when the statue of Sir John Cutler, weather-beaten in the garden, was renovated, and removed into the Hall; and the garden-front was enriched with the arms of the Company on each side their crest, and a loaded camel, emblematic of the ancient conveyance of the grocer's commodities. The Hall is spacious, and has a music-gallery: here are Cutler's portrait, a fine picture; portraits of Sir John Moore and Sir John Fleet: and on the staircase are the Company's arms, painted on glass by Willemont. The Grocers munificently support various free schools, almshouses, exhibitions, &c.; and the gifts for loans to poor members amount to 4670*l.*

The Grocers' Company, originally Pepperers, next united with the Apothecaries, was incorporated by Edward III., in 1345, as "the Mystery of Grocers:" among other privileges, they possessed the management of the Kings' Beam, at the Weighing-house. Charles II. and William III. were masters of the Company; and among the eminent Grocers were the Duke of York, afterwards James II.; George Monk, Duke of Albemarle; and Sir Philip Sidney, at whose funeral the Company rode in procession. In the reign of Henry IV., twelve aldermen were of the Grocers' Company at the same time. The fraternity also boasts of the patriotic Sir John Philpot; John Churchman, who founded the Custom House; Thomas Knoles, who began the Guildhall; Sir John Crosby, of Crosby House; Sir William Laxton, founder of Oundle School; and Laurence Shireff, of Rugby; besides the vilified Sir John Cutler. The Company sold their plate in aid of the defence of the City in the Civil Wars, and were famed for their loyal and costly pageants. In the Great Fire, they lost nearly all their property, except a few tenements in Grub-street, when they assembled in the turret-house in their garden: their Hall was once seized for debt, in part from loans made to the City: but the Grocers, like the rest of the Companies, recovered their position before the Revolution of 1688; and in the year after, William became sovereign master of the Grocers. By a charter of Henry VI., confirmed by Charles I., the wardens of the Company, or their deputies, could, like modern excisemen, enter druggists', apothecaries', and confectioners', as well as grocers' shops, and impose fines, and even imprisonment, for deceits; always seizing the spurious articles.

The statutes of the ancient Pepperers (mentioned *temp.* Henry II., and probably a guild long before) exist among the City archives. The Grocers first existed as a sort of club. Twenty-two Pepperers in Sopers-lane, Cheapside (now a part of Queen-street), on the 12th of June, 1345, after dinner, elected two of their number wardens, and appointed a chaplain to celebrate divine offices for their souls. Every member at the feast subscribed 1*s.* to pay for it, and contributions were then made towards the chaplain's salary.

The Grocers met in 1345 and 1346, at the town-mansion of the Abbot of Bryn, in St. Mary Axe, now Bevis Marks; in 1347, "at the abbot's place of St. Edmund;" in 1348, "at the house of one Fulgeman, called the Ryngdehall," near Garlickhythe; where, and at the hotel of the abbot of St. Cross, they continued till 1383, when they took up their temporary residence in Bucklersbury, at the Cornets' Tower, used by Edward III. as his exchange of money and exchequer. The hall is spacious, and has a music gallery; the feasts of the Company being noted for their orchestra.

\* The garden was then nearly severed in half for enlarging Prince's-street. For this latter slice, which cost the Grocers 31*l.* 17*s.* 8*d.* in 1433, the Company received from the Bank of England more than 20,000*l.* (*Herbert.*)

Mr. John Gough Nichols, in a communication to *Notes and Queries*, Second S., xi. p. 352, notes Grocers' Hall being used for the Lord Mayor's Feast in 1682:—

"This was the first time, as far as I have seen, that the City feasters deserted Guildhall on Lord Mayor's day. It appears to be attributable to the perturbed state of politics. It is remarkable that Grocers' Hall should be preferred to that of the Merchant-Tailors, although the Lord Mayor [Sir William Pritchard] belonged to the latter Company, and the spaciousness of their hall is well known. The choice of Grocers' Hall was probably directed by its convenient situation. It was used annually for the feast from this time [1682] till 1695, with a few exceptions, when the King came or was expected. In 1695, and two following years, Skinners' Hall was employed. Then Guildhall till 1703; in which, and the two following years, and perhaps more, Drapers' Hall was adopted."—*London Pageants*, 8vo, 1831, p. 118.

"I have not means readily at hand to trace further the locality of the Lord Mayor's feast after 1705; but at the period previously in question, in the reigns of Charles II., James II., and William, Grocers' Hall was in fact the mansion-house, or residence of the Lord Mayor during his year of office. In *Some Account of the Grocers' Company*, privately printed by John Benj. Heath, Esq., F.R.S. and S.A., it is distinctly stated at p. 31 (second edition, 1854), that after the Hall had been repaired and considerably enlarged, subsequently to the Great Fire, Sir John Moore, who had contributed the sum of 500*l.* towards the cost, "was the first Chief Magistrate who [in 1681] kept his Mayoralty at Grocers' Hall [but his feast at Guildhall], and he paid the Company a nett rent of 200*l.* for the use of it. It continued to be let for the same object for many years; and in 1735, as the Company's circumstances had much improved, it was ordered by the Court of Assistants that the hall should not, for the future, be let but to a Lord Mayor attached to the Company."

"But the year 1735 is not the date of the cessation of the occupancy of Grocers' Hall as the mansion-house; for it had been converted forty years before to a purpose which some will esteem still important. On the 4th Oct. 1694, it was demised for eleven years to the Bank of England, then first established; and it continued to be so employed during forty years, until the Bank removed to Thread-needle-street in 1734: so that the resolution of the Court of the Grocers in 1735, above quoted from Mr. Heath, was consequent upon the repairs of their hall which ensued after it was vacated by the Bank of England, not by the Lord Mayors."

John Dunton, the famous bookseller, of the Poultry, dined at the Lord Mayor's Feast at Grocers' Hall, in 1693, when his Lordship sent "a noble spoon" to each guest's wife. It is still usual, in some Companies, for a spoon and fork of bone to accompany the service of dried fruit and confectionery provided for the same purpose.

3. DRAPERS' HALL is in Throgmorton-street, where the Company settled in 1541, in a large mansion built *temp.* Henry VIII., "in the place of olde and small tenements, by Thomas Cromwell, Mayster of the King's Jewel-house," and afterwards Earl of Essex; upon whose attainder, the property was purchased by the Drapers and made their "Common Hall," till about the period of the Great Fire, which was here stopped in its progress northward.

Stow relates that his father had a garden adjoining Cromwell's, and close to his south pale a house, which, by the Mayster's order, was removed upon rollers, so as to gain a strip of ground, as Cromwell had taken from other neighbours. "No man," says Stow, "durst go to argue the matter, but each man lost his land, and my father payed his whole rent, which was vi*s.* vijd. the yeare, for that halfe which was left. Thus much of mine owne knowledge have I thought good to note, that the sodaine rising of some men causeth them to forget themselves."

Cromwell's House is figured on Aggas's plan with four embattled turrets. The garden, which is well kept up to this day, became celebrated in 1551, when the pleasant country lay open in its rear nearly all the way to Hampstead and Highgate. (*See GARDENS*, p. 366.)

Although the Fire of London stopped at Drapers' Hall, it was "all consumed to ashes;" but the Company's property was saved by removing it into the garden, and "watching it ther for seven days and nights." The Hall was rebuilt by Jarman, but nearly destroyed by fire in 1774, after which it was partly rebuilt (as we now see it) by the brothers Adam. It consists of a quadrangle surrounded by an ambulatory of arches and columns; the front in Throgmorton-street is highly enriched with stonework; the Drapers' arms over the gateway have for supporters lions instead of leopards. On the noble stone staircase is a marble bust of King George IV. The Hall ceiling is embellished with Phaeton and the signs of the zodiac; the screen is curiously carved, and above it is a fine portrait of Lord Nelson by Beechey: over the master's chair is a half-length portrait on panel (in oil, and therefore not contemporary) of Fitz-Alwin, the first Mayor of London, whom the Drapers claim as of their Company, whereas Stow and other writers describe him of the Goldsmiths'. In the wainscoted galleries are full-length portraits of the English sovereigns from William III. to George IV., the last by Lawrence; with the celebrated whole-length of Mary Queen of Scots and her son James I., ascribed to Zucchero, traditionally said to have been thrown over the

wall into the Drapers' garden during the Fire of London, and never afterwards owned: it has been copied by Spiridione Roma, and engraved by Bartolozzi.

"There is another tradition of this picture: that Sir Anthony Babington, confidential Secretary to Queen Mary, had her portrait, which he deposited for safety either at Merchant-Tailors' Hall or Drapers' Hall, and that it had never come back to Sir Anthony or his family. It has been insinuated that Sir William Boreman, clerk to the Board of Green Cloth in the reign of Charles II., purloined this picture from one of the royal palaces. Some have suggested that it is the portrait of Lady Dulcibella Boreman, the wife of Sir William; but the style and costume are much older."—*The Crypt*, No. 4, 1827.

In the Court-room is a marble bas-relief of the Company receiving their charter. In the ladies' chamber, balls are given. In the Livery-room, among other portraits, is a three-quarter length of Sir Robert Clayton, by Kneller, 1680; and a small portrait of Thomas Bagshaw (d. 1794), beadle to the Company forty years. The windows of this room look into the private garden, where are a fountain and statue.

The Drapers' Company was founded in 1332, and incorporated in 1364; they possess seven original charters, finely written, and claim to reckon more lord mayors than any other Company.—Strype states 87 years'. Their grant of arms, in 1439, is the only document of its kind of so early a date; the Herald's College possessing none of the arms of the London Livery Companies. The Drapers' grant is kept at the British Museum, and contains illustrative historical notices of the Company; and the books continue its history for above two centuries. In the Wardens' accounts are apprentice-fees, called "Spoon Silver;" "potacions at our Lady Fair in Southwark," &c. In an entry of 1485, pippins are first mentioned; 1491, "the aldermen of the taylores were treated with brede and wine at Drapers' halle;" 1494, "for cresset-staffs and banners, and bread, ale, and candell, in keeping xij. days' watch after the riot at the Steel-yard," 11s. 9d.; "for a barge two times to the Shene (Richmond), to speak wth the King;" 1496, the Drapers "riding to the king at Woodstock," accompanied by "Mr. Recorder, Mr. Fabyan," and other eminent persons; 1509, 114s. "for xij. torches for the beryall of King Henry the VIIth, weighing cccx<sup>lbs</sup> and 1 quart;" 1521, the Drapers took the lead in settling the contribution required by the Government from the Great Companies towards furnishing ships of discovery under the command of Sebastian Cabot.

The Company had "the Drapers' Ell" granted to them by Edward III., for measuring the cloth sold at St. Bartholomew's and Southwark fairs; it bore the name of "the Yard," "the Company's standard," &c. In the entries for relief "to those fallen in poverty," 1526, is ijs. and iiij<sup>d</sup>. to Sir Laurence Aylmer, one of the Drapers, two or three times Master of the Company, Sheriff 1501, and Lord Mayor 1507-8.

The Dress or Livery of this Company varied more than that of any other, and the colours were changed at almost every election until *temp.* James I., when a uniform livery was adopted; their observances consisting of election ceremonies, funerals, obits, and pageantries at state and civic triumphs. At their last public procession in 1751, their poor carried a pair of shoes and stockings, and a suit of clothes, an annual legacy.

The Drapers had a Hall in St. Swithin's-lane, Cannon-street, whither they removed from Cornhill. The St. Swithin's-lane Hall is first mentioned in 1405; when we find entered "a hammer to knock upon the table," the great parlour, the "high table" of the dining-hall (then strewed with rushes), the ladies' chamber, and the chekker chamber, all which at feasts were hung with tapestry; the kitchen had three fire-places. The ladies' chamber (an apartment which the Drapers still retain) was solely for the sisters of the fraternity, and in which they occasionally had separate dinners, instead of mixing with the company in the hall. The married ladies only, and those of the highest class, were the guests, "the chekker chamber being for maydens." A ladies' feast in 1515 included brawn and mustard, capon boiled, swan roasted, pyke, venison baked and roast, jellies, pastry, quails, sturgeon, salmon, and wafers and ipocras.

The Drapers thus early gave more splendid feasts than any other Company, their guests usually being the dignified and conventual clergy; including the abbot of Tower Hill, the prior of St. Mary Overy, Christchurch, and St. Bartholomew; the provincial and the prior of "Freres Austyn's," the masters of St. Thomas Acon's and St. Lawrence Pulteney. The sisters formed part of the usual guests, as did also the wives of members, whether enrolled amongst them or not: and visitors of high rank were personally waited on by the heads of the Company. Among the items of the Midsummer Feast, 1514-15, is perhaps the earliest mention of *players* as *companies*: "To Johan Slye and his *company*, for ij. plays on Monday and Tewesday," including "Robert Williams, the Harp, and Henry Colet, the Lut, iiij<sup>s</sup>." Among the rules "for the syt-tyng in y<sup>e</sup> halle" was, "No brother of the frat<sup>n</sup>ite to presume to sytte at any table in the halle tyll the mayr and the states *have wasshed* and be sett at the hygh table, on peyne of iiij<sup>s</sup>. iiij<sup>d</sup>."

The Drapers' Company have very large estates, and are trustees of numerous beneficent bequests, besides Almshouses. There are many females free of the Company, who invariably come on the list to participate in the charities. The Earls of Bath and

Essex, the Barons Wotton, and the Dukes of Chandos, derive their descent from members of the Drapers' Company.

Drapers' Hall had long been the usual rendezvous on Lord Mayor's day, according to the poetical programme of the show repeated in many of Jordan's *Pageants*:—

“Selected Citizens i' th' morning all  
At seven o'clock do meet at Drapers' Hall.”

And in much earlier times the feast had been held there, until some new kitchens were completed at Guildhall in 1501.

4. FISHMONGERS' HALL, at the north-west foot of London Bridge, was rebuilt by Roberts in 1830-3, and is the third of the Company's Halls nearly on this site, part of which was then purchased at the rate of 630,000*l.* per acre. It is raised upon a lofty basement cased with granite, and containing fireproof warehouses, which yield a large rental. The river front has a balustraded terrace, and a Grecian-Ionic hexastyle and pediment. The east or entrance front is enriched with pilasters and columns, and has in the attic the arms of the Company, and two bas-reliefs of sea-horses. The entrance-hall is separated from the great staircase by a screen of polished Aberdeen granite columns; and at the head of the stairs is a statue, carved in wood by E. Pierce, of Sir William Walworth, a Fishmonger, who carries a dagger.

In his hand was formerly a dagger, said to be the identical weapon with which he stabbed Wat Tyler, though in 1731 a publican of Islington pretended to possess the actual poniard. Beneath the statue is the inscription:

“Brave Walworth, knight, lord-mayor, yt slew  
Rebellious Tyler in his alarms;  
The King, therefore, did give in lieu  
The dagger to the City armes.

In the 4th year of Richard II. anno Domini 1381.”

A common but erroneous belief was thus propagated: for the dagger was in the City arms long before the time of Sir William Walworth, and was intended to represent the sword of St. Paul, the patron saint of the Corporation.

The reputed dagger of Walworth, which has lost its guard, is preserved by the Company: the workmanship is of Walworth's period. The weapon now in the hand of the statue (which is somewhat picturesque, and in our recollection was coloured *en costume*) is modern.

The Company has numbered about fifty lord mayors, among whom was Sir William Walworth, who, in his second mayoralty, slew Wat Tyler, commemorated in a pageant in 1740 by a personation of Walworth, dagger in hand, and the head of Wat Tyler carried on a pole. Next among the lord mayors was Sir Stephen Foster, who rebuilt Ludgate prison; also, Sir Thomas Abney, the friend of Dr. Isaac Watts. Dogget, the comedian, was a Fishmonger; and his bequest of a coat and a silver badge is in the direction of this Company, who have added four money-prizes.

Thomas Dogget, who wrote *The Country Wake*, a comedy, 1696, was born in Castle-street, Dublin. He first appeared on the Dublin stage; and subsequently, with Robert Wilks and Colley Cibber, became joint-manager of Drury-lane Theatre. He was a friend of Congreve, who wrote for him the characters of Pondewife in the *Old Bachelor*, and Ben in *Love for Love*. Dogget's style of acting was very original, and he was an excellent *dresser*. He died in 1721, and being a staunch Whig, bequeathed a sum of money to purchase a coat and silver badge, to be rowed for on the Thames on the 1st of August annually, to commemorate the accession of the House of Hanover to the throne of Great Britain:

“Tom Dogget, the greatest sly drole in his parts,  
In acting was certain a master of arts;  
A monument left—no herald is fuller,  
His praise is sung yearly by many a sculler;  
Ten thousand years hence, if the world lasts so long,  
Tom Dogget will still be the theme of their song;  
When old Noll, with great Lewis and Bourbon, are forgot,  
And when numberless kings in oblivion shall rot.”

*Written on a window-pane at Lambeth, August 1, 1736.*

The Garrick Club possess an original portrait of Dogget. (*See p. 249.*)

The Court dining and drawing rooms face the river, of which they have a fine view with the Kent and Surrey hills. The banqueting-hall is 73 feet by 38 feet, and 33 feet high, and has Sienna scagliola Corinthian pilasters, between which are suspended the arms of the benefactors and past prime-wardens of the Company; at one end of the hall are the royal arms, and opposite, those of the Fishmongers, in stained glass: on the front of the music-gallery are emblazoned the arms of the City and Twelve Great Companies: this introduction of heraldic insignia in a Grecian hall, being novel but very striking, and especially when lighted up by eight chandeliers. Among the

*Curiosities*, besides Sir W. Walworth's dagger, is his funeral-pall, of cloth-of-gold; the sides embroidered with the Saviour giving the Keys to St. Peter, and the Fishmongers' Arms; and the ends with the Deity and ministering Angels: here, too, is a plan of the show at Walworth's installation as mayor, probably the oldest representation of a lord mayor's show extant. Here also are eight curious pictures of fish, by Spiridione Roma, skilfully grouped and correctly coloured. Among the portraits are William III. and Queen, by Murray; George II. and Queen, by Shackleton; the Duke of Kent and Admiral Earl St. Vincent, by Beechey; and Queen Victoria, by Herbert Smith. Here also is preserved the old flag presented to Earl St. Vincent by the crew of the *Ville de Paris*, in which the shot-holes have been carefully darned over and repaired. In the Court dining-room is a splendid silver chandelier, made in the year 1754, weight 1350 oz. 14 dwts.

The several apartments were re-decorated by Mr. Owen Jones, in 1865.

The presidential chair of the Prime Warden (the Fishmongers have not a Master) is a relic of Old London Bridge, and commemorative of the new one; bridge piers form the angles, arches support the seats, and across the back are carved the old and present London Bridges and other Thames bridges. On a silver plate in the back is inscribed: "This chair was made by J. Ovenston, 72, Great Titchfield-street, London, from a design given by the Rev. William Jolliffe, Curate of Colmer, in Hampshire; and it was made entirely from the wood and stone taken up from the foundation of Old London Bridge, in July 1832, having remained there 656 years, being put down, in June 1176, by the builder, Peter, a priest, who was Vicar of Colechurch; and 'tis rather curious that a priest should begin the bridge, and, afterwards long a period, that a parson should clear it entirely away." Upon the seat of the chair is incised: "I am part of the first stone that was put down for the foundation of Old London Bridge, in June 1176, by a priest named Peter, who was Vicar of Colechurch, in London; and I remained there undisturbed, safe on the same oak piles this chair is made from, till the Rev. William John Jolliffe, Curate of Colmer, Hampshire, took me up in July, 1832, when clearing away the old bridge, after New London Bridge was completed."

The Fishmongers were incorporated 500 years since, and they existed as a guild two centuries earlier. By letters patent 10th of July, 37 Edward III. (1364), the fraternity was incorporated anew, by the name of the Mystery of the Fishmongers of London. They were among the earliest of the metropolitan guilds, and were amerced in the reign of Henry II. The earliest Parliamentary enactment on our statute-books relative to fish is that of 1 Edward I., who was glorified, on his return from his Scottish victory, in 1298, with a most splendid pageant by the Fishmongers, in which figured gilt sturgeons and silver salmon, and a thousand horsemen. In the year before their incorporation the Company had made Edward III. a present of money towards carrying on his French wars, the sum being 40*l.*, only one pound less than the Mercers, the highest Company. In 1382, Parliament enacted that "no Fishmonger should for the future be admitted Mayor of the City," which prohibition was, however, removed next year. Before the union of the Salt and Stock Fishmongers, they had "six several Halls: in Thames-street, twain; in New Fish-street, twain; and in Old Fish-street, twain." (*Stow.*) Next, the Fishmongers' Company was formed by the junction of the two Companies of Salt Fishmongers and Stock Fishmongers, and was incorporated by Henry VIII., in 1536.

The first Hall of the joint Company in Thames-street, in Hollar's view, 1647, has a dining-hall across the original quadrangle: the whole pile was of stone, embattled, and reaching to the water's edge; it had Tudor-shaped windows and square wing-towers, and altogether resembled a castle. In the Great Fire,

"A key of fire ran all along the shore,  
And frighten'd all the river with a blaze."—Dryden's *Annus Mirabilis*.

The Hall was entirely destroyed, but was rebuilt in 1674, not by Wren, as generally stated, but by Jarman, as proved by the Company's books: this edifice had a stately river-front, with an entrance from Thames-street, and was taken down in 1831, the Company having sold a portion of the land to the City for the new London Bridge approach. The cellars had been let as "Wine Shades," from the year 1697, the entrance being from the quay: here "the citizens drank their genuine old port and sherry, drawn from the casks, and viewed the bridge-shooters and boat-racers." The "Shades" were subsequently removed to the house of Alderman Garratt, who, as Lord Mayor, laid the first stone of the present London Bridge.

Among the Trust-estates and Charities of the Company is St. Peter's Hospital, originally erected at Newington, but taken down in 1851, and rebuilt on Wandsworth Common. (See *ALMSHOUSES*, p. 8.)

The Stock Fishmongers, from the earliest times, adopted St. Michael's Church, Crooked-lane (rebuilt and enlarged by their two eminent members, John Lovekyn and William Walworth), as their general burial-place, to which they added "the Fishmongers' Chapel." St. Michael's was destroyed in the Great Fire, was rebuilt by Wren, but was taken down in 1831 for the new London Bridge approach.

The history of the Fishmongers abounds with curious details of their trade and

mystery; and their regulations, even to the crying of fish, are very minute. The ancient market can be traced. The Fishmongers' statutes have not entirely fallen into desuetude: they had power in early times "to enter and seize bad fish;" and to this day two inspectors are employed by the Company, and report to the Court the number of unwholesome fish destroyed. The Charter by which the Company is now governed was granted in the reign of James I. The property of the Fishmongers has greatly increased in value; and the Charity Commissioners, at their latest visitation, bore testimony to the excellent administration of the funds of the Company. Curious it is to look back at the empty enactment of 500 years since, "that no Fishmonger be Lord Mayor of this City," and contrast it with the records which show that more than fifty of the Company have been Lord Mayors. Stow tells us of "these Fishmongers having been jolly citizens, and six Mayors of their Company in the space of twenty-four years;" and in our time Aldermen Sir Matthew Wood and Mr. William Cubitt, Fishmongers, each filled the civic chair twice, in successive years.

On Feb. 12, 1863, the Prince of Wales took the first step towards becoming a member of the Corporation of the City of London, by taking up his freedom of the Company of Fishmongers, of which his Royal Highness's father and grandfather were also freemen. On July 10, 1864, the Company had been incorporated 500 years: the day was Sunday; and, on Tuesday following, the event was celebrated by a festival at Fishmongers' Hall, the Prime Warden, Mr. James Spicer, presiding, and prefacing the toast of the evening with a *précis* of the history of the Company.

5. GOLDSMITHS' HALL, Foster-lane, Cheapside, back of the General Post Office, built by Philip Hardwick, R.A., 1832-35, is the most magnificent City Hall, and the third erected for the Company on this site; its cost being defrayed without trenching on their funds for charitable purposes. The architecture is Italian, seventeenth and eighteenth centuries; the building is 180 feet in front and 100 feet in depth, completely insulated; the basement is Haytor granite, and the superstructure fine Portland stone. The west or principal façade has six attached Corinthian columns, the whole height of the front, supporting a rich Corinthian entablature and bold cornice of extraordinary beauty, continued all round the building. The east, north, and south fronts are decorated with pilasters, which also terminate the angles. The plinth is 6 feet high, and some of the blocks in the column-shafts and entablature weigh from 10 to 12 tons each. The windows of the principal story have enriched and bold pediments, supported by handsome trusses, and the centre windows have massive balustraded balconies: the echinus moulding in this story is much admired. The intercolumniations of the centre above the first floor, in place of the continuation of the windows of the second story, have the Company's arms, festal emblems, and naval and military trophies, floridly sculptured. The entrance-door is a rich specimen of cast-work; the Hall roof is entirely covered with lead.

This noble Hall is disadvantageously placed, but its sumptuous architecture is best appreciated when seen from the rear of the Post Office. The interior is correspondingly superb: from the vestibule branches right and left a grand staircase, on the balustrade of which are four marble statuettes of the Seasons by Nixon; in the central niche is a marble bust of William IV. by Chantrey; and above are portraits—of George IV. by Northcote; and George III. and his Queen, by Ramsay. The ascent is to a gallery, with screens of scagliola verde antique columns, between which are statues of Apollo Belvidere and Diana and the hart; from the dome hangs a magnificent chandelier: the effect of the whole is fascinating and scenic, particularly when viewed through the four piles of columns. The banqueting-hall, 80 by 40 feet, and 35 feet high, has a range of Corinthian columns along its sides, which are raised on pedestals and insulated. The five lofty and arched windows are filled with armorial bearings; and at the north end is a spacious alcove for the display of plate, lighted from above. On the sides is a large mirror, with busts of George III. and IV. by Chantrey. Between the columns are lofty portraits of Queen Adelaide, by M. A. Shee; and William IV. and Queen Victoria, by Hayter. The Court-room has an elaborate stucco ceiling; and here, beneath glass, is preserved a Roman altar (sculptured with figures of Apollo and a dog, and a lyre), which was found in digging the foundations of the present Hall. In the Court-room is Janssen's portrait of Sir Hugh Myddelton (a Goldsmith), who brought

the New River to London: the picture is in the style of Vandyck; 'Sir Hugh wears a black habit, his hand rests upon a shell, and near him is inscribed "Foutes Fodinæ." Next is a portrait (said by Holbein), of Sir Martin Bowes, Lord Mayor 1545, introducing the cup he bequeathed to the Goldsmiths' Company: here also hangs a large painting of St. Dunstan (patron of the Goldsmiths), in rich robe, and crozier in hand; in the background the saint is taking the devil by the nose, and the heavenly host appears above: the marble chimney-piece of this room was brought from Canons, and its two large terminal busts are attributed to Roubiliac. The drawing-room (crimson, white, and gold), has immense mirrors, and a ceiling exquisitely wrought with flowers, fruits, birds, quadrupeds, and scroll-work, relieved with gay coats of arms. The Court dining-room has in the marble chimney-piece two boys holding a wreath, encircling the head of Richard II., by whom the Goldsmiths' incorporation was confirmed.

In the Livery tea-room is a conversation-picture by Hudson (Reynolds's master), containing portraits of six Lord Mayors, all Goldsmiths: Sir H. Marshall, 1745; W. Benn, 1747; J. Blachford, 1750; R. Allsop, 1752; Edmund Ironside and Sir Thomas Rawlinson, both in 1754, the former having died during his mayoralty.

The Goldsmiths' Company, anciently the "Gilda Aurifabrorum," was probably of foreign origin, and was fined as Adulterine, by Henry II. in 1180: incorporated in 1327, 1st of Edward III.; the grant being confirmed by Richard II., in 1392. The Company have altogether fifteen charters. They purchased the site of their present Hall, with tenements, in 1323; their second Hall was built by Sir Drew Barentyne, Goldsmith, and Lord Mayor in 1398: it was hung with Flemish tapestry, representing the history of St. Dunstan, whose silver-gilt statue stood on the rearedos, or screen: Sir B. Rede, when mayor, gave in this hall a feast, with "a paled park, furnished with fruitfull trees and beasts of venery." The Hall, from 1641 till the Restoration, was the Exchequer of the Parliamentarians, wherein was stored up the money accumulated by sequestrations, or forfeitures of the Royalists' estates, as we read in the newspapers of that day. The Hall was nearly destroyed in the Great Fire, after which it was repaired and partly rebuilt. This hall was taken down in 1829: it was very large, and the interior was sumptuously decorated.

Cheapside, Old 'Change, Foster-lane, St. Martin's-le-Grand, and the avenues near Goldsmiths' Hall, were the oldest localities of the goldsmiths' trade; there were also Gutter-lane, Seynt Marten's, Maydenyng-lane, Westminster, Southwark, Bush-lane, Lombard-street, Silver-street, and other places. The moneyers, or sheronioniers (such as cut out the plates to be stamped), occupied the Old 'Change and Sermon-lane. The shopkeepers, or sellers of plate, "sat in the High-street of Chepe." The Goldsmiths always strove to prevent foreign workmen from settling in London, the best artists being Italians,—from Cavalini, who made the shrine of Edward the Confessor, to Torregiano, the maker of the superb-brazen monument of Henry VII.; and in the fourth year of Edward IV. a trial of skill between English goldsmiths and foreign ones took place at the Pope's-Head Tavern, Cornhill (now Pope's-Head-alley), which was adjudged in favour of our workmen. Various entries show the Company to have been both operative goldsmiths and at the same time bankers.

Among the mayors of the Goldsmiths' Company were, Gregory de Rokesley (six times mayor); Nicholas de Faringdon, appointed mayor in 1308 by Edward II., "as long as it pleased him"; Sir John Chace, M.P., and Bartholomew Rede; Sir Martin Bowes, who lent Henry VIII. 300*l.*: Sir Robert Vyner; Sir John Shorter; Sir Francis Child, banker; and Sir Charles Duncombe.

The Goldsmiths' Pageants were of old very costly; they formerly maintained a splendid barge, and they possess a rich pall or hearse-cloth. St. Dunstan's image, of silver-gilt, set with gems, once adorned their Hall; and they drank his memory from "St. Dunstan's Cup."

The Company's plate is very magnificent, and comprises a chandelier of chased gold, weighing 1000 ounces; two superb old plates of gold, having on them the arms of France quartered with those of England, but without those of Hanover; the cup bequeathed by Sir Martin Bowes, and out of which Queen Elizabeth is said to have drunk at her coronation. At the Great Exhibition of 1851, the Company awarded 1000*l.* to the best artists in gold and silver plate; and, as a further commemoration, resolved to add to their treasures 5000*l.* worth of plate of British manufacture.

The *Assay* possessed by the Goldsmiths' Company compels every article of manufacture in gold or silver to be marked with the "Hall mark" before it leaves the workman's hands, and authorizes the Wardens to break whatever article is below standard. The Assay, anciently "the touch," with the marking or stamping and proving of the coin at "the Trial of the Pix," were privileges conferred on the Goldsmiths' Company before the statute 25th Edward I.; and they had an assay-office more than 500 years ago. "The same Act orders all goldsmiths' work to be stamped with the leopard's head,—that animal, before the adoption of the lion, being the armorial cognisance of England." (*Herbert.*) "The touch-wardens and assay-master have large steel puncheons and marks of different sizes." The

manner of making the assay is thus: "The assay-master puts a small quantity of silver upon trial in the fire; and then taking it out again, he, with his exact scales, that will turn with the weight of the *hundredth part of a grain*, computes and reports the goodness or badness of the gold and silver."—*Touchstone for Goldsmiths' Wares*.

The *Hall mark* shows where manufactured, as the leopard's head for London. *Duty mark* is the head of the sovereign, showing the duty is paid. *Date mark* is a letter of the alphabet, which varies every year: thus, the Goldsmiths's Company have used, from 1716 to 1755, Roman capital letters; 1756 to 1775, small Roman letters; 1776 to 1795, Old English letters; 1796 to 1815, Roman capital letters, from A to U, omitting J; 1816 to 1835, small Roman letters, a to u, omitting j; from 1836, Old English letters. There are two qualities of gold and silver; the inferior is mostly in use: the quality marks for silver are Britannia, or the head of the reigning monarch; for gold, the lion passant, 22 or 18, which denotes that fine gold is 24-carat, 18 only 75 per cent. gold; sometimes rings are marked 22. The *Manufacturer's mark* is the initials of the maker.

The Company are allowed 2½ per cent., and the fees for stamping are paid in to the Inland Revenue Office. At Goldsmiths' Hall, in the years 1850 to 1863 inclusive, there were assayed and marked 85 22-carat watch cases, 316,347 18-carat, 493 15-carat, 1550 12-carat, 448 9-carat, making a total of 318,923 cases, weighing 467,250 ounces, 6 dwts., 18 grains. The Goldsmiths' Company append a note to this return, stating that they have no knowledge of the value of the cases assayed, except of the intrinsic value as indicated by the weight and quality of the gold given in the return. The silver watch cases assayed at the same establishment in the fourteen years numbered 1,139,704, the total weight being 2,302,192 ounces, 19 dwts. In the year 1857, the largest number of cases were assayed out of the fourteen. The precise number in that year was 106,860, this being more than 10,000 above any year in the period named. In a subsequent year the number was only 77,608. A similar note with regard to value is appended to the return of silver cases as to the gold.

G. SKINNERS' HALL, Dowgate-hill, rebuilt after the Great Fire, was refronted by Jupp about 1790: in the pediment are the Company's arms, and the frieze is ornamented with festoons and leopards' heads. The drawing-room is lined with odoriferous cedar, carved and enriched, and has been restored by George Moore, F.R.S., who has also rebuilt the dining-hall, in Italian style with an enriched ceiling, and an Ionic gallery for minstrels. The pediment bears the Company's arms. The staircase still displays some of the many ornaments in fashion after the Great Fire. On the walls above the wainscot are panels for frescoes. Here is the portrait of Sir Andrew Judd, Skinner, Lord Mayor 1551, and founder of the Tunbridge School, the affairs of which are managed by the Company.

Among Judd's bequests was his "croft of pasture, called the *Sandhills*, on the backside of Holborn," in the parish of St. Pancras, which probably let for a few pounds at the time of the testator's decease, but is now covered with houses, the ground-rents of which amount to several hundreds a year. At the expiration of the present leases in 1906, the rental of this estate alone will exceed 20,000*l.* a-year—a vast income for a public school."—Britton's *Tunbridge Wells*, 1832.

The Company also possess much property, especially in Clerkenwell, where, near the Clerks' Well, was Skinners' Well, around which the skinners of London acted Holy plays; one of which, in 1408, lasted eight days, and was "of matter from the Creation of the World."

The Skinners were incorporated in the first year of Edward III., 1327, and became a brotherhood in the reign of Richard II. Twenty-nine Lord Mayors have been chosen from this Company. They have been honoured by the membership of six kings, five queens, one prince, nine dukes, two earls, and a baron. The existing charter was granted by James I.: few of the members are now furriers.

Gradually the use of furs by male persons ceased, except in the case of peers and magistrates for their state robes, ermine for kings, and fur trimmings for liverymen. The Skinners were proud of the antiquity of their guild, and in 1339 disputed with the Fishmongers for precedence, and a skirmish ensued. The municipal authorities seized some of the ringleaders; they were rescued, and the Mayor with his officers maltreated, when "these desperate fellows were apprehended, tried, and condemned at Guildhall, and executed in Cheapside, the king granting an indemnification to the Mayor." In 1395 they seem to have carried on their business operations in the parish of St. Mary Axe. Strype says that "in his days they removed to Budge-row and Walworth." Choosing officers of the Company was thus described to Mr. Herbert:—"The principals being assembled on the day of election, ten blue-coat boys, with the almsmen and trumpeters, enter the hall. Three large silver cocks or fowls, so named, are then brought in and delivered to the Master and Wardens. On unscrewing these pieces of plate, they are found to form drinking-cups, filled with wine, and from which they drink. Three caps of maintenance are then brought; the old Master tries on the first, and finding it will not fit, gives it for trial to those next to him; failing to fit any of them, it is then given to the intended new Master, and on its duly fitting, he is

then announced with acclamations as the Master-elect. Like ceremonies are repeated with the other caps on the Wardens."

At a dinner at Fishmongers' Hall, December 9, 1853, the toast of "the City Companies" was acknowledged by Mr. Locke, M.P., Master of the Skinners' Company, in virtue of an old award by which the Skinners' Company and the Company of Merchant Tailors took precedence of each other in alternate years. Both these companies were established in the reign of Edward III., and for a long period were at deadly feud on the point of precedence, their processions never meeting in the streets of the city without a fight. In the reign of Richard III. one of these conflicts was so violent that several persons were killed on both sides; in consequence of this event the point at issue was decided by the Lord Mayor of the time, who made an award by which the two companies were given precedence of each other alternately, and this old regulation is still observed; according to it Mr. Locke spoke to the toast, though the representative of the Merchant Tailors' Company was present. Mr. Locke also stated that the Prime Warden of the Fishmongers' Company then presiding was lineal descendant of the Lord Mayor Boddington, who so long ago made the peace-preserving decision.

7. MERCHANT-TAILORS' HALL, Threadneedle-street, was built by Jarman soon after the Great Fire. The banqueting-room is the most spacious of the City Companies' Halls, and has a stately screen and music-gallery. Upon the walls are shields emblazoned with the Masters' arms, and whole-length portraits of King William and Queen Mary, and other sovereigns. The Hall has, from an early period, been frequently lent to public corporations: the "Sons of the Clergy" anniversary meeting is held here; a splendid banquet was given here in 1815 to the Duke of Wellington, when he was invested with the freedom of the Company. Among the great political feasts held here was the dinner to Sir Robert Peel, May 11, 1835, at which the Duke of Wellington and many Conservative members of the House of Commons were present.

Among the pictures in the hall, court-room, &c., is a head of Henry VIII. by Paris Bordone; head of Charles I.; three-quarter and full-length of Charles II.; full-lengths of James II. and Queen Anne; George III. and his Queen, by Ramsay; the Duke of York, by Lawrence; Lord Chancellor Eldon, by Briggs; the Duke of Wellington, by Wilkie; Mr. Pitt, by Hoppner. Here too are portraits of Sir Thomas White, Master of the Company 1561, founder of St. John's College, Oxford; portraits of other lord mayors, Merchant-Tailors; and a modern picture of Henry VII. presenting his Charter of Incorporation, attended by Archbishop Warham, Fox Bishop of Winchester, and Willoughby Lord Brooke.

The Merchant-Tailors, anciently "Tailors and Linen Armourers," arose from a guild dedicated to St. John Baptist, originally incorporated by Edward IV. in 1466, but re-incorporated in 1503 by Henry VII., one of its members.

Their first hall, in Threadneedle-street, was the mansion of E. Crepin, and was called the "New Hal, or Taylers' Inne," to distinguish it from their old hall in Basing-lane. This Hall was rebuilt, was hung with tapestry of St. John Baptist, and had on the screen a silver image of St. John in a tabernacle; the windows were painted with armorial bearings; the floor strewn with rushes; from the ceiling hung silk flags and streamers: and on feast-days the tables on tressels were covered with the richest damask linen and glittering plate. Among the other Hall buildings was the Treasury, in the garden, for plate, money, securities, &c.: the King's Chamber, for the reception of the royal personages, who visited the Merchant-Tailors oftener than any other Company; and the Summer banqueting-room, in the garden. The Company's armoury is first mentioned in 1600, when there were state-palls and eighteen banners, besides pavises and pennons. After the Great Fire, from among the Hall ruins was collected the Company's melted plate (200 lbs. weight of metal), which they sold to begin a fund to rebuild.

One of the most splendid festivals in the old Hall was that given to James I. and Prince Henry in 1607, when a child "delivered a short speech containing xviii. verses, devised by Mr. Ben Johnson;" and "in the Ship which did hang aloft in the Hall were three rare men and very skilful, who song to his Majesty." James dined in the King's chamber, where Mr. John Bull, doctor of music, and a brother of the Company, played a pair of organs all the dinner-time. Then his Majesty came down to the Great Hall, where "the three rare men in the shippe" sang a song of farewell, which so pleased the King, that he caused the same to be sung three times over.

The Company are possessed of, and are Trustees to, great estates for noble purposes, besides the eminent School which bears their name. (See MERCHANT-TAILORS' SCHOOL.) In 1664, the scholars acted in the old Hall Beaumont and Fletcher's comedy of "Love's Pilgrimage."

In the list of the distinguished freemen of the Company are eleven sovereigns, about as many princes of the blood-royal, thirteen dukes, two duchesses, nearly thirty archbishops and bishops, fifteen abbots and priors, and a long list of the nobility.

One of the most eminent tailors (professionally so) was Sir John Hawkwood, "Johannes Acutus," who "twined his needle into a sword, and his thimble into a shield," and became "the first general of modern times; the earliest master, however imperfect, in the science of Turenne and Wellington." (Hallam's *Middle Ages*.) Sir Ralph Blackwell, stated to have been a fellow-apprentice of Hawkwood, and, like him, knighted for his valour by Edward III., was also a Merchant-Tailor; as were Speed

and Stow, the historians, both tailors by trade. Stow enjoyed an annuity from the Company, who keep in repair his monument in the church of St. Andrew, Under-shaft. (See CHURCHES, p. 150.)

In the Merchant-Tailors' records, we find this gratifying entry: "1654, 13*l.* 6*s.* 8*d.* given to Ogilby the poet, free of this Company, on his petition that he had, at much study and expense, translated Virgil into English metre, with annotations, and likewise Æsop's Fables, both which he had presented to them fairly bound." Herbert's *Twelve Great Livery Companies*, vol. ii. p. 406.

Edward I. granted a licence which recognised the Merchant-Tailors as a guild; Edward III. granted their first charter, and testified his regard for the Company by becoming the first of its Royal members. His grandson and successor, Richard II., and all the sovereigns of the Houses of Lancaster and York (excepting Edward V.), became honorary freemen of the Company. They also confirmed its charter and extended its privileges. Henry VII. re-incorporated the Company under its present title, and presented the new charter to the Master and Wardens from the throne. He afterwards conferred upon them the great honour of presiding as Master at a festival held in their Hall. At a subsequent date James I. was entertained here by this Company on his accession to the English throne; and his Majesty's two sons, Henry Prince of Wales and Charles Duke of York (afterwards King Charles I.), were enrolled as honorary members. King James II. and Prince George of Denmark were also honorary members of this ancient fraternity. At a much more recent date, the Dukes of York and Cambridge, the Duke of Wellington, Sir Robert Peel, the Duke of Kent, and Prince Albert, were admitted to the honourable freedom of this Company; and on St. Barnabas Day, June 11, 1863, the Prince of Wales was enrolled a Merchant-Tailor. The representatives of the old English houses of Stanley, Percy, and Cecil are honorary members of this Company; as are Sir John Lawrence and Sir George Pollock; while death only deprived the Company of the honour of such names as Dalhousie and the brave and good Havelock being added to the roll.

8. HABERDASHERS' HALL, No. 8, Gresham-street West, is built upon ground bequeathed to the Company in the reign of Edward IV. by a worthy citizen and haberdasher, with houses and premises, in the whole about half an acre of ground, of which there is a plan among the Company's documents; it is now part of Gresham-street West, nearly opposite Goldsmiths' Hall. The ancient Hall of the Haberdashers, with many of the Company's records and property of much value, were destroyed in the Great Fire. This must have been a structure of some magnitude, from the Parliament Commissioners having held their meetings in it during the Interregnum. The Hall was destroyed as above, except the strong-room, in which the ancient muniments and plate of the Company were deposited; these were saved intact on that occasion, the intensity of the ordeal to which they were exposed being shown to this day in the molten wax attached to the deeds, though they were inclosed in a place with walls seven feet thick during the fire. In the year after the Fire, 1667, the rebuilding of the Hall was commenced by Wren. Herbert says:—"It has nothing to merit description; indeed, it much needs rebuilding." The hall was lofty and spacious, had a screen and music-gallery, and several large glass chandeliers; it was let in winter for City balls and assemblies. However, Wren's poor work was redeemed by a fine foliated ceiling, which was destroyed some years since. There were, besides the banqueting-room, houses, and offices, and a chapel. In some Corporation improvements a portion of the front premises of the Hall in Gresham-street was removed to widen the thoroughfare. A new entrance was then constructed, with two richly-carved oak staircases; besides a kitchen, with gas and other cooking-stoves, ovens, &c.

In a great conflagration, September 19, 1864, in which nearly half a million's worth of property was destroyed, Haberdashers' Hall was damaged to the extent of 10,000*l.*, besides the loss of historical relics: it had just been restored at 4000*l.* cost. Of the banqueting-hall remained only the four walls, of fine proportions, being about 60 feet long by 30 feet in width. It was ornamented with portraits by eminent painters, or benefactors of the Company, and the arms of other distinguished members of the Guild were emblazoned on the windows. The Hall has been restored. Among the pictures, which were saved, are portraits of George I., George II., and Queen Caroline, Prince Frederick, when a youth (father of George III.), and Augusta, his consort; also

portraits of benefactors, including Robert Aske, who left the Company 30,000*l.* to build and endow almshouses at Hoxton; and William Jones, merchant-adventurer, who also bequeathed 18,000*l.* for benevolent purposes. Here are a small statue of Henry VIII.; a painting of the Wise Men's Offering; also a portrait of Sir George Whitmore, Lord Mayor in 1631, who entertained Charles I. and his Queen in his noble mansion and gardens of Baumes, or Balmes, Kingsland-road, Hoxton. The wrought-iron gates are fine.

The Company's Court books extend only to the reign of Charles I.; but they possess a small vellum book of ordinances, which has a good illumination of St. Katherine, the Haberdashers' patron saint.

The Haberdashers, or Hurrers of old, date their ordinances from 1372, and were incorporated by Henry VI. in 1447. They were also called Milliners, from dealing in merchandize from Milan. They were originally a branch of the Mercers, and Lydgate places their stalls together in the Mercery at Chepe. Here were also haberdashers of hats, as well as of small wares. In the reign of Edward VI. there were only twelve milliners' shops in all London, but in 1580 the town became full of them; and this encouragement of foreign manufacture doubtless led to the sumptuary regulations anciently issued to the Companies and City.

The location of the Company's Charities is denoted in Haberdashers' Place, Street, and Walk, at Hoxton; Haberdashers' Square, Cripplegate; and Court, Snow-hill. The original Hospital, built and endowed with Aske's princely bequest, was a truly Palladian design, by Dr. Robert Hooke, the fellow student of Sir Christopher Wren. The present Hospital, by Roper, has in the centre a Doric tetrastyle portico leading to the Hall and Chapel. The lodging-rooms of the almsmen, at Hoxton, are on each side of a quadrangle, in which is a statue of Aske, whose bequest also includes a School, in Bunhill-row. The Charities amount to between 3000*l.* and 4000*l.* annually.

9. **SALTERS' HALL**, St. Swithin's-lane, Cannon-street, the fifth hall of the Salters' Company, was rebuilt by Henry Carr, architect, 1823-27: it has a handsome Ionic portico, surmounted by the Company's arms. The Great Hall has a music-gallery, and is hung with banniers from the ceiling. Over the doorways are busts of George III. and IV., the Duke of York, and Nelson, and Wellington. In the Election Hall are portraits of Charles I.; Adrian Charpentier, painted by himself, 1760; and William III. on horseback. In the waiting-room is preserved the bill of a feast to fifty Salters in 1506—1*l.* 13*s.* 2½*d.* Their old plate includes a massive silver punchbowl, more than two hundred years old; and several loving-cups, one of which has been in the possession of the Company since the year before the Great Fire.

In the Company's books is a receipt "For to make a moost choyce Paaste of Gamys to be eten at ye Feste of Chrystemasse" (17th Richard II. A.D. 1394). A pie so made by the Company's cook in 1836 was found excellent. It consisted of a pheasant, hare, and capon; two partridges, two pigeons, and two rabbits: all boned and put into paste in the shape of a bird, with the livers and hearts, two mutton kidneys, forced-meats, and egg-balls, seasoning, spice, catsup, and pickled mushrooms, filled up with gravy made from the various bones.

The Salters' (Dry Salters) Company was not regularly incorporated till 1558; a Salter attended the Mayor as chief-butler at the coronation of Richard III., 1483, and was represented at the coronation of George IV. The original of the Salters' only printed pageant was sold in Bindley's sale, in 1818, for twenty guineas.

The Salters' *first* Hall was in Bread-street, next their kindred tradesmen the Fishmongers, in the Old Fish-market, Knight-rider-street. This Hall was rebuilt. The Company's *third* Hall was the town inn or mansion of the Priors of Tortington, purchased in 1641, and afterwards "Oxford-place," from John de Vere, 16th Earl of Oxford. It adjoined the dwellings of the infamous Empson and Dudley, *temp.* Henry VII., who met in the garden of Oxford-place, now Salters' Garden. The *fourth* Hall succeeded the Great Fire, and had an arcade opening into the garden; adjoining it was Salters'-Hall Meeting-house, rented of the Company, but taken down in 1821. In the garden, the growth of shrubs and flowers is marvellous, amidst the bricks-and-mortar and smoke, in the centre of the City: here rhododendrons bloom the second year; ferns and ivy flourish; the medlar and fig fruit well; dahlias and geraniums abound; and bulfinches and sparrows congregate.
