10. **IRONMONGERS' HALL**, Fenchurch-street, nearly opposite Mark-lane, built by T. Holden, in 1748, has a handsome stone front, of Italian architecture, with Ionic pilasters, and a well-proportioned pediment, in which are sculptured the Company's arms, &c. From the vestibule, divided by Tuscan columns, a large staircase leads to

the banqueting-hall; the decorations of which are in Louis Quatorze taste, in Jackson's papier-mâché and *carton-pierre* imitative oak, aided by old carvings, and thus economically effective. The Company's pictures consist chiefly of portraits of benefactors, including Mr. Thomas Betton, a Turkey merchant, who, in 1723-24, left 26,000*l.*, half the interest of which was to be expended in ransoming British subjects, captives in Barbary or Turkey. Here also is a fine portrait of Admiral Lord Viscount Hood, by Gainsborough, presented by his lordship, in 1783, when he was admitted to the freedom of the Company, in testimony of his distinguished naval services. One of the hall windows contains a very curious whole-length portrait, in painted glass, of Sir Christopher Draper, date 1639.

The Ironmongers\* were first incorporated by Edward IV. in 1464: their first "House," built upon the site of the present hall, had a gate-house, the refectory strewed with rushes, court-chamber hung with tapestry; and an armoury containing, in 1556, 17 back and breast plates, 17 pair of splints, 12 gorgets, 12 swords, and 11 daggers; to which were afterwards added corslets, skull-caps and red caps, black bills, and morris pikes, white coats with red crosses, 14 sheaves of arrows, &c. At the raising of the army of the Earl of Essex, in 1642, the Company lent, "to be returned or paid for," 10 russet armours, 10 pikes, 10 swords with belts, 10 head-pieces, 10 musquets with bandelores and rests, and 10 murrions. In 1523, the Company lent Henry VIII. a large sum of money, by selling some of their plate and pawning the rest; and Elizabeth compelled the Company to lend her money, which forced the citizens to borrow of her at 7 per cent. on pledges of gold and silver plate, &c.

In the list of Masters and Wardens is John London, Esq., 1727, who gave name to London-street, nearly opposite Ironmongers' Hall. New Wardens are chosen at the end of the Election dinner, when the wafers are brought in:—

1671, Sept. 21. "I din'd in the city at the Fraternity Feast in Ironmongers' Hall, where the four stewards chose their successors for the next year, with a solemn procession, garlands about their heads, and music playing before them; so coming up to the upper tables where the gentlemen sate, they drank to the new stewards, and so we parted."—Evelyn's *Diary*.

The Company's pageants were very costly and characteristic; one having Vulcan and his forge, with smiths at work; and an "estridge" (ostrich), ridden by an Indian boy, from the common belief that this bird could eat and digest iron; the supporters of the Company's arms are salamanders, supposed, like iron, to be unhurt by fire. A feast item of 1719 is "for playing on the tongs, 10*s.*;" and a meat breakfast in 1542 is charged "for the cook, turnspit, and woman, for dressing, viij*d.*" Funeral feasts were also celebrated in the Hall.

Among the Company's charities are the handsome almshouses in the Kingsland-road, originally founded by the will of Sir Robert Geffery, Lord Mayor in 1686.

The Company possess—the Richmond Cup, date 1460, and regarded as unique; Mazer Bowl, about six inches in diameter, the silver-gilt rim inscribed: "Ave Maria gratia plena, Dominus tecum, benedicta tu in mulieribus: et benedictus fructus ventris tui;" the Ironmongers' Arms: Pair of Hour-glass Salt-cellar, early sixteenth century. Also the following:—Grant of Arms by Lancaster, King of Arms, to the Company, dated 24 Henry VI.; Confirmation of Arms, by William Hery, Clarendoux, to the Ironmongers' Company, May 28, 1560; Charter of Incorporation to the Guild or Fraternity of Ironmongers, March 20, 3 Edward IV.; the Pall given to the Company by "John Gyva, late ironmonger of London, and Elizabeth, his wyffe;" the Master's Garland, of velvet, and ornamented with the arms and crest of the Company, engraved on silver; Grant from the Prior of Rochester to Matthew de la Wyke, of the Manor of Norwood, in Middlesex, A.D. 1241. To this charter is appended the very beautiful seal (in green wax) of the Church of Rochester; two Volumes of the manuscript collections for a history of the Ironmongers' Company, compiled by the present Master, John Nichols, Esq., F.S.A.

In the banqueting-hall is a marble statue of Alderman Beckford, by Moore; formerly at Fontbill, and presented to the Company by the Alderman's son, the author of *Vathek*, when residing at Bath.

11. VINTNERS' HALL, Upper Thames-street, near Southwark-bridge, was rebuilt by Wren, after the Great Fire; when were destroyed the first Hall, in a *quadrant*, given by Sir John Stodie, vintner, and Lord Mayor in 1357 (*Stow*); and the adjoining almshouses devised to the Company by Guy Shuldham, in 1446. The present Hall has been refronted, and is wainscoted and richly carved. In the Court-room are whole-length portraits of Charles II., James II. and his queen, George Prince of Denmark; and a picture, attributed to Vandyck, of St. Martin (tutelar Saint of the Company) dividing his cloak with the beggar.

\* In Ironmonger-lane, Cheapside, the trade first congregated; and many eminent ironmongers were buried in the church of the adjacent parishes of St. Olave, Jewry, and St. Martin, Ironmonger-lane. *strype* subsequently speaks of the removal of "the ironmongers of Ironmonger-lane" into Thames-street, where the iron-masters have extensive wharfs.

The Vintners were incorporated as Wine-Tunners by Henry VI. in 1437; Edward III. having granted them, in 1365, a charter for the exclusive importation of wines from Gascoyne: the freemen, or "free vintners" of the Company have the privilege of retailing wine without a licence. Stow tells us the Vintners were of old called "Marchants Vintners of Gascoyne," and "great Bourdeous merchants of Gascoyne and French wines." In the reign of Edward III. Gascoyne wines were sold in London at 4*d.*, and Rhenish at 6*d.*, the gallon.

The *Vintry*, which gives name to the Ward, was part of the north bank of the Thames, where Vintners' Hall and Queen-street-place are now built; it was at the south end of Three Cranes-lane, so called from the implements with which the merchants "craned their wines out of lighters and other vessels," and landed them: it was so magnificent a building, that Henry Picard, vintner and Mayor in 1356, entertained therein the kings of England, Scotland, France, and Cyprus, in 1363. After the Great Fire, the Vintners' Almshouses were rebuilt in the Mile-End-road. This Company, as well as the Dyers, continues to keep swans on the Thames (*see p.* 415).

12. CLOTHWORKERS' HALL (which just escaped destruction by the Great Fire), on the east side of Mincing-lane, Fenchurch-street, was an edifice of red brick, adorned with fluted brick pilasters. The Hall was richly wainscoted, and had life-sized carved figures of James I. and Charles I. In the windows were painted arms of benefactors, including Samuel Pepys, Master of the Company in 1677, who presented them with a silver election-cup and cover, embossed and parcel-gilt; the foot inscribed "Samuel Pepys, Admiralti Angliæ Secretes et Societ. : Pannif: Lond. Mr. (Master) An. 1677."

The Clothworkers were originally incorporated by Edward IV. in 1482 as Shermen (Shearers), and were united with the Fullers in 1528 by Henry VIII., the conjoined fraternity being then named Clothworkers. James I. incorporated himself into the Clothworkers, "as men dealing with the principal and noblest staple wares of all these islands, woollen cloths." Among their pageants was that of Sir John Robinson, Lord Mayor 1662-63, reviving "the true English and manlike exercise of wrestling, archery, sword, and dagger;" when at his mayoralty feast in Clothworkers' Hall, he entertained the King, Queen, and Queen-mother, the Duke and Duchess of York. In the Great Fire "strange," says Pepys, "it is to see Clothworkers' Hall on fire these three days and nights in one body of flame, it having the cellars full of oyle." The *Gazette* of Sept. 8, 1666, announces the Fire to have stopped near Clothworkers' Hall. The list of the Company's Charities is remarkable for its number of anniversary sermons and lectures, and for its bequests for blind persons. The Clothworkers' Almshouses (now at Islington) were originally in Whitefriars, on part of a garden belonging to Margaret Countess of Kent, held by her of the prior of that friary.

Howes relates that James I., being in the open Hall, inquired who was Master of the Company; and the Lord Mayor answering "Sir William Stone," to him the King said, "Wilt thou make me free of the Clothworkers?" "Yea," quoth the Master, "and think myself a happy man that I live to see this day." Then the King said, "Stone, give me thy hand; and now I am a Clothworker."

Clothworkers' Hall has been rebuilt upon an enlarged plan, Samuel Angell, architect, and was completed in 1860. The façade is of Portland stone, and the style florid Italian, rich in ornamentation. The main building includes a grand hall, or banqueting-room, and a staircase-hall, to both which there is nothing equal in effect in other City Halls. The Livery and Court drawing-rooms, on the first floor, are highly enriched. The banqueting-room is thus described:—

The Great Hall is 80 feet by 40 feet, length and breadth, and 40 feet high in the centre. An order of Corinthian three-quarter columns, with polished red granite shafts, and the pedestals and podium of coloured marbles and granite, surrounds the walls; the intercolumns being filled in with windows on one side, and arch-headed recesses, chiefly for mirrors, on the other, the archivolts springing from richly-ornamented pilasters. Two recesses at the principal end of the hall contain statues of honoured members of the Company; and the centre recess behind the president's chair encloses a *buffet* to exhibit the cup of Samuel Pepys, and other plate. At the opposite end of the hall, behind the columns, is a gallery for musicians, appearing as three separate balconies, in the intercolumns, supported by ornamented shafts, forming a framework to mirrors. The mirrors can be raised sufficiently to pass in what is required from the serving-rooms. Above the entablature of the order is a series of lunettes filled with stained glass; and the arches over these groin into a deep cove to the ceiling, which last is formed in one deep panel, divided into coffer ornaments with rosettes. The whole of the upper part of the Hall is profusely enriched. The spandrel spaces of the cove have alto-rilievos personifying the principal cities of Great Britain and Ireland: on the soffits of the arches, over the lunettes in which the stained glass displays the arms of the Twelve Companies, are the names in each case of a founder of the company in gilt letters in an ornamented panel; and the cove is separated from the cornice by a roll moulding enriched with fruit and flowers. The chandeliers hang from the points of the groining at the summit of the cove. The decorative features of the upper part of the staircase are clustered Ionic pilasters and archivolts with enriched mouldings, and the architraves and cornices of the doors, which open on to the landings. The angles of the square plan, pendentives, or spandrels, joining the square with the octagon, are ornamented with shields and branches of foliage. The octagon dome, 27 feet in span, starts from a bold cornice with trusses; it is divided into variously-formed compartments by enriched bands, all the principal compartments being glazed with ground glass, with a pattern in light blue thereon. At the top is a small open lantern. The effect of the dome, with the method of lighting, is novel and good. The doors and jambs throughout the building are of polished wainscot. The architrave mouldings and cornices are of painted wood, with enrichments in *carton-pierre*.—Abridged from the *Builder*, 1859.

Among the charities of the Clothworkers are: the "St. Thomas's Eve gift," distributed to one hundred and fifty poor freemen and widows, who are yearly clothed by the Company, and regaled with a Christmas dinner. On St. Stephen's Day, is distributed the gift of Robert Hitchin, a former member of the Court, by which forty poor men and women, twelve of the parish of St. Giles's, Cripplegate, and the rest free of the Company, are clothed yearly. On St. Luke's Day, the Master and Wardens of the Company, attended by twenty aged freemen, clothed at the expense of the Company, agreeably to the will of Sir William Lamb, walk in procession to St. Michael's church, where a sermon is preached suitable to the occasion.

#### HALLS OF THE MINOR CITY COMPANIES.

Of the sixty-nine Minor Companies, nearly half possess Halls. Each Company has its position in the order of precedence, commencing with the Dyers' and ending with the Carmen; but here the arrangement is alphabetical.

APOTHECARIES' HALL, in Water-lane, Blackfriars, at the east end of Union-street, Bridge-street, was built for the Company of Apothecaries, in 1670. Here are several portraits, including James I., Charles I., William and Mary; and a bust of Gideon Delanne, who brought about the separation of the Company from the Grocers'. Adjoining the Hall are laboratories, warehouses, drug-mills, and a retail shop for the sale of medicines to the public. Here are prepared medicines for the army and navy.

On June 4, 1842, Mr. H. Hennell, the principal chemical operator to the Apothecaries' Company, met a terrible death in the laboratory-yard, by the explosion of between five and six pounds of fulminating mercury, which he was manufacturing for the East India Company.

The Apothecaries rank as the fifty-eighth in the list of City Companies. Their arms are azure, Apollo in his glory, holding in his left hand a bow, and in his right an arrow, bestriding the serpent Python; supporters, two unicorns; crest, a rhinoceros, all or; motto, *Opiferque per orbem dicor*.

ARMOURERS' AND BRAZIERS' HALL, Coleman-street, is a modern building, with a Doric portico, on the site of the Armourers' old Hall of the Company, incorporated in 1422 by Henry VI., who also became a member. They formerly made coats of mail; and made and presented a gilt suit of armour to Charles I. when Prince of Wales. In the banqueting-hall is Northcote's picture of the *Entry of Richard II. and Bolingbroke into London*, purchased by the Company from Boydell's Shakespeare Gallery in 1825. The Hall is characteristically decorated with armour.

The Company possess ancient Grants, with curious seals, some dating 500 years back. Also MS. Volume, containing the marks allowed to the workmen Armourers' freemen of the Company, dated 1619; the Richmond Cup and Cover, gilt, about 1460, an invaluable example of early art; the large Mazer Bowl, given between 1460 and 1483, by Everard Frere (the first Master, after incorporation of the Company); an Owl Pot of stone, with silver mountings, temp. 15th century; a parcel-gilt Pot, 1574; a Salt and Cover, with initials, 1604—a fine specimen of early plate; three elegant Wine Cups; a unique collection of ancient Spoons, ranging from 1580 to the middle of the 17th century. Here is likewise a collection of six dozen Apostles' Spoons, dating from 1560 to 1630, showing the changes in fashion; also the Forbidden Gauntlet (of great rarity) and other Cups.

BAKERS' HALL, No. 16, Harp-lane, Great Tower-street, is on the site of the ancient mansion of John Chicheley, Chamberlain of London, and nephew of Archbishop Chicheley. Among the pictures in the wainscoted banqueting-hall is one of St. Clement, patron of the Company, incorporated by Edward II. in 1307. The Hall was last repaired by James Elmes, who wrote the *Memoirs of Sir Christopher Wren*.

BARBER-SURGEONS' HALL, Monkwell-street, has its semicircular end supported on a bastion of the City Wall, and was built a few years after the Great Fire, which destroyed the original Hall: the street entrance had a shell canopy, enriched with the Company's arms, and festoons of fruits and flowers: this picturesque entrance has been removed. The Theatre of Anatomy, built by Inigo Jones, in 1636, escaped the Great Fire, through being detached.

"The room contained four degrees of cedar seats, one above another, in elliptical form, adorned

with figures of the seven Liberal Sciences, the twelve signs of the Zodiac, and a bust of King Charles I. The roof was an elliptical cupola. This, as Walpole calls it, 'one of the best of Jones's works,' was repaired in the reign of George I. by the Earl of Burlington, and was pulled down in the latter end of the last century, and sold for the value of the materials. 'The designe of the Chirurgeons' Theatre,' an oval, dated 1636, is preserved in the portfolio of Jones's drawings at Worcester College, Oxford."—*Life*, by P. Cunningham; printed for the Shakspeare Society.

The United Company of barbers and surgeons were first incorporated by Edward IV., in 1461-2; and it would even seem that, of the two professions, that of barber was, at this period, considered the most respectable; at least, if we may judge from their adopting, and petitioning to be distinguished by, the style and title of the *Mystery of Barbers*. The barber-surgeons, through whose immediate influence the charter was obtained from the king, were Thomas Monestede, sheriff of London in 1436, and chirurgeon to Kings Henry IV., V., and VI.; Jaques Fries, physician to Edward IV.; and William Hobbs, "physician and chirurgeon for the same king's body."—*Jesse's London and its Celebrities*.

In 1512, an Act was passed to prevent any besides barbers practising surgery within the City and seven miles round, excepting such as were examined by the Bishop of London or Dean of St. Paul's, or their assistants. In 1540 they were united into one corporate body; but all persons practising shaving were forbidden to intermeddle with surgery, except to draw teeth and let blood; whence Barber-Surgeons.

The Rev. John Ward, vicar of Stratford-upon-Avon 1662 to 1681, relates that when he came to London, he lodged at the Bell, in Aldersgate-street, "to be near Barber-Chirurgeons' Hall," then the only place in the metropolis where anatomical lectures were publicly delivered.

In the Court-room, which has an enriched ceiling, is Holbein's celebrated picture of King Henry VIII. presenting the Charter to the Company. This painting is 10 feet 6 inches long and 7 feet high, contains 18 figures, nearly life-size, and represents a room in the palace hung with tapestry. In the centre, on a throne, sits the King, seemingly thrusting the Charter into the hands of Master Thomas Vicay, who receives it kneeling; the King's costume and ornaments are as fine as miniature-painting. Around him are the members of the Court kneeling: Sir John Chambre, in a cap and furred gown; the famous Dr. Butts, whose conduct in the scene in the play of *Henry VIII.* of the degradation of Cranmer, while waiting at the door of the council-chamber, is so well drawn by Shakspeare. All the heads are finely executed; the flowered and embroidered robes, gold chains, jewels, and rings of the chirurgeons, their monstaches and beards, are most carefully painted. Seven of the figures are liverymen of the Company. Every part of the picture is most elaborately and delicately finished; the colouring is chaste, and the care and style of the whole admirable. Pepys tried, after the Great Fire, to buy this picture, "by the help of Mr. Pierce (a surgeon), for a little money. I did think," he adds, "to give 200*l.* for it, it being said to be worth 1000*l.*: but it is so spoiled that I have no mind to it, and is not a pleasant though a good picture."—*Diary*, 29th Aug. 1668.

Next is a whole-length of Sir Charles Scarborough, by Walker, chief physician to Charles II., James II., and William III.: he is lecturing in the doctor's scarlet cap, hood, and gown; on the left is the demonstrating surgeon, Anthony Bligh, in the livery-gown, holding up the arm of a dead subject, which lies on a table partly covered with a sheet. Next are portraits of Dr. Arris and Dr. Thomas Arris, and Dr. Nehemiah Grew. Here, too, is a curious portrait of Mr. Lisle, barber to Charles II.; and of John Paterson, clerk to the Company, and the projector of several improvements in the City of London after the Great Fire.—*Abridged from the Art-Union*, 1839.

Holbein's picture was painted in the 32nd of Henry VIII., when were united the Barbers and Surgeons, formerly separate companies, which they again became in 1745; the Surgeons then removed to their Hall in the Old Bailey, and subsequently into the Royal College in Lincoln's-inn-fields. (*See COLLEGES*, p. 279.) Holbein's picture has been engraved by Baron, and the minutes of the Company have the following entry concerning the print:—

"27th August, 1734.—Copper plate of Holbein's picture ordered of Mr. Baron, for 150 guineas,—50 guineas on finishing the drawing, 50 guineas on delivery of the plate, and 50 guineas on 100 prints."

As an evidence of the estimation in which the picture was held by contemporaries, Mr. Pettigrew quotes a letter from King James to the Company which runs thus:—

"JAMES R.—Trusty and wellbeloved, we greet you well. Whereas we are informed of a table of painting in your Hall, wherein is the picture of our predecessor of famous memory, King Henry VIII., together with divers of your Company, *which being very like him, and well done*, we are desirous to have copied: wherefore our pleasure is that you presently deliver it unto this bearer, our wellbeloved servant Sir Lionel Cranfield Knight, one of our masters of requests, whom we have commanded to receive it of you, and to see it with all expedition copied, and redelivered safely; and so we bid you farewell.—Given at our court at Newmarket the 13th day of January, 1617."

The original cartoons from which this picture was painted are in existence. The portraits were taken on four portions of paper, which are now in the possession of the Royal College of Surgeons, and have been put together and made to form a picture.

Among the Barber-Surgeons' Plate is: 1. A Silver-gilt Cup, given by Henry VIII. in 1540: it is richly embossed with the rose, fleur-de-lys, and portucullis, and lions' masks, in the style of Holbein

from the bowl hang bells, and inside are the Company's arms. 2. A Silver Cup, with Cover, given in 1678 by Charles II.; the stem and bowl an oak-tree, with four pendent acorns, and the lid the Royal crown; royal badges, the Company's arms, &c. 3. Two Chaplets, with perforated silver oak-foliage borders, the Company's arms, &c.; besides a large chased silver Punch-bowl, presented by Queen Anne; several tankards, &c.

Peyps wrote of the Silver-gilt Cup, 1622-23:—"To Chyrurgeons' Hall, where we had a fine dinner and good learned company, many doctors of physiqne, and we used with extraordinary great respect. Among other observables, we drank the King's health out of a gilt cup given by Henry VIII. to this Company, with bells hanging at it, which every man is to ring by shaking after he hath drank up the whole cup." The Company sold this cup with other plate in the 17th century to build their hall, but, as Mr. Pettigrew pointed out, it was purchased by Edward Arris (Master of the Company in 1651), and presented by him again to the Company.

The Barber-Surgeons are exempt, as formerly, from serving as constables or on the nightly watch, on juries, inquests, attaints, or recognisances. After the separation of the two professions, the barbers continued to let blood (whence the pole) and draw teeth until our time: the latest we remember of this class, and with pain, was one Middelditch, in Great Suffolk-street, Southwark, in whose window were displayed heaps of drawn teeth.

BLACKSMITHS' HALL, Lambeth-hill, Doctors' Commons, is now let as a warehouse; the Company's business being transacted at Cutlers' Hall.

BREWERS' HALL, No. 19, Addle-street, Wood-street, Cheapside, is a modern edifice, and contains among other pictures a portrait of Dame Alice Owen, who narrowly escaped braining by an archer's stray arrow from Islington Fields, in gratitude for which she founded a hospital. (See ALMSHOUSES, p. 8.) In the Hall windows is some old painted glass. The Brewers were incorporated in 1438. The quarterage in this Company is paid on the quantity of malt consumed by its members. In 1851, a handsome schoolhouse was built for the Company, in Trinity-square, Tower-hill.

In 1422, Whittington laid an information before his successor in the Mayoralty, Robert Childe, against the Brewers' Company, for selling *dear ale*, when they were convicted in the penalty of 20*l*.; and the Masters were ordered to be kept in prison in the Chamberlain's custody, until they paid it.

Among the records of the Brewers' Company is one relative to the introduction of pewter pots as measures for ale, and the "sealing" (or stamping) of them by the City magistrates. There is an entry in one of them made on the authority of Robert Chicheley, Mayor, in 1423, in the reign of Henry VI.:—"That retailers of ale should sell the same in their houses in pots of pentre, sealed and open; and that whoever carried ale to the purchaser should hold the pot in one hand and a cup in the other, and that all who had pots unsealed should be fined.

BRICKLAYERS' HALL, behind No. 53, Leadenhall-street, is now let as a Synagogue for Dutch Jews. The Tilers and Bricklayers were incorporated by Queen Elizabeth, in 1568. There are preserved by the Company two chests full of papers, descriptive of their craft. They appear to have been at various periods embroiled with the Carpenters as to the respective merits of brick and timber buildings.

"In 1647, the Carpenters sent a remonstrance to the Court of Aldermen concerning the Bricklayers, and in 1650 they conveyed 'their reasons that tymbre buildings were more commodious for this cite than brick buildings were.' In the following year, on 18th of February, they spent 2*s*. 9*d*. at the Three Tuns in Gratiuous-street, with the Masters and Wardens of the Bricklayers' Company, to settle some of their differences. After the Great Fire, instead of further squabbling, the two Companies united against "florreyne" workmen being allowed to work in the City as masters: all who were not freemen were "florrcyners." By an Act of the Common Council, in Nov. 1667, the Bricklayers' Company (as well as others) were bound to elect yearly a certain number of men to be ready on all occasions of fire to attend the Lord Mayor and Sheriffs for quenching the same.

"In the earliest minute-book, 1580, nearly all the members of the Court made their 'mark,' instead of writing their name; and these marks are not simply a cross or an initial, but are similar to those to be seen on the face of stones in old buildings in England, France, Germany, and Belgium. One Order, passed on St. Lawrence's day, 1591, decrees 'that noe man shall reveale words spoken in the house.' In the charter and oaths, dated 1684, it is ordered that no person shall be a liveryman who holds not communion with the Church of England, or who 'frequents conventicles or any other unlawful meetings!' There is one deed addressed to Sir Nicholas Bacon and others, containing stipulations as to the trade, which gives them the right of claiming a farthing per thousand on all bricks made within a certain distance. In the reign of George I. (1723) power was given to the company to fine those who made bricks or tiles of bad earth. In one of the chests there is the early French edition of Serlio, 1551, and a black-letter Bible and chain.—Note, in *Builder*, No. 595.

BUTCHERS' HALL, Pudding-lane, Eastcheap, was rebuilt after a fire in 1829, which destroyed the old Hall. The Butchers were fined by Henry II., in 1180, for setting up an unlicensed guild; but they were not incorporated till 1605, by James I.

CARPENTERS' HALL, on the southern side of London Wall, is one of the few City

Halls which escaped the Great Fire, which surrounded it.\* The Hall was originally built in 1429: the walls of old London faced it, and beyond were Moorfields, Finsbury, and open ground. The exterior possesses no traces of antiquity. The Court-rooms were built in 1664, and the principal staircase and entrance-hall by W. Jupp about 1780: the latter is richly decorated with bas-reliefs of carpentry figures and implements; with heads of Vitruvius, Palladio, Inigo Jones, and Wren, designed by Bacon; and the street archway has also a fine bust of Inigo Jones, by Bacon.

The Great Hall has a rich and beautiful ceiling, put up in 1716, the supporting pillars springing from the corbels of the old arched timber roof. On the western side, surmounted by an embattled oak beam, is a series of four fresco paintings, which were discovered in 1845 by a workman in repairing the Hall. The subjects are divided by columns painted in distemper: the groundwork is laths, with a thick layer of brown earth and clay held together with straw, and a layer of lime, upon which the paintings are executed.

The subjects are: 1. Noah receiving the commands from the Almighty for the construction of the Ark; in another portion of the picture are Noah's three sons at work. 2. King Josiah ordering the repair of the Temple. (2 Kings chap. xxii., mentioning *carpenters* and builders and masons as having no reckoning of money made with them, "because they dealt faithfully.") 3. Joseph at work as a carpenter, the Saviour as a boy gathering the chips; Mary spinning with the distaff:† the figure of Joseph represents that in Albert Durer's woodcut of the same incident, executed in 1511. 4. Christ teaching in the Synagogue: "Is not this the *carpenter's* son?" Each painting has a black-letter inscription, more or less perfect. The figures are of the school of Holbein; the costumes are *temp.* Henry VIII. Above the pictures in the spandrel of the arch, are painted the Company's arms, and "shreeves" and "Robard" of an inscription remain, intimating it to commemorate the benefit of some sheriffs. The southern wall has some decorative Elizabethan work. The eastern window has carved oak mullions and *Renaissance* bases, and has some armorial painted glass, date 1586. There are a few carved wooden panels, besides the series of corbels, some of good workmanship.—*F. W. Fairholt, F.S.A.*

The east window is painted with the Royal arms; the City arms, 1586; and the names of the Masters and Wardens of the Company, from 1627 to 1684.

After the Great Fire, the Hall was let to the Drapers', Goldsmiths', Felt-makers', and Weavers' Companies; and next, the Lord Mayors, Sir W. Bolton, Sir W. Peeke, Sir W. Turner, and Sir S. Sterling, rented the Hall during their mayoralties.

The books of the Company contain many entries connected with the impressment of workmen for the service of the Crown. Amongst the latest instances is this:—"1668, 22nd July—Spent with Sir John Deunham, the King's surveyor, and others, about the twelve carpenters charged to be impressed for the King's work at Whitehall, 35*s.* 6*d.*"

The Carpenters' Company's earliest charter is dated 1174; their common seal and grant of arms 1466; but a guild of carpentry is noticed in 1421-2. The earliest entry in the Company's books is dated 1438: they contain many proofs of their power over the trade. Among the pictures are portraits of William Portington, master carpenter to the Crown *temp.* Elizabeth and James I.; and John Scott, ordnance carpenter and carriage-maker *temp.* Charles II. The company also possess four very curious caps or crowns (the oldest 1561), still used by the Master and Wardens. Among their plate are three silver-gilt *hanaps* (1611, 12, 28), which are borne in procession round the Hall on Election-day. Cakes are presented to the members of the Court on Twelfth Day, and ribbon-money to them on Lord Mayor's Day. (See *An Historical Account of the Company*, by E. Basill Jupp, Clerk. 1849.)

The custom of crowning the new Master and Wardens still exists in the Company, and the crowns or garlands used for the purpose are the same which were in their possession nearly three centuries ago. It was customary at one time for the Company to invite certain official personages to the entertainment on the election day. The King's Carpenter was a constant guest on that occasion and on others. The King's Surveyor also frequently honoured the Company with his presence, and in this capacity the books show that Sir Christopher Wren received an invitation to dinner together with his wife.

\* Carpenters' Hall was also nearly destroyed in a great fire, Oct. 6, 1849, when the end walls and windows were burned out, and the staircase and roof much damaged; while the burning building was only separated from Drapers' Hall by the garden and forecourt.

† Nash, the Elizabethan satirist, mentions the chips "which Christ in Carpenters' Hall is paynted gathering up, as Joseph his father strewes, having a piece of timber, and Mary his mother sits spinning by."

Among the *Curiosities* possessed by the Carpenters are:—Grant of Arms to the Company, by William Hawkeslowe, Clarencieux, dated Nov. 24, 6 Edward IV. Book of Ordinances, 16th century; containing, also, the marks or devices used by the various Masters and Wardens of the Company. The Crowns of the Master and three Wardens (date 1561). The Master's cap is of crimson silk, embroidered with gold and silver lace. On it are represented, in silver shields, the arms of the City of London (with date 1561) and the Carpenters' Company, enamelled in proper colours; the Merchants' mark, and initials of John Tryll, Master in 1561, are also on the cap. The Crowns of the Three Wardens are very similar to the Master's, and are of the same date. Three Wardens' Cups, of similar design; these cups show the change in covers to plate drinking vessels, being no longer essential as a means for avoiding poison. The Masters' Cup (date 1611), is silver-gilt, and of elegant workmanship and design. The Beadle's Staff, which is said to be the handsomest possessed by any of the City companies, is of silver, and consists of a square pillar and four shields, with the Company's arms and motto; it is dated 1725. Here also is a Possett or Caudle Cup, supposed to have been used in the families of the Company on interesting occasions.

COACHMAKERS' HALL, Noble-street, Foster-lane, was originally built for the Scriveners' Company, who, falling into poverty, sold it to the Coachmakers, originally incorporated by Charles II., in 1669, as the Coach and Coach-Harness Makers. The Company hold Industrial Exhibitions to encourage the workmen in the almost endless branches of the coach trade to exhibit the best specimens of manufacturing skill, the best working drawings of the vehicles now most in vogue, and the best designs for improving their general convenience and simplifying their mechanical contrivances.

Coachmakers' Hall was noted in the last century as the resort of "a kind of religious Robin Hood Society, which met every Sunday evening for free debate." (Boswell's *Johnson*.) But the most memorable meeting ever held in the Hall was on May 27, 1780, when the whole body of the Protestant Association, by formal resolution, undertook to attend in St. George's Fields, on June 2nd, to accompany Lord George Gordon to the House of Commons on the delivery of the Protestant petition." The association accordingly met; the result was "the Riots of 1780," and a week's defiance of all government. The flowers of rhetoric, however, continued long to bloom in Coachmakers' Hall. John Britton, in his early days (1798), joined a debating society held here.

COOPERS' HALL, Basinghall-street, was handsomely built, and had a large wainscoted banquetting-room. The Coopers' Company was incorporated by Henry VII. in 1501; and Henry VIII. empowered them to search and gauge beer, ale, and soap vessels in the City and two miles round, at a farthing for each cask. At Coopers' Hall were formerly drawn State Lotteries; the drawing of the last Lottery, on October 18, 1826, is described in Hone's *Every-day Book*, vol. ii. Coopers' Hall was taken down in 1866 for the enlargement of the site for the Guildhall offices.

CORDWAINERS' HALL, Great Distaff-lane, Friday-street, is the third of the same Company's halls on this site, and was built in 1788 by Sylvanus Hall; the stone front, by Adam, has a sculptured medallion of a country girl spinning with a distaff, emblematic of the name of the lane, and of the thread of cordwainers or shoemakers; in the pediment are their arms. In the hall are portraits of King William and Queen Mary; and here is a sepulchral urn and tablet, by Nollekens, to John Came, a munificent benefactor to the Company.

The Cordwainers were originally incorporated by Henry IV. in 1410, as the "Cordwainers and Cobblers," the latter then signifying dealers in shoes and shoemakers. In the reign of Richard II., "every cordwainer that shod any man or woman on the Sunday, to pay thirtie shillings." Among the Company's plate is a piece for which Camden the antiquary left 16*l.* Their charities include Came's bequests for blind, deaf, and dumb persons, and clergyman's widows, 1000*l.* yearly; and, in 1662, the Bell Inn at Edmonton was bequeathed for poor freemen of the Company.

The Cordwainers possess some curious old plate, and a charter, in which the name of Shakspeare, as a party interested, occurs.

CURRIERS' HALL, London Wall, was originally built in 1670: the banquetting-room had a Corinthian wainscot screen, with carvings, and paintings of Plenty, Justice, and Temperance. Here Calamy's son, in the reign of Charles I., preached every Sunday, to a little flock of Dissenters. This Hall, which stood among goodly trees, was taken down in 1820, and a smaller edifice erected upon part of the site, the remainder being covered with private dwellings. The Curriers serve their wine after dinner in magnums, upon carved vine-leaf stands; and the toasts are preceded by a prolonged whistle on a small instrument, not emitting more than one note. The Curriers combined as a Guild so early as 1363. Sir Matthew Wood, twice Lord Mayor, was of this Company.

CUTLERS' HALL is in Cloak-lane, Dowgate-hill. The Cutlers maintained a dispute with the Goldsmiths before Parliament in 1405. They were originally forgers of blades, or bladers, makers of hafts, and sheath-makers, united as cutlers by Henry IV. in 1425. In the Hall is a portrait of Mrs. Craythorne, who, in 1568, bequeathed the

Belle Sauvage Inn, on Ludgate-hill, to the Cutlers, for charitable purposes. Here an old house bears the Company's crest, sculptured in stone, and placed within a niche—an elephant bearing a castle on its back. Cutlers' Hall was taken down in 1854, and rebuilt.

DYERS' HALL, College-street, Upper Thames-street, was built about 1776, and rebuilt 1857. The Dyers were incorporated in 1472; their ancient Hall, in Upper Thames-street (upon the site of Dyers' Hall Wharf), was destroyed in the Great Fire.

The Dyers and Vintners are the only Companies who have the privilege of *keeping Swans on the Thames*: to catch and take up which, "Swan-voyages," termed *Swan-upping*, are made in August, when the cygnets are marked, and the marks on the old bird renewed. The marks are cut upon the upper mandible, in the presence of the Royal Swanherd. Thus, the swan-mark of the Vintners' is two nicks, probably intended for a demi-lozenge on each side, and V for a chevron reversed. Besides being heraldic, that these swan-marks have the initial of the word "Vintner" and form also the Roman numeral V, is supported by one of the regular stand-up toasts of the day being, "The Worshipful Company of Vintners, with Five!" The swans are not so numerous as formerly; at one period the Vintners alone possessed 500 birds; the male is called a *Cob*, the female a *Plu*. (*A. J. Kempe, F.S.A.*) The swanherds wear swan-feathers in their caps, and the *upplings* are still held; they were formerly made by the Companies in their state-barges, with much festivity.

EMBROIDERERS' HALL, Gutter-lane, Cheapside. Company-incorporated in 1561.

FOUNDERS' HALL, Founders'-court, Lothbury, is now a Dissenters' meeting-house, Stow tells us that "Lothburne, Lathberrie, or Loadberrie, is possessed for the most part by founders, that cast candlesticks, chafing-dishes, spice mortars, and such like copper and laton works, and do afterwards turn them with the foot and not with the wheel, to make them smooth and bright with turning and scratching (as some do term it), making a loathsome noise to the by-passers, that have not been used to the like, and therefore by them disdainfully called Loth-beric." The Company of Founders was incorporated by letters patent of the 12th of King James I., A.D. 1614. "All makers of brass weights are to have each weight marked by the Company's standard, and such of these weights as are of avoirdupois weight to be sealed at the Guildhall of this City, and those of troy weight at Goldsmiths' Hall." Chamberlain (1770) says, "It is not only used for transacting the business of the Company, but likewise let out to a congregation of Scotch Kirk, of which denomination there is but one other in England." Founders' Hall was, in 1792, nicknamed "the cauldron of sedition." Here Waitman made his first political speech, and, with his fellow-orators, was routed by constables sent by the Lord Mayor, Sir James Sanderson, to disperse the meeting. The Company's motto is "God the only Founder." They possess a beautiful glass cup on a silver-gilt stem, taken at the siege of Boulogne, in the reign of Henry VIII., and bequeathed to the Company by Richard Wesley, Master in 1631.

GIRDLERS' HALL, No. 39, Basinghall-street, was rebuilt after the Great Fire, on the site of the Company's ancient Hall. The Girdlers' or Girdle-makers' Company was incorporated by Henry VI. in 1449, confirmed by Elizabeth, in 1658, and then united with the Pinners and Wire-drawers. The gridiron or *girdle-iron* in their arms is thought to be a rebus on the Company's name. (*See Thoms's Stow*, p. 107.) The Company possess a document, dated 1464, by which Edward IV. confirmed the privileges granted to them by Richard II. and Edward III., among which was the following:—In the girdles then worn, silver and copper were used in their fabrication and embroidery, and power was given to the Company to seize all girdles found within the City walls with spurious metals. At the annual Election, the Clerk of the Company crowns the Master with a crown embroidered in gold on silk with the Girdlers' devices; and the Masters with three ancient caps; whereupon they pledge their subjects in a loving cup of Rhenish wine—a picturesque ancient ceremonial.

INNOLDERS' HALL, College-street, Upper Thames-street, was rebuilt after the Great Fire: the Company incorporated 1515.

JOINERS' HALL, between Nos. 79 and 80, Upper Thames-street, has entrance gateway piers of good workmanship, with leaden statues of river gods on them. There is also a handsome cornice, with neat window frames and pediment enriched; while the Company's crest (a demi-savage, life-size, wreathed about the head and waist with oak-leaves) surmounts the entrance to the Hall. In 1771, the building was described as

“remarkably curious, for a magnificent screen at the entering into the hall-room having demi-savages, and a variety of other enrichments carved in the right wainscot. The great parlour is wainscoted with cedar.” It is recorded that, in 1827, “the Joiners’ Company have a capital painting over the chimney of their Court of Assistants’ parlour, of a former court of assistants, small whole-lengths.”

LEATHERSELLERS’ HALL, St. Helen’s-place, Bishopsgate-street, was rebuilt about 1815, upon the site of the Company’s old Hall, a portion of the hall of St. Helen’s Priory, taken down in 1799; it was wainscoted, had a curiously-carved Elizabethan screen, and an enriched ceiling with pendants. Beneath the present Hall is the priory crypt. (See p. 303.) In the Hall yard is a pump sculptured by Caius Gabriel Cibber in 1679, in payment to the Company of his livery fine of 25*l.*: the design, a mermaid pressing her breasts, is very characteristic. The crypt, kitchen, and pump, are engraved by J. T. Smith. The Leathersellers were incorporated by Richard II. in 1442; and by a grant from Henry VII., the Wardens were empowered to inspect sheep, lamb, and calf-leather throughout the kingdom.

MASONS’ HALL is in Masons’-alley, between Basinghall-street and Coleman-street. The Masons, with whom are united the Marblers, were incorporated about 1410 as “the Free Masons,” and received their arms in 1474; incorporated 1677.

PAINTER-STAINERS’ HALL, Little Trinity-lane, Upper Thames-street, occupies the site of the old Hall, destroyed in the Great Fire. The Painters, otherwise Painter-stainers’ Company, had its origin in a fraternity of artists formed in the reign of Edward III., and styled a company, though not then incorporated. They called themselves *Painter-stainers*, from their chief employment, which, in the words of Pennant, was “the staining or painting of glass, illuminating missals, or painting of portatif or other altars, and now and then a portrait; witness that of Richard II., and the portraits of the great John Talbot and his wife, preserved at Castle Ashby.” In the year 1575, continues Pennant, “they found that plaisterers, and all sorts of unskilful persons, intermeddled in their business, and brought their art into disrepute by the badness and slightness of their work.” They, therefore, determined “to keep their mystery pure from all pretenders,” and were incorporated by Queen Elizabeth in 1582, but existed long before as a guild. Hatton describes them as Face-Painters, History-Painters, Arms-Painters, and House-Painters, and of the panels of the wainscot and ceiling of their Hall, as “imbellished with great variety of History and other Painture exquisitely performed,” &c. Stow, writing before the Great Fire, identifies them on their present site of habitation, or in 1598, saying,—“In Trinity-lane, on the west side thereof, is the Painter-stainers’ Hall, for so, of old time, were they called, but now that workmanship of staining is departed out of use in England.”

In Painters’ Hall the Relief Commission of the Plague met, in the days of Charles II., recorded in John Evelyn’s *Diary*, under dates Nov. 16, 1664, and July 3, 1665; while on July 4, in the latter year, he says he went to the Lord Chancellor “to desire ye use of ye Star Chamber for our Commissioners to meete in, Painters’ Hall not being so convenient.” Evelyn’s letter to Sir Thomas Clifford is dated “Paynters’ Hall, Lond., 16 June, 1665.”

Amongst their minutes are orders to compel foreign painters resident in London to pay fines for practising their art without being free of the Painter-stainers’ Company. Inigo Jones and Vandyck were asked together to their dinners, as appears by an entry in the Company’s books. (*Life*, by P. Cunningham: Shakspeare Society.) Camden, whose father was a Painter-stainer in the Old Bailey, bequeathed the Company 16*l.* to buy a silver cup, to be inscribed: “Gul. Camdenus, Clarencieux, filius Sampsonis, Pietoris Londinensis, dono dedit;” which cup is used at every Election-feast on St. Luke’s day. Verrio and Sir Godfrey Kneller belonged to the Company, as did Sir James Thornhill, Sir Joshua Reynolds; and Charles Catton was master of the Painter-stainers’ Company in 1784; he was known for his heraldic painting, more especially for his emblazonment of the Lord Mayor’s state coach.

Amongst the Company’s pictures are—St. Luke writing his Gospel, by Van Somer; Reason governing Strength, C. Catton, R.A.; Landscape by Lambert, with figures by Hogarth; Queen Anne (medallion), by Feilot; the Fire of London, by Waggoner; Charles I., copied from Vandyke, by Stone; Charles II. and his Queen, by Huysman; Queen Anne, by Dahl; William III., by Kneller; Camden, in his tabard, as Clarencieux. Architecture by Trivett, or Trevit, Master in 1713; and some works of Hondius, Baptist, Sebastian Ricci, Smirke, R.A., Houseman, Hals, and others. There is a portrait of Camden in the Hall, from

which an enamel was copied by the late H. Bone, R.A., for his Elizabeth Gallery. A card of invitation to "accompany the Society of Painters, at St. Luke's Feast, kept on Thursday, ye 24th November, 1687, at 12 of the clock, in Paynter Stayners' Hall, where you shall be entertained by us," and signed "Anthony Verrio, Nicholas Shepherd, Godfrey Kneller," and "Ed. Polehampton, Stewards," was designed by Sir Godfrey Kneller; and of this an engraving is in the Hall. The Painters' Company gave the first idea for a Royal Academy, and in the present century they have set the laudable example of reviving the "art and mystery," so long laid aside by the other City guilds. In 1860, they gave the first of a series of annual exhibitions of Works of Decorative Art, by bestowing prizes on skillful artisans.

The Charities of the Company are chiefly to the blind; amongst them is Mr. John Stock's "Charity of Poor Lame Painters, more or less incapacitated from illness arising from the injurious effects of Painters' colours, who receive pensions of 10*l.* per annum." The Company also assist diseased and paralysed Painters in going to Bath to drink the waters.

PARISH-CLERKS' HALL, No. 24, Silver-street, Wood-street, is the third hall of the Company. In the seventeenth year of Henry III., A.D. 1233, the Parish Clerks became an incorporated guild as "The Fraternity of St. Nicholas," and "so excelled in church music, that ladies and men of quality on this account became members." In 1391, the Parish Clerks performed miracle plays at Skinners' Well. Henry VI. was the head of the Parish Clerks' patrons, as appears by a MS. vellum roll in their possession, dating from 1440 to 1525. From this MS. there was one leaf missing, which has fortunately been recovered: it contains about 400 names, and has an illuminated initial; date of first entry 1523.

The Camden Society have published the curious *Diary of Henry Machin*, who appears to have been in that department of the trade of a Merchant-Tailor, which we should now call an undertaker or furnisher of funerals. The banners, &c., which he provided were probably painted by men who worked as his journeymen.

Under date 1555, there is a curious entry:—"The xxvij. day of May was the clarkes possessyon from Yerdhall College, and ther was a goodly masse be hard, evere clarkc having a cope and a garlande with C stremers borne and the whettes playng rounde Chepe, and so to Ledynhall unto St. Albro' (Ethelburga), church, and ther they put off ther gayre, and ther was the blessed sacrament, borne with torchlight about, and from thens unto the Barbur Hall to dener." "In the Catholic times they were an important society, and many ecclesiastics, and other persons of the first quality, both male and female, were of the number of their members. They attended all great funerals, at which their office was immediately to precede the hearse, with their surplices hanging on their arms, and singing solemn dirges all the way till they came to the church door. Their fraternity had the sole direction of the music employed in public worship."—Cromwell's *Clerkenwell*.

Previous to the year 1560, the Parish Clerks met in the Chapel at Guildhall, for even-song, and on the next day to dinner at Carpenters' Hall; but two years after this, they met in their own Hall, receiving seven persons into their brotherhood, and attending "a goodly play of the children of Westminster, with waits, regals, and singing." The Parish Clerks commenced the "Bills of Mortality," in 1592; and in January, 1611, James I. re-incorporated them, in consequence of their brotherhood having been dissolved, and their hall and property seized. Besides this re-incorporation, they were, about 1625, licensed by the Star Chamber to keep a printing-press in their hall, for the printing of the "Bills," which they were bound to make up each week, consisting of the births and burials, with some account of the diseases, age, &c., of the persons dying. During the Great Plague, these "Bills" were very important; they are still to be seen in the Guildhall Library, as well as others, dating from 1657 to 1758. The "Weekly Bill" has long ceased to be issued from Parish Clerks' Hall, and in its place (since July 1, 1837), the "Table of Mortality in the Metropolis" has been issued from the office of the Registrar-General, at Somerset House. The first Hall was at the sign of the Angel, in Bishopsgate-street, with seven almshouses for poor widows adjoining; the second stood in Broad-lane, Vintry; and the present Hall was erected after the Great Fire. Their organ, purchased in 1737, is placed in the Court-room. They have a few portraits of benefactors, among which appears that of William Roper, son-in-law of the celebrated Sir Thomas More. The east window is emblazoned with the arms of Charles II.; and here are two small portraits: David performing on the harp; and St. Cecilia at the organ, accompanied by angels.

The Company have a coat-of-arms, with a motto, "*Unitas Societatis Stabilitas*" (Unity the Stability of Society). They have a row of neat almshouses for the widows or daughters of their deceased brethren, situated on the south side of Denmark-road, Camberwell.

Their privileges exempt the Clerks from all parish offices, except that of their official duty as Clerk: their Charter allows them to administer admission-oaths, to have a printer and printing-press in their hall, and to frame all rules necessary for their government; to elect a Master, two Wardens, and seven-teen Assistants; but it does not confer upon them a Livery, nor hereditary nor City Freedom.

There was formerly published a very useful sort of Clerical Guide to the Parishes within the Bills of Mortality, "collected by the Company of Parish Clerks," whose arms the volume bears.

PEWTEERS' HALL, No. 17, Lime-street, contains a portrait of Sir William Smallwood, Master of the Company in the second year of Henry VII., and who gave them their Hall, &c. The Pewteers were incorporated in 1474: they assay pewter-ware, and use a mark, or *touch*, registered on a pewter-plate. The Hall was formerly let for lectures; and here Macklin, the actor, commenced his "school of oratory and criticism," lecturing in full-dress, but to be laughed at by Foote and other wits.

From the records of the Pewteers' Company (much older than the Brewers' record as dated), we find that the name of that guild was spelt *Peutr's Co.*, so that the authorized pots originated in Henry VI.'s time were made of pewter metal. (*See ante*, p. 412.) Up to the present day, the name of the officer appointed by the City Lands Committee to stamp the publicans' pots and brand the wooden measures is "Sealer and Stamper in Weights and Measures."

PINMAKERS' HALL, Pinners'-court, Old Broad-street, is on the site of part of the Priory of St. Augustine, or Austin Friars. The Hall has been, since the reign of Charles II., let as a Dissenters' meeting-house, and is now so occupied. The Pinners' Company as an unincorporated guild is mentioned in the year 1376. In the 11th Charles I., 1636, it was incorporated; motto, "Virginitas et Unitas Nostra Fraternitas." Pinmakers' Hall, according to Chamberlain, was formerly situated in Addle-street, Wood-street (now Plasterers' Hall), but after the dissolution of Austinfriars (Nov. 12, 1539), according to Pennant, part of the priory was converted into a Venetian glass manufactory, with James Howel as steward. Afterwards this manufactory became the property of the Pinmakers' Company, "who," says Herbert, "occupied the Austinfriars Hall, afterwards called 'Pinners' Hall Meeting-house.'" In 1771, it was "the only meeting-house in London where the audience were not Calvinists, the Independents meeting on the Sunday morning, and the Anabaptists on the Sunday afternoon."

By more than one authority the Pinmakers' Company have been said to be "defunct," but upon a reference to the Corporation Commissioners' second Report, it will there be found stated, that though no returns appear in the Chamberlain's books for forty years past, yet "it is supposed that one or two individuals belonging to the Company are yet living."

PLASTERERS' HALL, Addle-street, Wood-street, Cheapside, is now occupied as a warehouse; some of the rich ceilings remain. Malcolm has engraved a curious coat-of-arms, which he saved from the east window. The Company was incorporated by Henry VII. in 1501, motto, "Let brotherly love continue." Among the curiosities is an inscribed silver bell, the gift of Captain Abraham Stanyan, Master, 1647-48; a silver cup or vase, with two handles, the arms of the Company on the bowl, and dated 1706; and the head of an ancient beadle's staff.

A statute was passed in the first year of the reign of James I., 1603, c. 20, which enacted that no Plasterer should exercise the "art" of a painter in the City or suburbs of London: but an apprentice was exempt from the meaning of the Act. The penalty was 5*l.*, but a proviso allowed the Plasterer to use whitening, blacking, and red ochre mixed with size, without oil. This was a very important statute indeed, for it at once cleared up the several disagreements existing in 1575, between the Plasterers and the Painters, the latter retaining their privileges by becoming incorporated in 1581.

PLUMBERS' HALL, Great Bush-lane, Cannon-street, is a modern brick building: the Company was incorporated by James I. in 1611.

PORTERS' HALL is on St. Mary's-hill, Billingsgate. The Fellowship was incorporated in 1646, and consists of tackle and ticket porters; with the City arms for their armorial badge, and the Alderman of Billingsgate ward for their governor. They claim the exclusive privilege, under the appointment and control of the Common Council, of unloading all vessels that come to the port of London laden with corn, malt, seeds, potatoes, fruit, salt, fish, &c., at a fixed rate of prices; which, being high in comparison with the rates in the Docks and at the various outports of the kingdom, were greatly reduced in 1852, to meet the Free-trade exigencies.

The Ticket-porter of our times, "Toby Veck who waited for jobs outside the church-door, with wind, and frost, and snow, and a good storm of hail, his red-letter days, and was called Trotty from his pace, which meant speed if it didn't make it"—is the best character in Charles Dickens's Christmas story, *The Chimes*.

SADDLERS' HALL, No. 143, Cheapside, has an elegant stone entrance front, built in 1865, in place of a brick and stone frontage, surmounted by a large coat of the Company's arms (*azure*, a chevron, between three saddles, *or*; crest, a horse bridled and saddled; supporters, two horses bridled), with the motto, "Our Trust is in God." The Hall was rebuilt in 1823; Hatton, in 1708, described the former Hall "adorned with fretwork and wainscot."

"The Saddlers' Company claims to be the oldest civic guild, dating its descent from the Anglo-Saxon times. In the reign of Richard Cœur de Lion, a convention was made between the Canons of St. Martin's-le-Grand and the guild and fraternity of the Saddlers. According to ancient statutes existing between their church and this fraternity, the Saddlers were brothers and partakers of all benefits arising by day or by night in all masses, psalms, prayers, and vigils, performed in the said church. Two especial masses were granted them weekly; one for the living, another for the dead, and freely and honourably the bells of the church should toll, and a procession formed to convey the departed brother to his last resting-place on earth. The Canons of St. Martin's were also to assist in the house of the Saddlers; and the latter, according to ancient statutes, were, on the fast of St. Martin, accustomed to be present with wax-tapers, and to offer alms to the saint. And lastly, when St. Martin's bell tolled forth the funeral knell, the Saddlers' guild paid eightpence to the church."—*Kempe's Hist. St. Martin's-le-Grand.*

We have already seen that the Company conducted funerals 700 years ago: they possess a rich pall of crimson velvet, the centre yellow silk. On one side is embroidered, in raised gold work, "*In te, Domine, speravi,*" in old English characters; on the other side is worked, "*Nē me confunde in æternum.*" The head and foot of the pall have the Company's arms, four kneeling angels surrounding the letters "I.H.S.," encircled by a glory, and bordered by a broad gold fringe.

In the Hall is Frye's whole-length portrait of Frederick Prince of Wales (father of George III.), who became Master of the Company from having accepted an invitation to witness the Lord Mayor's Show from their stand.

Sir Richard Blackmore, schoolmaster, physician, and small poet, "the Cheapside Knight" and "the City Bard," and the general butt of the wits of his day, probably wrote some poems recited at Saddlers' Hall; whence Sir Samuel Garth addressed these lines: "To the merry Poetaster at Saddlers' Hall, in Cheapside.

"Unwieldy Pedant, let thy awkward Muse  
With Censures praise, with Flatteries abuse,  
To lash, and not be felt, in Thee's an Art;  
Thou ne'er mad'st any but thy School-boys smart.  
Then be advis'd, and scribble not agen;  
Thou'rt fashion'd for a Flail, and not a Pen.  
If B——'s immortal Wit thou would'st desery,  
Pretend 'tis he that writ thy Poetry.  
Thy feeble Satire ne'er can do him wrong;  
Thy Poems and thy Patients live not long."

"To Sir R—— B——, on the two Wooden Horses before Saddlers' Hall:

"'Twas kindly done of the good-natured Cits,  
To place before thy door a brace of tits."—*Tom Brown.*

Charles II., by charter, dated December 24th, in the thirty-sixth year of his reign, granted several privileges; and this the Company consider their governing charter. It is a very wealthy guild, and on August 30, 1859, was laid the first stone of "Honor's Home," for poor Freemen and widows, at Spring Grove, near Isleworth.

SCRIVENERS' HALL.—The Scriveners are an ancient guild, evident from the fact that, in 1483, they sent four members, in murrey-coloured coats, to attend, with other Companies, the entry of Richard III. into London. In 1485, they sent twenty men to attend the marching watch of the City; while on August 31, in the same year, they sent four members (among other guilds) to welcome Henry VII. on his entering London; and in 1487, on his return from Kenilworth.

The Scriveners were anciently denominated "The Writers of the Court Letter of the City of London," but in the reign of James I., 1616, they were incorporated. Being at one period a very wealthy guild, they built themselves a fine Hall in Noblestreet, near St. Martin's-le-Grand; but becoming in time much reduced, they were compelled to sell the building to the Company of Coachmakers, in whose hands it now remains.

Mr. Hyde Clarke has thrown much light on the connexion of Milton with the Scriveners' Company. Their records tell us, that on Feb. 27, 1599, John Milton, son of Richard Milton, of Stanston, co. Oxon, and late apprentice to James Colbron, citizen and writer of the Court Letter of London (Scrivener), was admitted to the freedom of

the Company. The grandfather and father of the poet are the two personages here alluded to. The latter, who appears to have only served four years' apprenticeship, instead of seven,\* commenced business in 1599, and married about a twelvemonth after.

Sir Robert Clayton, Knight, Lord Mayor in the year 1680, was also a Scrivener. He is often alluded to in the *Diary of Evelyn*, and appears to have been a wealthy and worthy man, "there never having been any who, for ye stateliness of his palace, prodigious feasting, and magnificence exceeded him."

Of another Scrivener, John Ellis, who died Dec. 31, 1791, at the venerable age of ninety-four,

Johnson once remarked to Boswell, "It is wonderful, sir, what is to be found in London. The most literary conversation that I ever enjoyed was at the table of Jack Ellis, a money-scrivener, behind the Royal Exchange, with whom I, at one period, used to dine generally once a week." Boswell adds, "There is a good engraved portrait of him by Pether, from a picture by Frye, which hangs in the hall of the Scriveners' Company."

The business of a Scrivener was the making of leases, writings, assignments, and money securities, by which he became, as it were, a banker and a conveyancer; but the designation money-scrivener having expired with the above Ellis, the business is now transacted by attorneys and others. The Company, however, still retain the title.

STATIONERS' HALL, Stationers' Hall-court, Ludgate-hill, occupies the site of Burgavenny House, whither the Stationers' Company removed in 1611: it was destroyed in the Great Fire;† after which the present Hall was erected; the eastern front was cased with stone about the year 1800.

The Company of Stationers retain their original character intact, and is the only London Company restricted to the members of its own craft; or members of the bookselling, stationery, printing, bookbinding, printselling, or engraving trades; while it practises "the mystery or art" to which its ancient title nominally refers.

The Company existed as a fraternity long previous to the introduction of Printing. Their first Hall was in Milk-street. They were first incorporated May 4, 1557 (3rd and 4th Philip and Mary): this charter was renewed by Elizabeth in 1588; amplified by Charles II. 1634; and confirmed by William and Mary, 1690, which is the existing charter of the Company. These charters gave them inquisitorial privileges of search and seizure of obnoxious books; printers were compelled to serve their time to a member of the Company; and every publication, from a Bible to a ballad, was required to be "Entered at Stationers' Hall." The first entry on the books is 1558: "To William Pekerynge, a ballad, called *A Ryse and Wake*, &c." The *Registers of the Stationers' Company* are valuable authorities. Mr. Payne Collier has given many quotations from them in the two volumes which he edited for the Shakspeare Society in 1848 and 1849; and has continued the extracts, with illustrations and anecdotes (from 1687), in *Notes and Queries*, 2nd s., vol. xii., 3rd s., vol. I. & ii., et seq.

The Company likewise had granted to them by James I., in 1603, the privilege of the sole printing of Prymers, Psalters, and Psalms; as well as "almanacks and prognostications, and the Latin books used in the grammar-schools." Under the Copyright Act, the proprietor of every published work is required to register his claim for his own protection, in the books of the Stationers' Company, before any legal proceedings can take place; the fee is 5s. To each apprentice bound at the Hall is given a Bible, which excellent custom originated in the bequest of Thomas Parkhurst, Master of the Company in 1683; he likewise left 37*l.* to purchase annually Bibles with Psalms, to be given to the poor. In corrupt times, the Company aided the Star-chamber, and hence they became stigmatized as its "literary constables." Their authority has been disputed; for, in the last century, Thomas Carnan, the bookseller, of St. Paul's Churchyard, contested with the Company the exclusive right to publish almanacks: Lord North sided with the Stationers, but the eloquence of Erskine strongly controverted their claim.

Their almanacks, to this day, maintain their superior accuracy and trustworthiness, and adaptation to the requirements of the day. Thus, we have *Francis Moore's*

\* In confirmation of this, an entry in the Scriveners' records tells us that James Colbron was admitted into the Company, April 1, 1595. The question remains whether Milton was a "turnover," from some other Scrivener to Colbron. Mr. Clarke adds, that he discovered that the Scriveners "had no especial custom or exemption of a shorter apprenticeship than seven years, and that Milton must have served seven years with one master or another." He was born in 1578, and died in March, 1646-7. Sarah, his wife, died April 3, 1637. The poet was born December 9, 1608.

† Hansard's *Typographia* contains a view of Burgavenny House as altered for the Hall of the Stationers, printed from the original block engraved for the Company.

*Almanack*, with the fullest account of Eclipses and Astronomical Phenomena; the *Lady's and Gentleman's Diary*, commenced in the last century, contains Papers and Questions contributed by some of the first mathematicians of the day, as well as Enigmas and Charades; John Partridge's *Almanack*, which Swift thought to extinguish in 1709, is still published; as is the *Sheet Almanack* commenced by Vincent Wing, the astronomer, who published for the Company, also, a *book almanack*: his portrait hangs in the Hall. Among the more popular of the late additions to the Company's list are *almanacks* for clergymen, parochial officers, and parish clerks; and a *Gardener's Almanack*, the first of which class was published by John Evelyn, the diarist.

In the Hall, on *Almanack-day*, in November, are published the *Almanacks* printed for the Company. The Stationers employed Lilly, Partridge, and Moore: Lilly's hieroglyphics were stolen from old monkish manuscripts: Moore it is stated has stolen them from him. The Company's astrological and other predictions in their *almanacks* continued, though modified, to our times; one year they experimentally omitted from *Moore's Almanack* the column on the moon's influence on the parts of the human body, when most of the copies were returned upon their hands. (Baily, on the *Nautical Almanac*.) The invested capital of the Company is upwards of 40,000*l.*, divided into shares; but their only publications are *almanacks* and a *Latin Gradus*.

The Court-room has some fine carvings, attributed to Gibbons; and at the extremity is West's touching picture of King Alfred dividing a loaf with St. Cuthbert the pilgrim, presented by Alderman Boydell, Master of the Company; and of whom here is a portrait as lord mayor, with allegorical absurdities, by Graham. In the Stock-room and Hall are excellent portraits of Prior and Steele, presented by John Nichols; of Samuel Richardson, the novelist, and his wife, by Highmore (Richardson was Master of the Company in 1754); of Vincent Wing; of John Bunyan, presented by Mr. Hobbs, the singer; a half-length of Bishop Hoadley; Robert Nelson, by Kneller; Andrew Strahan, and his father, William Strahan; and a bust of William Bowyer, "last of the learned printers," with a grateful inscription written by himself. The Hall has also a large window filled with painted armorial glass. Here was held for nearly twenty years, the Music Feast, on St. Cecilia's day, 22nd of November, for which Dryden wrote his celebrated Ode, last performed here in 1703.

The Company's Charities consist chiefly of pensions; and foremost among the benefactors are the respected names of Guy, Bowyer, Boydell, and Strahan. Over the gate in Stationers' Hall-court are the arms, the Bible, the glory, and the dove, and the motto, "Verbum Domini manet in æternum," bespeaking the holier labours of the Company; and the notice-boards below, the benevolence of its wealthier members.

From early times, the Stationers' Company has been celebrated for its sumptuous state, and its attendance upon the Lord Mayor's Shows, &c.; "the comeliest personages of the Company" attended the lord mayor on horseback, in velvet coats, chains of gold, and with staff torches, to escort Queen Elizabeth from Chelsea to Whitehall. They kept, until within a few years, a superbly-gilt barge, in which, on the morning of Lord Mayor's-day, they visited Lambeth Palace; when the household of the Archbishop of Canterbury brought on board the barge hot spiced ale, buns and cakes, and wine; the latter being served to the Stationers in small wooden "sack-cups," or bowls, with two handles, which were provided by the beadle of the Company. This custom is stated to have originated as follows: when Tenison possessed the See, a near relation of his, who was Master of the Stationers' Company, thought it a compliment to call at the Palace in his stately barge on the morning of Lord Mayor's-day, when the Archbishop sent out a pint of wine for each liveryman, with bread and cheese and ale for the watermen and attendants; and this grew into a settled custom. Certain fees amounting to 2*l.* 12*s.* 6*d.* were paid to the Archbishop's servants on this occasion; the Bargemaster's bill was 20 guineas, the charge for music, 12*l.*, besides other expenses, to enable the Company to "attend my lord mayor with fitting state." On the discontinuance of the aquatic civic pageant, the Stationers' Company sold their barge, and the regale at Lambeth was thenceforth discontinued. The Company formerly submitted their several *almanacks* to the Archbishop of Canterbury, for his Grace's approval; this is no longer observed, but the Stationers continue to present annually to the Archbishop an entire set of their *almanacks*.

The Stationers' Company have erected in Bolt-court, Fleet-street, a School-house, at a cost of about 9000*l*. The School is not confined to the sons of liverymen and freemen of the Company: it will accommodate upwards of 300 boys, and affords an education similar to that of the City of London School. The speeches and awards of prizes take place at Midsummer before the Master, Wardens, and Court of Assistants, in the Stationers' Hall. The buildings were repaired and re-decorated in 1866-7: the Court-room is a noble and picturesque apartment.

The funeral feast of Thomas Sutton, of the Charter-house, was given May 28, 1612, in the former Stationers' Hall; the procession having started from Dr. Law's, in Paternoster-row. For this repast were provided 32 neats' tongues, 40 stone of beef, 24 marrow-bones, 1 lamb, 46 capons, 32 geese, 4 pheasants, 12 pheasants' pullets, 12 godwits, 24 rabbits, 6 hearnshaws, 48 turkey-chickens, 48 roast chickens, 18 house-pigeons, 72 field-pigeons, 36 quails, 48 ducklings, 160 eggs, 3 salmon, 4 congers, 10 turbot, 2 dorics, 24 lobsters, 4 mullets, a firkin and keg of sturgeon, 3 barrels of pickled oysters, 6 gammons of bacon, 4 Westphalia gammons, 16 fried tongues, 16 chicken-pies, 16 pasties, 16 made dishes of rice, 16 neats'-tongue pies, 16 custards, 16 dishes of bait, 16 mince-pies, 16 orange-pies, 16 first back-meats, 16 gooseberry-tarts, 8 redcare-pies, 6 dishes of whitebait, and 6 grand salads.—*Malcolm*.

STOCKING-WEAVERS' HALL, Redcross-street, Cripplegate, long since taken down, was noted for containing a curious picture, illustrative of the history of the stocking-loom.

In this old picture William Lee or Lea is pointing out his stocking-loom to a female knitter; beneath which is this inscription: "In the year 1589, the ingenious William Lee, Master of Arts of St. John's College, Cambridge, devised this profitable art for stockings (but being despised, went to France,) yet of iron to himself, but to us and others of gold: in memory of whom this is here painted." By some the picture is thought to have suggested the story of Lee's having invented the machine to expedite knitting, and thus allow the girl, of whom he was enamoured, more time to listen to his love-making; or the picture may be an illustration of the story. Aaron Hill gives the invention to a poor student of Oxford, to supersede his wife's knitting for their family's support; but Hill wrote this in 1715 upon hearsay; and Lee is named as the inventor in a petition of the Framework-knitters, or Stocking-makers, to Cromwell for a charter, subsequently granted by Charles II. in 1663. Hill's version has, however, been adopted by Elmore in his very clever picture of "the Invention of the Stocking-loom," painted in 1847.

The painting of Lee and his wife, however, was parted with by the Company at a period of pecuniary embarrassment. Mr. Bennet Woodcroft has collected some particulars of the disposal of the picture, in the hope that they may lead to its restoration. In a list, dated 1687, of plate, paintings, &c. belonging to the Company, is an item: "Mr. Lee's picture, by Balderston:" it is also described in Hatton's *London*, 1708. From 1732, the Company's books show no more meetings at their Hall, or any further entry of the picture. The Stocking Weavers subsequently let their Hall, and met at various taverns. The head of the Court Summons, dated 1777, is engraved from Lee's picture; and from this plate is copied an engraving in the Gallery of Portraits of Inventors in the Great-Seal Patent Office. The picture is thought to have passed, about 1773, into the hands of an influential member of the Court of Framework Knitters, who, from time to time, lent the Company money, as their books testify.

TALLOW-CHANDLERS' HALL, Dowgate-hill, is built in the style of Wren, with a colonnade of Tuscan arches. The Company was incorporated by Edward IV. in 1460.

WATERMEN'S HALL, St. Mary-at-Hill, Billingsgate, was built in 1786. The Company's old Hall was in Cold-harbour, and faced the Thames.

The fares of the Thames Watermen and Wherry-men were regulated by Henry VIII. in 1514. Taylor the Water-poet, *temp.* Elizabeth, states the Watermen between Windsor and Gravesend at 40,000. They were made a Company by Philip and Mary in 1555, with eight overseers and rulers, "the most wise, discreet, and best sort of watermen," selected by the Lord Mayor and Court of Aldermen. This statute regulates the dimensions of the boats and wherries, then dangerously "shallow and tinkle;" the Lord Mayor and Aldermen to limit the watermen's fares, to be confirmed by the Privy Council. Strype was told by one of the Company that there were 40,000 watermen upon their rolls; that they could furnish 20,000 men for the fleet; and 8000 men were then in the service. Taylor the Water-poet, with his fellow-watermen, violently opposed the introduction of coaches as trade-spillers. The Company condemned the building of Westminster and Blackfriars Bridges, for their injury to the ferries between Vauxhall and the Temple, the profits of which were given to the poor, aged, decayed, and maimed Watermen and their widows; and in both cases the Company were compensated for their losses. The substitution of steam-boats for wherries has, however, been as fatal to the watermen as railways have proved to stage-coachmen. The above statement of the number of Watermen is very questionable.

In 1633, Taylor, the Water-poet, sent in a petition to Lord Cottington, on behalf of his Majesty's watermen. It is in rhyme:—

"Shows that your Lordship is so well inclined  
To pay us, that our order you have signed,  
For which we humbly thank you, though as yet,  
We sue, and seek, and can no payment get.

We live in debt, we coin and credit lack,  
 And we do fear Sir Robert Pye is slack,  
 Or else unwilling; therefore we implore  
 Your Lordship to remember him once more;  
 And we shall pray unto the power supernal  
 To bless your Lordship, temporal and eternal.

WAX-CHANDLERS' HALL, No. 13, Gresham-street West, nearly opposite Haberdashers' Hall, was taken down in 1852, and has been rebuilt. The Wax-Chandlers' Company was incorporated by Richard III. in 1483. The Chandler of old set his mark to the several articles which he made; lent out wax-tapers for hire; and in Roman Catholic times wax was brought to the chandlers, to be made into "torches, torchettes, prykettes or perchers, chaundelle or tapers for women ayenst Candelmas."

Among the Company's Curiosities are a Grant of Arms to the Company, *temp.* Richard III., a most magnificent document, the Company's Charter of Incorporation, beautifully illuminated. The Wax-chandlers also have several very interesting examples of the 17th century silver plate. The late Mr. Gregory, of Wax-chandlers' Hall, left a very interesting collection of civic antiquities.

WEAVERS' HALL, Basinghall-street. The Weavers enjoy the privilege of being the first to whom a charter was granted, of any of the City Guilds. That Guilds were originated for the purposes of trade is borne out by the fact that the Weavers' Guild is older than the charter of the City itself; and persons belonging to that Guild are entitled to trade in the City, though they are not free of the City. The Company, originally cloth and tapestry weavers, was first incorporated in the reign of Henry I., and paid 1*l.* a year to the Crown for their immunities. Their privileges were confirmed to them at Winchester by Henry II. in 1184, the charter being sealed by Thomas à Becket, the celebrated Chancellor of that reign. The chief officers of the Company retain the distinctive titles of Upper Bailiff and Renter Bailiff. The motto is "Weave Truth with Trust." Hatton (1708) describes the Hall as greatly adorned with hangings, fretwork, and a screen of the Ionic order. Their arms are curious:

Azure, on a chevron, argent, between three leopards' heads, having each a shuttle in his mouth, or, as many roses, gules, seeded proper: crest, a Leopard's Head crowned with a ducal coronet, and a shuttle as before; supporters, two Weavers, ermine, winged or, membered gules.

The old Hall, which had a decorative ceiling, and a staircase with carvings, was taken down in 1856, and has been rebuilt in handsome style.

The existing Companies are so many trusteeships for "charitable purposes" and "chartered festivals;" and their earliest object was the formation of a common stock for the relief of poor or decayed members. Stow devotes some twenty-five folio pages of his *Survey* to charities for this purpose, and which he characterizes as "the Honour of Citizens and Worthiness of Men." These charities comprise pensions to decayed members, almshouses, gifts of money to the poor; funds for the support of hospitals, schools, exhibitions at the universities; prisoners in the City gaols; for lectures and sermons, and donations to distressed clergymen; loans to young beginners in business, &c.

Of the eighty-nine Companies, eight are practically extinct; and a ninth, the Parish Clerks, has no connexion with the municipality of London. The others are divided by the Parliamentary Commissioners into three classes: 1. Companies still controlling their trade, namely, the Goldsmiths and the Apothecaries: both these also belong to Class 2. 2. Companies exercising the right of search, or making wares, &c., including the Stationers, at whose Hall all copyright books must be "entered;" the Gun-makers, who prove all the guns made in the City; the Founders, who test and mark weights; the Saddlers, who examine the workmanship of saddles; the Painters, who issue a trade price-list of some authority; and the Pewterers and Plumbers, who make assays. 3. Companies into which persons carrying on certain occupations in the City are compelled to enter: such are the Apothecaries, Brewers, Pewterers, Builders, Barbers, Bakers, Saddlers, Painter-stainers, Plumbers, Innholders, Founders,\* Poulterers, Cooks,†

\* The Fruiterers' Company have no Hall: they present the Lord Mayor yearly with fruit, formerly twelve bushels of apples, and are entertained by his Lordship.

† The Cooks' Company have no Hall. By their Charter of Charles II. they claim to serve the sovereign on all civic occasions, as well as exemption from serving on juries. They also claim the right of selling beer without a license; but the Court of Excise have decided against this privilege by an Act of Parliament which exempts only members of the Vintners' Company from the wine license. The Cooks' Company are, however, exempted from serving on juries in the City courts.

Weavers, Scriveners, Farriers, Spectacle-makers, Clockmakers,\* Silk-throwers, Distillers, Tobacco-pipe-makers, and Carmen; the last mentioned exclusively consisting of persons belonging to the trade. Admission to the body of freemen is obtained by birth, apprenticeship, purchase, or gift; and thence into the livery by fees.

The Needlemakers' is the only City Company not incorporated by a crowned head, they having received their Charter from Cromwell in 1656. They have no Hall, but these characteristic arms: *vert, three needles in fess argent, each ducally crowned or*: crest, a Moor's head, couped at the shoulders in profile proper, wreathed about the temples argent, and in his ear a pearl (the crest originally was an apple-tree and serpent); supporters, a man and woman (termed Adam and Eve), wreathed round the waist with leaves, all proper, in the woman's dexter hand a needle argent; motto, "they sewed fig-leaves together and made themselves aprons." Stow tells us that needles were sold in Cheapside in the reign of Queen Mary, and were then made by a Spanish negro, by a secret art; they are also said to have been made in London by a native of India, in 1545; and by one Elias Krause, a German, in 1566. Needles were first made, or rather finished, in Whitechapel, by one Mackenzie: hence the cry of "Whitechapel needles, twenty-five for a penny." The trade then removed to the borders of Warwickshire and Worcestershire; but Whitechapel labels are still used, and the fame of "Whitechapel sharps" has reached the interior of Africa.

The arms of the several Companies (some very curious) are correctly given in *Moule's English Counties*: Middlesex. Their records are ancient; for the Great Companies' title-deeds mostly extend to the thirteenth century.

#### HALLS, MISCELLANEOUS.

AGRICULTURAL HALL, Islington, was built in 1862, and opened with the Smithfield Club Cattle Show, in December. The principal entrance is in Liverpool-road, beneath a lofty arch, flanked by towers, with cupolas, 95 feet high. The capital was raised by a Joint-Stock Company, Limited, composed of agriculturists, agricultural implement makers, and cattle salesmen. The whole sum expended in the building, fittings, &c., was 53,000*l.* The first chairman of the Company was the late Mr. Jonas Webb, of Babraham, the celebrated breeder of South-down sheep and short-horned cattle. The ground-plan and cattle fittings were designed by Mr. John Giblett, the eminent cattle-salesman, of the Metropolitan Market. The vice-chairman is Mr. Shuttleworth, the agricultural implement maker, of Lincoln. The main hall is 384 feet in length, by 217 feet in breadth, and has galleries on the four sides, 30 feet wide. There is also a minor hall, 100 feet square; and an entrance-arcade 150 feet long from Islington Green. The great hall has an iron arched roof, glazed, 130 feet span. Mr. F. Peck was the architect. The first stone was laid by Lord Berners, as President of the Club.

The Hall was originally established by members of the Smithfield Club, after an existence of more than sixty-two years. The Club has, since its first institution, had at least five different places of exhibition. In 1799 and 1800, the Club exhibited in Wootton's Livery Stables (Dolphin Yard), Smithfield; in 1804, the Show was held in Swan-yard; in 1805, the next selected spot was Dixon's Repository, in Barbican; the display for 1808 took place in Sadler's-yard, Goswell-street; and in 1839, the Club, moving westward, gave its first exhibition in Baker-street. From Mr. Brandreth Gibbs's *History of the Origin and Progress of the Smithfield Club*, we learn that, at the first exhibition, the Club only received from the public 40*l.* 3*s.* The receipts of the first Baker-street Show were 300*l.*

At the first Cattle-show in the Agricultural Hall, in five days, 134,669 persons paid one shilling each for admission. Since that date, besides the annual Show of cattle, sheep, pigs, and agricultural implements, there have been held here four Dog-shows, at one of which 2000 dogs were entered: that held in 1863 brought 60,800 paying visitors. The first Horse-show was held in 1864. The Hall Company have the credit of originating a Show of this description under cover, with horses exhibited, saddled and harnessed, in an arena sufficiently large to display their paces, and accommodations which have never been excelled. A Horse-show is now held here every year in the week between Epsom and Ascot Races, and attracts the most fashionable company in London. The judges are invariably selected from noblemen and gentlemen; as for instance, the Earls of Chesterfield and Portsmouth, Lords Suffield and Combermere.

\* The Clockmakers' Company have a lending library, rich in treatises on Horology and the allied sciences; besides a cabinet of specimen watches, &c. The Company have no hall, but an office, 6, Cowper's-court, Cornhill; whence the Master, Wardens, and Court of Assistants, May 10, 1852, memorialized Her Majesty's Commissioners of Works and Buildings against the order given direct to Mr. Dent to make the great Clock for the New Palace at Westminster, instead of submitting it, as originally intended, to competition.

There are also at Christmas, Equestrian Performances, with chariot-races, &c., reminding one of the sports of Old Rome. There have likewise been several Industrial and Musical Exhibitions: the Metropolitan Working Men's Exhibition held here ten weeks in the autumn of 1866, was visited by more than half a million persons. One evening, when the *Messiah* oratorio was sung by the Tonic Sol-fa Association, upwards of 23,000 persons paid twopence each for admission in little more than two hours. The Company, up to January, 1865, when the Cattle-show was seriously affected by the cattle plague, had paid four dividends, averaging eight pounds per cent. Mr. John Clayden of Littlebury, Essex, is the present chairman. The Secretary and Manager of the Hall is Mr. Samuel Sidney, a well-known writer on colonization, civil engineering, and agriculture.

BAKEWELL HALL formerly stood in front of the Guildhall, over the ground now occupied by the Law Courts, and extending almost to Basinghall-street. (See the Plan of *Basishaw Ward*, *Strype's Stow*, vol. i.; also Maitland's *History of London*; edition 1760, vol. ii.; Aggas's *Plan of London*, 1560. For a view of the first hall, in the time of Henry VIII., see Newton's *Plan of London*.) Stow says it was first called Basing's Hall, after its owners, the noble family of the Basings, who, in the reign of King John, were appointed chief magistrates, and many served the office of mayor and sheriff. Subsequently, this large building, in the reign of Edward III., was inhabited by Thomas Bakewell. In the twentieth year of Richard II. the King, for the sum of 50*l.* which the mayor and commonalty had paid into the Hanaper, assigned to them the Hall, gardens, &c., for the use of the Corporation; and Bakewell Hall, from that time, was chiefly employed as a weekly market-place for woollen cloths, broad and narrow, brought from all parts of this realm to be sold there. The first hall was taken down and rebuilt in the space of ten months, in 1558, at the charge of 2500*l.* 300*l.* was a legacy of Mr. Richard May, merchant-tailor; but this building did not escape the Great Fire; it was again rebuilt in 1672. The Corporation gave to Christ's Hospital the profit arising from the lodging and pitching of the cloth in the several warehouses or halls—for it was divided into several. This last building was taken down to make room for the new Law Courts. Bakewell Hall, or Blakewell Hall, as it was subsequently called up to the last century, was the great cloth-market of London, and the neighbourhood is still noted for the warehouses of wholesale woollen-drappers.—W. H. Overall, Guildhall Librarian: *City Press*.

COMMERCIAL HALL, Mincing-lane, for the public sale of colonial produce, was built in 1811, from the designs of Joseph Wood, F.S.A., author of *Letters from an Architect*; it has some characteristic bas-reliefs, by J. G. Bubb.

FLAXMAN HALL, University College, Gower-street, is the central apartment beneath the cupola, designed by Cockerell and Donaldson, for the receipt of Flaxman's models, presented by his sister-in-law, Miss Maria Denman. The collection consists of about 140 casts in plaster from the original models, statues and groups of figures, and reliefs, some retouched by the great sculptor. Immediately beneath the lantern is the group of Michael and Satan; and around and above are his monumental and other reliefs, arranged in compartments. In the niche in the vestibule is the large group of Hercules and Omphale; in adjoining rooms are the Pastoral Apollo, the Shield of Achilles, small models of Raphael and Michael Angelo, and other of Flaxman's works; and on the landing is a fine statue of the sculptor by M. L. Watson.

FLORAL HALL, at the south-east corner of the Piazza, Covent Garden, was built in 1863, by taking down a portion of Inigo Jones's Arcade; E. M. Barry, architect. It is of iron and glass, and has a large dome. It is an adjunct to Covent-garden opera-house, and occasionally used for concerts, flower-shows, &c.

HALL OF COMMERCE, No. 52, Threadneedle-street, was designed and built in 1840-43 by Mr. Moxhay, formerly a biscuit-baker in the same street: it occupies the site of the French Protestant Church, in clearing away which a fine Roman tessellated pavement was discovered, and is now in the British Museum.

The Hall façade has a bas-relief 73 feet in length, with life-size figures, by M. L. Watson: the central figure is Commerce, with outspread wings and hands, encouraging the Fine Arts; the groups

symbolizing the intellectual and physical advantages of Commerce. Thus, *sinister* are Peace; Industry, agricultural and mechanical figures bearing fruits and produce, and others spinning; next is Navigation, guided by Astronomy and Geography; and Education and Civilization, with Liberty freeing the Slave. *Dexter* is History; next is a group of the Arts and Sciences; Enterprise guided by Genius, and awaiting their arrival is a group of aborigines. The sculptor died young, in 1847.

The building was opened as a mercantile club-house; right and left were two superb halls, with Corinthian columns and pilasters, picturesque friezes, and elegantly coved ceilings. In the larger hall, 130 feet long, 44 wide, and 50 feet high, March 1, 1851, was given the dinner to Mr. Macready on his retirement from the stage; upwards of 500 guests. The Hall of Commerce, after Mr. Moxhay's death in 1849, was sold for 44,000*l.*; the site alone is stated to have cost him 35,000*l.* The building was next altered for the Bank of London.

HICKS'S HALL, whence the miles on the Great North Road were formerly measured (or, "from the spot where Hicks's Hall formerly stood"), merits record. In the wide part of St. John-street, Clerkenwell, some two hundred yards from Smithfield, an inscription on a public-house states that Hicks's Hall there formerly stood. It was erected some two hundred and fifty years since—the year in which the New River was brought into London. It was built by and named after Sir Baptist Hicks, of Kensington, one of the justices, who, "out of his worthy disposition," gave it to the justices of the county for ever. It got out of repair, and much impeded the traffic. Another Sessions-House was commenced building on Clerkenwell-green; this was finished in 1782 (Rogers, architect): it contains a carved chimney-piece, of Jacobean character, with an inscription recording Hicks's gift, removed from the old Sessions-House. Strype says the Hall cost about 900*l.*, or thereabouts; elsewhere, he states 600*l.* Howes thus describes the building, and the naming of it:

Sir Baptist Hicks, Knight, one of the justices of the county, builded a very stately Session House of brick and stone, with all offices thereunto belonging, at his own proper charge; and upon Wednesday, the 13th of January, this yere, 1612, by which time this house was fully finished, there assembled twenty-six justices of the county, being the first day of their meeting in that place, when they were all feasted by Sir Baptist Hicks; and then they all, with one consent, gave it a proper name, and called it Hicks' Hall, after the name of the founder, who then freely gave the same house to them and their successors for ever. Until this time, the Justices of Middlesex held their usual meeting in a common inn, called the Castle (near Smithfield Bars).

Hicks's Hall had other celebrity besides its milestone distinction. It occurs in *Hudibras*, part iii. canto 3:—

"An old dull sot, who told the clock,  
For many years, at Bridewell Dock,  
At Westminster and Hicks's Hall,  
And *hiccius-doctius* played in all."

In Hicks's Hall, William Lord Russell, the patriot, was sentenced to death for high treason, July 14, 1683; here, too, Count Koningsmarck was tried for the murder of Mr. Thynne, and acquitted; and in March, 1765, a bill of indictment was found at the sessions here against Count de Gnerchy, for the absurd charge of a conspiracy to murder the Chevalier d'Eon. Hicks's Hall, we gather from a drawing in Mr. Holbert Wilson's collection, scarcely reaches Howes's description: it was not large, had a bay-window in the upper floor, and above it a gable.

HUDSON'S BAY COMPANY'S HALL, Fenchurch-street, is a handsome edifice, with an interesting collection of *Curiosities* from the countries to which the Company trade by barter and otherwise, for rich furs, skins, &c., sold here in spring and autumn. The Company was incorporated by Charles II. in 1670. Their hunting-ground extends from Hudson's Bay to the Pacific, and from the United States' frontier to the Arctic Sea. In the Hall is a vast pair of horns of the Moose Deer, weighing 56 lbs.; and in another room, the picture of an Elk, the European Moose, killed in the presence of Charles XI. of Sweden: it weighed 1229 lbs.

ST. JAMES'S HALL and its appurtenances (originated by Mr. Willert Beale) are situated between the Quadrant in Regent-street and Piccadilly, and Vine-street and George-court. There is a frontage in Regent-street, and another in Piccadilly; the latter is characteristically embellished with a sculptured figure of Music, supported by two Cupids, in the tympanum over the upper windows; and between the upper and lower window is a *frieze* of children playing various musical instruments. The interior

consists of a great hall and two smaller halls. The dimensions of the great hall are 139 feet by 60, and 60 feet in height; and it will seat about 2500 persons. It has a semicircular-headed ceiling, and a recessed orchestral gallery at one end, and an alcove at the other end, containing a large organ by Gray and Davidson. The walls and ceiling have been decorated by Mr. Owen Jones. The ceiling is divided into lozenge-shaped panels, by principal ribs that traverse the roof diagonally, and intersect each other; within these panels are others formed by lesser ribs. The semicircular-headed windows are surrounded with flowing scroll ornaments, on a ground of orange-chrome yellow; and the windows have groups of figures in bold relief, holding scrolls, on which are inscribed the names of Mozart, Handel, Beethoven, Haydn, Auber, Meyerbeer, Spohr, Weber, Gluck, Purcell, Rossini, Cherubini, and other eminent composers. The ceiling is rich in colour and gilding; the smaller panels are Alhambran gold on a red ground. The Hall is not lighted at night by a central chandelier, but by gas stars of seven jets each, suspended from the ceiling. The figures in the various designs were modelled by Monti; the other enrichments, by De Sarchy, are of plaster and canvas run into moulds. The floor of the Hall is of marqueterie. It was opened with a musical performance for the benefit of the Middlesex Hospital on the 25th of March, 1856. The Hall is not, however, appropriated exclusively to music.

Public Dinners are given in this Hall. The first took place June 2, 1858, Mr. Robert Stephenson, M.P., presiding, when handsome plate and 2678*l.* were presented to Mr. F. Pettit Smith, in testimony of his bringing into general use the system of Screw Propulsion in ships. The subscribers to the Testimonial were 138, chiefly eminent naval officers, engineers, ship-builders, ship-owners, and men of science; and the Festival intellectually commemorated "one of those bloodless triumphs of civilization, of which this age and country have reason to be proud."

ST. MARTIN'S MUSIC HALL, No. 89, Long Acre, was originally designed by R. Westmacott, for Mr. Hullah's Singing Classes: the style Elizabethan, with iron arches and panelled wood roof, of immense span; the Hall was first opened Feb. 11, 1850. It was partly destroyed by fire, but was restored and lengthened in 1853, and is now 121 feet 6 inches long; an entrance-hall was then added.

UNION HALL, Union-street, Southwark, was built by subscription, upon the site of the Greyhound inn, in 1781, for the use of the justices of the peace, before which they sat at the Swan Inn. They attended at Union Hall daily till the passing of the Police Act in 1793, when it was made one of the offices; the business was next removed to a new office at Stones' End; Union Hall was then let as warehouses; it was destroyed by fire Dec. 6, 1851.

WESLEYAN CENTENARY HALL and MISSION HOUSE, Bishopsgate-street, faces Threadneedle-street. The Centenary Hall was formerly the City of London Tavern. The great Hall for Wesleyan meetings will hold 1200 persons. In the rear is the Mission House, built in 1842: here is the picture by Parker of the rescue of John Wesley from the flames, when a boy. The arrangement of the warehouses, for books, clothes, implements, and other outfittings of the missionaries, illustrates the extent of the Society's transactions *geographically*: here Ashantee, there Tonga; there Caffraria, Gambia, &c.

An interesting Sale of Thank-offerings from the Friendly and Fejee Islands to the Wesleyan Missionary Society was held in their Hall, June 19 and 20, 1851; including temples, cloths, and mats: spears and clubs, shells and bows; elephants' and whales' teeth; costumes, idols, and musical instruments;—all picturesquely grouped, and touching as a lesson of gratitude exemplary to the silken baron of civilization.

WESTMINSTER GUILDHALL, on the south side of the Sanctuary, near the Abbey, was built in 1805, by Cockerell, upon the site of the market-house, erected by subscription in 1568. The Guildhall is octagonal in plan, and has a Doric entrance-portico: here are held the sessions.

TOWN HALLS and VESTRY HALLS have been erected within the last twenty years in most of the large parishes of the metropolis and its environs: some are good specimens of Gothic and classic architecture.

See also, BRIDEWELL, CHARTER-HOUSE, CHRIST'S HOSPITAL, CROSBY HALL, EGYPTIAN HALL, EXETER HALL, FREEMASONS' LODGES, GRESHAM HALL, LAMBETH PALACE. Halls are likewise attached to the INNS of COURT and CHANCERY, which see. Also, WESTMINSTER HALL.

## HAYMARKET (THE).

“A VERY spacious and public street, length 340 yards, where is a great market for hay and straw.” (*Hatton*, 1708). Hay was sold here in the reign of Elizabeth; and Aggas’s plan has “the Haymarket,” with hedgerows and a few straggling houses; and washerwomen then dried their linen on the grass of the site of the present Opera-house. A Token in the British Museum denotes one of the earliest vendors of sea-coal to have lived here: “Nathaniel Robins, at the Sea-coal seller, 1666.” (Reverse.) “Hay Markett in Pickadilla, his halfpenny.” Charles II. granted the right of holding a cattle-market in the street twice a week, opened 1664; it was paved 1697, by fines on the carts; 3*d.* for each load of hay, and 2*d.* for straw. The market for Hay was removed by Act of Parliament, in 1830, to Cumberland Market, Regent’s Park.

The acclivity of the Haymarket at 490 feet from Piccadilly was, in 1842, 1 foot in 22: this has been ingeniously overcome in building the front of Her Majesty’s Theatre, the divisions of which have been taken advantage of to lower the lines, whilst the great length of the façade has rendered the rise unnoticeable: it was designed by Novosielski, but re-fronted by Nash and Repton, 1818. Nearly opposite is the Haymarket Theatre, built by Nash, in 1821, with a fine Corinthian portico: the site of Potter’s “Little Theatre” is occupied by the Café de l’Europe.

Opposite Her Majesty’s Theatre is *Suffolk-place*, leading to *Suffolk-street*, the site of a mansion of the Earls of Suffolk. In Strype’s time the houses were handsome: Moll Davies lived here from 1667 to 1673, in a mansion richly furnished for her by Charles II., which Pepys thought “a most infinite shame:” she kept also “a mighty pretty fine coach.” Here lived Sir John Coventry, who, on his way home, when at the corner of the street, had his nose cut to the bone, “for reflecting on the king,” in 1669; whence dates the *Coventry Act* against cutting and maiming.

*Suffolk-street* has some classic house-fronts: No. 2 has four characteristic oil-jars; No. 6, next the Society of British Artists’ Gallery, is from Andrea Palladio’s house at Vicenza. The Gallery, No. 6½, has a Roman-Doric tetrastyle portico on three semi-circular arches, by Nash: the suite of five rooms, planned by James Elmes, were lit by large ceiling lanterns, inclined from the perpendicular, and diffusing even light. No. 19 is the stage-door of the Haymarket Theatre.

On the east side of the Haymarket is James-street, dated 1673; where was the Tennis-court of Shavers’ Hall (*see* TENNIS, p. 18), the last house in Faithorne’s plan of 1658. Above is Panton-street, which, with Panton-square, Coventry-street, was named from Colonel Panton, the ground-landlord: he was a noted and successful gamester, of the time of the Restoration, and the last proprietor of Piccadilly Hall, which stood at the corner of Great Windmill-street and Coventry-street: the Tennis-court remained to our time in Great Windmill-street.

Colonel Panton, it is said, in one night won as many thousands as purchased him an estate of above 1500*l.* a year. After this good fortune he would never handle cards or dice again; but lived handsomely on his winnings to his dying day, which was in the year 1681. He was in possession of land, the site of streets which bear his name, as Panton-street and Panton-square, as early as the year 1664. Yet we remember to have seen it stated that Panton-street was named from a particular kind of horse-shoe called a *panton*; and from its contiguity to the Haymarket, this origin was long credited.

In 1772, Puppets were exhibited in Panton-street, and were visited by Burke and Goldsmith. “Burke praised the dexterity of one puppet in particular, who tossed a pike with military precision. “Psha” remarked Goldsmith, with some warmth, ‘I can do it better myself.’” (Forster’s *Goldsmith*.) Boswell relates that Goldsmith “went home with Mr. Burke to supper, and broke his shin by attempting to exhibit to the company how much better he could jump over a stick than the puppets.”

On the west is Norris-street, leading to St. James’s Market, once the great western butchers’ and poulterers’ market, noted by Pepys in 1666 as just built by my Lord St. Albans: in a room over the market-house Richard Baxter used to preach. Here, too, is Jermyn-street, named after Henry Jermyn, Earl of St. Albans.

At the corner of Market-street, extending into Jermyn-street, lived Wheeler, the linen-draper, and uncle of Hannah Lightfoot, “the fair Quakeress,” who, while serving in her uncle’s shop, caught the eye of Prince George (afterwards King George III.), in his walks and rides from Leicester House to St. James’s Palace.

Facing Piccadilly Hall, occupying the whole south side of the present Coventry-street, between the Haymarket and Hedge-lane, stood the Gaming-house built by the barber of the Earl of Pembroke, and hence called Shavers' Hall: it is described by Garrard, in a letter to Lord Stratford in 1635 as "a new Spring Gardens erected in the fields beyond the Mews."

From a survey of the premises, made in 1650, we gather that Shavers' Hall was strongly built of brick, and covered with lead: its large "seller" was divided into six rooms: above these four rooms, and the same in the first storey, to which was a balcony, with a prospect southward to the bowling-alleys. In the second storey were six rooms; and over the same a walk, leaded, and enclosed with rails, "very curiously carved and wrought," as was also the staircase, throughout the house. On the west were large kitchens and coal-house, with lofts over, "as also one faire Tennis Court," of brick, tiled, "well accommodated with all things fitting for the same;" with upper rooms; and at the entrance to the upper bowling-green, a parlour-lodge; and a double flight of steps descending to the lower bowling-alley; there was still another bowling-alley, and an orchard-wall, planted with choice fruit-trees; "as also one pleasant banqueting-house, and one other faire and pleasant Roome, called the Greenc Roome, and one other Conduit-house, and 2 other Turrets adjoining to the walls."

### HOLBORN,

A THOROUGHFARE of varying widths, extends from the north end of Farringdon-street to Broad-street, Bloomsbury. It was anciently called Old-bourne, from being built upon the side of a brook or bourne, which "broke out of the ground about the place where now the bars do stand, and ran down the whole street till Old-bourne Bridge, and into the River of the Wells, or Turnemill Brook." (*Stow.*) 1502. "The deche from the Temse to Holborne-brygge new cast." (*Grey Friars' Chronicle.*) The stream now runs the same course along the common sewer; and the arch of Holborn-bridge was uncovered in 1841. Holborn was first paved in 1417, at the expense of Henry V., when the highway "was so deep and miry that many perils and hazards were thereby occasioned, as well to the king's carriages passing that way, as to those of his subjects." (*Rymer's Fœdera*, vol. ix. p. 447.) By this road criminals were conveyed from Newgate and the Tower to the gallows at St. Giles's and Tyburn; whither a ride in the cart "up the Heavy Hill" implied going to be hung, in Ben Jonson's time.

"As clever Tom Clinch, while the rabble was bawling,  
Rode stately through Holborn to die of his calling,  
He stopt at the George for a bottle of sack,  
And promised to pay for it when he came back."—*Swift*, 1727.

"An old Counsellor in Holborn used every execution-day to turn out his clerks with this compliment: Go, ye young rogues; go to school and improve."—*Tom Brown*.

To remedy the declivities of Holborn and Snow Hill, various plans have been proposed, by viaducts crossing the valley of the Fleet, and otherwise. Alderman Skinner, who built Skinner-street, proposed to construct a bridge from Snow-hill across the valley to Holborn-hill; and to lift the valley 17 feet forms part of Mr. Charles Pearson's plan. The traffic is much larger than is generally believed: for example, of 9950 vehicles passing over Holborn-hill, 1013, or about one-tenth, go up and down from the low levels; and of 10,723 passing through Skinner-street and Snow-hill, 3219, or about three-tenths, go up and down from the low levels.

The Corporation plan provides that the line of improvement from east to west shall commence at or near the Old Bailey, and terminate at a point 55 feet beyond the western side of Hatton-garden by a high-level roadway formed 80 feet wide, with an almost imperceptible gradient. Farringdon-street is to be crossed by a bridge with a minimum central headway of 21 feet. Two new streets are to be laid down, both starting from Farringdon-road, to afford communication for vehicles between the upper and lower levels.

No. 94, Holborn-hill, opposite Shoe-lane, the well-known house of Messrs. Fearon, was established at the beginning of the present century. The amount of the wines and spirits sold there was much controverted in the *Times* newspaper, in 1829: a Correspondent, December 14, stated that he had "watched one shop in Holborn, and saw, on an average, six individuals enter per minute, being equal to 360 in an hour." At this time liquors were consumed upon the premises, but this has long been discontinued. The general business is still very extensive at this establishment, and in twelve months reaches a quarter of a million customers. Messrs. Fearon have been celebrated in the verse of Thomas Hood, who, writing home to his wife, in 1835, from Rotterdam, implied that he had taken some English gin with him as a travelling companion, perhaps a parting present from Mrs. Hood; for he says:—

"The flavour now of Fearon's,  
That mingles in my dram,  
Reminds me you're in England,  
And I'm in Rotterdam."

And he concludes with—

“The girl I love in England  
I drink at Rotterdam.”

The founder of the house was Mr. Henry Bradshaw Fearon, who visited America in 1818, and on his return published “A Narrative of a Journey of Five Thousand Miles through the Eastern and Western States.”

On the north side is Ely-place, built upon part of the site of the palace of the Bishops of Ely. (See ELY HOUSE, p. 321.)

In Holborn are Thavie’s, Barnard’s, Furnival’s, Staple’s, and Gray’s Inns. (See INNS OF COURT.) At the corner of Furnival’s Inn, and in Queen-street, Cheapside, Mr. Edward Kidder, the famous pastry-cook (who died April, 1739, aged 73 years), had two schools, in which he taught nearly six thousand ladies the art of making pastry. Kidder published his receipts, engraved on copper, in a thin 8vo, with his portrait as a frontispiece.

At No. 39, Brooke-street, died Chatterton. Of the house, occupied by Mr. Jefford, a plumber, Mr. Hotten, in his *Adversaria*, gives these very interesting reminiscences:—

“We know, from the account of Sir Herbert Croft, that Chatterton occupied the garret—a room looking out into the street, as the only garret in this house does. I remember this room very well, as it was twenty-six years ago, soon after which the occupier made some alterations in it. It must then have been substantially in the same condition as in 1770; for the walls were old and dilapidated, and the flooring decayed. It was a square and rather large room for an attic. It had two windows in it—lattice-windows or casements—built in a style which I think is called “Dormer.” Outside ran the gutter, with a low parapet-wall, over which you could look into the street below. The roof was very low, so low, that I, who am not a tall man, could hardly stand upright in it with my hat on; and it had a very long slope extending from the middle of the room down to the windows. It is a curious fact, that in the well-known picture (The Death of Chatterton, by Wallis) exhibited at Manchester, St. Paul’s is visible through the window: I say a singular fact, because, although this is strictly in accordance with the truth, as now known, the story previously believed was, that the house was opposite, where no room looking into the street could have commanded a view of St. Paul’s. This, however, could only have been a lucky accident of the painter’s. About the period I have mentioned, the tenant divided the garret into two with a partition, carried the roof up, making it horizontal, and made some other alterations, which have gone far to destroy the identity of the room. It is a singular coincidence, seeing the connexion between the names of Walpole and Chatterton, that my friend, Mrs. Jefford, the wife of the now occupier, who has resided there more than twenty years, was for some years in the service of Horace Walpole, afterwards Lord Orford. She is a very old lady, and remembers Lord Orford well, having entered his family as a girl, and continued in it till he died, near the end of the last century.”

Gerarde, the herbalist, had a large physic-garden in Holborn. Howel dates one of his *Familiar Letters*, Holborn, 3 Jan. 1641, “to Sir Kenelm Digby, at his house in Saint Martin’s-lane.” Sir Kenelm lived, before the Civil Wars, between King-street and Southampton-street; Milton in Holborn-row, in a house opening into Lincoln’s-inn-fields; and Dr. Johnson, in 1748, at the Golden Anchor, Holborn-bars. These were the City boundaries, now marked by two granite obelisks near Middle-row, at the south-east corner of which Sir James Branscomb kept a lottery-office forty years: he had been footman to the Earl of Gainsborough, and was knighted when sheriff of London and Middlesex in 1806.

Next is *Middle-row*, which has, for two centuries, been considered an obstruction. Howel, in his *Perustration of London*, 1657, p. 344, observes:—“Southward of Gray’s-inn-lane there is a row of small houses, which is a mighty hindrance to Holborn in point of prospect, which, if they were taken down, there would be from Holborn Conduit to St. Giles’s-in-the-Fields one of the fairest rising streets in the world.” These obstructive buildings have been condemned for removal. The old row is shown in Faithorne’s Ichnographical Delineation of London in the reign of Charles I., a facsimile of which, engraved on copper, has lately been executed.

Southampton-buildings, Holborn, denotes the site of the mansion of the Wriothesleys, Earls of Southampton; and Brooke-street that of the residence of Sir Fulke Greville, Lord Brooke, the friend of Sir Philip Sidney. Gate-street, and Great, Little, and New Turnstiles, lead into Lincoln’s-Inn-fields; between the north side of which and the south side of Holborn is Whetstone’s Park, a profligate resort of two centuries since, commemorated in the plays of Dryden, Shadwell, and Wycherley.

Paul Whitehead was born in Castle-yard, Holborn, on 6th February, 1710, o.s., being St. Paul’s-day, from which circumstance he is said to have derived his Christian name, ludicrously unsuitable to his character, and made more memorably ridiculous by his brother, satirist Churchill’s well-known lines:—

“May I (can worse disgrace o’er manhood fall?)  
Be born a Whitehead, and inspired a Paul.”

On the north side of High Holborn, between Nos. 110 and 77 (*see* boundary-marks in the pavement), is the *Holborn Charity Estate* of St. Clement Danes parish, which plot of ground and some old buildings were purchased in 1552, for 160*l.*, when Holborn was almost a country road from the City to the village of St. Giles. The property now produces 4000*l.* a year, expended in schools, almshouses, and other charities. The almshouses were first built at the east end of St. Clement's Church, Strand; next, about 1790, at the back of Clement's Inn Hall; and in 1848-9 the Charity was removed to forty almshouses built in Garratt-lane, Streatham: infant-schools were erected in Milford-lane, Strand, in 1852. Upon the Holborn Estate is Day and Martin's Blacking Factory, No. 97, built at a cost of 12,000*l.*: here Mr. Day amassed great wealth, and, dying in 1836, left 100,000*l.* for the benefit of persons, like himself, deprived of sight.

In Endell-street (formerly Old Belton-street), High Holborn, leading to Long-acre, on the east side, is the Early English Christ Church, erected in 1845; next is the British Lying-in Hospital, a picturesque Elizabethan structure, built in 1849; and a handsome Italianized edifice for Baths and Wash-houses, built in 1852, not far from the site of "Queen Anne's Bath;" whilst, nearly in a line with Endell-street, are the Industrial Schools, opened in 1852; and in Bloomsbury-street, northward, side by side, are three chapels in Early Pointed, Lombardic, and *rococo* styles: six of these seven edifices of religion and philanthropy were erected within eight years.

Kingsgate-street, between 116 and 117 High Holborn, is named from the King's-gate, this being the royal road to Newmarket; and Pepys records, 3 March, 1668-9, the King and the Duke of York, and the Duke of Monmouth, leaving Whitehall at three in the morning, in their coach, which was overset at the King's-gate: "it was dark, and the torches did not, they say, light the coach as they should do." Here, in 1852, was an old public-house, sign the Red Gate.

In Holborn also are FIELD-LANE, ELY-PLACE, FETTER-LANE, FULWOOD'S-RENTS, CHANCERY-LANE, and DRURY-LANE, which names *see*. From Farringdon-street to Fetter-lane is "Holborn Hill;" Fetter-lane to Brooke-street, "Holborn;" and from Brooke-street to Drury-lane, "High Holborn."

On the south side, nearly upon the site of Warwick House, is the Holborn Theatre, built in 1866, and opened Oct. 6.

In the reign of Edward the Sixth, the authorities ordered the removal of all the King's revels and masques from Warwick House, Holborn, to "the late dissolved house of Blackfriars, London." The players who removed from Holborn to Blackfriars opened the latter theatre with scenery and machinery, long before the period at which those adjuncts are said to have been introduced by Davenant. When the Puritans closed the theatres, the ejected actors complained that they were not allowed to act at all, while the drama of "Bel and the Dragon," performed by puppets, was creating an uproar at the foot of Holborn-bridge.—*Athenæum*, No. 2033.

On the north side was the old historic inn, the George and Blue Boar, upon the site of which has been erected the Inns of Court Hotel.

### HOLLAND HOUSE, KENSINGTON,

**A** LITTLE west of the town, and about two miles from the metropolis, is a picturesque Elizabethan pile, placed in a beautiful park about midway between the Kensington and Uxbridge roads. This mansion, which is the manor-house of Abbots Kensington, was built in 1607 for Sir Walter Cope, and descended to his son-in-law, Henry Rich, first Earl of Holland; whence it was named Holland House. The Earl was twice made prisoner here—by Charles I. in 1633, for his challenging Lord Weston; and by command of the Parliament, after his attempt to restore the king, for which he was beheaded in 1649. Holland House was next occupied by Sir Thomas Fairfax, afterwards Lord, the Parliamentary General, as his head-quarters.

"The Lord-General (Fairfax) is removed from Queen-street to the late Earl of Holland's house at Kensington, where he intends to reside."—*Perfect Diurnal*, 9th to 16th July, 1649.

The mansion was, however, soon restored to the Countess of Holland. During the Protectorate, "in Oliver's time," plays were privately performed here. In 1716 the estate passed to Addison the Essayist, by his marriage with Charlotte, Countess Dowager of Holland and Warwick; and here Addison died June 17, 1719: having

addressed to the dissolute Earl of Warwick these solemn words: "I have sent for you that you may see how a Christian can die!" he shortly after expired:

"There taught us how to live, and—oh, too high  
The price of knowledge!—taught us how to die."

The young Earl himself died in 1721. About the year 1762, the estate was sold to Henry Fox, the first Baron Holland of that name, whose second son, Charles James Fox, passed his early years at Holland House; and here lived his nephew, the accomplished peer, at whose death, in 1840, the estate descended to his only son, the last Lord Holland, by whom the olden character of the mansion and its appurtenances was studiously maintained: the latest restorations are by Barry, R.A.

Thorpe's drawings of Holland House are preserved in the Soanean Museum. Its plan is that of half the letter H; it first consisted of the centre and turrets only, to which Henry Rich, Earl of Holland, added the wings, and their connecting arcades: the materials are deep-red brick, with stone finishings; but the exterior has lost many of its original features. Eastward is a stone gateway, designed by Inigo Jones, and carved by N. Stone; the lodges and enriched metal gates in the Kensington-road were added in 1838. The raised terrace, with an open parapet and vases of plants, was added to the south front in 1848, when also the public footpath was diverted to the east side of the Park. In the Hall is the model of Westmacott's statue of Fox, erected in Bloomsbury-square. In the Journal-room (which contains a complete set of the Journals of the Lords and Commons) is a large collection of preserved birds, reptiles, insects, shells, minerals, &c. The Great Staircase and the Gilt Room are of the time of James I.; the former has massive balustrades, carved into arches, &c. The Gilt Room is mostly by Francis Cleyn, who was much employed by James I. and Charles I.: the ceiling "in grotesque," by Cleyn, fell down during the minority of the third Lord Holland; the wainscot panels have alternately gold fleurs-de-lis on blue, within palm-branches; and gold crosslets on red, encircled with laurel; with the arms of the Rich and Cope families, and the punning motto, *Ditior est qui se?*—Who more rich than he? The entablature has a painted leaf enrichment, with gilt acorns between; the compartments of the two fire-places are painted with female figures and bas-reliefs from the antique fresco of the Aldobrandini Marriage, executed by Cleyn, and not unworthy of Parmegiano: among the furniture are carved and gilt shell-back chairs, also by Cleyn, and a table from the Charter-house hall. Here are marble busts of George IV. when Regent; William IV.; Henry IV. of France; the Duke of Sussex; the Duke of Cumberland of Culloden, by Rysbrack; the third Lord Holland; C. J. Fox, by Nollekens, a duplicate made for the Empress Catherine of Russia; Napoleon, by Milne; Ariosto, copied from his tomb; and Henry Fox, first Lord Holland, often declared by Bartolozzi to be "one of the finest specimens of sculpture since the days of Phidias or Praxiteles." In the bow recess are models of Henry Earl of Pembroke and Thomas Winnington, Esq. (*See Richardson's Architectural Remains of the Reigns of Elizabeth and James I.*)

In the breakfast-room are family portraits by Lely, Kneller, Reynolds, Hoppner, &c.; and in the Great Drawing-room (40 feet by 18 feet) are some very fine pictures, including a scene by Hogarth from Dryden's *Indian Emperor*, acted by children, all portraits; a Sea-port, by Velasquez; a Holy Family, on copper, by Murillo; a Man and Boy eating Fruit, by Velasquez; Hope nourishing Love; and half-lengths of Garrick and Sterne, by Reynolds. The Library, or Long Gallery, 102 feet by 17 feet 4 inches, forms the eastern wing of the mansion: the collection exceeds 18,000, besides MSS. and autographs, including three plays of Lope de Vega. In the other apartments are valuable pictures, miniatures, drawings, sculptures; with enriched cabinets, vases, carvings in ivory, china, filagree-work, time-pieces, &c. In the Ante-room is the famous collection of miniatures. Here, too, is Reynolds's celebrated picture of Lady Susan Lennox leaning from a bay-window on the north side of Holland House, to receive a dove from Lady Susau Strangways, near whom is Charles James Fox, when a boy of fourteen.

This "brave old house" is charmingly placed upon high ground:

"Thou hill, whose brow the antique structures grace,"

*Tickell, On the Death of Addison*

the upper apartments are stated to be on a level with the stone gallery of St. Paul's Cathedral. The southern park is enclosed with noble elms. Against the house grow some curious old exotic plants. The gardens abound with architectural quaintness: of parterres in Italian scrolls and devices, and box and dwarf oaks clipped into globes; flower beds in the forms of a fox (in allusion to the family name), and the old English  $\mathfrak{H}$ ; the effect of the flowers aided by coloured sand, and the outlines of box-edging. In a parterre near the house, upon a granite column, is a bronze bust of Buonaparte, by Canova, the pillar inscribed with a verse from Homer's *Odyssey*; and in the north garden-wall is an arbour with this distich by Vassall Lord Holland:

"Here ROGERS sat—and here for ever dwell  
With me those 'Pleasures' which he sang so well."—VU. Hd.

Beneath are some lines added in 1818 by Henry Lintrell.

In the French garden, in 1804, was first raised in England the Dahlia, from seeds sent to Vassall Lord Holland from Spain. The grounds westward, with their stately oaks and cedars, were laid out and planted in 1769 by the Hon. Charles Hamilton, of Pains Hill, in Surrey.

Aubrey relates two supernatural appearances at Holland House: the first to "the beautiful Lady Diana Rich, daughter to the Earl of Holland, as she was walking in her father's garden at Kensington," when she "met with her own apparition, habit and every thing, as in a looking-glass. About a month after she died of the small-pox." Aubrey's second story is that the third daughter of Lord Holland, not long after her marriage with the first Earl of Breadalbane, "had some such warning of approaching dissolution."

In a meadow west of Holland House was fought, March 7, 1804, a fatal duel between the late Lord Camelford and Captain Best, R.N.: upon the spot where Lord Camelford fell is an antique Roman altar, placed there and thus inscribed by Vassall Lord Holland: "HOC DĪS MAN . VOTO DISCORDIAM DEPRECAMUR."

The Highland and Scottish Societies' gatherings, with their characteristic sports and pastimes, have been frequently held in Holland Park north, since 1849.

There is a traditional story that Addison, to escape from his termagant countess, often walked from Holland House to the White Horse Inn, at the corner of "Lord Holland's Lane" (no longer a thoroughfare), on the site of the present Holland Arms Inn; and there enjoyed "his favourite dish, a fillet of veal, his bottle, and perhaps a friend." (*Spence*.) Before his marriage, Addison lived in Kensington-square.

Holland House is associated "with the courtly magnificence of Rich, with the loves of Ormond, the councils of Cromwell, with the death of Addison." It has been for nearly two centuries and a half the favourite resort of wits and beauties, of painters and poets, of scholars, philosophers, and statesmen. In the lifetime of Vassall Lord Holland it was the meeting-place of "the Whig Party;" and his liberal hospitality made it "the resort not only of the most interesting persons composing English society, literary, philosophical, and political, but also to all belonging to those classes who ever visited this country from abroad." (*Lord Brougham*.) In this delightful circle, "every talent and every accomplishment, every art and science, had its place. . . . The last debate was discussed in one corner, and the last comedy of Scribe in another; while Wilkie gazed with admiration on Reynolds's Baretti; while Mackintosh turned over Thomas Aquinas to verify a quotation; while Talleyrand related his conversation with Barras at the Luxembourg, or his ride with Lannes over the fields of Austerlitz." (*Murray's Environs of London*.) "Holland House" (says Macaulay) "can boast of a greater number of inmates distinguished in political and literary history than any other private dwelling in England."

### HORSE-FERRY (THE),

**B**ETWEEN Westminster and Lambeth, was the only Horse-ferry permitted on the Thames at London, and was granted by patent to the Archbishop of Canterbury; the ferry-boat station being near the palace-gate. Here were two inns for the reception of travellers, who arriving at night, did not choose to cross the water at such an hour, or in case of bad weather, might prefer waiting for better. On opening Westminster Bridge, 1750, the ferry ceased, and compensation was granted to the See. (BRIDGES, p. 69.)

The rates were, for a man and horse, 2s.; horse and chaise, 1s.; coach and two horses, 1s. 6d.; coach and four horses, 2s.; coach and six horses, 2s. 6d.; cart loaded, 2s. 6d.; cart or wagon, each 2s.

At the time of the Usurpation, a wooden house was built for a small guard posted here. M. de Lauzan mentions the ferry in his account of the escape of the Queen of James II., Dec. 9, 1688: Sir Edward Hales being in attendance with a hackney-coach, "we drove from Whitehall to Westminster, and arrived safely at the place called the Horse-ferry, where I had engaged a boat to wait for me."

The same author adds: "The King, attended by Sir Edward Hales, who was waiting for him,

descended the back stairs, and crossing Privy Gardens, as the Queen had done two nights before, proceeded to the Horse-ferry, and crossed the Thames in a little boat with a single pair of oars to Vauxhall. He threw the Great Seal into the river by the way; but it was afterwards recovered, in a net cast at random, by some fishermen."

"Very early one morning, the Duke of Marlborough, with his hounds, desired to cross by the Ferry; one Wharton, the waterman at hand, was subsequently rewarded by the Duke obtaining for him a grant of the Ferry-house, the present owner of which is a descendant of Wharton."—Walcott's *Westminster*, 1849, p. 333.

### HORSE-GUARDS (THE),

AT Whitehall, is named from a troop of Horse-Guards being constantly on duty here: the buildings comprise the offices of the Secretary-at-War, the Commander-in-Chief, the Adjutant-General, and Quartermaster-General. The Horse-Guards were originally raised by Charles II., who had built for them stables and barracks in the Tilt-yard of Whitehall, which Pennant has engraved, with "the Banqueting-house, one of the gates, the Treasury in its ancient state, and the top of the Cock-pit in the back view." These stables and barracks were removed in 1751, and the present Horse-Guards was built of stone from a design commenced by Vardy, and completed by Kent, "broken into complex forms, much in the picturesque style of Vanbrugh." (Weale's *London*.) It consists of a centre and two pavilion wings, with a turret and clock; the west front opening into St. James's Park, by a low and mean archway; the *entrée* for carriages is only for royal and other privileged personages. In the rear is the parade-ground, part of the ancient Tilt-yard, with a guard station for infantry; and here inspections of the troops take place. In the vestibule of the building is the boundary-line of the parishes of St. Martin's and St. Margaret's, Westminster, denoted by inscriptions. In the Audience-room, facing the Park, the Military Secretary and the Commander of the Forces hold their levees: here are portraits, by Gainsborough, of George III. and his Consort; and a bust of Field Marshal the Duke of York. Attached to the Quartermaster-General's office is a Board of Topography, with a dépôt of maps, plans, and a library of military works. In the Guards' Mess-room is a portrait of Aubrey de Vere, Earl of Oxford, in armour, commander of Charles II.'s "Regiment of Horse," and after whom were named the "Oxford Blues," now the Royal Horse-Guards Blue.

In two stone alcoves, flanking the gates, facing Whitehall, is stationed a guard of two mounted cavalry soldiers from ten to four o'clock, relieved every two hours; when the doors in the rear are thrown open, and the two relieving guards enter; whilst those relieved ride out in front, describe a semicircle, meet, and ride side by side through the central gate, and so back to their stable. Orders concerning all the Guards in London are given out by the field officer on duty at the Horse-Guards. The marching and countermarching of the Guards drawn from the cavalry barracks at Knightsbridge and the Regent's Park, is a picturesque scene, as the troop passes through the Parks, on the march line of Portland-place, Regent-street, and Waterloo-place: their stately cuirassed and helmeted figures, and the splendour of their accoutrements, rendering them the most magnificent "Household troops" in Europe.

The Horse-Guards' Clock has about the same popular reputation for correct time at the west end of the town, that St. Paul's clock holds in the City. The Horse-Guards' Clock was originally made by Thwaites, in 1756. The Clock was repaired, and improvements added by Vulliamy and Sons, 1815-16: it has since measured time with sufficient accuracy for any practical purpose not connected with astronomical observations; but much of its reputation may be conventional—from the rigid punctuality with which the slightest military movement is executed. The dials are each 7 feet 5 inches diameter, and painted white, with black numerals and hands; the Whitehall dial is very effectively illuminated at night by a strong light thrown from a lamp, with a reflector, placed on the projecting roof in front of the clock-tower.

On the night before the Funeral of the Duke of Wellington, Nov. 18, 1852, the remains were removed from Chelsea Hospital to the Audience Room in the Horse-Guards. Upon the parade-ground was erected a gigantic pavilion, beneath which was the car of state, upon which, next morning, was placed the coffin. At the word of command, "Present arms!" every musket and sword were raised, the muffled drums gave a long and heavy roll, minute-guns fired a funeral salute, the troops were ordered to "Reverse arms!" and there, in the attitude of mourners, and in view of the body of the illustrious deceased, the military awaited the signal to move off. The word of command was given; every band played "the Dead March in Saul;" a tremendous roll of drums denoted that the Coldstreams were in motion, and the procession moved on. The twelve horses attached to the funeral car drew it from under the tent; the colonels carrying the bannerols surrounded the car, and their gaily-painted flags, the rich bronze of the car, the gilt bier, the trophies of modern arms, the canopy of silver tissue and the crimson and gold of the coffin, the pall powdered with silver heraldic collars; with such pomp and stateliness, the mortal remains of Wellington left the scene consecrated by his labours no less than by his victories.

## HOSPITALS.

OF the Charitable Institutions of the Metropolis, one quarter consists of General Hospitals, Medical Charities for special purposes, Dispensaries, and Societies for the preservation of life and public morals, mostly supported by donations and annual subscriptions. We can only describe a few of such of these establishments as have remarkable histories.

Of the Five ancient Royal Hospitals of the City of London, three are Medical: two of these have been described as follows:—*ST. BARTHOLOMEW'S*, p. 36; *BETHLEHEM*, p. 56. The third, *ST. THOMAS'S HOSPITAL*, Southwark, was originally a house of alms, founded by the Prior of Bermondseye, in 1213, adjoining the wall of that monastery. After the Surrender in 1539, it was purchased by the City of London, chartered, in 1551, as one of the five royal foundations, and opened in 1552. In 1569, the funds were so low that a lease was pawned for 50*l.* Strange mutations have come over this spot, which for six centuries and a half had been the site of a Hospital, or nearly three centuries and a half before it was refounded and endowed by the pious King Edward VI., who confirmed the gift only ten days before his death; and it was delivered over by charter (the 5th and 7th of Edward VI.) to the mayor, commonalty, and citizens of London, and was named the London House of the Poor in Southwark, to be situated in London or Southwark, for poor, sick, infirm, wayfaring people. Much injury was done to the property belonging to the establishment by the fires which took place in Southwark in 1676, 1681, and 1689, although the Hospital itself suffered no damage on either occasion. The Fire of 1676 consumed five hundred houses in Southwark, “yet,” says Hatton, “as by the particular will of Heaven, was extinguished at this Hospital.” However, at the close of the seventeenth century the buildings had become so much decayed that there was founded a subscription fund, to which Robert Clayton, the President, contributed 600*l.*; he also bequeathed to the sick poor 2300*l.* The Hospital was enlarged in 1732: the wards Frederick and Guy were named from their founders, the latter of whom built a pair of large iron gates; on the two piers were statues of cripples. The Hospital was, in part, reconstructed in 1835, by Sir Robert Smirke and Mr. Field. The site of the new north wing of the Hospital, at the south end of London-bridge, was purchased of the City of London for the sum of 40,850*l.*, which was not considered an extravagant price, though at the rate of 54,885*l.* per acre. The site of two houses adjoining the above spot was sold by the Hospital to the City at the enormous rate of 69,935*l.* per acre! The Hospital consisted of three courts, and colonnades: in the first court was a bronze statue of Edward VI., by Scheemakers, set up by Charles Joyce, Esq., in 1737. In the second court was the chapel for patients—service daily; St. Thomas's church, described at p. 208; the hall, and kitchen; and over the Doric colonnade was the Court-room, with portraits of Edward VI., William III. and Queen Mary, Sir Robert Clayton, and other of the Hospital presidents. In the third court was the statue of Sir Robert Clayton, robed as Lord Mayor, erected in his life-time by the Hospital governors. In a smaller court were the cutting-ward, surgery, bathing-rooms, theatre, and dead-house. There were twenty wards for patients, each superintended by a Sister. The Hospital, of four acres, and buildings were on the east side of High-street, Southwark, and the site was sold to the Charing-cross Railway Company; the Governors claiming as compensation 750,000*l.* The Railway Company offered them terms equivalent to 400,000*l.*; and, after a litigation which absorbed little less than 25,000*l.*, 296,000*l.* were awarded by the arbitrator. The patients were then removed to a temporary hospital, late a Music-hall, Surrey Zoological Gardens. It was next proposed to rebuild the Hospital in the country; but the choice of a site in the metropolis prevailed. It was contended that in 1631 the Lord Mayor counted 16,880 persons in Southwark, and that now Southwark and the neighbouring parishes, all of which are obliged to avail themselves largely of the aid of this Hospital, contain more than half a million persons, the great majority of whom are poor hardworking people. The site was definitively settled in Stangate, facing the Thames, immediately west of the southern end of Westminster Bridge. The income of the Hospital has increased from 12,000*l.* to 35,000*l.* since the beginning of the century. Among the expenditure for 1861 is 5942*l.* for provisions, 2634*l.* for

drugs, 932*l.* for wine and spirits, 353*l.* for porter, 777*l.* for washing, 3156*l.* for salaries to medical officers, 2257*l.* for wages to sisters and nurses, 151*l.* for hospital dinners, and 747*l.* for insurance against fire. The in-patients of the year were 3948 in number, the out-patients 41,814.

In November, 1866, was decided in the Court of Queen's Bench, the case relating to the right of the Corporation of London as to the election of presidents of the four great City Hospitals. The question was whether it was necessary that the president should be an alderman who had arrived at the dignity of Lord Mayor; or, at all events, an alderman. There were two candidates, of whom Mr. Cubitt (since deceased), who had the majority of votes, having resigned his gown—although he had “passed the chair”—was not an alderman; and his opponent, Alderman Rose, was at the time Lord Mayor, so that he was both alderman and “Grey cloake”—the term used in the ordinances to denote those aldermen who had passed the chair. Judgment was given for the defendants—that is, for the Hospital. The result of the decision is that the Governors of the great Hospitals have free choice in the election of their Presidents.

CHARING-CROSS HOSPITAL, Agar-street, was commenced by Decimus Burton, as a portion of the West-Strand Improvements, in 1831; when the first stone was laid, Sept. 15, with Masonic solemnity, by the Duke of Sussex, Grand Master of the Freemasons. The Charity, founded in 1818, comprises a Dispensary and Casualty Hospital, being the eighth established in the metropolis, the population of which had doubled since the seventh Hospital was instituted. The architecture is Grecian, and the circular termination of the plan well accords with the form of the site. Although upwards of 1000 in-patients and 17,000 out have been treated in one year, the annual average expenditure of the establishment is stated at only 2506*l.*

One day a gentleman called at the Charing-cross Hospital and inquired of the porter whether some money he had just put into one of the collecting-boxes would be safe. Having been assured it would, he immediately went away. The same day a friend of the institution, walking past the above-mentioned box, saw, or fancied that he saw, something in it. On applying his penknife carefully, he succeeded in extracting twenty-two 10*l.*-notes. Having taken these into the Hospital and informed the resident officers of the circumstance, the box was examined, and three more notes found, making a total of 250*l.* thus freely and anonymously contributed to the funds of this deserving charity.

CONSUMPTION HOSPITAL, Brompton, fronting the Fulliam-road, was commenced in 1844, June 11, when Prince Albert laid the first stone; the site was formerly a nursery garden, and the genial, moist air of Brompton has long been recommended for consumptive patients. The Hospital is in the Tudor style, of red brick, with stone finishings; Francis, architect; it was opened in 1846. In 1850 was attached an elegant memorial chapel (*see* CHAPELS, p. 213); and in 1852 was added the western wing of the Hospital, towards which Mdlle. Jenny Lind, when residing at Old Brompton, in July, 1848, munificently presented 1606*l.* 16*s.*, the proceeds of a concert held by her for its aid. This noble act is gracefully commemorated by Mdlle. Lind's bust being placed upon the Hospital staircase: here also is a painted window, of characteristic design, presented by a governor. The Hospital is ventilated by machinery, worked by a steam-engine; and is warmed by water heated by two large Arnott stoves. In the kitchen, steam is used for boiling caldrons of beef-tea, mutton-broth, arrow-root, coffee, chocolate, &c.; and the provisions are wound up a shaft to the respective wards. The patients take exercise in the well-ventilated passages: and the wards are tempered by warm fresh air, which enters at the floor, and escapes by valves in the ceiling. There are a library for the in-patients, and the Rose Charity Fund for convalescents. The deaths in this new Hospital have never exceeded one in every five in-patients, whereas in the former Hospital they were one in four.

FRENCH PROTESTANT HOSPITAL, Victoria Park, South Hackney, was built in 1866, in the pure French domestic style of the early part of the sixteenth century, corresponding to our Tudor; R. L. Roumieu, architect. It is 200 feet long, and stands on three acres of pleasure-ground; it has 60 inmates, and a chapel for 120 persons. The *hospice* owes its origin to a bequest of M. Gastigny, who held an appointment under William III., and dying in 1708, left 1000*l.* towards founding a permanent home and place of temporary relief for poor French Protestants and their descendants resident in England. To this fund the wealthier French Protestants contributed liberally, and premises were built in a bye-lane leading from Old-street, St. Luke's, to Islington, now Bath-street, City-road. Here the hospital remained until the removal to Victoria Park. The old buildings in Bath-street are now the City of London Middle-Class School.

ST. GEORGE'S HOSPITAL, Hyde-Park Corner, originated with a party of dissentient

Governors of Westminster Hospital, who, in 1733, converted Lanesborough House, Grosvenor-place, into an Infirmary. Pennant describes the old mansion as the *country-house* of

“The sober Lanesborow dancing, in the gont:”

hence also the quaint distich inscribed on the house-front :—

“It is my delight to be  
Both in town and country.”

The Hospital has been rebuilt; architect, Wilkins, R.A., 1831; the grand front, facing the Green Park, is very elegant. William Hunter was a surgical pupil at St. George's in 1741, when he resided with the eminent Smellie, at that time an apothecary in Pall Mall. William's brother, John Hunter, was appointed surgeon to St. George's in 1768; and here, in 1793, he died of disease of the heart.

GUYS HOSPITAL, Southwark, on the south side of St. Thomas's-street, was built by Dance, the City architect, in 1722-4, at the sole expense of Thomas Guy, the bookseller in Lombard-street, who by printing and selling Bibles made a fortune: this he greatly increased by purchasing seamen's tickets at a large discount, and afterwards investing them in the South-Sea Company.

Guy was the son of a lighterman at Horselydown, where he was born in 1644. He was apprenticed to John Clarke, bookseller and binder, in a house in the porch of Mercers' Hall, Cheapside, in 1660. In this house, rebuilt after the Great Fire, Guy commenced business for himself; and he subsequently removed to the house between Cornhill and Lombard-street, subsequently known as “the Lucky Corner,” and Pidding's Lottery Office, nearly on the site of the Globe Insurance Company's offices. Guy had agreed to marry his housekeeper, who, however, displeased him, and thenceforth he devoted his immense fortune to works of charity. In 1707, he built and furnished three wards of St. Thomas's Hospital; the stately iron gate, with the large houses flanking it in High-street, Guy also built at the expense of 3000*l.* He was a liberal benefactor to the Stationers' Company; built and endowed almshouses and a library at Tamworth, in Staffordshire, the place of his mother's birth, and which he represented in Parliament. In his 76th year, he took of the president and governors of St. Thomas's Hospital a piece of ground opposite the south side of their Hospital for 999 years, at a ground-rent of 30*l.* a year; thereon, in the spring of 1722, Guy laid the first stone of a Hospital for the cure of sick and impotent persons; and the building was roofed in before his death, Dec. 27, 1724. The expense of erecting and finishing the Hospital was 18,792*l.* 16*s.*, and the sum left to endow it was 219,497*l.* 0*s.* 4*d.*; the largest sum ever left by an individual for charitable purposes. His noble example was followed by Mr. Hunt of Petersham, who, in 1829, bequeathed to the Hospital 196,115*l.*, stipulating for the addition of accommodation for 100 patients. About 10,000*l.* was also received from other benefactors.

“The annual income is now between 25,000*l.* and 30,000*l.*, arising chiefly from estates purchased with the valuable bequests of Guy and Hunt, in the counties of Essex, Hereford, and Lincoln. The usual number of governors is 60, who are self-elective. The office cannot be constituted by any contribution, and there is no published list of benefactors.”—*Low's Charities of London*, 1850.

Guy's Hospital consists of a centre and two wings; behind is a quadrangle, and beyond is a lunatic house for twenty-four insane patients, with a garden and airing-ground for their recreation; in 1839, one of these patients had been in the Hospital fifty-three years. In the wings are the officers' apartments, a surgery, apothecary's shop, laboratories, medical and operating theatres, and a room for the application of electricity and galvanism. Here, too, are a museum, library, a very fine anatomical collection, models in wax by Towne, &c. Westward is the Chapel; and eastward, the Court-room. Attached to the Hospital is a botanic garden for the students. In 1852 were added two handsome wings, heated by Sylvester, and ventilated by a shaft 200 feet high, with an open cupola, and a wind-vane which sends down the shaft fresh air into the wards; while two lower shafts carry off the effluvia. In the front court is a metal statue of Guy, in his livery-gown, by Scheemakers; the pedestal bears representations in relief of Christ healing an impotent man; the Good Samaritan; Guy's arms, and an inscription. In the centre of the front are two characteristic statues by John Bacon, a native of Southwark.

In the Chapel is a fine marble statue of Guy, by Bacon, which cost 1000*l.*: he stands in his livery-gown, with one hand raising an emaciated figure from the ground, and with the other pointing to a second sufferer, as he is borne on a bier into the Hospital, at the back: on the pedestal are emblematic medallions and a glowing inscription, asserting that Guy “rivalled the endowment of kings.” Here is buried Sir Astley Cooper, the distinguished surgeon, to whom there is a marble monument. In the Court-room, over the president's chair, is a portrait by Dahl, a Danish painter, of Guy, in the black gown and long flowing wig of his time: on the ceiling is painted his apotheosis.

KING'S COLLEGE HOSPITAL, Carey-street, Lincoln's-inn-fields, was established in 1839 for the sick poor, for affording practical instruction to the medical students of King's College, under their own professors. The building of a new Hospital, by subscription, was commenced June 18, 1852, when the first stone was laid by the Archbishop of Canterbury: the wards are very spacious, light, and airy; with ventilation by opposite windows and open fire-places, without artificial aid; and the arrangements for teaching include an operating theatre and chapel, dispensary, laboratory, &c.

LOCK HOSPITAL, Harrow-road; CHAPEL and ASYLUM, Westbourne-green: the Hospital established 1746, for the treatment of the peculiar disease incident to profligate women; the Asylum founded 1787 by the Bible commentator, the Rev. Thomas Scott, for the reclamation of the cured inmates to virtuous habits; and the Chapel in 1764, for the ministration to the unfortunate patients and inmates. The establishment was originally formed in Grosvenor-place, where the Chapel, by its popular preachers, became a source of income to the institution. This is the only Asylum existing in connexion with a hospital; all penitentiaries are necessarily shut against the sick and dying outcasts; and for such there is no complete refuge save "the Lock Hospital." (See *Low's Charities*, p. 99.) In 1842, the Institution was removed to its present site; in 1849, the success of an autograph appeal by the Duke of Cambridge provided for the admission of double the number of patients.

The Lock Hospital is so called from the Loke or Lock, in Kent-street, Southwark, a spittal for leprous persons of early date. The name has been referred to the old French *loques*, rags, from the linen applied to sores; "but otherwise, and with more probability, from the Saxon *log*, shut, closed, in reference to the necessary seclusion of the leper on account of the infectious nature of his disease." (Archer's *Vestiges*, Part I.) We find Lock "an infirmary" in Bailey's Dictionary. Others trace the Southwark Hospital to the stream, or open sewer, called "the Lock," which divided the parishes of St. George and St. Mary, Newington, and is shown in Roëque's large map of Surrey. The Hospital known to have existed *temp.* Edward II., had a chapel dedicated to St. Leonard. (*Tanner*.) It came into the possession of St. Bartholomew's Hospital, whence it received patients: falling into decay, it was let in tenements, was taken down in 1809, and its site laid into the Dover-road; a portion of the site was, however, consecrated as the parish burial-ground more than a century since, and so continues.

There were other "Locks:"—2. Between Milk End and Stratford-le-Bow. 3. At Kingsland, between Shoreditch and Stoke Newington, the chapel of which, St. Bartholomew's, remained till 1840. (See CHAPELS, p. 209.) A sun-dial on the premises formerly bore this inscription, significant of sin and sorrow:—

"Post voluptatem misericordia."

Prior to its alienation from the mother hospital, the house had a communication with the chapel so contrived that the patients might take part in the service without seeing or being seen by the rest of the congregation: and there was a similar arrangement in the Lock-chapel in Grosvenor-place. 4. At Knightsbridge, east of Albert-gate, was a lazar-house under the patronage of the Abbot and Convent of Westminster: the Hospital chapel (Holy Trinity) remains: it was rebuilt in 1627, by a licence from Dr. Laud, then Bishop of London, as a chapel of ease to St. Martin's-in-the-Fields, within the precincts of which it was situated; but it was subsequently assigned to the parish of St. George, Hanover-square, and now forms part of Kensington.—*Notes and Queries*, No. 114.

The two largest Leper Hospitals were, however, *St. James's*, Westminster, founded before the Conquest (*Stow*), and made a royal palace by Henry VIII.; the original gateway remains. Next was *St. Giles's-in-the-Fields*, founded about 1117. (See *ST. GILES'S*, p. 376.)

LONDON HOSPITAL, Whitechapel-road, originally "the London Infirmary," was instituted 1740, in a large old mansion in Prescott-street, Goodman's Fields; it was incorporated in 1758, and the present Hospital built on "the Mount," Whitechapel-road. The Charity was established for the poor sick, particularly manufacturers, seamen, watermen, coal-heavers, shipwrights, labourers on the river, and children. In 1791, a *Samaritan Society*, at the suggestion of Sir W. Blizard (the first established), was appended to this Hospital, for the benefit of homeless convalescents, sending them to the sea-side, &c.

A new west wing to the Hospital was founded, July 4, 1864, by the Prince of Wales, when nearly 32,000*l.* was subscribed, of which 3000*l.* was given in one donation by Mr. T. Fowell Buxton; Mr. J. Gurney Barclay, 3000*l.*; and the Hon. Jamsctjee Jejeebhoy, 2000*l.* One ward is set apart for the exclusive use of members of the Hebrew persuasion, of whom large numbers reside in the neighbourhood. The London Hospital has been in active operation more than one hundred and twenty years, during which period it has afforded medical and surgical assistance to one million three hundred thousand persons.

ST. LUKE'S HOSPITAL for Lunatics was first established 1751, in a house upon Windmill-hill, on the north side of Moorfields, nearly opposite the present Worship-

street. In 1753, pupils were admitted to the Hospital; and Dr. Battie, the original physician, allowed medical men to observe his practice. This practice fell into disuse, but was revived in 1843, and an annual course of chemical lectures established, at which pupils selected by the physicians of the different metropolitan hospitals are allowed to attend gratuitously. In 1754, incurable patients were admitted on payment to the Hospital on Windmill-hill. In 1782, was commenced the present St. Luke's, in Old-street-road, when green fields could be seen in every direction; the foundation-stone was laid by the Duke of Montague, July 30; the cost, about 50,000*l.*, was defrayed by subscription; George Dance, jun., architect.

"There are few buildings in the metropolis, perhaps in Europe, that, considering the poverty of the material, common English clamp-bricks, possess such harmony of proportion, with unity and appropriateness of style, as this building. It is as characteristic of its uses as that of Newgate, by the same architect."—*Elmes*.

The Hospital was incorporated 1838; the end infirmaries added in 1841; a chapel in 1842, and open fire-places set in the galleries; when also coercion was abolished, padded rooms were provided for violent patients, and an airing-ground set apart for them; wooden doors were substituted for iron gates, and unnecessary guards and bars removed from the windows. In 1843 were added reading-rooms and a library for the patients, with bagatelle and backgammon-boards, &c. By Act 9 and 10 Vict., c. 100, the Commissioners of Lunacy were added to the Hospital direction. In 1848, Sir Charles Knightley presented an organ to the chapel, and daily service was first performed. The Hospital was next lit with gas; the drainage, ventilation, and supply of water improved, by subscription at the centenary festival, June 25, 1851.

On St. Luke's Day (October 18), a large number of the Hospital patients are entertained with dancing and singing in the great hall in the centre of the Hospital, when the officers, nurses, and attendants join the festival. Balls are also given fortnightly.

The mode of treatment at St. Luke's has undergone so complete a metamorphosis within the last few years, by the institution of kindness for severity, and indulgence for restrictions, that the maladies of the brain have been rendered as subservient to medical science as the afflictions of the body. Modern experience shows that the old terrors of the prison, brutal execrations and violence, and those even worse scenes which were exhibited for a small money payment to the curious, in the madhouses of the metropolis and elsewhere, were errors. The per-centage of recoveries was, from 1821 to 1830  $47\frac{1}{3}$  per cent.; 1831 to 1840,  $56\frac{1}{4}$  ditto; 1841 to 1850,  $60\frac{3}{5}$  ditto; showing the results of the improved treatment. But the largest per-centage of recoveries, with one exception, was  $69\frac{1}{5}$ , in 1851.

MARYLEBONE AND PADDINGTON HOSPITAL, Cambridge-place, was commenced in 1845, when, June 28 (Coronation-day), the first stone was laid by Prince Albert; the site was originally a reservoir of the Grand Junction Water-works. The Hospital, opened in 1850, is of red brick, similar to Chelsea Hospital: it is warmed and ventilated by the circulation of tempered atmospheric air, and the withdrawal of the foul air from the wards; there are shafts for conveying the food from the kitchen and medicines from the laboratory, besides other novel mechanical applications. Hon. architect, Mr. Hopper. The present foundation comprehends three-fourths of the whole plan.

MIDDLESEX HOSPITAL, Charles-street, facing Berners-street, was established 1745: the present building was commenced in 1755, then in Marylebone-fields; and much enlarged and improved in 1848; the baths, cooking apparatus, laboratory works, ventilating shaft, and laundry, are supplied with steam-power. The Cancer-ward, a special addition in this Hospital, was made in 1792, upon a plan by the benevolent John Howard, at the sole expense of Mr. Whitbread, M.P., who endowed the ward with 4000*l.*, that cancer-patients might, if necessary, remain here for life.

In the Council-room is a large vellum Benefaction-book, wherein are beautifully written the names of the Benefactors to the Hospital, from its foundation. The binding is elaborately carved oak, by W. G. Rogers; and the clasps, corners, and bosses are rich ornolu. This sumptuous volume is protected by an ornamental iron stand; it is intended to supersede the large black benefaction-boards which cover the hospital walls.

One day a lady, being permitted to visit the wards, went from bed to bed, and in the most quiet and gracious manner presented half-a-sovereign to almost every one of the patients as a New Year's gift, and as a thanks-offering for her recovery from a dangerous illness. The number of patients so relieved amounted to nearly 300.

OPHTHALMIC (*ophthalmos*, Gr., the eye) HOSPITALS, were established in 1804; that in Moorfields being the first.

It was founded in 1804; it has afforded relief to upwards of half a million persons suffering from diseases of the eye. The number of attendances annually at this hospital is about 80,000. In one year the new cases alone amounted to 17,000; among these above 350 persons afflicted with blindness from cataract and other analogous affections were restored to light. The average attendance daily is from 300 to 400. An amount of relief is confidently stated to be thus obtained far greater than that afforded by any similar establishment in Europe. The explanation may be found in the dense population by which it is surrounded, and the high reputation it has so long enjoyed, bringing patients from India, America, Australia, and our remotest colonies.

The *Royal Infirmary*, Cork-street, was founded in 1804, by Sir Walter Waller (originally Phipps, the celebrated oculist), submitting to their Majesties a plan suggested by the sufferings he was then endeavouring to relieve among the soldiers and sailors who had returned from the Egyptian Expedition. The late Duke of Wellington was president of the *Royal Westminster Ophthalmic Hospital*, Chandos-street, Charing-cross, where patients are admitted without letters.

ORTHOPÆDIC (*orthos*, Gr., straight, and *paidos*, of a child) HOSPITAL, ROYAL, 6, BLOOMSBURY-SQUARE, established 1838 for the cure of club-foot and other contractions, by dividing the tendons, &c., was founded by Dr. Little, who introduced the Strome-erian operation of subcutaneous tenotomy into the metropolis. The Hospital has been removed to 315, Oxford-street.

QUEEN CHARLOTTE'S LYING-IN HOSPITAL was originally established in 1752 in St. George's-row, near Tyburn turnpike, whence it was removed to Bayswater in 1791; and in 1810, to Lisson-green; the Hospital was rebuilt in 1857. This excellent charity has been patronized by Queen Charlotte, the Duke of Sussex, Queen Adelaide, and every member of the Royal family. It affords an asylum for indigent females during childbirth, as well as to out-patients, especially to the wives of soldiers or sailors; penitent patients are admitted once, but in no instance a second time.

ROYAL FREE HOSPITAL, Gray's-inn-road, affording free and instant relief to the destitute sick, was originally founded 1828, in Greville-street, Hatton-garden: in 1832 700 cholera patients were admitted here, when other hospitals were closed against them; a demonstration of the *free* principle which led to the removal of the Hospital, in 1843, to the present premises, formerly the barracks of the Light-Horse Volunteers. The establishment of this Hospital was prompted by its founder, Mr. Marsden, a surgeon, having seen in the winter of 1827 a wretched young woman lying on the steps of St. Andrew's Churchyard, Holborn-hill, after midnight, perishing through disease and famine: she was a stranger in London, without a friend, and died two days afterwards unrecognised! The "Sussex Ward" was built as a memorial of the Duke of Sussex, of whom here is a portrait-statue in a niche in the front.

At the Hospital-gate, in Gray's-inn-road, is a subscription-box, wherein have been found the following donations by stealth: Dec. 27, 1843, a bank-note for 100*l.*, labelled "A Passer-by;" June 14, 1844, 100*l.*, "Another Passer-by;" Nov. 2, 1844, 100*l.*, with "Winter is coming on—*Bis dat qui cito dat*;" Oct. 9, 1850, 50*l.*; June 21, 1851, 20*l.*; and frequently bank-notes of 10*l.* and 5*l.*

ROYAL MATERNITY CHARITY (Office, 17, Little Knight-riding-street, Doctors' Commons) provides advice and good nurses for delivering poor married women at their own homes in Eastern London; and the cases annually average nearly 3500.

This institution was originally founded as "the Lying-in Charity," in 1768. The Prince of Wales, when but five years old, being nominated president, a donation of 500*l.* was made in his name; thenceforth he contributed annually 20*l.* George IV. became president in 1818; and from the time of his Regency to his death, contributed to the Hospital fund 1800*l.*

SMALL-POX AND VACCINATION HOSPITAL, instituted 1746, for those attacked with natural small-pox, and for preventing it by vaccination, was first opened at Battle Bridge, St. Pancras, 1767; but this Hospital and site being required for the terminus of the Great Northern Railway Company, the Hospital was rebuilt in a healthy and picturesque situation at the foot of Highgate-hill, at a cost of 20,000*l.*, paid out of the Railway Company's compensation.

UNIVERSITY COLLEGE HOSPITAL, Upper Gower-street, was founded 1833, under the presidency of Lord Brougham, in connexion with University College, which the Hospital building faces: it is attended by the medical officers and students of the College.

WESTMINSTER HOSPITAL originated from an infirmary "for relieving the sick and

needy," and is the oldest subscription hospital in the metropolis. It was first established in Petty France, next in Chapel-street, then in James-street; and the present noble Hospital was built in the Broad Sanctuary, opposite Westminster Abbey, upon a piece of ground purchased of the Government for 6000*l.*, originally part of the site of the ancient Sanctuary cruciform church, and subsequently of Westminster Market. The Hospital foundation is six feet depth of concrete; the design, by the Inwoods, is Elizabethan, with windows *temp.* Henry VII.; the central and end oriels, and the embattled porch, are fine; the whole frontage is 200 feet, and the windows number two hundred and sixty; the roof, nearly half an acre, is an airing-walk for the patients. The building is embattled throughout; the materials are white Suffolk bricks, with stone finishings; and among the enrichments are bosses of the Westminster portcullis arms.

The Medical Students of the various Hospitals have long been noted for their irregularities; and in 1851, Mr. Henry, a Bow-street magistrate, described them as "the most disorderly class with whom the police and magistrates have to deal." To this unqualified stigma has however been opposed the assertion, that "almost every idle dissolute young man, who in a fit of drunken folly is guilty of some crime, will, if he wears a decent garb, arrogate to himself a respectability to which he has no right, by claiming the title of a Medical Student." Mr. Albert Smith, himself a "Middlesex man," was the first to sketch the Medical Student's life in London.—(See *Punch*, vol. ii.)

DISPENSARIES were first established in 1770, when the *Royal Dispensary* was founded in Shaftesbury House, Aldersgate-street. There are now upwards of forty Dispensaries in the metropolis.

"Medicine and every other relief under the calamity of bodily diseases, no less than the daily necessities of life, are natural provisions which God has made for our present indigent state, and which He has granted in common to the children of men, whether they be rich or poor; to the rich by inheritance and acquisition; and by their hands, to the disabled poor. Nor can there be any doubt that Public Dispensaries are the most effectual means of administering sick relief."—*Bishop Butler*.

#### HOTELS.

THERE is no capital in Europe, always saving Constantinople, which, until recently, was not better provided with good average comfortable upper and middle-class Hotels, than London. A few private houses knocked somehow into one have been thought a large and grand hotel, for it is only within the last few years that the obvious necessity which existed for constructing a building specially for Hotel purposes has been slowly recognised in this country. This new class of Hotels originated with the great Railway Companies.

Thus, we have the EUSTON, adjoining the terminus of the North-Western Railway; but this edifice is not remarkable for its architectural embellishment.

The GREAT-WESTERN HOTEL, adjoining the Great-Western Railway Terminus, at Paddington, is of more ornate character; it was designed in 1852, P. Hardwick, R.A., architect, in the style of Louis XIV., or later; the curved-roof forms were then a striking novelty; four colossal termini, finely modelled, support the central balcony, and over them are casts of the Warwick vase; and in the pediment above is a group of Britannia, surrounded by personations of the six parts of the world, and of their arts and commerce. The exterior is of stucco; and the ornaments and projections are in rich and bold style, the figures by Thomas. The number of bed, dressing, and sitting-rooms, about 150; the passages and staircases are fire-proof. The chief coffee-room, and the saloon above it, are magnificent.

The GREAT NORTHERN, adjoining the terminus of the Great Northern Railway, King's Cross, has, architecturally, little to claim notice.

THE PALACE HOTEL, Buckingham-gate, Murray, architect, is a standard model of what the highest class of Family Hotel should be. Outside it is only a handsome range of buildings; inside it has costly and luxurious suites of rooms. The ventilation is perfectly arranged, and, though there is a constant current of air through all the building from basement to roof, the Hotel is always kept at a mild and equal temperature by hot-air pipes along each corridor, and leading into every apartment. Lifts communicate with each floor, so as to render every story complete in itself, with its service-room and heating apparatus, for serving dinners on the various landings. The entire structure is as perfectly fire-proof as the use of stone and brick along all the various stairways and corridors can make it.

THE WESTMINSTER PALACE HOTEL, facing the Abbey, has one of the best situations in London, and is a very good example of French Renaissance architecture. It realizes the expectations even of the luxurious of the commercial classes. One-half of the hotel is let to the India Board, else this building alone would contain three hundred rooms. It has thirteen sitting-rooms, gentlemen's and ladies' coffee-rooms (the latter an exceedingly fine apartment), several committee and dining-rooms, with one hundred and thirty bedrooms, besides servants' apartments.

THE LONDON BRIDGE HOTEL, Curry, architect, exactly adjoins the terminus on the side of the Brighton and South Coast Railway. As a building, it is inferior only to the Grosvenor in size and external appearance. It contains, in all, about two hundred and fifty rooms. There is an exceedingly magnificent coffee-room, with a smaller one, decorated in the same style, for the use of ladies only. There are spacious bed and dressing-rooms, with suites of apartments for families; reading, billiard, and smoking-rooms. This is the only Hotel of the new class which has a billiard-room. Like the other Hotels, the London Bridge is fire-proof, and is further provided with a powerful water supply, and fire-mains, with hoses, on each floor. An air-shaft passing up the building gives the most perfect ventilation to every floor, of which there are seven. The exterior has a heavy cornice, and terminates in a Mansard roof.

THE GROSVENOR HOTEL, Victoria Station, Pimlico, J. T. Knowles, architect, is of vast extent—262 feet long, 75 deep, and 150 high to the top of the roof. The exterior is elaborately decorated. The spandrels on the first floor are in Portland stone, and represent her Majesty the Queen, the Prince Consort, Humboldt, Lord Palmerston, Lord Derby, Lord John Russell, and others. At the side façades are representations of the four quarters of the globe; and colossal festoons of flowers are suspended between the ground-floor windows. The enriched string, the trusses, and the leafage, are of Portland cement, coloured while "green," to match the stone; the carving by Dayman. On the ground-floor are a spacious hall, enriched with scagliola columns, and reaching to the second-floor corridor; dining, drawing, and sitting-rooms—the principal coffee-room, 69 feet by 36, and 18 in height; a smoking-room, &c. The first and second floors are chiefly suites of rooms for families; the upper rooms are bedrooms, the top story for servants only. On the first floor is a wide gallery entirely round the central hall. The whole building contains upwards of 300 rooms, many superb suites, including suites for wedding-breakfasts. The smoking-room, with its light, handsome columns, its groined arch roof, and ample windows, looks into the Station. The principal staircase is one of the finest features in the building: after the first floor the stairs diverge right and left; 1500 feet of stone corridors traverse the centre of the building on its various floors from end to end. There is one staircase for servants in the northern end of the building; the corresponding space in the southern wing being occupied by a lift, the cage of which is 8 feet square. This is worked by a very simple hydraulic apparatus, Easton and Amos, engineers, and passes up a shaft along the various floors of the building from top to bottom; it is equal to raising ten persons at one time. There are bath-rooms in all the landings, with services of hot and cold water and speaking-tubes to every floor. The cost of this splendid building is stated at considerably more than 100,000*l.*

THE LANGHAM HOTEL, Portland-place, Giles and Murray, architects, is a sumptuous pile, and contains forty drawing and private sitting-rooms, and 300 bedrooms. THE AGRICULTURAL HOTEL, Salisbury-square, Giles, architect, is of much less architectural pretension. THE INNS OF COURT HOTEL, Lockwood and Mawson, architects, has an Italian front, with polished granite and serpentine shafts, in Holborn; the original design includes a large central covered court, and a front in Lincoln's-inn-fields.

THE CHARING CROSS HOTEL AND RAILWAY STATION is in the Italian style, order Corinthian, E. M. Barry, architect. The principal entrances have polished granite columns, and carving above, and the chimney-stocks have red terra-cotta shafts. The railway offices are in the basement. The suites of apartments are superb; there are 250 bedrooms; the building extends nearly as far down Villiers-street as along the Strand. In the court-yard is a reproduction of the Eleanor Cross, at Charing Cross.

THE CITY TERMINUS HOTEL, Cannon-street, is by the architect of the Charing Cross Hotel. Both buildings have pavilions at the ends of the principal front, with high truncated roofs, ornamented in zinc; they have each a Mansard roof to the portion between these wings, and chimneys having small columns at their ends; in each case there are enclosed porches to the wings, and a pent-roof for the whole length between; in each there are balconies with flower-vases on the pedestals, and with the supporting cantilevers of the same character of profile.

The City Terminus Hotel has provision for public meetings and banquets, a noble coffee-room, a great hall for public dinners and balls, and a large meeting-room; and it has a restaurant, as well as a chop-room and a luncheon-bar, besides the refreshment-bar and the dining-room immediately attached to the station. Including the ground-story, chiefly appropriated to the railway booking-offices, there are four ordinary stories in the principal front of the building, above ground, and two stories in the roof. In the Charing Cross Hotel there are five stories of ordinary windows, including a mezzanine: whilst each pavilion has an additional story; and there are two ranges of dormers in the centre-portion of the front, and three ranges of dormers and lucarnes in the pavilions. The frontage of the Cannon-street building is about 213 ft. in length: that of the Charing Cross Hotel is 227 ft.—the railing in the Strand being 11 ft. longer. The Cannon-street front comprises eleven bays; the porches project 14 ft. The height of the main portion of the building, comprising the four ordinary stories, is 76 ft. 3 in., to the top of the cornice. Above this, to the highest part of the main roof is about 23 ft., and to the highest part of the pavilion-roofs 32 ft. A tower at the south-east angle, containing a ventilating-shaft and the kitchen-flue, rises higher; whilst the highest points of all are reached by the gilded metal-work finials of the spire-cappings of the two turrets, which are grouped with the pavilions in the principal front. Much of the space in the building being devoted to rooms for dinners and meetings, there are few bedrooms in proportion to the size of the structure, or as compared with the provision in the Charing Cross Hotel. There appear to be eighty-four bed and dressing-rooms. Amongst the leading features of the Cannon-street exterior are the spire-capped turrets and the continuous balconies. The pilasters on the piers between the windows of the first-floor, are enriched somewhat in the manner of the Renaissance. The pedestals of the crowning balustrade have rusticated obelisk-formed terminals, of Elizabethan character, in terra cotta; each one having a small gilt ball at the top. The dormer windows have two arch-headed lights, with pilasters and trusses, carrying a pediment whose tympanum is enriched. In the upper part of the pavilion-roofs there are lucarne-lights. The roofs are ornamented at the angles, and at the edges round the flat top of each pavilion, by very bold ornament in stamped zinc, executed, like that of the other Hotel, by French workmen. Each turret terminates in a belvidere-story, open, above the cornice; and with a domical covering, ending in a spire. The front of the Hotel looking into the station has three lofty and bold arches, having coffers in the soffits enriched with rosettes. The Hotel building is stated to have cost about 100,000*l*.

### HOUNDSDITCH

**E**XTENDS from opposite St. Botolph's Church, Bishopsgate-street, to St. Botolph's, Aldgate. Beaumont and Fletcher call it Dogsditch.

"From Aldgate north-west to Bishopsgate lieth the ditch of the City called Houndsditch, for that in old time, when the same lay open, much filth (conveyed from the City), especially dead dogs, were there laid or cast."—*Stow*.

Into this filthy ditch, by command of King Canute, was thrown Edie, the Saxon, the murderer of his master, Edmund Ironside, after having been drawn by his heels from Baynard's Castle, and tormented to death by burning torches. The ditch was subsequently enclosed with a mud wall, against which was a "fair field," with cottages for poor bed-rid people, and where devout people walked (especially on Fridays) to relieve the bed-ridden, who lay on the ground-floor, at the window, with a clean linen cloth, and a pair of beads, to show to charitable passengers that "there lay a bed-rid body, unable but to pray only."

Houndsditch was first paved 1503. Late in the reign of Henry VIII. a foundry for casting brass ordnance was established here, which drove the poor bed-rid people out of their cottages; and upon their site were built houses and shops for "brokers, joiners, braziers, and such as deal in old clothes, linen, and upholstery." (*Strype*.) Braziers abound here to the present day. Here lived Tench, the joiner, to

whom it was sworn on the trial of Hugh Peters, 1660, that his orders were given on the scaffold to prepare the block for the beheading of Charles I.; and in Rosemary-lane lived Ralph Jones, the ragman, who assisted Brandon, the common hangman, in the execution. Anthony Munday speaks indignantly of the unconscionable broking usurers, a base kind of vermin, who had crept into Houndsditch; which, with Long-lane, were the Rag Fairs of two centuries since; and Houndsditch is to this day the centre of the Jews' quarter.

Houndsditch was also the general name of the different parts of the City ditch. In a chartulary of St. Giles's Hospital, beginning of fifteenth century, *Houndesdic* and *Houndesdich* are part of the ditch in the parish of St. Sepulchre. Howell's *Londinopolis* shows, by the same name, parts of the fosse between Ludgate and Newgate; and by Barbican.

### HOUSES OF OLD LONDON.

ANTERIOR to the reign of Stephen, Houses in London were built much as they had been in the earlier Saxon times, almost wholly of wood, roofed with straw and reeds: thus a carpenter is described as "making houses and bowls." Hence the frequent fires; and especially the great conflagration of 1097, which spread from London Bridge to the church of St. Clement Danes, in the Strand. By an assize (1st year of Richard I.) all houses in London were hereafter to be built of stone, with party-walls of the same: but this mandate was rarely complied with; and it was not until the reign of Edward IV., when brick was made from the clay of Moorfields, that it occasionally took the place of the timber which had hitherto been used for houses; reeds were then replaced by tiles and slates. In two centuries, to gain ground, many stone houses were taken down, and others of timber built in their place; and it is distinctly stated that London, to the period of the Great Fire 1666, was chiefly built of chestnut, filled up with plaster. After the Great Fire, the houses were rebuilt with brick; but between 1618 and 1636 several fine brick houses were erected in Aldersgate-street, Great Queen-street, Lincoln's-inn-fields, and Covent Garden. Still, the general form of roof was the high-pitched gable, whole rows of which have disappeared in our time, with several specimens of florid plaster and carved wood fronts. Very few specimens, however, remain.\*

*Aldersgate-street* has several house-fronts with remains of sixteenth and seventeenth century carving and other ornaments. (See also p. 449.)

*Aldgate High-street*, No. 76, with central bay-windows, enriched brackets, and a projecting penthouse-shop, has panels decorated with the Prince of Wales' feathers, the fleur-de-lis of France, the Thistle of Scotland, porteullis of Westminster, &c.

*Ashburnham House*, Little Dean's-yard, and Cloisters, Westminster Abbey, was originally built by Inigo Jones, on chapter land, for the Ashburnham family; it was purchased by the Crown of John Earl of Ashburnham, in 1730. Here the Cotton Library of MSS. was deposited. On October 23, 1731, a fire broke out here, when of the 948 volumes, 114 were lost or spoiled, and 98 much damaged. All that remains in the western portion of the house, are an exquisitely proportioned drawing-room; the dining-room, once a state bed-room, with a graceful alcove; and a staircase, one of the finest of Inigo Jones's interior works. Sir John Soane had careful drawings made of the house. In the cellars, it is said, were some remains of the conventual buildings; and a capital of the time of King Edward the Confessor, which was built into the modern wall.

*Bagnio*, the, in Bath-street, Newgate-street, was built by Turkey merchants, and first opened in 1679 (*Aubrey*), for sweating, rubbing, shaving, hot-bathing, and cupping, after the Turkish model. The cupola-roof and walls neatly set with Dutch tiles, described by Hatton in 1708, exist to this day: it is now a cold bath.

\* The remains of Roman London consist chiefly of portions of the City wall, foundations of buildings; tessellated pavements, often of so much beauty as to denote a corresponding style in the superstructure; baths, sewers, bronzes, and various ornaments admirable as works of art. A Roman bath nearly complete still exists in Strand-lane; and a Roman hypocaust is preserved beneath the Coal Exchange (see p. 329). The remains of the *superstructures* of Roman London which have yet been discovered, are, however, unimportant.

*Bangor House*, Shoe-lane, south of St. Andrew's Church, is described as the palace of the Bishops of Bangor in a roll of 48 Edward III. Being deserted as an episcopal residence, some mean dwellings were built upon the grounds; yet a garden with lime-trees, and a rookery, long remained. The last of the mansion, octangular and two-storied, was removed in 1828; but is kept in memory by "Bangor House;" and by Bangor-court, opposite which are some remains of "Oldborne Hall," in Stow's time "letten out in divers tenements."

*Baumes*, or *Balmes* (from two Spanish merchants so named), stood west of the Kingsland-road, Hoxton, and was taken down in 1852. It was built by the Balmeses, about 1440; Sir George Whitmore resided here occasionally when lord mayor, 1631; and on this spot Sir W. Acton, lord mayor, with the aldermen, &c., waited the arrival of Charles I. on his return from Scotland, Nov. 25, 1641; when the royal coaches were conducted, by a road formed for the occasion, through Balmes's grounds to Hoxton, and thence to Moorgate, into the City, the road between Kingsland and Shoreditch being then impassable by "the depth and foulness of it." Baumes-march was long a favourite archery and artillery exercise;\* but the ground attached to the house is now the site of De Beauvoir Town, named from the De Beauvoir family, its owners since 1696. A print of 1580 shows Baumes, with its gate-house, farmery, spacious gardens and grounds, avenues of fruit-trees and stately elms; and the Italianized brick mansion with its two-storied roof, moated and approached by a drawbridge; the house and moat were supplied from the ancient well in Canonbury Field. The interior of Balmes was rich in carved ceilings, panelling and staircase, armorial glass and tapestry.

*Brook's Menagerie* (subsequently Herring's), an old wooden house at the western corner of Brook-street, New-road, was standing when Tottenham Fair was in its glory; and almost the only house between St. Giles's Pound and Primrose-hill was Tottenham, a house of entertainment in 1645, on the site of which is the "Adam and Eve tavern."

*Bulk Shops* have only disappeared in our time. In 1846 was taken down an old house south-west of Temple Bar, which is engraved in Archer's *Vestiges*, part i. A view in 1795, in the *Crowle Pennant*, presents one tall gable to the street; but the pitch of the roof had been diminished by adding two imperfect side gables. The heavy pents originally traversed over each of the three courses of windows; it was a mere timber frame filled up with lath and plaster, the beams being of deal with short oak joints: it presented a capital example of the old London bulk-shop (sixteenth century), with a heavy canopy projecting over the pathway, and turned up at the rim to carry off the rain endwise. This shop had long been held by a succession of fishmongers, among whom was the noted Crockford, who quitted it for "play" in St. James's (see CLUB-HOUSES, pp. 246, 247). Crockford would not permit this house-front to be altered in his lifetime.

*Burnet's (Bishop) House*, St. John's-square, Clerkenwell, is now let in tenements, and has an arched thoroughfare to a court of houses built on the site of the garden. In this house Burnet died 1715, and was buried in St. James's Church, when the rabble threw dirt and stones at his funeral procession. The Bishop's house and tomb are engraved from original drawings in the *Mirror*, 1837, No. 836.

*Campden House*, Kensington, originally approached from the town by an avenue of elms, was built about 1612 by Sir Baptist Hicks, afterwards Viscount Campden, who purchased the property of Sir Walter Cope; or, traditionally, won it of him "at some sort of game." The house was of red brick, with stone finishings, and had a central porch, bay-window once fitted with armorial glass, and flanking turrets with cupolas. The great dining-room, in which Charles II. supped with Lord Campden, had a rich armorial ceiling in stucco, floridly carved wainscot, and a tabernacle mantelpiece, with Corinthian columns and caryatid figures, finely sculptured. The State apartments on the first floor included Queen Anne's bedchamber; and the Globe room, originally a chapel, and communicating with the garden terrace: the other rooms had richly stuccoed ceilings and marble mantelpieces. During the Protectorate, the Sequestration

\* The Robin Hood public-house (now refronted) originally looked over Finsbury-fields, and was much frequented by the metropolitan archers; the sign, Robin Hood and Little John, in Lincoln-green, formerly swung from a tree before the door. A few dealers in archery implements, and preservers of animals, have lingered in the City-road to our day—the last relics of the chivalry of Hogsden, Finsbury, and Moorfields.

Committee sat here. Queen Anne, when Princess of Denmark, resided five years at Campden House, with her son the Duke of Gloucester, who kept a regiment of boy-soldiers here, and had a puppet-theatre built. Lord Lechmere, the lawyer and staunch Whig, lived here when he had his quarrel with Sir John Guise, ridiculed in Swift's ballad of "Duke upon Duke:"

"Back in the dark, by Brompton Park,  
He turn'd up thro' the Gore,  
And slunk to Campden-house so high,  
All in his coach and four.  
The Duke in wrath called for his steeds,  
And fiercely drove them on:  
Lord! Lord! how rattled then thy stones,  
O kingly Kensington!"

Swift had lodged at Kensington, and well knew the locality. The gardens, in which the wild olive and the caper-tree once flourished, had been much reduced; but the house retained its original front. In the spring of 1862, by a conflagration of remarkable rapidity, Campden House was reduced to blackened and windowless walls: it has been rebuilt in the same style. The historic interest of the place had ceased some sixty years before. Among the relics are two dogs (supporters of the Campden arms), which formerly surmounted the gateway-piers, and are cleverly sculptured. Westward is *Little Campden House*, built during the Princess Anne's residence at Campden House: it has an outer arcaded gallery; and was once occupied by the Right Hon. William Pitt.

*Canonbury Place*, Islington, was originally the country-house of the Priors of St. Bartholomew. (See CANONBURY TOWER, p. 78.)

"Canonbury House internally is one of the richest specimens of the architecture of James I. in the neighbourhood of London. The house, or rather the remains, form at the present time several large dwelling-houses; including a portion of the old great chamber, with a rich ceiling, date 1599, a quaintly carved oak fireplace, with statuettes of Mars and Venus draped, and a doorway with bust of an old English gentleman and dame, the Roman mouldings and enriched frieze very fine; several other rooms are sumptuously carved, and the parlour retains its original decoration."—*C. J. Richardson, F.S.A.*

*Carlisle House*, Carlisle-street, Soho-square, formerly the mansion of the Dowager Lady Carlisle, was built *temp.* James II.: it has a marble-floored hall and grand decorated staircase; the rooms are large and lofty, and have enriched ceilings. The mansion originally stood in the midst of a garden, a portion of which remains in the rear; the "cherry-garden" is built upon. The lower walls of Carlisle House are of old English bond, of brilliant red brick; the leadwork of the cistern is dated 1669, the year of the creation of the Earldom of Carlisle. The mansion was long tenanted by Angelo, the fencing-master; also by W. Gibbs Rogers, the carver: and in the ball-room the College of the Freemasons of the Church held their monthly meetings.

"*Caxton's House*," Westminster, and other old houses in the Almonry, are described at p. 6. The identification of the old Printer's house is very doubtful.

*Crosby Hall*, Bishopsgate-street, the finest specimen of olden domestic architecture in the metropolis, is described at p. 297.

*Drury-lane* has the *Cock and Magpie*, a low public-house of the seventeenth century, with a panelled house next door, and a range of tenements in Drury-court of the same date. These were then the only houses in the eastern part of Drury-lane, except the mansion of the Drurys. Hither the youths and maidens who on May-day danced round the May-pole in the Strand, were accustomed to resort for cakes and ale: Pope has named it the scene of "the high heroic games devised by dulness to gladden her sons." The old public-house is now otherwise occupied.

"*Dyott's House*," Dyott-street, now George-street, St. Giles's, was the mansion of Richard Dyott, Esq., a vestryman of St. Giles's parish *temp.* Charles II., and was inhabited till our time by his descendant, Philip Dyott, Esq.

*Elizabethan Houses*. Among the earliest examples of the Elizabethan period was a house in Grub-street, engraved in Smith's *Antiquities*, in which the mouldings, quatrefoil, and other Gothic ornaments, were combined with the Italianized panels and brackets of a later date. Malcolm, in his *Anecdotes*, has engraved two Elizabethan houses in Goswell-road, built about 1550, and standing in 1807; with bay-windows, over-hanging upper story, and gable: next door, for contrast, is a house built about 1800, three floors of the former being scarcely equal to two of the latter.

"The roofs (ceilings) of your houses are so low, that I presume your ancestors were very mannerly, and stood bare to their wives, for I cannot discern how they could wear their high-crowned hats."—*Sir William Davenant.*

*Fowler's House*, Islington, fronts Cross-street: a ceiling bears the date 1595: at the extremity of the garden is a lodge, probably built as a summer-house by Sir Thomas Fowler the younger, whose arms and the date 1655 are in the wall. Sir Thomas Fowler the elder, who died 1624, was a juryman on Sir Walter Raleigh's trial.

*Fulwood's Rents*, Holborn, has a house *temp.* James I. (See p. 363.)

*Gray's-Inn-lane*, east side, north end, has three Elizabethan houses, originally one, and probably a hostelry on the road to Theobalds: its three stories project over each other upward, the top one being of weather-board plastered inside, and the roof having four pointed gables: at the ends of the first and second stories are carved brackets, one dated 1559.

*Grub-street.* In Sweden's passage, Grub-street, was an ancient timber-built house, traditionally the residence of Sir Richard Whittington, *temp.* Henry IV.; and of Sir Thomas Gresham, *temp.* Elizabeth. The massive timbers were oak and chestnut, the ground-floor chimneys being of stone: it had a boldly projecting staircase, which, with the house, was taken down in 1805, and three small houses were built upon its site, one inscribed "Gresham House, once the residence of Sir Richard Whittington, Lord Mayor 1406, rebuilt 1805." (See Smith's *Ancient Topography.*)

*Holborn.* In the volume of MS. drawings by John Thorpe, preserved in Sir John Soane's Museum, is a sketch of a wooden house described as standing in Thorpe's time at the "water end of Holborn."

"From the garden you ascend by five steps the enclosed terrace in front of the building; this has, as Thorpe expresses it, a 'terrace overhead': a small porch leads into the great hall. The kitchen is on the right; the larder is the small square room leading out of it. The small room in front on the same side as the kitchen, is the buttery, with cellar under, the small steps conducting down to it. Above the hall is 'the great chamber,' the staircase leading to which opens into a gallery communicating to the rooms of the rest of the building. The square compartments at the back of the house, represented in plan as staircase and larder, are carried up above the roof as turrets; a small prospect tower is placed in front of the building."—*C. J. Richardson, F.S.A.*

*Holland House*, Kensington, is described at pp. 431-433.

*Hoxton.* A few years since there stood in Hoxton Old Town the reputed "oldest house in the metropolis," in taking down which was found a brick dated above 150 years back; but most of the bricks were of a much earlier period, being deep-red and highly glazed: the door was beautifully carved with the oak and vine, &c. The Parliamentary Survey, No. 78, as reported in Sir H. Ellis's *History of Shoreditch*, of which Hoxton is one of the divisions, states that about this spot, during the Interregnum, a house was in the possession of Charles Stuart, some time King of England, in 1653, which was valued at 4*l.* per annum.

*Kennington Manor-house*, a portion of the royal lodging built of brick upon part of the site of the old palace near Kennington-cross, exists to this day. Its last royal tenant was Charles I., when Prince of Wales, Kennington having been an occasional residence of the Kings of England prior to the Conquest. The manor was annexed to the Duchy of Cornwall, *temp.* Edward III., and was tenanted by the Black Prince. John of Gaunt took refuge here in 1377 from the exasperated Londoners. Henry VII. and Katherine of Arragon resided here; and James I. settled the manor on Henry Prince of Wales, his eldest son; and upon his decease, 1612, on Prince Charles, afterwards Charles I. The stables of the earlier palace, built of flint and stone, and known as the *Long Barn*, remained till 1795; and fragments of flint, chalk, and rubble-stone walls of the ancient palaces are traceable in houses in Park-place.

*Kensington House*, nearly opposite the palace-gates, was the residence of the Duchess of Portsmouth, the French mistress of Charles II. Here Elphinstone, the friend of Jortin, Franklin, and Johnson, kept a school from 1776 till 1788: he is unsparingly ridiculed in Smollett's *Roderick Random*. The mansion was next a Roman Catholic boarding-house, where Mrs. Inchbald, the player and novelist, died in 1821. *Colby House*, facing the Palace-road gates, was built about 1720, for Sir Thomas Colby: it has a painted grand staircase with Heruleaneum ceiling, and a small chapel. *Kensington National Schools*, a stately pile of brickwork, west of the church, were built by Sir John Vanbrugh, who "is singularly fortunate in this design, his lines presenting a re-

strained degree of civil architecture, in the middle class of uprights" (*John Carter*). Here are costumed figures of a charity boy and girl of the last century.

*Hale House*, Earl's-court, traditionally the residence of Oliver Cromwell, long remained dilapidated and desolate; but retained a few seventeenth-century decorations. Near the West London Cemetery is *Coleherne House*, temp. Charles I., the property of Sir William Lister; next of Gen. Lambert, the first President of Cromwell's Council; and in 1820, of the widow of Major-Gen. Sir W. Ponsonby, who fell at Waterloo.

*Lindsey House*, *Chelsea*, west of the old church, was built by Bertie, Earl of Lindsey, upon the site of the mansion of Sir Theodore Mayerne, physician to James I. and Charles I. In 1751 Lindsey House was purchased by the United Brethren, or Moravians, whose Bishop, Count Zinzendorf, died here in 1760: in the rear of the house is a burial-ground for the Brethren, with a small chapel; but their only place of worship in London is the chapel in Fetter-lane (see p. 220). Lindsey House is now five residences: the central one was tenanted by Sir I. K. Brunel and Son, and Bramah, the engineers; and next inhabited by John Martin, the epic painter, who in a summer-house in the garden executed a fine fresco.

*Lindsey House*, on the centre of the west side of Lincoln's-inn-fields, was built by Inigo Jones for the above Bertie, Earl of Lindsey, and was for some time the residence of the proud Duke of Somerset: it has a handsome stone façade, and had formerly vases upon the open balustrade. At the south-west angle of Lincoln's-inn-fields is *Portsmouth House*, built in Inigo Jones's rich style for the Earl of Portsmouth, but now let in chambers. It gives name to Portsmouth-street, where is the Black-Jack public-house, frequented by Joe Miller, and long known as "the Jump," from Jack Sheppard's leaping from one of its first-floor windows, to escape his pursuers.

*Little Moorfields*, No. 23, was formerly the King's Arms public-house, with a plaster front richly wrought with flowers, and a pair of large scrolls surmounted with the Ionic volute. In London Wall was a house-front, temp. Charles I., enriched with groups of foliage and figures, and engraved in Lester's *Illustrations*, 1818.

*Long-lane*, *Smithfield*, has a few houses remaining of Elizabethan date; and *Cloth Fair* has relics of this and a later period.

*Marylebone Manor-house*, attached to the Royal Park, was built temp. Henry VIII., and was a palace of Mary and Elizabeth. Here, about 1703, was established a school of great repute; the interior had a beautiful saloon and gallery, in which private concerts were given. The house, which stood at the top of High-street, nearly opposite the old church, was taken down in 1791. South of the Manor-house site was *Oxford House*, built especially for the Library and MSS. (Harleian) of the Earl of Oxford, now in the British Museum.

*Milborn's Almshouses*, Crutched Friars, were built of brick and timber, in 1535, by Sir John Milborn, lord mayor in 1521, for thirteen aged poor men and their wives, of the Drapers' Company. Over the Tudor gateway was sculptured in stone the Assumption, the Virgin supported by six angels. The Almshouses were taken down in 1862.

*Newcastle House*, at the north-west angle of Lincoln's-inn-fields, has beneath its south wing an arcade over the southern footway of Great Queen-street. It was originally Powis House, built for the Marquis of Powis, about 1686, by Captain William Winde, a scholar of Webbe, a pupil of Inigo Jones. It was bought by Holles, Duke of Newcastle, and inherited by his nephew, who led the Pelham administration under George II.

"*Old City of London Workhouse*," Bishopsgate-street Without, the first workhouse built in London, dates from 1680: in the court-room is a portrait of Sir Robert Clayton, the first governor. The house was originally partitioned into the steward's side, for poor children; and the keeper's side, for "rogues and vagabonds."

*Post-office*, Lombard-street, formerly the General Post-office, was originally built by "the great banquer," Sir Robert Viner, on the site of a noted tavern destroyed in the Great Fire. Here Sir Robert kept his mayoralty in 1675. Strype describes it as a very large and curious dwelling, with a handsome paved court, and behind it "a yard for stabling and coaches."

*Queen-street*, *Lincoln's-inn-fields*, has on the south side some early brick houses, built by Inigo Jones and his pupil Webbe; those on the south being charged with the

fleur-de-lis, in compliment to Queen Henrietta-Maria, daughter of Henry IV. of France, after whom the street was named: it was said to have been designed for a square, and built at the charge of the Jesuits on the site of the common path which anciently separated Aldewych Close from the northern division of Aldewych, extending to Holborn. The street was originally entered from the west by "the Devil's Gap," a narrow passage; altered 1765.

"In the last century Queen-street was the residence of many people of rank. Among others was Conway House, the residence of the noble family of that name; Paulet House, belonging to the Marquis of Winchester; and the house in which Lord Herbert of Cherbury finished his romantic career. The fronts of certain houses, possibly of those of others of the nobility, are distinguished by brick pilasters and rich capitals."—*Pennant*.

Howel writes to Lord Herbert, 13th July, 1646: "God send you joy of your new habitation, for I understand your Lordship is removed from the *King's-street* to the *Queen's*."—*Familiar Letters*.

Here lived Sir Thomas Fairfax, the Parliamentary general, when he took possession of Holland House, Kensington. Also, Sir Godfrey Kneller; Hudson, Sir Joshua Reynolds's master; and Sir Robert Strange, the engraver. Lord Herbert's house is near the east corner of Great Wild-street. Another of Howel's *Familiar Letters* is addressed "To the R. H. the Earl Rivers, at his house in Queen-street."

"May 26th, 1671. The Earl of Bristol's House, in Queen-street, Lincoln's-inn-fields, was taken for the Commissioners of Trade and Plantations, and furnished with rich hangings of the King's. It consisted of seven rooms on a floor, with a long gallery, gardens, &c."—*Evelyn's Diary*.

*Schomberg House*, Pall Mall, Nos. 81 and 82, south side, was built about 1650, when Pall Mall was planted with 140 elm-trees, "standing in a very regular and decent manner on both sides of the walk;" and the above house is described as "a fair mansion enclosed with a garden." In 1660, at the Restoration, it was occupied by several Court favourites; and subsequently by Edward Griffin, Treasurer of the Chamber, and ancestor of the present Lord Braybrooke. In 1670 Schomberg House and the adjoining mansions had gardens which extended to St. James's Park, and had earthen mounds or terraces, from which was a view over the green walks to the Palace.

Next door, on the site of the present No. 79 (tenanted by the Society for the Propagation of the Gospel in Foreign Parts), lived Nell Gwyn, after her removal from a house at the east end of the north side of Pall Mall. Evelyn records a walk made March 2, 1671, in which he attended Charles II. through St. James's Park, where he both saw and heard "a familiar discourse between the King and Mrs. Nellie, as they called an impudent comedian, she looking out of her garden on a terrace at the top of the wall, and the King standing on the green walk under it." Part of the terrace or mound on which Nelly stood may still be seen under the park wall of Marlborough House; and among Mr. Robert Cole's Nell Gwyn papers, now dispersed (bills sent to Nelly for payment), there is a charge for this very mound. (*Cunningham's Story of Nell Gwyn*, p. 119.) This scene has been admirably painted by E. M. Ward, R.A.

Here lived the Duke of Schomberg, who was killed at the Battle of the Boyne, 1690, and after whom the house is named. It was beautified for Frederick, third and last Duke of Schomberg, for whom Peter Berchett painted the grand staircase with landscapes in lunettes. In 1699, the house had nigh been demolished by a mob of disbanded soldiers; and in the Gordon riots of 1780, attempts were made to sack and burn it. William, Duke of Cumberland, the hero of Culloden, took the house in 1760. John Astley, the painter and "the Beau," who lived here many years, partitioned the mansion into three, and placed the bas-relief of Painting above the middle doorway. Astley also built on the roof a large painting-room, his "country-house," looking over the Park, to which and some other apartments he had a private staircase. After Astley's death, Cosway the portrait-painter tenanted the centre. Gainsborough occupied the west wing from 1777 to 1788, when he died in a second-floor room: he sent for Sir Joshua Reynolds, and was reconciled to him; and then exclaiming, "We are all going to heaven, and Vandyke is of the company," he immediately expired. Part of the house was subsequently occupied by Robert Bowyer for his "Historic Gallery;" and by Dr. Graham, the empiric, for his "Celestial Bed" and other impostures, advertised by two gigantic porters stationed at the entrance, in gold-laced cocked hats and liveries. The house was a good specimen of the red-brick seventeenth-century mansion. It was partly occupied by Payne and Foss, with their valuable stock of old books, until 1850. The eastern wing of the old mansion has been taken down, and rebuilt in Italian style, but incongruously, for the War Department.

*Shaftesbury House*, originally Thanet House, on the east side of Aldersgate-street, was built by Inigo Jones for the Tuftons, Earls of Thanet; whence it passed into the

See p  
63  
Centre  
West  
Re

family of Anthony Ashley Cooper, Earl of Shaftesbury. In 1708 it returned to the Thanet family; in 1720, became an inn; in 1734, a tavern; 1750, a Lying-in-Hospital; and in 1849, a Dispensary. The façade is of red brick, decorated with eight pilasters, but painted stone colour. Nearly opposite was *London House*, originally Peter House, of handsome brick: it was the town-mansion of the Bishop of London after the Great Fire of 1666.

*Southwark* retained in High-street some of its olden house-fronts, almost to the rebuilding of London Bridge. In 1830 were removed two houses with enriched pilaster decoration and armorial ensigns of the sixteenth century; and the writer witnessed about 1809, the demolition of a long range of wood and plaster and gable-fronted houses on the west side of High-street.

"*The Spanish Ambassador's House*," eastward of Houndsditch, in Gravel-lane, was taken down in 1844. This was one of the "garden-houses," which Stow describes as built amidst "fair hedgerows of elm-trees, with bridges and easie stiles to pass over into the pleasant fields." More than a century later Strype adds: "There was a house on the west side, a good way in the lane, which, when I was a boy, was commonly called *The Spanish Ambassador's House*, who, in King James's reign, dwelt here; and he, I think, was the famous Count Gondomar." The house was built *temp.* James I., in a courtyard, with a fine gateway, upon a flight of steps, approached by "Seven-Step Alley:" it had three stories, with pilasters between the windows, the lower rooms were oak-panelled, and had richly-carved fireplaces and stucco ceilings; and on the first floor was a large chamber, with an elaborately-traceried ceiling in Italian taste, charged with Latin mottoes, and the arms of the founder, Robert Shaw, and those of the Vintners' Company, of which he was master: here, too, was a superb fireplace, of coloured marbles and carved oak (*see Archer's Vestiges*, part v.).

*Staple Inn, Holborn*, has three overhanging stories, the upper one with four pointed gables; the ground-floor has modern shop-fronts, but the central arched entrance to the Inn has the original term pilasters of the Jacobean style.

*Star Chamber* and Exchequer-buildings, the, stood on the eastern side of New Palace-yard; and adjoining northward was an arched gateway (Henry III.), communicating by stairs with the Thames. These buildings, bay-windowed and gabled, were taken down between 1807 and 1836; the last remaining were the offices for trials of the Pix, and printing Exchequer bills. In an apartment here the Court of Star Chamber sat from *temp.* Elizabeth until its abolition, 1641: over the doorway was the date 1602, E. R. and an open rose on a star. It had a richly-carved Tudor-Gothic oak ceiling, with moulded compartments, roses, pomegranates, portcullises, and fleurs-de-lis; and it had been gilt and coloured, though it had not a trace of gilt stars. The mantelpiece was decorated with fluted columns, and the chimney-opening was a Tudor arch. Drawings of the whole were made in 1836. Behind the Elizabethan panelling were found three Tudor-arched doorways, and under the staircase a Gothic wood-hole entrance, its spandrels ornamented with roses; proving this to have been the original *Camera Stellata*, newly fitted *temp.* Elizabeth. The panelling of the Chamber has been removed to a room at Leasowe Castle, Shropshire, the seat of the Hon. Sir Edward Cust; here, too, is "the Dosel, a screen of ornamental woodwork, at the back of the chair of state."—Sir Bernard Burke's *Visitation of Seats and Arms*, vol. ii. p. 126, 1853.

*St. Mary Axe*.—A four-storied Tudor House, opposite the church of St. Andrew's Undershaft, was taken down in 1864: it had three overhanging floors, the front was entirely of wood and plaster, not unpicturesque; and it had some finely-panelled oak apartments. Nearly opposite this house was erected on May morning "the great Shaft of Cornhill," as the street was then called.

*The Strand* retains a few old house-fronts: as west of the Adelphi Theatre; and immediately east of Strand-lane are three houses of the reign of Charles I., retaining a few of their classic mouldings, cornices, and window pediments.

*Tradescant's House*, South Lambeth-road, a large brick edifice, nearly opposite Spring-lane, was the residence of the Tradescants, father and son; and of Elias Ashmole, who "added a noble room to it, and adorned the chimney with his arms, impaling those of Sir William Dugdale, whose daughter was his third wife." The house, with its museum, was called "Tradescant's Ark." (*See GARDENS*, p. 368.)

*Warwick House*, Cloth Fair, Smithfield, built *temp.* Elizabeth, was bought with the Priory of St. Bartholomew, and the right to hold the Fair, by Sir Robert Rich, in 1544, and devolved to his descendants, the Earls of Warwick and *Holland*; whence that "uproarious rabblement," called *Lady Holland's Mob*, which assembled on the eve of St. Bartholomew in mock proclamation of the Fair.

*Weather-boarded house-fronts*, in part plastered, are of old date: there was, until 1853, a row of these wood tenements on the east side of Milford-lane, Strand; and up a passage in Bell-yard, Fleet-street, a little north-west of a house *temp.* Charles I., is a square court entirely of weather-board and plaster, bespeaking the inflammable nature of London before the Great Fire.

*Winchester-street*, Old Broad-street, the most curious specimen of ancient domestic architecture to be found in the City, disappeared in 1865. It occupied the site of the gardens of the Priory of St. Augustine. Part of the house which the Marquis of Winchester built here still remains. Pinners' Hall, an old building at the upper end of Princes-court, in Winchester-street, was also part of the Augustine Priory; and was converted into a glasshouse before it became the property of the Pinmakers' Company, and, with its gabled house-fronts and ancient air, was rendered still more curious in contrast with the magnificent edifices and the great railway works around it. Some of the old shops, without fronts, in this street were very remarkable. During the removal were dug up some remains which carry us far beyond the Priory occupancy—as a piece of Samian ware and part of a well-wrought bone stylus; and an iron knife, or perhaps a Roman razor, almost exactly like that engraved in Mr. Roach Smith's Catalogue, p. 72.

Several examples of Old London Houses are engraved and described in the *Builder*, Nos. 486, 489, 494, and 515.

#### INNS OF OLD LONDON.

OF Olden Inns, up gateways, and consisting of rooms for refection below, and long projecting balustraded galleries above, leading to the chambers—time and change have spared a few interesting specimens.

*Angel*, Islington (actually in St. James's, Clerkenwell), once a busy resort of travellers on the Great North Road, is reputed to have been established upwards of 200 years: it was rebuilt in 1819. The old inn-yard was nearly quadrangular, with double galleries, supported by plain columns, and pilasters carved with caryatid and other figures. (See Pugin's *Views in Islington and Pentonville*, 1819.) A coloured drawing of this old inn-yard is preserved here. The *Peacock*, another inn hard by, was of equal if not greater antiquity.

*Angel*, St. Clement's, Strand, retained to the last its gables and portions of covered galleries, with an old lattice-fronted attic passage. Data of three centuries since also attest its antiquity: Bishop Hooper, the venerated martyr of the Reformation, upon his second committal to the Fleet Prison in 1553, refusing to recant his opinions, was condemned to be burnt, in January, 1555. It was expected that he would have accompanied Rogers, a prebendary of St. Paul's, to the stake; but Hooper was led back to his cell, to be carried down to Gloucester, to suffer among his own people. Next morning he was roused at four o'clock, and being committed to the care of six of Queen Mary's Guard, they took him, before it was light, to the *Angel Inn*, St. Clement's, then *standing in the fields*; and thence he was taken to Gloucester, and there burnt with dreadful torments on the 9th of February.

In the *Public Advertiser*, March 23, 1769, is the following advertisement:—

"To be sold, a Black Girl, the property of J. B.—, eleven years of age, who is extremely handy, works at her needle tolerably, and speaks English perfectly well; is of an excellent temper and willing disposition. Inquire of Mr. Owen, at the Angel Inn, behind St. Clement's Church, in the Strand."

The *Angel Inn* has been taken down; and upon its site is built the *cul-de-sac* of Chambers called "Danes' Inn."

*Ape*, Philip-lane, London Wall: here were formerly two galleried inns, the *Ape* and the *Cock*, of great antiquity: the sign of the former is preserved on the house No. 14.

*Baptist's Head* public-house, east side of St. John's-lane, Clerkenwell, just without the Priory-gate, is a fragment of an Elizabethan mansion, and until its renovation had an overhanging front grotesquely carved, and lit by large bay windows, with painted

glass: some of the interior scroll-panelling remains. This house was the residence of Sir Thomas Forster, Knt., one of the judges of the Court of Common Pleas; he died in 1612, and his arms, sculptured upon the chimney-piece of the present tap-room, have been collated in Cromwell's *Clerkenwell*. The sign may have been chosen in compliment to Sir Baptist Hicks; and the public-house is said to have been frequented by Samuel Johnson and Oliver Goldsmith in connexion with their transactions at Cave's printing-office over St. John's Gate.

*Bell*, Great Carter-lane, Doctors' Commons: hence, Oct. 25, 1598, Richard Quiney addressed to his "loving good friend and countryman, Mr. Wm. Schackespere" (then living in Southwark, near the Bear-garden), for a loan of thirty pounds; which letter we have seen in the possession of Mr. R. Bell Wheler, at Stratford-upon-Avon: it is believed to be the only existing letter addressed to Shakspeare. The *Bell* inn has disappeared, but has given name to Bell-yard.

*Bell*, Warwick-lane, Newgate-street: here Archbishop Leighton, the steady advocate of peace and forbearance, died 1684; little of the old inn remains.

"He often used to say, that if he were to choose a place to die in, it should be an inn; it looking like a pilgrim's going home, to whom this world was all an inn, and who was weary of the noise and confusion in it. . . . And he obtained what he desired."—Burnet's *Own Times*.

*Bell Savage*, or *Belle Sauvage*, Ludgate-hill, is a specimen of the players' inn-yard before our regular theatres were built. The landlord's token, issued between 1648 and 1672, bears an Indian woman holding a bow and arrow. The sign is thus traced:

"As for the Bell Savage, which is the sign of a savage man standing by a bell, I was formerly very much puzzled upon the conceit of it, till I accidentally fell into the reading of an old romance translated out of the French, which gives an account of a very beautiful woman who was found in a wilderness, and is called in the French 'la Belle Sauvage,' and is everywhere translated by our countrymen the Bell Savage."—*Spectator*, No. 28.

The sign, however, was originally a bell hung within a hoop, as proved by a grant *temp.* Henry VI., wherein John French gives to Joan French, widow, his mother, "all that tenement or inn called *Savage's Inn*, otherwise called the *Bell on the Hoop*." In the *London Gazette*, 1676, it is termed "an antient inn." Stow affirms it to have been given to the Cutlers' Company by one Isabella Savage: but their records state by Mrs. Craythorne. (See *CUTLERS' HALL*, p. 414.) Here Sir Thomas Wyatt's rebellion was stopped.

"And he (Wyet) himself came in at Temple Bar, and soo down alle Fleet-strete, and soo un-to the Belle Sauvage. And then was his trayne (sttacked at) the commandment of the erle of Pembroke, and sartyane of hys men slayne. And whaa (he saw) that Ludgatte was shutt agayne hym, he departed saynge, 'I have keppe towche,' and soo went (back) agayne; and by the Tempulle barre he was tane, and soo brought by water unto the (Tower) of London."—*Chronicle of the Grey Friars of London*.

Fuller, in his *Church History*, states that after Wyatt's adherents had forsaken him, he flung himself on a bench opposite the Bell Savage, and began to repent the rashness of his enterprise, and lament his folly. He was summoned by an herald to submit, which he agreed to do, but would yield only to a gentleman;—and afterwards surrendered to Sir Maurice Berkeley.

In Bell Savage-yard lived Grinling Gibbons, "where he carved a pot of flowers which shook surprisingly with the motion of the coaches that passed by."—*Walpole*.

This was one of the inns at which Banks exhibited his wonderful horse, Marocco, whose accomplishment was dancing. One of his exploits was going up to the top of St. Paul's Church. The horse is first mentioned about 1590. He was exhibited not only in England but abroad, where it became suspected that the horse was a demon, and his exhibitor was a sorcerer; and both were burnt at Rome by the Inquisition. There is an extremely rare tract, *Maroccus Extaticus; or, Bankes's Bay Horse in a Trance*, 1595, a fine copy of which at Mr. Daniel's Canonbury sale, in 1864, fetched 81*l.*

The old inn has been taken down, and upon its site and that of the inn-yard have been erected the extensive printing works of Cassell, Petter, and Galpin. An old house, bearing the crest of the Cutlers' Company, cut in stone, remains.

*Blossoms*, Lawrence-lane, Cheapside, "corruptly Bosoms Inn, hath to sign 'St. Laurence the Deacon,' in a border of blossoms or flowers," which, says the legend, sprung up "on the spot of his cruel martyrdom." This was one of the inns hired for the retinue of Charles V. on his visit to London in 1522, when "xx. beddes and a stable for ix. horses" were ordered here.

*Bolt-in-Tun*, Fleet-street, No. 64, in a grant to the White Friars in 1443, is termed "Hospitium vocatum Le Boltenton." In Whitefriars-street, No. 10 is the *Black Lion*, a small inn-yard with exterior wooden balustraded gallery, &c. Among the lands and tenements in St. Dunstan's occur the *Bore's Hede*, rented at 4*l.*; *le Bolle and Tonne*, 4*l.*; and *le Blake Swanne*, 4*l.*; all in Fleet-street.

*Bull*, Bishopsgate, in its galleried yard, accommodated audiences for our early actors, before the building of licensed theatres. Richard Tarlton frequently played here.

*Bull and Mouth*, St. Martin's-le-Grand, and the *Bull and Gate*, Holborn, had probably the same origin, the Bullogne Gate, one of the Gates of Bullogne, designed, perhaps, as a compliment to Henry VIII., who took that place in 1544. This G. A. Steevens learned from the title-page of an old play. Tom Jones, it will be recollected, alighted at the *Bull and Gate*, Holborn, when he first came to London. Strype tells us that the *Bull and Mouth* was the great resort of those who bring bone-lace for sale; and the house was much frequented by the Quakers before the Great Fire. This continued to be a great coach-office to all parts of England and Scotland, until the railways rose up. About this time the house was rebuilt in handsome style by Mr. Sherman: in the centre between the second-floor windows is a sculptured group of great absurdity: a Bull, and beneath it, a gigantic open mouth;\* above is a bust of Edward VI., the founder of Christ's Hospital, to which foundation the site belongs.

*Clerkenwell*. In St. John-street is the *Cross Keys*, where the carrier of Daintree lodged in 1637; Hatton mentions the *Three Cups*, near Hicks's Hall. Here also are the *Golden Lion* and the *Windmill*; and in Woodbridge-street was the *Red Bull* inn, the yard once the pit of the Red Bull Theatre. (See CLERKENWELL, p. 236.)

*Coach and Horses*, at the entrance to Bartholomew Close, is a portion of the ancient priory, probably the *hospitium*, at the end of the north cloister: the first floor has an arched roof and 16th-century cornice; the tap-room has an Early-English window: and the beer-cellar, a crypt, has a 12th-century clustered column. Of St. Bartholomew's, also, exist the prior's house, and the hall, with an ancient timbered roof, now used as a tobacco-manufactory. Close by is the monastery kitchen, from which a subterranean passage, in our time, communicated with the church: it has two panelled rooms, one with a vaulted roof and carved mantel-piece. (See Archer's *Vestiges of Old London*, part v.)

*Cock*, in Tothill-street, was probably the most ancient domestic edifice in Westminster: it was built entirely of timber, and at the back was a long inn-yard, with heavy timber sheds. The upper part of the house consisted of one story, in which were several rooms on different levels, one of which remained in its original state, a curious specimen of an early timbered room, being entirely of chestnut-wood. The exterior was very picturesque, although plastered and painted. The house was entered by a descent of three steps: in the parlour was a massive oak carving of the Adoration of the Magi, of Flemish work, well executed and painted to the life. Another piece of carved work, more in the High German manner, an alto-relievo of Abraham offering up Isaac, was preserved in an adjoining room. The *Cock* is said to have been frequented by the builders of Henry VII.'s Chapel; and there is a further tradition that here was the pay-table of the workmen at the building of the Abbey, *temp.* Henry III. In 1845, Mr. Archer found in the kitchen the old sign of the Royal Arms, which, with the Flemish carving and ancient bedchamber, are engraved in the *Vestiges of Old London*, part vi. From this house started the first Oxford coach; and a portrait of its original driver was shown here. The old house has some time disappeared.

*Cross Keys*, Gracechurch-street, was one of the old galleried inns at which Banks exhibited the extraordinary feats of his horse Marocco; the better class of spectators being in the galleries. Richard Tarlton, the clown, kept a tavern here. He was chosen scavenger, "and often the ward complained of his slackness in keeping the streets cleane." The first stage-coach travelling between Clapham and Gracechurch-street, *once* daily, was established in the year 1690, by John Day and John Bundy. The *Cross Keys*, Wood-street, Cheapside, was taken down in 1865: this sign, and that in Gracechurch-street, taken down in 1866, were derived from adjoining churches being dedicated to St. Peter, whose emblem is two keys crossed.

*Elephant and Castle*, Newington Butts, was a noted stage-coach house until the railway times; and was originally a low-built roadside inn, with outer gallery, a drawing of which hangs in the present tavern. Adjoining was a large sectarian chapel, inscribed in gigantic capitals "THE HOUSE OF GOD!" held by the dupes of Joanna Southcott, whose dreams and visions were painted upon the walls. There is an odd

\* This is referred by some to the story of Milo, who, after killing a bullock with a blow of his fist, ate it up in a meal!

notion that this Elephant and Castle sign was founded upon the finding of elephant bones near the inn site ; but an elephant and castle is the crest of the Cutlers' Company.

*Four Swans*, Bishopsgate-street Without, is perhaps the most perfect old London inn, its galleries being entire. Hobson, the noted Cambridge carrier, put up here.

"This memorable man stands drawn in fresco at an inn (which he used) in Bishopsgate-street, with an hundred-pound bag under his arm, with this inscription upon the said bag :

"The fruitful mother of a hundred more."—*Spectator*, No. 509.

*George and Blue Boar*, Holborn, was associated with a great event in our history : here is said to have been intercepted Charles I.'s letter, by which Ireton discovered it to be the King's intention to destroy him and Cromwell, which discovery brought about Charles's execution ; but the story is disbelieved. Nearly opposite the *George and Blue Boar* was the *Red Lion*, the largest inn in Holborn ; and where the bodies of Cromwell, Ireton, and Bradshawe were carried from Westminster Abbey, and next day dragged on sledges to Tyburn—a retributive coincidence worthy of note. In old St. Giles's Church was "a red lyon painted in glasse, given by the innholder of the Red Lyon." (*Aubrey*.)

*George, Snowhill*, is a relic of the time when this hill was the only highway from Holborn-bridge eastward ; the house appears to have been an extensive inn for carriers t a very early date, and

"St. George that swiug'd the dragon,  
And sits on his horseback at mine hoste's door,"

though much dilapidated, is a good specimen of a carved sign-stone.

*Gerard's Hall*, Basing-lane and Bread-street, Cheapside, replaced the ancient Hall of the Gisors, the fine Norman crypt of which remained for a wine-cellar ; but, with the superstructure, was removed in 1852, in forming New Cannon-street.

*Giles's, St.*, was formerly noted for its large inns. (*See* ST. GILES'S, pp. 376-377.)

*Green Man*, on the site of the commencement of the present Osnaburg-street, was originally the Farthing Pye-house, kept by Price, the noted rolling-pin and salt-box player ; here were sold bits of mutton, put into a crust, and shaped like a pie, for a farthing !

*Half-way House*, Kensington-road, opposite the site of the building for the Great Exhibition of 1851, and near the Prince of Wales's Gate, Hyde Park, was removed in 1846 at an expense of 3050*l.*, in addition to the purchase of the fee.

*Holborn Hill*. The *Rose* has disappeared within our recollection : from this inn Taylor the Water-poet started in the Southampton coach for the Isle of Wight, 19th October, 1647, while Charles I. was there :

"We took one coach, two coachmen, and four horses,  
And merrily from London made our courses,  
We wheel'd the top of the heavy hill call'd Holborn,  
(Up which hath been full many a sinful soul borne,  
And so along we jolted past St. Giles's,  
Which place from Brentford six or seven miles is,"

Taylor's *Travels from London to the Isle of Wight*, 1647.

The *Old Bell*, Holborn, bears the arms of Fowler, of Islington, viz., azure, on a chevron, argent, between three herons, as many crosses formée, gules. These arms also occur on a building supposed to have been the lodge of Fowler's house in Islington.

*King's Arms*, Leadenhall-street, No. 122 : in the reign of William III., Sir John Fenwick and others met here to plan the restoration of James II.

*Oxford Arms*, situate at the end of a narrow street out of the west side of Warwick-lane, and southward of Warwick-square and the old College of Physicians, has a red brick pedimented façade of the period of Charles II. surmounting a gateway leading into the inn-yard, which has on three of its sides two rows of wooden galleries, with exterior staircases leading to the chambers on each floor, the fourth side being occupied by stabling built against part of old London-wall. This house, known as the *Oxford Arms* before the Great Fire, must have been then consumed, but was rebuilt on the plan of the former inn. The *Oxford Arms* was not, as supposed, part of the Earl of Warwick's house ; as it belongs, and has belonged of old time, to the Dean and Chapter of St. Paul's. The houses of the Canons Residentiary of St. Paul's adjoin the *Oxford Arms* on the south, and part of London Wall is still remaining in the court-yard of those houses. There is a door from the old inn leading into one of the back yards of

the residentiary houses, which is said to have been found useful during the Riots of 1780, for facilitating the escape of Roman Catholics, who then frequented the *Oxford Arms*, from the fury of the mob, by enabling them to pass into the residentiary houses; for which reason, as is said, by a clause always inserted in the leases of the inn, that door is forbidden to be closed up. (*Communication to the Builder.*) The *London Gazette*, 1762-3, No. 762, has this advertisement:

“These are to give notice that Edward Bartlet, Oxford Carrier, hath removed his inn in London from the Swan at Holborn Bridge to the Oxford Arms in Warwick Lane, where he did Inn before the Fire. His coaches and waggons going forth on their usual days, Mondays, Wednesdays, and Fridays. He hath also a Hearse with all things convenient to carry a corps to any part of England.”

At the *Oxford Arms*, in Warwick-lane, lived John Roberts, the bookseller, from whose shop issued the majority of the squibs and libels on Pope.

*Paul Pindar's Head*, corner of Half-moon-alley, No. 160, Bishopsgate-street Without, was the mansion of Sir Paul Pindar, the wealthy merchant, contemporary with Sir Thomas Gresham. The house was built towards the end of the 16th century, with a wood-framed front and caryatid brackets, the principal windows bayed, and their lower fronts enriched with panels of carved work. In the first-floor front room is a fine original ceiling in stucco, in which are the arms of Sir Paul Pindar. In the rear of these premises, within a garden, was formerly a lodge, of corresponding date, decorated with four medallions of figures in Italian taste.

*Piccadilly Inns.* At the east end were formerly the *Black Bear* and *White Bear* (originally the *Fleece*), nearly opposite each other. The *Black Bear* was taken down in 1820. The *White Bear* occurs in St. Martin's parish-books in 1685: here Chatelain and Sullivan, the engravers, died; and Benjamin West, the painter, lodged the first night after his arrival from America. Strype mentions the *White Horse Cellar* in 1720; and the booking office of the *New White Horse Cellar* is to this day in “the cellar.” The *Three Kings* stables' gateway, No. 75, had two Corinthian pilasters, stated by D'Israeli to have belonged to Clarendon House: “the stable-yard at the back presents the features of an old galleried inn-yard, and it is noted as the place from which General Palmer started the first Bath mail coach.” (J. W. Archer: *Vestiges*, part vi.) The *Hercules' Pillars* (a sign which meant that no habitation was to be found beyond it) stood a few yards west of Hamilton-place, and is mentioned as one extremity of London by Wycherley, in 1676. Here Squire Western “placed his horses” when he arrived in London with the fair Sophia (see *Tom Jones*); here “the horses of many of the quality stood” and it became the scene of fashionable dinner-parties of the officers of the army, often headed by the Marquis of Granby. The *Hercules' Pillars*, and another roadside inn, the *Triumphant Car*, were standing about 1797, and were mostly frequented by soldiers. Two other Piccadilly inns, the *White Horse* and *Half-moon*, have given names to streets.

*Pied Bull*, Church-row, Islington, traditionally the residence of Sir Walter Raleigh, and in the Elizabethan style, was taken down in 1826-7. The late front was modern; but the parlour (the original dining-room) had an elaborately-carved chimney-piece, with figures of Faith, Hope, and Charity; and a stuccoed ceiling, with personifications of the Five Senses. In a window were painted the arms of Sir John Miller, who lived there in 1634; and a bunch of green leaves above the shield was popularly regarded as the tobacco-plant introduced by Raleigh.

*Queen's Head*, Lower-street, Islington, was a still more perfect Elizabethan house than the above. The walls were strong timber framework, filled in with lath and plaster; the three stories projected, and the windows were supported by carved brackets; the entrance porch being ornamented by caryatides and Ionic scrolls. The interior had panelled wainscot, and stuccoed ceilings of rich design. The house has been rebuilt, and portions of the old woodwork are preserved.

*Pindar of Wakefield*, Gray's-inn-road, was a roadside inn in Aubrey's time, 1685, who mentions the yellow-flowered Neapolitan bank-crests, the London rocket, growing there, as well as on the ruins of London, after the Great Fire.

*Rose of Normandy*, on the east side of High-street, Marylebone, built in the 17th century, was the oldest house in the parish, and had the original exterior, staircase, and balusters. In the rear was a bowling-green, enclosed with walls set with fruit-trees and quickset hedges, “indented like town-walls.”

*Saracen's Head*, Snow-hill (actually in Skinner-street), and of old "without New-gate," was in Stow's time "a fair and large inn for the receipt of travellers."

*Saracen's Head*, Friday-street, Cheapside, adjoined St. Matthew's Church, and No. 5, said to have been the dwelling-house of Sir Christopher Wren. The inn consisted of three floors with open galleried fronts, besides the ground-floor: it was taken down in 1844; and upon its site, extending nearly to Old Change, large Manchester warehouses were erected. There was also a *Saracen's Head*, No. 5, Aldgate: it was once a common London sign, which Selden thus illustrates:—

"When our countrymen came home from fighting with the Saracens, and were beaten by them, they pictured them with huge, big, terrible faces (as you still see the sign of the Saracen's head is), when in truth they were like other men. But this they did to save their own credit."—*Table Talk*.

SOUTHWARK INNS.—Stow enumerates here "many fair inns for receipt of travellers, by these signs: the *Spurr*, *Christopher*, *Bull*, *Queen's Head*, *Tabard*, *George*, *Hart*, *King's Head*," &c. Of these the most ancient is the *Tabard* (now *Talbot*), No. 75, High-street, opposite the Town-hall site. The tabard is a jacket or sleeveless coat, worn in times past by noblemen, with their arms embroidered on it, but now only by heralds, as their coat of arms in service. "This was the hostelry where Chaucer and the other pilgrims met together, and with Henry Bailly, their hoste, accorded about the manner of their journey to Canterbury." (*Speght*, 1598.)

"Befell that in that season, on a day  
At Southwark at the Tabard as I lay,  
Readie to wander on my Pilgrimage  
To Canterburie with devout courage,  
At night was come into that hostelry  
Well nine-and-twenty in a companie  
Of sundrie folke, by adventure yfall  
In fellowship, and pilgrimes were they all,  
That toward Canterburie wouden ride:  
The chambers and the stables weren wide,  
And well we weren eased at the best," &c.—*Chaucer*.

The Register of Hyde Abbey, and the Escheat Rolls of King Edward I., show the acquisition by the Abbey of Hyde of the *Tabard* and the *Abbot's House*, in Southwark, by purchase from William de Lategareshall, in 1304. Henry Bailly, Chaucer's host of the *Tabard*, is identified as one of the representatives of the borough of Southwark in Parliament, in the 50th of Edward III. and 2nd of Richard II.; and in the 4th of Richard II. "Henry Bayliff, ostyler, and Christian his wife, were assessed to the subsidy (in Southwark) at 2s." After the Dissolution of the monasteries, the *Tabard* and the *Abbot's House* were sold by King Henry VIII. to John Master and Thomas Master; and the particulars for the grant in the Augmentation Office afford descriptions of the hostelry called the *Tabard*, parcel of the possessions of the monastery of Hyde, and the Abbot's Place, with the stable and garden belonging thereto. The *Tabard* is mentioned to have been late in the occupation of one Robert Patty, but the Abbot's Place, with the garden and stable, were reserved to the late Bishop Comendator, John Saltcote, *alias* Capon, who had been last abbot of Hyde, and who surrendered it to King Henry VIII.; and after being made Bishop of Bangor, *in commendam* with the Abbey of Hyde, subsequent to the Surrender of the abbey he was preferred to the see of Salisbury, in 1539, which he retained till his death in 1557. Upon the breastsummer beam of the gateway facing the street was formerly inscribed: "This is the inne where Sir Jeffry Chancer and the nine-and-twenty pilgrims lay in their journey to Canterbury, anno 1383." This was painted out in 1831: this was originally inscribed upon a beam across the road, whence swung the sign, removed in 1763, when the inscription was transferred to the gateway. The sign was changed about 1676, when, says Aubrey, "the ignorant landlord or tenant, instead of the ancient sign of the Tabard, put up the Talbot, or dog!" The buildings of Chaucer's time have disappeared, but were standing in 1602: the oldest remaining is of the age of Elizabeth; and the most interesting portion is a stone-coloured wooden gallery, in front of which is a picture of the Canterbury Pilgrimage, said to have been painted by Blake: immediately behind is the Pilgrims' Room of tradition, but only a portion of the ancient hall. The gallery formerly extended throughout the inn buildings. The inn facing the street was burnt in the Great Fire of Southward: "this house," says Aubrey, "remaining before the fire of 1676, was an old timber house, probably coeval with Chaucer's time;"

it is shown in the oldest view of the *Tabard* extant, in Urry's *Chaucer*, 1720, reproduced in *The Mirror*, vol. xxii. 1833. Mr. G. R. Corner, F.S.A., who has left us the fullest and best account of the ancient Inns of Southwark (see *Collections of the Surrey Archaeological Society*, vol. ii. part. ii.), was of opinion, from personal examination of the premises (at some risk), that there was nothing in the existing remains of the *Tabard* earlier than the Fire of 1676, after which was built the supposed "Pilgrims' Hall," the fireplaces in which are of this date. [The date of the Canterbury Pilgrimage is generally supposed to have been the year 1383. The MS., almost perfect, well written, and richly illuminated, was exhibited to the British Association, in 1865, by Archdeacon Moore, at Lichfield Cathedral.] Taylor the Water-poet mentions another *Tabard* inn, "neere the Conduit," in Gracechurch-street.

*The George* is described by Stow as existing in his time; and it is mentioned at an earlier period, viz., in 1554, 35th Henry VIII., by the name of the *St. George*, as being situate on the north side of the *Tabard*. In the seventeenth century, two tokens were issued from *The George*, which are in the Beaufoy collection at Guildhall, and described in Mr. Burn's ably compiled Catalogue. The first is a token of "Anthony Blake, Tapster, y<sup>e</sup> George in Southwarke;" and on the reverse are three tobacco-pipes; above them, four beer-measures. The other token is inscribed, "James Gunter 16 . . ."—St. George and Dragon, in field. Reverse, "In Southwarke : " in the field, "I.A.G." Mr. Burn quotes some lines from the *Musarum Deliciæ*, 1656, upon a surfeit by drinking bad sack at *The George* tavern in Southwark :

"Oh, would I might turne poet for an houre,  
To satirize with a vindictive power  
Against the drawer ! or I could desire  
Old Jonson's head had scalded in this fire :  
How would he rage and hring Apollo down  
To scold with Bacchus, and depose the clown  
For his ill-government, and so confute  
Our poet-apes, that do so much impute  
Unto the grape's inspirement !"

In the year 1670 *The George* was, in great part, burnt and demolished by fire; and it was totally burnt down in the Great Fire of Southwark, in 1676. The following is from the *Diary* of the Rev. John Ward, written a few years later :—

"Gover and his Irish ruffians burnt Southwark, and had 1000 pounds for their pains, said the Narrative of Bedloe. Gifford, a Jesuit, had the management of the fire. The 26th of May, 1676, was the dismal fire of Southwark. The fire begunne at one Mr. Welsh, an oilman, near St. Margaret's Hill, betwixt the 'George' and 'Talbot' innes, as Bedloe in his Narration relates."—*Diary of the Rev. John Ward*, p. 155.

The Fire was stopped by the substantial building of St. Thomas's Hospital, then recently erected; and, in commemoration of the event, there was a tablet placed on the staircase, over the door of the hall or court-room, with an inscription. Although the present building of *The George Inn* is not older than the end of the seventeenth century, it seems to have been rebuilt, after the Fire, upon the old plan; and it still preserves the character of the ancient English inns, having open wooden galleries leading to the chambers on each side of the inn-yard.

*The White Hart*, the head-quarters of Jack Cade and his rebel rout in 1450 (and a dozen doors nearer London Bridge than the *Tabard*), has been demolished. The back part of this inn was burnt in 1699, and the remainder was destroyed in the great Fire in Southwark in 1676; it was rebuilt upon the plan of the older edifice, and is well engraved from a drawing by Mr. Fairholt, in the Archaeological Collections just quoted. Shakspeare makes Cade say, "Hath my sword therefore broke through London gates, that you should leave me at the *White Hart* in Southwark." At the *Hart* lodged Jack Cade on his arrival in Southwark, July 1, 1450; "for," says Fabyan, "he might not be suffered to enter the Citie." Again, of Cade's rebels, "at the *Whyt Harte* in Southwarke one Hawaydine of Sent Martyns was beheddyd." (*Chronicles of the Grey Friars of London*.) Hatton (1708) describes the *White Hart* as "the largest size about London, except the *Castle Tavern*, in Fleet-street." Mr. Corner brought together some curious notices of this inn from the *Paston Letters*, vol. i. p. 61. The *White Hart* of our time is well described in the *Pickwick Papers*, by Charles Dickens.

The other Southwark inns named by Stow remain, except the Christopher; but they

have mostly lost their galleries and other olden features. The *King's Head* sign was within our recollection a well-painted half-length of Henry VIII. The *Catherine Wheel* remains; but we miss the *Dog and Bear*, which sign, as well as Maypole-alley, hard by, points to olden sport and pastime.

*The White Lion*, formerly a prison for the county of Surrey, as well as an inn, is mentioned in records in the reign of King Henry VIII., having belonged to the Priory of St. Mary Overey. It is also mentioned by Stow, and it continued to be the county prison till 1695. The rabble apprentices of the year 1640, as Laud relates in his *Troubles*, released the whole of the prisoners in *The White Lion*. It has been supposed that the White Lion was the same house that, before the building of New London Bridge, was called *Baxter's Chophouse*, No. 19, High-street; and in old deeds, *The Crown*, or *The Crown and Chequers*, an old plaster-fronted house. The house which stood in the court beside it, and was formerly called *The Three Brushes*, or "Holy Water Sprinklers," was of the time of Elizabeth; and some drawings exist of the interior, as a panelled room, with an ornamental plaster ceiling, having in the centre the arms of Queen Elizabeth, with E. R. in support of this opinion. This room is supposed to have been the court or justice-room in which her Majesty's justices sat and held their sessions. The house was pulled down about 1832, for making the new street to London Bridge.

*Bear at the Bridge-foot* was a noted house during the sixteenth and seventeenth centuries, and it remained until the houses on the old bridge were pulled down, in or about the year 1760. This house was situate in the parish of St. Olave, on the west side of High-street, between Pepper-alley and the foot of London Bridge. It is mentioned in a deed of conveyance (dated Dec. 12, 1554, in the first and second years of Philip and Mary); and in the parish-books, of the same date, there is still earlier mention of this house, for among the entries of the disbursements of Sir John Howard, in his steward's accounts, are recorded:—"March 6th, 1463-4. Item paid for the red wyn at the *Bere* in Southwerke, *iiid.*" And again, "March 14th (same year). Item paid at dinner at the *Bere* in Southwerke, in Costys, *iiis. iiid.* Item, that my mastyr lost at shotynge, *xxd.*"

Cornelius Cooke, mentioned in the parish accounts of St. Olave's as overseer of the land side as early as 1630, became a soldier, and ultimately was made captain of the Trained Bands. He rose to the rank of colonel in Cromwell's time, and was appointed one of the Commissioners for the sale of the king's lands. After the Restoration, he settled down as landlord of this inn. Gerrard, in a letter to Lord Strafford, dated January, 1633, intimates that all back doors to taverns on the Thames were commanded to be shut up, excepting only the *Bear* at the Bridge-foot, exempted by reason of the passage to Greenwich. The "Cavaliers' Ballad" on the magnificent funeral honours rendered to Admiral Dean (killed June 2, 1653) has the following allusion:—

"From Greenwich towards the *Bear* at Bridge foot,  
He was wafted with wind that had water to't;  
But I think they brought the devil to boot,  
Which nobody can deny."

There is also another allusion in the following lines from a ballad "On banishing the Ladies out of Town:":—

"Farewell Bridge foot and *Bear* thereby,  
And those bald pates that stand so high;  
We wish it from our very souls  
That other heads were on those poles,

Pepys, on the 24th February, 1666-7, mentions the mistress of the *Bear* drowning herself, and again alludes to the inn on the 3rd of April following.

In the year 1761 the *Bear* was pulled down, on the bridge being widened. In the *Public Advertiser*, of Saturday, Dec. 26, 1761, is the following announcement:—"Thursday last, the workmen employed in pulling down the *Bear* tavern, at the foot of London Bridge, found several pieces of gold and silver coin of Queen Elizabeth, and other monies to a considerable extent."

*Boar's Head*.—Southwark had its *Boar's Head*, as well as the City of London its *Boar's Head* in East Cheap, immortalized by Shakspeare; and while the one is celebrated as the resort of Jack Falstaff, the other was the property of another of Shakspeare's characters, who has often been erroneously confounded with lean Jack. Sir John Fastolf, of Caistor, Norfolk, and of Southwark, where (in Stoney-lane) he had his town house, was a man of military renown, having been in the French wars of Henry VI.; and was governor of Normandy: he was also a man of letters and learning, and the *Boar's Head* formed part of the endowment of Magdalen College, Oxford, founded by his

friend, William Waynfleet, Bishop of Winchester, at whose instance Sir John Fastolf gave large possessions in Southwark and elsewhere towards the foundation. In the *Reliquiæ Hearnianæ*, edited by Dr. Bliss, is the following entry relative to this bequest :—

1721. June 2.—The reason why they cannot give so good an account of the benefaction of Sir John Fastolf to Magd. Coll. is, because he gave it to the founder, and left it to his management, so that 'tis supposed 'twas swallow'd up in his own estate that he settled upon the college. However, the college knows this, that the *Boar's Head*, in Southwark, which was then an inn, and still retains the name, tho' divided into several tenements (which brings the college 150*l.* per annum), was part of Sir John's gift.

The property above-mentioned was, for many years, leased to the father of the author of the present work, and was by him principally sub-let to weekly tenants. The premises were named "*Boar's Head-court*," and consisted of two rows of tenements, *vis-à-vis*, and two houses at the east-end, with a gallery outside the first floors: the tenements were fronted with strong weather-board, and the balusters of the staircases were of great age. The Court entrance was between the houses Nos. 25 and 26, east side of High-street, and that number of houses from old London Bridge; and beneath the whole extent of the Court was a finely-vaulted cellar, doubtless the wine-cellar of the *Boar's Head*. The property was cleared away in making the approach to the new bridge. (See *Notes and Queries*, 2nd s., No. 109.) In the Beaufoy Collection, at Guildhall, is a token of the *Boar's Head* (a boar's head, lemon in mouth, 1649). There were at St. Margaret's-hill, a *Boar's Head-alley*, and *Boar's Head Livery Stables*.

*Spread Eagle*, Gracechurch-street, was rebuilt after the Great Fire. Of this inn we find Taylor, the Water-poet, in his *Carrier's Cosmographie*, 4to, 1637, mentioning "*The Tabard* near the Conduit," and "*the Spread Eagle*," both in "*Gracious-street*." The latter was taken down in 1865, but remained to the last nearly entire, with its outer galleries to the two floors. The plot of ground which it occupied contained in all 12,600 feet, 5600 feet of which were leasehold for a long term, and the rest freehold. It was sold for 95,000*l.* The ground is surrounded on three sides by Leadenhall Market. There is a good view of the old inn in the *Illustrated London News*, Dec. 23, 1865.

The *Spread Eagle*, besides being an early carriers' inn, became famous as a coaching-house; the mails and principal stage-coaches for Kent and other southern counties arriving and departing from here. It was long the property of John Chaplin, cousin of William Chaplin (Chaplin and Horne), who began life as a coachman at Rochester, served as Sheriff of London and Middlesex, and sat in Parliament for Salisbury. He died chairman of the London and South-Western Railway, and worth a quarter of a million of money. He was occupier, at one period, of five inn-yards in London, possessed 2400 horses, and his receipts for booking parcels amounted to 8000*l.* a year.

The *Grasse-street* of old was a memorable place. To this market for grass or herbs, in the reign of Edward III., it was customary for every cart (not belonging to a citizen) laden with corn or malt going there to be sold, to pay one halfpenny; if laden with cheese, twopence. The cart of the franchise of the Temple and St. Martin's-le-Grand paid a farthing; the cart of the Hospital of St. John of Jerusalem paid nothing for their proper goods. In Aggas's plan is shown an open place upon which White Hart-court was built after the Great Fire. Ben Jonson, in one of his masques, alludes to the poulterer's wife in Grace's-street. Pepys calls the street "*Gracious-street*." Nov. 28, 1662, he records the death of "a poulterer in Gracious-street, which was thought rich;" and, on the 24th of the same month, Pepys speaks of the conduit in the quarre four at the end of Gracious-street; "the spouts whereof running very near me upon all the people that were under it." And on Sept. 14, 1665 (the time of the Plague), he was horrified "to see a person sick of the sores carried close by me by *Gracechurch*, in a hackney-coach." He afterwards calls the street "*Gracious-street*;" for he says, Nov. 25, 1668, "So home, buying a barrel of oysters, at my old oysterwoman's in Gracious-street, but over the way to where she kept her shop before (the Fire)." Sir John Fielding, in his *Description of London and Westminster*, 1776, calls the street "*Grasschurch-street*, Cornhill."

*Swan with Two Necks*, Lad-lane, now Gresham-street, was long the head coach-inn and booking-office for the North. The sign has been referred to a corruption of two *nicks*, or the Vintners' Company's swan-marks on the bill; but this popular notion is discountenanced by Mr. Kempe, F.S.A.: are the two necks an heraldic monstrosity?

"The carriers of Manchester doe lodge at the Two-Neck'd Swan in Lad-lane" (Taylor's *Carrier's Cosmographie*, 1637), originally Lady's-lane.

*Three Cups*, Aldersgate-street, is mentioned by Hatton; with the same sign in St. John-street, near Hicks's Hall; and in Bread-street, near the middle. Beaumont and Fletcher have "*the Three Cups* in St. Giles's;" and Winstanley mentions Richard Head at the same sign in Holborn, making verses over a glass of Rhenish.

*White Hart*, Bishopsgate-street, taken down in 1829, bore on the front the date 1480: it was three-storied, with overhanging upper floor, and occupied the site of "a

faire inn for receipt of travellours, next unto the parish church of St. Buttolph," thus described by Stow.

*White Hart*, Covent-garden, gave name to Hart-street, and is mentioned in a lease to Sir William Cecil (Lord Burghley) of Sept. 7th, 1570. Weever has preserved this epitaph in the Savoy Church on an old vintner of the *White Hart*, who died 1586:—

"Here lieth Humphrey Gosling, of London, vintner,  
Of the Whyt Hart of this parish a neighbor,  
Of vertuous behaviour, a very good archer,  
And of honest mirth, a very good company keeper.  
So well inclined to poore and rich,  
God send more Goslings to be sich."

*White Hart*, corner of Welbeck-street, was long a detached public-house, where travellers customarily stopped for refreshment, and to examine their fire-arms, before crossing the fields to Lisson-green. The land westward of the bourn (whence the parish, now Marylebone, was named) was a deep marshy valley: here was Fenning's Folly, upon the top of which was built a fishmonger's; the shop, level with the street, having been the Folly upper story.

*White Horse*, Fetter-lane, was formerly the great Oxford house, as already mentioned under FETTER-LANE, p. 336.

*Yorkshire Sting*, New-road, was celebrated for a century and a quarter, and appears in a plan dated 1757: here was held annually, on May 1, a Fair, until suppressed as a nuisance.

#### INNS OF COURT AND CHANCERY.

THE hostels or abodes of the practisers and students of the law before the reign of Edward II. were called *Inns of Court*, because their inhabitants belonged to the *King's Court*, first noticed on the Placita Rolls, 10th Richard I. One of these, Johnson's Inn, is said to have been at Dowgate; another in Fewter's (Fetter) lane; and a third in Paternoster-row. The Serjeants and Apprentices (of the Law) then each had his pillar in St. Paul's Church, where he heard his client's case:

"A serjeant of the law both ware and wise,  
That often had yben at the *Perwyse*."—Chaucer's *Canterbury Tales*.

And in the reign of Charles I., upon the making of serjeants, they went to St. Paul's in their formalities, and chose their pillars.

Sir John Fortescue, Chief Justice to Henry VI., enumerates four Inns of Court—the Inner Temple, the Middle Temple, Lincoln's Inn, and Gray's Inn—and ten Inns of Chancery: the former frequented by the sons of nobility and wealthy gentry; and the latter by merchants and others, who had not the means of paying the greater expenses (about 20 marks per annum) of the Inns of Court. The first were called *apprenticii nobiliores*, the latter *apprenticii* only. On the working days they applied themselves to the study of law; on the holydays to holy Scripture. They also learned singing and all kinds of harmony, dancing, and other noblemen's pastimes. The only punishment for misdeeds was expulsion (as is the case now), which was greatly dreaded. They were famous for their revels and other gaities.

In 1635, the four Inns of Court gave a grand masque to Charles I. and Queen Henrietta-Maria at Whitehall.

The Court of Star Chamber, however, took care of their morals by desiring the principals of the Inns of Court and Chancery not to suffer the students to be out of their houses after six o'clock at night, "without very great and necessary causes, nor to wear any kind of weapon;" and the Court records prove the Star Chamber to have committed to the Tower the Earl of Surrey, Sir Thomas Wyatt, and young Pickering, for breaking windows, and eating flesh in Lent.

In the reign of Philip and Mary it was ordained by all the four Inns of Court, "that none except knights and benchers should wear in their doublets or hose any light colours, save scarlet and crimson; nor wear any upper velvet cap, or any scarf or wings in their gowns, white jerkins, buskins, or velvet shoes, double cuffs in their shirts, feathers or ribbons in their caps; and that none should wear their study gowns in the City any farther than Fleet-bridge or Holborn-bridge; nor, while in Commons, wear Spanish cloak, sword and buckler, or rapier, or gowns and hats, or gowns girded with a dagger on the back."—Dugdale's *Origines Juridicales*.

The students in the reign of Henry VI. were: 4 Inns of Court, each 200 = 800; 10 Inns of Chancery, each 100 = 1000; total, 1800. In 1850 there were in the four Inns of Court upwards of 4000.

On Ascension-day, or Holy Thursday, when the custom of beating the bounds of most of the City and other parishes takes place by the children of the parish schools, headed by the clergy, parochial officers, and many inhabitants, the Temple and other Inns of Court and extra-parochial places are shut up and guarded, to prevent the processions passing through, which might possibly affect the privileges of the different places. The two Temples and Gray's Inn are extra-parochial, *i.e.*, pay no poor-rates and maintain their own poor; but Lincoln's Inn has not entirely that exemption.

The Inns of Court are interesting to others besides lawyers, for they are the last working institutions in the nature of the old trade guilds. It is no longer necessary that a shoemaker should be approved by the company of the craft before he can apply himself to making shoes for his customers, and a man may keep an oyster-stall without being forced to serve an apprenticeship and be admitted to the Livery of the great Whig Company; but the lawyers' guilds guard the entrance to the law, and prescribe the rules under which it shall be practised. There are obvious advantages in having some authority to govern such a profession as the Bar, but it is sufficiently remarkable that voluntary societies of barristers themselves should have managed to engross and preserve it.—*Times journal.*

THE TEMPLE lies between Fleet-street and the Thames, north and south; and Whitefriars and Essex-street, east and west; divided by Middle Temple-lane into the Inner and Middle Temple, each having its hall, library, and garden, quadrangles, courts, &c. Originally there was also the Outer Temple, comprising Essex House and gardens: a portion of the old Water-gate remains at the foot of Essex-street.

The ancient hostels existed until 1346 (20th Edward III.), when the Knights Hospitallers of St. John of Jerusalem (to whom the forfeited estates of the rival brotherhood of the Templars had been granted by the Pope) demised the magnificent buildings, church, gardens, "and all the appurtenances that belonged to the Templars in London," to certain students said to have removed thither from Thavies Inn, Holborn, in which part of the town the Knights Templars themselves had resided before the erection of their superb palaces on the Thames. In this New Temple, "out of the City and the noise thereof, and in the suburbs," between the King's Court at Westminster and the City of London, the studious lawyers lived in quiet, increasing in number and importance; so that, although the mob of Wat Tyler's rebellion plundered the students, and destroyed almost all their books and records ("To the Inns of Court! down with them all!"—*Jack Cade*), it became necessary to divide the Inn into two separate bodies, the Hon. Societies of the Inner and Middle Temple; having separate halls, but using the same church, and holding their houses as tenants of the Knights Hospitallers until the Dissolution by Henry VIII., and thenceforth of the Crown by lease. In the sixth year of James I. the two Temples were granted by letters patent to the then Chancellor of the Exchequer, the Recorder of London, and others, the bankers and treasurers of the Inner and Middle Temple, which, by virtue of this grant, are held to this day by an incorporated society of the "students and practisers of the laws of England."

THE INNER TEMPLE is entered from Fleet-street by a gateway, built 5th James I., beneath No. 17, Fleet-street, through Inner Temple-lane: at No. 1 lived Dr. Johnson from 1760 to 1765. Upon the east side of the lane, the old chambers of Churchyard-court have been taken down, and a noble stone-fronted structure erected in their place; to this and the opposite new lines have been given the honoured names of *Johnson's* and *Goldsmith's Buildings*. At the foot of the lane is the magnificent western doorway of the church (described at pp. 205–207); and westward are the cloisters, which were built by Wren after the fire of 1678, which fire Titus Oates pretended to the Council was "a contrivance." *Crown Office-row*, facing the garden, has also been rebuilt with a handsome stone façade. In the former row was the birthplace of Charles Lamb.

"Some gentlemen of the Inner Temple would not endeavour to preserve the goods which were in the lodgings of absent persons, nor suffer others to do it, 'because,' they said, 'it was against the law to break up any man's chamber!'"—*Lord Clarendon's Own Life*, p. 355.

Upon the broad terrace facing the garden are the Library (containing Bacon's *History of the Alienation Office*, in MS.), and the Parliament Chamber in the Tudor

style, completed by Smirke, R.A. in 1835; adjoining is the Hall, built upon the site of a structure of the age of Edward III. Here are full-length portraits of Coke and Littleton; and an emblematic Pegasus, by Sir James Thornhill. Here dinner is served to the members of the Inn daily during term-time; the masters of the bench dining on the *state* or *daïs*, and the barristers and students at long tables extending down the hall to the carved screen at the western end. On grand days are present the judges, who dine in succession with each of the four Inns of Court.

"At the Inner Temple, on certain grand occasions, it is customary to pass huge silver goblets (loving cups) down the table, filled with a delicious composition, immemorially termed 'sack,' consisting of sweetened and exquisitely flavoured white wine: the butler attends its progress to replenish it, and each student is restricted to a *sip*. Yet it chanced not long since at the Temple, that, though the number present fell short of seventy, thirty-six quarts of the liquid were consumed!"—*Quarterly Review*, 1836, No. 110.

The gentlemen of the Inner Temple were of old famed for their plays, masques, revels, and other sumptuous entertainments. Christmas, Halloween, Candlemas, and Ascension-day, were anciently kept with great splendour in the Hall. In 1661 Charles II. dined here, and was received with *twenty violins*, dinner being served by fifty gentlemen of the society in their gowns. Next year, the Duke of York and Prince Rupert were admitted members. For these feasts, the master of the revels arranged the dancing and music; after the play, a barrister sang a *song* to the judges and serjeants; and dancing was commenced by the judges and benchers round the sea-coal fire. This dance is satirized in Buckingham's witty play of the *Rehearsal*; and the revels have been ridiculed by Dr. Donne in his *Satires*, and Prior in his *Alma*. Pope in the *Dunciad* has:

"The judge to dance, his brother serjeant calls."

Sir Christopher Hatton, with four other students of the Inner Temple, wrote the play of *Tancred and Gismund*, which, in 1568, was acted by that Society before the Queen. Sir Christopher wrote the fourth act, signed "*Compositus Chr. Hatton*:" it was first printed in 1592, and there is a copy among the Garrick Plays in the British Museum.

The last revel in any of the Inns of Court was that held Feb. 2, 1733, in the Inner Temple Hall, in honour of Mr. Talbot, a bencher, having the Great Seal delivered to him. A large gallery built over the screen was filled with ladies; and music in the little gallery at the upper end of the Hall played all dinner-time. After dinner, began the play *Love for Love*, and the farce of *The Devil to Pay*, by actors from the Haymarket. After the play, the Lord Chancellor, the Masters, Judges, and Benchers retired into their Parliament Chamber; in half an hour they returned to the Hall, and led by the Master of the Revels, formed a ring, and danced, or rather walked, round the fire-place, according to the old ceremony, three times; the ancient song, accompanied with music, being sung by one Tony Aston, dressed in a bar-gown. This was followed by dancing, in which the ladies from the gallery joined; then a collation was served, and the company returned to dancing. The Prince of Wales was present.

Among the eminent members were Audley, Lord Chancellor to Henry VIII.; Nicholas Hare (who built Hare-court), Master of the Rolls to Queen Mary; Littleton and Coke (in the reign of James I. the Temple was nicknamed "my Lord Coke's shop"); Sir Christopher Hatton, Selden, Heneage Finch, Judge Jeffreys, and Sir William Follett; and the poets Beaumont and Cowper. Speght's statement that Chaucer studied here is much disputed. Among the Readers was "the judicious Hooker," of whom, in 1851, a memorial bust was placed at the south-west angle of the choir of the Temple Church.

"The view from the Temple Gardens, when, on the opposite side of the river, the eye ranged over the green marshes and gradually rising ground to the Surrey hills, and the rich oak and beech woods that clothed them, must have been beautiful." (Pearce's *Inns of Court*.) The public are admitted to the Inner Temple Garden, about three acres, on summer evenings from 6 to 9: it is already described at p. 365. Towards its south-eastern corner are the New Paper Buildings, of red brick and stone, erected 1848, by Sydney Smirke, A.R.A., with overhanging oriels and angle turrets, assimilating to Continental examples of the Tudor style.

THE MIDDLE TEMPLE, west of the lane, is entered from Fleet-street by a red-brick and stone-fronted gate-house, built by Wren, in 1684, "in the style of Inigo Jones, and very far from inelegant" (*Ralph*). It occupies the site of the gate-house erected by Sir Amias Paulet, as a fine imposed by Wolsey, whose prisoner he was; and which he garnished with cardinal's hats and arms to appease "his old unkind displeasure." Abutting on the garden is Middle Temple Hall, built 1562-72, in the treasurership of Plowden, the jurist. This Grand Hall is 100 feet long, 40 feet wide, and upwards of

60 feet in height, and has a fine open timber roof, which omits the principal arched rib, and multiplies the pendants and smaller curves; it is very scientifically constructed, and contains a vast quantity of timber. There is also a Renaissance carved screen and music-gallery, dight with Elizabethan armour and weapons; on the side windows are emblazoned the arms of eminent members, as also on the great bay-windows, on the dais or state; "besides the Queen's and the 3 Lyons of England."

The fine collection of State pictures embraces the sovereigns from Charles I. to George I. inclusive. The most striking of these is the noble equestrian portrait of Charles I. by Vandyck (one of the three known to be by his hand), which has hung in the Middle Temple hall since 1684, when it was acquired by the Society. Charles II.'s portrait is reputed to be the work of Sir Godfrey Kneller: it represents the King in coronation robes, wearing the Garter; it is a grandly studied work, though the flesh tints have deepened; the draperies are unrivalled, so finely are they cast and so brilliantly coloured. The portrait of Queen Anne was painted from life for the Society. It appears from their records that on the 27th of November, 1702, the benchers directed the treasurer "to put up her Majesty's picture at the west end of the hall over the bench, and to have it drawn by Mr. Dahl, unless the treasurer thinks fit to make use of another hand." Dahl was a native of Sweden, and a rival of Kneller. But the treasurer of the day selected a Scottish artist, Thomas Murray, for the work, who also painted the portrait of King William III. Cunningham says: "the portraits are chiefly copies, and not good." Around the Hall are imitative bronze busts of the twelve Cæsars; and on the dais, marble busts of Lords Eldon and Stowell, by Behnes.

The oaken tables extend from end to end: "they cut their meat on wooden trenchers, and drink out of green earthen pots." (*Hatton*, 1708.) Dugdale tells us that "until the second year of Queen Elizabeth's reign, this Society did use to drink in cups of aspen-wood (such as are still in use in the King's Court), but then those were laid aside, and green earthen pots introduced, which have ever since been continued." Specimens of these green cups have been found in the Inner Temple, in Gray's Inn, and Lincoln's Inn; they hold half a pint, are tall, have a lip, and are surmised to have held the portions assigned to each student, who was also supplied with a drinking-horn.

The item "To Calves'-head, &c." in the old "battles" of the Middle Temple, refers to ancient times, when the chief cook of the Society gave every Easter Term a calves'-head breakfast to the whole fraternity, for which every gentleman paid at least one shilling. In the eleventh year of James I., however, this breakfast was turned into a dinner, and appointed to be on the first and second Monday in every Easter Term. The price per head was regularly fixed, and to be paid by the whole Society, as well absent as present—a fact which will account for the appearance of the item in the Trinity bills. The sum thus collected, instead of belonging solely to the cooks, was divided among all the domestics of the house (see *Herbert's Antiquities of the Inns of Court and Chancery*).—*B. Blundell, F.S.A.*

In this noble Hall was performed Shakspeare's *Twelfth Night*, as recorded in the table-book of John Manningham, a student of the Middle Temple: "Feb. 2, 1601(2). At our feast we had a play called 'Twelfth Night, or What you will.'"—"It is yet pleasant to know that there is one locality remaining where a play of Shakspeare was listened to by his contemporaries, and that play *Twelfth Night*." (*Charles Knight: Pictorial Edit. Shakspeare*.) The Middle Temple feasts were sumptuous: Evelyn describes that of 1688 "so very extravagant and great, as the like had not been seen at any time;" he condemns the revels as "an old but riotous custom." Aubrey was admitted 1646; here and at Trinity College, Oxford, he "enjoyed the greatest felicity" of his life. Among his "Accidents" we find:—"St. John's Night, 1673: In danger of being run through with a sword by a young templar, at Burges' chamber in the Middle Temple." (*Britton's Memoir of Aubrey*, pp. 14, 19.) Elias Ashmole was called to the bar at the Middle Temple, in 1660: he had chambers in Middle Temple Lane.

The Reader at the Middle Temple appointed for the Lent Season, 1861 (Dr. Phillimore), inaugurated his election to the office by reading, in the ancient hall of the Inn, a paper on "Minority and Majority in England and Abroad." The Readers are elected in rotation from the Benchers, and in the olden time their duty was to read law twice in the year—viz., in Hilary and Trinity Terms: but since the year 1680, these public readings had been discontinued.

The New Library, built at the river end of Garden-court, and upon additional ground purchased at the cost of 13,000*l.*, was commenced in August, 1858; H. R. Abraham, architect. It is a beautiful edifice, in the collegiate style of the fifteenth century. The lower portion is occupied by chambers; the material is Bath stone. The Library, which is a room of handsome proportions, 96 feet long, 42 wide, and 70 feet high, occupies the upper portion, and is approached by a winding staircase in an octagonal tower at the side. The roof, which reminds one of Westminster Hall, except that it

is two-centred, is of American pitch-pine—the first time this wood has been used for the purpose in England. The floor is of Portland stone, in panels, with Portland cement in the centre compartments. There is a stained glass window at each end: the oriel at the south is illuminated with the arms of the Royal Princes, from the time of Richard Cœur de Lion down to the present Prince of Wales; and the window at the north represents the shields of all who have been Benchers during the time of its erection. There are five windows at each side, which cast a dim studious light through silvered glass. Over the door is fitly hung the portrait of the founder of the Library, Robert Ashley. The Library was opened with due ceremony, October 30, 1861, by the Prince of Wales, his Royal Highness having previously been enrolled a Member of the Middle Temple, in form as follows:

The Master Treasurer moved, and the Lord Chancellor seconded, first, "that his Royal Highness be admitted a member of the Middle Temple;" and next, "that his Royal Highness be called to the degree of the outer Bar, and that the oath, on publication of the Call, be dispensed with." There being no opposition, both motions were carried unanimously, and the Prince was invested with the Bar gown and subscribed the Call-book. The next motion, also by the Treasurer, and seconded by the Lord Chancellor, was "that his Royal Highness be invited to the Bench." This motion was also agreed to, and the Prince assumed the Bencher's gown, and took his seat as a Master of the Bench, at the right hand of the Treasurer. The new Master next moved "that the Parliament do adjourn, and proceed to open the Library."

The event was commemorated by a sumptuous *déjeuner* and an evening *fête* to nearly 1000 guests. The portrait of the Prince of Wales has been painted for the Society; and His Royal Highness's bust has been placed in the Library.

There formerly stood in a plot of ground which has since been purchased by the Society of the Middle Temple, a Turkish (turban) tombstone, which was placed in the earth near a slab in the wall which marked the boundary of the Duchy of Lancaster. The stone is thought to have been abstracted from some Turkish cemetery, brought to England, perhaps as ballast, and thus placed as a curiosity in the little garden. A paper was written concerning this stone by W. H. Marley: it has disappeared.—*Notes and Queries*, 3rd s. ix. 109.

Among the eminent members of the Middle Temple were Plowden, the jurist; Sir Walter Raleigh; Sir Thomas Overbury; John Ford, the dramatist; Sir Edward Bramston, who had for his chamber-fellow Mr. Edward Hyde (afterwards Lord Chancellor Clarendon); Bulstrode Whitelocke; Lord Keeper Guildford; Lord Chancellor Somers; Wycherley and Congreve; Shadwell and Southerne; Sir William Blackstone; Dunning, Lord Ashburton; Lord Chancellor Eldon and Lord Stowell; Edmund Burke; Richard Brinsley Sheridan; and the poets Cowper and Moore. Oliver Goldsmith had chambers in Brick-court, at the window of which he loved to sit and watch the rooks in Middle Temple Garden; Goldsmith died here on the 4th of April, 1774, in his 46th year; his rooms were at No. 2, second floor, over the chambers of Blackstone, who was then finishing the fourth volume of his *Commentaries*.

Middle Temple Garden is well kept, and has an air of seclusion; here is a *catalpa syringifolia*, related to have been planted by Sir Matthew Hale. The Fountain in the adjoining Court is described at pp. 356–7.

*Sun-dials*.—There remain three dials, with mottoes: Temple-lane, "Pereunt et imputantur:" Essex-court, "Vestigia nulla retrorsum;" Brick-court, "Time and tide tarry for no man:" in Pump-court and Garden-court are two dials without mottoes; and in each Temple Garden is a pillar dial, dated 1770; that in Middle Temple is elaborately gilt. Upon the old brick house at the east end of Inner Temple-terrace, removed in 1828, was another dial, with this quaint inscription: "Begone about your business."

In Middle Temple-lane are some of the oldest chambers in the Temple, and within the gate are shops. It was between the Temple Gate and the Bar that, in 1583, Francis Bacon stood among his brother barristers to welcome Queen Elizabeth into the City. And in one of the shops within the Gate lived Benj. Motte, the publisher of the works of Pope and Swift; his imprint being "at the Middle Temple Gate."

LINCOLN'S INN, on the west side of Chancery-lane, occupies the site of the palace of Ralph Neville, Bishop of Chichester, and Lord High Chancellor to Henry III.; and of the ancient monastery of Black Friars in Holborn, granted to Henry de Lacy, Earl of Lincoln, who built thereon his town-house or *inn*: soon after whose death, in 1312, it became an Inn of Court, named from him Lincoln's Inn; when also the greater part of the estate of the see of Chichester was leased to students of the law. The Earl of Lincoln's garden, with a pond or vivary for pike, is noticed at p. 365.

The precincts of Lincoln's Inn comprise the old buildings, about 500 feet frontage in Chancery-lane, erected between the reigns of Henry VII. and James I. The Gatehouse, a fine specimen of Tudor brickwork, was built mostly at the expense of Sir Thomas Lovell, "double reader" and treasurer of the Society. The entrance is an obtusely-pointed arch, originally vaulted, between two four-storied square towers. The bricks and tiles used in the Gatehouse and Hall were made from clay dug from a piece of ground on the west side of the Inn, and called the Coneygarth, "well stocked with rabbits and game."

Over the Gatehouse arch are painted and gilt the royal arms of King Henry VIII. within the garter and crowned, having on the dexter side the arms of Henry Lacy, Earl of Lincoln; and on the sinister side the arms and quarterings of Sir Thomas Lovell, K.G.; beneath, on a riband, *Anno Dom.* 1518. Lower down is a tablet denoting an early repair, inscribed: "Insignia hæc refecta et decorata Johanne Hawles Armig. Solicitat. General. Thesaurario 1695." The original doors of oak, put up 6 Eliz. 1564, still remain. In the court on the west is the ancient Hall (the oldest structure in the Inn), and the old kitchen, now chambers; on the north is the Chapel (described at p. 213); and in the centre are the two Vice-Chancellors' Courts, built 1841.—Spilbury's *Lincoln's Inn*.

This and the three other courts of chambers were chiefly built *temp.* James I. At No. 13, from 1645 to 1650, lived John Thurloe, Secretary of Oliver Cromwell. In these chambers, it is said, was discussed early in 1649, by Cromwell and Thurloe, Sir Richard Willis's plot for seizing Charles II.; in the same room sat Thurloe's assistant, young Morland, at his desk, apparently asleep, and whom Cromwell would have dispatched with his sword, had not Thurloe assured him that Morland had sat up two nights, and was certainly fast asleep: he, however, divulged the plot to the king, and thus saved Charles's life. This narrative is given by Birch in his *Life of Thurloe*, but rests upon questionable evidence. Here was discovered in the reign of William III. a collection of papers, concealed in a false ceiling of the apartment: they form the principal part of Dr. Birch's *Thurloe State Papers*. There is a tradition that Cromwell had chambers in or near the Gatehouse, but his name is not in the registers of the Society: his son Richard was admitted a student 23 Charles I.

*Sun-dials*.—On two of the old gables are, 1. A southern dial, restored in 1840, which shows the hours by its gnomon from 6 A.M. to 4 P.M., and is inscribed "Ex hoc momento pendet æternitas." 2. A western dial, restored in 1794, the Right Hon. William Pitt, Treasurer, and again restored in 1848, from the different situation of its plane, only shows the hours from noon till night: inscription, "Qua redit, nescitis horam."

The Old Hall, rebuilt 22 Henry VII., 1506, occupies the site of the original Hall, and has a louvre on the roof, date 1552, and an embattled parapet; opposite the entrance, at the south end, is the old kitchen. The "goodly hall" is about 71 feet in length and 32 in breadth; height about equal to the breadth. It has on each side three large three-light windows, with arched and cusped heads; and a great oriel, transomed, with arched head and cusps: at each end the room was lengthened ten feet in 1819, when the open oak roof was removed, and the present incongruous coved plaster ceiling substituted. At the lower end is a massive screen, erected in 1565, grotesquely carved, and emblazoned with the full achievements of King Charles II., James Duke of York, Prince Rupert, the Earl of Manchester, Lord Henry Howard, and Lord Newport, date Feb. 29, 1671: at the end of the Hall, in panels, are the arms of distinguished members of the Society, including Lords Mansfield, Loughborough, Ellenborough, Brougham, &c. On the dais is the seat of the Lord Chancellor. The *commons* of the Society were held here until the building of the New Hall.

Among the earliest distinguished members of Lincoln's Inn were, Sir John Fortescue, *temp.* Henry VI.; Sir Thomas More, who removed here from New Inn;\* Lambard and Spelman, the antiquaries; the learned John Selden; Noy, Attorney-General to Charles I.; Lenthall, the Cromwellian Speaker; and the great Lord Chancellor Egerton.

In this ancient Hall were held all the revels of the Society, their masques and Christmasings; when the benchers laid aside their dignity, and dancing was enjoined for the students, as conducive "to the

\* "After a careful comparison of the facts and dates connected with both John Mores, the only reasonable conclusion that can be formed seems to be that John More, first the butler, afterwards the steward, and finally the reader, of Lincoln's Inn, was the Chancellor's grandfather; and that John More, junior, who was also at one time the butler there, was the Chancellor's father and afterwards the Judge. Not only does this descent suit precisely the 'non celebri sed honestâ natus' in Sir Thomas More's epitaph, but it explains the silence of his biographers, and accounts for the Judge and the Chancellor attending the readings of a society with which their family had been so closely connected."—*Edward Foss, F.S.A.: Archæologia*, vol. xxxv. p. 33.

making of gentlemen more fit for their books at other times" (Dugdale's *Origines*); and by an order 7th of James I. "the under-barristers were, by decimation, put out of commons, for example's sake, because they had not danced on the Candlemas-day preceding, when the judges were present." Of Christmas, 1661, Pepys writes: "The King (Charles II.) visited Lincoln's Inn to see the revels there; there being, according to an old custome, a prince and all his nobles, and other matters of sport and charge." Here were present, Clarendon, Ormond, and Shaftesbury, at the revels of Hale; Ley, and Denham the poet; and the gloomy Prynne standing-by. At these entertainments the Hall cupboard was set out with the Society's olden plate, which includes silver basins and ewers, silver cups and covers, a silver colledge-pot for festivals, and a large silver punch-bowl with two handles.

In 1671 Charles II. made a second visit, with his brother the Duke of York, Prince Rupert, and the Duke of Monmouth, who were entertained in the Hall, and admitted members of the Society, and entered their names in the admittance-book, which contains also the signatures of all members from the reign of Elizabeth to the present time. Sir Matthew Hale entered here student in 1629: he bequeathed a large collection of MSS. to the Library.

Not many years ago it was the custom at Lincoln's Inn for one of the servants, attired in his usual robes, to go to the threshold of the outer door about twelve or one o'clock, and exclaim three times, "*Venez manger!*" when neither bread nor salt was upon the table.

*New Square*, southward of the ancient buildings, was completed in 1697, by Mr. Henry Serle, a bencher of the Inn: in the centre was formerly a Corinthian column, with a vertical sun-dial; and at the base were four Triton *jets d'eau*: the area was enclosed and planted in 1845. In the reign of Charles II. this was open ground, known as Little Lincoln's Inn Fields, or Fickett's Fields: it is not part of the Inn.

*The Stone Buildings*, at the north-east extremity of the Inn, were designed by Sir Robert Taylor, and completed by Hardwick, in 1845: the architecture is beautiful Corinthian. This is only part of a design, in 1780, for rebuilding the whole Inn.

"The working drawings were made by a young man of the name of Leech, then a clerk in Taylor's office, who afterwards became a student of Lincoln's Inn, and died filling the high and lucrative office in the law of Master of the Rolls. Leech's drawings are preserved in the library of Lincoln's Inn.—Cunningham's *Handbook*, p. 473.

The garden was enlarged, and the terrace-walk on the west was made, in 1663:—

"To Lincoln's Inn, to see the new garden which they are making, which will be very pretty,—and to the walk under the chapel by agreement."—Pepys's *Diary*.

Into Lincoln's Inn walks Isaac Bickerstaff sometimes went instead of the tavern (*Tatler*, No. 13); and a solitary walk in the garden of Lincoln's Inn was a favour indulged in by several of the benchers, Isaac's intimate friends, and grown old with him in this neighbourhood (*Tatler*, No. 100).

The ruined gamester (*Tatler*, No. 13) in the morning borrows half-a-crown of the maid who cleans his shoes, "and is now gaming in Lincoln's-inn Fields among the boys for farthings and oranges, until he has made up three pieces; and then he returns to White's, into the best company in town."

The Gardens were much curtailed by the building of the New Hall and Library; when disappeared "the walks under the elms," celebrated by Ben Jonson. Among the officers of the Society is a "Master of the Walks." (See GARDENS, p. 365.) And, in 1662, was revived the ancient custom of electing a Lord-Lieutenant, and Prince of the Grange.

On the western side of the garden, almost on the site of the Coneygarth, are the *New Hall* and *Library*, a picturesque group, finely situated for architectural effect, in the late Tudor style (*temp.* Henry VIII.), having a corresponding entrance-gate from Lincoln's-inn-fields; architect, Philip Hardwick, R.A. The foundation-stone was laid April 20, 1843: the hall is arranged north and south, and the library east and west; the two buildings being connected by a vestibule, flanked by a drawing-room and council-room. The materials are red bricks, intersected with black bricks in patterns, and stone dressings. The south end has a lofty gable, inscribed, in dark bricks, "P. H." (Philip Hardwick), and the date 1843; flanked on each side by a square tower, battlemented; beneath are shields, charged with lions and milrines, the badges of the Society: between the towers is the great window of the Hall, of seven lights, transomed, and the four-central arch filled with beautiful tracery. On the apex of the gable, beneath a canopied pinnacle, is a statue of Queen Victoria; Thomas, sculptor. The side buttresses are surmounted by octagonal pinnacles. The roof is leaded, and in its centre is an elegant louvre, surrounded by slender pinnacles bearing vanes; the capping has crockets and gurgoyles, and is surmounted by a vane with direction-points in gilded metal-work—the whole very tasteful. The entrance to the Hall is at the south-east tower, by a double flight of steps to the porch, above which are the arms of the Inn. Above is the clock, of novel and beautiful design, with an enriched pedimental canopy in metal-work.

The central building, the entrance to the Library and Great Hall, has end oriels, and an octagonal embattled crown or lantern, filled with painted glass, and reminding

one of the octagon of Ely Cathedral. From the esplanade is the entrance by flights of steps to a porch, the gable bearing the lion of the Earl of Lincoln holding a banner; and at the apex of the great gable of the library roof is a circular shaft, surmounted by an heraldic animal supporting a staff and banner. The Library has large end oriels, of beautiful design, and five bay-windows on the north side; the lights being separated by stone compartments, each boldly sculptured with heraldic achievements of King Charles II., James Duke of York, K.G., Queen Victoria, Prince Albert, K.G. (all visitors of the Society), and Albert Edward Prince of Wales. The buttresses dividing the bays are terminated by pillars, surmounted by heraldic animals. At the north-west angle of this front is an octagonal bell-turret. On the western front towards Lincoln's-inn Fields, the clustered chimneys have a beautiful effect: they are of moulded red brick, resembling those at Eton College and Hampton Court Palace. The bosses, gurgoyles, and armorial, grotesque, and foliated ornaments throughout the building are finely sculptured.

Entering by the southern tower, the corridor is arranged on the plan of the college halls of the Universities, and has a buttery-hatch, and stairs leading to the vaulted kitchen, 45 feet square and 25 feet high, with one of the largest fire-places in England; adjoining are cellars for one hundred pipes of wine.

From the corridor, through a carved oak screen, you enter the Hall: length, 120 feet; width, 45 feet; height to the apex of roof, 62 feet. In size it exceeds the halls of the Middle Temple, Hampton Court Palace, and Christ-church, Oxford; but is exceeded in length by the hall of Christ's Hospital, which is 187 feet. The upper part of the screen serves as the front of the gallery, between the arches of which, upon pedestals, in canopied niches, are costumed life-size figures of these eminent members of the Society: Lord Chief-Justice Sir Matthew Hale; Archbishop Tillotson, one of the preachers of Lincoln's-inn; Lord Chief-Justice Mansfield; Lord Chancellor Hardwicke; Bishop Warburton, one of the preachers; and Sir William Grant, Master of the Rolls. The sides of the Hall are panelled with oak, and the cornice is enriched with gilding and colour. The five large stained-glass windows on either side contain, in the upper lights, the arms, crests, and mottoes of distinguished members of the Society, chronologically arranged, from 1450 to 1843; and the lower divisions are diapered with the initials "L. I." and the milrine. Above the windows is a cornice enriched with colour and gilding.

The roof is wholly of oak, and is divided into seven compartments by trusses, each large arch springing from stone corbels, and having two carved pendants (as in Wolsey's Hall at Hampton Court), at the termination of an inner arch, that springs from hammer-beams projecting from the walls. These pendants are illuminated blue and red, and gilt, and they each carry a chandelier to correspond. Between the wall trusses is a machicolated cornice, panelled and coloured.

Here is a nobly-designed fresco by G. F. Watts—"The Origin of Legislation." This great work was the gift of Mr. Watts, the artist; commenced in 1854, but soon after discontinued through illness, and not renewed till 1857—finished Oct. 1859.

On April 25, 1860, Mr. Watts was entertained in the Hall—an honour before conferred on no painter except Hogarth, who dined there in 1750—was presented by this Society with a silver-gilt cup, value 150*l.*, and purse of 500*l.*; the testimonial being "not in the character of compensation, but as a testimony of the friendly feeling of the Society for the man who had selected it as the recipient of so valued a gift, and of its appreciation of his genius as an artist."

On the northern wall, above the dais panelling, is the picture of Paul before Felix, painted in 1750 by Hogarth, and removed from a similar position in the Old Hall. The composition is good; but the conception of character commonplace.

By the will of Lord Wyndham, Baron of Finglass, and Lord High Chancellor of Ireland, the sum of 200*l.* was bequeathed to the Society, to be expended in adorning the Chapel or Hall, as the benchers should think fit. At the recommendation of Lord Mansfield, Hogarth was engaged to paint the picture, which was at first designed for the chapel.—Spilsbury's *Lincoln's Inn*, p. 103.

At the opposite end of the Hall is a noble marble statue, by Westmacott, of Lord Erskine, Chancellor in 1806.

On either side of the dais, in the oriel, is a sideboard for the upper or benchers' table; the other tables, ranged in gradation, two crosswise and five along the hall, are for the barristers and students, who dine here every day during term: the average

number is 200; and of those who dine on one day or other during the term, "keeping commons," is about 500.

The western oriel window contains, in the upper light, the armorial bearings of Ralph Neville, Bishop of Chichester: Henry Lacy, Earl of Lincoln: William de Haverhill, Treasurer to King Henry III., Edward Sulyard, Esq., by whom the inheritance of the premises of Lincoln's Inn was transferred to the Society in 1580: whose arms are also here—motto: "Longa profectio est pacis jus." In the middle of the window are the arms of King Charles II. within the garter, and surmounted by the crown, with the supporters and motto; also the arms of James Duke of York and of Prince Rupert. On the other side, the quarrels of the whole windows are diapered, like the other windows of the hall, with the milrime and L. I. The oriel window, on the eastern side, contains all the stained glass removed from the old hall, consisting of the armorial insignia of noblemen, legal dignitaries, &c. All the heraldic decorations, with the exception of the eastern oriel, are by Mr. Willement.—Spilisbury's *Lincoln's Inn*, pp. 104-5.

From the dais of the Hall large folding-doors open into the vestibule, east of which is the Council-chamber; and west, the Drawing-room: the stone chimney-pieces are finely sculptured. In the Drawing-room are portraits of Justice Glanville, 1598; Sir John Granville, Speaker of the House of Commons, 1640; Sir Matthew Hale, 1671, by M. Wright (acquired by the Society, with his collection of MSS.); Sir Richard Rainsford, Lord Chief-Justice K.B., 1676, by Gerard Soest; Lord Chancellor Hardwicke, 1737, after Ramsay; Lord Chancellor Bathurst, 1771, by Sir N. Dance; Sir John Skynner, Lord Chief Baron, 1771, by Gainsborough; Sir William Grant, Master of the Rolls, by Harlow; Francis Hargreave, Treasurer in 1813, by Sir Joshua Reynolds; and Sir H. Haddington, Speaker of the House of Commons.

In the Council-room is a portrait of Sir John Franklin, of Mavourn, Beds, Knight, a master in chancery thirty-three years; ob. 1707. Here are also several copies from the old masters; and a Lady with a Guitar, by William Etty, R.A. The walls of both Council and Drawing-rooms are also hung with a valuable collection of engraved portraits of legal dignitaries, eminent prelates, &c.

The Library, 80 feet long, 40 feet wide, and 44 feet high, has an open oak roof, of much originality. The projecting book-cases form separate apartments for study, and have an iron balcony running round them about midway, and another gallery over them against each wall. Each of the oriel windows displays arms of the present benchers; as also the five northern windows, except the lower lights of the central one, which are filled with the arms of Queen Victoria, of brilliant colour and broad treatment. The glass of the windows consists of small circular panes, termed beryl glazing, of remarkable brilliancy.

The Society's valuable collection of MSS., mostly bequeathed by Sir Matthew Hale, are deposited in two rooms opening from the Library. The books and MSS. exceed 25,000: the collection of law-books is the most complete in this country, and here are many important works on history and antiquities. The Library, founded in 1497, is older than any now existing in the metropolis; and many of the volumes still retain iron rings, by which they were secured by rods to the shelves. The early Year-books are chiefly in their original oak binding; and four of them belonged to William Rastell, nephew of Sir Thomas More. Among the other rarities are, *Le Mirror a Justices*, per Andrew Horne, in a hand of the reign of James I.; *Placita* of the whole reign of Edward II. on vellum, written in the fourteenth century; two volumes of Statutes on vellum, Edward III. and Henry V.; a MS. Year-book, Edward III.; the fourth volume of Prynne's *Records*, bought for 335*l.* by the Society at the Stowe sale, in 1849 (it was published in the year of the Great Fire, when most of the copies were burnt); several MSS. in the handwriting of Sir Matthew Hale, Archbishop Usher, and the learned Selden; a beautiful copy of the works of King Charles I., which had belonged to King Charles II.; Baron Maseres's copy of his *Scriptores Logarithmici*, six vols. 4to; Charles Butler's fine copy of *Tractatus Universi Juris*, with index, twenty-eight vols. folio, &c. (See Spilisbury's *Lincoln's Inn*, specially devoted to the Library; to which carefully-written work we are much indebted.)

The New Hall and Library were inaugurated October 30, 1845, by Queen Victoria and Prince Albert, when Her Majesty held a levee in the Library, at which the Treasurer of the Inn, J. A. F. Simpinkson, was knighted; the Prince became a member of the Society, and with the Queen signed his name in the Admittance-book. Her Majesty and Prince Albert then partook of an early banquet in the Great Hall; this being the first visit of a sovereign to the Inn for nearly two centuries.

Lincoln's Inn is exempted from poor-rates as extra-parochial. The ground on which the New Hall is built belonged, at the time of building, to the parish of St. Giles in the Fields; but was, by agreement, subsequently severed from that parish, and annexed to the vill or township of Lincoln's Inn, the Society paying annually a compensation to the parish for the rates.

The Old-buildings are continued to New-square, where may be noted some vine and fig trees. There are some very old houses and shops near the Carey-street gate: some shops are stuck up against the main building: these in former days had been book-stalls.

At Lincoln's Inn and at Gray's Inn the Curfew-bell is rung every night at nine o'clock; though, in this respect, the societies do not stand alone, for curfew-ringing is a practice still preserved in many towns scattered about England.

GRAY'S INN, on the north side of Holborn, and west of Gray's-Inn-lane, appears to have been "a goodly house since Edward III.'s time." (*Stow.*) It was originally the residence of the noble family of Grey of Wilton, who, in 1505, sold to Hugh Denny, Esq., "the manor of Portpoole (one of the prebends belonging to St. Paul's Cathedral), otherwise called Gray's Inn, four messuages, four gardens, the site of a windmill, eight acres of land, ten shillings of free rent, and the advowson of the chantry of Portpoole." The manor was next sold to the prior and convent of East Sheen, in Surrey, who leased "the mansion of Portpoole" to "certain students of the law," at the annual rent of 6*l.* 13*s.* 4*d.*; and after the Dissolution by Henry VIII. the benchers of Gray's Inn were entered in the King's books as the fee-farm tenants of the Crown, at the same rent as paid to the monks of Sheen.

The principal entrance to Gray's Inn is from Holborn, by a gateway erected 1592, a good specimen of early brickwork, leading to South-square (formerly Holborn-court), separated by the hall, chapel, and library from Gray's-inn-square. Westward is Field-court, with a gate, now blocked up, to Fulwood's Rents (*see* p. 363); and opposite is the lofty gate of the gardens; Verulam-buildings east; Raymond-buildings west; the northern boundary-wall being in King's-road. The old name of Gray's-inn-square was Corner-court, an evident relic of the Manor of Portpoole.

The Hall was completed in 1560. It has an open oak roof, divided into seven bays by Gothic arched ribs, the spandrels and pendants richly carved; in the centre is an open louvre, pinnacled externally. The interior is wainscoted, and has an oaken screen, decorated with Tuscan columns, caryatides, &c. The windows are richly emblazoned with arms. The men of Gray's Inn had their masques and revels, and were "practisers" of gorgeous interludes and plenteous Christmasings: a comedy acted here Christmas, 1527, written by John Roos, a student of the Inn, and afterwards serjeant-at-law, so offended Wolsey, that its author was degraded and imprisoned. Adjoining is the Chapel, probably on the site of the "chantry of Portpoole," wherein masses were daily sung for the soul of John, the son of Reginald de Gray, for which lands were granted to the prior and convent of St. Bartholomew, Smithfield: at their expense divine service was subsequently performed here on behalf of the Society; and after the Dissolution, the chaplain's salary was paid out of the Augmentation Court. At the Reformation, the Popish utensils, with a pair of organs, were sold, but were restored by Mary; and by command of Henry VIII. was taken out a window, "wherein the image of St. Thomas à Becket was gloriously painted." Richard Sibbs, author of *The Bruised Reed*, was one of the preachers.

In 29 Elizabeth, for the better relief of the poor in Gray's-inn-lane, alms were distributed thrice by the week at Gray's Inn gate.

James I. signified by the judges that none but *gentlemen of descent* should be admitted of Gray's Inn. The Readers had liberal allowances of wine and venison; *vis. viiij.* was paid for each mess; eggs and green sauce were the breakfast on Lenten-days; and beer did not exceed 6*s.* per barrel. Caps were compulsorily worn at dinner and supper; and hats, boots, and spurs, and standing with the back to the fire, in the hall, were forbidden under penalty. Dice and cards were only allowed at Christmas. Lodging double was customary in the old inn; and at a pension, 9 July, 21 Henry VIII., Sir Thomas Nevile accepted Mr. Attorney-General (Sir Christopher Hales) to be his bedfellow in his chamber here.

Gray's Inn has been noted for its exercises, called by Stow "Bolts Mootes, and putting of cases." Bailey defines "Bolting (in Gray's Inn), a kind of exercise, or arguing cases among the students." (*Dict.*, 3rd edit. 1737.) "Bolting is a term of art used in Gray's Inn, and applied to the bolting or arguing of moot cases" (*Cowell's Law Dict.*); and he argues the bolting of cases to be analogous to the *bolting* or sifting of meal through a bag. Judge Hale has "beats and bolts out the truth." Danby Pickering, Esq., of Gray's Inn, was the last who voluntarily resumed these mootings.

The Garden (Gray's-inn-walks) was first planted about 1600, when Mr. Francis

Bacon, after Lord Verulam, was treasurer. (See GARDENS, p. 366.) Howell, in a letter from Venice, June 5, 1621, speaks of Gray's-inn-walks as the pleasantest place about London, with the choicest society; and they were in high fashion as a promenade and place of assignation in Charles II.'s time, when from Bacon's summer-house, on a mount, there was a charming view towards Highgate and Hampstead. The Garden was formerly open to the public, like those of the Inner Temple and Lincoln's Inn.

Hall the chronicler, and Gascoigne the poet, studied at Gray's Inn: Gascoigne and his fellow-student Kinwelmersh translated the *Jocasta* of Euripides, which was acted in Gray's-inn-hall 1566. Bradshaw, president at the trial of Charles I., was a bencher. Sir Thomas Holt was treasurer of Gray's Inn; and his son, Lord Chief-Justice Holt, was entered upon the Society's books before he was ten years old: he is Verus the magistrate, in the *Tatler*, No. 14.

Lord Burghley entered at Gray's Inn in 1541, and made genealogy his special study. Sir Nicholas Bacon kept his terms here, was called to the bar of the Society, and was elected Treasurer 1552; and his son Francis, Lord Verulam, was admitted here, and made an ancient in 1576: here he sketched his great work the *Organum*, though law was his principal study. In 1582, he was called to the Bar; in 1586, made a Bencher; in 1588, appointed Reader to the Inn; and in 1600, the Lent double Reader: in the interval he wrote his *Essays*, dedicated "from my chamber at Graie's Inn, this 30 of Januarie, 1597." In 1583, he stood among the barristers at Temple Bar to welcome Queen Elizabeth into the City. Bacon had chambers in Gray's Inn when Lord Chancellor; and here he received the suitors' bribes, by which his name became tarnished with infamy. After his downfall and distress, when he had parted with York House, he resided, during his visits to London, at his old chambers in Gray's Inn; whence, in 1626, on a severe day, he went in his coach to Highgate, took cold in stuffing a fowl with snow as an anti-putrescent, became too ill to return to Gray's Inn, and was carried to the Earl of Arundel's house at Highgate, where he died within a week. Bacon is traditionally said to have lived in the large house facing Gray's Inn garden-gates, where Fulke Greville, Lord Brooke, frequently sent him home-brewed beer from his house in Holborn. Basil Montagu,\* however, fixes Bacon's chambers on the site of No. 1, Gray's-inn-square, first floor; the house was burnt Feb. 17, 1679, with 60 other chambers. (*Historian's Guide*, 3rd edit. 1688.) Lord Campbell speculatively states that Bacon's chambers "remain in the same state as when he occupied them, and are still visited by those who worship his memory." (*Lives of the Lord Chancellors*, vol. ii. p. 274.) The association with Bacon is recorded in "Verulam-buildings."

David Jones, the patriotic Welsh judge, *temp.* Charles I., was of Gray's Inn; Romilly was also a member; and Southey was entered here on leaving Oxford. The students were formerly often refractory. Pepys writes in May, 1667: "Great talk of how the Barristers and Students of Gray's Inn rose in rebellion against the Benchers the other day, who outlawed them, and a great deal to do; now they are at peace again."

Within Gray's-inn-gate, next Gray's-inn-lane, lived Jacob Tonson, who published here Dryden's *Spanish Friar*, 1681, said to be the first work published by the Tonsons: Jacob was the second son of a barber-chirurgeon in Holborn. At Gray's-inn-gate, also, lived Thomas Osborne, the bookseller, who gave 13,000*l.* for the *books* from the Harleian Library, for the binding of a portion of which Lord Oxford is stated by Dibdin to have paid 18,000*l.*

The *Gray's Inn Journal*, in the style of the *Spectator*, was started by Arthur Murphy, in 1752, and continued weekly two years. Murphy studied the law, was refused admission to the Societies of the Temple and of Gray's Inn because he had been an actor as well as author, but was admitted of Lincoln's Inn. He was of a high family. He died a Commissioner of Bankrupts, 1805. Clergymen are admitted to Inns of Court and to the Bar, though they were not so until very lately.

In Gray's Inn lived Dr. Rawlinson ("Tom Folio" of the *Tatler*, No. 158), who stuffed four chambers so full with books, that he slept in the passage. In Holborn-

\* Mr. Montagu, who died in 1852, possessed a glass and silver-handled fork, with a shifting silver spoon-bowl, which once belonged to Lord Verulam, whose crest, a boar, modelled in gold, surmounts the fork-handle.

court (now South-square) were the chambers of Joseph Ritson, the literary antiquary and rigid Pythagorean: the site is now occupied by the libraries, between the hall and chapel, built by Wigg and Pownall in 1841; style, elegant Italian.

*Admission to the Inns, and Call to the Bar.*—The four Inns of Court, viz. the two Temples, Lincoln's Inn, and Gray's Inn, have exclusively (through their board of Benchers, usually their Queen's Counsel) the power of conferring the degree of Barrister-at-Law, requisite for practising as an advocate or counsel in the Superior Courts. Lincoln's Inn is generally preferred for students who contemplate the Equity Bar; it being the locality of Equity Counsel and Conveyancers, and of Equity Courts or Courts of Chancery. If the student design to practise the common law, either immediately as an advocate at Westminster, the assizes, and sessions, or as a special pleader (a learned person who, having kept his terms, is allowed to draw legal forms and pleadings, though not actually at the bar), his choice lies usually between the Inner Temple, the Middle Temple, and Gray's Inn, though he may adopt Lincoln's Inn. The Inner Temple, from its formerly persisting on a classical examination before admission, became more exclusive than the Middle Temple or Gray's Inn. Gray's Inn has been numerously attended by Irish students, and has produced some of the greatest luminaries at the Irish Bar, including Daniel O'Connell. In the present day, Mr. Justice Lush, Serjeant Payne, Lord Romilly, M.R., and Mr. Huddleston, Q.C., have been students of Gray's Inn, and the two latter are still among its benchers.

To procure admission to either of these Inns, the student must obtain the certificate of two barristers, coupled in the Middle Temple with that of a bencher, to the effect that the applicant is a fit person to be received into the Inn for the purpose of being called to the Bar. Once admitted, the student has the use of the Library, and is entitled to a seat in the church or chapel of the Inn, and to have his name set down for chambers. He is then required to keep *commons*, by dining in the hall for twelve terms (four terms occur in each year); on commencing which, he must deposit with the treasurer 100*l.*, to be retained with interest until he is called; but resident members of the Universities are exempt from this deposit. The student must also sign a bond with sureties for the payment of his commons and term fees. In all the Inns no person can be called unless he is above twenty-one years of age and three years' standing as a student. The *call* is made by the benchers in council; after which the student becomes a barrister, and takes the usual oath at Westminster. A Council of Legal Education has, however, of late years been established by the four Inns of Court, to superintend the subject of the education of students for the Bar; and, by order of this council, law lectures are given by learned professors at the four Inns, all of which any student of any of the Inns can attend. Examinations also take place, and scholarships, certificates, and other marks of approbation are the rewards of the successful students. Nevertheless persons may still be called to the Bar, regardless of the lectures and examinations; but in all cases keeping *commons* by dining in the hall is still absolutely necessary.

*A Hall Dinner* is a formal scene. At five or half-past five o'clock, the barristers, students, and other members in their gowns, having assembled in the hall, the benchers enter in procession to the dais; and the steward strikes the table three times, grace is said by the treasurer or senior bencher present, and the dinner commences: the benchers observe somewhat more style at their table than the other members do at theirs: the general repast is a tureen of soup, a joint of meat, a tart, and cheese, to each mess consisting of four persons; each mess is also allowed a bottle of port-wine. The dinner over, the benchers, after grace, retire to their own apartment. At the Inner Temple, on May 29, a gold cup of "sack" is handed to each member, who drinks to the happy restoration of Charles II. At Gray's Inn a similar custom prevails, but the toast is the memory of Queen Elizabeth. The Inner Temple Hall waiters are called *panniers*, from the *panarii* who attended the Knights Templars. At both Temples the form of the dinner resembles the repast of the military monks; the benchers on the dais representing the Knights; the barristers, the *Frères*, or Brethren; and the students, the Novices. The Middle Temple still bears the arms of the Knights Templars, viz. the figure of the Holy Lamb.

The entrance expenses at the Inner Temple (the average of the costs at other Inns) are 40*l.* 11*s.* 5*d.*, of which 25*l.* 1*s.* 3*d.* is for the stamp; on call, 82*l.* 12*s.*, of which 52*l.* 2*s.* 6*d.* is for the stamp: total 123*l.* 3*s.* The commons bill is about 12*l.* annually.

*Arms of Temple, Inner:* Az. a pegasus salient, or. *Temple, Middle:* Arg. on a cross gu. a paschal lamb or, carrying a banner of the first, charged with a cross of the second. *Lincoln's Inn:* Or, a lion rampant purp. These were the arms of Lacy, Earl of Lincoln. *Gray's Inn:* Sa. a griffin segreant, or.

## INNS OF CHANCERY.

THESE Inns were formerly the nurseries of our great lawyers; but they are at present attached only by name to the parent Inns of Court: the Inner Temple had three, *Clement's*, *Clifford's*, and *Lyon's Inns*; the Middle Temple one, *New Inn*; Lincoln's Inn one, *Thavie's*; and Gray's Inn two, *Barnard's* and *Staple Inns*.

BARNARD'S INN, Holborn, anciently Mackworth's, from having belonged to Dr. John Mackworth, Dean of Lincoln, *temp.* Henry VI., was next occupied by one Barnard, when it was converted into an Inn of Chancery; the arms of the house are those of Mackworth, viz. party per pale, indented ermine and sables, a chevron, gules, fretted or. The ancient Hall, maintained in the olden taste, is the smallest in the London Inns: it is 36 feet long, 22 feet wide, and 30 feet high.

In Barnard's Inn, No. 2, second-floor chambers, lived the chemist, Mr. Peter Woulfe, F.R.S., a believer in alchemy. (See ALCHEMISTS, p. 3.)

Westward, in Holborn, in Dyer's buildings (the site of some almshouses of the Dyers' Company), lived William Roscoe when he published his edition of Pope's Works, with notes and a life of the poet, 10 vols. 8vo, 1824.

CLEMENT'S INN, Strand, is named from being near the church of St. Clement Danes, and St. Clement's Well. It was a house for students of the law in the reign of Edward IV. The Elizabethan iron gate, erected in 1852, bears the device of St. Clement, an anchor without a stock, with a C couchant upon it; as also does the Hall, built in 1715. In the small garden is a kneeling figure supporting a sun-dial; it is painted black, and has hence been called a blackamoor.

Shakspeare has left us a picture from this Inn at his period :

"*Shallow.* I was once of Clement's Inn where I think they will talk of mad Shallow yet.

"*Silence.* You were called lusty Shallow then, cousin.

"*Shallow.* By the mass, I was called any thing; and I would have done any thing indeed, and roundly too. There was I and little John Duit of Staffordshire, and Black George Barnes of Staffordshire, and Francis Pickbone and Will Squele, a Cotswold man; you had not four such swinge-bucklers in all the Inns of Court again."

Then Shallow tells of Sir John Falstaff breaking "Skogan's head at the court-gate, when he was a crack not thus high; and the very same day did I fight with one Sampson Stockfish, a fruiterer, behind Gray's Inn."

"*Shallow.* Oh, Sir John, do you remember since we lay all night in the Windmill in St. George's Fields?"

"*Falstaff.* We have heard the chimes at midnight, Master Shallow.

"*Shallow.* I remember at Mile-end Green (when I lay at Clement's Inn), I was then "Sir Dagonett" in Arthur's Show."

Then Falstaff says of Shallow: "I do remember him at Clement's Inn, like a man made after supper of a cheese-paring."—*Henry IV.* Part II. act iii. sc. 2.

Sir Edmund Sanders, Lord Chief-Justice of the Court of King's Bench from 1681 to 1683, was originally a poor boy, who used to beg scraps at Clement's Inn, where an attorney's clerk taught him to earn some pence by hackney-writing. St. Clement's Well, on the east of the Inn, and lower end of Clement's-lane, is mentioned by Fitzstephen: it is now covered, and has a pump placed in it.

CLIFFORD'S INN, behind St. Dunstan's Church, Fleet-street, is named from Robert Clifford, to whom the property was granted by Edward II., and by his widow was let to students of the law. The arms are those of Clifford, viz. chequy, or and azure, a fesse and bordure gules, bezanté. Sir Edward Coke was admitted of this Inn, 1571; and Selden, 1602. Harrison, the regicide, was an attorney's clerk here: in the same office with him was John Bramston, cousin of Sir John Bramston, who records: "When the warr begann, his fellow-clerke, Harrison, perswaded him to take armes (this is that famous rogue Harrison, one of the King's judges), which he did, that he might get to the King, which he soon did."—*Autobiography.*

The Hall is modern Gothic, but has some old armorial glass. Here is an oaken case, in which are the Society's rules written on vellum, with illuminated initials and the arms of England, *temp.* Henry VIII. In this Hall Sir Matthew Hale and the judges sat after the Great Fire of 1666, to adjudicate in disputes between landlords and tenants, &c. The most authentic record of any settling of the Law Societies in the reign of Edward III. is a demise, in the 18th year, from Lady Clifford *apprenticiis de Banco*, "of that house near Fleet-street called Clifford's Inn."

A very peculiar dinner-custom is observed in the Hall, which is believed to be unique. The Society consists of two distinct bodies—"the Principal and Rules," and the junior members, or "Kentish Mess." Each body has its own table: at the conclusion of the dinner, the chairman of the Kentish Mess, first bowing to the Principal of the Inn, takes from the hands of the servitor four small rolls, or loaves of bread, and, without saying a word, he dashes them three several times on the table; he then discharges them to the other end of the table, from whence the bread is removed by a servant in attendance. Solemn silence—broken only by three impressive thumps upon the table—prevails during this strange ceremony, which takes the place of grace after meat in Clifford's Inn Hall; and concerning which, not even the oldest member of the Society is able to give any explanation.—*Notes and Queries*, 2nd S., No. 4. In No. 7, Mr. Buckton, of Lichfield, says: "Cakes, sacred to Ceres, usually terminated the ancients' feasts; and the rolls at Clifford's Inn may be thrown down as an offering to Ceres, *legifera*, as she first taught mankind the use of laws"—a remote probability.

In Clifford's Inn "lived Robert Pultock, author of *Peter Wilkins*, with its Flying Women. Who he was is not known—probably a barrister without practice; but he wrote an amiable and interesting book."—*Leigh Hunt.*

Clifford's Inn has a terrace and raised garden, rearward of which is the new Record Office, of late Gothic or Tudoresque style, somewhat of a German character, with massive buttresses and Decorated windows.

FURNIVAL'S INN, between Brook-street and Leather-lane, was originally the town mansion of the Lords Furnival, and was an Inn of Chancery in the 9th of Henry IV.; was held under lease *temp.* Edward VI., and the inheritance in the then Lord Shrews-

bury was sold early in Elizabeth's reign to the Benchers of Lincoln's Inn, who leased the property to the Society of Furnival's Inn. Sir Thomas More was Reader here for three years. The original buildings were mostly taken down in Charles I.'s time, and then re-edified with a lofty street-front of fine brickwork, decorated with pilasters. The old Gothic Hall remained until 1818, when the entire Inn was taken down, and rebuilt of brick by Peto in modern style, with stone columns and other accessories. In the square is a statue of Peto. Thomas Fiddall, attorney of this Inn, in 1654 wrote a Conveyancing Guide, published with his portrait. Furnival's Inn is let in chambers, but is no longer an Inn of Court or Chancery. Part of its interior is occupied by a well-appointed hotel.

"In the 32d of Henry VI., a tumult betwixt the gentlemen of innes of court and chancery and the citizens of London happening in Fleet-street, in which some mischief was done, the principals of Clifford's Inne, Furnivall's Inne, and Barnard's Inne, were sent prisoners to Hartford Castle."—*Stow's Annals*.

LYON'S INN, Strand, between Holywell-street and Wych-street, was originally a guest-inn or hostelry, held at the sign of the *Lyon*, and purchased by gentlemen, professors and students in the law, in the reign of King Henry VIII., and converted to an Inn of Chancery. Hatton describes the Inn, in 1708, as follows:—

Lyon's Inn, an Inn of Chancery, situate on the Sh. side of Witch Str. It has been such an Inn since Anno 1420, or sooner. It is governed by a Treasurer and 12 Ancients; those of this House are 3 weeks in Michaelmas Term, other Terms 2 in Commons; and pay 5s. for the Reading Weeks, for others 2s. 6d. Here are Mootings once in 4 terms, and they sell their chambers for 1 or 2 Lives. Their Armorial Ensigns are Chequy Or and Azure, a Lyon Rampant Sable. They have a handsome Hall, built in the year 1700.

Herbert, in his *Antiquities of the Inns of Court and Chancery*, the materials for which he mostly derived from Dugdale's *Origines Juridiciales*, says:—"It (Lyon's Inn) is known to be a place of considerable antiquity from the old books of the stewards' accounts, which contain entries made in the time of King Henry V. How long before that period it was an Inn of Chancery is uncertain." Sir Edward Coke, the year after his call to the Bar in 1579, was appointed Reader at Lyon's Inn, where his learned lectures brought him crowds of clients; this being the start of our great constitutional lawyer.

The whole of the Inn was taken down in 1863; and a sketch of certain of its late tenants will be found in *Walks and Talks about London*, 1865. In chambers at the south-east corner of the Inn lived the gambler, William Weare, who was murdered by John Thurtell and others, at Elstree, in Hertfordshire, as commemorated in a ballad of the time, attributed to Theodore Hook:—

"They cut his throat from ear to ear,  
His brains they battered in:  
His name was Mr. William Weare,  
He dwelt in Lyon's Inn."

He left his chambers on the afternoon of October 24, 1823, for Elstree, whence he never returned alive. Lyon's Inn Hall bore the date 1700, and a lion sculptured in its pediments. The Inn formerly had its sun-dial, and a few trees. Here lived Philip Absolon, who, in conjunction with E. W. Brayley, wrote a *History of Westminster Abbey*. The place had long ceased to be exclusively tenanted by lawyers.

NEW INN, Wych-street, adjoins Clement's Inn: the Hall and other buildings are modern. On the site, about 1485, was a guest inn, or hostelry, with the sign of the Virgin Mary, and thence called Our Lady's Inn. It was purchased or hired by Sir John Fineux, Chief Justice of the King's Bench, in the reign of Edward IV., at 6l. per annum, for the law-students of St. George's Inn, in St. George's-lane, Little Old Bailey; here also the students of the Strand Inn nestled, after they were routed from thence in the reign of Edward VI. by the Duke of Somerset. The armorial ensigns of New Inn are, vert, a flower-pot argent. Sir Thomas More studied here in the reign of Henry VII., before he entered himself of Lincoln's Inn; and in after-life he spoke of "New Inn fare, wherewith many an honest man is well contented." Against the Hall is a large vertical sun-dial; motto, "Time and tide tarry for no man."

SERJEANTS' INN, CHANCERY-LANE.—There were originally three Inns provided for the reception of the Judges and such as had attained to the dignity of the coif—viz.,

first, Scroop's Inn or Serjeants' Place, opposite St. Andrew's Church, Holborn, now long deserted by the Serjeants; secondly, Serjeants' Inn, Fleet-street, which was held by lease under the Dean and Chapter of York, and is now deserted as an inn for Serjeants; and thirdly, Serjeants' Inn, Chancery-lane, the only place that can with propriety be at present called Serjeants' Inn. Scroop's Inn belonged to John Lord Scroop, and was afterwards known as Scroop's-court. After his death it was let out to some serjeants, who adopted it as their place, whence it was called Serjeants' Inn in Holborn. After they disused it, the site was used for tenements and gardens. The serjeants about the beginning of the reign of Henry VI., and not before, resorted to the Fleet-street Inn, which had a very fine chapel and hall and a stately court of tall brick buildings. It likewise retained a steward, a master cook, a chief butler, with other attendants and servants, and a porter. The old Inn in Holborn having been sold, and the Fleet-street Inn having become dilapidated, the serjeants were quite ready to entirely emigrate to Chancery-lane, the third and chief Inn to which one need invite attention. It bore once the name of "Faryndon Inn," and it was known as early as the 17 Richard II., when the inheritance belonged (and has done since) to the Bishop of Ely and his successors. In the "account" of the Bishop's bailiff 12 Henry IV., it was called "Faryndon Inne," and it was stated "that the serjeants-at-law had lodgings there." In 1416, 7 Henry V., the whole house was demised to the judges and others learned in the law. The freehold, after having passed through various hands, came to be held for three lives by Sir Anthony Ashley, Knight, under whom the judges and serjeants continued to rent it. Eventually the serjeants negotiated with the Bishop of Ely for the purchase of the fee simple of the property, and the same was ultimately vested in the Society by an Act of Parliament, creating the Society of Serjeants' Inn, Chancery-lane, for the purpose, a Corporation, upon the annual payment for ever of a fee farm rent to the Bishop and his successors. The officers belonging to this Inn are similar to those in Fleet-street—namely, a steward, a master cook, a chief butler, and their servants, and a porter. In 1837-8 the Inn was rebuilt (under the auspices of Serjeant Adams, the then treasurer) by Sir Robert Smirke, R.A., except the old dining-hall of the Society, which was then fitted up as a court for Exchequer equity sittings, but is now used as the state dining-room of the serjeants, including the common law judges, who are always serjeants-at-law. The handsomest room is, however, the private dining-room, which contains one of the finest collections of legal portraits in the kingdom, including those of Sir Edward Coke, by Cornelius Jansen; of Lord Mansfield, Lord King, Sir Francis Buller, Chief Justice Tindal, Lords Eldon, Denman, and Lyndhurst, all by painters of note. The windows (containing the armorial ensigns of judges and serjeants) are finely executed. The chambers where the judges of the common law sit to hear summonses and other private matters are in this Inn. The arms of Serjeants' Inn are, or, a stork ppr.

This Serjeants' Inn is the exclusive property of the serjeants-at-law, or *Servientes ad Legem*, who are the highest degree in the common law. The serjeantcy-at-law, moreover, is somewhat of a title or dignity as well as a degree, being created by the Queen's writ. In his armorial ensigns, the serjeant bears a helmet open and front face, like that of a knight, and not with the vizor down as an esquire's is. He, in a knightly way, gives, on his appointment, gold rings to the Queen, the Lord Chancellor, and to his own legal friends. The serjeants-at-law form a brotherhood to which the judges of the Common Law Courts at Westminster must belong. For this reason, as being of the same body, the judges of the Common Law Courts at Westminster invariably address a serjeant as "Brother;" and they never apply the term to any other counsel. The serjeants are a body incorporated by Act of Parliament. The robes of the serjeant vary in colour on particular days; and peculiar to him is "the coif," or circular black patch on the top of his wig. By that mark, peculiar to his order, the serjeant-at-law may always be recognised in court. The serjeant, on joining Serjeants' Inn, quits entirely the Inn of Court to which he, as a student and barrister, belonged.

At some of the Inns of Court, if the new-made serjeant leaves the Inn in term-time, the following ceremony occurs: after giving a breakfast to the benchers of the Inn in their council chamber, the new serjeant proceeds to the banqueting-hall, and is there presented

by the treasurer with a silver purse containing ten guineas, as a retaining fee for any occasion on which the Society may in future require his services. A bell is then rung as a warning that he has ceased to be a member of the Inn.\*

**SERJEANTS' INN, FLEET-STREET.**—This other, but obsolete Inn, in Fleet-street, already described, still bears the name of **SERJEANTS' INN**, and this is liable to be mistaken for the now only real Serjeants' Inn, in Chancery-lane. The Fleet-street Inn was destroyed in the Great Fire, was rebuilt in 1670, and again rebuilt, as we now see it, with a handsome stone-fronted edifice, designed by Adam, the architect. This Inn is now let in private chambers to any one who likes to rent them.

**STAPLE INN**, Holborn, nearly opposite Gray's-inn-lane, is traditionally named from having been the inn or hostel of the Merchants of the (Wool) Staple, whither it was removed from Westminster by Richard II. in 1378. It became an Inn of Chancery *temp.* Henry V.; and the inheritance of it was granted 20th Henry VIII. to the Society of Gray's Inn. The Holborn front is of the time of James I., and one of the oldest existing specimens of our metropolitan street-architecture. The Hall is of a later date, has a clock-turret, and had originally an open timber roof: some of the armorial window-glass is of date 1500; there are a few portraits, and at the upper end is the wool-sack, the arms of the Inn; and upon brackets are casts of the twelve Cæsars. In the garden adjoining was a luxuriant fig-tree which nearly covered the south side of the Hall. Upon a terrace opposite are the offices of the Taxing Masters in Chancery, completed in 1843, Wigg and Pownall, architects; in the purest style of the reign of James I., with frontispiece, arched entrances, and semicircular oriels, finely effective: the open-work parapet of the terrace, and the lodge and gate leading to Southampton-buildings, are very picturesque.

Dr. Johnson lived in Staple Inn in 1759: in a note to Miss Porter, dated March 23, he informs her that "he had on that day removed from Gough-square, where he had resided ten years, into chambers at Staple Inn;" here he wrote his *Idler*, seated in a three-legged chair, so scantily were his chambers furnished. In 1760, Johnson removed to Gray's Inn. Isaac Reed lived at No. 11, Staple Inn.

**STRAND INN, or CHESTER INN** from its being near the Bishop of Chester's house, was taken down *temp.* Edward VI., by the Duke of Somerset for building his palace; it occupied part of the site of the present Somerset House. Oocleve, the pupil of Chaucer, in the reign of Henry V., is said to have studied the law at "Chestre's Inn."

**SYMOND'S INN**, Chancery-lane, though named from a gentleman of the parish who died in 1621, is stated to be the only portion retained by the Bishops of Chichester of their property in Chancery-lane, where they formerly had a palace; and here are Bishop's-court and Chichester-rents.

**THAVIE'S INN**, between Nos. 56 and 57, Holborn-hill, was originally the dwelling of John Thavie, of the Armourers' Company, who let the house *temp.* Edward III. to apprentices to the law: it was subsequently purchased as an Inn of Chancery by the benchers of Lincoln's Inn, by whom it was sold in 1771; destroyed by fire, and rebuilt as a private court. In the adjoining church of St. Andrew is a monument to John Thavie, who, in 1348, "left a considerable estate towards the support of this fabrick for ever," from which property the parish now derive an annual income of 1300*l.*

### ISLE OF DOGS (THE),

**A** PART of Poplar Marsh, lying within the bold curve of the Thames between Blackwall and Limehouse, was originally a peninsula; in a Map drawn in 1588 by Robert Adams, engraved in 1738, this name is applied to an islet in the Thames, still in part existing, at the south-west corner of the peninsula, and from this spot the name appears to have extended to the entire marsh. (*Notes and Queries*, No. 203.) In 1799–1800, a canal was cut through the isthmus by the Corporation of London, to

\* Nearly opposite Serjeants' Inn, Chancery-lane, were two houses, date 1611, taken down in 1853. The richly-carved and picturesque house at the south-west corner, in Fleet-street (often engraved), was taken down for widening the lane in 1799.

save ships the long passage round the Isle; but since sold to the West India Dock Company, and now a timber-dock. Here Togodumnus, brother of Caractacus, is said to have been killed in a battle with the Romans under Plautius, A.D. 46. Traditionally, it was named from the hounds of Edward III. being kept there, for contiguity to Waltham and other royal forests in Essex. Again, *Isle of Dogs* is held to be corrupted from *Isle of Ducks*, from the wildfowl upon it. Here (says Lysons) stood the chapel of St. Mary, mentioned in a will of the fifteenth century, "perhaps an hermitage founded for saying masses for the souls of mariners." The remains of the chapel existed to a very late date. Pepys speaks of it as "the unlucky Isle of Doggs." He also speaks of a ferry in the Isle of Dogs, which is named as a horse-ferry by Norden in the *Speculum Britannicæ*, 1592 (MS.). This ferry is still used. The ground is very rich, and in Strype's time oxen fed here sold for 3*l.* apiece: the grass was long prized for distempered cattle. The island is a pleistocene drift or diluvial deposit, in which has been found a subterranean forest of elm, oak, and fir trees, eight feet below the grass, and lying from south-east to north-west; some of the elms were three feet four inches in diameter, accompanied by human bones and recent shells, but no metals or traces of civilization: the marsh is now enclosed by a pile and brick embankment. Here Captain Brown, R.N., established his works for the manufacture of iron suspension-bridges and iron cables: in 1813, he built here a suspension-bridge for foot-passengers, weighing only 38 cwt., but carts and carriages passed safely over it; the span was 100 feet. Captain Brown also constructed the chain-pier at Brighton, in 1822-3. About this time the Isle of Dogs began to be thickly inhabited: here is St. Edmund's Roman Catholic Chapel. The late Alderman Cubitt built here a large number of houses, named Cubitt-town, and a Gothic church. The Isle is partly covered with stone-wharves, iron ship-building and chemical works, &c. Adjoining are the dockyards of the Wigrams and Greens, formerly Perry's, mentioned by Pepys in 1660-61: the picturesque old masting-house is 120 feet high. Near the principal entrance to the West India Docks is a bronze statue (by Westmacott) of Mr. Milligan, by whom the Docks were begun and principally completed. (See MILLWALL.)

The working men of the Isle of Dogs number some 15,000, engaged in the numerous factories and shipyards; for whose recreation has been formed a Free Library, to provide them with amusement for evenings too often spent in dissipation.

### ISLINGTON,

**C**ALLED also Iseldon, Yseldon, Eyseldon, Isendune, and Isondon, and of all the villages near London alone bearing a British name, was originally two miles distant north of the town, to which it is now united. *Iseldon* is conjectured to signify the lower fort, or station; and as there was undoubtedly a Roman camp at Highbury, this name may have been given to the camp which a few years since was visible in the field beside Barnsbury Park. Iseldon, in Domesday Book, possesses nearly 1000 acres of arable land alone; and so well cleared was the property, that there only remained "pannage for 60 hogs" (woodlands) adjoining Hornsey.

The great benefactor of Islington was Richard de Cloudesley, who by will, dated 1517, among other bequests to the parish, left to poor men gowns with the names of *Jesu* and *Maria* upon them; also 40*s.* for repairing and amending the causeway between his house and Islington Church; and a load of straw to be laid upon his grave: but superstition would not let Cloudesley's "bodie rest until certain exorcises, at dede of night," had quieted him, with "diuers diuine exorcises at torchlight." The name of this benefactor is preserved in Cloudesley Square and Terrace. Algernon Percy, Earl of Northumberland, is said to have resided at Newington Green, where Henry VIII. was a frequent visitor, probably on his lawking excursions; and one of his proclamations, in 1516, commands that "the games of hare, partridge, pheasant, and heron, be preserved for his owne disport and pastime; that is to saye, from his palace of Westminster to St. Giles in the Fields, and from thence to Islington, to our Lady of the Oke, to Highgate, to Hornsey Parke, to Hamsted Heath," &c.

Islington retained a few of its Elizabethan houses to our time, and its rich dairies are of like antiquity: in the entertainment given to Queen Elizabeth at Kenilworth Castle, in 1575, the Squier Minstrel of Middlesex glorifies Islington with the motto, "*Lac caseus infans*;" and it is still noted for its cow-keepers. It was once as famous for its cheese-cakes as Chelsea for its buns; and among its other notabilities were custards and stewed "pruans," its mineral spa, and its ducking-ponds—Ball's Pond dating

from the time of Charles I. At the lower end of Islington, in 1611, were eight inns, principally supported by summer visitors:—

“Hogsdone, *Islington*, and Tothnam Court,  
For cakes and creame had then no small resort.”

Wither's *Britain's Remembrancer*, 1623.

Cowley, in his poem “Of Solitude,” points to Islington of the seventeenth century, in thus apostrophizing “the monster London”:—

“Let but thy wicked men from out thee go,  
And all the fools that crowd thee so,  
Ev'n thou, who dost thy millions boast,  
A village less than Islington will grow,  
A solitude almost.”

Lord Macaulay, in like vein, says, “Islington was (*temp.* Charles I.) almost a solitude, and poets loved to contrast its silence and repose with the din and turmoil of the monster London.”—*History of England*, vol. i. pp. 349–350.

Islington parish includes Upper and Lower Holloway, three sides of Newington-green, and part of Kingsland; the southern portion of the village being in the parish of St. James, Clerkenwell. Besides St. Mary's, the mother-church, here are a large church in Lower Holloway; St. John's, Upper Holloway; St. Paul's, Ball's Pond; and Trinity, Cloudeley-square—all three designed by Barry, R.A., 1828–9, architect, also of St. Peter's, in 1835; Christchurch, Highbury, designed by Allom, in 1849, has a picturesque tower and spire, and interior of novel plan. There are also other district churches; St. John the Evangelist's (Roman Catholic), with lofty gable and flanking towers; besides numerous chapels for every shade of dissent: Claremont Chapel, built in 1820, was named in memory of the lamented Princess Charlotte.

*Canonbury*, about half a mile north-east of the old church, was once the country-house of the Prior of the Canons of St. Bartholomew: the tower is described at p. 78.

An old Islingtonian has favoured us with these details of the New River: Act of Parliament passed 1606; begun Feb. 20, 1608; the labourers received 2s. 6d. per day; stopped at Enfield for want of funds; completed in five years; opened with great ceremony at the Head, Sadler's Wells, Michaelmas Day, 1613, before the Lord Mayor and Lord Mayor Elect, Sir Thomas Myddelton, brother of Sir Hugh; King James, and Sir Hugh Myddelton.

*The New River* enters Islington by Stoke Newington, and passing onward, beneath Highbury, to the east of Islington, ingulfs itself under the road, in a subterranean channel of 300 yards; again rises in Colebrook-row, and still coasting the southern side of Islington, reaches its termination at the New River Head, Sadler's Wells. From this vast circular basin the water is conveyed by sluices into large brick cisterns, and hence by mains and riders to all parts of London. (*See* NEW RIVER.) Upon the Green, now planted and inclosed as a garden, is a portrait-statue in stone of Sir Hugh Myddelton, with a drinking fountain, presented by Sir Morton Peto, Bart., M.P.

The centre of Islington is perforated by the *Regent's Canal* brick tunnel, commencing westward of White Conduit House, and terminating below Colebrook-row. This tunnel is 17 feet wide, 900 yards long, and 18 feet high, including 7 feet 6 inches depth of water.

*Highbury* was originally a summer camp of the Romans, and adjoined the Ermine-street. The manor was given to the Priory of St. John of Jerusalem between 1271 and 1286, and was the Lord Prior's country residence, destroyed by Jack Straw in 1371. The site is now occupied by Highbury House, where is a lofty observatory, partly built by John Smeaton, F.R.S.

Among the more eminent inhabitants of Islington were John Bagford, the antiquary and book and print collector; William Collins, whilst under mental infirmity, was visited here by Dr. Johnson; Alexander Cruden, compiler of the *Concordance*, died here in 1770; Oliver Goldsmith, and Ephraim Chambers the cyclopædist, lodged in Canonbury tower; Quick, the comedian, in Hornsey-row; John Nichols, F.S.A., editor of the *Gentleman's Magazine*, lived in Highbury-place; where Richard Percival, F.S.A., formed a matchless collection of drawings and prints of Islington; William Knight, F.S.A., of Canonbury, a collection of angling-books and missals. William Upcott, F.S.A., the bibliographer and autograph-collector, died here in 1845; and Charles Lamb retired from his clerkship in the India House to a cottage in Colebrook-row, in 1825: “the New River (rather elderly by this time) runs (if a moderate walking pace can be so termed) close to the foot of the house.” (*C. Lamb*.) The house remains, but has been much altered; and the New River has been covered over. Hard by was “Starvation Farm,” where the owner, a foreign baron, kept his emaciated stock.

In July, 1864, was dispersed by auction the valuable Library of the late Mr. George Daniel, of 13, Canonbury-square, together with his collection of Original Drawings and Engraved Portraits of Actors and Actresses, Water-colour Drawings, Pottery and Porcelain, &c. The Library included the First

Four Folios of Shakspeare's Works, the First Folio producing 682 guineas: the Quarto Plays comprised several first editions, 300*l.* each and upwards; Sonnets, one of the only two perfect copies known, with the same imprint, 215 guineas; and a choice edition of the Poems; also, a collection of Black-letter Ballads, 1559-1597, 750*l.* A great number of the Books were unique, or nearly so, and included Garlands, Jests, Drolleries, and Songs: two Missals of high class; Autograph Letters, Drawings, and Engravings, illustrative of the lives and times of Burns, Chatterton, Cowper, Goldsmith, Gray, Johnson, Kemble, Pope, &c. The sale occupied ten days.

Among the *old inns and public-houses* were—near the church, the *Pied Bull*, popularly a villa of Sir Walter Raleigh's; in Lower-street, the *Crown*, apparently of the reign of Henry VII., and the *Queen's Head*, a half-timbered Elizabethan house; near the Green, the *Duke's Head*, kept by Topham, "the Strong Man of Islington;" in Frog-lane, the *Barley-mow*, where George Morland painted; at the *Old Parr's Head*, in Upper-street, Henderson the tragedian first acted; *White Conduit House* has been twice rebuilt within our recollection; and *Highbury Barn*, though now a showy tavern, nominally recalls its rural origin; the *Three Hats*, near the turnpike, was taken down in 1839; and the *Angel* was originally a galleried inn. Timber gables and rudely-carved brackets are occasionally to be seen on Islington house-fronts bearing old dates; also here and there an old "house of entertainment," which, with the little remaining of "the Green," reminds one of Islington *village*.

Islington abounds with chalybeate springs, resembling the Tunbridge Wells water; one of which was rediscovered in 1683, in the garden of Sadler's music-house, subsequently Sadler's Wells Theatre; at the *Sir Hugh Myddelton's Head* tavern was formerly a conversation-picture with twenty-eight portraits of the Sadler's Wells Club. In Spa-Fields, about sixty years ago, was held "Gooseberry Fair," where the stalls of Gooseberry-fool vied with the "threepenny tea-booths" and the beer at "my Lord Cobham's Head."

The following amusing Curiosities of Islington Taverns are selected and abridged from Pinks's *History of Clerkenwell*, 1865:—

Less than half a century ago, the *Old Red Lion Tavern*, in St. John-street-road, the existence of which dates as far back as 1415, stood almost alone; it is shown in the centre distance of Hogarth's print of *Evening*. Several eminent persons frequented this house: among others, Thomson, the author of *The Seasons*; Dr. Johnson, and Oliver Goldsmith. In a room here Thomas Paine wrote his infamous book, *The Rights of Man*, which Burke and Bishop Watson demolished. The parlour is hung with choice impressions of Hogarth's plates. The house has been almost rebuilt.

Opposite the *Red Lion*, and surrounded by pens for holding cattle on their way to Smithfield, was an old building called "Goose Farm;" it was let in suites of rooms: here lived Cawse, the painter; and in another suite, the mother and sister of Charles and Thomas Dibdin—the mother, a short, squab figure, came on among villagers and mobs at Sadler's Wells Theatre, but, failing to get engaged, she died in Clerkenwell Poorhouse. Vincent de Cleve, nicknamed Polly de Cleve, for his prying qualities, who was treasurer of Sadler's Wells for many years, occupied the second-floor rooms above the Dibdins. "Goose Yard," on the west of the road, serves to determine the site of the old farmhouse.

The public-house facing the iron gates leading to the Sadler's Wells Theatre, with the sign of *The Crown*, in honour of Grimaldi, who frequented the house, was, in his day, known as the *King of Prussia*, prior to which its sign had been that of the *Queen of Hungary*. It is to this tavern, or rather to an older one upon the same site, that Goldsmith alludes in his *Essay on the Versatility of Popular Favour*. "An alehouse-keeper," says he, "near Islington, who had long lived at the sign of *The French King*, upon the commencement of the late war with France, pulled down his own sign, and put up that of the *Queen of Hungary*. Under the influence of her red face and golden sceptre, he continued to sell ale till she was no longer the favourite of his customers; he changed her, therefore, some time ago for the *King of Prussia*, which may probably be changed in turn for the man that shall be set up for vulgar admiration." The oldest sign by which this house was distinguished was that of *The Turk's Head*.

At *The Golden Ball*, near Sadler's Wells, was sold by auction, in 1732, "the valuable curiosities, living creatures, &c., collected by the ingenious Mons. Boyle, of Islington," including "a most strange living creature, bearing a near resemblance of the human shape; he can utter some few sentences and give pertinent answers to many questions. Here is likewise an Oriental oyster-shell of a prodigious weight and size; it measures from one extreme part to the other above three feet two inches over. The other curiosity is called the Philosopher's Stone, and is about the size of a pullet's egg, the colour of it is blue, and more beautiful than that of the Ultramarine, which, together with being finely polished, is a most delightful entertainment to the eye. This unparalleled curiosity was clandestinely stolen out of the late Great Mogul's closet; this irreparable loss had so great an effect upon him, that in a few months after he pined himself to death: there is a peculiar virtue in this precious stone, that principally relates to the Fair Sex, and will effectually signify, in the variation of its colour, by touching it, whether any of them have lost their virginity."

At the *Rising Sun*, in the Islington-road, in *Mist's Journal*, Feb. 9, 1726, we read that for the ensuing Shrove Tuesday "will be a fine hog *barbyqu'd*—i.e., roasted whole—with spice, and basted with Madeira wine, at the house where the ox was roasted whole at Christmas last."

In the Islington-road, too, near to Sadler's Wells, was Stokes's Amphitheatre, a low place, though resorted to by the nobility and gentry. It was devoted to bull and bear baiting, dog-fighting, boxing, and sword-fighting; and in these terrible encounters, with naked swords, not blunted, women engaged each other to "a trial of skill;" they fought *à la mode*, in close-fitting jackets, short petticoats, Hol-

land drawers, white thread stockings, and pumps; the stakes were from 10*l.* to 20*l.* Here we read of a day's diversion—a mad bull, dressed up with fireworks, to be baited; cudgel-playing for a silver cup, wrestling for a pair of leather breeches, &c.; a noble, large, and savage incomparable Russian bear, baited to death by dogs; a bull, illuminated with fireworks, turned loose; eating farthing pies, and drinking half-a-gallon of October beer in less than eight minutes, &c.

The increase of population in Islington has been enormous. By the census of 1851 it stood at 95,154: by that of 1861 it is seen to be 156,000, showing an increase in ten years of 60,846 persons. This is not entirely owing to the new buildings which have been erected there, great as the number of them is: the decadence of some of the streets must also be taken into account, many houses in which, formerly occupied by one family in each, now contain several. To meet these requirements at Islington have been erected, with a portion of the funds munificently presented by an American merchant, Mr. Peabody, to trustees for the poor of London, four blocks of buildings, to comprise in all 155 tenements, with ample accommodation for upwards of 650 persons. The whole cost of these buildings, exclusive of the sum paid for the land, will amount, when the accounts shall have been closed, to 31,690*l.* They are appropriately named *Peabody-square*.

*Holloway* was once famous for its cheese-cakes, which, within recollection, were cried through London streets by men on horseback. Du Val's-lane was traditionally the scene of the exploits of Du Val, the highwayman, executed at Tyburn Jan. 21, 1690, "to the great grief of the women." Within memory, the lane was so infested with highwaymen, that few people would venture to peep into it, even at mid-day: in 1831 it was lighted with gas. (*J. T. Smith.*) At *Lower Holloway*, Mrs. Foster, grand-daughter of Milton, kept a chandler's-shop for several years; she died in poverty at Islington, May 9, 1754, when the family of Milton became extinct.

Between Islington and Hoxton was built in 1786, a curious windmill for grinding white-lead, worked by five flyers, at right angles to which projected a beam with smaller shafts. In 1853 was built at the Rosemary Branch Gardens a Circus, to seat five thousand persons. At Hoxton were the "Ivy Gardens" of Fairchild, who, dying rich, left to the parish of St. Leonard, Shoreditch, 50*l.* (increased to 100*l.* by the parishioners), the interest to be devoted to a lecture on Whit-Tuesday in the parish-church, "On the goodness of God as displayed in the Vegetable Creation." In Fairchild's employ was William Bartlett, "a simpler," who died at the age of 102 years; and his son James, "a simpler," aged 80.

In the Lower-road was "the Islington Cattle Market," originated with a view to the removal of the cattle-market from Smithfield, and established by Act of Parliament in 1835; but it failed as a market, and has since been only used for the lairage of cattle; it occupied fifteen acres of land, walled in. (*See* *MARKETS.*)

### JAMES-STREET, WESTMINSTER,

**F**ACING St. James's Park and Buckingham-gate, has been the abode of two distinguished *literati*. At No. 11 lived the poet Glover, whose song of "Hosier's Ghost" roused the nation to a Spanish war, and will be read and remembered long after his *Leonidas* is forgotten. At No. 6 died, December 31, 1826, William Gifford, editor of the *Quarterly Review* from its commencement in 1809 to 1824; and working editor of the *Anti-Jacobin Review*, writing the refutations and corrections of "the Lies," "Mistakes," and "Corrections." Gifford also translated Juvenal, wrote the satires of the *Baviad* and *Mæviad*; and edited Massinger, Ben Jonson, Ford, and Shirley.

On the west side of James-street stood Tart Hall, partly built in 1638, by N. Stone, for Alathæa Countess of Arundel; after whose death it became the property of her second son William, the amiable Viscount Stafford, beheaded on Tower-hill, Dec. 29, 1680, upon "the perjured suborned evidence of the ever-infamous Oates, Dugdale, and Tuberville." The gateway of Tart Hall was not opened after Lord Stafford had passed under it for the last time. The second share of the Arundel Marbles was deposited here, and produced at a sale in 1720, 885*l.* 19*s.* 11<sup>3</sup>/<sub>4</sub>*d.* (*Minutes, Soc. Antiquaries.*) Dr. Mead bought a bronze head of Homer for 136*l.*; it is now in the British Museum, catalogued as a head of Pindar. The Hall was taken down soon after the sale: Walpole told Pennant it was very large and venerable. According to Strype, it was

part in the parish of St. Martin's-in-the-Fields, and part in St. James's; on the garden-wall, a boy was whipt annually to remember the parish bounds; upon the site of the wall was built Stafford-row: in one of the adjoining passages, Mrs. Abington, the actress, had an *incognito* lodging, for card-parties. Sir Richard Phillips, in his *Morning's Walk from London to Kew, 1817*, writes—

At Pimlico the name of Stafford-row reminded me of the ancient distinction of Tart Hall, once the rival in size and splendour of its more fortunate neighbour, Buckingham House, and long the depository of the Arundelian Tablets and Statues. It faced the Park, on the present site of James-street; its garden-wall standing where Stafford-row is now built, and the extensive livery-stables being once the stables of its residents."

Dr. Rimbault believes Tart Hall was called so from its proximity to the Mulberry Garden, which was famous for its *tarts*. It is so called in the inventory of "household stuffs," &c., taken in 1641. (*Harl MS.*, No. 6272); in Algernon Sydney's *Letters to Henry Savile*; in several documents in the State Paper Office, &c. (*Notes and Queries*, 2nd S.; ix. p. 407.)

In the Harleian MS. we read of four pictures: 1. A Goundelowe. 2. A Mountbanke. 3. A Brave. 4. "King Henry 7. his wife and children." "The Great Roome, or Hall," was situated "next to the Banketing House." "My Lord's Room" was hanged with yellow and green taffetas. A closet had the floor covered with a carpet of yellow leather. The *roof* of one of the rooms was decorated with a "picture of the Fall of Phaeton." Mr. Arden's room was "hanged with Scotch plad." Among the pictures named are—Diana and Actæon, by Titian (now in the Bridgewater Gallery?); Jacob's Travelling, by Bassano (now at Hampton Court?); A Martyrdom, by Tintoret; The Nativity of Our Saviour, by Honthorst. No statues are mentioned. The site is marked in Faithorne's Map of London, 1658.—*Cunningham*.

In James-street was the residence of Lord Milford, facing St. James's Park, and first fitted up as the Stationery Office in 1820: it was taken down on the removal of the office to the new buildings in Prince's-street, Westminster.

### ST. JAMES'S.

**A**LTHOUGH the Hospital dedicated to St. James is believed to have been founded prior to the Norman Conquest, and was rebuilt as a palace in 1532, not two centuries have elapsed since St. James's formed part of the parish of St. Martin's-in-the-Fields, and occupied the furthest extremity of the western boundaries of Westminster. "The Court of St. James's" dates from after the burning of Whitehall in the reign of William III., when St. James's became the royal residence; the church was consecrated in 1685, in honour of the reigning monarch, to St. James.

Hatton (1708) describes the parish as "all the houses and grounds comprehended in a place heretofore called St. James's Fields, and the confines thereof, containing about 3000 houses, and divided into seven wards." In the reign of Queen Anne it had acquired the distinction of the Court quarter.

"The inhabitants of St. James's, notwithstanding they live under the same laws and speak the same language, are a distinct people from those of Cheapside; who are likewise removed from those of the Temple on the one side, and those of Smithfield on the other, by several climates and degrees in their way of thinking and conversing together."—Addison, *Spectator*, No. 403, 1712.

ST. JAMES'S-STREET, in 1670, was called "the Long Street," and is described by Strype as beginning at the Palace of St. James's, and running up to the road against Albemarle-buildings; the best houses, at the upper end, having a terrace-walk before them. Waller, the poet, lived on the west side from 1660 till 1687, when he died at Beaconsfield; Pope lodged "next door to y<sup>e</sup> Golden Ball, on y<sup>e</sup> second terras." Gibbon, the historian, died Jan. 16, 1794, at No. 76, then Elmsley, the bookseller's, who would not enter upon "the perilous adventure" of publishing the *Decline and Fall*, by which the publishers have profited ten times the amount paid to the author for his copyright.

Horace Walpole relates: "I was told a droll story of Gibbon the other day. One of those book-sellers in Paternoster-row, who publish things in numbers, went to Gibbon's lodgings in St. James's-street, sent up his name, and was admitted. 'Sir,' said he, 'I am now publishing a *History of England*, done by several good hands; I understand you have a knack at them these things, and should be glad to give you every reasonable encouragement.' As soon as Gibbon had recovered the use of his legs and tongue, which were petrified with surprise, he ran to the bell, and desired his servant to show this encourager of learning downstairs."

Here was the Thatched House Tavern, originally a *thatched house* in St. James's

Fields. It was taken down in 1814 and 1863, having been for nearly two centuries celebrated for its club meetings; and its large public room, wherein were hung the Dilettanti pictures. Beneath the tavern front was a range of low-built shops, including that of Rowland, or Rouland, the fashionable *coiffeur* of *huile Macassar* fame. Through the tavern was a passage to the rear, where, in Catharine Wheel-alley, in the last century, lived the widow Delany, some of whose fashionable friends then resided in Dean-street, Soho. Upon part of the site has been built the Civil Service Club-house, described at pp. 244, 245. Sheridan called St. James's-street the Campus Martius of the beaux' cavalry.

Facing St. James's-street, upon the site of Albemarle-street, was Clarendon House, on the road whither, on Dec. 6, 1670, between six and seven in the evening, the great Duke of Ormond was dragged from his carriage by Blood and his accomplices, tied to one of them on horseback, and carried along Piccadilly towards Tyburn, there to be hanged; but the alarm being given at Clarendon House, the servants followed and recovered his grace from a struggle in the mud with the man he was tied to, and who, on regaining his horse, fired a pistol at the duke and escaped. In the *Historian's Guide*, third edit. 1688, are stated to have been "six ruffians mounted and armed;" the duke's six footmen, who usually walked beside his carriage, were absent when the attack was made.

BURY (properly BERRY) STREET, on the east, is named from the ground-landlord a half-pay officer *temp.* Charles I.: he died Nov. 1733, aged above 100 years. Swift and Steele, Crabbe and Thomas Moore, occasionally lodged in Bury-street. Swift paid for a first floor—a dining-room and bed-chamber,—eight shillings a week, "plaguy dear."

JERMYN-STREET, on the east side of St. James's-street, was named from Henry Jermyn, Earl of St. Albans. Here, in 1665–81, lived the Duke of Marlborough, when Colonel Churchill, at the west end, south side. Gray, the poet, lodged here, at the east end. Sir Isaac Newton lived in this street before he removed to St. Martin's-street, Leicester-square; as did also William and John Hunter. East of St. James's Church is the entrance-front of the Museum of Practical Geology, a lofty Italian building by Pennethorne; completed in 1850. (*See* MUSEUMS.)

In Jermyn-street, near St. James's Church, about 1713, lived Mrs. Howe and her husband, who was absent from her seventeen years, as she supposed in Holland; though, in fact, living disguised in a mean lodging in Westminster. From Jermyn-street, Mrs. Howe removed to Brewer-street, Golden-square; Mr. Howe often visited at an opposite house, whence he saw his wife in her dining-room receiving company; and for seven years he went every Sunday to St. James's Church, and there had a view of his wife, but was not recognised by her. (*See* Dr. King's *Anecdotes of his own time.*)

KING-STREET, leading to St. James's-square, has at the south-east corner the St. James's Bazaar, described at p. 41. Here is the St. James's Theatre, designed by Beazley for Braham the singer (it occupies the site of Nerot's Hotel, No. 19), which cost Braham 8000*l.* (*See* THEATRES.) Nerot's was of the time of Charles II., and had a carved staircase, and panels painted with the story of Apollo and Daphne. Next are Willis's Rooms (*see* ALMACK'S, p. 4); and opposite are Christie and Manson's (late Christie's) auction-rooms, celebrated for sales of pictures and articles of *vertu*. (*See* an account of these sales in the *Shilling Magazine*, vol. i.) At No. 16, in King-street, lodged Louis Napoleon, in a house which he pointed out to his Empress, as he rode up St. James's-street, on their visit to Queen Victoria in 1855. There are four streets in this neighbourhood named from *King*, *Charles*, and the *Duke of York*.

In King-street, St. James's, was born, May 4, 1749, Charlotte Smith, the poet and novelist; and here she mostly resided with her father, Mr. N. Turner, from her twelfth to her fifteenth year, when she married Mr. Richard Smith, a West India merchant, aged 21.

In St. James's-street (west side) Thomas Wirgman, goldsmith and silversmith, kept shop, and after making a large fortune, squandered it as a regenerating philosopher—a Kantesian. He had tinted papers made especially for his books, one of which, 400 pages, cost him 2276*l.* printing. He published a grammar of the five senses, and metaphysics for children, and maintained that when his system was universally adopted in schools, peace and harmony would be restored to the earth, and virtue would everywhere replace crime. Sir Christopher Wren had a house in St. James's-street, where he died, Feb. 25, 1723. Lord Byron lodged at No. 8, in 1811; Gillray, the caricaturist, lodged at No. 24, Humphrey the printseller's, when, in 1815, he threw himself from an upstairs window, and died in consequence.

Humphrey was the publisher of Gillray's caricatures, the copperplates of which were estimated, in 1815, to be worth 7000*l.* After Humphrey's death his widow could raise only 1000*l.* upon the plates; subsequently, when offered by auction, they were bought in at 500*l.*; and upon the widow's death, her

executors, unable to dispose of the plates as engravings, sold them to Mr. H. G. Bohn, the publisher as *old copper*, for as many pence as they were originally said to be worth pounds; and sets are now to be bought at one-fifth of the first cost. (See the *Account*, &c. by Wright and Evans, 1851.)

About 1708, Peyrault's, or Pero's "Bagnio," now Fenton's Hotel, was in high fashion. At the south-west end was the St. James's Coffee-house (Whig), taken down in 1806: it was the Foreign and Domestic News-house of the *Tatler*, and the "fountain head" of the *Spectator*. Here, too, was the Tory house, Ozinda's; and the Cocoa-tree, to which belonged Gibbon and Lord Byron.

In St. James's-street are several Club-houses, already described (see pp. 241-260). At White's is a pair of views by Canaletti: one, London Bridge, with the houses, from Old Somerset House Gardens; and Westminster Bridge (just built), taken from the water, off Cuper's Garden.

Next to Brooks's Club, in 1781, lived C. J. Fox. At No. 62 was Betty's fruit-shop, famous in Horace Walpole's time. Mason has, in his *Heroic Epistles*—

"And patriot Betty fix her fruit-shop here."

It was a famous place for gossip. Walpole says of a story much about, "I should scruple repeating it, if Betty and the waiters at Arthur's did not talk of it publicly." Again: "Would you know what officer's on guard in Betty's fruit-shop?"

In Cleveland-row, extending from St. James's-street to the Stable-yard of the Palace, Theodore Hook took a handsome house in 1827, which he furnished at the cost of 2000*l.* or 3000*l.* Then came heavy embarrassments, in which he was assisted by the liberality of his publishers, Bentley and Colburn, and the sale of his share in the *John Bull* for 4000*l.* While residing in Cleveland-row, Hook fell in with the Rev. Mr. Barham (Ingoldsby), who called one day. Haynes Bayly was then discussing a devilled kidney. Hook introduced him, saying, "Barham—Mr. Bayly—there are several of the name: this is not 'Old Bailey,' with whom you may one day become intimate, but the gentleman whom we call 'Butterfly Bayly' (in allusion to his song, 'I'd be a butterfly')." "A misnomer, Hook," replied Barham; "Mr. Bayly is not yet *out of the Grub*."

ST. JAMES'S-PLACE, west side of St. James's-street, was built about 1694. Addison lodged here in 1712. Here also lived Parnell, the poet; Mr. Secretary Craggs; Bishop Kennett, the antiquary, who died here 1728; John Wilkes lived here in 1756 "in very elegant lodgings;" and Mrs. Robinson, the charming actress, lodged at No. 13. Lady Hervey lived in a house built for her by Flitcroft, afterwards occupied by the Earl of Moira (Marquis of Hastings). Spencer House, facing the Green Park, was designed by Vardy; the figures on the pediment are by M. H. Spong, a Dane. At No. 25 lived Lord Guildford, who had his library lined with snake-wood from Ceylon, of which island he was Governor: the next tenant was Sir Francis Burdett, who expired here Jan. 23, 1844, of grief for the loss of his wife, who died thirteen days previously. At No. 22, built by James Wyatt, R.A., lived, from 1808, until his death in 1855, Samuel Rogers, the poet: here Sheridan, Lord Byron, Sir James Mackintosh, "Conversation" Sharp, and Thomas Moore, were often guests.

Mr. Rogers' choice collection of pictures, sculpture, Etruscan vases, antique bronzes, and literary curiosities, were to be seen through the introduction of any accredited artist or connoisseur. The paintings included these gems from the Orleans Gallery: Christ bearing the Cross (A. Sacchi); "Noli me tangere" ("mellow and glorious union of landscape and poetry"); (Titian); Holy Family (Correggio); large Landscape (Claude); Christ on the Mount of Olives (Raphael). Also, Christ disputing with the Doctors (Mazzolina di Ferrara), and the Coronation of the Virgin (A. Caracci), from the Aldobrandini Palace; Triumphal Procession (Rubens), after Andrea Mantegna; St. Joseph and the Infant Saviour (Murillo); Landscapes by Rubens and Domenichino, Gainsborough, and R. Wilson; Virgin and Child (Raphael); Knight in Armour (Giorgione); Allegory, and Forest Scene, sunset (Rembrandt); Virgin and Child, with six Saints (L. Caracci); a Mill, a small octagon (Claude); Head of Christ crowned with thorns (Guido); Virgin and Child (Van Eyck); two large compositions (N. Poussin); Sketch for Mary Magdalen anointing the feet of the Saviour (P. Veronese); Sketch for the Miracle of St. Mark (Tintoretto); Study for the Apotheosis of Charles V. (Titian); Portrait of Himself (Rembrandt); Infant Don Balthazar on horseback (Velasquez); the Evils of War (Rubens); Virgin and Child, a small miniature (Hemmelinck); three original Drawings (Raphael); black chalk Study (Michael Angelo); Puck, the Strawberry Girl, the Sleeping Girl, Girl with Bird, Cupid and Psyche, and the Painter's House at Richmond (Sir Joshua Reynolds); Napoleon upon a rock at St. Helena (Haydon); and twelve Elizabethan miniatures. The paintings were lighted by lamps with reflectors. Among the sculptures were: Cupid pouting and Psyche couching, and Michael Angelo and Raphael, statuettes by Flaxman. Here also were seven pictures by Stothard (including a copy of the Canterbury Pilgrims), and a cabinet with his designs. Among the autographs was the original assignment of Dryden's *Virgil* to Tonson, witnessed by Congreve. Milton's agreement with Symons for *Paradise Lost*, long possessed by Mr. Rogers, was presented by him to the British Museum in 1852.

This collection was dispersed by auction, after the death of Mr. Rogers, 18th of

December, 1855, in his 93rd year, at his house in St. James's-place, surrounded by the works of art which his fine taste had brought about him.

### JEWS IN LONDON.

THE Jews were settled in England in the Saxon period, A.D. 750. In 1189, great numbers were massacred on the coronation-day of Richard I., when they lived in the Jewries, extending along both sides of the present Gresham-street to Basinghall-street, and Old Jewry on the east; the first synagogue in the metropolis being at the north-west corner of Old Jewry, which Stow describes as "a street so called of Jews some time dwelling there and near adjoining." The only burial-place appointed them in all England was the Jews' Garden, Redcross-street, Cripplegate; until 1177, the 24th Henry II., when a special place was assigned to them in every quarter where they dwelt. (*Stow*.) The site of the present Jewin-street, Aldersgate-street, anciently "Leyrestowe," was granted them as a burial-place by Edward I. Capital punishment was inflicted for comparatively small offences, and scarcely a day passed without an execution in the Cheap. To some extent, this universal bloodthirstiness may explain, if it does not extenuate, the cruelties practised on the unfortunate Jews. For the king to take "a moiety of their moveables," whenever he wanted money, was bad enough; but on the doubtful charge of the wilful murder of a Christian child at Lincoln, ninety-two Jews were apprehended, and eighteen of them "were on the same day drawn, and after the hour of dinner, and towards the close of the day, hanged." In the week before Palm Sunday, in the year 1263, the Jewry in London was wantonly destroyed, and more than five hundred Jews "murdered by night in sections"—none escaping, seemingly, except those whom the mayor and the justiciars had sent to the Tower before the massacre began. The ground for this outrage (according to Fabyan) was, that a Jew had exacted more than legal interest from a Christian. Fifteen years later no less than 293 Jews were "drawn and hanged for clipping the coin." In 1285, more compendiously still, "all the Jews of England were taken and imprisoned, and put to ransom on the morrow of St. Philip and James." Finally, a few years afterwards "it was provided by the King and his Council, upon prayer of the Pope, that all the Jews in England were sent into exile between the Gule of August and the Feast of All Saints, under pain of decapitation, if after such feast any one of them should be found in England."

The Jews made no effort to return to England till the protectorship of Oliver Cromwell, when they proposed to pay 500,000*l.* for certain privileges, including the use of St. Paul's Cathedral as a synagogue; but 800,000*l.* was demanded, and the negotiation was unsuccessful. They next applied to Charles II., then in exile at Bruges, when the king proposed they should assist him with money, arms, or ammunition, to be repaid; and Dean Tucker remarks, that the restoration of the Stuarts was attended with the return of the Jews into Great Britain. The Jews themselves aver that they received a private assent to their re-admission; and Bishop Burnet asserts that Cromwell brought a company of Jews over to England, and gave them leave to build a synagogue. Dr. Tovey, however, in the Jewish registers, finds that, by their own account, until the year 1663 the whole number of Jews in England did not exceed twelve; so that the date of their return must be referred to the reign of Charles II. The first synagogue was built by Portuguese Jews, in King-street, Duke's-place, in 1656; and a school was founded by them in 1664, called "the Tree of Life." The first German synagogue was built in Duke's-place in 1691, and occupied till 1790, when the present edifice was erected.

The principal Jewish Cemeteries are two on the north side of the Mile-End-road belonging to the Portuguese Jews, and a third to the German Jews. The old Portuguese ground was first used 1657: some of the tombs bear bas-reliefs from Scripture; as the story of Joseph and his brethren, Jacob wrestling with the angel, &c. Near Queen's Elm, Fulham-road, is also "the burying-ground of the Westminster Congregation of Jews," established 1816.

The Jewish quarter of the metropolis is bounded north by High-street, Spitalfields;

east by Middlesex-street (Petticoat-lane); south by Leadenhall-street, Aldgate, and Whitechapel; and west by Bishopsgate-street.

The Clothes' Exchange of Cutler-street, Houndsditch, is popularly known as *Rag Fair*; through which must pass, at one stage or another, half the second-hand habiliments of the empire. The trade in renovated clothes, too, is very great, so as to make the epithet "worn-out" a popular error. Factitious arts make up the mighty business of Rag Fair; and Bevis Marks has long been the Oporto of London, noted for its manufacture of "cheap port-wine."

Saturday in the Hebrew quarter is a day of devotion and rest: every shop is shut; and striking is the contrast between the almost conventional silence on that day of Bevis Marks, Houndsditch, and St. Mary Axe, and the bustle of Whitechapel, Bishopsgate, and Leadenhall. How the Christian Sabbath is kept is denoted by such a notice as this: "Business will commence at this Exchange on Sunday morning at 10 o'clock. By order of the managers, Moses Abrahams." Again, from 8 to 12 o'clock on Sunday morning, Duke's-place is the great market for the supply of *oranges* to the itinerant Jewish retailers.

The wealth of the leading Jews in London is very great, and their influence on the money-market is overwhelming. Their shipping trade is very extensive. The largest clothing-establishments are carried on by Jews. The trade in old silver goods, pictures, old furniture, china, and curiosities, is chiefly carried on by Hebrew dealers.

Jews are admissible to all public offices and dignities, even to a seat in Parliament. In 1828 baptized Jews were allowed to purchase the freedom of the City of London, a privilege forbidden by the Court of Aldermen in 1785. Mr. David Salomons (1835) and Sir Moses Montefiore (1837) served as Sheriffs of London, these being the first Jews who filled that office; and Sir Moses is the first Jew who received a baronetcy in Britain. Mr. Salomons was elected Alderman for Cordwainers' Ward in 1847, and is the first Jew who ever sat in the Court; he served as Lord Mayor in 1857-8. Alderman Sir Benjamin S. Phillips, Lord Mayor, 1865-6, received knighthood for his very able discharge of his duties, and the dignity he imparted to the office.

The Jews take care of their own poor; and their schools, hospitals, and asylums are numerous. You may see many poor Jews, but never a Jewish beggar. In 1852, the amount of offerings during the sacred festivals of the New Year, Day of Atonement, &c., for the relief of the poor at the principal metropolitan Synagogues, were:—Great Synagogue, Duke's-place, 800*l.*; Sephardim, ditto; Bevis Marks, 500*l.*; New, ditto; Great St. Helen's, 600*l.*; Hamburgh, ditto; Fenchurch-street, 150*l.*; West London ditto; Margaret-street, 70*l.*—total, 2120*l.* The Western Synagogue, St. Alban's-place, has abolished offerings, substituting in lieu thereof a charge on the seats. In 1852 there were distributed in Passover week to the poor of the Synagogues and the itinerant poor, 55,000 pounds of Passover cakes, costing 916*l.* 13*s.* 4*d.*

The Rabbinical College, or Beth Hamedrash, Smith's-buildings, Leadenhall-street, contains one of the most splendid Jewish libraries in Europe, and is open to the public by tickets: here lectures are delivered gratuitously to the public, on Friday evenings, by learned Jews.

*The Jews' Free School*, founded in 1817, is a good specimen of the zealous care with which the Jews organize their institutions. This School originated in the general feeling then entertained of the necessity of diffusing knowledge among the poor. Its founders adopted those parts of the various systems of education then in general use which appeared to them best calculated to advance that object, and the school has all along been conducted on a plan combining their advantages, mutual instruction on the monitorial plan being fully recognised. Many children, they state, who would have wandered idly about the streets, devoid alike of religion and knowledge, and who might easily have been ensnared into courses of vice and infamy, have by means of this institution been instructed in their religious duties and the elementary branches of knowledge, and been thus trained to become respectable and useful members of society. The School, greatly enlarged, is now established in Bell-lane, Spitalfields, and for nearly half a century has diffused the blessings of knowledge and morality among the poor Jews of the metropolis, according to the design of its founders and supporters, though of late years the system of education pursued in it has been somewhat modified and enlarged. The Revised Code insists that every child presented shall satisfy the inspector in reading, writing, and arithmetic according to a classification under six standards. In this department of the school the highest class was examined in the highest standard, a degree of proficiency which had not been attained in the first year of the operation of the Revised Code by any other school in the country: making a small allowance for unavoidable absences, about 99 per cent. of those children presented passed successfully.

**JEW'S'-ROW**, at Chelsea, has been made by Wilkie the background of his picture of

"the Chelsea Pensioners reading the Gazette of the Battle of Waterloo," now in the Duke of Wellington's Gallery, at Apsley House.

"Jews'-row has a Teniers-like line of mean public-houses, lodging-houses, rag-shops, and huckster-shops, on the right-hand, as you approach Chelsea College. It is the Pall Mall of the pensioners; and its projecting gables, breaks, and other picturesque attributes were admirably suited, in the artist's opinion, for the localities of the picture."—*Mrs. A. T. Thomson.*

### ST. JOHN'S GATE, CLERKENWELL,

IS nearly all that remains of the magnificent monastery of the Knights of St. John of Jerusalem, that chivalrous order which for seven centuries "was the sword and buckler of Christendom in the Paynim war." The priory was founded in 1100, and was almost of palatial extent. King John resided here in 1212; and our sovereigns occasionally held councils here. Three acres of ground lying without the walls, between the land of the Abbot of Westminster and of the Prior of St. John of Jerusalem, was called *No-man's Land*. In November, 1326, Anthony d'Espagne, a wealthy merchant, who collected a burdensome duty of 2s. a tun on wine, was dragged barefoot out of the City, and beheaded by the populace on *No-man's Land*—a fitting name for the site of such an atrocity! In 1382 the whole commandery was burnt by Wat Tyler's mob; and the grand prior was beheaded in the courtyard, the site of St. John's-square, at the southern entrance of which stands the gateway. Late in the fifteenth century, the rebuilding of the monastery was commenced by Prior Docwra, who, according to Camden, "increased it to the size of a palace," and completed this entrance about 1504, "as appeareth by the inscription over the gatehouse yet remaining" (*Stow*).

In a Chapter held here 11 Jan. 1514, Sir T. Docwra prior, a lease was granted to Cardinal Wolsey of the manor of Hampton, which the most eminent physicians of England and learned doctors from Padua had selected as the healthiest spot within twenty miles of London for the site of a palace for the cardinal. In this curious document (*Cotton. MSS. British Museum*) is a grant of four loads of timber annually for piles for the Hampton Weir, to be cut "in and fro Seynt John's Woode, Midd." This grant is printed in the *Gentleman's Magazine*, January, 1834.

Docwra was grand-prior from 1502 to 1520, and was the immediate predecessor of the last superior of the house, who died of grief on Ascension-day, 1540, when the priory was suppressed. Five years subsequently, the site and precinct were granted to John Lord Lisle, for his service as high-admiral; the church becoming a kind of store-house "for the king's toyles and tents for hunting, and for the warres." It was, however, undermined and blown up with gunpowder, and the materials were employed by the Lord Protector to King Edward VI. in building Somerset-place; the Gate would probably have been destroyed, but from its serving to define the property. The Priory was partly restored upon the accession of Mary, but again suppressed by Elizabeth. In 1604 the Gate was granted to Sir Roger Wilbraham for his life. Hollar's very scarce etchings show the castellated hospital, with the old front, eastern side, towards St. John-street, about 1640; also the western side, and Gatehouse.

At this time Clerkenwell was inhabited by people of condition. Forty years later fashion had travelled westward; and the Gate became the printing-office of Edward Cave, who, in 1731, published here the first number of the *Gentleman's Magazine*, which to this day bears the Gate for its vignette. Dr. Johnson was first engaged upon the magazine here by Cave in 1737: "his practice was to slut himself up in a room assigned to him at St. John's Gate, to which he would not suffer any one to approach, except the compositor or Cave's boy for matter, which, as fast as he composed, he tumbled out at the door." (*Hawkins.*) At the Gate Johnson first met Richard Savage; and here in Cave's room, when visitors called, Johnson ate his plate of victuals behind the screen, his dress being "so shabby that he durst not make his appearance." One day, while thus concealed, Johnson heard Walter Harte, the poet and historian, highly praise the *Life of Savage*. Garrick, when he first came to London, frequently called upon Johnson at the Gate; and at Cave's request, in the room over the great arch, and with the assistance of a few journeyman-printers to read the other parts, Garrick represented the principal character in Fielding's farce of the *Mock Doctor*. Goldsmith was also a visitor here. When Cave grew rich, he had St. John's Gate painted, instead of his arms, on his carriage, and engraved on his plate. After Cave's

death in 1754, the premises became the "Jerusalem" public-house, and the "Jerusalem Tavern."

The latter name was assumed from the *Jerusalem Tavern*, Red Lion-street, in whose dank and cobwebbed vaults John Britton served an apprenticeship to a wine-merchant; and in reading at intervals by candle-light, first evinced that love of literature which characterized his long life of industry and integrity. He remembered Clerkenwell in 1787, with St. John's Priory-church and cloisters; when Spa-fields were pasturage for cows; the old garden-mansions of the aristocracy remained in Clerkenwell-close; and Sadler's Wells, Islington Spa, Merlin's Cave, and Bagnigge Wells, were nightly crowded with gay company.

In 1845, under the new Metropolitan Buildings' Act, a survey of St. John's Gate was made, and a notice given to the then owner to repair it: and by the aid of "the Freemasons of the Church," and Mr. W. P. Griffith, architect, the north and south fronts were restored.

The gateway is a good specimen of groining of the fifteenth century, with moulded ribs, and bosses ornamented with shields of the arms of the Priory, Prior Docwra, &c. The south or principal front has a double projection; has numerous small windows; and a principal window over the crown of the arch in each front, in the wide and obtusely-pointed style. The south front bears the arms of France and England, and the north or inner front those of the Priory and Docwra. In the west side of the gateway is an ancient carved oak doorhead, discovered in 1813, when that part of the building (afterwards a coal-shed) was converted into a watch-house for St. John's parish. In the spandrels are the monastery arms, as also in a low door-case of the west tower from the north side of the Gate; these spandrels also bear a cock and a hawk, and a hen and a lion. This was the entrance to Cave's printing-office. The east basement is the tavern-bar, with a beautifully moulded ceiling. The stairs are Elizabethan. The principal room over the arch has been despoiled of its window-mullions and groined roof. The foundation-wall of the Gate is 10 feet 7 inches thick, and the upper walls are nearly 4 feet, hard red brick, stone cased: the view from the top of the staircase-turret is extensive. In excavating there have been discovered the original pavement, 3 feet below the Gate; and the Priory walls, north, south, and west. Other repairs were commenced in 1866.

St. John's Church, in St. John's-square, is built upon the chancel and side aisles of the old Priory-church, and upon its crypt; the capitals of the columns, ribbed mouldings, lancet windows, are fine; from the key-stone of each arch hangs an iron lamp-ring: in 1849, the crypt was found by excavation to have extended much further westward. The turret-clock belonged to old St. James's Church, as did also the silver head of the beadle's staff (James II. 1685). Here, too, is a portable baptismal bowl, with a scriptural inscription, and "Deo est sacris;" it was formerly used as the church font. (See *Ye History of ye Priory and Gate of St. John*. By B. Foster. 1851.)

The Gate is minutely described in Chapter X. of Pinks's *History of Clerkenwell*, pp. 241-257, with eleven engravings, wherein it is stated: "to Mr. W. P. Griffith, F.S.A., the inhabitants of Clerkenwell are deeply indebted for saving from positive defacement, if not from absolute removal, the Gate of the Priory of St. John."

### KENNINGTON,

A MANOR of Lambeth, is named from Saxon words signifying the place or town of the king. Here, at a Danish marriage, died Hardiknute, in 1041. Here Harold, son of Earl Godwin, seized the Crown the day after the death of the Confessor, and is said to have placed it on his own head. Here, in 1231, King Henry III. held his court, and passed a solemn and stately Christmas; and here, says Matthew Paris, was held a Parliament in the succeeding year. Hither, says Stow, in 1376, came the Duke of Lancaster, to escape the fury of the populace of London, on Friday, February 20, the day following that on which Wickliffe had been brought before the bishops at St. Paul's. Hither also came a deputation of the chiefest citizens to Richard II., June 21, 1377, "before the old king was departed," "to accept him for their true and lawfull king and gouernor." Kennington was the occasional residence of Henry IV. and VI. Henry VII. was here shortly previous to his coronation. Leland tells us that Katharine of Aragon was here for a few days; after

which the palace probably fell into decay: Camden, late in the reign of Elizabeth, says, though erroneously, that "of this retreat of our ancient Kings, neither the name nor the ruins are now to be found." The early celebrity of the manor of Kennington as a "Royal property" is attested to this day in the names of Prince's-road and Chester-place, which refer to the annexation of the manor to the Duchy of Cornwall, in the reign of Edward III., who was here in 1339, from a document printed in the *Fœdera*, tested by the Black Prince, then only ten years of age. James I. settled the manor, with other estates, on his eldest son, Henry, Prince of Wales: and after his decease, in 1612, on Prince Charles (afterwards Charles I.), and they have ever since been held as part of the estate of the Prince of Wales, as Duke of Cornwall. Charles was the last tenant of the palace, which was then taken down, and there was built on the site a manor-house, described in 1656 as an old, low, timber building; but of the palace offices there remained the stable, a long building of flint and stone, used as a barn: this was taken down in 1795. The palace, there is no doubt, stood within the triangular plot of ground near Kennington Cross, now bounded by Park-place, Devonshire-street, and Park-street; thick fragments of walls of flint, chalk, and rubble stone intermixed, may yet be seen in the cellars of some houses in Park-place.

Kennington Common (about twenty acres) was formerly noted for its cricket-matches, pugilism, and itinerant preachers, and as the exercise-ground of volunteer regiments. It was the common place of execution for Surrey, before the erection of the County Gaol, Horsemonger-lane; and on the site of *St. Mark's Church*, south of the Common, some of the rebels of 1745, tried by special commission in Southwark, were hanged, drawn, and quartered: among them was "Jemmy Dawson," the hero of Shenstone's touching ballad: and of another ditty, set to music by Dr. Arne, and sung about the streets. On the Common was a bridge, called Merton Bridge, which was formerly repaired by the Canons of Merton Abbey, who had lands for that purpose.—(*Lysons*.) Here was a theatre; for, Baker, in his *Biographia Dramatica*, edit. 1732, vol. ii. p. 239, says, "the satirical, comical, allegorical farce," the *Mock Doctor*, published in 8vo, in 1739, was "acted to a crowded audience at Kennington Common, and many other theatres, with the humour of the mob." Here George Whitefield preached to audiences of ten, twenty, and thirty thousand persons, as we learn from his published diary, which is now scarce:

"Sunday, April 29, 1731. At five in the evening went and preached at Kennington Common, about two miles from London, where upwards of 20,000 people were supposed to be present. The wind being for me, it carried the voice to the extremest part of the audience. All stood attentive and joined in the Psalm and the Lord's Prayer so regularly, that I scarce ever preached with more quietness in any church. Many were much affected.

"Sunday, May 6, 1731. At six in the evening went and preached at Kennington; but such a sight I never saw before. Some supposed there were above 30,000 or 40,000 people, and near four score coaches, besides great numbers of horses; and there was such an awful-silence amongst them, and the Word of God came with such power, that all seemed pleasingly surprised. I continued my discourse for an hour and a half.

"Friday, August 3, 1739. Having spent the day in completing my affairs (about to embark for America), and taking leave of my dear friends, I preached in the evening to near 20,000 people at Kennington Common. I chose to discourse on St. Paul's parting speech to the elders of Ephesus, at which the people were exceedingly affected, and almost prevented my making any application. Many tears were shed when I talked of leaving them. I concluded with a suitable hymn, but could scarce get to the coach for the people thronging me, to take me by the hand, and give me a parting blessing."

On Kennington Common was held, April 10, 1848, the great revolutionary meeting of "Chartists," brought to a ridiculous issue by the unity and resolution of the metropolis, backed by the judicious measures of the Government, and the masterly military precautions of the late Duke of Wellington. In 1852, the Common, with the site of the Pound of the manor of Kennington, were granted by Act of Parliament, on behalf of the Prince of Wales, as part of the Duchy of Cornwall estate, to be inclosed and laid out as "pleasure-grounds for the recreation of the public; but if it cease to be so maintained, it shall revert to the duchy." They comprise twelve acres, disposed in grass-plots, and planted with shrubs and evergreens; and at the main entrance have been reconstructed the model cottages originally erected at the expense of Prince Albert for the Great Exhibition of 1851: the walls are built with hollow and glazed brick, and the floors are brick and stucco; the whole being fireproof. At Kennington-green, in 1852, was built a large Vestry Hall, in semi-classic style, for the district of Lambeth. In Kennington-lane is the School of the Friendly Society of Licensed Victuallers, built 1836; the first stone laid by Viscount Melbourne, in the name of King William IV.

## KENSINGTON, BROMPTON, AND KNIGHTSBRIDGE.

**K**ENSINGTON, a mile and a half west of Hyde Park-corner, contains the hamlets of Brompton, Earl's-court, the Gravelpits, and part of Little Chelsea, now West Brompton; but the royal palace, and about twenty other houses north of the road, are in the parish of St. Margaret, Westminster. On the south side, the parish of Kensington extends beyond the Gore, anciently Kyng's Gore, the principal houses between which and Knightsbridge are also in St. Margaret's. The old church (St. Mary Abbot's) Bishop Blomfield used to designate the ugliest in his diocese.

The resolution to build this church was adopted by the vestry in 1696, and among the contributors were King William III. and Queen Mary, as well as the Princess Anne. The King and Queen not only subscribed to the building fund, but presented the reading-desk and pulpit, which have crowns carved upon them, with the initials W. and M. R. A curtained pew was in consequence set apart for the Royal family, and long continued to be occupied by residents in Kensington Palace, among whom the Duke and Duchess of Kent and the late Duke of Cambridge are still remembered. It was in this church that the Duchess of Kent returned thanks after the birth of her present Majesty. In the parish books there are entries of the expenses incurred for ringing the church bells on all public occasions since the Revolution. Mr. Wilberforce, who resided at Kensington-gore, is still remembered sitting in the pew appropriated to the Holland-house family. George Canning might often be seen seated in the Royal pew. Coke, of Norfolk, had a pew here, which he regularly occupied. Nassau Senior, the political economist, resided at Hyde-park-gate, and W. M. Thackeray occupied a house which he had planned and built for himself in Palace-green, where he died December, 1863. These eminent writers both attended the early service at half-past nine. When Lord Macaulay came to reside at Holly-lodge, Campden-hill, he desired to have a list of the parochial charities and a seat in the parish church. Although confined to the house by asthma during the winter, he was regular in his attendance during the summer; he died at Holly Lodge, December 20, 1859. The church, condemned as incapable of being long used for public worship, contains 114 monuments. (See p. 131.)

The extension of Kensington mostly dates from the enlargement of the royal palace; though the mineral spring which it once possessed may have contributed to the celebrity of the place. Holland House is described at p. 431. Nearly opposite, in the Kensington-road, was the *Adam and Eve* public-house, where Sheridan, on his way to or from Holland House, regularly stopped for a dram; and there he ran up a long bill, which Lord Holland had to pay. (Moore's *Diary*.) Kensington Palace Gardens lead from the High-street of Kensington to the Bayswater-road, and contain several costly mansions, including one of German Gothic design, built for the Earl of Harrington in 1852. On Campden Hill is the observatory of Sir James South, one of the founders of the Royal Astronomical Society: among the working instruments are a 7-feet transit instrument, a 4-feet transit circle, and one of the equatorials with which, between 1821 and 1823, Sir James South (at Blackman-street, Southwark) and Sir John Herschel made a catalogue of 380 double stars. In Little Chelsea was born, in 1674, Charles Boyle, fourth Earl of Orrery, patron of Graham, who constructed for the Earl an orrery, which was named after his lordship.

In Orbell's-buildings, Kensington, lodged Sir Isaac Newton from January, 1725, until his death, March 20, 1727, in his 85th year. His body, on March 23, lay in state in the Jerusalem Chamber, and was thence buried in Westminster Abbey.

Leigh Hunt has written a remarkably pleasant account of Kensington, under the title of *The Old Court Suburb*. Here are the old mansions, *Kensington House* and *Colby House*, described at p. 447. *Campden House* is described at p. 445.

Here was the *King's Arms Tavern*, the last place in or about London where the old coffee-house style of society was still preserved, and where members of the legislature and a high class of gentry were to be met with in rooms open to "the town." It was patronized for many years by the family at Holland House, and Moore, in his *Diary*, alludes to it. It was much frequented by members of the London Clubs. Among them was "Vesey junior" (Lord Eldon's Law Reporter), who preserved his forensic name to his eightieth year. Flaxman, the sculptor, was fond of retiring thither, and always dined in one of the small rooms looking over the gardens; and it was there also that "the Doctor" (William Maginn) was to be found in his best conversational mood.—*Press Newspaper*.

At Gore House, Kensington Gore, Mr. Wilberforce resided from 1808 to 1821. He writes:—"We are just one mile from the turnpike at Hyde Park Corner, having about three acres of pleasure-ground around our house, or rather behind it; and several old trees, walnut and mulberry, of thick foliage. I can sit and read under their shade with as much admiration of the beauties of nature as if I were 200 miles from the great city." Thither came Clarkson, Zachary Macaulay, Romilly, and others, to

commune with Wilberforce on measures for the abolition of slavery. He often alludes to his "Kensington Gore breakfasts." He was much attached to the place, but its costliness made him uneasy lest it should compel him to curtail his charities. The Countess of Blessington resided at Gore House for the same period as Mr. Wilberforce—thirteen years. In her time the place retained much of its picturesqueness, of which there is an interesting memorial—a large view in the grounds, with portraits of the Duke of Wellington, Lady Blessington, and other celebrities, including Count D'Orsay, the painter of the picture. Lady Blessington's Curiosities were sold here in 1849. The house was opened by Soyer as a *restaurant* ("Symposium") during the Exhibition of 1851. In the *Temple Bar Magazine*, Mr. Sala has described, in his very clever manner, what he saw and thought, whilst for "many moons he slept, and ate, and drank, and walked, and talked, in Gore House, surrounded by the very strangest of company." In 1852, the Gore House estate, twenty-one and a half acres, was purchased for 60,000*l.*, and the Baron de Villars's estate, adjoining, forty-eight acres, fronting the Brompton-road, was bought for 153,500*l.*, by the Commissioners of the Great Exhibition of 1851.

The yellow gravel of Hyde Park and Kensington, so often found covering the London clay, is, comparatively speaking, of very modern date, and consists of slightly rolled, and, for the most part, angular fragments, in which portions of the white opaque coating of the original chalk-flint remain uncovered. —*Sir Charles Lyell, F.G.S.*

The eastern extremity of the Gore, now the site of Ennismore Gardens, is the highest point of ground between Hyde Park-corner and Windsor Castle. (Faulkner's *Kensington*.) Kingston, next Ennismore, and now Listowel House, was the residence of the Duchess of Kingston, "the notified Bet Cheatley, Duchess of Knightsbridge," who died here in 1788. Here in 1842 died the Marquis Wellesley; in the corridor is a large window, a garden-scene, painted by John Martin when he was a pupil of *Muss*. At Old Brompton, upon the site of the Florida Tea Gardens, was Orford Lodge, built for the Duchess of Gloucester, and subsequently tenanted by the Princess Sophia of Gloucester, and the Right Hon. George Canning, who was here visited by Queen Caroline. The house was afterwards called "Gloucester Lodge," and was taken down in 1852. Here also was Hale or "Cromwell" House taken down in 1853. The large space of ground between the Kensington and Brompton roads included the Brompton Park nursery; and here (in 1853) were remains of the wall of Brompton Park. Brompton Hall, mostly modern, has a noble Elizabethan room, wherein Lord Burghley is said to have received Queen Elizabeth. In the hamlet of Earl's Court, about 1764, John Hunter, the eminent surgeon, built a house, in which he lived for nearly thirty years. The house and grounds (where Baird was "surprised to find so many living animals in one herd from the most opposite parts of the habitable globe") remain to this day.

SOUTH KENSINGTON is the district lying south of the main Kensington-road, the nucleus being the Gore House estate above mentioned; added to which were Gray's Nursery Grounds, Park House, Grove House, and various market-gardens; the grounds of Cromwell House and other lands belonging to the Earl of Harrington and the Baron de Villars, in all eighty-six acres, for 280,000*l.*, at an average of 3250*l.* an acre. Old footpaths, &c., were stopped, and houses removed, and nearly two miles of new roadway formed the chief lines surrounding the best part of the Estate—namely, the Cromwell-road, the Exhibition-road, and the Prince Albert-road, forming with the main Kensington-road, four sides of a square. Thereon is now in progress of erection, "the South Kensington Museum," to be described under MUSEUMS. About twelve acres have been let on building leases, and are covered with lines of lofty and handsome houses, the Commissioners nearly doubling their original capital by the above speculation. They next let the upper part of the great centre square, about twenty-two acres, to the Horticultural Society. (See GARDENS, p. 370). Next was erected, south of the Horticultural Society's Gardens, the buildings for the International Exhibition of the year 1862.

The main building, designed by Captain Fowke, R.E., occupied about sixteen acres of ground: it measured about 1200 feet from east to west, by 560 feet from north to south. The whole of this ground was covered by buildings of brick, iron, and glass; and two long strips of ground, east and west, were

roofed in by the temporary sheds, or *annexés*, in which were shown machinery, and large and heavy objects, this additional area extending to seven acres. The interior space, covered by roofs of various heights, was divided into nave, transepts, aisles, and open courts; the latter were roofed with glass, but the other parts had opaque roofs, and were lighted by clerestory windows. The south front, in Cromwell-road, 1150 feet long, and 55 feet high, was of brick, had two projecting towers at each end, and a larger centre tower, in which was the main entrance to the Picture Galleries, being about as long as the Gallery of the Louvre, in Paris. In the east and west fronts rose a dome to a height of 260 feet. Under each noble arched recess was the entrance to the Industrial Courts, and in each tympan was a great rose-window. At the extreme north and south were two auxiliary Picture Galleries. The only portions of the building which resembled the Crystal Palace of 1851, were the six courts north and south of the nave; they had glass roofs on the ridge-and-valley plan, supported by square iron columns and wrought-iron trellis-girders. Each dome was at the intersection of the nave and transepts, and was of glass, with an outer and inner gallery. The interior was variously coloured, and relieved with gold, medallions and inscriptions; the decorations beneath the dome were grand, harmonious, and rich; and the view beneath the nave, 800 feet in length, remarkably effective. The Exhibition, based upon that of 1851, embraced thirty-six classes, besides those of the Fine Arts. It was opened with befitting ceremony, May 1, 1862, by the Duke of Cambridge, by command of the Queen, whose absence—through the death of the great originator, Prince Albert—greatly dimmed the state pageant. About 22,000 exhibitors were here represented, of whom about 17,000 were subjects of Her Majesty, and 5000 of foreign States. The absence of artistic treatment in the plan of the building, the general elevation, and the exterior ornamental details, were very objectionable. Still, under many depressing influences, the Exhibition proved numerically and practically a success; the manufactures of the United Kingdom showed not merely a gratifying advance upon those of 1851, but a still greater improvement as compared with those of other countries; commercially, the exhibitors largely benefited by the sale of works of industrial and fine art, home and foreign. A compact account of the International Exhibition, 1862, will be found in the extra volume of the *Year-book of Facts*, pp. 362.

In the construction of the building 4000 persons were employed; the buildings were insured for 400,000*l.*, at a cost of 3300*l.*; the prizes to exhibitors were declared July 11; the Exhibition was closed Nov. 1; Great Exhibition Memorial to Prince Albert, inaugurated June 10, 1863. The buildings have since been taken down, except the Picture Galleries, in which has been held the National Portrait Exhibition.

BROMPTON has long been frequented by invalids for its genial air. (See CONSUMPTION HOSPITAL, p. 43, and HOLY TRINITY CHURCH, p. 208.) At No. 7, Amelia-place, died, in 1817, the Right Hon. J. P. Curran. In Brompton-square, at No. 13, died Charles Incedon, the singer, 1826; and in the same year, at No. 22, George Colman the younger. At the Grange, taken down in 1842, lived Braham, the singer. At No. 45, Brompton-row, Count Rumford, the heat-philosopher; Rev. W. Beloe, the "Sexagenarian;" and Sir Richard Phillips, when writing his *Million of Facts*. At No. 14, Queen's-row, Arthur Murphy died in 1805, aged 77. The National School-house attached to Brompton Church was built in 1841, in the Tudor style, by George Godwin, F.R.S., architect. Brompton was once famous for its taverns; southward, among "the Groves," were the *Hoop and Toy*, the *Florida*, and other tea-gardens; at Old Brompton there remains the *Swan*, with its bowling-green. In a retired and well-appointed house, eastward, Mademoiselle Jenny Lind resided, during the zenith of her well-earned fame as a songstress.

KNIGHTSBRIDGE, or Kingsbridge, which is the more ancient name is doubtful. In a charter of Edward the Confessor, the wood at Kyngesbyrig is referred to. In a charter, not royal, namely one of Abbot Herbert, of Westminster, less than a century thereafter, occurs the name of Knyghtsbrigg. In Domesday it formed part of three manors—Neyte, Hyde (whence the name of Hyde Park), and Eybury, now spelt Ebury, which came by marriage to the Grosvenor family, and has been chosen as a title by one of its members. There is a tradition as to "Knightsbridge," namely, that two knights, on the way to Fulham, to be blessed by the Bishop of London, quarrelled and fought at the Westbourn Bridge, and killed each other on the spot. A commentator of Norden, the topographer, too, gives the following anecdote: "Kingsbridge, commonly called Stonebridge, near Hyde Park-corner, where I wish no true man to walk too late without good guard, as did Sir H. Knyvett, knight, who valiantly defended himself, there being assaulted, and slew the master-thief with his own hands." Still, we have the fact that the place was called "Knyghtsbrigg" in a formal charter (that of Abbot Herbert), long before the time to which either of these traditions could apply.

The bridge whence the place partly derived its name was one thrown across the Westbourn, which, rising at West-End in Hampstead, and giving its name to a district of Bayswater, flowed through the (artificially widened) Serpentine to the Thames. Its course may yet be traced on any map of London by the irregularities it has caused in laying out Belgravia. Part of it was an open brook so lately as 1854, but it is now wholly covered in; and is, we need not say, a common sewer, like the Oldbourne or the Fleet. Pont-street, which opens Belgravia to Sloane-street, must derive its name from the fact that it was at one time one of the few bridges over the Westbourne. This brook used formerly to over-

flow after heavy rains. One such flood is remembered in 1809, when for several days passengers had to be rowed from Chelsea to Westminster by the Thames boatmen.

The Knightsbridge road was infested by footpads, so that even so late as 1799 a party of light horse patrolled nightly from Hyde Park-corner to Kensington; and it is within the memory of some still alive that pedestrians walked to and from Kensington in bands sufficient to ensure mutual protection, starting at known intervals, when a bell was rung to announce the proper time. It was not even safe to sojourn at the change-houses or inns which stood by the way, for these were the haunts of the highwaymen. The water supply of the hamlet was anciently by means of springs and wells, which were very numerous, pure, and valuable. Doubtless, the Westbourn was also of great use to the inhabitants. In the beginning of the eighteenth century, a conduit was formed within Hyde Park, by permission of the Crown, for the supply of Park-side; and in the fields on each side of Rotten-row there was a row of conduits, the waters of which were received by one at the end of Park-side, known as St. James's or the Receiving Conduit: these supplied the royal residences and the Abbey. A spring in Hyde Park, in the time of James I., was allowed to supply the Lazar-house (now Trinity Chapel, described at p. 216) by "a pipe of lead bringinge the sayde springe of water to the sayde house."—*Builder*.

West of St. George's Hospital, at No. 14, John Liston, the comedian, lived several years, and here he died, March 22, 1846. Liston was born in Norris-street, Haymarket, in 1776, and was educated in Archbishop Terison's school: he first appeared on the stage, at the Haymarket Theatre, in 1805; and retired at the Olympic Theatre in 1837: he died worth 40,000*l*.

In 1842, opposite the Conduit in Hyde Park, was built the St. George's Gallery, for the exhibition of Mr. Dunn's Chinese Collection; subsequently occupied by Mr. Gordon Cumming's African Exhibition, and Bartlett and Beverley's Diorama of the Holy Land. The Gallery was then taken down.

The original entrance was copied from a Chinese summer-house, inscribed "Ten thousand Chinese things." This Collection, formed by Mr. Nathaniel Dunn, in twelve years, and first exhibited in Philadelphia, consisted of a vast assemblage from China of its idols, temples, pagodas, and bridges; arts and sciences, manufactures and trades; parlours and drawing-rooms; clothes, finery, and ornaments; weapons of war, vessels, dwellings, &c. Here were life-size groups of a temple of idols, a council of mandarins, and Chinese priests, soldiers, men of letters, ladies of rank, tragedians, barbers, shoemakers, blacksmiths, boat-women, servants, &c., amidst set scenes and furnished dwellings. Here was a two-storied house from Canton, besides shops from its streets; here were persons of rank in sumptuous costumes, artisans in their working-clothes, and altogether such a picture of Chinese social life as the European world had never before seen. Part of the collection was subsequently exhibited in 1851, in a gay pavilion built for the occasion west of Albert Gate; the site of which is now occupied by a handsome five-storied mansion.

Westward is Albert-gate, Hyde Park, opened 1846: the stags upon the piers were formerly at the Ranger's Lodge, Green Park, and were modelled from a pair of prints by Bartolozzi. The ground, with the site of the large and lofty houses east and west, was purchased by the Crown from the Dean and Chapter of Westminster, when the Cannon Brewery was removed: the house east was bought for 15,000*l*. by Mr. Hudson, then "the Railway King." It is now the residence of the French Embassy.

Knightsbridge Green is identified as the burial-pit of the victims of the plague in the Lazar-house and the hamlet generally. On the Green was erected, in 1864, the *New Tattersall's* removed from "the Corner," for the increased accommodation and comfort of the Jockey Club, its subscribers, and the general public.

The plot of ground upon which it stands is nearly two acres in extent. It is approached from the east by Knightsbridge-green, and the *façade* consists of two square wing-blocks, divided by a pedimented gateway, carved, and two side entrances. The subscription-room is a saloon 60 ft. by 30 ft., with a clear height of 26 ft. 6 in.: lighted by day by two large domes 18 ft. high, covered with lunettes. A third dome is in the centre of the ceiling, in which an enormous sun-burner is placed by night. These domes are bordered by a beautiful *guilloché* pattern, and enriched with coloured devices. The walls are decorated in the same pattern. The spacious floor is paved, in a tasteful geometric pattern. A raised dais, about 6 in. in height, surrounds this apartment. It is skirted and edged with marble. Under each of the two extreme domes a large octagon slab of marble supports the desks used for recording wagers or writing letters. At the south-west corner is an area of about 70 ft. by 40 ft. for open-air betting, with a telegraph office. The grand or central entrance leads into the principal public yard, appropriated to sales by auction. In the centre of this area is the old and familiar temple of the other premises at Hyde Park-corner, covering the aqueduct with its fox and the bust of George IV. when in early life; and in the north-west corner, is the well-known pulpit of the auctioneer. The whole yard is covered by a gigantic roof of Hartley's patent glass.

At Rutland Gate (on the site of a mansion of the Dukes of Rutland) is the house where John Sheepshanks, Esq., formed his collection of 229 pictures (with two exceptions), by modern British artists: including 6 works by A. Callcott, R.A.; W. Collins, R.A., 7; John Constable, R.A., 5; C. W. Cope,

R.A., 7; W. Etty, R.A., 2; Edwin Landseer, R.A., 9; C. Leslie, R.A., 9; W. Mulready, R.A., 15; W. Redgrave, R.A., 6; C. Stanfield, R.A., 3; J. M. W. Turner, R.A., 5; T. Uwins, R.A., 4; T. Webster, R.A., 5. The collection was bequeathed by Mr. Sheepshanks to the National Gallery.

In *High-road*, between the Green and Rutland-gate, are the oldest houses in the hamlet. Chatham House is dated 1688. Three doors beyond it is *The Rose and Crown* inn, formerly *Oliver Cromwell*, the front of which is emblazoned with the great Protector's arms. There is a tradition that his body-guard was once quartered here; as well as of its having sheltered Wyatt, while his unfortunate Kentish followers rioted on the adjacent green. At the corner of South-place is the Phoenix Floorcloth Manufactory, the earliest established, founded by Nathan Smith, 1754; burnt down 1794; rebuilt 1824: at the north end is a clock, with a figure of Time, cut in stone. At Kent House resided for a few years the Duke of Kent, who largely added to the original house. Stratheden House was the town residence of Lord Campbell and Lady Stratheden: Lord Campbell died here, June 23, 1861, aged eighty-one: the first volume of his *Lives of the Chancellors* is dated from this house.

In *High-row* stood the noted *Fox and Bull Tavern*, of the time of Queen Elizabeth, and noted for its gay company to our time. The house is referred to in the *Taller*, No. 259. Sir Joshua Reynolds, Sir W. Wynn, the patron of Ryland, and George Morland, were visitors here; and Sir Joshua painted the sign, which hung till 1807, when it was destroyed in a storm. The Elizabethan house was panelled and carved and had enriched ceilings; and its immense fire-dogs were not disused till 1799. In a house westward lived Lady Anne Hamilton; then Mr. Chalon and Mr. Davies, both artists of repute; and next Mr. White the naturalist, who had here a menagerie. Mr. Woodburn, the connoisseur in ancient art, once lived here; and the staircases still bear evidence of the artistic tenacity.

Ozias Humphry, R.A., resided many years at Knightsbridge; he died at 13, High-row, in 1810. At the west end of the row is the Horse Guards' Barracks, built in 1795, and capable of accommodating 600 men and 500 horses. Bensley, the actor, who in early life had been in the army, was appointed barrack-master, which appointment he held till his death, in 1817. Hard by are the stables built for the Duke of Wellington: Hardwick, architect. In Park-row resided, about 1828, Olive, the *soi-disant* Princess of Cumberland, and next door, Sir Richard Phillips. (Abridged chiefly from Davis's *Memorials of Knightsbridge*, 1859.)

Lowndes-square occupies the site of a famous place of amusement—Spring Gardens, so called after the still more celebrated Spring Gardens at Charing-cross: the World's End, at Knightsbridge, mentioned by Pepys and Congreve, is supposed to have been a synonym of this fashionable house of entertainment. The building itself survived till 1826. There was another famous place of entertainment in the same neighbourhood, called Jenny's Whim. Its site is now occupied by St. George's-row, near the Chelsea Water-works; and the house, distinguishable by its red-brick and lattice-work, was not removed until November, 1865. Angelo says it was established by a firework-maker, in the reign of George I.; here were a large breakfast-room, bowling-green, alcoves, and arbours; a fish-pond, a cock-pit, and duck-hunting pond; a grotto, and a decanter of Dorchester for sixpence; a large garden with amusing *spring* deceptions; and a piece of water with large fish or mermaids.

Knightsbridge-grove, approached through a stately avenue of trees from the road, was a sporting house, where the notorious Mrs. Cornelyus endeavoured to retrieve her fortunes after her failure at Carlisle House; but she again failed in 1785. Ten years after, she reappeared at Knightsbridge as Mrs. Smith, a retailer of asses'-milk, in a suite of breakfast-rooms—but in vain.

The existence of *Belgravia* only dates from 1825. Before that, the district was a marshy tract, bounded by mud-banks, and partly occupied by market-gardens. The sites of Belgrave and Grosvenor Squares were nursery-grounds. Grosvenor Bridge, where the King's-road crosses the Westbourne, was not built till the time of Charles II.; and it was long called Bloody Bridge, from the number of murderous robberies there committed. It is curious that the whole of this district was built over, not gradually, but in two distinct movements—one from 1770 to 1780, and the other, after a pause of nearly fifty years, beginning in 1825, and still in operation.

## KENSINGTON GARDENS.

THESE delightful gardens, which, in our time, included an area of above 350 acres, did not, when purchased by William III., soon after his accession, exceed 26 acres, which he added to Hyde Park. In 1691 they were described by the Rev. Dr. Hamilton, to the Society of Antiquaries, as "not great, nor abounding with fine plants. The orange, lemon, myrtle, and what other trees they had there in summer, were all removed to London or Mr. Wise's greenhouse at Brompton Park, a little mile from there." Queen Anne added 30 acres, and planted the design as we now have it. Evelyn notes: "Sept. 2nd, 1701.—I went to Kensington and saw the houses, plantations, and gardens, the work of Mr. Wise, who was there to receive me." (*Diary*, vol. ii. p. 75.) Bowack, in 1705, described the gardens as "beautified with all the elegances of art (statues and fountains excepted). There is a noble collection of foreign plants, and fine neat greens, which makes it pleasant all the year; the whole, with the house, not being above 26 acres. Her Majesty has pleased lately to plant near 30 acres more towards the north, separated from the rest only by a stately greenhouse, not yet finished." Thus, previous to 1705, Kensington Gardens did not extend farther north than the conservatory; and the eastern boundary was nearly in the line of the broad walk which crosses before the east front of the palace. The kitchen gardens, which formerly extended northward towards the gravel-pits, and the 30 acres north of the conservatory, added by Queen Anne to the pleasure-gardens, may have been the 55 acres "detached and severed from the park, lying in the north-west corner thereof," granted in the 16th of Charles II. to Hamilton, Ranger of the Park, and Birch, Auditor of Excise; the same to be walled and planted with "pippins and red-streaks," on condition of their furnishing apples or cider for the King's use. At the end of the avenue leading from the south front of the palace to the wall on the Kensington-road, is a large and lofty architectural alcove, built by Queen Anne's orders; so that Kensington Palace, in her reign, seems to have stood in the midst of fruit and pleasure gardens, between the Kensington and Uxbridge roads. Addison, in the *Spectator*, No 477, dignifies Wise and London as the heroic poets of gardening, and is enraptured with their treatment of the upper garden at Kensington, which was at first nothing but a gravel-pit; the hollow basin and its little plantations, and a circular mount of trees, as if scooped out of the hollow, greatly delighting the essayist. Tickell opens his elegant eclogue with the oft-quoted glance at the morning promenade of his day; where—

"The dames of Britain oft in crowds repair  
To gravel walks and unpolluted air;  
Here, while the town in damps and darkness lies,  
They breathe in sunshine, and see azure skies;  
Each walks with robes of various dyes bespread,  
Seems from afar a moving tulip-bed,  
Where rich brocades and glossy damasks glow,  
And chintz, the rival of the showery bow."

Queen Anne's *Banqueting-house*, north of the palace, completed in 1705, is a fine specimen of brickwork: the south front has rusticated columns supporting a Doric pediment, and the ends have semicircular recesses. The interior, decorated with Corinthian columns, was fitted up as a drawing-room, music-room, and ball-room; and thither the Queen was conveyed in her chair from the western end of the palace. Here were given full-dress fêtes à la *Watteau*, with a profusion of "brocaded robes, hoops, fly-caps, and fans," songs by the court lyrist, &c. But when the Court left Kensington, Queen Anne's building was converted into an orangery and greenhouse. (See PALACES.)

Caroline, queen of George II., formed the Serpentine, dividing the Palace grounds from the open Hyde Park by a sunken fosse and wall, thus adding 300 acres to the gardens or private grounds; the ha-ha, now extending from the Bayswater-road to the powder magazine, remaining identically as it was then formed. With the soil dug was raised a mount to the south-east, with a revolving prospect-house. The Gardens were planted and laid out by Bridgeman, who banished verdant sculpture, but adhered to straight walks and clipped hedge, varied with a wilderness and open groves.

A plan of 1762 shows the formal Dutch style on the north of the palace. On the north-east, a fosse and low wall reaching from the Uxbridge-road to the Serpentine at once shut in the Gardens, and conducted the eye along their central vista, over the Serpentine (formed between 1730 and 1733), to its extremity; and across the Park to the east of Queen Anne's gardens, immediately in front of the palace, a reservoir was formed into "the round pond;" thence long vistas were carried through the wood that encircled it, to the head of the Serpentine, to the fosse and Bridgeman's ha-ha wall, affording a view of the Park; and to the mount already mentioned, which, with its evergreens and temple, has disappeared within recollection. Bridgeman, "Surveyor of the Royal Gardens," died in 1738; and was succeeded by Samuel Milward and John Kent. Kensington Gardens long maintained its rural character; for, in a minute of the Board of Green Cloth, 1798, we read of a pension granted to a widow, whose husband was accidentally shot while the keepers were hunting foxes in Kensington Gardens.

After King William took up his abode in the palace, a court end of the town gathered round it. The large gardens laid out by Queen Caroline were opened to the public on Saturdays, when the King and Court went to Richmond; all visitors were then required to appear in full-dress. When the Court ceased to reside at Kensington, the Gardens were thrown open in the spring and summer; and next open throughout the year, as at present. On stated days in the London season, military bands perform. Here is a refreshment-room: "Gentlemen are requested not to smoke in the vicinity of the music platform and refreshment room, as much complaint has been made by visitors to the gardens in consequence of this practice.—Office of Works, August 20, 1855."

Of late years Kensington Gardens have been greatly improved by drainage, re-laying out, and the removal of walls and substitution of open iron railing. Viewed from near the palace, eastward are three avenues through dense masses of ancient trees. Immediately in front of the palace is a quaintly-designed flower-garden, between which and Kensington are some stately old elm-trees. The broad walk, 50 feet in breadth, was once the fashionable promenade. On the southern margin of the Gardens is a walk, bordered by the newer and rarer kind of shrubs, each labelled with its Latin and English name, and its country. The most picturesque portion of the Gardens, however, is at the entrance from near the bridge over the Serpentine, where is a delightful walk east of the water, beneath some noble old Spanish chestnut-trees. The elegant stone bridge across the west end of the Serpentine was designed by Sir John Rennie in 1826, and cost 36,500*l*. A pair of magnificent Coalbrook-dale iron gates (from the Great Exhibition of 1851) has been erected adjoining the southern lodge.

An unornamented gate has been opened in the Bayswater-road. In 1860, a ride was formed in the Gardens, which had hitherto (except during the Exhibition year 1851) been kept from equestrian intrusion. In 1861 was formed another ride, adapted only for summer, and entering Kensington Gardens from Hyde Park, through the gateway in the south-western arch of the bridge; proceeding along the edge of the Serpentine between a bank of rhododendrons and fine trees; then through a broad and shady avenue, and returning along an open space to the entrance-gate.

On this side of the Gardens are the Ornamental Water-works, completed in 1861. They consist of a small Italian garden, with an engine-house, 48 feet high, Italian in style, and an engine to pump the water in to large reservoirs, with a jet in the centre of each; the tower end separated from the Serpentine by a screen, with vases; and in the centre a large octagonal fountain; the whole supplying the Serpentine. The sculpture here is by John Thomas; and the engineer of the water-works, Hawksley.

A large portion on the west side of the Gardens, including the extensive kitchen-gardens (which date from 1738), pursuant to 5 Vict., c. 1., has been appropriated to a fine public road from Kensington to Notting-hill: here are several handsome mansions, the gardens of those on the west side extending to the old red-brick wall of the Palace kitchen-gardens, which remains. By the formation of this road, Kensington Palace Gardens, the royal gardens were reduced to 261 acres, their present extent. Their effect is not exhilarating, but a relief to the in-dwellers of London.

## KENT-STREET, SOUTHWARK,

ORIGINALLY "Kentish-street," is a wretched and profligate part of St. George's parish. In 1633 it was described as "very long and ill-built, chiefly inhabited by broom-men and mumpers;" and for ages it has been noted for its turners' shops, and broom and heath yards. Evelyn tells of one Burton, a broom-man, and his wife, who sold kitchen-stuff in Kent-street, whom God so blessed that Burton became a very rich and a very honest man, and Sheriff of Surrey. At the east end of Kent-street, in 1847, was unearched a pointed arched bridge of the 15th century, probably erected by the monks of Bermondsey Abbey, lords of the manor. In Rocque's Map, 1750 (when the Kent-road was lined with hedge-rows), this arch, called Lock's-bridge, from being near the Lock Hospital, carries the road over a stream which runs from Newington-fields to Bermondsey. Yet, what long lines of conquest and devotion, of turmoil and rebellion, of victory, gorgeous pageantry, and grim death, have poured through this narrow inlet of old London! The Roman invader came along the rich marshy ground now supporting Kent-street (says Bagford, in a letter to his brother-antiquary, Hearne); thousands of pious and weary pilgrims have passed along this causeway to St. Thomas's of Canterbury; here the Black Prince rode with his royal captive from Poitiers, and the victor of Agincourt was carried in kingly state to his last earthly bourne. By this route Cade advanced with his 20,000 insurgents from Blackheath to Southwark; and the ill-fated Wyatt marched to discomfiture and death. To the formation of the Dover-road, in our time, Kent-street continued part of the great way from Dover and the Continent to the Metropolis.

Smollett, in his *Travels*, 1766, describes "the avenue to London by the way of Kent-street, which is a most disgraceful entrance to such an opulent city. A foreigner, in passing through this beggarly and ruinous suburb, conceives such an idea of misery and meanness, as all the wealth and magnificence of London and Westminster are afterwards unable to destroy. A friend of mine, who brought a Parisian from Dover in his own post-chaise, contrived to enter Southwark after it was dark, that his friend might not perceive the nakedness of this quarter."

## KENTISH TOWN,

A HAMLET of St. Pancras, and a prebendal manor of St. Paul's, was formerly written Kaunteloe, and is the property of the Camden family. Here was the *Castle* tavern, which had a Perpendicular stone chimney-piece; the house was taken down in 1849: close to its southern wall was a sycamore planted by Lord Nelson, when a boy, at the entrance to his uncle's cottage; the tree was spared. Opposite were the old Assembly-rooms, taken down in 1852: here was a table, with an inscription by an invalid, who recovered his health by walking to this spot every morning to take his breakfast in front of the house. Kentish Town Chapel, originally built by Wyatt in 1784, has been enlarged and altered to the Early Decorated style: here is buried Grignon, the engraver. (See p. 212.) In 1848, was built here a large Congregational Nonconformist Chapel, in ecclesiastical style. In Gospel-terrace is the Roman Catholic Chapel of St. Alexis, established 1847. In 1848 were erected the National Infant and Sunday Schools, by Hakewill, upon the plan of the Committee of Privy Council on Education; the site is part of an estate bequeathed by the witty divine, Dr. South, to Christ Church, Oxford. Near Highgate Rise is the *Grove*, where Charles Mathews the elder made his collection of paintings, prints, and other memorials of theatrical history, now at the Garrick Club-house. Nearly opposite (at the corner of Swain's-lane, leading to the Highgate and Kentish Town Cemetery—see p. 82), was "a miniature Wanstead House" (the design copied from Wanstead House, Essex), the villa of Mr. Philip Hurd, of the Inner Temple, who collected here a costly library, including the celebrated *Breviarium Romanum*, purchased by him, in 1827, from Mr. Dent's library, for 378*l.*: it consists of more than 500 leaves of vellum, illuminated by Flemish painters in Spain, of the fifteenth century, with miniatures and borders of flowers, fruit, and grotesque figures, upon a gold ground. (See Dibdin's *Bibliographical Decameron*, vol. i. pp. 163-7.) The villa was taken down in 1851, and upon the site are built handsome houses. From the rear of Mr. Hurd's house, some twenty-five years since,

not a house could be seen, so rural was this neighbourhood; now little can be seen but bricks and mortar. The river Fleet, which runs in the rear of the hamlet, has its source from springs on the south side of the hill between Hampstead and Highgate. In July, 1846, were sold 27 acres of building-ground in Gospel-Oak and Five-Acre Fields, between Kentish Town and Hampstead, for nearly 400*l.* an acre. Beneath the Gospel Oak preached some of our earliest Reformers, and Whitefield the Methodist.

In the last century, the road between the metropolis and Kentish Town was beset with highwaymen. In the *Morning Chronicle and London Advertiser*, Jan. 9, 1773, appears: "Thursday night some villains robbed the Kentish Town stage, and stripped the passengers of their money, watches, and buckles. In the hurry they spared the pockets of Mr. Corbyn, the druggist; but he, content to have neighbour's fare, called out to one of the rogues, 'Stop, friend, you have forgot to take my money!'"—*Notes and Queries*, No. 62.

The original "Mother Red Cap," Kentish Town, was a place of terror to travellers, and is believed to have been the "Mother Damnable" of Kentish Town in early days; at this house "Moll Cutpurse," the highwayman of the time of Oliver Cromwell, dismounted and frequently lodged.—*Smith's Book for a Rainy Day*, p. 20.

*Camden Town*, begun 1791, built on the estate of the Marquis Camden; and *Somers Town*, begun 1786, on the estate of Earl Somers—are also hamlets of Pancras parish, and both are now united with London, and are portions of the metropolis.

Walpole writes, June 8, 1791: "There will soon be one street from London to Brentford; ay, and from London to every village ten miles round! Lord Camden has just let ground at Kentish Town for building fourteen hundred houses—nor do I wonder; London is, I am certain, much fuller than ever I saw it. I have twice this spring been going to stop my coach in Piccadilly, to inquire what was the matter, thinking there was a mob—not at all; it was only passengers."

### KILBURN,

A HAMLET about two and a half miles north-west from London, at the southwestern extremity of the parish of Hampstead, is named from Cold-bourne, a stream which rises near West End, and passes through Kilburn to Bayswater; and after supplying the Serpentine reservoir in Hyde Park, flows into the Thames at Ranelagh. Kilburn has its station upon the London and North-Western Railway. In the last century, the place was famed for its mineral spring (Kilburn Wells), which rises about 12 feet below the surface, and is enclosed in a brick reservoir, the door-arch of which bears on its keystone 1714. The water is more strongly impregnated with carbonic acid gas than any other known spring in England. In 1837 was taken down a cottage at Kilburn in which Oliver Goldsmith had resided.

Kilburn originated from Godwyn, a hermit, who, *temp.* Henry II., built a cell near the little rivulet called *Cunebourne, Keelebourne, Coldbourne*, and *Kilbourne*, on a site surrounded with wood. Between 1128 and 1134, Godwyn granted his hermitage and adjoining lands to the conventual church of St. Peter at Westminster, who soon after assigned the property to Emma, Gunilda, and Cristina, maids-of-honour to Maud (queen of Henry I.), herself a Benedictine nun; and hence the cell of the anchorite became a nunnery; Godwyn being appointed its master or warden, and guardian of the maidens, for his life. Certain estates were granted to the nuns in Southwark and Knightsbridge (which manor still belongs to Westminster), the latter property in the place called Gara, probably Kensington Gore. Provisions, kitchen-fare, wine, mead, and beer were also assigned; and in return the vestals prayed for St. Edward the Confessor, and the church at Westminster.

At the Dissolution, in 1536, the "Nonre of Kilbourne" was surrendered; when the inventory shows the chamber furniture to have included "bedsteddes, standing bedd w<sup>t</sup> 4 postes, fetherbedds, matters, cov'ettes, wollen blankettes, bolsters, pillows of downe, sheetes," &c. The name of the last prioress was Anne Browne. Soon after the King assigned the priory estate, with other lands, to Weston, prior of the Hospital of St. John of Jerusalem, in exchange for Paris Garden in Surrey, &c. The church was dedicated to St. Mary and St. John the Baptist; the latter, in his camel-hair garment, is portrayed on the priory seal. The Abbey Farm at Kilburn includes the site of the priory: the only view known of the conventual buildings is an etching, piece, date 1722.

Several relics, including pieces of pottery, a few coins, and a bronze vessel, all mediæval, were found on the Priory site in the autumn of 1852, and shown to the Archæological Institute. In the *Graphic and Historical Illustrator*, pp. 336-340, is a good account of Kilburn Priory, mostly derived from Park's *Hampstead*.

### LAMBETH,

ALSO called *Lambhith, Lambhyde*, and *Lambhei*, is probably derived from *lam*, dirt, and *hyd* or *hythe*, a haven; or from *lamb* and *hythe*. It was anciently a village of Surrey, but is now united with Southwark; and is one of the metropolitan boroughs, returning two members to Parliament under the Reform Act of 1832. The parish

ranges along the south bank of the Thames from Vauxhall towards Southwark, and extends to Norwood, Streatham, and Croydon; in Aubréy's time it included part of the forest of oaks called Norwood, belonging to the see of Canterbury, wherein was the Vicar's Oak (cut down in 1679), at which point four parishes meet.

In the earliest historical times, the greater part of modern Lambeth must have been a swamp, overflowed by every tide, and forming a vast lake at high water. The Romans have the credit of having embanked the Thames on the south side, and of having done something towards draining the marsh. Roman remains have been discovered at St. George's Fields and at Kennington; and some antiquaries have thought that it was among the Lambeth marshes that Plautius got entangled after his victory over the Britons, and that he retired thence to the strong entrenchment still to be traced in the picturesque upland of Keston, near Bromley. The great Roman road from the south coast at Newhaven, through East Grinstead to London, entered Lambeth at Brixton (*Brixii lapidem*), crossed Kennington Common to Newington, and there divided; the eastern branch going to Southwark, and the western across St. George's Fields to Stangate, where was a ferry. In 1016, Canute laid siege to London, and finding the east side of the bridge impregnable, conveyed his ships through a channel ("Canute's Trench") dug in the marshes south of the Thames, so as to attack it from the west. Maitland, writing in 1739, imagined that he had succeeded in tracing this canal from Rotherhithe to Newington Butts, and thence to the river at Vauxhall. But two more probable and far shorter courses have been indicated for this channel, neither of which would reach Lambeth at all. Is it not possible, we ask, that the draining works executed by the Romans left certain water-courses which might have been made available for the purpose of this stratagem by the invading fleet? A few years later, in 1041, Kennington—the "King's Town"—was the scene of the sudden death of Hardicanute. There was a royal palace there, in which the nuptials of two scions of noble Danish families were celebrated. The King expired (says the *Saxon Chronicle*) "with a tremendous struggle" "as he stood drinking"—not without suspicion of poison. A popular holiday commemorated this event for many generations; and we have records of "Hog's Tide" or "Hock Tide" being kept as late as 1618. In Lambeth parish, the Churchwardens' Accounts show entries, till 1566, of sums gathered at these festivals and applied to the repairs of the church. Harold, in 1062, granted the manor of Lambethythe to Waltham Abbey; and in *Domesday* there are mentioned twelve villans, twenty-seven bordars, a church, and nineteen burgesses in London, and wood for three hogs; and the value of the manor is stated at 11*l.* It passed, after sundry changes, to Bishop Gundulph, of Rochester, who taxed it with an annual supply of 500 lampreys; and his successor demanded, in addition, a yearly salmon—to be caught of course off the river boundary. In 1197 the manor came by exchange into the hands of the Archbishops of Canterbury, with whom it has remained ever since. King John gave leave for the establishment within it of a weekly market and a Fair of fifteen days, on condition that it would not be prejudicial to the City of London. This Fair was suppressed by Archbishop Herring in 1757. A strange attempt was made, at the close of the twelfth century, by Archbishop Baldwin, to found somewhere in Lambeth a collegiate church of secular canons which should humble the refractory monks of Canterbury by superseding them in their right of election to the metropolitan see. The scheme was vehemently opposed, and Pope Celestine being prevailed upon to withdraw the sanction granted by his predecessor Urban, the buildings were razed by the mob. After many intrigues, the design was finally abandoned. We derive this *précis* of the early history of Lambeth from a paper in the *Saturday Review*.

Lambeth mother-church (St. Mary's) adjoins the Palace, and is described at p. 185. Beneath its walls, Mary, queen of James II., found shelter with her infant son, having crossed the river by the horse-ferry from Westminster: here the Queen remained a whole hour in the rain on the night of December 9, 1688, until a coach arrived from the next inn, and conveyed her to Gravesend, whence she sailed for France. St. Mary's Church was rebuilt in 1851–2, save the tower, in the same style as formerly, except the open timber roof. Memorial and other windows are filled with stained glass; "the Pedlar and his Dog" has been replaced, and the tombs and monumental brasses have been restored. The district churches have little that is noteworthy.

The site of *St. John's*, Waterloo-road, was a swamp and horse-pond: the church (built 1823-4) has a peal of eight bells, tenor 1900 lbs. weight: in a vault is buried Robert William Elliston, the comedian (d. 1831). The district commences at the middle of Westminster Bridge, whence an imaginary boundary-line passes through the middle of the river Thames to Waterloo Bridge.

On the south side of Church-street was Norfolk House, the mansion of the Earl of Norfolk *temp.* Edward I.: here resided the celebrated Earl of Surrey when under the tuition of John Leland, the antiquary. The house has long been demolished, and its site and grounds occupied by Norfolk-row and Hodges's distillery. The Dukes of Norfolk also had in Lambeth, on the banks of the Thames, a garden, which was let to Boydell Cuper, who opened it as Cuper's Gardens, and decorated it with some fragments of the Arundelian marbles, given him by the Earl of Arundel, whose gardener he had been. Other fragments of the sculptures were set up in a piece of ground adjoining, and afterwards were buried with rubbish from the ruins of St. Paul's Cathedral, then rebuilding by Wren; but the sculptures were subsequently disinterred, and the site was let to Messrs. Beaufoy for their Vinegar-works—removed to South Lambeth on the erection of Waterloo Bridge.

*Carlisle Street, Lane, and Chapel*, keep in memory Carlisle House, the palace of the Bishops of Rochester from the thirteenth to the sixteenth century, when Henry VIII. granted it to the see of Carlisle. Here, in 1531, Richard Roose or Rose, a cook, poisoned seventeen persons; for which he was attained of treason and boiled to death in Smithfield, by an *ex post facto* law passed for the purpose, but repealed in the next reign. On the grounds of Carlisle House was subsequently built a pottery, which existed *temp.* George II. The house then became a tavern, brothel, dancing-school, and academy; and was taken down in the year 1827.

Lambeth has long been celebrated for its places of public amusement. *Vauxhall Gardens* are mentioned by Evelyn, in his *Diary*, July 2, 1661: "I went to see the New Spring Garden, at Lambeth, a pretty contrived plantation;" and the place was to the last licensed annually as "the Spring Garden, Vauxhall." It was finally closed in 1859; and upon the site have been built the beautiful church of St. Peter; a School of Art, and streets of houses. *Belvedere House and Gardens\** adjoined Cuper's Gardens in Queen Anne's reign; and still further west were *Cumberland Tea-Gardens* (named after the great Duke), which existed until 1813; their site is now crossed by Vauxhall Bridge-road. The *Dog and Duck* dates from 1617, the year upon the sign-stone in the garden-wall of Bethlem Hospital (see pp. 51-54): here is preserved a drawing of the old tavern and its grounds. The *Hercules Inn and Gardens* occupied the site of the Asylum for Female Orphans, opened in 1758; and opposite were the *Apollo Gardens* and the *Temple of Flora*, Mount-row, opened 1788. A century earlier there existed, in King William's reign, *Lambeth Wells*, in Three Coney Walk, now Lambeth Walk; it was reputed for its mineral waters, sold at a penny a quart, "the same price paid by St. Thomas's Hospital." About 1750 a musical society was held here, and lectures and experiments were given on natural philosophy by Erasmus King, who had been coachman to Dr. Desaguliers. In Stangate are the *Bower Saloon*, with its theatre and music-room; and the *Canterbury (Music) Hall*.

*Astley's Amphitheatre* originated with Philip Astley, who in 1763 commenced horsemanship in an open field near Glover's "Halfpenny Hatch" at Lambeth. Thence Astley removed to the site of the present theatre, Westminster Bridge-road, when his ground-landlord had a preserve or breed of pheasants near the spot: the theatre was burnt in 1794, 1803, and 1841. The *Victoria Theatre*, formerly the *Coburg*, opened in 1818, is built on ground held of the manor of Lambeth: the site was a swampy open field; and part of the stone materials of the old Savoy Palace, Strand, then being cleared away, was used for the theatre foundation. The *Royal Circus*, St. George's Fields, was built in 1781, by Dibdin and Hughes, to compete with Astley; the Circus was burnt in 1805, and rebuilt as the *Surrey Theatre* in 1806; burnt in 1865, and rebuilt in the same year.

The *Asylum for Female Orphans*, just mentioned, was established chiefly through Sir John Fielding, the police-magistrate, whose portrait, attributed to Hogarth, was

\* Dr. Rawlinson, in his additions to Aubrey's *Surrey* (written in 1719), imagines Belvedere Gardens to have been the site of a saw-mill erected in Cromwell's time, and which he protected by Act of Parliament.

preserved there; with a head of George III. and his youngest son, the Duke of Cambridge, who was long president of the institution: in the chapel is a tablet to his memory. The site cost the charity 16,000*l.*; premises rebuilt 1826; removed to Beddington in 1866.

In Oakley-street, at the *Oakley Arms*, November 16, 1802, Colonel Edward Marcus Despard and thirty-two other persons were apprehended on a charge of high treason: and in February following, the Colonel, with nine associates, were tried by a special commission at the Surrey Sessions House; and being all found guilty, seven, including Despard, were executed, February 21, on the top of Horse-monger-lane Gaol.

Lambeth was long noted as the residence of astrologers. At Tradescant's house, in South Lambeth-road, lived Elias Ashmole, who won Aubrey over to astrology (*see* pp. 309 and 396). Simon Forman's burial is entered in the Lambeth parish-register; he died on the day he had prognosticated. Lilly says, Forman wrote in a book left behind him: "This I made the devil write with his own hand in Lambeth Fields, 1569, in June or July, as I now remember." Captain Bubb, contemporary with Forman, dwelt in Lambeth Marsh, and "resolved horary questions astrologically," a ladder which raised him to the pillory. At the north corner of Calcot-alley lived Francis Moore, astrologer, physician, and schoolmaster, and the original author of "Moore's Almanack." Next to Tradescant's house lived the learned Dr. Ducarel, one of the earliest Fellows of the Society of Antiquaries, and librarian at Lambeth Palace.

*Lambeth Marsh*, by Hollar's map, extended from near Stangate to Broadwall; and was bounded by the river on the north-west, and the ancient way or road called Lambeth Marsh on the south-east. The names of Narrow-wall and Broad-wall were derived from the embankments subsequently made.

In cutting for the railway and lines of sewerage at the great terminus near York-road (a space in size equal to Grosvenor-square), there was found a large deposit from the inundations of the Thames, containing gravel-stones and dark wet clay, or pressed river-mud, imbedding fragments of twigs, bones, pieces of Roman tile, &c.

Narrow-wall, Vine-street, and Cornwall-road are delineated in views of these suburbs in Queen Elizabeth's reign: Vine-street is from eight to ten feet below the level of the adjacent streets. In the Marsh stood, until 1823, an old house, called Bonner's house, which was traditionally known as the residence of Bishop Bonner. Near the Marsh resided Thomas Bushell, a man of scientific attainments, who was a friend of Lord Chancellor Bacon. He obtained from Charles I. a grant to coin silver money for the purposes of the king, when the use of his Mint at the Tower was denied to the king. When Oliver Cromwell assumed the protectorate, Thomas Bushell hid himself in this house, which it seems had a turret upon it. A large garret extended the length of the premises; in this the philosopher lay hid for upwards of a year. This apartment he had hung with black; at one end was a skeleton extended on a mattress: at the other was a low bed, on which he slept; and on the dismal hangings of the wall were depicted several emblems of mortality. At the Restoration, Charles II. supported Bushell in some of his speculations. He died in 1674, eighty years of age, and was buried in the little cloisters of Westminster Abbey.

At South Lambeth, upon the site of Sir Noel Caron's mansion and deer-park, are *Beaufoy's Vinegar and Wine Works*. Here were a vessel of sweet wine containing 59,109 gallons, and another of vinegar of 56,799 gallons; the lesser of which exceeded the famous Heidelberg tun by 40 barrels. Mr. Beaufoy, F.R.S., was an eminent mathematician, and a munificent patron of education; his bust is placed in the Council Chamber, Guildhall. In Lambeth Walk, close upon the South-Western Railway, are the *Lambeth Ragged Schools*, founded in 1851 by Mr. Beaufoy, at the expense of 10,000*l.*, and 4000*l.* endowment, as a memorial of the benevolent Mrs. Beaufoy, the wife of the founder.

On part of the site of Belvedere House and Gardens were established, in 1785, the *Lambeth Water-works*, first taking their water from the borders of the Thames, then from its centre, near Hungerford Bridge, by a cast-iron conduit-pipe 42 inches in diameter; whence, in 1852, the works were removed to Seething Wells, Ditton, 23 miles by the river-course from London Bridge. Thence the water is supplied to the Company's reservoirs at Brixton, 10 $\frac{3}{4}$  miles, by steam pumping-engines, at the rate of 10,000,000 gallons daily; from these reservoirs, 100 feet above the Thames, the water flows by its own gravity through the mains; but at Norwood it is lifted by steam-power 350 feet, or the height of St. Paul's Cathedral, above the supplying river.

In *Belvedere-road* is *Goding's Ale Brewery*, built in 1836: the upper floor is an immense tank for water, supplying the floor below, where the boiled liquor is cooled; it then descends into fermenting tuns in the story beneath, next to the floor for fining, and lastly to the cellar or store-vats.

Plate-glass for mirrors and coach-windows was first made, in 1670, by Venetian artists, with Rosetti at their head, under the patronage of the second Duke of Buckingham, at Fox-hall (Vauxhall), with great success, "so as to excel the Venetians, or any other nation, in blown plate-glass." But about 1780 the establishment was broken up, and a descendant of Rosetti's left in extreme poverty. (*Hist. of Lambeth*, 1786.) The works stood on the site of Vauxhall-square. Some of the finest "Vauxhall plates" are to be seen in the Speaker's state-coach. The *Falcon Glass-house*, Holland-street, Blackfriars-road, occupies the site of the tide-mill of the old manor of Paris Garden, and has existed more than a century; here is made about a fortieth part of the flint-glass manufactured in England.\*

Lambeth has long been famed for its stone-ware. The *Vauxhall Pottery*, established two centuries since, by two Dutchmen, for the manufacture of old Delft ware, is probably the origin of all our existing potteries. Two other Potteries at Lambeth were commenced in 1730 and 1741. The potters procure the clay from Devon and Dorset; and the flint, already ground, from Staffordshire. Salt-glazed stoneware is made in Lambeth of the yearly value of 100,000*l.*, of which more than one-half is paid for labour; at Green's manufactory are made chemical vessels for holding from 300 to 400 gallons.

In *Hunt's Chemical Works*, High-street, are combined the crushing of bones and the grinding of mustard, with the manufacture of colours, soap, and bone brushes; and stearine, glue, hartshorn, and phosphate of lime are obtained by steam-power from the refuse of slaughtered cattle. *Hawes's Soap and Candle Works*, at the Old Royal Barge House, have existed for 90 years.

Above Vauxhall Bridge are *Price's Stearine Candle Company's Works* (established 1842): where candles are made from cocoa-nut oil brought from the Company's plantations in Ceylon, and palm-oil from the coast of Africa, landed from barges at the wharf at Vauxhall. The oil being converted by chemical processes into stearine, is freed from oleic acid by enormous pressure; is liquefied by steam, and then conveyed into the moulding machinery, by which 800 miles of wicks are continually being converted into candles. The buildings are of corrugated iron, and include the auxiliaries of a laboratory, engineers', carpenters', finners', copper-smiths', and weavers' shops; forges, a cooperage, a sealing-wax manufactory, and steam printing-machine; the several furnaces consuming their own smoke. This is the most colossal establishment in the world in this branch of chemical manufacture.

Shot is made in the lofty towers immediately above and below Waterloo Bridge. The height of the quadrangular tower is 150 feet: the upper floor is a room wherein the alloy of arsenic and lead is melted by a furnace; the fluid metal is then ladled into a kind of cullender, through the holes of which it falls like rain for about 130 feet into water at the lower floor of the building. An iron staircase leads from the bottom to the top of the tower: on Jan. 5, 1826, the upper floor was destroyed by fire, which happening at night, presented a magnificent effect. The circular shot-tower, 100 feet high, is strikingly beautiful. Mr. Hosking, the architect, considers this structure to rival the Monument: "They are both," he observes, "of cylindrical form; but the one is crowned by a square abacus, and the other by a bold cornice, which follows its own outline (*i.e.* of the tower): the greater simplicity and consequent beauty of the latter is such as to strike the most unobservant."

*Maudslay and Field's Marine Steam Engine Works*, in the Westminster-road, were commenced in 1810, and employ from 1300 to 1400 workmen, besides steam-power for the heavy labour. Here are fashioned immense metal screws, like the double tail of a whale; parts of engines, several tons weight, are lifted by cranes, to be adjusted and joined together; immense cylinders are bored and polished, of such diameter that a man might almost walk upright through them. Engines cut and shave hard iron, as if it were soft as wax; cutting instruments have a force of thirty tons; steam-hammers are of ten, twenty, and thirty cwt.; thick metal plates are pierced by rolling mills and machinery to be fastened with red-hot rivets.

\* Mr. Apsley Pellatt, the proprietor of the Falcon Works, elected M.P. for Southwark in 1852, published *Curiosities of Glass-making* (1849); the experiences of a lifetime unceasingly devoted to the study and practice of the art.

In Duke-street, Stamford-street, are *Clowes's Printing Works and Foundry*, the largest in the world, commenced by Augustus Applegath, the eminent engineer, and greatly extended by his successors, Messrs. Clowes.

The "New Cut," from Westminster to Blackfriars-road, has become a street within the recollection of the writer, who remembers low-lying-fields, with a large windmill, east of the raised roadway. *Pedlar's Acre* (for the name see p. 185), a portion of the Marsh, by old admeasurement contains 1 acre 17 poles, with a frontage on the Thames. In 1504, by the churchwardens' accounts, it was an osier-bed, and in 1623, Church Osiers; the name of *Pedlar's Acre* does not occur until 1690, probably from its being the squatting-place of pedlars, as were the New Cut fields within memory.

In 1504-5, the annual rent of this estate was 2*s.* 8*d.*; in 1506, 4*s.*; 1520, 6*s.*; in 1556, 6*s.* 8*d.*; in 1564, 13*s.* 4*d.*; in 1591, 1*l.* 6*s.* 8*d.*; and in 1651, 4*l.*, at about which sum it continued until the commencement of the last century. After the draining of Lambeth Marsh, and the erection of Westminster and Blackfriars Bridges, *Pedlar's Acre*, in 1752, was held on a long lease at a yearly rent of 100*l.* and 800*l.* fine. In 1813, when it had been much built upon, it was let by auction for twenty-one years, in three lots, at 78*l.* per annum, and 6000*l.* premium. The rents and proceeds are applied to parochial purposes, under the Act 7 Geo. IV. cap. 46.

At Narrow Wall flourished for nearly 60 years Coade's Manufactory of burnt Artificial Stone (a revival of *terra-cotta*), invented by the elder Bacon, the sculptor; and first established by Mrs. Coade, from Lyme Regis, in 1769. Of this material are the bas-relief in the pediment over the western portico at Greenwich Hospital, representing the Death of Nelson, designed by West, and executed by Bacon and Panzetta; and the rood-screen or loft at St. George's Chapel, Windsor. The manufacture (now Austin and Seeley's) has been removed to the New-road.

Lambeth, a few years since a feverish marsh, has been greatly improved by drainage: Maudslay's Foundry was raised on pillars from the swamp, where at times a boat might have floated; it is now, by drainage, firm and dry at all seasons. Lett's Timber Wharf, from the time of Queen Elizabeth until the beginning of this century, lay amidst ponds and marsh-streams, but is now dry and healthy. Here are the timber-wharves of Messrs. Gabriel; Alderman Gabriel, Lord Mayor 1866-7.

Across this thickly-peopled district extends the South-Western Railway from its terminus in the Waterloo-road to Nine Elms, 2 miles 50 yards, executed at a cost of 800,000*l.*; and along the river-bank, anaconda-like, upon arches, trends the extension of the London, Chatham, and Dover Railway, and the South Eastern Railway, from London Bridge.

### LAMBETH PALACE,

**L**AMBETH HOUSE of old, has been for six and a half centuries the mansion of the Archbishops of Canterbury, who had resided at Lambeth seventy years previously; and in 1197 obtained the entire manor, by exchange with the Bishop of Rochester for certain lands in Kent. Hence the present palace is the manor-house; and, with the gardens and grounds, forms an extra-parochial district.

The oldest part of Lambeth Palace is the *Chapel*, and a *Crypt*, supposed to be a portion of the ancient manor-house, built by Archbishop Hubert Walter about 1190. Archbishops Langton, Boniface, Arundel, Chicheley, Stafford, Morton, Warham, Cranmer, Pole, Parker, and Bancroft, expended great sums on the palace, as have succeeding archbishops. Cranmer's additions included "the Steward's Parlour," and "a summer-house in the garden of exquisite workmanship;" both which have disappeared. In Wat Tyler's rebellion, "the commons from Essex" plundered the palace, and beheaded the archbishop, Sudbury, on Tower Hill. In 1642, the Parliamentary soldiers dismantled the Chapel, broke the painted windows, which it was alleged Archbishop Laud had restored "by their like in the mass-book;" while Laud's "books and goods were seized on, and even his very diary taken by force out of his pocket." The palace was then used as a prison for the Royalists; and after its sale by the Parliament for 7073*l.*, the Chapel was converted into a dancing-room, and the Great Hall demolished. The latter was rebuilt by Archbishop Juxon, at the charge of 10,500*l.* The palace was attacked by the rioters of 1780, when it was protected by a detachment of Guards, and subsequently by a militia regiment as a

episcopi tandem hic quiescit.”\* The tomb, which Parker “erected while he was yet alive,” near the spot where he “used to pray,” was demolished by Col. Scot in 1642, and the Archbishop’s corpse thrown into a dung-heap; but it was recovered and re-interred after the Restoration. Archbishop Bancroft has narrated these facts in an epitaph of elegant Latin, inscribed on a tomb raised by him to Parker’s memory. In the Chapel have been consecrated upwards of 150 bishops: Dr. Howley’s consecration as Bishop of London (1813) was witnessed by Queen Charlotte, when seventy years of age: as Archbishop of Canterbury he crowned three sovereigns. The *Crypt* beneath the chapel has been already noticed at p. 302.

The *Library* (Juxon’s Hall) and the *Great Dining-room* (on the site of the Guard-chamber) form the west side of the inner court. On the north are the new buildings of the palace, by E. Blore; the entrance is between two octagonal towers, 84 feet high. In the *Private Library* is a portrait on board of Archbishop Warham, consecrated 1504; this was painted by Holbein, and presented by him to the Archbishop, with a head of his friend Erasmus: the latter is missing. In the *Ante-room* is a whole-length portrait of Charles I., copied from Vandyke; and a picture on panel of St. Ambrose, St. Jerome, St. Augustine, and St. Gregory, with the Holy Spirit. (See a List of the Pictures, in Brayley’s *History of Surrey*, vol. iii.)

The *Guard-chamber* is mentioned in 1424 as the “*Camera Armigerorum*,” from the arms being kept here for the defence of the palace; but they were carried off in the plunder of 1642, and were never replaced. In this chamber Archbishop Laud kept his *state*, Sept. 19, 1633, the day of his consecration. The apartment is 58 feet long and 27 feet 6 inches wide; it has a very elegant oak roof, with the lofty two-centred and bold tracery of Early Perpendicular work; it was long plastered over, but was restored by Blore about 1832, when it was under-propped, and the walls were rebuilt. The roof is panelled, and supported by bold arches springing from octangular corbels; the spandrels of the arches being filled by quatrefoils in circles, and trefoil mouldings. On the gabled sides of the roof similarly enriched arches stretch between the great roof arches; on the walls also arches span from corbel to corbel, and support an embattled frieze; and the fireplace is turreted.

In this room, besides smaller portraits, is a series of half and three-quarter lengths of all the Archbishops of Canterbury since 1633: including Laud, by Vandyke; Juxon (who attended Charles I. on the scaffold), from an original at Longleat; Herring, by Hogarth; Secker, by Reynolds; Sutton, by Beechey; Howley, by Shee. These portraits show the gradual change in the clerical dress, in bands and wigs, and the large ruff in place of the band: Tillotson’s being the first wig, unpowdered, and not unlike the natural hair. Here also are smaller heads of the earlier archbishops: Arundel, from a curious portrait at Penshurst; Chicheley, Cranmer, and Grindal; and Cardinal Pole, from an original in the Barberini Palace at Rome. Pole maintained great hospitality at Lambeth: in the MS. Library is his patent (4 Philip and Mary) for retaining one hundred servants. The body of the Cardinal lay in great state at Lambeth during forty days, prior to its interment at Canterbury.

In the hall are given annually, on “public days,” a certain number of state entertainments, termed “Lambeth Palace dinners,” to the bishops and leading clergy. The Rev. Sydney Smith facetiously asks: “Is it necessary that the Archbishop of Canterbury should give feasts to aristocratic London; and that the domestics of the Prelacy should stand with swords and bag-wigs, round pig and turkey and venison, to defend, as it were, the orthodox gastronome from the fierce Unitarian, the fell Baptist, and the famished children of Dissent?”—*Second Letter on Church Reform*.

In the *Picture Gallery*, built by Pole, among other paintings are: Archbishop Potter when six years old (1680), holding a Greek Testament, which he is said then nearly to have read; Martin Luther, from Nuremberg; Cardinal Pole (curious, on board, and probably a genuine likeness); Queen Catherine Parr, original, on board; Luther and his Wife (?), attributed to Holbein, and copied on enamel by Bone; Henry Prince of Wales, eldest son of James I. (full-length, curious costume); Bishop Burnet, as Chancellor of the Garter; an old view of Canterbury Cathedral; Archbishop Juxon, after his decease; Bishop Hoadly, painted by his second wife; Archbishop Parker,† painted in 1572 by Richard Lyne, who practised painting and engraving in the palace; Archbishop Tillotson, by Mrs. Beale.

The *Great Hall* is built of dark-red brick, with strong buttresses and stone finishings. In the centre of the roof is a two-storied hexagonal lantern, surmounted by a large vane, in which are the arms of the see of Canterbury, impaled with those of Juxon (a cross between four negroes’ heads), surmounted by the archiepiscopal mitre.

\* In this Chapel Archbishop Parker was consecrated, Dec. 5, 1559, according to the “duly appointed ordinal of the Church of England,” as recorded in Parker’s Register at Lambeth, and in the Library of Corpus Christi College at Cambridge; thus falsifying the absurd calumny promulgated by the Romanists, of Archbishop Parker having been irregularly consecrated at the *Nug’s Head Tavern*, at the east end of Friday-street, Cheapside, by one bishop only.

† This portrait strongly resembles the small print of the Archbishop engraved by R. Berg (Remigius Hogenberg), which Vertue considered to be the first portrait engraved in England.

The interior was converted into a library for the printed books belonging to the see, between 1830 and 1834; when a new entrance-gateway to the inner court was built, with a fireproof room over it, in which are kept the MSS. The library has a large north-west bay-window of richly ornamented stained and painted glass; in the top division is a very large coat of the arms of the see and Archbishop Juxon; and underneath are the arms of the see and Archbishop Howley, 1829. Around are smaller coats of the arms of about twenty-four archbishops, each impaled with the arms of the see. Here are also the arms of Philip II. King of Spain; but the most curious piece of painted glass is an ancient portrait of Archbishop Chicheley.

The roof is of oak, and a fine specimen of olden carpentry: it consists of eight main ribs, with longitudinal braces, springing from corbel brackets, and enriched with carved spandrels, pendants, entwined mitres, and the arms of Juxon and the see of Canterbury several times repeated. Above the two fireplaces are painted the arms of the see, impaling those of Bancroft, the founder of the library; and of Secker, a liberal contributor. The books, over-estimated by Ducarel at 25,000 volumes, are kept in wall and projecting oak cases; the earliest printed works being in the south-west bay-window recess. Until Bancroft bequeathed his books in 1610, each archbishop brought his own private collection. Bancroft's books remained at Lambeth till 1646, two years after the execution of Laud, when being seized by the Parliament, the use of them was granted to Dr. Wincocke. They were subsequently given to Sion College, and many began to get into private hands; when Selden suggested to the University of Cambridge a right to them, and they were delivered, pursuant to an ordinance of Parliament, dated Feb. 1647, into their possession. After the Restoration, and repeated demands by Juxon and Sheldon, the books were collected, including those in private hands, and in the possession of John Thurloe and Hugh Peters. Evelyn writes to Pepys, in 1689, that the library was then "replenished with excellent books, but that it ebbs and flows, like the Thames running by it, at every prelate's accession or translation." The books left by Archbishops Bancroft, Abbot, Laud, Sheldon, and Tenison, bear their arms. There is only one volume in the collection known to have belonged to Archbishop Parker, which is a volume of Calvin's writing: his arms are on the outside, and within is written in red lead, "J. Parker," who was the archbishop's son.

The first complete Catalogue made of the printed books was drawn up by Bishop Gibson when librarian. In 1718 it was fairly copied by Dr. Wilkins, in three volumes folio; and it has been continued by his successors to the present time. The library consists of rare and curious editions of the Scriptures, commentaries of the early fathers, scarce controversial divinity, records of ecclesiastical affairs, English history and topography; many fine copies, splendidly embellished.

The early printed books (see the Rev. Dr. Maitland's two Catalogues) include, Caxton's *Chronicles of England and Description of Britain*, both "fynshed" in 1480, the finest copies extant; Lyndwode's *Constitutiones Provinciales*, printed by Wynkin de Worde in 1499; *The Golden Legend*, emprinted at London in Fleetestrete, in the Sygne of the George, by Richard Pynson, in 1507, and another edition of the same work by Wynkin de Worde, in 1527; Gower's *Confessio Amantis*, a splendid copy by Caxton, 1483; *Dives and Pauper*, by Pynson, 1493; *Chaucer's Works*, folio, by John Reynes, in 1452, and Islip, in 1598. Here, too, is a small folio, executed at Paris, on vellum, about 1500, intitled, *La Dance Macabre* (the Dance of Death), printed with old Gothic types and beautifully illuminated. Here, also, in volumes, is Bancroft's collection of black-letter tracts, pamphlets, and sermons; remarkable for St. Paul's Cross sermons, Mar-Prelate tracts, and the writings of the Brownists and other Elizabethan separatists. Here, too, is a copy of Archbishop Parker's *Antiquities* printed, by Dayes in 1572 (only two complete copies extant): it contains the very rare portrait of Parker, taken just before his death, by Berg.

Among the Manuscripts are, the ancient French version and exposition of the Apocalypse, with miniature paintings, No. 75; the Latin copy of the Apocalypse, No. 209 (thirteenth century), with 78 brilliant illuminations; and No. 200, a copy of the treatise *De Virginitate*, in praise of celibacy, by Aldhelm, Abbot of Malmesbury, eighth century. Among the sacred MSS. are Greek Testaments; the Old Testament in Armenian; the whole Bible, Wicliffe's translation; and Latin Psalters, beautifully written and illuminated. Here, too, are Scripture expositions of Bede; Anglo-Saxon sermons (tenth century) and Saxon homilies (twelfth century). Among the Missals is a very beautiful Salisbury missal, folio, on vellum, emblazoned with Archbishop Chicheley's arms. The MSS. of Greek and Latin classics are extremely valuable. Here are the Lambeth Registers, 40 vols. folio, on vellum; containing homages, popes' bulls; letters to and from popes, cardinals, kings, and princes; commissions and proxies, marriages and divorces, &c. 1279 to 1747 (except 1644 to 1660): the registers of the primates subsequent to Potter, 1747, are kept at Doctors' Commons. Also two large folio volumes of papal bulls; ancient charters of the see, 13 vols.; accurate transcripts of the parliamentary surveys of the property of bishops, deans, and chapters, made during the Commonwealth, 21 vols.

The collection is stored with MSS. of English history, civil and ecclesiastical, including chronicles and collections of histories; and important documents, particularly of the relations of France and England (*temp.* Hen. V. and VI.). Among the MSS. on Heraldry and Genealogy are many written or corrected by Lord Burghley. Here are stores of old English poetry and romances: including Lydgate's Works, and Gawan Douglas's Translation of Virgil's *Æneid*; and the metrical legend of Ilybeus Disconus.

Among the *Letters* are those of Lord Verulam, published by Dr. Birch; those of his brother, Anthony Bacon, sixteen vols.; the letters of the Earl of Shrewsbury, and of other persons, *temp.* Henry VIII. to James I. But the most curious and beautifully written of the miscellaneous MSS. (between 1200 and 1300 in number) is Lord Rivers's translation from the French of "the Notable Wise Sayings of Philosophers," with a very fine illumination of Earl Rivers presenting Caxton the printer to King Edward IV., in presence of his queen and infant son, afterwards Edward V. (*Londiniana*, vol. iii. p. 316.)

Here is an original copy of Aggas's Map of London, *temp.* Elizabeth; and here are laid up the service-books which have been used at the coronations of different sovereigns. The coronation-chairs claimed by the archbishops have descended to their respective families.

Among the *Curiosities* is the *habit of a priest*, consisting of a stole, maniple, chasuble, cord, two bands marked P., and the corporal; also, a crucifix of base metal, a string of beads, and a box of relics. Here is kept the shell of the tortoise, believed to have lived in the palace-garden from the time of Laud (1633) to 1753, when it perished by the negligence of the gardener: the shell is 10 inches in length, and 6½ inches in breadth.

The *Gardens and grounds* extend to eighteen acres. Here were formerly two fine white Marseilles fig-trees, traditionally planted by Cardinal Pole against that part of the palace which he founded: these trees were more than 50 feet in height and 40 in breadth; their circumferences 28 and 21 inches. They were removed during the late rebuilding, but some cuttings from the trees are growing between the buttresses of the Library. The Terrace is named Clarendon Walk, from having been the scene of the conference between the great and wise Earl of Clarendon and the ill-fated Laud.

A superb feature in the archbishop's *state* was formerly a river barge, in which he went to Parliament; but this custom has been discontinued a century, or since Archbishop Wake's primacy. The Stationers' Company's Barge, formerly called at Lambeth Palace on Lord Mayor's Day, to present copies of their Almanacks; the origin of which custom is described under the account of the Stationers' Company, p. 421.

Lambeth House has at various times proved an asylum for learned foreigners who have been compelled to flee from the intolerant spirit of their own countrymen. Here the early reformers, Martyr and Bucer, found a safe retreat; and the learned Antonio, Archbishop of Spalatro, was entertained by Archbishop Abbot. The archbishops have frequently been honoured by visits from their respective sovereigns. Henry VII., just before his coronation, visited Archbishop Bourchier. Henry VIII. was a guest of Warham, in 1513; and one evening in 1543 he crossed the Thames to Lambeth, to acquaint Cranmer (whom he called into his barge) of the plot against him instigated by Bishop Gardiner. Queen Mary is said to have refurnished Lambeth House, at her own expense, for the reception of Cardinal Pole, whom she several times visited here during his short primacy. Elizabeth often visited Archbishop Parker; his successor, Grindal, was out of favour; but Whitgift, the next archbishop, was visited fifteen times by Elizabeth, who occasionally stayed two or three days. James also visited Whitgift. Mary, Queen of William III., had a conference here in 1694 with Archbishop Tillotson, who received here Peter the Great, to witness the ceremony of an ordination.

#### LAW COURTS.

FOR nearly eight centuries, existing record proves Law Courts to have been held at Westminster, within the palace of the sovereign: one of the earliest notices being in the *Annals of Waverley*, 1069, when Elfric, Abbot of Peterborough, was tried before the king *in curia*. But it was not until 1225 (9 Hen. III.) that the Law Courts, hitherto held wherever the king was temporarily resident, were permanently fixed at Westminster. Here the Courts were frequently held before the monarch in person; and the phrase of summons, "*in banco reginae*," still is, "before the queen herself."

The old Law Courts in Westminster Hall were thus arranged. At the entry, on the right hand, were settled the Common Pleas, for civil matters; at the upper end, in the south-east corner, was the

King's Bench, for pleas of the Crown; and in the south-west angle sat the Lord Chancellor, the Master of the Rolls, and eleven men learned in the civil law, called Masters of the Chancery, deriving its name from the lattice-work, "cancelli," which separated this Court (in the last century shutting it out of sight) from the lower part of the Hall. (The screen was removed before the coronation of King George IV.) Near the King's Bench, going to the large chamber (White Hall) was the Court of Wards and Liveries, instituted by Henry VIII.; in this chamber, then called the Treasury, were kept valuable state-papers. Adjoining, but inferior to the Chancery, was the Equity Court of Requests, or Conscience, for trying suits made by way of petition to the sovereign; and sometimes called the Poor Man's Court, because he could there have right without paying money. It began its sittings in 1493, and was remodelled in 1517; the Lord Privy Seal sitting as judge.—Walcott's *Westminster*, p. 252, abridged.

The Old Court of Requests, just mentioned, was, at the Union, fitted up as the King's Robing-room and the House of Lords; and after the great fire in 1834, this Court was newly roofed, and fitted up as the House of Commons; the old Painted Chamber being similarly provided as the House of Lords.

Of certain of the present Courts we subjoin a few details of popular interest.

CENTRAL CRIMINAL COURT (the) forms part of the Sessions House, formerly "the Justice Hall," divided by a broad yard from the prison of Newgate, in the Old Bailey. The Court, established 1834, sits monthly; so that a prisoner has been apprehended one day, committed by a magistrate on the second, and tried, convicted, and sentenced on the third or fourth day. The judges are, the Lord Mayor (who opens the Court), the Sheriffs, the Lord Chancellor (such is the order of the Act), the Judges, the Aldermen, Recorder, Common Serjeant of London, judge of the Sheriffs' Court, or City Commissioner, and any others whom the Crown may appoint as assistants. Of these, the Recorder and Common Serjeant are in reality the presiding judges; a judge of the law only assisting when unusual points of the law are involved, or when conviction affects the life of the prisoner. Here are tried crimes of every kind, from treason to the petty larceny, and even offences committed on the high seas. The jurisdiction comprises the whole of the metropolis as now defined; with the remainder of Middlesex; the parishes of Richmond and Mortlake in Surrey; and great part of Essex.

The Court-house, built in 1773, was destroyed in the Riots of 1780, but was rebuilt and enlarged 1809, by the addition of the site of Surgeons' Hall. The Old Court is a square hall, with a gallery for visitors; below is a dock for the prisoners, with stairs descending to the covered passage by which they are conveyed to and from Newgate; opposite is the bench, with the chief seat, above it a gilded sheathed sword upon the crimson wall; and a canopy overhead, surmounted with the royal arms. To the left of the dock is the witness-box, and further left is the jury-box; which arrangement enables the jury to see, without turning, the faces of the witnesses and prisoners; the witnesses to identify the prisoner; and lastly, the judges on the bench, and the counsel in the centre of the Court below; keeping jury, witnesses, and prisoners all at once within nearly the same line of view. The Court formerly sat at 7 A.M.; the present hour is 10. Upon the front of the dock is placed rue, to prevent infection. In 1750, when the jail-fever raged in Newgate, the effluvia entering the Court, caused the death of Baron Clarke, Sir Thomas Abney, the judge of the Common Pleas; and Pennant's "respected kinsman," Sir Samuel Pennant, Lord Mayor; besides members of the bar and of the jury, and other persons: this disease was also fatal to several persons in 1772. In the New Court, adjoining, are tried the lighter offences.

In 1841, both courts were ventilated upon Dr. Reid's plan, from chambers beneath the floors, filled with air filtered from an apartment outside the building; the air being drawn into them by an enormous discharge upon the highest part of the edifice, or propelled into them by a fan. From the entire building the vitiated air is received in a large chamber in the roof of the Old Court, whence it is discharged by a gigantic iron cowl, 15 feet in diameter, weighing two tons, and the point of the arrow of the guiding-vane 150 lbs. The subterranean air-tunnels pass through a portion of the old City wall.

Above the Old Court is a stately dining-room, wherein, during the Old Bailey sittings, the dinners are given by the Sheriffs to the judges and aldermen, the Recorder, Common Serjeant, City pleaders, and a few visitors. Marrow-puddings and rump-steaks are invariably provided. Two dinners, exact duplicates, are served each day, at three and five o'clock; the judges relieve each other, but aldermen have eaten both dinners; and a chaplain, who invariably presided at the lower end of the table, thus ate two dinners a day for ten years. Theodore Hook admirably describes a Judges' Dinner in his *Gilbert Gurney*. In 1807-8, the dinners for three sessions, nineteen days, cost Sheriff Phillips and his colleague 35*l.* per day=665*l.*; 145 dozen of wine, consumed

at the above dinners, 450*l.*: total 1115*l.* The amount is now considerably greater, as the sessions are held monthly.

"The Press Yard," between the Court-house and Newgate, recalls the horrors of the old criminal law, in the *peine forte et dure* (the strong and hard pain): a torture applied to persons refusing to plead, who were stripped and put in low dark chambers, with as much weight of iron placed upon them as they could bear, and more, there to lie until they were dead; which barbarous custom of *pressing to death* continued until the year 1734.

*Memorable Trials at the Old Bailey and Central Criminal Courts*: Major Strangways, the assassin, 1657; Col. Turner and his family, for burglary in Lime-street, 1663; the Regicides, 1690; Green, Berry, and Hill, for the murder of Sir Edmund Berry Godfrey, 1678; Count Koningsmark, and three others, for the assassination of Mr. Thynne, 1631; William Lord Russell, William Hone, and two others, for high treason, 1633; Rowland Walters and others, for the murder of Sir Charles Pym, bart., 1633; Harrison, for the murder of Dr. Clenche, 1692; Bean Fielding, for bigamy, 1706; Richard Thornhill, Esq., for killing Sir Cholmeley Deering in a duel, 1711; the Marquis di Paleotti, for the murder of his servant in Lisle-street, 1718; Major Oney, for killing in a duel, 1718 and 1726; Jack Sheppard, the house-breaker, 1724; Jonathan Wild, the thief-taker (who lived nearly opposite the Court-house), 1725;\* Catherine Hayes, murder of her husband, 1726; Richard Savage, the poet, for murder, 1727; the infamous Col. Charteris, 1730; Sarah Malcolm, for murder, 1733; Elizabeth Canning, an inexplicable mystery, 1753; Ann Brownrigg, for murder, 1767; Baretti, for stabbing, 1769; the two Perraus, for forgery, 1776; the Rev. Dr. Dodd, for forgery, 1777; the Rev. Mr. Hackman, for shooting Miss Reay, 1779; Rylind, the engraver, for forgery, 1783; Barrington, the pickpocket, 1790; Renwick Williams, for stabbing, 1790; Theodore Gardelle, for murder, 1790; Hadfield, for shooting at George III., 1800; Capt. Macnamara, for killing Col. Montgomery in a duel, 1803; Aslett, the Bank clerk (forgery on the Bank, 320,000*l.*), 1803; old Patch, for murder, 1806; Holloway and Haggerty, for murder, 1807; Governor Wall, for murder by flogging, 1812; Bellingham, the assassin of Perceval, 1812; Eliza Fenning, for poisoning, 1815; Cashman, the seaman, for riot on Snow-hill (where he was hanged), 1817; Richard Carlile, for blasphemy, 1819 and 1831; Cato-street conspirators, 1820; Fauntleroy, for forgery, 1824; St. John Long, the "counter-irritation" surgeon, for manslaughter, 1830 and 1831; Bishop and Williams, for murder by "burking," 1831; Greenacre, for murder, 1837; E. Oxford, for shooting at the Queen, 1840; Courvoisier, for the murder of Lord William Russell, 1840; Blakesley, for murder in Eastcheap, 1841; Beaumont Smith, for forgery of Exchequer Bills, 1841; J. Francis, for attempt to shoot the Queen, 1842; Mac Naughten, for assassination, 1834; Dalmas, for murder on Battersea Bridge, 1844; Barber, Fletcher, &c., for Will-forgeries, 1844; Manning and his wife, for murder, 1849; Seven Pirates convicted of murder on the high seas, within the jurisdiction of the Admiralty of England, 1863.

CLERKENWELL SESSION HOUSE (*see p.* 237).

COURT OF ARCHES (*see DOCTORS' COMMONS*, p. 312).

COURTS OF EQUITY (the)—namely, those of the Lord Chancellor, the Master of the Rolls, and the Vice-Chancellor of England—sit at Westminster in term-time; but in the intervals the Lord Chancellor and Vice-Chancellor sit at Lincoln's Inn; and the Master of the Rolls at the Rolls House, in Chancery-lane: the two additional Vice-Chancellors, appointed in 1841, also sit at Lincoln's Inn. The Lord High Chancellor was originally a sort of confidential chaplain, or, before the Reformation, confessor to the king, and keeper of the king's conscience. As chief secretary, he advised his master in matters temporal; prepared royal mandates, grants, and charters; and when seals came in, affixed the same: hence the appointment to the office takes place by the delivery of the Great Seal. His Court has exclusive cognisance of trusts, and the suitors' property exceeds 40,000,000*l.*

COURT OF CHANCERY.—The present Law Courts, on the west side of the Great Hall at Westminster, were built by Soane, 1820–25, upon the site of the old Exchequer Chamber, &c. There is little to interest the visitor, except in the Lord Chancellor's Court, where his lordship sits in state, with the mace and an embroidered bag before him; in this bag the seal is deposited when the Chancellor receives it from the Sovereign, and when, upon his retirement from office, he delivers it into the royal hands: formerly, the Great Seal was worn by the Chancellor on his left side.

The *Great Seal* itself is a silver pair of dies, which are closed to receive the melted wax, poured, when an impression is to be taken, through an orifice left in the top. As each impression is attached to a document by a ribbon or slip of parchment, its ends are put into the seal before the wax is poured in; so that when the hard wax is taken from the dies, the ribbon or parchment is affixed to it. The impression of the seal is

\* Amongst the old manuscript documents in the Town Clerk's Office at Guildhall is a petition from Jonathan Wild to the Court of Aldermen, dated 1724, praying to be free of the City, for apprehending and convicting divers felons returned from transportation, since October 1720. In 1839, the skeleton of Jonathan was in the possession of a surgeon at Windsor.

six inches in diameter, and three-quarters of an inch thick. On every accession to the throne, a new seal is struck, and the old one is cut into four pieces and deposited in the Tower of London. Formerly, the seal was broken "by the king's command," and the fragments were given to the poor of religious houses.

*The present Great Seal* was executed by Benjamin Wyon, R.A., in 1839. *Obverse*: The Queen wearing a flowing and sumptuous robe and regal diadem, bearing a sceptre, and riding a charger richly caparisoned with plumes and trappings, while a page, bonnet in hand, gracefully restrains the steed. The legend in the exergue, "Victoria Dei Gratia Britanniarum Regina, Fidei Defensor," is engraved in Gothic letters; the interspaces of the words being filled with heraldic roses; a crown above, and a trident-head and oak branches beneath. *Reverse*: The Queen royally robed and crowned, holding the sceptre and orb, and seated upon a throne beneath a Gothic canopy: on either side is a figure of Justice and Religion; and beneath are the royal arms and crown; the whole encircled by a border of oak and roses.

*The Seal-bag* is about twelve inches square, of crimson silk embroidered in gold, with the royal arms on each side, fringed with gold bullion; to the bag is attached a stout silken cord, by which it is carried; within is placed the Seal, in a leathern pouch, enclosed in a silk purse.

*The Chancellor's Mace* is silver-gilt, and about five feet long. The staff and its massive bands are deeply chased with the rose, shamrock, and thistle; the upper portion consists of a large and richly chased crown, surmounted with the orb and cross, and encircled with crosses-patées and fleurs-de-lis; and supported on a bold circlet, ornamented in high relief with the emblems of the United Kingdom. The mace and seal-bag are laid before the Chancellor when seated upon the woosack as Speaker of the House of Lords; and they are placed upon the table in the Court of Chancery, accompanied by a large nosegay of flowers, conjectured to be the representative of the judge's bough or wand.

COURT OF EXCHEQUER (the) was formed by William I. in 1079, as a superior Court of Record, in the place of a similar court in his Duchy of Normandy: it included the Common Pleas until 16 John, 1215; it was remodelled into its present form by Edward I. The name of Exchequer is from the parti-coloured carpet of a table before the Barons, on which the sums of certain of the king's accounts were reckoned by counters: the Chancellor of the Exchequer is the treasurer; he presides only when the Court sits as a Court of Equity.

*The Great Roll of the Exchequer* ("the Pipe Roll") contains an account of the Crown revenue from 5 Stephen to the present time. To this document nearly every ancient pedigree is indebted; it has a perfect list of the Sheriffs of the different counties, and almost every name in English history.

The Court of Exchequer regulates the election of Sheriffs. Thus, on the morrow of St. Martin, November 12, a Privy Council is held in the Exchequer Court, to receive the report of the Judges of the persons eligible in the several counties to serve as Sheriff. On the bench sits the Chancellor of the Exchequer, in his figured silk gown, trimmed with gold; next are Members of the Privy Council, the Lord Chancellor, and Judges of the Queen's Bench and Common Pleas; below sit the Judges and Chief Baron of the Exchequer, and on the left the Remembrancer of the Court. At this meeting the Judges report the names of *three* persons eligible for Sheriff in each county, when excuses for exemption are pleaded. The list is again considered by the Privy Council, and the names finally determined on the approval of Her Majesty in Council, which is done by the Sovereign pricking through the name approved on a long sheet of paper called the Sheriffs' Roll.

The Sheriffs of London and Middlesex are, however, chosen by the Livery; but are presented, on the morrow of the Feast of St. Michael, in the Court of Exchequer, accompanied by the Lord Mayor and aldermen, when the Recorder introduces the Sheriffs and details their family history, and the Cursitor Baron signifies the sovereign's approval; the writs and appearances are read, recorded, and filed, and the Sheriffs and senior under-sheriff take the oaths; and the late Sheriffs present their accounts. Formerly, the following ancient tenure ceremony was performed in the Court. The Crier of the court made proclamation for one who did homage for the Sheriffs of London to "stand forth and do his duty;" when the senior Alderman below the chair rose, the usher of the court handed him a bill-hook, and held in both hands a small bundle of sticks, which the Alderman cut asunder, and then cut another bundle with a hatchet. Similar proclamation was then made for the Sheriff of Middlesex, when the Alderman counted six horse-shoes lying upon the table, and sixty-one hob-nails handed in a tray; and the numbers were declared twice. The sticks were thin peeled twigs, tied in a bundle at each end with red tape; the horse-shoes were of large size, and very old; the hob-nails were supplied fresh every year. By the first ceremony the Alderman did suit and service for the tenants of a manor in Shropshire, the

chopping of sticks betokening the custom of the tenants supplying their lord with fuel. The counting of the horse-shoes and nails was another suit and service of the owners of a forge in St. Clement Danes, Strand, which formerly belonged to the City, but no longer exists. Sheriff Hoare, in his MS. journal of his shrievalty, 1740-41, says, where the tenements and lands are situated "no one knows, nor doth the City receive any rents or profits thereby."

This ancient ceremony is now observed before the Queen's Remembrancer, at his office, where the City Solicitor, the Secondary of London, and one of the late Under-Sheriffs, attend "to account as to rent services due to the Crown to be rendered on behalf of the Corporation;" when the City Solicitor cuts the fagot and counts the horse-shoes and nails, and the Remembrancer says, "Good number," according to custom.

On Nov. 9 the oath is administered in the Court of Exchequer to the Lord Mayor elect; the late Lord Mayor renders his accounts; and the Recorder invites the barons to the inauguration-banquet at Guildhall.

The Court of Exchequer has *two seals*: the *Great Seal*, used not more than ten or twelve times a year, except on Seal Days, in passing the accounts in court. The other, a small *Initial Seal*, which formerly contained the Chancellor's initials, but now bears the letters C. E., is affixed to writs, "is in daily use, and seldom idle during official hours."—*Notes, by F. S. Thomas, Record Office.*

The Receipt of Exchequer at Westminster, the most ancient revenue department of the State, with all its antiquated machinery of tallies and checks, was not abolished until the year 1834; when a new office for the payment of pensions and public moneys, and the receipt of revenue, was opened at the Bank of England. By the statute of 23 Geo. III. cap. 82, however, indented check receipts were issued from the Tally Court instead of tallies, which, as instruments of loan, declined with the growth of Exchequer Bills. An Exchequer Tally, date 1810, is 22½ inches long, and ¼ of an inch extreme width; notches are cut in its edge to denote the reckoning, and from the cross-line in the lower part has been stripped off the counter-tally, cutting the date-line of the transaction written on the edge; so that identity consisted not only in the wood fitting, but in the halved date and notches corresponding, like a halved bank-note.

"From his rug the skew'r he takes,  
And on the stick ten equal notches makes;  
With just resentment flings it on the ground,  
There, take my tally of ten thousand pound."—*Swift.*

As one of the Exchequer apartments at Westminster was filled with the old tallies in 1834, it became advisable to destroy them; and an order was issued from the Board of Works to burn these ancient relics, although persons curious in such matters would have purchased bundles of them for museums and collections. The tallies were, accordingly, burnt in the principal stove of the House of Lords; and to the consequent overheating of the flues proceeding in every direction from the stove through the wood-work of the House, on October 16, 1834, nearly the whole of both Houses of Parliament was consumed by fire.

**INSOLVENT DEBTORS' COURT**, Portugal-street, Lincoln's-Inn-fields, abolished 1861. Mr. Dickens has thus vividly sketched its characteristics:—

"A temple dedicated to the genius of seediness," and "the place of daily refuge of all the shabby-gentle people in London. There are more suits of old clothes in it at one time than will be offered for sale in all Houndsditch in a twelvemonth; and more unwashed skins and grisly beards than all the pumps and shaving-shops between Tyburn and Whitechapel could render decent between sunrise and sunset. There is not a messenger or process-server attached to the Court who wears a coat that was made for him; the very barristers' wigs are ill-powdered, and their curls lack crispness. But the attorneys, who sit below the commissioners, are, after all, the greatest curiosities. The professional establishment of the more opulent of these gentlemen consists of a blue bag and a boy. They have no fixed offices, their legal business being transacted in the parlours of public-houses or the yards of prisons, whither they repair in crowds, and canvas for customers after the manner of omnibus-cads. They are of a greasy and mildewed appearance; and if they can be said to have any vices, perhaps drinking and cheating are most conspicuous among them."—*Pickwick Papers.*

**MARSHALSEA and PALACE COURT** was an appendage to the royal house at Westminster: anciently it had exclusive jurisdiction in matters connected with the royal household, and was presided over by the Earl Marshal. It next became a minor court of record for actions for debt, &c., within Westminster and twelve miles round it, except the City of London; its prison being in High-street, Southwark, until consolidated with the Queen's Bench and Fleet in 1842. The Court, with the Knight-Marshal for judge, existed until December 28, 1849, when it was formally adjourned for the last time, and rose never to resume its sittings; the suits being transferred to the Common Pleas and County Courts, and the records to the charge of the Master of the Rolls. The Marshalsea Court sat in Southwark until 1801, and subsequently in Great Scotland-yard, Whitehall; but it was probably first held in the "Court of Requests," part of the Norman Palace at Westminster. Littleton, the eminent lawyer, was appointed by Henry VI. Steward or Judge of the Marshalsea Court.

There were formerly local courts in the metropolis outside the privileged boundary of the "City:" the various Courts of Request, and the celebrated *Palace Court*, with a jurisdiction in some respects resembling the Lord Mayor's Court, and like that Court, under its original constitution, having only a limited number of privileged counsel and attorneys. The old Courts of Request were swept away by

the County Courts' Acts. The Palace Court survived, and owed its subsequent downfall to the accident of an energetic writer for the public press having been sued there, and in consequence brought about a clamour for its abatement as a nuisance.—*Alexander Pulling*.

**LORD MAYOR'S COURT** (the) has jurisdiction over all personal and mixed actions within the City, and is held at Guildhall, nominally before the Lord Mayor and Aldermen, but really before the Recorder. The office of the Court was formerly in a long gallery at the west end of the Royal Exchange. The records of the Court were saved from the great fire at the Exchange in 1838, and have been arranged in a strong fire-proof closet in a record-room at Guildhall by the town-clerk; with other records of the reigns of Edward I., Edward III., Richard II., Henry IV., V., and VI.; books of precedents, James I.; records from Elizabeth to George I. Francis Bancroft was an officer of this Court, and despised for his mercenary conduct, which he atoned for by bequeathing his ill-gotten wealth to build almshouses and a school. The Court was, after 1838, held in Old Jewry; and next removed to the Guildhall.

The Lord Mayor's Court is presided over by the Recorder, with an unlimited jurisdiction, both legal and equitable, for cases which are within the City boundaries, and peculiar modes of procedure, in part derived from the ancient customs of the City of London, and in part from recent Acts of Parliament, and possessing the very peculiar power of proceeding by what is called *foreign attachment*.

**ROLLS COURT**.—In vacation the Master sits at the Rolls House, in the Liberty of the Rolls, between Chancery-lane and Fetter-lane: it is exempt from the power of the Sheriff of Middlesex, and of every other officer, except with leave of the Master. The Court adjoins the Master's House and the Chapel, described at p. 215. The House, designed by Colin Campbell, was built 1717, when Sir Joseph Jekyll was Master. A great portion of the estate was formerly laid out in gardens, upon which has been built the central portion of a new Record Office. Opposite the Rolls Chapel was Herflot Inn, belonging to the priors of Nocton Park, and occupied by the Six Clerks in the Court of Chancery, who subsequently removed to the west side of the north end of Chancery-lane: they were abolished 1842.

When Sir William Grant was Master of the Rolls, the court sat in the evening from six to ten, and Sir William dined after the court rose: his servant, when he went to bed, left two bottles of wine on the table, which he always found empty in the morning. Sir William lived on the ground-floor of the Rolls House, and when showing it to his successor in the Mastership, he said: "Here are two or three good rooms; this is my dining-room; my library and bed-room are beyond; and I am told there are some good rooms upstairs, but I was never there."

**SHERIFF'S COURTS** (the) are held by each of the Sheriffs of London, near Guildhall, before a judge appointed by him.

**STAR CHAMBER** (the) was the ancient council-chamber of the palace at Westminster, wherein the king sat in extraordinary causes. The last-existing Star-Chamber buildings are described at p. 450.

Our chief metropolitan tribunals are, at this day, held in the same place, and with hardly better accommodation, than was accorded to them at the date of Magna Charta, when the Common Pleas was permanently fixed at Westminster Hall. The demand for a fitting *Palace of Justice* for the metropolis, which has been so long pressed on the attention of the Legislature, is now about to be complied with; the chosen site being the district (7½ acres) bounded on the north by Horseshoe-court, Yeates-court, Carey-street, and Lincoln's-inn; on the south by the Strand, and the Temple; on the east by Bell-yard and Temple-bar; and on the west by New Inn and Clement's Inn. The competitive designs for the New Law Courts were exhibited to the public in a temporary building in Old-square, Lincoln's-inn, in February, 1867. A paper, descriptive of the older occupation of the site, entitled, "Old Houses on the site of the New Law Courts," by the author of *Curiosities of London*, with eight engraved views, appeared in the *Illustrated London News*, December 15, 1866: it is a piece of London topography of considerable historic interest.

#### LEADENHALL STREET,

**E**XTENDING from Cornhill to Aldgate, and the adjoining Market, are named from the manor-house of Leadenhall, which belonged to Sir Hugh Neville in 1309;

in 1419 Simon Eyre erected upon its site a granary, which he gave to the Corporation; and adjoining he built a chapel in the Perpendicular style, for the market-people, Leadenhall having then become a market. In this Hall were kept the artillery and other arms of the City; doles were distributed from here; in Stow's boyhood, the common beams for weighing wool, and the scales to weigh meal, were kept here; and in the lofts above were painted devices for pageants. Chamberlayne describes it, in 1726, as "a noble ancient building, where are great markets for hides and leather, for flesh, poultry, and other sorts of edibles." In 1730 the market-place was partly rebuilt; and the leather-market in 1814, when the Chapel and other ancient portions were removed. The "Green Yard" was a portion of the garden of the Nevilles; and the Chapel, in Ram-alley, was inscribed "Dextra Domini exaltavit me."

Leadenhall was formerly the great meat-market. Don Pedro de Ronquillo, on visiting it, said to Charles II., that he believed there to be more meat sold in that market alone, than in all the kingdom of Spain in a year; and "he was a very good judge."

Beneath No. 71, Leadenhall-street is the ancient chapel of St. Michael, Aldgate (*see* CRYPTS, p. 303). No. 153 has an Early English crypt. Here, too, at "the Two Fans," Peter Motteux, the translator of Rabelais and Don Quixote, kept an India House for "China and Japan wares, fans, tea, muslins, pictures, arreck, and other Indian goods;" rich brocades, Dutch atlases, and other foreign silks, fine Flanders lace and linens. (*Spectator*, Nos. 288 and 552, by Steele). Motteux wrote a poem upon Tea: he was found dead (murdered) on his birthday, Feb. 19, 1717-18, in a house of ill-fame in Star-court, Butcher-row, Temple Bar.

In Leadenhall-street are the churches of St. Andrew Undershaft (*see* p. 150) and St. Catherine Cree (p. 156). On the wall of the latter is a large sun-dial; and at the east end a curious gateway, built 1631. The churchyard was noted for performances of miracle-plays, the earliest known of which relates to St. Catherine. (*See* also EAST INDIA HOUSE, pp. 318, 319).

Nearly opposite the site of the East India House, now occupied by handsome stone-fronted buildings, is St. Mary Axe, a street named from the church of St. Mary Axe, which was "suppressed and letten to be a warehouse" about the year 1565; and the church derived its particular designation from a holy relic it possessed: "an axe, oon of the iij that the xj<sup>m</sup>d Virgins were behedyd w<sup>t</sup>."—(*Signed Bill*, 5 *Henry VIII.*) This church was united to St. Andrew Undershaft, in the above year. Nearly opposite, in 1864, was taken down a four-storied Tudor house, with three overhanging floors, the front entirely of wood and plaster; and some fine oak-panelled interiors.

At No. 16, St. Mary Axe, lived Joseph Denison, the wealthy banker: here were born his eldest daughter, afterwards Marchioness Conyngham; and his son, William Joseph Denison, M.P., who, dying in 1849, bequeathed two millions and a half of money, settled on his nephew, Lord Albert Denison, afterwards Baron Londesborough.

### LEICESTER SQUARE,

WITHIN memory, was called Leicester Fields, from the mansion at its north-east corner, built for Robert Sydney, Earl of Leicester, who died 1677. It was let to Elizabeth Queen of Bohemia, daughter of James I.: she died here 1661. Colbert and Prince Eugene resided here. But the fame of Leicester House chiefly rests upon its having been bought by the Prince of Wales, afterwards George II., when he had quarrelled with his father and received the royal command to quit St. James's. When George II. had a similar quarrel with his son Frederick, the Prince of Wales took up his residence, as his father had done before him, at Leicester House, which Pennant happily describes as "successively the pouting-place of Princes." Walpole tells us that Frederick, Prince of Wales added to Leicester House the mansion westward—Savile House—for his children; a communication being made between the two houses, as Sir John Fielding phrased it, in 1777, "for the more immediate intercourse of the royal family." Hence, much of the celebrity of Leicester House became extended to Savile House, wherein, probably, was performed Addison's play of *Cato* by the junior branches of the Prince of Wales's household, Prince George playing Portius. The

Prince resided here until his accession to the throne as George III., when, in front of the mansion, he was first hailed as King. The last Royal tenant of Leicester House was the Duke of Gloucester, grandson of George II. The mansion was next let to Sir Ashton Lever for his museum, which was removed in 1788. Leicester House was then taken down: Savile House being left standing. It had, however, been proposed to build here a theatre; for, in the *Ladies' Magazine*, 1790, we read, "The site of the new opera-house is settled: Leicester-square—the mound occupied by Leicester House." On the site of its gardens was built New Lisle-street, in 1791. Eastward was the door which was unceremoniously cut through the wall of the garden of Horne, the poulterer, to make an outlet towards Newport Market for the convenience of the Prince of Wales's domestics. How the poulterer resisted the encroachment, and triumphed over the heir-apparent of the English crown, and the obnoxious door was removed, will be remembered, as well as its influence on the political aspirations of the poulterer's son, John Horne Tooke. Westward was built Leicester-street, where, in 1796, Charles Dibdin, the song-writer, built his theatre, the "Sans Souci."

Savile House was sometimes called Aylesbury House, from the Earl of Aylesbury residing here. It was let as a town-house for people of fashion: here the Earl of Carmarthen entertained Peter the Great. It belonged to the Savile family, and here resided Sir George Savile, M.P., in 1780, when, in the Riots, his house was stripped of its valuable furniture, books, and paintings, which the rioters burnt in the Fields. The Rev. W. Mason, in a letter to Walpole, 1778, speaks of the political wisdom of Sir George Savile, "who chooses this very moment to indispose the whole body of Dissenters towards him and his party by rising up the champion of the Papists." Naturally, this patron of toleration suffered, and in the Riots "the rails torn from Sir George's house were the chief weapons and instruments of the mob." Their conduct was ferocious; for the accounts state Sir George's life to have been shortened by their threats. However, he must have been a strong partisan, for Wilberforce notes: "Sir George Savile was chosen member for Yorkshire by the Whig grandees in the Marquis of Rockingham's dining-room." The attack upon Savile House by the Rioters of 1780 is referred to in a letter to Richard Shackleton from Edmund Burke, who then lived in Charles-street, St. James's; telling how he spent his nights with other volunteer friends of rank in guarding Sir George Savile's house:—"For four nights," he says, "I kept watch at Lord Rockingham's, or Sir George Savile's, whose houses were garrisoned by a strong body of soldiers, together with numbers of true friends of rank."

At the commencement of the present century, Savile House was rebuilt by the late Mr. Samuel Page, of Dulwich, an architect of some eminence at the time. The famous Chancery suit of "Page v. Linwood and others," which lasted forty years, related to this property. Lord Chancellor Cottenham, when Mr. Pepys, was counsel for the plaintiff; and Mr. Sugden, now Lord St. Leonards, was counsel for Miss Linwood.

*Miss Linwood's Needlework* was exhibited at Savile House from the commencement of the present century until the year after her death in 1845, in her 90th year. She worked her first picture when thirteen years old, and the last piece when seventy-eight years. The designs were executed with fine crewels dyed expressly for her, on a thick tummy, and were entirely drawn and embroidered by herself. In 1785, the pictures were exhibited to the Royal Family at Windsor; next at the Pantheon, Oxford-street; removed in 1798 to the Hanover-square Rooms; and then to Leicester-square. The collection consisted of sixty-four pictures, including a portrait of Miss Linwood, at 19, from a crayon painting by Russell; her first piece, Head of St. Peter (Guido); Salvator Mundi (Carlo Dolci), for which 3000 guineas had been refused (this picture was bequeathed by Miss Linwood to her Majesty); Woodman in a Storm (Gainsborough); Jephtha's Rash Vow (Opie). The pictures were sold by auction, by Christie and Manson, at Savile House, April 23, 1846, when the Judgment upon Cain, which occupied ten years working, brought 64*l.* 1*s.*; the price of neither of the other pictures exceeding 40*l.* The original Hubert and Arthur, by Northcote, sold for 38*l.* 17*s.* The entire sale did not realize 1000*l.*

At Savile House the National Political Union held its Reform meetings; and here

was exhibited, in 1849, an extensive moving Panorama of the Mississippi River, &c. The place has since been a very *Noah's Ark* of exhibitions, of greater variety than delicacy. The large building, Savile House, was destroyed by fire in less than two hours, on the night of February 28, 1865.

Leicester-square was built between 1630 and 1671. In 1677, rows of elm-trees extended in the Fields nearly half the width of the present Square, which was enclosed about 1738. In 1720, it was described as "ordinarily built and inhabited, except the west side, towards the fields, where there is a very good house and curious garden which fronts the fields." In the centre, upon a sculptured stone pedestal, is an equestrian metal statue of George I., modelled by C. Buchard for the Duke of Chandos, and brought from Canons in 1747, when it was purchased by the inhabitants of the Square: it was "finely gilt," and within memory was regilt; but its history is much disputed.\* Over this statue was built a colossal Model of the Earth, which became one of the most intellectual exhibitions of the metropolis.

The ground was leased, in 1851, for ten years, for 3000*l.*, to Mr. Wyld, the geographer, for whom was erected here (H. R. Abraham, architect), a circular building 90 feet across, enclosing a Globe 60 feet 4 inches in diameter, and lighted by day from the centre of the dome (as at the Pantheon at Rome), and by gas at night. The frame of the Globe consisted of horizontal ribs, battened to receive the plaster modelling, thus to figure the earth's surface on the inside instead of the outside of a sphere, and to show at one view the physical features of the world. The visitor passed into the interior of the Globe, and by a winding staircase proceeded round it, viewing every part of the model at four feet distance from the eye. The scale was ten miles to an inch horizontal, and one mile to an inch vertical, so as effectively to exhibit the details of hill and valley, lake and river: the great oceans occupying nearly 150,000,000 square miles; and the old and new continents, and all the islands, only 60,000,000 square miles; the gigantic model being made up of some thousand castings in plaster. The Circumpolar Regions were similarly illustrated. At the termination of the lease the building and Globe were removed.

At No. 47, Leicester-square, west side, Sir Joshua Reynolds lived from 1761 till his death in 1792. Here he built a gallery for his works, and set up a gay coach, upon the panels of which he painted the Four Seasons.

Here were given those famous dinner-parties, the first great example in this country "of a cordial intercourse between persons of distinguished pretensions of all kinds: poets, physicians, lawyers, deans, historians, actors, temporal and spiritual peers, House of Commons men, men of science, men of letters, painters, philosophers, and lovers of the arts, meeting on a ground of hearty ease, good humour, and pleasantry, which exalt my respect for the memory of Reynolds. It was no prim fine table he set them down to. Often was the dinner-board prepared for seven or eight required to accommodate itself to fifteen or sixteen; for often, on the very eve of dinner, would Sir Joshua tempt afternoon visitors with intimacy that Johnson, or Garrick, or Goldsmith, was to dine there."—*Forster's Life of Goldsmith*, p. 253.

Sir Joshua painted in an octagonal room; the sticks of his brushes were 18 inches long; he held his palettes by handle; one of mahogany, 11 by 7 inches, is possessed by Mr. Cribb, King-street, Covent-garden, whose father received it from Sir Joshua's niece, the Marchioness of Thomond. Here, in 1790, the good-natured bachelor P.R.A. painted for two schoolboys a flag bearing the Royal arms, which was borne at the next breaking-up of King's Academy, Chapel-street, Soho.

Reynolds came to town in 1740, and, probably, lived during his apprenticeship of two years at Hudson's house, now Nos. 55 and 56, Great Queen-street, Lincoln's-inn-fields; on returning from Italy he had rooms at 104, St. Martin's-lane, Thornhill's and Hayman's house, in front of the first studio of Rouilliac; the site of the latter is now occupied by a Friends' Meeting-house, but, intermediately, was the subscription drawing-academy under Moser. From St. Martin's-lane, in 1753, Reynolds removed to a whole house, No. 5, Great Newport-street. In 1760 he removed, for the last time, to No. 47, Leicester-square. On going to Great Newport-street, he raised his price for heads to twelve guineas, and, in a few years, to fifteen guineas. In 1758 he had no fewer than 150 sitters, and worked prodigiously hard; the number of sittings for each portrait varies from five to sixteen. In 1759 he got twenty guineas for a head; the following year twenty-five guineas; soon after this he was earning 6000*l.* a year. He left his residuary legatee, the Marchioness of Thomond, nearly, one of the editors thinks, 100,000*l.*; and to others what was, probably, worth nearly 20,000*l.*

The house was afterwards the Western Literary and Scientific Institution, when was added a theatre, designed by George Godwin, F.R.S., for lectures. The premises are now occupied by Puttick and Simpson, the book-auctioneers: the noble staircase remains, and the wine-cellar is now used as a strong-room.

On the opposite side of the Square, in the house subsequently the northern wing of the Sablonière Hotel, lived William Hogarth from 1733; his name upon a brass-plate on the door, and the sign of the Golden Head over it: this head, of pieces of cork glued together, Smith (in his *Life of Nollekens*) tells us was cut by Hogarth's

\* This statue has also been described as that of the Duke of Cumberland, the hero of Culloden, which may have arisen from the Duke's birth at Leicester House in 1721. The Earl of Aylesbury, one of the trustees of the Canons estate, and who resided in Leicester-square, may have influenced the statue being placed here.

own hand. In the *European Magazine* for 1801, it is stated that the apartment which Hogarth had erected for painting was still in existence as the billiard-room of the Sablonière, for which its top lighting would peculiarly adapt it. Hogarth usually took his evening walk within the enclosure of the square, in a scarlet roquelaure and cocked hat. Hogarth published, by subscription, the Harlot's and Rake's Progresses, and other prints: he died here suddenly, Oct. 25, 1764. Next door lived John Hunter from 1783: in the rear he built rooms for his anatomical collection, lectures, dissection, Sunday-evening medical levees, &c.; and from here, in 1793, Hunter was buried in St. Martin's Church. To No. 28, also east, was removed the National Repository (on the plan of the *Arts et Métiers* at Paris) from the King's Mews, taken down in 1830; and here was temporarily housed, in 1836, the Museum of the Zoological Society.

In the centre of the east side of the Square the *Panopticon of Science and Art* was erected 1852-3, by a chartered company for a polytechnic exhibition: it has a pair of minarets nearly 100 feet high, a domed roof, and other eastern features. The interior had a hall 97 feet in diameter, lecture-theatres, laboratory, colossal machinery for experiments; an electrifying machine, plate eight feet diameter, &c. The building is now the *Alhambra Palace*, a gigantic music hall.

*Burford's Panorama*, at the north-east angle of Leicester-square, was erected in 1783, by a number of patrons of the arts, who were repaid their capital by Robert Barker, the inventor of the Panorama, succeeded by Henry Aston Barker, and John and Robert Burford. The building is now a French Chapel.

In *Leicester-place*, Charles Dibdin, the song-writer, built in 1796 the *Sans Souci* theatre for his musical entertainment: the premises, No. 2, now an hotel, occupy the site of *The Feathers* public-house, frequented by "Athenian Stuart;" Scott, the marine painter; Luke Sullivan, the miniature painter, who engraved Hogarth's March to Finchley; Capt. Grose and Mr. Hearne, the antiquaries; Henderson, the actor; John Ireland, editor of *Hogarth Moralised*, &c.

In *Lisle-street* is the Royal Society of Musicians, founded in 1738 for the benefit of the families of indigent musicians: it originated in the two orphan sons of Kaitch, the oboist, being seen driving milch-asses down the Haymarket. In Lisle-street lived Henry Bone, R.A., the enamel-painter, who received for an enamel, 18 by 16 inches, 2200 guineas: he died 1834, aged 80, leaving a long series of Elizabethan portraits. His collection of beautiful enamels was dispersed by auction, in March, 1856.

In *Cranbourne-alley* (named from the second title of the Marquis of Salisbury, the ground-landlord), lived Ellis Gamble, silversmith, to whom Hogarth was apprenticed to learn silver-plate engraving, and engraving on copper; and from 1718 till 1724 he earned his livelihood by engraving arms, crests, ciphers, shop-bills, &c. An impression of Hogarth's allegorical shop-card, dated 1720, has been sold for 25*l.* The fame of the place had dwindled to a "Cranbourne-alley bonnet," ere Cranbourne-street was built.

In *St. Martin's-street*, next the chapel, is the last town residence of Sir Isaac Newton, who removed here, in 1710, from Jernyn-street: upon the roof is a small observatory, built by a subsequent tenant, a Frenchman, but long shown as Newton's. In a scarce pamphlet, *A List of the Royal Society, &c.*, in 1718, we find: "Sir Isaac Newton, St. Martin's-street, Leicester-fields." The house was subsequently tenanted by Dr. Burney, when writing his *History of Music*: and his daughter, Fanny, wrote here her novel of *Evelina*. Mr. Bewley, "the philosopher of Massingham," died here, during a visit to Dr. Burney, who, in an anecdote related to Boswell (*Life of Johnson*), erroneously states Newton to have died here: he died at Kensington (see p. 488).

Fanny Burney (Madame D'Arblay), writes from here in 1779 and 1780 (*Diary and Letters*, vol. i.); and Mr. Thrale, writing to Miss Burney, styles the inmates of the house in St. Martin's-street, "dear Newtonians."

In *Green-street*, at now No. 11, lived William Woollett, the landscape and historical engraver, known by his masterly plates of Wilson's pictures and his battle-pieces: when he had finished a plate, he used to fire a cannon on the roof of his house: his portrait, by Stuart, hangs in the Vernon Collection. He died 1785, and is buried at Old St. Pancras; his grave-stones were restored by the Graphic Society in 1846.

In *Orange-court*, Leicester-fields, lodged Opie, the painter; and here was born Dec. 10, 1745, Thomas Holcroft, his father, a shoemaker.

"Cradled in poverty, with no education save what he could pick up for himself, amid incessant struggles for bare existence—by turns a pedlar, a stable-boy, a shoemaker, and a strolling-player—he

yet contrived to surmount the most untoward circumstances, and at last took his place among the most distinguished writers of his age as a novelist, a dramatist, and a translator."—*Preface to Holcroft's Life*, by William Hazlitt.

Leicester-square has long been the resort and habitat of foreigners; and Maitland (1739) describes the parish (St. Anne's) so greatly abounding with French, "that it is an easy matter for a stranger to imagine himself in France." Of the Hotels in the Square, the principal were Huntley's and Brunet's; and La Sablonière, named from the famous Parisian cook.

LEVELS.

THE data for the following Levels, from actual surveys and private documents, adopting the standard of Trinity High Water Mark at London Bridge, have been communicated through the courtesy of Mr. Wyld, the geographer.

The highest ground in London is about the middle of Panyer-alley, between Newgate-street and Paternoster-row; the spot being denoted by a boy sitting upon a panner, upon a pedestal, all of stone; the latter inscribed, "WHEN YE HAVE SOUGHT THE CITY ROVND, YET STILL THIS IS THE HIGH<sup>T</sup>. GROVND. AVGVST THE 27, 1688."

The made ground and accumulated *débris* occurring in the City, and anciently populated parts adjacent, varies from 8 to 18 feet in thickness; in Westminster, from 6 to 12 feet.

### LIBRARIES.

"THE greatest city in the world is destitute of a public library," wrote Gibbon towards the close of the last century; since which period much has been done to afford the masses facilities for mental culture by an *open public library* from which books may be taken out.

AGRICULTURAL SOCIETY OF ENGLAND (ROYAL), 12, Hanover-square; library of the Board of Agriculture, increased by purchases, &c.

ANTIQUARIES, SOCIETY OF, Somerset House: valuable collections of red Broad-sides and Ballads; rare Prints, illustrating Ancient London; the Book of St. Albans, fol. St. Albans, 1486, finest state. Among the MSS. are, 1. Cartulary of the Abbey of Peterborough. 2. Original MS. of Weever's *Funeral Monuments*. 3. Indentures for Coining Money in England and Ireland, from Edward I. to Elizabeth. 4. The "Winton Domesday," on 33 leaves of vellum, and in the original stamped cuirbouilli covers: this MS. (*temp.* Edward I.) contains an exact account of every tenement in Winchester at that period. 5. Original Letters of Antiquaries and Literary men (18th century). 6. Letters of Eminent Englishmen (17th century). Autograph of John Bunyan, doubtful. The Society's Transactions, *Archæologia*, commenced 1710. The library consists of nearly 10,000 volumes, and is richest in topography, its collection of county histories, &c.

ARCHÆOLOGICAL SOCIETIES, the several, have libraries and museums.

ARTILLERY GROUND, or Military Yard, behind Leicester House.

Near Leicester-fields, upon the site of Gerrard-street, was a piece of ground walled in by Prince Henry, eldest son of James I., for the exercise of arms; where were an armoury, and a well-furnished library of books relating to feats of arms, chivalry, military affairs, encamping, fortification, in all languages, and kept by a learned librarian. It was called the Artillery Ground; and after the Restoration of Charles II. it was bought by Lord Gerard, and let for building, about 1677.

ASIATIC SOCIETY (ROYAL), 5, New Burlington-street: scarce books and MSS., including a collection of Sanscrit MSS., formed by Colonel Tod in Rajasthan. Here is a Chinese Library, of which see the catalogue, by the Rev. S. Kidd, 1838.

ASTRONOMICAL SOCIETY (ROYAL), Somerset House: valuable collection of astronomical works, including Peter Apian's *Opus Cæsareum*, printed at Ingolstadt in 1540; and the library of the Mathematical Society, from Spitalfields.

BANK OF ENGLAND LIBRARY, instituted by the Directors for the use of the clerks, was opened May, 1850; the Court having voted 500*l.* for the purchase of books.

BARBER-SURGEONS' HALL, Monkwell-street: a curious collection of rare books on olden Anatomy.

BEAUMONT INSTITUTION, Mile-end, built and endowed with 13,000*l.* by Mr. Barber Beaumont, has a library of 4000 volumes, a music-hall, and museum of natural history.

BIBLE SOCIETY, BRITISH AND FOREIGN, 10 Earl-street, Blackfriars: collection of versions of the Scriptures, in various languages or dialects. The bulk of this invaluable biblical library consists of copies of the Scriptures, including, in addition to those in which the Bible Society has been immediately concerned, rare copies of the first or early editions of the Bible in various languages; and no national, collegiate, or private biblical library can approach that of the Society. In addition to the printed Bibles, there are also valuable copies of more or less of the Scriptures in manuscript, in about fifty different languages, some of which have never yet appeared in print. A considerable portion of this curious collection consists of lexicons, grammars, and other philological treatises, which refer to the business of translation. This library contains also a

large assortment of commentaries, liturgies, catechisms, books of topography and travels, and the reports of all the Bible Societies in the world. Next in attraction to the Bibles in all languages, and the MSS. above referred to, is a collection of twelve folio volumes in manuscript, containing the history of the translations in 94 languages, in which the Society had been concerned down to 1829; and similar materials are preserved for continuing these historic records to the present time. Here also are early versions of the Scriptures in such tongues as Welsh and Bohemian; and invaluable Ethiopic and Mexican manuscripts. Some of its rarest curiosities it owes to the liberality of Prince Louis Lucien Bonaparte, who presented it with copies of the translations of the versions of St. Matthew he has recently caused to be executed in Basque, and in the lowland Scotch dialect. Of the former of these only twelve, of the latter only eighteen copies have been printed.

**BOTANICAL SOCIETY**, 20, Bedford-street, Covent-garden, has a library of works on botany for reference and circulation; besides British and general herbaria for the exchange of specimens.

**BRITISH MUSEUM.** (See MUSEUMS.)

**CHARTER-HOUSE**, Aldersgate: a collection presented by booksellers and others for the reading of the Brotherhood. In 1851 Queen Victoria presented the *Quarterly Review*, 86 vols.

**CHELSEA HOSPITAL**: History, Voyages, and Travels, and Military Memoirs, Newspapers, and Periodicals for the pensioners' reading.

**CHRIST'S HOSPITAL**, Newgate-street, "formerly the Grey Friars, hath a neat library for the use of the masters and scholars; besides a collection of mathematical instruments, globes, ships, with all their rigging, for the instruction of the lads designed for the sea." (*H. Lemoine*, 1790.) To the library of MSS., Whittington was a great benefactor. The most considerable Franciscan collection of books seems to have been at the London monastery, on the site of Christ's Hospital, Newgate-street, for which the first stone of a new building was laid by Sir Richard Whittington, on the 21<sup>st</sup> of October, 1421. After it was completed, 100 marks were expended on a transcript of the Works of Nicholas de Lira, to be chained in the library. (*Stow's Survey*, by Strype.) Whittington's Library was a handsome room, 129 feet long, and 31 feet broad, wainscoted throughout, and fitted with shelves neatly carved, with desks and settles: it formed the northern side of the quadrangle.

**CHURCH MISSIONARY SOCIETY**, Salisbury-square, Fleet-street: miscellaneous collection, rich in voyages and travels.

**CITY OF LONDON INSTITUTION**, Aldersgate-street, commenced in 1825, contained upwards of 7000 volumes for reference and circulation; dispersed in 1852, when the Institution was dissolved.

**CIVIL ENGINEERS (INSTITUTION OF)**, 25, Great George-street, Westminster: upwards of 3000 volumes, and 1500 tracts, upon bridges, canals, railways, roads, docks, navigation, ports, rivers, and water; Transactions of Societies, Parliamentary Reports, &c. Here are some volumes of MS. observations by Telford in his early engineering career. This library has the advantage of a printed catalogue, admirably arranged by C. Manby, Secretary to the Institution.

**CLOCKMAKERS' COMPANY**, London Tavern, Bishopsgate-street: a lending library of valuable English and foreign works on Horology and the allied sciences, with a printed catalogue.

**CLUB-HOUSES (The)** have extensive general libraries.

**COLLEGE OF PHYSICIANS**, Pall Mall East. (See p. 277.) In this collection are the libraries of Selden and the Marquis of Dorchester; and Sir Theodore Mayerne, physician to James I.

**COLLEGE OF SURGEONS**, Lincoln's-inn-fields: library commenced by John Hunter's donation of his published works on Anatomy and Surgery in 1786, the unique autograph letter accompanying which is possessed by Mr. Stone, the present Librarian. Sir Charles Blicke bequeathed his medical library, and 300*l.*; and the collection now

numbers 30,000 volumes (cost 23,000*l.*); mostly works on the history, science, and practice of medicine and the collateral sciences: its collection of Transactions and Journals is very perfect.

Among the *Curiosities* is "Approved Medicines and Cordiall Receiptes," dated 1590: it bears in several places the signature and initials of Shakspeare; but it was bought at the sale of forger Ireland's effects. Among the early books are a *Compendium Medicinæ nonium Medicis sed Cyirurgia utilisissimum*, 1510, by Gilbertus Anglicus, circ. 1230: the works of John of Gaddesden, or Johannes Anglicus, circ. 1320. *Herbarium Germanicæ*, 1485, beautifully illuminated, and bound in oak, brass ornaments, dated 1549; a collection of engraved portraits of medical men, formerly possessed by Fantleroy, the banker, and presented by him to William Wadd, the facete surgeon. The library, designed by Barry, extends the entire length of the College façade; above the bookcases are a gallery and portraits of Harvey, Chesel-don, Nesbitt, Nourse, Blizard, Hunter, Pott, &c.; and adjoining is a room with a collection of Voyages and Travels, works on Natural History and Science. Members of the College can introduce a visitor.

CORPORATION OF LONDON LIBRARY, Guildhall. It appears that in 1411 the Guildhall College was furnished with a library founded by the executors of Richard Whittington, and that to this was added a portion of the library of John Carpenter, the Town Clerk of the City, and the founder of the City of London School. The will of Carpenter says:—"I direct, that if any good or rare books shall be found among the residue of my goods which, by the discretion of Masters William Lichfield and Reginald Pocock, may seem necessary for the common library at Guildhall, for the profit of the students there and those discoursing to the common people, then I will and bequeath that those books be placed by my executors and chained in that library, under such form that the visitors and students thereof may be the sooner admonished to pray for my soul." It appears that in 1457 John Clipstone, priest and bedeman, was appointed librarian. He was succeeded, in 1510, by Edmund Alison, also a priest; and at this date, according to Stow, the books constituted "a fayre and large librarie." According to this chronicler, the whole of these books, four carts full, were borrowed by Edward Duke of Somerset, the Lord Protector, with a promise of their speedy return, which, however, never took place. The citizens, thus deprived of their library, formed a new collection, of which but little is known, except that it was entirely destroyed in the Fire of 1666. From that period it does not appear that any fresh library was formed to the present one, founded in 1824, and which now numbers about 25,000 volumes. In 1828 was published *A Catalogue* of the books, to which have since been made valuable additions. It is enriched with a choice collection of 950 original Royal proclamations, published by King Charles I., the Parliament, the Protector, Charles II., James II., and William III.; also 400 volumes of Hebrew and Rabbinical literature, presented by Mr. Philip Salamons. The present Catalogue contains a valuable Index of names, ably compiled by the librarian, Mr. W. H. Overall.

The Library is rich in works relating to the Cities of London and Westminster, and the Borough of Southwark; rare tracts preceding, accompanying, and following the Commonwealth; and several volumes of original proclamations, *temp.* 1638 to 1698. Here are *Domesday Survey* and the *Monasticon*; in history, Ven. Bede, Matthew Paris, *Decem Scriptores*, and other old English chroniclers; in foreign history, Kämpfer, Pontoppidan, Wormius, Duhalde, D'Herbelot, Mezeray, &c.; Hakluyt's *Voyages*, first edit. black letter, and Evans's very brilliant edit. 5 vols. 4to; Lysons's *Environs of London*, with drawings, prints, and armorial bearings, 13 thick volumes, perhaps the most elaborately illustrated work extant. Among the recent additions are: the great French work on Egypt, 14 vols. atlas folio, and 9 vols. folio letterpress; *Il Vaticano*, by Erasmus Pistolesi, 8 vols. folio; M'Kenney's *History of the Indian Tribes of North America* (superb coloured engravings), 3 vols. folio. Portfolios of Maps, Views, and Plans of London, of various dates from Aggas to Stanford. The library of the Dutch Church, Austinfriars, has been deposited here with the MSS. and letters of the early Reformers and men of science.

*Book Rarities*:—*Nuremberg Chronicle*, 1493, with MS. Notes, sixteenth century, and Lists of Bailiffs, Mayors, and Sheriffs of London, 1st Rich. I. to 4 Hen. VIII., with marginal notes of events: woodcuts, mostly coloured. *Complaint of Eoderick Mars*, sometime a Gray Fryare (Geneva), said by Kennet to have been written by Henry Brincklow, a London merchant. *Bonner's Profitable and Necessary Doctrine*, bl. l. 1555. Declaration of Bonner's Articles, bl. l. 1561. A Boke made by John Fryth, Prysoner in the Tower of London, bl. l. 1546. *The Actes of English Votaryes*, by John Bale, bl. l. 1546. *The Castel of Helth* (by Sir Jo. Elyot, bl. l. 1541. *The Burnynge of Paul's Church*, &c. (written against Popery, by Pilkington, Bishop of Durham), bl. l. 1591. *Legenda Sanctorum*, fol. bl. l. n. d. *Codex Sinaiticus*, presented by the Emperor of Russia. A collection of early printed Plays and Pageants.

Among the autographic *Curiosities* is the Charter granted by William the Conqueror to the City of London in 1067. It is beautifully written in Saxon characters, in about four lines, upon a slip of parchment six inches long and one broad.

Also, in a glass-case, is the signature of Shakspeare, purchased in 1843, by the Corporation of London for 145*l.*: it is affixed to a deed of bargain and sale of "all that messuage or tente with the app'tennes lyeing and being in the blackfryers in London, neare the Wardrobe," by Henry Walker to William Shakspeare, dated March 10, 1612-13, and has the seals attached, and the names of the attesting witnesses on the back. The house is described as "abutting upon a streete leading down to Pudle wharffe" (now St. Andrew's Hill), and was in Ireland-yard, named after the tenant, William Ireland, about the time of the above sale: it was bequeathed by Shakspeare in his will to his daughter, Susannah Hall. Here, too, is the sign-stone of the *Boar's Head Tavern*. The Museum attached to the Library is particularly rich in antiquities discovered in the City of London during numerous excavations.

COTTONIAN LIBRARY (The), now in the British Museum, was collected by Sir Robert Bruce Cotton, the learned antiquary, who greatly profited by the dissolution of monasteries half a century before, by which the records, charters, and instruments were thrown into private hands. Sir Robert Cotton was the friend of Camden, and greatly assisted him in his *Britannia*. The library was kept at Cotton House, at the west end of Westminster Hall, and was greatly increased by Sir Robert's son and grandson; in 1700 it was purchased by Act of Parliament, and in 1706 Cotton House was sold to the Crown for 4500*l.*; but the mansion falling into decay, in 1712 the library was removed to Essex House, Strand; and thence, in 1730, to Ashburnham House, Westminster. Here, October 23, 1731, a destructive fire broke out, by which 111 MSS. were lost, burnt, or entirely defaced, and 99 rendered imperfect. What remained were removed into the new dormitory of Westminster School. In 1738 was bequeathed to the collection Major Arthur Edwards's library of 2000 printed volumes; and in 1757 the whole were transferred to the British Museum. The Cottonian collection originally contained 958 volumes of original Charters, Royal Letters, Foreign State Correspondence, Ancient Registers: it was kept in cases, upon which were the heads of the twelve Cæsars; and the MSS. are distinguished by the press-marks of the Cæsars. Humphrey Wanley published a catalogue of the Cottonian Library, which is minutely noticed by Chamberlayne, *Magnæ Britanniae Notitia*, 1726. Above the bookcases were portraits of the three Cottons, Judge Doddridge, Spelman, Camden, Dugdale, Lambard, Speed, &c. An extended catalogue was printed in 1802.

Besides MSS., the Cottonian collection contained Saxon and old English coins, and Roman and English antiquities, all now in the British Museum. Sir Robert Cotton aided Speed in his *History of England*, and Knolles in his *Turkish History*. Sir Walter Raleigh, Selden, and Bacon drew materials from the Cottonian Library; and, in our time, Lingard's and Sharon Turner's *Histories of England*, and numerous other works, have proved its treasures unexhausted. DANIEL'S, G., LIBRARY, Canonbury (See MUSEUMS.)

DEPARTMENT OF PRACTICAL ART, South Kensington: a collection of works of reference for Manufactures and Ornamental Art, originally formed for the Schools of Design. About 1500 volumes on architecture, sculpture, painted glass, general antiquities, and decoration; prints and drawings, including Raphael's Arabesques, coloured; original Sketches of the Cathedral of Messina, and the Church of St. Ambrose, Milan; and many elementary and practical works on art and ornamental design.

DOCTORS' COMMONS (College of Advocates). (See p. 313.)

DULWICH COLLEGE LIBRARY. (See p. 274.)

DUTCH CHURCH, Austin Friars: for the use of foreign Protestants and their clergy: containing MSS. and Letters of Calvin, Peter Martyr, and others, foreign Reformers: the Ten Commandments, believed to be in the handwriting of Rubens. This collection of books and MSS. was made by Maria Dubois, a pious lady, and was placed at the west end of the church, over the screen, in an apartment inscribed thus:—"Ecclesiæ Londino-Belgiæ Bibliotheca, extracta sumptibus Mariæ Dubois, 1659." Additions to the collection were made from time to time by the Dutch Ambassadors, the Dutch East India Company, and the wealthy members of the congregation. Its autographic treasures include a very interesting collection of letters of the early ecclesiastical Re-

farmers—among others, of Erasmus, Calvin, and Beza, Bucer, Peter Martyr; Grindal, Archbishop of Canterbury; Vizet; John à Lasco, the first Minister of the Dutch Church in London; Bullinger, and of John Fox, the martyrologist; likewise letters of the principal founders of the Dutch Republic, including the Prince of Orange, afterwards William I.; Sir Philip de Marix, Count d'Albegonde, the Admiral of the Dutch fleet. One collection also contains 272 original letters to Abraham Ortelius, geographer to Philip II. of Spain, from the chief learned and scientific men of the age. Here likewise are portrait-etchings of Albert Durer, by himself; Olertius Christopher Plantin, printer of the polyglot Bible; of Cardinal Ximenes, Gerard Mercator, William Camden, Dr. John Dee, the great Lord Burghley; the Earls of Leicester, Sussex, and Lincoln; several of the English Bishops of those times, and of the Lord Mayors of London; also the Ten Commandments, believed to be in the handwriting of Rubens. The library principally consists of early theological works in Latin, German, Dutch, and English; good editions of the classics; illuminated Bibles; Blaeuw's *View of the different Continental States*, in 1649, and *the Embassy to China*, 1670—in all about 2000 volumes, and with the old fittings complete. In the conflagration at the Dutch Church, in 1862, this fine library was fortunately saved; and upon the restoration of the church, the Library was added to that of the Corporation at Guildhall.

**EAST INDIA COMPANY'S LIBRARY:** printed books and tracts relating to the history and geography of the Eastern hemisphere; the history, commerce, and administration of the East India Company, printed in Europe or India; books, drawings, and prints of the people, scenery, and antiquities of Asiatic countries; MSS. on palm-leaves in Sanscrit, Burmese, and other languages of the Archipelago, and Sanscrit MSS. in 3000 bound volumes; Chinese printed works; Tibetan Cyclopædia, in 300 large oblong volumes, printed with wooden blocks; Arabic and Persian MSS.; miniature copies of the Koran; another Koran, in old Cufic characters, written out by the Khalif Othman (d. A.D. 655), and other volumes of the library of Tippoo Sultan; his autograph "Register of Dreams," &c. Open to students recommended. When the East India House was taken down, the Library and Museum were removed to Fife House, Whitehall. (*See* MUSEUMS.)

**ELLESMERE LIBRARY**, Bridgewater House, Green Park, contains many hundred manuscript plays, by all the dramatists who have written for the stage from the year 1737 to the year 1824. These are the copies which were from time to time sent officially to the Licensor of Dramatic Compositions: and in many instances they bear his marks and remarks for regulating the performance, and contain passages omitted not only in the representation but in the editions afterwards printed from the acting copies. The whole collection illustrates the history of our stage during nearly a century—since it proves at once with respect to revived dramas, who was or was not the author of the additions and alterations—a matter of doubt even within our own memory.

**GEOGRAPHICAL SOCIETY (ROYAL)**, 3, Waterloo-place, Pall Mall: upwards of 4000 volumes, mostly geographical; 150 Atlases; more than 1000 pamphlets; 10,000 maps and charts: available as a circulating library by the Fellows.

**GEOLOGICAL SOCIETY'S LIBRARY**, Somerset House, contains several rare and curious treatises, &c., chiefly of the seventeenth century, and relating to the cosmogonical and hypothetical notions about the earth and its structure, the origin and nature of minerals and fossils, natural history, early chemistry, &c.

**GRESHAM COLLEGE**, Basinghall-street, has a small library of modern books for the use of the lecturers. The College does not appear to have originally possessed a library, but to have used that of the Royal Society, the removal of which to Crane-court in 1710 proved a great disadvantage to the Gresham Professors. (*Ward's Lives*, p. 175.) (*See* GRESHAM COLLEGE, p. 274.) The books subsequently possessed by the College were burnt in the Royal Exchange, Jan. 10, 1838.

**HALLS OF THE CITY COMPANIES (The)**, often contain collections of early treatises upon their arts and mysteries.

**HARLEIAN LIBRARY and MSS.** (*See* MUSEUMS: British).

**HEBREW LIBRARY**, Duke's-place, Aldgate.

The Jews, in Bevis Marks, had a valuable library in their Synagogue, relating to their ceremonials and Talmudical worship; but some narrow minds among them conceiving that if they should get into the hands of Christians, they would be disgraced by shameful translations, agreed among themselves to cause them to be burnt; for which purpose they employed some of their scribes, or tephilim writers, to examine into the correctness of the copies; and receiving a report agreeable to their wishes, they had them conveyed to Mile End, where they were all destroyed in a kiln; for it is contrary to their maxim ever to make waste paper of the sacred language.—H. Lemoine: *Gentleman's Magazine*, July, 1790.

HERALDS' COLLEGE (College of Arms), see p. 275. Here is a curious collection of works on Heraldry, Arms, Ceremonies, Coronations, Marriages, Funerals, Funerallings, and Visitations; an ancient Nennius on vellum, and Robert of Gloucester's *Chronicle*.

HORTICULTURAL SOCIETY, South Kensington: the largest collection of horticultural works in the kingdom, and an assemblage of drawings of fruits and ornamental plants.

HOSPITALS, the several, possess medical libraries.

INCORPORATED LAW SOCIETY, Chancery-lane: the law and literature connected with the profession; Votes, Reports, Acts, Journals, and other proceedings of Parliament; County and Local Histories: topographical, genealogical, and antiquarian works, &c.

INNS OF COURT.—The INNER and MIDDLE TEMPLE each possesses a good library, with valuable MSS. The INNER TEMPLE MSS., principally collected by William Petyt, Esq., Keeper of the Tower Records, were presented by his trustees in 1707: they exceed 400 MSS., parliamentary statutes and common law, ecclesiastical records, year-books, Hoveden, Higden, and other English historians, letters, and papers, with signs-manual of kings and queens of England. MIDDLE TEMPLE LIBRARY, the new building for which is described at p. 463, dates from 1641, when its founder, Robert Ashley, a collateral ancestor of the Earl of Shaftesbury, left his whole library, together with a large sum of money, to the Inn where he had received his legal education. His example was followed by other distinguished Templars of the time, and thus the Library was first established. The Irish Lord Chief Justice Pepys was a large benefactor to it. Ashmole, Bartholomew Shower, and William Petyt were among its most liberal supporters. Lord Stowell also left a handsome legacy to it, which was expended chiefly on the purchase of books on civil, canon, and international law. During the latter part of the last century many volumes, in some way or other, disappeared from the shelves altogether, among them some of the most scarce and valuable tracts, and 30 folio volumes of Votes of Parliament. In civil, canon, and international law books, and in the English, Scotch, Irish, and American reports it is said to be very strong, and there is also a large collection of books on divinity and ecclesiastical history. There is likewise an ample collection of proclamations and other official documents relating to the times of the Civil War. LINCOLN'S INN Library is described at p. 468; also in Spilisbury's *Lincoln's Inn and its Library*; GRAY'S INN, law and history p. 469. Most of the INNS OF CHANCERY have also libraries.

KING'S COLLEGE, Somerset House, has large medical and general libraries; including the Marsden Library, 3000 volumes on Philosophy and Oriental Literature, presented in 1835 by William Marsden, F.R.S. The Medical Library contains about 2000 volumes.

LAMBETH PALACE LIBRARY. (See p. 501.)

LINNEAN SOCIETY, Burlington House: the Library and Herbarium of Linnæus, purchased by Sir James Smith for 1000*l*. In the Society's house, 32, Soho-square, Sir Joseph Banks collected his valuable library of works on Natural History, now in the Banksian department of the British Museum: the catalogue fills five octavo volumes, and is very rare.

LITERARY FUND (ROYAL), 4, Adelphi-terrace: this is a collection of books, mostly modern, and presents. Here is also the MS. of Thorlaksson's Icelandic version of *Paradise Lost*, sent to the Institution by himself, through the Danish Government. Here is the dagger with which Colonel Blood stabbed Edwards, keeper of the Regalia in the Tower of London, when Blood attempted to carry off the crown; also a dagger taken from Parrot, Blood's accomplice. Both weapons are of French manufacture, and very curious: they were bequeathed to the Institution by Mr. Thomas

Newton, who believing himself to be the last descendant of Sir Isaac Newton, left his entire estate to the Literary Fund.

LONDON INSTITUTION, Finsbury-circus, commenced in 1806 with part of the library of the first Marquis of Lansdowne, contains about 30,000 volumes: rich in English Antiquities and Topography; scarce collection of Foreign Laws; several thousand Tracts; Bibliography, including rare editions from the early presses of Germany, Italy, and France; and fine specimens of the printing of the celebrated Antoine Verard, the Wechels, the Stephani, Claude Morel, Christopher Plantin, Johann Froben, Guarinus, Hieronymus Commelin, Henricus Petrus, the Aldi, the Sessæ, Gabriel Giolito, and the Giunti; with some from the English printers, Julian Notary, Peter Treveris, Richard Grafton, Thomas Marshe, John Cawood, &c. Professor Porson, William Upcott, and Richard Thomson, author of the *Chronicles of London Bridge*, 1827, were successively librarians. This collection is valued at 40,000*l.*

LONDON LIBRARY, 12, St. James's-square (the house tenanted by Lord Amherst when Commander-in-chief), was established in May, 1841, at 57, Pall Mall, and removed to St. James's-square in 1844. It is upon the subscription and lending plan, and the collection admirable.

MATHEMATICAL SOCIETY, Crispin-street, Spitalfields, established in 1717, had a library, of which a catalogue was published in 1821; but the books and archives were removed to Somerset House in 1845, when the Mathematical Society merged into the Royal Astronomical Society. (See p. 516.)

MECHANICS' INSTITUTE, Southampton-buildings, Holborn, founded by the philanthropic Dr. Birkbeck in 1823; who also, in 1825, advanced a large sum for building the fine theatre of the Institution. The library has 6000 vols.

MEDICAL AND CHIRURGICAL SOCIETY, 53, Berners-street, Oxford-street: about 20,000 volumes on Medicine, Surgery, &c.

MEDICAL SOCIETY OF LONDON, 32A, George-street, Hanover-square, has a collection of books, including the library bequeathed by Dr. Lettsom, with a house in Bolt-court, Fleet-street. (See p. 350.)

MERCHANT-TAYLORS' SCHOOL LIBRARY, Suffolk-lane, Cannon-street, contains a fair collection of Hebrew and other Oriental works of reference; some good copies of the Fathers; nearly all the standard classical and other Lexicons; and the best writers in English Theology. The Merchant-Taylors' Company devote thirty guineas per annum to the increase and keeping up of this library; and frequent presents have been made to it by Members of the Court.

MICROSCOPICAL SOCIETY, 21, Regent-street: a library of standard works on the Microscope; the perfection of which valuable instrument is the object of the Institution.

MUSEUM OF PRACTICAL GEOLOGY, Jermyn-street, St. James's: rare edition of the works of Aldrovandus; collection of alchemical treatises and histories; Kircher's works; olden Topography, Voyages and Travels; collection of Surveys, &c.

NEW COLLEGE, St. John's Wood (see p. 277), possesses a library of 20,000 volumes, including the theological collections from Coward, Homerton, and Highbury Colleges; and is otherwise rich in works for the Congregational denomination.

PARLIAMENT (HOUSES OF) possess large and valuable libraries.

PATENT SEAL OFFICE LIBRARY.—This free scientific library consists of more than 25,000 volumes, well selected, and of a class character, and there is a conveniently-arranged catalogue. In days of old the inventive faculty of man was taxed and made profit of to Chancellors and Chaff-waxers. The records of patents were lodged in the Rolls Chapel and other places, and the expense of inquiry was great; the specifications of patents were not printed, and the cost of obtaining even a specification amounted to sums which varied from twelve guineas up to 500*l.*; the legal expenses of an old patent amounted to 350*l.* and upwards. Now, all the specifications of patents have been printed, and they can be had at the rate of from 2*l.* to 10*l.* each copy. Of the patents

under the old patent law, the most ancient is the following: "A.D. 1617.—No. 1. Engraving and printing maps, plans, &c.; Rathburne & Burges' patent." This is the first patent which has been printed. No. 2 patent is by Nicholas Hilliard, for drawing, engraving, and printing portraits of the royal family. No. 3 is for constructing locks, sluices, bridges, cranes, and obtaining or applying water-power. No. 4 (1617)—Protecting arms and armour from rust. No. 5—Manufacture of swords and rapier blades, &c. No. 6—Patent to David Ramsey and Thomas Wildgoose. Ramsey seems to have been one of the pages of the bedchamber. This invention is described as follows:—

"Newe, apte, or comodius formes or kinde of engines or instruments, and other profitable inuencions, wayes, and means for the good of our commonwealth, as well to *plough grounde without horse or oxen*, and enrich and make better and more fertile, as well barren bent, salt, and sea sand, as in land and upper land grounde within our kingdoms of England and Ireland, and our domynon of Wales; as also to *rayse waters from amie lowe place to high places, for well watering of cityes, towns, noblemen's and gentlemen's houses, and other places now much wanting water, with lesse charges than ever hath been heretofore, and to make boats for the carriage of burthens and passengers run upon the water, as swift in calme, and more safe in storms, than boats full-sayled in great wayes.*"

The inventions for the cure of smoke are numerous, and of several dates, notwithstanding many of her Majesty's subjects are as smoke-dried as formerly. Mops, egg-boilers, self-adjusting gloves, frying-pans, and other such manufactures have been patented. There are also beverages and such like made patent; one of these is called "A new beverage—Gibson's Pinerium; or, Aërated Sarsaparilla."

From 1617 to 1852, when the change in the law took place, we find, in this library, the record of 14,359 patents: of these the payment for extension to fourteen years only seems to apply to 7529. Since the new law has made patents more easy of obtainment, the specifications were more numerous than those which in the Chaff-wax days were recorded during more than two centuries. On an average about 3000 petitions for provisional protection are presented in each year: only 1950 inventions reach the patented state; and but 550 patents pay the stamp duty required at the expiration of each year: probably not more than 100 of these 550 patents will pay the additional stamp duty required at the end of the seventh year. Among the printed records, we see the dawnings of steam-power, the electric telegraph, and gas-lighting. In 1652, 262 patents were taken out for fire-arms. One Puckle puts his specification in rhyme, and says:—

"Defending King George, your country and laws,  
In defending yourself and country's cause,  
For bridges, trenches, lines and passes,  
Ships, boats, houses, and other places."

ST. PAUL'S CATHEDRAL Library, in the gallery over the southern aisle, was collected by Bishop Compton: 7000 volumes, with MSS. relating to Old St. Paul's. (See p. 111.)

ST. PAUL'S SCHOOL, St. Paul's Churchyard, formerly contained the library of Dean Colet, the founder; but the books were destroyed in the Great Fire, with Mr. Cromlehome, the upper Master's curious stock, the best private collection then about London: he was a great lover of his books, and the loss of them hastened the loss of his life. They have been supplied by lexicons, dictionaries, and grammars, in Hebrew, Chaldee, Greek, and Latin, for the use of the upper scholars. Here is the reputed copy of *Vegetius de re Militari*, which Marlborough used when a pupil at the school. The original statutes of this school were accidentally picked up at a bookseller's by the late Mr. Hamper, of Birmingham, and by him presented to the British Museum.

PHARMACEUTICAL SOCIETY (The), 17, Bloomsbury-square, has a library, museum, and laboratory.

ROYAL ACADEMY OF ARTS, Trafalgar-square: all the best works on art; besides prints, including a valuable collection of engravings from the Italian School, from the earliest period, collected by George Cumberland. The former library room, at Somerset-house, has a ceiling painted by Angelica Kauffmann, Sir Joshua Reynolds, and other Academicians. The office of Librarian is usually given to an Academician: Wilson, Fuseli, and Stothard were librarians.

ROYAL ACADEMY OF MUSIC, 4, Tenterden-street, Hanover-square, has a library of music, practical, for the use of the students. Here is preserved the original deed, dated 1719, signed by several noblemen, subscribers to a Royal Academy of Music, from which was formed the first Italian Opera in England.

ROYAL INSTITUTE OF ARCHITECTS, Conduit-street, Hanover-square: about 2000 volumes on Architecture and its attendant sciences; including the Prussian Government's educational works; that by Lepsius on Egypt; and large and expensive books of curiosity and reference, such as Piranesi and Canina. The MSS. and original Drawings comprise Stuart's commencement of a Dictionary of Architecture; Weennick's *Lives of Flemish Architects*; and about 2000 drawings of antiquities, modern edifices, and designs by English, French, Italian, and German architects of the seventeenth, eighteenth, and nineteenth centuries.

ROYAL INSTITUTION, Albemarle-street: about 27,000 volumes, including the curious library of Astle, the antiquary; topographical, antiquarian, classical, and scientific works; parliamentary history, &c.

ROYAL LIBRARY (The) St. James's Palace, was originally founded by Edward VI., who appointed Bartholomew Trahnon, keeper, with a salary of 20*l.*: the first books mostly collected by Leland, at the Dissolution; and here were deposited his "Collections," presented by him to King Edward, but subsequently dispersed. James I. refounded the library, and added the collection of the learned Isaac Casaubon. The entire collection was presented to the British Museum, in 1757, by George II.; and to the gift was annexed the privilege, which the Royal Library had acquired in the reign of Queen Anne, of being supplied with a copy of every new publication entered at Stationers' Hall. In St. James's Palace was also the *Queen's Library*, built by Kent, for Caroline, consort of George II., in the Stable-yard: here were two fine marble busts of George II. and Queen Caroline, by Rysbrack, both now in Windsor Castle.

ROYAL SOCIETY, Burlington House: the Library, in the upper floor, is extremely rich in the best editions of scientific treatises, besides rare and valuable theological historical works, which are lent to Fellows of the Society. The catalogue of books, MSS., and letters, 1841, fills two volumes 8vo. ("The collection is very poor in some departments."—*A. De Morgan.*) The Society also possess upwards of 5000 maps, charts, engravings, drawings, &c. The library of Arundel House, presented to the Royal Society by Mr. Henry Howard, 1666-7, forms the nucleus of the present collection, each book being inscribed *Ex dono Henrici Howard, Norfolciensis*: "it consists of 3287 printed books, chiefly first editions, soon after the invention of printing; and Hebrew, Greek, Latin, Turkish, and other rare MSS., 544 volumes." (*Maitland.*) In 1830, the Arundel MSS. (excepting the Hebrew and Oriental) were sold to the British Museum for 3559*l.*, which was expended in purchasing scientific works for the Royal Society's Library, now exceeding 42,000 volumes.

Here are Chaucer's *Canterburie Tales*, fol. 1480 (Caxton); Copernicus's *History of Astronomy*, first edition; original MS. of the *Principia*, written by Sir Isaac Newton; and documents in the *Commercium Epistolicum* (invention of Fluxions); MS. of Aubrey's *Natural History of Wiltshire*.

ROYAL SOCIETY OF LITERATURE, 4, St. Martin's-place, Trafalgar-square: a valuable library, greatly enriched by the lexicographical and antiquarian works presented by the Rev. H. J. Todd, editor and enlarger of Johnson's *Dictionary*; also papers by the most eminent writers on history, philology, poetry, philosophy, and the arts. The Society's House was built by the leading members upon Crown land granted in 1826 by George IV., who contributed 1100 guineas a year.

It is true that George IV. was committed to this large annual subscription by a misconception of Dr. Burgess, Bishop of Salisbury; the king intending a donation of 1000 guineas, and an annual subscription of 100 guineas: his Majesty not only cheerfully acquiesced, but amused himself with the incident.

RUSSELL INSTITUTION, Great Coram-street. This Institution was founded in the year 1808, and amongst its earliest members were Sir Samuel Romilly, Francis Horner, Mason Good, Henry Hallam, and Lord Abinger. The number of volumes exceeds 16,000. Here is Haydon's grand heroic picture of "Xenophon and the Ten Thousand."

It was disposed of by lottery for 800 guineas, in 1836, when it was won by John, Duke of Bedford, and presented by him to the Institution.

SION COLLEGE LIBRARY, London Wall (*see* p. 279), though founded for the clergy of the City and suburbs of London, is now accessible daily upon the same conditions as the British Museum Library. The Sion collection was increased by the bequest of the library of Dr. William Harris: here are many curious black-letter theological works and scarce tracts of the Puritan times.

SIR JOHN SOANE'S MUSEUM: Architecture and the Fine Arts generally, by English, Italian, French, German, and Russian artists and literati; original Drawings and MSS. by Thorpe, Jones, Vanbrugh, Wren, and Chambers; Pennant's *London*, illustrated with 2000 drawings, prints, &c. (Fauntleroy's); Tasso's MS. *Gerusalemme Liberata*; first, second, third, and fourth folio editions of Shakspeare, from J. P. Kemble's library. (*See* MUSEUMS: Sir John Soane's.)

SOCIETIES, LITERARY AND SCIENTIFIC, in Islington, Marylebone, Southwark, and Westminster, contain modern libraries.

SOCIETY OF ARTS, John-street, Adelphi, has a collection of technical works, which is very far from complete, but was intended to contain copies of all special treatises on the arts and manufactures. The most interesting and important part of the library is the MS. correspondence and journal-books. Amongst the rejected communications and condemned inventions are many since the subjects of patents; and these volumes are the most remarkable registers in the country of the inventions of the last century. The books are lent to the members.

STATISTICAL SOCIETY, 12, St. James's-square: a large collection of Statistical Returns, imperfectly catalogued.

TENISON'S LIBRARY, in Castle-street, St. Martin's-lane, immediately behind the National Gallery, was built by Sir Christopher Wren. It is "a noble structure, extremely well contrived for the placing of the books and lights, and furnished with the best modern books in most faculties: the best of its kind in England."—(*H. Lemoine*, 1790.) The Library, about 4000 volumes, was formed by the Archbishop during the reigns of Kings Charles II., James II., William III., and Queen Anne, and was established by Tenison in 1685, then Rector of St. Martin's parish. It contained all the rare books formerly belonging to Father Le Courayer, canon and chief librarian of St. Geneviève, and author of the celebrated *Dissertation on the Validity of the Ordinations and the Succession of the Bishops of the Church of England*. Some years before his death the Canon gave all his rare and valuable books to Archbishop Tenison's Library. The entire collection was dispersed by auction by order of the Charity Commissioners, in June, 1864, when some of the MSS. were disposed of as follows:—

The Original Note-Book of Francis Bacon, entirely in his autograph and unpublished, full of curious and interesting details illustrative of the personal history of this great reformer of philosophy, 69*l*. The Holy Bible, translated by Wickliffe, a manuscript of the fourteenth century, upon vellum, comprising a portion of the Old Testament Scriptures, 150*l*. Venantii Honorii Clementiani Fortunati, Presbyteri Italici, Versarium et Prosaice Expositiones Orationis Dominicæ et Symboli, a fine manuscript, Sæc. X. or XI., 78*l*. Higden's *Polychronicon*, translated into English by John de Trevisa, being the version used by Caxton, a noble manuscript, wanting a few leaves. It is preceded by two treatises, one entitled, *Dialogus inter Militem et Clericum*, and the other, *The Defence, before the Pope at Rome*, by Richard Fitz-Ralph, Archbishop of Armagh, which latter has not been printed, 189*l*. Historical Miscellanies, containing three pages in the autograph of Francis Bacon, 30*l*. 10*s*. A charming volume, entitled, *All the King's Short Poësis that are not Printed*, with numerous alterations in the handwritings of King James the First and Prince Charles (afterwards Charles the First), 63*l*. 5*s*. Keating's *Three Shafts of Death*, composed in the year 1631, and *History of Ireland*, in the Irish character, 20*l*. A chronicle, called *Flores Historiarum*, by that eminent English historian Matthew of Westminster, a manuscript of the fourteenth century, 63*l*. *Missale secundum Usum Sarum*, a fine manuscript of the fifteenth century, with musical notes, 70*l*. *Prudentii Liber de Pugnâ Vitorum et Virtutum*, cum *Glossis*, a wonderful manuscript of the tenth century, with eighty illustrations of a highly spirited character, executed in outline, and exhibiting great artistic skill in the powerful treatment of the various subjects, 273*l*. *Psalterium, cum Precibus*, a most beautiful manuscript of the thirteenth century, by an English artist, with many thousand capital letters, various figures, devices and grotesque subjects, executed in gold and colours in the richest manner, 200*l*. A curious collection of Theological Treatises in English, one of them being a discourse against miracle plays, the most singular relic of the kind known to exist, and said to be the only mediæval English treatise on such plays yet discovered, 35*l*. Divers Treatises in English, by Dr. Wickliffe, 37*l*. 10*s*.

The Grammar-school, including the Library-rooms, with St. Martin's Workhouse,

have been purchased of the parish of St. Martin's for 86,000*l.*; the site being required for the enlargement of the National Gallery.

**TOWER OF LONDON.**—At the commencement of the last century, according to Bagford and Oldys, the Records in the Wakefield Tower were very curious, and were then “modeled and digested, and repositied in cases.” In the White Tower were a vast number of records relating to monasteries, &c., several letters of kings, princes, dukes, &c., from several parts of the world, as Tartary, Barbary, Spain, France, Italy, &c., to our kings in England. (*See RECORDS, PUBLIC.*)

**UNITED SERVICE INSTITUTION, Middle Scotland-yard, Whitehall:** an admirable library of reference (10,000 volumes), especially valuable in its practical utility to soldiers; pamphlets on the services; engineering papers: rich in old Italian military literature; a French plan of fortification in MS., corrected in the handwriting of Vauban.

**UNIVERSITY COLLEGE, Gower-street:** about 43,000 volumes, and 8000 pamphlets, general, legal, and medical; including the Chinese library, 10,000 volumes, left by Dr. Morrison; the Ricardo library (political economy), left by David Ricardo; and a large collection bequeathed by Dr. Holmes of Manchester. The marble statue of Locke in the principal library, is by Sir Richard Westmacott, R.A. (*See p. 280.*)

**WESTMINSTER ABBEY: (Chapter House).**—The Chapter House was once the monks' “parlour,” or “parleying” place, but made a public library by Lord Keeper Williams, whilst Dean of Westminster. The books were burnt in 1664, and but one MS. saved out of 320: they are catalogued in the Harleian MSS. Chamberlayne (1726) describes “a fair publick library, free for all strangers in term time:” about 11,000 volumes. Among the treasures here are collections of music and classics and early Bibles; an early vellum book, printed at Oxford, 1482; ceremonials of consecrations; an *Editio Princeps* of Plato; St. Ambrose on vellum; the *Pupilla Oculi*, and Litlington's Missal, 1362.

*Domesday Book*, Rymer's *Fœdera*, and other ancient records, kept here, have been transferred to the Rolls Office, Chancery-lane. The Chapter House formerly contained the most valuable muniments, of which, in 1807, an inventory was made; three copies only were taken; one, with coloured drawings of the building, is in the British Museum. Addit. MS. 8977. The Parliament Rolls were, at the above date, in an old stone tower, in the Old Palace Yard, Westminster; and the Papers of State from the beginning of Henry VIII. were kept in Holbein's Cockpit Gate.

In the room called the Museum, at Westminster School, is a collection of books given by Dr. Busby for the use of the scholars.

**WILLIAMS'S LIBRARY, “the Dissenters' Library,” Redcross-street, Cripplegate:** 20,000 volumes, collected by the Rev. Dr. Daniel Williams, the Nonconformist, and Dr. Bates; and bequeathed by the former, with provisions for a building; opened 1729. This library has been increased by gifts, and by a small income from estates left by Dr. Williams: it is rich in controversial divinity, is open to the public by a trustee's order, and books are allowed to be taken out. Here are some manuscripts of the early history of the Reformation. Dr. Williams purchased most of the books of the heirs of one Baker, of Highgate: by negligence many of the MSS. were burnt, including the pompous and rare book of the *Rules and Ceremonies of the Coronation of the Kings of England*. (*H. Lemoine, 1790.*) Also, *The Salisbury Liturgy*, finely illuminated; *The Hours of the Virgin*, Paris, 1498; Illuminated Bible; miniature copy of the Head of Christ, from a painting in the Vatican; the glass baptismal basin of Queen Elizabeth. Here was a very interesting collection of portraits of Dissenting Ministers.

Before the system of the registration of births, marriages, and deaths had been established at Somerset House, three denominations of Protestant dissenters, forming a congregation within twelve miles of London, established a registry of births here, which was continued from 1742 to 1837, when these records were placed in the care of the Registrar-General. In these books are entered nearly 50,000 births, attested by witnesses. The library buildings were taken down in 1864, for the extension of the Metropolitan Railway; and the collection has been removed to Lincoln's-inn-fields.

ZOOLOGICAL SOCIETY, 11, Hanover-square: Transactions of learned societies, and scientific zoological works of modern date.

CIRCULATING LIBRARIES date from 1740, when one Wright, at No. 132, Strand, established the first. Dr. Franklin writes in 1725, lodging in Little Britain: "Circulating libraries were not then in use." Among Wright's earliest rivals were the Nobles, in Holborn and St. Martin's-court; Samuel Bathoe, Strand; and Thomas Lowndes, Fleet-street. Another early Circulating Library was in Crane-court, Fleet-street, where the Society of Arts met in 1754 and 1755. In 1770 there were but four Circulating Libraries in the metropolis.

FREE LIBRARIES: the first established in Marylebone, 1853.

MUDIE'S SELECT LIBRARY, New Oxford-street, has about 120,000 volumes actually in circulation, in addition to a reserve of nearly a million volumes. Rather more than half of these are works of Fiction, chiefly of the higher and standard class. The Library was formed into a Company, in 1864, under Mr. Mudie's superintendance, and with increasing success; number of subscribers, nearly 20,000. The books are kept in a large and handsome Hall, decorated with Ionic columns; light iron galleries give access to the upper shelves, and an iron staircase descends to vaults, filled with solid stacks of books; and light trucks circulate laden with books. More than 1000 exchanges are usually effected in one day. Of the more popular works thousands of copies are provided: of Livingstone's *Travels in Africa*, 3250 copies were in circulation at one time; of *Essays and Reviews*, 2000 copies; and of the *Quarterly Review*, in which the *Essays* were answered, 1000 copies; M'Clintock's *Voyage in Search of Franklin*, 3000 volumes; of some novels, 3000. The books are distributed throughout the three Kingdoms to private individuals, country book-clubs, and literary societies. The system was commenced by Mr. Mudie in 1842, with the object of providing a supply of works of a higher class than were usually to be found in circulating libraries. This is altogether a liberal enterprise, the benefits of which have been rightly appreciated by the reading public.

### LINCOLN'S INN FIELDS.

THIS fine square west of Lincoln's Inn dates from 1618, when "the grounds were much planted round with dwellings and lodgings of noblemen and gentlemen of quality, but at the same time were deformed by cottages and mean buildings—encroachments on the fields, and nuisances to the neighbourhood." To reform these grievances, a commission was appointed by the Crown "to plant and reduce to uniformity Lincoln's Inn Fields, as it shall be drawn by way of map or ground-plot by Inigo Jones." A view, painted in oil, of Inigo's plan is preserved at Wilton House: it is taken from the south, and the principal feature is Lindsey House, on the centre of the west side (*see* p. 448). It still remains, but has lost the handsome vases which originally surmounted the open balustrade at the top. (*Life of Inigo Jones*, by Peter Cunningham. Shakspeare Society, 1848.)

The proportions of the square were long stated to be those of the Great Pyramid of Egypt; which, says Walpole, "would have been admired in those ages when the keep of Kenilworth Castle was erected in the form of a horse-fetter, and the Escorial in the shape of St. Lawrence's gridiron." But the fact is otherwise; the base of the Great Pyramid measures 764 feet on each side, whereas Lincoln's-inn-fields, although 821 feet on one side, is only 625 feet 6 inches on the other, and *the area of the Pyramid* is greater by many thousand square feet. (Colonel Howard Vyse, *On the Pyramids*.) The west side only was completed by Inigo Jones.

Lincoln's Inn Fields have been used as a place of execution. Here, September 20 and 21, 1586, Babington and his accomplices were "hanged, bowelled, and quartered, on a stage or scaffold of timber strongly made for that purpose, even in the place where they used to meet and to conferre of their traitorous purposes." And here in the middle of the square, July 21, 1683, was beheaded the patriotic William Lord Russell.

Burnet thus describes the sad scene: "Tillotson and I went with him in the coach to the place of execution. Some of the crowd that filled the streets wept, while others insulted. He was singing psalms a great part of the way, and said he hoped to sing better soon. As he observed the great crowd of people all the way, he said to us, 'I hope I shall quickly see a much better assembly.' When he came to the scaffold, he walked about it four or five times. Then he turned to the sheriffs and delivered his paper. . . . He prayed by himself, then Tillotson prayed with him. After that he prayed again by himself, and then undressed himself, and laid his head on the block without the least change of countenance, and it was cut off at two strokes."

The Fields were long the resort of troops of idle and vicious vagrants: such were "Lincoln's-inn-fields Mumpers;" and "Scarecrow, the beggar in Lincoln's-inn-fields, who disabled himself in his right leg, and asks alms all day, to get himself a warm supper and a trull at night." (*Spectator*, No. 6.) Boys gambled for farthings and oranges; and a favourite game here was "the Wheel of Fortune," played with a moveable hand pointing to a circle of figures, such as we remember in Moorfields, the prizes being gingerbread-nuts the size of farthings. Gay, in his *Trivia*, cautions the pedestrian:—

"Where Lincoln Inn's wide space is rail'd around,  
Cross not with vent'rous step; there oft is found  
The lurking thief, who, while the daylight shone,  
Made the walls echo with his begging tone:  
That wretch, which late compassion moved, shall wound  
Thy bleeding head, and fell thee to the ground."

Lincoln's-inn-fields *Iuffers* were wretches who assumed the characters of maimed soldiers, and begged from the claims of Naseby, Edgehill, Newbury, and Marston Moor; their prey was people of fashion, whose coaches they attacked, and if refused relief, they told their owners, "'Tis a sad thing that an old crippled cavalier should be suffered to beg for a maintenance, and a young cavalier, that never heard the whistle of a bullet, should ride in his coach."

The Fields were inclosed with iron railing after 1735, in consequence of Sir Joseph Jekyll, then Master of the Rolls, being ridden over; "before which time the Square was a receptacle for rude fellows to air horses, and many robberies were committed in it." (*Gentleman's Magazine*, August, 1773.) But Ireland states that Jekyll was attacked and thrown down by the mob, in consequence of his aid in the passing of the Act of Parliament to raise the price of gin. In the Fields was often set up, until its final abolition, the Pillory, handy for the rabble of Clare Market. At the north-west angle of the inclosure is a picturesque Gothic drinking fountain. On the north side are Sir John Soane's Museum and the Inns of Court Hotel; south, the College of Surgeons (*see* p. 279); east, Lincoln's-inn New Hall (*see* p. 466); west, through Inigo Jones's archway, in Duke-street, is the Sardinian Roman Catholic Chapel (*see* p. 232); opposite which, over an Italian warehouse, lodged Dr. Franklin, when a compositor in Watts's printing office.

At No. 12, Duke-street, in 1845, was completed by Mr. Smith, a magnificent Silver Fountain, of extraordinary magnitude and exquisite workmanship, as a present from the East India Company to Mohammed Ali, Pasha of Egypt. This fountain is upwards of ten feet in height, and contains 10,000 ounces (7½ cwt.) of silver. It consists of a massive and enriched pedestal, whence springs a shaft, supporting a tier of three basins; and at each angle of the pedestal are a large vase of flowers, and groups of fruit at the base. The likeness of beast, bird, or fish is scrupulously avoided throughout the ornaments, in deference to Mahomedan scruples. The style of ornament is that of Louis Quatorze; and the base bears an inscription in English, Turkish, Arabic, and Latin. This fountain cost 7000*l.*; it occupied more than seven months in the actual manufacture; and is, we believe, the largest silver work ever executed in England.

*Great and Little Turnstile* are named from the turning stiles which, two centuries since, stood at their ends next Lincoln's-inn-fields, to prevent the straying of cattle therefrom; and *Gate-street*, north-west, has a similar origin. Sir Edwin Sandys's curious *Europæ Speculum*, 4to, 1637, was "sold by George Hutton, at the *Turning Stile* in Holborne." The English translation of Bishop Peter Camus's *Admirable Events*, 4to, 1639, was also "sold in Holborne, in *Turnstile Lane*." In 1685 was built *New Turnstile*.

*Turnstile-alley*, leading to Holborn, was first designed as a change for selling Welsh friezes, flannels, &c. Here Cartwright, the bookseller, kept shop: he was an excellent player, and bequeathed his plays and pictures to Dulwich College.

On the north side of the Fields is *Whetstone's Park*, a row of tenements named after William Whetstone, a vestryman of the parish of St. Giles's-in-the-Fields in the time of Charles I. and the Protectorate. It was long a place of ill repute, and was attacked by the London apprentices in 1682. Since 1708, however, it has chiefly consisted of stables. (*Hatton's London*, p. 88.)

"And makes a brothel of a palae,  
Where harlots ply, as many tell us,  
Like brimstones in a Whetstone alehouse."—*Butler*.

The vile place and its loose characters also occur in the plays of Shadwell and Dryden, and in Ned Ward's *London Spy*.

The concentration of the Law Courts in Lincoln's Inn Fields was once proposed; and in 1841 Mr. Barry designed a large building, of Grecian character, containing a Great Hall (nearly equal to the area of Westminster Hall), surrounded by 12 courts; the whole occupying one-third of the area within the rails, to be belted with plantations. Funds were wanting, and the blocking up of the open space was objected to: persons had considered this area as their "country walk," and that "they had been in the country when they had been round Lincoln's Inn Fields." (*Evidence before Parliament*.)

### LITERARY FUND (THE ROYAL),

ADMINISTERS assistance to authors of published works of approved literary merit, and to authors of important contributions to periodical literature who may be in distressed circumstances; such assistance being extended, at the death of an author, to his widow and children. Of this institution it has been well said:

"With equal promptitude and delicacy, its committee are ever ready to administer to the necessities of the unfortunate scholar, who can satisfy them that his misery is not the just punishment of immoral habits. Some of the brightest names in contemporary literature have been beholden to the bounty of this Institution, and in numerous instances its interference has shielded friendless merit from utter ruin."—*Quarterly Review*.

The Society was established by subscription, in 1790, by Mr. David Williams, who has detailed its objects in a work entitled *The Claims of Literature*. It was first proposed by Williams in 1773, to a club which met at the *Prince of Wales's Tavern*, Conduit-street, Hanover-square; Dr. Franklin presided, but discouraged Williams by observing, "the event will require so much time, perseverance, and patience, that the anvil may wear out the hammer." The first anniversary dinner was held in 1793: in 1794 an ode was recited; and this practice was continued until 1830. Among the writers of these odes were Captain Morris, Mr. Fitzgerald, Mr. Disraeli, Mr. George Dyer, Mr. Boscawen, the Rev. Henry Kett, the Rev. Dr. Charles Symmons, the Rev. George Crabbe, the Rev. Thomas Maurice, Mr. Henry Neele, and Mr. Allan Cunningham. The first patron of the Fund, the Prince Regent, contributed 5455*l.*; the Dukes of Kent, Sussex, York, and Cambridge presided at its dinners; Prince Albert presided in 1842, and the Prince of Wales in 1864. In the Society's armorial bearings are the imperial crown and the Prince of Wales's plume. The first house of the Fund was 36, Gerard-street, Soho, where Williams died in 1816: he was buried in St. Anne's Church, and his gravestone bears, "DAVID WILLIAMS, ESQ., AGED SEVENTY-EIGHT YEARS, FOUNDER OF THE LITERARY FUND." Yet Canning, in political spite, once classed Williams amongst "creeping creatures, venomous and low!" The Fund was incorporated 1818: the average annual number of authors relieved during the last ten years has been 52, classified under the heads of History and Biography; Science and Art; Periodical Literature; Topography and Travels; Classical Literature and Education; Poetry; Essays and Tales; Drama; Law; Medicine; and Miscellaneous. The average amount of the annual grants during the last ten years has been 1577*l.* The Reserve Fund at the end of 1866 was 26,000*l.* The stock of the property bequeathed to the Fund by Mr. Thomas Newton, who believed himself to be the last descendant of Sir Isaac Newton, amounts to 8167*l.* 15*s.* 10*d.*; and the Newton estate at Whitechapel produces at present 203*l.* a year in rents. The present Chambers of the Fund are at No. 4, Adelphi-terrace, described at page 1. (See also LIBRARIES, p. 521.)

### LITTLE BRITAIN,

ANCIENTLY Bretagne or Britain-street, west of Aldersgate-street, is named from the Duke of Bretagne, who had here his magnificent town-mansion.

Little Britain was as remarkable for its booksellers through the reigns of Charles I. and II., James II., and William and Mary, as Paternoster-row is at present. This location of booksellers may have been influenced by John Day, the eminent printer, living over Aldersgate; and from Grub-street being the abode of authors. (See GRUB-STREET, pp. 383-385.) "Bartholomew-close printers" are also mentioned by Dryden.

Roger North, in his *Life of the Hon. and Rev. Dr. John North*, speaking of the booksellers in the reign of Charles II., says: "Little Britain was a plentiful and perpetual emporium of learned authors, and men went thither as to a market. This drew to the place a mighty trade, the rather because the shops were spacious and the learned gladly resorted to them, where they seldom failed to meet with agreeable conversation; and the booksellers themselves were knowing and conversible men, with whom, for the sake of bookish knowledge, the greatest wits were pleased to converse; and we may judge the time as well spent there as (in latter days) either in tavern or coffee-house. But now this emporium has vanished, and the trade contracted into the hands of two or three persons."

Robert Scott appears to have been a principal dealer in Little Britain. A newspaper of 1644 states 460 pamphlets to have been published here in four years. Richard Chiswell, of Little Britain, buried in St. Botolph's Church, Aldersgate, in 1711, is described as "the metropolitan bookseller of England." At the Dolphin, in Little Britain, lived Samuel Buckley, publisher of the *Spectator*, commenced March 1, 1711. In 1725, Benjamin Franklin, when working at Palmer's printing-office in Bartholomew-close, lodged in Little Britain, next door to Wilcox the bookseller, who lent Franklin books "for a reasonable retribution."

Milton, after he had left Jewin-street, lodged for a time in Little Britain with Millington, the book-auctioneer, who was accustomed to lead his venerable inmate by the hand when he walked in the street, as mentioned by Richardson, on the testimony of the acquaintance of Milton. (Symmons's *Life of Milton*, 2nd edition, p. 501.) Richardson also relates, that, in Little Britain, the Earl of Dorset, when beating about for books to his taste, "met with *Paradise Lost*, and was so struck with some of its passages that he bought it, the bookseller begging him to speak in its favour if he liked it, for that they (the copies in his shop, not the impression, as Malone states) lay on his hands as waste-paper. The Earl read the poem, and sent it to Dryden, who returned it with the memorable opinion: 'This man cuts us all out, and the ancients too.'"

"The race of booksellers in Little Britain is now almost extinct; honest Ballard, well known for his curious divinity catalogues, being their only genuine representative" (*Gentleman's Magazine*, No. 1, 1731). He died Jan. 2, 1796, aged 88, in the house wherein he was born.

*Duke-street*, formerly *Duck-lane*, leading into *Smithfield*, was once celebrated for refuse book-shops:

"And so may'st thou, perchance, pass up and down,  
And please awhile th' admiring court and town,  
Who after all shall in *Duck-lane* shops be town."

Oldham's *Satires*, circa 1680.

Washington Irving describes the locality as "a cluster of narrow streets and courts of very venerable and debilitated houses, several ready to tumble down, the fronts of which are magnificently enriched with old oaken carvings of hideous faces, unknown birds, beasts, and fishes, and fruits and flowers, which it would perplex a naturalist to classify" (*Sketch-book*). Most of this grotesque ornamentation has, however, long disappeared.

### LOMBARD STREET,

"A CERTAIN street of the greatest credit in Europe," (*Addison*), is proved by *Stow* to have borne that name before the reign of Edward II.; and is so called of the Longobards, the first of whom were the Causini family, a rich race of bankers who settled here, and their countrymen soon grouped around them. They were also the goldsmiths, who took pledges in plate, jewels, &c.; and the badge of the Lombards (the three golden pills of the Medici family) has descended as the sign of the pawnbrokers.\* The black-letter ballad in the Pepys collection makes the husband of Jane Shore a goldsmith here:

"In Lombard-street I once did dwelle,  
As London yet can wisse welle;  
Where many gallants did beholde  
My beauty in a shop of golde.  
\* \* \* \* \*

I penance did in Lombard-streete  
In shameful manner in a sheete."

In the parish of St. Edmund, in Lombard-street, was the hostel of Isabella, Queen of Edward the Second, whom, with the Prince of Wales, the Queen entertained here, October 26, 1357. The rent of her house, which belonged to the prioress of St. Helen's, was twenty-five shillings and twopence half-yearly.—*Archæologia*, vol. xxxv. pp. 453-469.

\* The sign is also traceable to the three pieces of gold, which are the emblem of the charitable St. Nicholas. (See Mrs. Jameson's *Sacred and Legendary Art*.)

Here the merchants assembled twice daily in all weathers. In 1537, Sir Richard Gresham proposed to Cromwell (then Lord Privy Seal) "to make a goodely Bursse in Lombert-strette, for marchaunts to repayer unto." Hence originated the Exchange built by Sir Richard's son, Sir Thomas Gresham, who was then living in Lombard-street, described by Hentzner as the handsomest street in London.

Here, like other bankers, Gresham kept a shop on the site of the banking-house (No. 68) of Martin, Stone, and Martins, who in Pennant's time possessed the large gilt grasshopper (Gresham's crest) which was placed over his door as a sign. It existed entire until 1795, when the present house was built, and the sign disappeared.

Hentzner, in 1593, saw in Lombard-street "all sorts of gold and silver vessels exposed to sale, as well as ancient and modern coins, in such quantities as must surprise a man the first time he sees and considers them." At Gresham's death, much of his wealth consisted of gold chains. Lombard-street has retained its character as well as its name for at least five centuries and a half; and within the last thirty years several gold and silver lacemen lived there.—Burgon's *Life and Times of Sir Thomas Gresham*, vol. i. p. 281 : 1839.

The Pope's merchants also chaffered here for their *wafers-cakes* and *pardons*. Sir Simon Eye built here a large tavern, *The Cardinal's Hat*; and Pope's Head Alley, leading from Lombard-street to Cornhill, is named from *The Pope's Head Tavern*, which existed in 1464: it had a finely painted room in Pepys's time. The Alley was once famous for its print-sellers, for toys, turnery, and cutlery; and stalls of fine fruit.

It was long believed that the poet Pope was born in Plough-court, Lombard-street, May 22, 1688, "at the house which is now Mr. Morgan's, an apothecary" (Spence's *Anecdotes*); a name long since forgotten, although J. T. Smith took much pains to discover it. It was added that Pope's father was a linendraper. But, in 1857, it was ascertained from a *London Directory*, in the Manchester Free Library, 1677, that Alexander Pope, the poet's father, was then living in Broad-street, and was a merchant, not a linendraper. Mr. Hotten, of Piccadilly, was the first to discover the above, as well as a broadside, which shows that the poet's family were living in Broad-street three years later than the appearance of the *Directory*. At what date Pope's father retired is not clearly ascertained, but all accounts agree that Pope was born in 1688, in the City of London. Looking to the facts, therefore, that the father appears to have been firmly established in Broad-street as a merchant, and that the tradition of Plough-court, Lombard-street, is extremely vague, may we not assume it as most probable that Pope was born in Broad-street, in the parish of St. Bennet Fink? In the *Athenaeum*, May 30, 1857, we find:—"1679, 12 August, Buried, Magdalen, the wife of Alexander Pope. Here, then, we have for the first time evidence that the elder Pope resided in Broad-street in 1677-79, and there died and was buried in 1679, Magdalen, wife of Alexander Pope the elder. There can be no doubt that this Magdalen Pope was the wife of the poet's father, and the mother of Magdalen Rackett, who, on the evidence of the poet himself, was the daughter of Pope's father by a first wife; and thus the question of relationship between Mrs. Rackett and Pope will be decided after a century of discussion, and against the recorded judgment of his biographers."

In *Abchurch-lane*, named from the parish of St. Mary Abchurch, or Upchurch, as Stow says he had seen it written, lived Mr. John Moore, author of the celebrated worm-powder:

"O learned friend of Abchurch-lane,  
Who sett'st our entrails free!  
Vain is thy art, thy powder vain,  
Since worms shall eat e'en thee."—*Pope*.

Lombard-street had also its booksellers. The imprint to Howel's *Familiar Letters*, 5th edition, is: "London, printed for *Thomas Guy*, at the Corner-shop of *Little Lombard-street* and *Cornhill*, near *Wool-church* Market, 1678." And 1696, Sept. 17, *Lloyd's News* was first "printed for Edward Lloyd (Coffee-man) in Lombard-street." Towards Birchin (anciently Birchover's) lane stood the house of William de la Pole, created in France, by Edward III., Knight Banneret; he was King's Merchant, and from him sprang a numerous race of nobility.

In *George-yard* was the *George* hostel, the London lodging of Earl Ferrers, whose brother in 1175, was slain here in the night, and thrown into the dirty street, which foul deed led to the setting of the night watches.

Lombard-street highway passes over the site of Roman houses, and has been the field of three great finds of Roman remains, in 1730, 1774, and 1785-6; the latter, in its stratum of wood ashes, supposed to indicate the burning of London by Boadicea. Ten feet below the street-level was found a wall of the smaller-sized Roman bricks, pierced by flues or chimneys; likewise tile and brick pavements; in Birchin-lane, a tessellated pavement of elegant design, heaps of Roman coins, glass bottles, keys, and beads; vessels and fragments of earthenware; and a large vessel of red Samian ware, richly embellished, and reminding us that "Rome did not want its Wedgwood." The causeway, which Wren considered the northern boundary of the Roman station, was then also discovered in Birchin-lane.

By the *London Directory*, 1677, above quoted, of the forty-four names or firms of

"goldsmiths who kept running cashes" in London "twenty-seven were (then) located in Lombard street." Sir Martin Bowes, the wealthy goldsmith, lived upon the site of No. 67, now Glyn's banking-house, which Sir Martin bequeathed to the Goldsmiths' Company, of which he was a distinguished member.

The banking-house of Messrs. Barclay and Co., No. 54, on the north side of Lombard-street, originally extended backwards to George-court, and is supposed to have been derived from the gift of Richard Mervayle to the Vintners' Company in 1437, who leased the premises for seventy years, from Michaelmas, 1778, at the yearly rent of 75*l.* (Herbert's *History of the Twelve Great Livery Companies*, vol. ii. p. 629.) The staff of Barclay's firm originally consisted of three clerks; and we are told that, on the third clerk coming to the office for the first time, he was thus dressed:—

He wore a long, flapped coat, with large pockets. The sleeves had long cuffs, with three large buttons, something like the coats worn by the Greenwich pensioners of the present day; an embroidered waistcoat, reaching nearly down to his knees, with an enormous bouquet in the button-hole: a cocked hat; powdered hair, with pigtail and bagwig; and gold-headed cane, similar to those of the present day carried by footmen of ladies of rank.—See *Reminiscences*, by Morris Charles Jones. Privately printed. Welshpool, 1864.

The banking-house was rebuilt in 1864, P. C. Hardwick, architect: it has four storeys, reaching 60 feet in height, and 85 feet in width. Lombard-street as the centre of "the banking world" has realized large sums for building sites, of which the following are remarkable quotations:—

The banking premises of Heywood, Kennard, and Co., in Lombard-street, were purchased by the Mercantile and Exchange Bank for 20,000*l.*; the directors of which let the first floor of the house to the Asiatic Banking Corporation for 1000*l.* a year. The amalgamation of the London Bank of Scotland with the Mercantile and Exchange Bank, having made it necessary to value the premises in Lombard-street, the Directors of the Bank of Scotland paid 10,000*l.* to the shareholders in the Mercantile and Exchange Bank, as their proportion of the increased value of the premises, which are now estimated at worth 40,000*l.*! The value was thus doubled within the year.

Again, a piece of ground at the corner of Lombard-street, formerly the site of Messrs. Spooner and Co.'s banking-house, was let to the Agra and Masterman's Bank for ninety-nine years, at 6600*l.* a year. Owing to a change in the arrangements of that bank, it was next sold to the City Offices Company at a premium of 70,000*l.*, and a building is now to be erected upon it, at a cost of upwards of 70,000*l.*, the gross rental of which is estimated at 22,000*l.*, the London and County Bank paying 12,000*l.* for the ground floor and basement.

One of the best edifices in Lombard-street is the bank of Robarts, Lubbock, and Co. The basement is suited to the idea of a bank; it makes no use of columns, but is the most decorated feature of the design; P. C. Hardwick, architect. Here is one of Sir Robert Taylor's best works, the Pelican Fire Office, with its elegant Doric and rusticated basement, carrying the emblematic group designed by Lady Diana Beauclerk, executed by Coade, at Lambeth, but now coated with paint. In the London and County Bank, the whole of the Portland stone used was that of old Westminster Bridge.

The *General Post-Office* was removed to Lombard-street early in the last century (see p. 394), and the Chief Office to St. Martin's-le-Grand in 1829.

Here are the churches of Allhallows (see p. 146); St. Edmund (p. 161); and St. Mary Woolnoth (p. 188.)

### LONDON INSTITUTION, THE,

**F**INSBURY CIRCUS, was established by a proprietary, 1805, "for the advancement of literature and the diffusion of useful knowledge:" upon its first committee were Mr. Angerstein and Mr. Richard Sharp ("Conversation Sharp"). The Institution was temporarily located at 8, Old Jewry (the fine brick mansion of Sir Robert Clayton, *temp.* Charles II.), and opened with a library of 10,000 volumes; incorporated in 1807: the sun in splendour, a terrestrial globe, open book, and air-pump, among the armorial ensigns of the common seal, characterizing the objects of the Institution. In 1812 it was removed to King's Arms-yard, Coleman-street; and thence, in 1819, to the present mansion, built on the north side of Moorfields; it is a very characteristic design (Brooks, architect; the father of Mr. Shirley Brooks, the popular *litterateur*); the first stone laid November 4, 1815, by the Lord Mayor, Birch: the façade is of Portland stone, and has a Corinthian portico, modified from the temple of Vesta at Tivoli; cost of the building, 31,124*l.* The library is 97 by 42 feet, and 28 in height, and has a gallery throughout: the collection of books is "one of the most useful and accessible in

Britain" (see LIBRARIES, p. 522). In the rear of the mansion is the Lecture-room, or Theatre, for 700 auditors; and adjoining are the Apparatus-room and Laboratory; the latter designed by W. H. Pepsy, F.R.S., and engraved in Parkes's *Chemical Catechism*, 13th edition, 1834. The apparatus in pneumatics, hydrostatics, electricity and magnetism, is very perfect; but the great battery of 2000 double plates, and another with a pair of plates 200 feet square, with which Sir Humphry Davy experimented, have long been destroyed.

## LONDON STONE,

CANNON STREET, is a fragment of the *milliarium* (mile-stone) of the Romans, "a pillar set up by them in the centre of the forum of Agricola's station, the *gnoma* or *umbilicus castris Londinensis*." (A. J. Kempe, F.S.A.) Stow describes it on the south side of the street, near the channel of Walbrook, "pitched upright, a great stone, called London Stone, fixed in the ground very deep, fastened with bars of iron, and so strongly set, that if carts do run against it through negligence, the wheels be broken, and the stone itself be unshaken." There is evidence to the belief that it was placed here a thousand years ago; and Camden considers it to have been the great central mile-stone, from which the British high-roads radiated, and the distances on them were reckoned, similar to that in the Forum at Rome.\*

The traditional history of the stone is as follows:—It was the altar of the Temple of Diana, on which the old British kings took their oaths on their accession, laying their hands on it. Until they had done so, they were only kings presumptive. The tradition of the usage survived as late, at least, as Jack Cade's time; for it is not before he rushes forth and strikes the stone, that he thinks himself entitled to exclaim—

"Now is Mortimer lord of this city!"

Tradition also declares that the stone was brought from Troy by Brutus, and laid by his own hand as the altar-stone of the Diana Temple, the foundation-stone of London, and its palladium—

"Tra maen Prydain  
Tra lied Llyndain"—

("So long as the stone of Brutus is safe, so long will London flourish,")

which infers also, it is to be supposed, that if it disappears, London will wane. It has been, from the earliest ages, jealously guarded and imbedded, perhaps from a superstitious belief in the identity of the fate of London with its palladium.—*Notes and Queries*, 3rd S., No. 1.

London Stone is referred to as a local mark of immemorial antiquity in Saxon charters. Stow found it mentioned as a landmark in a list of rents belonging to Christ's Church, in Canterbury, at the end of "a fair-written gospel-book," given to that foundation by the West-Saxon King Athelstane, who reigned from 925 to 941. Of later time we read, that in the year 1135, the 1st of King Stephen, a fire, which began in the house of one Ailward, near unto London Stone, consumed all east to Aldgate. Henry Fitz-Alwyn, "the draper of London Stone," was the first Mayor of London, 1189. Lydgate, about 1430, sings:

"Then I went forth by London Stone  
Throughout all Canwick Street."—*London Lackpenny*.

Holinshed mentions the striking of the Stone in describing the insurrection of Jack Cade; and Shakspeare has introduced this dramatic incident in the Second Part of Henry VI. act iv. sc. 6. In *Pasquill and Marforius*, 1589, we read: "Set up this bill at London Stone. Let it be doone solemnly, with drom and trumpet; and looke you advance my cullour on the top of the steeple right over against it." Also, "if it please them these dark winter nights, to sticke uppe their papers uppon London Stone." Here it is presumed to have been customary to affix official papers. Dryden (*The Cock and the Fox*.) has:

"Jack Straw at London Stone with all his rout  
Struck not the city with so loud a shout."

\* A like stone, of the time of Hadrian (2nd century), was found on the side of the Roman Foss-way near Leicester, in 1771; and is preserved in the Museum of the Leicester Literary and Philosophical Society.

Watling-street, of which Cannon-street is a continuation, is supposed to have been the principal street of Roman London; but it may have been a British road before the arrival of the Romans, to which earlier period Strype refers London Stone. After the Great Fire of 1666, the ground in Cannon-street was much disturbed, and the "large foundations" of London Stone led Wren to consider this to have been some more considerable monument than even the Roman milliarium; for adjoining "were discovered some tessellated pavements, and other extensive remains of Roman workmanship and buildings. Probably this might in some degree have imitated the *Milliarium Aureum* at Constantinople, which was not in the form of a pillar, as at Rome, but an eminent building," containing many statues. The Stone, before the Great Fire, was "much worn away, and as it were but a stump remaining." (*Strype*.) It was then cased over by Wren with a new stone, handsomely wrought and cut hollow, something like a Roman altar or pedestal, admitting the ancient fragment, "now not much larger than a bomb-shell," to be seen through a large aperture near the top. The Stone, in its old position on the *south* side of the street, being complained of as a nuisance, was removed to the *north* side in 1742, close to the kerb: here again it proved an obstruction; and in 1798, when St. Swithin's church was about to be repaired, the venerable Stone was by some of the parishioners doomed to destruction; but Mr. Thomas Maiden, of Sherborne-lane, printer, prevailed on the parish-officers to have it placed against the south wall of the church, where it now remains.

In Cannon-street is the spacious City Terminus of the South-Eastern Railway.

Luther's *Table-Talk*, English translation, was first "printed by William Du Gard, dwelling in Suffolk-lane, near London-stone, 1652."

#### LONDON WALL,

MOORFIELDS, is a street named from its north side occupying the site of that portion of the City Wall which divided the City Liberty from the Manor of Finsbury, and against which was built Bethlem Hospital, taken down 1817-8; when also the Wall was removed: "found uncommonly thick, and the bricks double the size of those now used; the centre filled in with large loose stones, &c." (*Hughson's Walks*, 1817.) The level of the street has been in parts raised two feet within the last 40 years. Over *Helmet Court* entrance is a helmet, boldly sculptured in stone. Here is *Sion College*, described at page 214.

The Wall, believed to be the work of the later Roman period, when London was often exposed to hostile attacks, extended from the Tower, through the Minorities to Aldgate, Houndsditch, Bishopsgate, *along London Wall* to Fore-street, through Cripplegate and Castle-street to Aldersgate, and so through Christ's Hospital by Newgate and Ludgate towards the Thames. (See CITY WALL AND GATES, pp. 233-236.)

In October, 1866, excavations at London-wall led to the discovery of a large quantity of bones of horses, oxen, and deer, the horns in high preservation; also goat-horns, attached to portions of skulls; spear-handles, decayed, and tipped with horn. Till old Bethlem Hospital was taken down (1817-18), the greatest part of the ancient wall of London, partly Roman, was to be seen here; and the Hospital itself was built partly upon the City ditch, filled with rubbish, so that it was requisite to shore up and underpin the walls.

#### LONG ACRE,

THE main street between Covent Garden and St. Giles's, and extending from Drury-lane west to St. Martin's-lane, was (*temp.* Henry VIII.) an open field, called the Elms, from a line of those trees growing upon it, as shown in Aggas's plan. It was next called Seven Acres; and *temp.* Charles I., when it was first laid out, it was changed to Long Acre, from the length of the slip of ground first made a pathway. In Phoenix-alley, now Hanover-court, on the south, John Taylor, the water-poet, and a contemporary of Shakspeare, kept an ale-house, first with the sign of *The Mourning Crown*, for which, at the Commonwealth, he substituted his own head, with this motto:

“There’s many a head stands for a sign;  
Then, gentle reader, why not mine?”

Taylor, as a Thames waterman, stoutly assailed coaches, among the builders of which he died, in Phoenix-alley, in 1653.

It is related of Prior, the poet, that after spending the evening with Oxford, Bolingbroke, Pope, and Swift, he would go and smoke a pipe, and drink a bottle of ale with a common soldier and his wife in Long Acre, before he went to bed. This woman (also said to have been a cobbler’s and an alehouse-keeper’s wife) was the beautiful Chloe of Prior’s poems: “he used to bury himself for whole days and nights together with this poor mean creature” (Pope).

The *Journey through England*, 1722, describes “the Mug-house Club, in Long Acre, where, every Wednesday and Saturday, a mixture of gentlemen, lawyers, and tradesmen, meet in a great room, and are seldom under a hundred. They have a grave old gentleman, in his own grey hairs, now within a few months of ninety years old, who is their president, and sits in an arm’d chair some steps higher than the rest of the company, to keep the whole room in order. A harp plays all the time at the lower end of the room, and every now and then one or other of the company rises and entertains the rest with a song, and (by the by) some are good masters. Here is nothing drunk but ale, and every gentleman hath his separate mug, which he chalks on the table where he sits as it is brought in: and every one retires as he pleases, as from a coffee-house. The room is always so diverted with songs, and drinking from one table to another to one another’s healths, that there is no room for politicks, or anything that can sour conversation. One must be there by seven to get room, and after ten the company are for the most part gone.”

Long Acre was at first inhabited by persons of note, and some of the houses are handsomely built; but coachmakers, and the subordinate trades of coach-trimmers, colourmen, and varnish-makers, have probably lived in Long Acre since the general introduction of coaches, *circ.* 1630. John Locke (in his *Diary*, 1679), recommends “Mr. Cox, of Long Acre, for all sorts of dioptrical glasses.” A few old signs, including the goldbeater’s gilded arm and hammer, remained to our time, upon the house-fronts; but the coachmakers have of late years followed fashion westward. The chapel on the north side of Long Acre was the private property of the Rev. John Warner, D.D., an eloquent preacher (d. 1800). In conjunction with Dr. Lettsom and Mr. Nichols, Dr. Warner originated the erection of the statue of John Howard in St. Paul’s Cathedral. Among the *nostrums* of Long Acre were Dr. Gardner’s Worm-destroying Medicines, &c.: also, Burchell’s Anodyne Necklaces, strongly recommended for teeth-cutting, by Dr. Turner, the inventor; and by Dr. Chamberlain, who is said to have possessed the secret.

The removal of part of a labyrinth of alleys at the west end of King-street, Covent-garden, has been followed by the partial demolition of Rose-street, a dirty thoroughfare into Long Acre, with a curious literary history. Mr. Cunningham thus carefully narrates:

“It was in this street (Dec. 18th, 1679) that Dryden, returning to his house in Long Acre, over against Rose-street, was barbarously assaulted and wounded by three persons, hired for the purpose, as is now known, by Wilmot, Earl of Rochester. Fifty pounds were offered by the King for the discovery of the offenders, and a pardon in addition if a principal or accessory would come forward. But Rochester’s ‘Black Will with a cudgel’ (the name he gives his bully) was bribed to silence, it is thought, by a better reward. Rochester took offence at a passage in Lord Mulgrave’s *Essay on Satire*: an essay in which his lordship received assistance from Dryden. There are many allusions to this Rose-alley Ambuscade, as it is called, in our old State poems. So famous, indeed, was the assault, that Mulgrave’s poem was commonly called the Rose-alley Satire.”

Samuel Butler, author of *Hudibras*, lived the latter part of his life in Rose-street, “in a studious, retired manner,” and died there in 1680: he is said to have been buried at the expense of Mr. Longueville, though he did not die in debt. The house in which he died was not taken down until the street disappeared. In the same street, Edmund Curll was living when he published *Mr. Pope’s Literary Correspondence*. At the corner of Rose-street, in King-street, lived Mr. Setchel, the bookseller, whose daughter painted that very clever and popular picture, “The Momentous Question.” Mr. Setchel and his father had kept shop here for seventy years.

*Endell-street*, on the north side, leads to Holborn (*see* p. 431). *St. Martin’s Hall* was built in 1849, between Charles and Hanover streets (*see* p. 427); and in Castle-street, in 1850, the *St. Martin’s Northern Schools*, Wyld, architect. The style is Byzantine, with two tiers of pointed arches; the top story being a covered playground, 100 feet long, opening to the front by a colonnade,—a novel contrivance for keeping the children from the evil ways of the street.

## LORD MAYOR'S STATE.

THE salary and allowances paid to the Lord Mayor from the City funds during his year of office, with sums from other sources, amount to about 7900*l.* He resides in the Mansion House, which is sumptuously furnished, and provided with plate and jewelled ornaments said to be worth from 20,000*l.* to 30,000*l.*: his household consists of twenty gentlemen, including the Sword-bearer, the Common Hunt, the Common Crier, and the Water-bailiff, all of whom have the title of esquires. He has a splendid retinue of servants, and keeps three tables; he is provided with a gorgeous state-coach, but not with horses; and he finds the dress-carriage and horses for the Lady Mayoress. (See STATE COACHES.) He is expected to give a certain number of state banquets during the year, in addition to bearing half of the expense of the inauguration-dinner at Guildhall on the 9th of November. The Lord Mayor's dinners are provided by contract, but the wines are supplied from the Mansion-House cellars. The mayoralty expenses, unless "cool was his kitchen," generally exceed by 4000*l.* the City allowance. The state liveries usually cost 500*l.*

The Fool was formerly one of the Lord Mayor's household; and he was bound by his office to leap, clothes and all, into a large bowl of custard, at the Lord Mayor's inauguration dinner:—

"He may, perchance, in tail of a Sheriff's dinner,  
Skip with a rime o' the table, from new nothing,  
And take his almain leap into a custard,  
Shall make my Lady Mayoress and her sisters  
Laugh all their hoods over their shoulders."—*Ben Jonson.*

Custard was a "food much used in City feasts." (Johnson's Dictionary.)

"Now may'rs and shrieves all hush'd and satiate lay;  
Yet eat, in dreams, the custard of the day."—*Pope.*

*Costume and Jewels.*—On ordinary state occasions the Lord Mayor wears a massive black silk robe richly embroidered, and his collar and jewel. In the courts and civic meetings he has a violet silk robe, furred, and barred with black velvet; and on the bench at the Mansion House, and in the Central Criminal Court, he wears a scarlet robe, furred, and bordered with black velvet. In conducting the Sovereign through the City, the Lord Mayor wears a rich crimson velvet robe, and a court suit, with point lace; the velvet hood of old has been superseded by a three-cornered dress hat, trimmed with black ostrich-feathers. At state banquets, the Lord Mayor wears an "entertaining robe, richly embroidered with gold:" a new robe, in 1867, cost 160 guineas.

The wear of robes of various colours upon certain days was fixed by a regulation in 1562, and, with the customs and orders for meeting, was printed in a tract by John Day, now very scarce. But the present authority for the customs is a pamphlet printed by direction of the Common Council in 1789.

The Collar is of pure gold, composed of a series of links, each formed of a letter S; a united York and Lancaster, or Henry VII. rose; and a massive knolt. The ends of the chain are joined by the portcullis, from the points of which, suspended by a ring of diamonds, hangs the Jewel. The entire Collar contains 28 SS, 14 roses, and 13 knolts, and measures 64 inches. The Jewel contains in the centre the City arms, cut in cameo, of a delicate blue, on an olive ground. Surrounding this, a garter, of bright blue, edged with white and gold, bearing the City motto, "Domine dirige nos," in gold letters. The whole is encircled with a costly border of gold SS, alternating with rosettes of diamonds, set in silver. The Jewel is suspended from the collar by a portcullis; but when worn without the Collar, is suspended by a broad blue ribbon. The investiture is by a massive gold chain; and when the Mayor is re-elected, by two chains.

*Mace and Swords.*—The Mace is silver-gilt, is 5 feet 3 inches in length, and bears on the lower part W. R.; it is surmounted with a regal crown and the imperial arms, and has the handle and staff richly chased. The "Pearl Sword," presented by Queen Elizabeth upon opening the Royal Exchange, has a crimson velvet sheath thickly set with pearls; and the handle, of gold, is richly chased in devices of Justice and Mercy. There are a Sunday sword for church; a common sword for the Sessions; and a black sword for the 30th of January; and Sept. 2nd, the anniversary of the Great Fire of 1666.

*Seals.*—The Corporate Seal is circular. *Obverse:* St. Paul, bearing a sword, and a flag ensigned with

three lions passant-gardant, standing in a city, over the gate of which is a key; legend, SIGILLVM : BARONVM : LONDONIARVM. Reverse: the City Arms, with mantlings, &c.; legend, LONDONI : DEFENDE : TVOS : DVVS OPTIME : CIVIS. The second Seal, made by Richard II., bears the effigies of SS. Peter and Paul, canopied. Beneath are the present arms of the City: a cross with a dagger in the dexter quarter, supported by two lions. It appears to have been surmounted with a low-pointed arch. The centre compartment is flanked with two canopied niches; in each a demi-figure, a serjeant-at-arms, bearing a mace, and wearing a triangular cap. The pedestals of the canopies sustain kneeling figures paying adoration to the Virgin Mary, whose effigy (much effaced) appears in the centre niche at the top of the seal. Legend, SIGILLVM OFFICII : MAJORATVS : CIVITATIS : LONDINI : very indistinct from wear.

The Mayor has been chief butler to the Sovereign at coronation feasts since the reign of Richard III., receiving for his fee a gold cup and cover.\*

The most memorable name in the civic annals is that of Sir Richard Whittington, four times Mayor, 1397, 1398, 1406, 1419.

Whittington was the son of Sir William Whittington, Knight, and his early destitution rests but upon the nursery tale. His prosperity is referred to the coal-carrying *Cat* of Newcastle; but a scarce print, by Elstrake, of Whittington in his mayoralty robes, has a cat beside the figure, showing the version of the nursery tale to have been then popular: in the early impressions of this plate a skull appears in place of the cat, which has rendered the original print a rarity of great price among collectors. Whittington's wealth rebuilt Newgate, and St. Michael's Church, Paternoster Royal; built part of St. Bartholomew's Hospital, and the library of Christ's Hospital, and added to the Guildhall. He also bequeathed his house at "College-hill" for a college and almshouse, which have been taken down, and the institution removed to a handsome collegiate building near Highgate Archway, not far from the stone marking the spot whereon tradition states Whittington to have rested when a poor boy and listened to the bells of Bow; the original stone (removed in 1821) is said to have been set up by desire of Whittington, to assist horsemen to mount at the foot of the hill. Whittington was buried in St. Michael's Church, beneath a costly marble tomb; but his remains were twice disturbed before the church was destroyed by fire, and now there is no odlen memorial of Whittington to be traced; his statue has been placed in the Royal Exchange. Whittington was of the Mercers' Company, "flos mercatorum;" his will at Mercers' Hall bears a curious illumination of Whittington on his death-bed, his three executors, a priest, &c. Whittington is also said to have lived in Sweodon's-passage, Grub-street; and in a court in Hart-street, Mark-lane, was formerly a building termed in old leases "Whittington's Palace."

Sir Geoffrey Bullen, Lord Mayor in 1453, was grandfather to Thomas Earl of Wiltshire, father to Anne Bullen, and grandfather to Queen Elizabeth; the highest genealogical honour the City can boast of.

"The ennobled families of Cornwallis, Capel, Coventry, Legge, Cowper, Thynne, Ward, Craven, Marsham, Pulteney, Hill, Holles, Osborne, Cavendish, Bennet, and others, have sprung either directly or collaterally from those who have been either Mayors, Sheriffs, or Aldermen of London; and a very large portion of the peerage of the United Kingdom is related either by descent or intermarriage, to the citizens of the metropolis."—*Thomas Moule*.

In 1858 the services of the Watermen in the Lord Mayor's State Barge being no longer required, the sum of 5*l.* each, equivalent to one's year's emolument, was paid, on the badge, cap, and clothing being delivered up.

In 1865 an old custom was revived at the Mansion House, which had fallen into disuse since 1857,—that of an officer of the Corporation, wearing an official robe and carrying a staff of office, escorting the Lord Mayor daily from the Mansion House to the Court, and announcing him on his taking his seat on the bench. The staff used in the ceremony is a very ancient symbol of dignity, and is scarcely less part of the insignia of the Corporation than the sword and mace. It is about seven feet high, and is surmounted with a massive representation of the City arms in silver-gilt, and the official robe of the usher is in keeping.

The table plate is very valuable. Formerly it was always customary for a Lord Mayor to contribute 100*l.* towards keeping up the Corporation plate, but this has not been observed for about the last 30 years.

The total expenses of the Banquet and Procession on Lord Mayor's-day, 1865, amounted to 3102*l.* 11*s.* 4*d.* Of this, one-half was paid by the Lord Mayor (Mr. Alderman Phillips) and the other half by the two Sheriffs (Mr. Alderman Gibbons and Mr. J. Figgins). The contract for the dinner and wine amounted to 1639*l.* 14*s.* 10*d.* The decorations cost 736*l.* 8*s.* 4*d.*, including 30*l.* 12*s.* for loan of decorations, flags, armour, &c., from War and Store Office; 41*l.* for repairing and arranging flags; 40*l.* for hire of looking-glasses; 60*l.* for hire of flowering plants and shrubs; 25*l.* for hire of awning; 105*l.* for gas-fitting; 100*l.* for gas; 213*l.* for upholstery; and 33*l.* for plumbing and painting. The procession cost 276*l.* 8*s.* 10*d.*, and included 101*l.* 7*s.* for five bands of music; 32*l.* 11*s.* for banners and banner-bearers; 30*l.* 17*s.* for rosettes and scarfs; 64*l.* 3*s.* 10*d.* for refreshment of troops and police; 7*l.* 10*s.* for gravelling the streets; and 40*l.* for decorating Ludgate-hill and Fleet-street. The music in Guildhall cost 50*l.* 19*s.*; the printing and stationery, 143*l.* 13*s.* 9*d.* The general expenses are put down at 255*l.* 6*s.* 7*d.*,

\* There is current a piece of City gossip, of a Silver Cradle being customarily presented at the accouchement of a Lady Mayoress; but in 1735 and 1843, such an event was merely signaled by a congratulatory vote of the Court of Common Council.

and include some of the most curious items, such as men on the roof, 4*l.* 4*s.*; men bringing up provisions for distribution to the poor, 1*l.* 1*s.*; bell-ringers at ten churches, 20*l.*; Hatley, drummer, Royal London Militia, donation in consideration of an accident to him in the procession, 5*l.*; wands and decorations for Committee, 70*l.* 7*s.* 6*d.*; gold pens and pencil-cases, for Chairman and Secretary, 9*l.* 15*s.*; seal for the Chairman, 6*l.* 14*s.*; gloves, 10*l.* 18*s.*; toilet articles for ladies' rooms, 29*l.* 11*s.*; padlocks, 5*l.*, &c. &c. Total, 310*l.* 11*s.* 4*d.*

The bill of the feast of the Mayor of Norwich, in the time of Queen Elizabeth, when he entertained the Queen and her court, was—Total charge, 1*l.* 12*s.* 9*d.* Three of the items were—Eight stone of beef at 8*d.* per stone, and a sirloin, 5*s.* 8*d.*; a hind-quarter of veal, 10*d.*; bushel of flour, 6*d.*; two gallons of white wine and canary, 2*s.*

### LUDGATE, LUDGATE HILL AND STREET.

LUDGATE, one of the principal gates of the City, was situated at the western extremity of Bowyer's-row, now Ludgate-hill, between the London Coffee-house and St. Martin's Church. Geoffrey of Monmouth states the gate to have been built by the British King Lud, 66 B.C.: hence its traditional name; but more probably from the Flood, or Flud, which ran into Fleet-river. We find no further mention of it until 1215, when it was fortified or rebuilt by the barons leagued against King John, and who employed as materials the remains of the stone houses of opulent Jews, which had been destroyed, as proved by a stone discovered in 1586, inscribed in Hebrew, "This is the ward of Rabbi Moses, the son of the honourable Rabbi Isaac." In 1260 the gate was again repaired, and ornamented on the east side with statues of Lud and his two sons; and subsequently the statue of Queen Elizabeth was placed in the west front. Ludgate was much injured in the Great Fire of 1666, and is shown in Greffier's picture, engraved by Birch. The gate is described by Chamberlayne (1726) as a prison "only for debtors who are freemen of London." In the *Spectator*, No. 82, is "a voice bawling for charity at the grate;" just as in our time the prisoners of the Fleet loudly called upon those who passed the grate, "Pray remember the poor debtors," as the board above stated, "having no allowance." Pennant describes Ludgate, within his memory, "a wretched prison for debtors." It was taken down, 1760–62, when the statue of Elizabeth was placed at the east end of St. Dunstan's Church, Fleet-street, and the other statues were disposed of as described at p. 235. By a plan preserved in St. Martin's vestry-room, the great arch and postern of Ludgate was 37 ft. 6 in. wide in front, and 39 ft. deep. Ludgate was made a free prison in 1378 (1st Richard II.); but its privileges were soon violated, and it became a place of great oppression. Rowley's comedy of *A Woman never vex't, or the Widow of Cornhill*, is founded upon the tradition of the handsome Stephen Foster, Lord Mayor in 1454, *begging at the grate* of Ludgate, and attracting the sympathy of a rich widow, who paid the debt for which he was confined, and afterwards married him:—

"Mrs. S. Foster. But why remove the prisoners from Ludgate?  
Stephen Foster. To take the prison down and build it new,  
With leads to walk on, chambers large and fair;  
For when myself lay there, the noxious air  
Choked up my spirits. None but captives, wife,  
Can know what captives feel."—Act v. sc. 1.

Between 1454 and 1463 the prison was much enlarged, and a chapel built by Dame Agnes Foster and the executors of Stephen her husband, as thus recorded on a copper-plate upon the walls:

"Deout soules that passe this way,  
for Stephen Foster, late Maior, heartily pray,  
And Dame Agnes, his spouse, to God consecrate,  
that of pitie this house made of Londoners in Ludgate,  
So that for lodging and water prisoners here nought pay,  
as their keepers shall all answere at dreadful doomes day."

At the rebuilding of Ludgate in 1566, "the verse being unhappily turned inward to the wall," Stow tells us he had the like "graven outward in prose, declaring him (Foster) to be a fishmonger, because some upon a light occasion (as a maiden's head in a glass window) had fabled him to be a mercer, and to have begged there at Ludgate," &c.

A quarto tract, *Prison Thoughts*, by Thomas Browning, a prisoner in Ludgate, "where poore citizens are confined and starved amidst copies of their freedom," was published in that prison by the author in 1682, and is supposed to have suggested Dr. Dodd's *Prison Thoughts*.

Ludgate-hill formerly extended from Fleet-street to St. Martin's Church (*see* p. 180); and Ludgate-street from thence to St. Paul's. On the hill, opposite the gate, stopped the rebellion of Sir Thomas Wyatt; and below is the *Bell Savage Inn*, described at p. 452. Near this spot lived the famous cobbler whom Steele mentions as a curious instance of pride; he had a wooden figure of a beau of the time, who stood before him in a bending posture, humbly presenting him with his awl, or bristle, or whatever else his employer chose to put in his hand, after the manner of an obsequious servant. Ludgate-street and hill were famous for mercers in Stow's time. At the north-east corner (St. Paul's Churchyard), No. 65, lived John Newbery, for whom Goldsmith wrote *Goody Two-shoes*, a pamphlet on the Cock-lane Ghost, a *History of England*, and edited the *Public Ledger* newspaper. To Newbery succeeded John Harris, and next Grant and Griffith, now Griffith and Farran, worthy successors of Newbery. At "the Dunciad," in Ludgate-street, Dr. Griffiths published the *Monthly Review*, No. 1, May 1749.

On the north is Ave-Maria-lane, leading to Amen-corner and Paternoster-row; and Stationers' Hall-court, leading to the hall of the Stationers' Company (*see* pp. 420-422.) On the south is Creed-lane, with another ecclesiastical name.

In 1792 was discovered a barbican, or watch-tower, between Ludgate and the Fleet-ditch, forming part of the extension of the City wall in 1276; a fine fragment of which exists in St. Martin's-court opposite the Old Bailey. In a bastion of the wall, in 1800, was found a sepulchral monument, in the rear of No. 24, the London Coffee-house, where it is now preserved: it is dedicated to Claudina Martina, by her husband Anencletus, a provincial Roman soldier. Here are also a fragment of a statue of Hercules, and a female head.

At No. 32, north side, was the picturesque old shop-front of Rundell and Bridge, goldsmiths and diamond-jewellers to the Crown, with the sign of the Golden Salmon. Here was executed Flaxman's Shield of Achilles, in silver-gilt: and here was fitted up the imperial Crown for the coronation of George IV. in 1821; and a silver wine-cooler which occupied two years in chasing. Mrs. Rundell wrote *The Art of Cookery (Domestic Cookery)*, for which she ultimately received 2000 guineas. At No. 45, William Hone published his political satires, with woodcuts by Cruikshank; and his *Every-day Book, Ancient Mysteries, &c.* In the house No. 7, opposite Hone's, was published another successful venture, the *Percy Anecdotes*, contemporary with the *Every-day Book*.

The lower portion of Ludgate-hill is crossed by the London, Chatham, and Dover Railway viaduct, which has been much objected to; yet the inhabitants gave evidence in its favour; and the design is identical with that exhibited by the Company, in 1860, before Parliament. The objections are too numerous to detail here: one is, interference with one of the finest architectural views in the metropolis. Coleridge, many years since, remarked: "A Mr. H——, a friend of Fox's, who always put himself forward to interpret the great orator's sentiments, and almost took the words out of his mouth, put him in mind of the steeple of St. Martin, on Ludgate-hill, which is constantly getting in the way when you wish to see the dome of St. Paul's." However, Coleridge's remark is here *mal-apropos*; for St. Martin's Church spire improves the view of St. Paul's. It is true that the level of the bridge is low, but it has unquestionably spoiled the view, and its small elevation above the street (18 feet) traffic is an objection of another class. The street of Ludgate-hill is here only 42 feet wide; but, as the Corporation intend, at some future time, to enlarge the thoroughfare, the span is 18 feet wider than the street, or 60 feet. The bridge is composed of five girders of wrought iron, screened from sight by ornamental iron-work, and relieved with decorative brackets, bronze armorial medallions, and handsome gas-lanterns and standards. It carries four lines of rails. Through Ludgate-hill there have passed, in twelve hours, 8752 vehicles, 13,025 horses, and 105,352 persons. The entire line from Bridge-street to St. Paul's is now Ludgate-hill.

## MAGDALEN HOSPITAL,

ST. GEORGE'S FIELDS, for the relief and reformation of unfortunate women and pentitent prostitutes, was projected by Robert Dingley, Jonas Hanway, and a few others,

in 1758;\* and opened at a house in Prescot-street, Goodman's-fields, when eight unhappy objects were admitted; and from thence to Feb. 26, 1761, there were received into "Magdalen-house" 281: of a hundred inmates, not a seventh were 15 years old.

Among the names of the earliest benefactors occurs that of Omychund, the black merchant of Calcutta. He bequeathed between this and the Foundling Hospital 37,500 current rupees, to be equally divided. Unfortunately, however, "a portion only of this munificent legacy could be extracted from the grasp of Hurzorial, his executor, notwithstanding the zealous interference of the Governor-general (Warren Hastings) and other eminent functionaries."—*Brownlow*.

Another early promoter was the Rev. William Dodd, "the unfortunate," who, in 1759, preached a sermon for the benefit of the charity; and again in 1760, before Prince Edward, Duke of York: both sermons are eloquent compositions, were printed, and large editions sold.† The Magdalens wore a grey uniform dress, high in the neck, long black mittens, mob-cap, and a broad black chip hat. In the list of contributors we find "A Lady unknown, a Lottery Ticket, No. 34987, in the Lottery 1758, a Prize of 500*l*." Lord Chesterfield, 21*l*. per annum; "Will's Coffee-house, Lincoln's Inn, 16*l*. 16*s*." the "Charity Boxes," in one year, received 458*l*. 10*s*.; and the women's needlework produced 282*l*. 11*s*. 3*d*.: there being about 100 in the house.

Among their employments was making their own clothes, spinning the thread and making the cloth; to knit their stockings: to make bone-lace, black lace, artificial flowers, children's toys, winding silk, embroidery, millinery, making women's and children's shoes, mantuas, stays, coats, caul's for wigs, weaving hair for perukes, making leathern and silken gloves and garters, drawing patterns, making soldiers' clothes and seamen's slops, making carpets after the Turkey manner, &c.

In 1769, the charity was incorporated and the institution declared extra-parochial: the present Hospital was commenced, 6½ acres of St. George's common fields having been purchased by the governors. Attached to the Hospital is a chapel, rendered attractive by the singing of the Magdalens, screened from the congregation; and the donations at the chapel doors are very productive to the Hospital funds: formerly, the admission on Sunday evenings was by ticket. Queen Charlotte patronized this charity 56 years. Queen Victoria became patroness in 1841.

Fit objects for the Magdalen charity are admitted without any recommendation, on their own application and petition, on the first Thursday in every month. More than 8000 have been received since the Hospital was established; more than two-thirds have been permanently reclaimed, and many have married and become respectable members of society: all who have behaved well are discharged with some provision for their future maintenance.

### MANSION HOUSE, THE,

OF the Lord Mayor, and his residence during his year of office, occupies the site of Stocks'-market, nearly facing the area of the Royal Exchange. The foundation of the Mansion-house was laid in 1739 by Lord Mayor Perry; but the building was not finished until 1753, in the mayoralty of Sir Crisp Gascoigne, the first Lord Mayor who resided in it. The architect was the elder Mr. Dance; the style is that of Palladio; and the building, which is entirely insulated, is of Portland-stone, and resembles a massive Italian palace. The principal front has a very fine Corinthian portico, with six fluted columns, supporting a pediment, in the tympanum of which is a group of allegorical sculpture by Sir Robert Taylor. In the centre is a female impersonation of the City of London, trampling on her enemies; on her right is the Roman licitor, and a boy bearing the cap of liberty; and beyond them is Neptune and nautical insignia. To the left of the centre is another female attended by two boys, and bearing an olive-branch and cornucopia; the extreme angles being filled with casks, bales, and other emblems of commerce. On each side a flight of steps, balustraded, ascends to the entrance beneath the portico; and in the rusticated basement is the entrance to the offices. On the west side is a Roman-Doric porch. A long narrow attic, called the Mare's (Mayor's) Nest, has been removed from the roof.

The interior of the block of buildings was an open court of elaborate character,

\* A plan of the kind was suggested in the *Gentleman's Magazine* for April 1751; and the *Rambler*, No. 107.

† Account of the Magdalen Charity; with the above Sermons, Advice to the Magdalens, Prayers, Rules, &c. Printed in 1761.

similar to that part of an Italian palace; but the central area is now filled with the saloon, which is of wood. This grand banquet-room was designed by the Earl of Burlington, and is called the Egyptian Hall, from its accordance with the Egyptian Hall described by Vitruvius. It has two side screens of lofty columns, supporting a vaulted roof, and lit by a large western window; it can dine 400 guests, and here the Lord Mayor gives his State-banquets. In the side walls are sixteen niches, filled with sculptured groups or figures. (*See STATUES.*)

There are other dining-rooms; as the Venetian Parlour, Wilkes's Parlour, &c. The drawing-rooms and ball-room are superbly decorated; above the latter is the Justice-room (constructed in 1849), where the Lord Mayor sits daily. In a contiguous apartment was the State Bed. There are a few gallery portraits and other pictures. The kitchen is a large hall, provided with ranges, each of them large enough to roast an entire ox. The vessels for boiling meat and vegetables are not pots but tanks. The stewing range is a long broad iron pavement laid down over a series of furnaces; the spits are huge cages formed of iron bars, and turned by machinery.

At one time the Household of the Lord Mayor was about twenty-four in number, who held their offices by purchase, and with a power of alienation. At the head of them were the four esquires of the Lord Mayor, of whom the Swordbearer was the senior; and among the rank and file were the Lord Mayor's Clerk, the Common Crier, the Common Hunt, three Serjeant Carvers, three Serjeants of the Chamber, the Serjeant of the Channel, the two Marshals, the Attorneys of the Mayor's Court (four in number), the Water Bailiff, and several more. When on duty they had all the right to dine at the Swordbearer's table, and as the services of many of them were in daily requisition, a dinner was provided daily throughout the year at the cost of the Chief Magistrate for the time being. About the year 1822 the household dinners were limited, by a resolution of the Court of Common Council, to thirteen in the year, on so many civic state occasions; and in still more modern times the number has been gradually curtailed, until the entertainment given annually on Plough Monday is the only one that survives. On the abolition of the daily table many of the household compounded for the lost privilege by the receipt of 100*l.* a year each, for the rest of their lives, upon the basis of 7*s.* 6*d.* a day; and the official income of the Lord Mayor was diminished by 1000*l.* a year in consideration of his being relieved from the obligation of providing it. All the members of the household now hold their offices by election, and no longer by purchase.

### MANSIONS.

**A**PSLEY HOUSE (Duke of Wellington), Hyde-park-corner, Piccadilly, and happily called by a foreigner "No. 1, London," was built about 1785-6, by the Adams, for Charles Bathurst Baron Apsley, Earl Bathurst and Lord Chancellor, who died in 1794. Here resided the Marquis Wellesley, elder brother of the great Duke of Wellington, who purchased the house in 1820. It was then a plain brick mansion, but was cased with Bath-stone in 1828, by B. Wyatt, who designed the tetrastyle Corinthian portico and pediment upon a rusticated entrance arcade; built a gallery and suite of rooms on the west or Hyde-park side, and enlarged the garden by a strip of ground from the Park. These additions and repairs are stated to have cost 130,000*l.*

The bullet-proof iron Venetian blinds (the first of the kind) were put up by the late Duke of Wellington, after his windows had been broken by the Reform Bill mobs; and these blinds were not removed during the Duke's life-time. "They shall stay where they are," was his remark, "as a monument of the gullibility of a mob, and the worthlessness of that sort of popularity for which they who give it can assign no good reason. I don't blame the men that broke my windows; they only did what they were instigated to do by others who ought to have known better. But if any one be disposed to grow giddy with popular applause, I think that a glance towards these iron shutters will soon sober him." The blinds have long been removed.

The court-yard is enclosed by richly bronzed metal gates (in which the Grecian honey-suckle is finely cast); and the stone piers have curious chapters. The hall-door and knocker belong to the original house. In the waiting-room is Steell's bust of "the Duke;" Castlereagh, by Chantrey; Pitt, by Nollekens; and a reduced copy of Rauch's statue of Blucher; busts of Mr. Perceval, Colonel Gurwood, Mr. Ponsonby, &c. At the foot of the grand staircase is Canova's colossal marble statue of Napoleon, holding a bronze figure of Victory in his right hand: it is Canova's noblest and most antique-looking work; it is 11 feet high, and, except the left arm, was cut from one block of marble.

The pictures in the first Drawing-room include the Card-players, by Caravaggio, fine in expression, and marvellous in colour, light, and shade; the great Duke of Marlborough on horseback (from White Knights), probably by Vandermeulen; "Chelsea Pensioner reading the Gazette of the Battle of Waterloo," a commission to Wilkie from the

Duke, for which he paid 1200 guineas in bank notes; and the companion-picture, "Greenwich Pensioners," by Burnet, and bought from him by the Duke for 500 guineas; Van Amburg in the Den with Lions and Tigers, painted by Sir E. Landseer, R.A., after the instructions of the Duke, who with the Bible in his hand, pointed out the passage (Gen. i. 26) in which dominion is given to Adam over the earth and animals: "he caused the text to be inscribed on the frame as an authority which conferred on him a privilege of power, and gave to himself 'the great commission' which he carried out on the fields of battle and chase." (*Quarterly Review*, No. clxxxiv.) Next are large copies by Bonnemaïson, after the four celebrated pictures by Raphael at Madrid; the Melton Hunt, by Grant, R.A.; Napoleon studying the map of Europe, a small full-length; Mr. Pitt, by Hoppner; the Highland Whisky-still, by Landseer, R.A.; and portraits of Marshal Soult, Lord Beresford, Lord Lynedoch, and Lord Anglesey, by Sir Thomas Lawrence; Lord Nelson, by Sir William Beechey; Sir George Murray, Sir Thomas Picton; and Sarah, the first Lady Lyndhurst, by Wilkie: the canvas was pierced by a stone during a Reform Bill riot, but it has been cleverly repaired. Here are portraits of the Emperor Nicholas, of the Wellesley family, and, by Winterhalter, of the Duke's godson, Prince Arthur. Here also are George IV. and William IV. (whole-lengths), by Sir D. Wilkie. There are at least six portraits of Napoleon; and full-lengths of the Emperor Alexander; and Kings of Prussia, France, and the Netherlands. Still, there is no faithful or worthy representation of the Duke in the collection; nor of statesmen of his-generation—not even Peel. There is but one battle-scene—Waterloo, taken from Napoleon's head-quarters by Sir W. Allan; of this picture the Duke observed, "Good, very good—not too much smoke."

Among the furniture are two magnificent Roman mosaic tables; a splendid pair of Sèvres vases, the gift of Louis XVIII.; a malachite vase, from Alexander Emperor of Russia; a service of Sèvres china, from Louis XVIII., &c.

In the Picture-gallery, in the western wing, the Waterloo Banquet was held annually on June 18, until 1852. Over the fireplace hangs a copy of the "Windsor" Charles I. on horseback. Here is the gem of the collection, "Christ on the Mount of Olives," by Correggio, on panel, the most celebrated specimen of the master in this country: the light proceeds from the Saviour. This picture was captured in Spain, in the carriage of Joseph Bonaparte, and restored by the captor to Ferdinand VII., but was presented to the Duke by that Sovereign. Next in excellence are the examples of Velasquez, chiefly portraits, and "the Water-seller;" a Female holding a wreath, by Titian; specimens of Claude, Teniers, and Jan Steen; the Signing of the Peace of Westphalia, by Terburg, from the Talleyrand collection. Here is also a repetition of the Madonna della Sedia of Raphael, by Giulio Romano; and a marble bust of Pauline Bonaparte, by Canova. In the centre are two majestic candelabra of Russian porphyry, 12 feet high, presented by Alexander Emperor of Russia; and two fine vases of Swedish porphyry, from the King of Sweden. The Gallery and the Waterloo Banquet are well seen in Salter's large picture, engraved by Greatbatch; and the Duke receiving his Guests has been painted by J. P. Knight, R.A.

In the China-room, on the ground-floor, are a magnificent Dresden dessert-service, presented by the King of Saxony, painted with the Duke's victories in India, the Peninsula, and at Waterloo; other services of china presented by the Emperor of Austria, the King of Prussia, and Louis XVIII.: the silver plate, 30 feet long and 30 feet wide, and lighted by 106 wax tapers, the gift of the King of Portugal; three silver-gilt candelabra (a foot-soldier, life-size), presented by the Corporation of London: the superb Waterloo Vase, from the City merchants and bankers; and the *Wellington Shield*, designed by T. Stothard, R.A., and in general treatment resembling Flaxman's Shield of Achilles. It is silver-gilt, circular, about 3 ft. 8 in. diameter. In the centre is the Duke of Wellington on horseback, the head of his charger forming the boss of the shield: around him are his illustrious officers; above is Fame crowning the Duke with a wreath of laurel: and at his feet are prostrate figures of Anarchy, Discord, and Tyranny. The wonder of this central group is the management of the horses within the circle (of oak-branches), the evolutions of the chargers emanating from the centre,—in itself a most original conception. The border of the shield is in ten compartments, each bearing a bas-relief of the principal events in the Duke's military life, to the Peace of 1814, and are as follows: Assaye, Vimiera, the Douro, Torres Vedras, Badajoz, Salamanca, Vittoria, the Pyrenees, Toulouze, and the Duke receiving his coronet from the Prince Regent. Stothard's designs are large drawings in sepia: he made his own models for the chaser, etched the designs the same size as the originals, and received his own demands, 160 guineas. The columns, by Smirke, stand one on each side of the shield, about 4 ft. 3 in. high, surmounted with figures of Fame and Victory: each column consists of a palm-tree, with a capital of leaves; around the base are emblematic figures, and military trophies and weapons at the angles. The cost of this superb national gift, completed in 1822, was 7000*l.*

In the China-room, also, are bronze busts, of great spirit and finish, of Henri Quatre, the Prince of Condé, Louis XIV., Marshal Turenne, and the Marquis Wellesley. Beyond is the Secretary's-room, the Great Duke's private room, and lastly his bed-room, which, early in 1853, the public were permitted to inspect, precisely arranged as they were last used by his Grace, in September, 1852: the library he consulted, the books he kept beside him for reference, the mass of papers, maps, and documents, even to the latest magazine, were undisturbed. The Duke's room was lined with bookcases and despatch-boxes, and had a red morocco reading-chair, a second chair, a desk to stand and write at; a circular-topped writing-table; two engravings of the Duke, one when young, the other (by Count D'Orsay) when old; a small drawing of the Countess of Jersey, by Cosway, between medallions of the present Duchess of Wellington and Jenny Lind. In the Secretary's-room was a rough unpainted box, which accompanied the Duke through all his wars; in which he stowed away his private documents, and whereon he wrote many of his despatches, and traced the orders for military manœuvres.

A short passage to the east leads to "the Duke's bed-room," which is narrow, shapeless, and ill-lighted; the bedstead small, provided with only a mattress and bolster, and scantily curtained with green silk; the only ornaments of the room being an unfinished sketch of the present Duchess of Wellington, two cheap prints of military men, and a small portrait in oil. Yet here slept the Great Duke, whose "eightieth year was by." In the grounds and shrubbery he took daily walking exercise; where, with the garden-engine, he was wont to enjoy exertion.\* Lastly, "in fine afternoons, the sun casts the shadow of the Duke's equestrian statue full upon Apsley House, and the sombre image may be seen gliding spirit-like over the front." (*Quarterly Review*, No. clxxxiv.) The house and pictures can only be seen by special permission. A *Catalogue raisonnée* is published by Mitchell, Old Bond-street.

Part of the site of Apsley House was a piece of ground given by George II. to an old soldier, Allen, whom the king recognised as having served in the battle of Dettingen. Upon this spot Allen built a small tenement, in place of the apple-stall kept by his wife; and on the erection of Apsley House, in 1784, the ground was sold for a considerable sum by Allen's successors to Apsley, Lord Bathurst. The apple-stall is shown in a print dated 1768.

ARGYLL HOUSE, Argyll-street, centre of the east side, was a plain mansion, with a front court-yard, and was formerly the residence of the Duke of Argyll, by whom it was sold, about 1820, to the Earl of Aberdeen: here "the Aberdeen Ministry" was formed in 1852.

Soon after the succession of the present Earl to the title, in 1864, his lordship had part of the premises fitted up as an industrial school for about sixty boys; there were a class-room, in which the boys were instructed; a dining or mess room; work rooms, in which useful trades, such as shoemaking, tailoring, &c., were taught; and a lecture-room, in which lectures were given to the poor of the neighbourhood. The coach-house, in Marlborough-mews, was changed into baths and lavatories, and accommodation for some of the boys to sleep on the premises. The whole were carried out on a similar principle to the schools of Dr. Guthrie in Edinburgh. The boys were also clothed and fed by the noble earl; the most destitute in the neighbourhood were admitted.

The mansion was sold July 5, 1862, for 18,500*l.*, and was taken down: it comprised a paved hall, 30 feet by 21 feet; a great drawing-room, 27 feet by 21 feet; a banqueting-room, 43 feet by 31 feet; a library, 24 feet by 19 feet, &c., all fitted with statuary, &c. The rooms were stately, but sombre. On August 24th was sold here the late Earl's valuable parliamentary and miscellaneous library, together with English and foreign works in connexion with architecture and the fine arts; a collection of manuscripts in Arabic, Persian, Turkish, Greek, and Latin, on vellum, and illuminated in gold and colours. The site is now occupied by a new Bazaar. *See Hengley*

BARING, Mr. T., No. 41, Upper Grosvenor-street, has a fine collection of pictures; Dutch and Flemish, from the cabinet of the Baron Verstolk, at the Hague; Italian, formerly Sir Thomas Baring's; English pictures, mostly from the exhibitions of the Royal Academy. Among the Spanish pictures are four specimens by Murillo, including the Madonna on the Crescent. Here, also, is St. Jerome in his Study, an authentic picture by J. Van Eyck; with works of N. and G. Poussin, Parmegiano,

\* Jan. 2, 1820. General Bonaparte was "amusing himself with the pipe of the fire-engine, spouting water on the trees and flowers in his favourite garden."—*Journal of Capt. Nicholls: Captivity of Napoleon at St. Helena; Sir Hudson Lowe's Letters and Journals*, 1853.

L. Caracci, C. Dolci, Salvator Rosa, Morales, &c. The collection can be seen only through introduction of Mr. Baring's friends.

**BATH HOUSE** (Lord Ashburton), No. 82, Piccadilly, built by the first Lord Ashburton upon the site of the old mansion of Sir William Pulteney, Bart. The entrance is from Bolton-street: the hall occupies the centre of the mansion to the roof, of embossed glass; and the principal apartments open into its gallery, which has a richly-gilt balustrade. This hall has a parqueted oak floor, and the walls are painted with Pompeian subjects: here are antique busts and modern statues; including Thorwaldsen's Hebe, and Mercury as the Slayer of Argus. The principal apartments command a view over the Green Park and St. James's Park, with Buckingham Palace; Piccadilly being masked by the terrace-wall: the floors are oak, and doors mahogany.

The Ashburton collection is pre-eminent for its Dutch and Flemish pictures, from the cabinet of Talleyrand. Here are: Portraits of Jansen, and the writing-master Lieven van Coppenhol, by Rembrandt; Moses before the Burning Bush, Domenichino; Alehouse, and Playing at Nine Pins, Jan Steen; La Ferme au Colombier, Wouvermans; Rape of the Sabines, and Reconciliation of Romans and Sabines, small, but cost 1000*l.*; St. Thomas of Villaneuva dividing his Cloak with Beggar-boys, and the Virgin attended by Angels, Murillo; Water-mill, Karl du Jardin; fine specimens of Cuypp, Wouvermans, Teniers, Ostade, and Paul Potter; Hay-harvest, A. Vanderveelde; Lobster-catchers, and Le Fagot, N. Berghem; the Infant Christ asleep in the arms of the Virgin, an Angel lifting the Quilt, Leonardo da Vinci (belonged to the Prior of the Escorial): St. Peter, St. Margaret, St. Mary Magdalene, and Andrew of Padua, Correggio; Daughter of Herodias with the head of St. John, Titian; Christ on the Mount of Olives, P. Veronese; Stag-hunt, Velasquez; Wolf-hunt, Rubens; Virgin and Child, and Charles I. and Henrietta-Maria (full-lengths), Vandyke; Hermit Praying, G. Douw; Boy blowing Bubbles, Netscher; Street in Utrecht (sunshine), De Hooghe; Head of Ariadne, Sir Joshua Reynolds; Head, Holbein; works of Wynants, Ruysdael, Hobbema, &c.

In the dining-room of Bath House were wont to meet Thomas Moore, J. W. Croker, Sydney Smith, and J. G. Lockhart; Dr. Coplestone, Bishop of Llandaff; Rogers, Hallam, Chantrey, Wilkie, and Theodore Hook.

**BEDFORD, DUKE OF**, No. 6, Belgrave-square: the mansion contains a small but very choice collection of Dutch pictures, &c.

Here are: Herodias with the Head of John the Baptist, by Giorgione; study of Two Dogs, by Titian; Twelfth Night, by Jan Steen; Interior, by Bassen and Polemberg; the Nativity, by A. Werf; Travellers by I. Ostade; Landscape, by Ruysdael; Moses treading on Pharaoh's Crown, by N. Poussin; Gulliver amongst the Houyhnhnms, by Gilpin; Four Cuypps, small but excellent; Dutch Courtship, by A. Brouwer; Little Girl, by Rembrandt; the Pont Neuf at Paris, by P. Wouvermans; Pair of Landscapes, by Salvator Rosa; the Death of Hippolytus, study by Rubens; River View, by Van der Capella; Sabine Mountain City, by G. Poussin; the Tribute Money, by Sir G. Hayer; Village Fête, by Teniers (portraits); Going out Hawking, and Landscape and Cattle, by Paul Potter; Landscape, by A. and S. Both; Heads in *grisaille*, by Vandyke; Dead Christ, by Guercino; Sunset, Claude.

**BERNAL, RALPH, Esq.**, No. 93, Eaton-square. Here Mr. Bernal assembled his rare collection of Works of Art, including ancient Jewellery, Armour and Arms, Seals and Rings, Medals, Bronzes, Carvings, Clocks and Watches, Enamels, Pottery and Porcelain, Glass, Pictures, Plate and Furniture, the sale of which by auction at the house occupied 32 days, and realized 61,964*l.* 11*s.* 3*d.* The books and prints, seven days, 6587*l.* 2*s.* 6*d.* Thirty-nine days, 68,551*l.* 13*s.* 9*d.*

**BRIDGEWATER HOUSE** (Earl of Ellesmere), on the east side of the Green Park, adjoins Spencer House, and has its south or entrance front in Cleveland-row, named from that "beautiful fury," Barbara Duchess of Cleveland, to whom Charles II. presented Berkshire House, which formerly stood here. The new mansion, designed by Sir Charles Barry, R.A., is almost a square: south front 142 feet 6 inches; west 122 feet. The elevations and details are mostly from palaces of Rome and Venice; the chimney-shafts form architectural features; the main cornice is richly carved with flowers, and the second-floor string-course, a folded ribbon, is very picturesque. The fenestration is very characteristic: the principal windows have arched pediments, each filled with arabesque foliage, and a shield with the monogram of E E entwined, *dos-à-dos*; in the panel beneath is the Bridgewater motto "Sic donec;" the first-floor window-dressings have elegant festoons of fruit and foliage; and the balustrade is surmounted with sculpture. The entrance-porch on the south is inscribed, "Restauratum 1849;" and the keystone of the arched doorway bears a lion rampant, the crest of the Earl of Ellesmere. The picture-gallery, on the north side, is the height of the two floors, 110 feet long, and has a separate entrance for the public: it is lighted by glazed panels in the coved ceiling, at night, from burners outside.

This renowned Collection was formed principally from the gallery of the Duke of Orleans, by the Duke of Bridgewater; whence it is called the Bridgewater Gallery; and being left by the duke to his nephew, the Marquis of Stafford, it is likewise frequently called the Stafford Gallery. It was much enlarged by the next possessor, the Marquis's second son, Francis, Earl of Ellesmere. It is the finest private collection in England: from the time of Raphael, the series is unequalled; and in the Caracci school it is without rival. Among the 305 pictures are 4 by Raphael, 5 Titian, 7 A. Caracci, 5 L. Caracci, 5 Domenichino, 4 Claude, 8 N. Poussin, 8 Teniers, 5 Berghem, 6 Cuypp, 6 A. Ostade, 5 Rembrandt, 7 Vandervelde, 2 Paul Veronese, 3 Velasquez, 2 Guido, 3 Rubens, 1 Vandyke, 3 G. Douw, 3 Hobbema, &c. The great Assumption of the Virgin, by Guido, has the chief honour of the gallery; the *Vierge au Palmier* is one of the purest Raphaels in England; the Seven Sacraments of N. Poussin, and Moses striking the Rock, are very fine; Cuypp's Landing of Prince Maurice looks as if the painter had dipped his pencil in sunlight. Here, also, are Turner's *Gale at Sea*, nearly equal to the finest Vandervelde in the collection; *De la Roche's* large picture of Charles I. in the Guard-room; a Wilson equal to Niobe; and the Chandos Portrait of Shakspeare, purchased by Lord Ellesmere at Stowe, in 1848, for 355 guineas: it is presumed to have been painted by Burbage, the actor; was left by Taylor, the Poet's Hamlet, to Sir W. Davenant; was possessed by Betterton the actor, and Mrs. Barry the actress: and must be regarded as the most authentic likeness of Shakspeare. The collection is valued at nearly 250,000*l.*: it vies with the Esterhazy and Lichtenstein galleries, at Vienna; the Manfrini gallery, at Venice; the Zambeccari collection, at Bologna; and the Borghese, Colonna, Sciarra, and Doria collections, at Rome.

BUCKINGHAM HOUSE, Pall Mall, built by Soane, R.A., for the Duke of Buckingham, has been purchased by the Government for the office of the Minister-at-War, thus placing the War-office very near to the Ordnance-office.

BURLINGTON HOUSE, No. 49, Picadilly, was originally built for Richard Boyle, second Earl of Burlington, by Sir John Denham, Surveyor of the Works to Charles II. Horace Walpole has given currency to the story that Lord Burlington, "when asked why he built his house so far out of town, replied, because he was determined to have no building beyond him." A similar anecdote, however, is told of Peterborough House, Milbank; Northumberland House; and of other houses on the verge of the spreading town; and it could not have been said with truth of Burlington House, because Clarendon House and Berkeley House were being built to the west of it at the very same time. The three houses just named are thus mentioned by Pepps:—

20th Feb. 1684-5.—Next that (Lord Clarendon's) is my Lord Barkeley beginning another on one side, and Sir J. Denham on the other.

23th Sept. 1668.—Thence to my Lord Burlington's house, the first time I ever was there, it being the house built by Sir John Denham, next to Clarendon-house.

The site was previously occupied by a farmstead. The house built by Denham was plain and well-proportioned, without any architectural display. A print by Kipp shows this house in the year 1700, with its quaint gardens, and beyond them *the country*, now covered by Regent-street and Portland-place; the court-yard is enclosed by a wall of moderate height, in front of which are planted large trees; and the carriage entrance is through two plain piers. Lord Burlington, the architect, added a new Portland stone front to the mansion; and a grand colonnade, borrowed from a palace by Palladio, at Vicenza. In the centre of the wall was built, in place of Denham's plain gateway, an archway of triumphal design; and there are two semicircular side entrances. Horace Walpole was in Italy when these embellishments were completed, and he thus tells their impression upon him after his return:—"As we have few samples of architecture more antique and imposing than that colonnade, I cannot help mentioning the effect it had upon myself. I had not only never seen it, but had never heard of it, at least with any attention, when soon after my return from Italy, I was invited to a ball at Burlington-house. As I passed under the gate by night, it could not strike me. At daybreak, looking out of the window to see the sun rise, I was surprised with the vision of the colonnade that fronted me. It seemed one of those edifices in fairy tales that are raised by genii in a night-time."

The Doric colonnade and gateway are attributed to Colin Campbell, an architect of some skill, employed by Lord Burlington, who, when the designs were made, was but twenty-three years of age: still they were claimed for his Lordship, though he is not known to have urged his own right. Later in life he designed many architectural works which render the eulogy of Pope in his fourth "Moral Essay"—the Epistle on the Use of Riches—which he had addressed to the Earl of Burlington, by no means exaggerated:—

"You, too, proceed! make falling arts your care;  
Erect new wonders, and the old repair;  
Jones and Palladio to themselves restore,  
And be whate'er Vitruvius was before."

In Burlington House the Earl delighted to assemble the leading artists and men of taste of his time; poets and philosophers—the learned, the witty, and the wise. Kent, the architect and landscape-gardener, had apartments in the mansion, where he remained until his death, in 1748. Here Handel resided with the Earl for three years; and here Pope, Arbuthnot, and Gay, often met. The latter poet, in his *Trivia*, after lamenting the disappearance of the famed structures and stately piles in the Strand, thus refers to the Piccadilly mansion:—

“Yet Burlington’s fair palace still remains:  
Beauty within, without proportion reigns.  
Beneath his eye declining art revives,  
The wall with animated pictures lives;  
Here Handel strikes the string—the melting strain  
Transports the soul, and thrills through every vein;  
There oft I enter (but with cleaner shoes),  
For Burlington’s beloved by every Muse.”

Sir William Chambers has described the mansion as one of the finest pieces of architecture in Europe, “behind an old brick wall in Piccadilly.”

“The interior,” says Pennant, “built on the models of Palladio, and adapted more to the climate of Lombardy, and to the banks of the Adige or the Brenta, than to the Thames, is gloomy and destitute of gaiety and cheerfulness.” Lord Burlington converted “Ten-Acres Field,” at the back of his gardens, into a little town, bounded by Bond-street and Swallow-street; and in 1719 he sold a piece of ground in Boyle-street for a school-house, which he designed for the trustees.

Lord Burlington died in 1753, when the title became extinct, and Burlington House passed to the Duke of Devonshire. Several alterations were made in the interior by Ware. The Duke of Portland, Prime Minister to George III., died in this mansion in 1809, a few days after he had resigned the seals of office. In the western wing were temporarily deposited the Elgin Marbles, before they were removed to the British Museum. In 1814, White’s Club gave here to the Allied Sovereigns, then in England, a grand ball, which cost 9849*l*.

The lease expired in 1809, and there was some talk of taking the mansion down, when a renewal was obtained by Lord George Cavendish (afterwards Earl of Burlington), son of William, fourth Duke of Devonshire, and grandson of the architect. Lord George Cavendish repaired all those portions of the edifice erected by Lord Burlington; and by raising the Venetian windows of the south front, completed the Earl’s design for this façade. Lord George Cavendish converted the riding-house and stables on the east side of the court-yard into a dwelling, as an appendage to the mansion, and built other stables behind the screen-wall. His Lordship also restored the terrace and terrace-steps in the garden; and converted a narrow slip of ground on the west side of the house and garden into the “Burlington Arcade,” built by Ware, in 1819: from the rental of which the Cavendish family are said to have derived but 4000*l*. a year, although the actual produce (from sub-leases) is stated to amount to 8640*l*. On the east side of the gardens is the high range of buildings called “The Albany;” but all its windows are shut out from view of the gardens.

The state apartments of Burlington House are on the first floor. Proceeding eastward from the great staircase, they form a suite of six rooms, richly ornamented and gilt. The ceiling of the saloon was painted by Sir James Thornhill. The great staircase was painted for the Earl of Burlington by Marco Rico and his uncle Sebastian; the same artists painted the ceilings of the state dining-room, and the south-east ante-room to the great drawing-room. Altogether, Burlington House merited much of the praise applied to it in 1826—that it was “the only town residence really fit for a British nobleman;” but since that period some costly additions have been made to the mansions of the metropolis. The edifice and grounds are said to occupy about eight acres. The south front of the house is 130 feet in extent, and the height is 48 feet. A ground-plan is given in Britton’s *Public Buildings of London*.

The entrance archway may be said to have considerable pretensions to grandeur. It has a lofty pediment, flanked by the supporters of the Burlington arms, and supported by four rusticated columns, coupled. It is commemorated by Hogarth in a *caricatura* print (1731), inscribed “The Man of Taste,” containing a view of Burlington Gate:

on the summit is Kent (served by Lord Burlington as a labourer), flourishing his palette and pencils over Michael Angelo and Raphael: lower down is Pope white-washing the front, and bespattering the Duke of Chandos in the street. Ralph refers to the front as "the most expensive wall in England: the height wonderfully proportioned to the length, and the decorations both simple and magnificent: the grand entrance is elegant and beautiful: and, by covering the house entirely from the eye, gives pleasure and surprise, at the opening of the whole front with the area before it at once." Any passenger who has seen the mansion through the great gateway from the footpath may appreciate the above effect.

Burlington House, with its gardens, was purchased by Government, in 1854, for 140,000*l.* The extent of the grounds is about 3½ acres. The building is now occupied by the Royal Society, the Senate of the University of London, the Geographical Society, the Linnean Society, and the Chemical Society. No income is derived from the property; the annual outgoings and cost of maintaining it average 470*l.*

On the north side of the gardens was commenced in 1866, a building for the University of London, with an entrance from the street we call Burlington Gardens.

CAMBRIDGE HOUSE, 94, Piccadilly—the site once occupied by an inn—has been known by the names of Egremont, Cholmondeley, and Cambridge House, from the names of its various tenants. Here died July 8th, 1850, Adolphus, Duke of Cambridge, youngest son of George III., born 1774. During the Cambridge occupation, Her Majesty was leaving the house, when she was assaulted by the last of the imbeciles who hoped to become celebrated by such a guilty proceeding.

One of its early noble tenants used to take his chop and spend his evening at "the Glo'ster Coffee House," when his lady had a rout. "He didn't care for such things," he said, "and liked to be quiet." The third Earl Cholmondeley acquired Houghton by marrying Sir Robert Walpole's only legitimate daughter. The son of the first Marquis Cholmondeley (Lord Malpas) embraced the Roman Catholic faith, was converted from his conversion by the mother of the lady whom he afterwards married, and subsequently left the Established Church for the Wesleyan connexion.—*Athenæum*.

After the death of the Duke of Cambridge, this mansion was the town residence of Viscount Palmerston; from hence his Lordship was buried in Westminster Abbey, October 27, 1865. Cambridge House is now the Naval and Military Club House.

CHESTERFIELD HOUSE (the Earl of Chesterfield), South Audley-street, was built by Ware, 1749, for Philip, fourth Earl, who describes the boudoir as "the gayest and most cheerful room in England," and the library "the finest room in London;" and they remain unsurpassed. The columns of the screen facing the court-yard, and the superb marble staircase (each step a single block twenty feet long), are from Canons (Duke of Chandos's); and the gilt hall-lantern, for eighteen candles, from Houghton (Sir Robert Walpole's). In the library, above the bookcases, are portraits of eminent authors contemporary with the fourth Earl of Chesterfield, who wrote here his celebrated *Letters to his Son*. Under the cornice of the room, extending all round in capitals twelve inches high, are these lines from Horace:

NUNC VETERUM LIBRIS NUNC SOMNO ET INERTIBUS HORIS.  
DUCERE SOLICITE JUCUNDA OBLIVIA VITÆ.

Throughout the room are busts of ancient orators, besides vases and bronzes and modern statuettes. The windows look upon the finest private garden in London, and in the lofty trees are a few rooks.

In that very pleasant table-book, *Host and Guest*, by Mr. Kirwan, we are reminded that the great Lord Chesterfield was the first nobleman who made the most strenuous efforts to introduce French cookery. He engaged as his cook La Chapelle, a descendant of the famous cook of Louis XIV. La Chapelle published, in 1733, a treatise on Cookery, in three volumes, which is now rarely met with. Like Alexis Soyer's books, La Chapelle's *Modern Cook* was printed for the author: it was sold by Nicholas Prévost, a Frenchman, over against Southampton-street, in the Strand. About this period Chesterfield was Lord Steward of the Household to George II. His dinners and suppers were deemed perfection; and these entertainments were among the few items in which his expenditure was liberal. Lord Chesterfield lived till 1773; and, says Mr. Kirwan, "I more than once heard the late Earl of Essex say, more than thirty years ago, at Brooks's Club, that he remembered, as a boy of fourteen or fifteen, seeing the Earl seated on a rustic seat outside the courtyard of his house in May Fair. Chesterfield House was, ninety-one years ago, at the very extremity of London, and all beyond it was an expanse of green fields."

CLARENCE HOUSE, on the east side of Stable-yard, St. James's Palace, was built for

the Duke of Clarence, afterwards King William IV. : it has a handsome portico in two stories, the lower Doric, and the upper Corinthian. Here resided the Duchess of Kent. The mansion is now the town residence of Prince Alfred.

DE GREY, EARL, No. 4, St. James's-square, possesses a choice gallery of pictures, including portraits, mostly whole-lengths, by Vandyke; "Titian's Daughter" holding a casket; a pair of landscapes by Claude; a fine picture by Salvator Rosa; and a few examples of the Dutch school.

DEVONSHIRE HOUSE (Duke of Devonshire), Piccadilly, occupies the site of Berkeley House, formerly "Hay Hill Farm;" it was built by William Kent for the third Duke of Devonshire, at the cost of 20,000*l.*, including 1000*l.* for the design. It was also called Stratton House.

Berkeley House was built about 1665 for John, Lord Berkeley and Stratton, and is stated by Evelyn to have cost "neere 30,000*l.*:" it was remarkable for its great number of chimneys, noble state-rooms, cedar staircase, the walls painted by Laguerre, and gardens "incomparable by reason of the inequalities of the ground, and a pretty piscina," and holly-hedges on the terrace, advised by Evelyn. The Princess Anne, afterwards Queen Anne, resided here, from her leaving Whitehall, until 1697: in the *Postman*, No. 94 (1695), is advertised a silver cistern, valued at 750*l.*, stolen out of Berkeley House. The first Duke of Devonshire purchased the mansion in 1697; and March 31, he entertained King William III. at dinner there. The duke died here in 1701: it was destroyed, October 16, 1733, by fire, through the boiling over of a glue-pot while the workmen were at breakfast; the house was entirely consumed, but the library, pictures, medals, and other curiosities were saved.

"Lord Pembroke (*Shakspeare's* Lord Pembroke), Donne, Waller, Denham, and Dryden read their verses here. Devonshire House, towards the close of the last century, was famous as the head-quarters of Whig politics, and for the fascinations of its beautiful Duchess, whose verses on William Tell produced a burst of admiration from Coleridge:—

"Oh, lady, nurs'd in pomp and pleasure,  
Where learnt you that heroic measure?"

She learnt it from her race (the Spencers); from their family tutor, Sir William Jones; and from her own cordial nature."—*Leigh Hunt*.

Devonshire House has an unpretending exterior, with an ill-matched portico: the old entrance, by a double flight of steps, was removed in 1840; and in the rear of the house has been erected a state staircase, with white scagliola walls, marble stair, gilt-brass balustrades, and glass hand-rail. The whole interior was re-decorated for William Spencer, sixth Duke of Devonshire, except a small room, blue and silver, designed by the celebrated Duchess. The Grand Saloon, originally the vestibule, is superbly decorated and painted in the rich style of Le Brun, and hung with Lyons brocade-silk; portraits over the doors, &c. The Ball-room, white and gold, is hung with French silk brocatelle, blue and gold, and a few magnificent pictures. In this superb room took place the first amateur performance of Sir Edward Bulwer Lytton's comedy of *Not so Bad as we Seem*, for the benefit of the Guild of Literature and Art, before Her Majesty and Prince Albert, May 16, 1851. The grounds of Devonshire House are a fine specimen of town landscape-gardening. Upon the gate-piers in Piccadilly are garlanded vases, gracefully sculptured. Among the pictures are Dobson's portrait of Sir Thomas Browne; Lord Burlington, the architect, by Kneller; and Lord Richard Cavendish, by Reynolds. In a glass-case are "the Devonshire Gems," 564 cut stones and medals. Here is the renowned *Libro di Verita*, in which Claude Lorraine made drawings of all the pictures he ever executed: they number about 200, and on the back of each is Claude's monogram, the place for which the picture was painted, usually the person ordering it, and the year, the "Claudio fecit" never wanting. By reference to this volume, the authenticity of reputed Claudes may be tested; hence it is called "the Book of Truth;" it is well known by Earlom's engravings. Upon the back of the first drawing is inscribed, in Claude's own handwriting.

"Audi 10 dagosto 1677. Ce livre Apurtien a moy que je faict durant ma vie. Claudio Gillee, dit le Loraine. A Roma ce 23 Aos. 1680."

Among the bibliographical rarities are "the Kemble Plays," and other old English plays, the richest collection in the world, annotated by the Duke of Devonshire; also, a large collection of playbills; early editions of Shakspeare; designs, by Inigo Jones, for buildings, sketches from pictures, costumes for characters in masques, scenery, &c. The exquisite taste and knowledge displayed by the late Duke of Devonshire in collecting these valuable treasures in art and literature have been respected by the present Duke in preserving so valuable a collection intact.

DORCHESTER HOUSE (Mr. R. S. Holford), Park-lane, built by Lewis Vulliamy, 1851-3: a parallelogram, nearly as large as Bridgewater House, faced with Portland-stone; the principal cornice and frieze richly carved by C. H. Smith; the chief projecting stones are each 8 feet 4 inches square; the external walls are 3 feet 10 inches thick. The grand staircase is of marble. The mansion occupies the site of old Dorchester House, in which died the Marquis of Hertford, 1842.

12 April 1923.

Round House.

...ver House, Whitehall, the office of the Scottish Secretary, which is now having the domed roof of its noble circular entrance-hall rededicated, was the occasion of a famous episode in the life of Lord North's in the days of his blindness. It was told that the Prince of Wales was having a colonnade of arches erected at Carlton House, and the Duke of York had added this to the hall to York House, where he professed concern that one of the arches was put in the round house and the other in the pillory.

Melbourne.

The Duke of York subsequently exchanged houses with the first Lord Melbourne (father of Queen Victoria's Premier), who had a mansion at Piccadilly on the present site of the present house. The houses exchanged, and York House was for many years known as Melbourne House. It was the brilliant and attractive residence of the first Lord held her gay parties, and received her distinguished admirers. Her son's wife, the Countess of Albemarle, was here, and Lord Byron was a frequent visitor. Both these ladies lived in the house. Subsequently the second Lord Melbourne parted with the house to Lord Melbourne, better known as the Whig politician, and its name was once more changed, to Dover House.

Holford's fine collection of pictures was temporarily placed in the house. The collection includes portraits of Lawrence's, in Russell-square. The collection includes portraits of Bellini, S. del Piombo, Titian, and Tintoretto; two of the famous 'St. John the Baptist', from the Giustiniani Palace; among the Dutch pictures is a 'St. John'; here are exquisite small pictures by Murillo, Greuze, and Verelst, and by Paul Potter, C. du Jardin, W. Vandervelde; Giorgione, 'St. John and Saints', by Andrea del Sarto; Holy Family and St. John, by Claude; Rubens' masterly sketches of his Entry of Henry IV. of the Virgin (Antwerp). The collection may be seen by recom-

...), Whitehall, opposite the Banqueting House, has a fine collection, and was built by Payne for Sir Matthew Featherstonhaugh, sold to Viscount Melbourne, who sold it to the Duke of Devonshire. The pictures are of a picturesque Ionic portico and the domed circular hall; the residence of the Prince of Wales, being distinguished for its wit and witticism thus told by Southey in *Esperia's Letters*. Lord North after he had become blind, in the latter part of his life. Then the Duke of York, it should seem, has been sent to the Tower of London. The Duke of Wales is put in the pillory."

...ley), Park-lane, contains a fine collection of 130 pictures, which were sent to their source.

Raphael's earliest works, and the Last Judgment, by Fiesole, both figures of Saints, by Raphael, in tempera; the Virgin and Child, by Carpaccio; by Francia; Sta. Caterina, by Lo Spagna; two figures of the Virgin and Child, enthroned, by A. Dasisi; altar-piece of the Magdalen, by Carlo Dolce; four Illuminations by Andrea Mantegna; a seated Cardinal, by Guercino; curious specimens of the Colossal Heads, by Correggio, and a reputed replica of his 'Christ', by Albert Durer; Celebration of the Mass, by Van Eyck; 'The Descent from the Cross', by Rembrandt (half-length), from the Stowe Collection; 'Landscape', by Gaspar Poussin; Venetian View, very fine, by Canaletto; also several pieces of antique Sculpture; and a seated Venus, by Hiram Powers.

...f Cambridge), Piccadilly, corner of Park-lane, was prepared for the Duke of Devonshire, and were deposited the Elgin Marbles. Lord Byron called it "a stone-shop," and

...to Burlington House, and to the British Museum in 1806. It was purchased by the late Duke of Gloucester, on his marriage with the late Duchess of Gloucester. In the state drawing-room is a needlework carpet, made for the Duchess of Gloucester upon her birth-day, by 84 ladies of the aristocracy. The Duchess died here April 30, 1857, and was buried in the chapel of the house, the Duke of Cambridge, the unexpired lease of

...of Westminster), Upper Grosvenor-street, has a magnificent screen, Roman-Doric: it is 110 feet long, and has two columns, sculptured with the Grosvenor arms, and panels of the

four Seasons above the root-entrances; between the columns are massive candelabra, which, with the metal gates, are composed of demi-figures, rich foliage, fruit and flowers, and armorial designs. The whole screen is picturesque and elegant, and was completed in 1842 by T. Cundy, the architect of the western wing of the mansion (the Picture-gallery) in Park-lane: the latter consists of a Corinthian colonnade, with six statues and an attic, after the manner of Trajan's Forum at Rome; on the acroteria are vases and a balustrade, and between the columns are rich festoons of fruit and flowers;

Feb. 1910

House.

CURIOSITIES OF LONDON.

... by Lord Derby's new house in Stratford Place I noticed yesterday that the white hoarding which has entirely hidden it from view during the past six or seven months is down at last. They say the house will be renamed, and will be known in the future as Derby House. This does not matter much, as the name of the builder has been kept green in Stratford Place itself. It was Edward Stratford, the second Earl of Stratford, who built this fine house in 1775, and who with others was responsible for the building of the stately *cul de sac* of which it forms the termination. The Duke of St. Albans, Prince Esterhazy, and many other distinguished persons have lived in Stratford House since that date. The last occupant was Lord Colebrooke. So soon as he went out the builders took charge of the house, and began to destroy its old Adam character. It is a very big house, and is now much larger than it was. It will probably be ready for occupation before the season is in full swing. There once stood a pillar in Stratford Place commemorating the naval victories of Great Britain, but its foundations gave way and were inappropriately in the year of Trafalgar. There are still two fascinating little watchmen's boxes on either side of the entrance in Stratford-street.

William IV.: it has a handsome portico in two stories. Here resided the Duchess of Kent, and Prince Alfred.

"HUMILIATED" BRID

All sorts of people are trying to get their views incorporated in the new Prayer-book. Among them is the League of the Church of England, which, if it succeeds in its object, will make drastic alterations in the Marriage Service.

The President is Miss A. Royden. Briefly, the League proposes to a bridegroom undertaking to "give away" his wife with all his goods, a bride's promise to "give away" her husband, and the ceremony of "giving away" the bride.

"Untrue" Words.

A determined attempt is being made to get recognition of these "reforms" in the Prayer-book when the proposals are discussed in the National Assembly in July.

Why these alterations were demanded was explained to a reporter to-day by the Secretary of the League, Miss E. M. Chandon.

The marriage service in its present form, she said, "compels both the bride and bridegroom to take words which are not true."

"It is appalling that at one of the most solemn moments of her life a woman should be obliged to make a vow which she has no intention of keeping."

"Obeying" Quite Modern

There was no vow of obedience until the fourteenth century.

**DORCHESTER HOUSE** (Mr. R. S. Holford), Park-lane, built by Lewis Vulliamy, 1851-3 : a parallelogram, nearly as large as Bridgewater House, faced with Portland-stone; the principal cornice and frieze richly carved by C. H. Smith; the chief projecting stones are each 8 feet 4 inches square; the external walls are 3 feet 10 inches thick. The grand staircase is of marble. The mansion occupies the site of old Dorchester House, in which died the Marquis of Hertford, 1842.

While this mansion was building, Mr. Holford's fine collection of pictures was temporarily placed in the house No. 65 (formerly Sir Thomas Lawrence's), in Russell-square. The collection includes portraits by Velasquez, Vandyke, Dosso Dossi, Bellini, S. del Piombo, Titian, and Tintoretto; two of the famous Caracci series (by Agostino and Ludovico), from the Giustiniani Palace; among the Dutch pictures is a long view of Dort, and a large Hobbema; here are exquisite small pictures by Murillo, Greuze, and others; and fine works by Teniers, Wouvermans, Paul Potter, C. du Jardin, W. Vandervelde; Giorgione, Bonifazio, Fra Bartolomeo; Holy Family and Saints, by Andrea del Sarto; Holy Family and St. John, by Gaudenzio di Ferrara; Evening, by Claude; Rubens' masterly sketches of his Entry of Henry IV. (Luxembourg); and the Assumption of the Virgin (Antwerp). The collection may be seen by recommendation of known artists or amateurs.

**DOVER HOUSE** (Lady Clifden), Whitehall, opposite the Banqueting House, has a very tasteful and classical façade, and was built by Payne for Sir Matthew Featherstonhaugh. It was subsequently sold to Viscount Melbourne, who sold it to the Duke of York, for whom Holland added a picturesque Ionic portico and the domed circular hall; which, and Carlton House, the residence of the Prince of Wales, being distinguished for its screen of columns, gave rise to a witticism thus told by Southey in *Espriella's Letters*. The buildings being described to Lord North after he had become blind, in the latter part of his life, he remarked, "Then the Duke of York, it should seem, has been sent to the Round House, and the Prince of Wales is put in the pillory."

**DUDLEY HOUSE** (Earl of Dudley), Park-lane, contains a fine collection of 130 pictures, tracing the Italian and Flemish schools to their source.

Here are the Crucifixion, one of Raphael's earliest works, and the Last Judgment, by Fiesole, both from Cardinal Fesch's Gallery; small figures of Saints, by Raphael, in tempera; the Virgin and Child, and the Virgin, Infant Christ, and Joseph, by Francia; Sta. Caterina, by Lo Spagna; two figures of Saints, in pen-and-ink and tempera, by Perugino; Virgin and Child, enthroned, by A. Dasisi; altar-piece of Saints and Infant Christ, by Pierino del Vaga; altar-piece, Adoration of the Shepherds, by B. Peruzzi; the Death of Abel, by Guido; Head of the Magdalen, by Carlo Dolce; four Illuminations by Andrea Mantegna; Christ bearing his Cross, by L. Caracci; a seated Cardinal, by Guercino; curious specimens of the Venetian School, by Carlo Crivelli; two Colossal Heads, by Correggio, and a reputed *replica* of his Magdalen; the three Marys, and Dead Christ, by Albert Durer; Celebration of the Mass, by Van Eyck; St. Peter, by Spagnoletto; the Burgomaster, by Rembrandt (half-length), from the Stowe Collection; the Mocking of Christ, by Teniers; Landscape, by Gaspar Poussin; Venetian View, very fine, by Canaletti; Shipwreck, by Vernet, &c. Here are also several pieces of antique Sculpture; and a seated Venus, by Canova; and a duplicate of the Greek Slave, by Hiram Powers.

**GLOUCESTER HOUSE** (Duke of Cambridge), Piccadilly, corner of Park-lane, was previously the Earl of Elgin's. Here were deposited the Elgin Marbles. Lord Byron sarcastically called Elgin House "a stone-shop," and

"General mart  
For all the mutilated blocks of art."—*English Bards and Scotch Reviewers*.

The Marbles were next removed to Burlington House, and to the British Museum in 1816. Gloucester House was purchased by the late Duke of Gloucester, on his marriage with the Princess Mary. In the state drawing-room is a needlework carpet, presented to the Duchess of Gloucester upon her birth-day, by 84 ladies of the aristocracy, each having worked a compartment. The Duchess died here April 30, 1857, having bequeathed to her nephew, the Duke of Cambridge, the unexpired lease of Gloucester House.

**GROSVENOR HOUSE** (Marquis of Westminster), Upper Grosvenor-street, has a magnificent open stone colonnade or screen, Roman-Doric: it is 110 feet long, and has two carriage-ways, with pediments sculptured with the Grosvenor arms, and panels of the four Seasons above the foot-entrances; between the columns are massive candelabra, which, with the metal gates, are composed of demi-figures, rich foliage, fruit and flowers, and armorial designs. The whole screen is picturesque and elegant, and was completed in 1842 by T. Cundy, the architect of the western wing of the mansion (the Picture-gallery) in Park-lane: the latter consists of a Corinthian colonnade, with six statues and an attic, after the manner of Trajan's Forum at Rome; on the acroteria are vases and a balustrade, and between the columns are rich festoons of fruit and flowers;

the whole is grand and architectural. Here is the celebrated "Grosvenor Gallery," commenced by Richard, first Earl Grosvenor, by the purchase of Mr. Agar's pictures for 30,000 guineas; increased by his son, and grandson, the present noble owner, to 200 paintings, including:

Raphael, 5; Murillo, 3; Velasquez, 2; Titian, 3; Paul Veronese, 3; Guido, 5; Salvator Rosa, 4; Claude, 10; N. and G. Poussin, 7; Rembrandt, 7; Rubens, 11; Vandyke, 2; Hobbema, 2; Cuypp, 4; Snyders, 2; Teniers, 3; West, 5; Hogarth, 3; Gainsborough, 3; with specimens of Lebrun, Paul Potter, Gerard Douw, Van Huysum, Vandervelde, Wouvermans, Sir Joshua Reynolds, and Wilson; Perugino, Bellini, Giulio Romano, and Sasso Ferrato: Correggio, Parmegiano, L. da Vinci, &c.

Among the most celebrated are the four colossal pictures by Rubens, painted in Spain in 1629,—the Israelites gathering Manna, Abraham and Melchisedek, the Four Evangelists, and the Fathers of the Church,—from the convent of Loeches, near Madrid, purchased for 10,000*l.*; Cattle and Landscape, by Paul Potter, a miracle of art: Gentleman holding a Hawk, and Lady with Fan, by Rembrandt, two of the finest portraits ever painted; Mrs. Siddons as the Tragic Muse, Sir Joshua Reynolds's masterpiece, cost 1760*l.* In the ante-room is a very large painting, by Canaletti, of a grand Bull-fight in St. Mark's Place, Venice, in 1740, with many thousand figures.

Among the rarities is a triptych panel-picture by Memmelinck, 15th century: the central compartment contains our Saviour, the Virgin Mary, and St. John the Evangelist; the *volets*, St. John the Baptist, and Mary, the sister of Martha and Lazarus, with the pot of ointment: of most elaborate execution; bought by the Marquis of Westminster in 1845.

No private gallery in this country exceeds the Grosvenor Gallery in point of *variety*. The number of pictures in the Bridgewater collection is more than double, the series more complete, and some of them exceed any here in value and *variety*; but the fascination of the Claudes, the imposing splendour of the Rubenses, and the interest attached to a number of the English pictures ('Mrs. Siddons,' 'the Blue Boy,' and 'General Wolfe,' for instance), long contributed to render the Grosvenor Gallery quite as popular as a resort for the mere amateur, and not less attractive and improving to the student and enthusiast.—Mrs. Jameson's *Private Galleries of Art*.

Among the sculpture is Susanna, life-size, by Pozzi; Cupid and Psyche, by Sir R. Westmacott, R.A.; a Faun (antique); and busts of Mercury, Apollo, Homer, Paris and Helen, Charles I. and Cromwell, &c. The vases are fine; and the superb plate includes antique salvers, and a profusion of race-cups, won by the Marquis of Westminster's celebrated stud. The pictures are to be seen only, on a specific day, by admissions obtainable by personal acquaintances of, or introduction to, the Marquis of Westminster.

HARCOURT HOUSE (Duke of Portland), on the west side of Cavendish-square, originally built for Benson, Lord Bingley, and altered from Archer's design, is described by Ralph, in 1734, as "one of the most singular pieces of architecture about town; rather like a convent than the residence of a man of quality," resembling a copy of some of Poussin's landscape ornaments: and so it remains to this day. It was originally called Bingley House. The handsome offices in the rear were designed by Ware.

HERTFORD HOUSE (Marquis of Hertford), No. 105, Piccadilly, was formerly the Pulteney Hotel, where Alexander, Emperor of Russia, and his sister the Duchess of Oldenburg, sojourned in 1814, and where the Duchess of Oldenburg (the Emperor Alexander's sister) introduced Prince Leopold to the Princess Charlotte. The original façade, rich Italian, was by Novosielski, with a Grecian-Doric porch added by Sir Robert Smirke. The mansion was designed for the Earl of Barrymore, but was unfinished at his death; was first let as an hotel, and then to the late Marquis of Hertford. It was taken down and rebuilt mostly with the same Portland stone, in 1851, when the house was heightened from 57 to 71 feet. The drawing-rooms have a vista of 114 feet, and the picture-gallery 50 feet, but the mansion remained some years untenanted after its rebuilding.

The Hertford collection contains *chef-d'œuvres* from the gallery of the King of Holland: Water-mill, Hobbema; Holy Family, Rubens (cost 2478*l.*); Alchemist, Teniers; la Vierge de Pade, A. del Sarto; Vandyke, by himself; Oxen in a Meadow, Paul Potter; several pictures by Cuypp; the Annunciation, by Murillo; Landscape with Herdsman, Claude; his own Portrait, by Rembrandt; Christ giving the Keys to St. Peter, Rubens; and, from the Stowe collection, the Sibyl, by Domenichino; and the Unmerciful Servant, by Rembrandt (sold for 2300*l.*). The Marquis also possesses a fine collection of china, and costly objects of art and *vertu*.

HOLDERNESSE HOUSE (Marquis of Londonderry), No. 16 Park-lane, contains a magnificent Sculpture-gallery, wherein are several works by Canova and other great sculptors; Theseus and the Minotaur, from the Fries Gallery at Florence; the Kneeling Cupid, &c.; full-length portraits of British and Foreign Monarchs of the present century, by Sir Thomas Lawrence; life-size model of Thomas's Statue of Lord Castle-reagh, the celebrated minister, placed in Westminster Abbey; and presented to the

## of Chequers:—An Fifth Birthday.

WEDNESDAY, NOVEMBER 22, 1922.

### Hampden House.

There is no domestic building in London so like an old-fashioned country dwelling as Hampden House, Green-street, where the Duchess of Sutherland is giving her party to "to meet the Prime Minister." It is only a few years ago that the Duchess of Sutherland acquired this interesting property from the Duke of Abercorn.

Personally, I would far rather live there than in Stafford House—or Lancaster House, as it is called to-day. It is cosy, big and rambling, and unobtrusive.

### Kaiser's Bust.

What I best recall of Hampden House in recent years is the colossal bust of the ex-Kaiser—with a Derby touch all over it—which was presented by Wilhelm to the Duke of Abercorn on the occasion of his going to Berlin officially to announce the death of Queen Victoria.

It is said to have a definite relation with the Hampden family. Of course it will have been all-Scotch, what the Hamiltons, the Levesons-Gowers—and Mr. Bonar Law, from Glasgow, to-morrow.

XVIII., and a valuable diamond-hilted sword; trophies, captured by the soldier-Marquis in the

east corner of Down-street, Piccadilly, was built under the joint superintendence of M. Dusillion, architect. The fronts are Caen stone, and have panels between the windows; the arrangement of which is such that the total height from the street-level to the balustraded vases) is 62 feet. The entrance-porch is supported by two principal window-pediments are sculptured the armorial shields, the initial H in the very handsome iron railing, throughout show very careful and elegant drawings by the French artists, is beautifully executed. The grand staircase of the building; the upper hall is paved with tiles, the walls are plaster-of-Paris polished, scagliola panels, and the floors are of cast-iron girders and tile arches. The principal doors are of oak, carved with the armorial shields, the eye-pieces are of *pierre-de-tonnerre*, panelled with brass and metal, with caryatid figures. The stables (for the rear of the mansion. W. Cubitt and Co., London, 1860), doors, ceilings, stone carvings, mahogany case-work, 30,000*l.* There are few pictures here, the collection is in Surrey. Among the antiques is Sir John Lubbock made at Naples. The mansion may be seen by the Duke of Abercorn.

The mansion in Duchess-street, Portland-place, in the decoration, exemplified the classic principles illustrated in his *Journal of Decorations*, 1905. Thus the suite of apartments is decorated with scrolls of papyrus and mummy-cases; the walls are blue-green, relieved by masses of black and gold. *The Star Room*: emblems of Night below; and above, the Hours; furniture, wreathed figures of the Hours. *The Library*; the mantel-piece an Egyptian portico; Egyptian, *Picture Gallery*: Ionic columns, entablature, and pediment of Apollo, classic tables, pedestals, &c. In four separate rooms are two copies of the Barberini or Portland Vase; the *New Gallery*, for 100 pictures of the Flemish school, in a Grecian design. Mr. Hope died at Duchess-street in 1860, and his munificence as the early patron of Chantrey, Flax-

(Lansdowne), which, with its garden, occupies the site. It was commenced by Robert Adam for the Marquis of Shelburne, created Marquis of Lansdowne in 1793, but the mansion cost Lord Bute 25,000*l.*

The discovery of the secret of the authorship of Junius's Letters, was made in the following week. The "Letters" are believed to have been written by Lord Shelburne, Colonel Barré, and Dunning, Lord Ashburton's picture by Sir Joshua Reynolds, in 1784-5, have been examined. Possibly, therefore, Junius's Letters were written in the year after established, that oxygen was discovered here, Aug. 1, 1774, at Shelburne.

The collection of sculpture, including about fifty busts and reliefs: it was commenced by Gavin Hamilton, in 1766, at his Villa. At the foot of the staircase is a noble bust of the great dining-room are nine antique statues of the gods, Mars, Trajan, and Cicero; also the Sleeping Venus in the front drawing-room his Venus quitting the bath, of a Child holding an alms-dish. In the end are life-size statues of Hercules, Marcus Juno, an Amazon, Juno standing, Hercules and two Egyptian black marble statues, found at the busts, reliefs, &c.

the whole is grand and architectural. Here is commenced by Richard, first Earl Grosvenor, but for 30,000 guineas; increased by his son, and 200 paintings, including:

Raphael, 5; Murillo, 3; Velasquez, 2; Titian, 3; P. Claude, 10; N. and G. Poussin, 7; Rembrandt, 7; Rubens, 2; Teniers, 3; West, 5; Hogarth, 3; Gainsborough, Gerard Douw, Van Huysum, Vandervelde, Wouvermans, Bellini, Giulio Romano, and Sasso Ferrato: Correggio, P.

Among the most celebrated are the four colossal pictures of the Israelites gathering Manna, Abraham and Melchisedek, Church,—from the convent of Loeches, near Madrid, painted by Paul Potter, a miracle of art: Gentleman holding a Hat, the finest portraits ever painted; Mrs. Siddons as the Tragic Heroine, cost 1760*l.* In the ante-room is a very large painting, by Canova, Venice, in 1740, with many thousand figures.

Among the rarities is a triptych panel-picture by Michelangelo, which contains our Saviour, the Virgin Mary, and St. John the Baptist, and Mary, the sister of Martha and Lazarus, with the Resurrection, bought by the Marquis of Westminster in 1845.

No private gallery in this country exceeds the Grosvenor. The collection of pictures in the Bridgewater collection is more than double that of any other in the country; but the fascinations of the Rubenses, and the interest attached to a number of pictures, such as 'Blue Boy,' and 'General Wolfe,' for instance, long contrived to make it popular as a resort for the mere amateur, and not less so for the enthusiast.—Mrs. Jameson's *Private Galleries of Art.*

Among the sculpture is Susanna, life-size, by Giovanni Stanetti, Westmacott, R.A.; a Faun (antique); and busts of Helen and Helen, Charles I. and Cromwell, &c. The collection also includes antique salvers, and a profusion of rare objects. The artist's celebrated stud. The pictures are to be seen in the gallery, obtainable by personal acquaintances of the Marquis of Westminster.

HARCOURT HOUSE (Duke of Portland), on the site of the old house built for Benson, Lord Bingley, and altered by John Vanbrugh, in 1734, as "one of the most singular palaces in the kingdom like a convent than the residence of a man of rank." The house is Poussin's landscape ornaments: and so it remains. Bingley House. The handsome offices in the rear of the house.

HERTFORD HOUSE (Marquis of Hertford), in the Pulteney Hotel, where Alexander, Emperor of Russia, sojourned in 1814, and where the Emperor's sister) introduced Prince Leopold to the house. The facade, rich Italian, was by Novosielski, with the design by Robert Smirke. The mansion was designed for the Emperor; finished at his death; was first let as an hotel, and was taken down and rebuilt mostly with the same materials. The house was heightened from 57 to 71 feet. The picture-gallery 50 feet, but the mansion is now in its rebuilding.

The Hertford collection contains *chef-d'œuvres* from the collections of Hobbema; Holy Family, Rubens (cost 2478*l.*); Alchibiades, by Vandyke, by himself; Oxen in a Meadow, Paul Potter; Murillo; Landscape with Herdsman, Claude; his own 'St. Peter,' Rubens: and, from the Stowe collection, the 'Boy with a Snake,' by Rembrandt (sold for 2300*l.*) The Marquis is a collector of art and *virtu.*

HOLDERNESSE HOUSE (Marquis of Londonderry), a magnificent Sculpture-gallery, wherein are some of the finest sculptures; Theseus and the Minotaur, from the collection of the Duke of Devonshire; full-length portraits of British monarchs, by Sir Thomas Lawrence; life-size portrait of the celebrated minister, placed in West-

# AMERICA WET

START OF VIGOROUS  
OF PROHIBITION

FIRST MAN TO  
AC

From Our New

That American public opinion is strongly against prohibition in its present form was clearly indicated by the results of the recent elections, "wet" candidates having been victorious in all parts of the country while even Representative Volstead, author of the Prohibition Law, was defeated.

## Independent Candidates.

Although there is little hope of the Act being modified during the coming session of Congress, the National Association Against the Prohibition Law expects to make such a vigorous campaign that majorities in favour of repeal will be elected in 1924, when the Presidential Election takes place.

If the old parties do not meet the issue, the association will place independent candidates in the field pledged to modify the law.

## Tax to Find Bonuses.

A tax on wine and beer, it is pointed out, would enable the Government to raise funds for a soldier's bonus. This argument, widely employed in the recent election, gained the votes of thousands of men who served in the Army during the war.

same, a colossal Sèvres Vase, by Louis XVIII., and a valuable diamond-hilted sword; besides cuirasses, helmets, and other trophies, captured by the soldier-Marquis in the Peninsular War.

HOPE HOUSE (Mrs. Hope), south-east corner of Down-street, Piccadilly, was built in 1849, for the late H. T. Hope, Esq., under the joint superintendence of M. Dusillion, a French artist, and Professor Donaldson. The fronts are Caen stone, and have panels of decorative marbles in the piers between the windows; the arrangement of which is novel, especially in the attic-story. The total height from the street-level to the balustrade (surmounted with superbly-carved vases) is 62 feet. The entrance-porch in Down-street is very rich; in the principal window-pediments are sculptured the armorial bearings of Mr. Hope, repeated with the initial H in the very handsome iron railing, cast by André in Paris. The details throughout show very careful and elegant drawing; and the carving, wholly by French artists, is beautifully executed. The grand staircase and hall occupy the centre of the building; the upper hall is paved with coloured marbles in patterns. The walls are plaster-of-Paris polished, scagliola panels, and marble plintus; the floors, fire-proof, are of cast-iron girders and tile arches. The ceilings are panelled and enriched; the principal doors are of oak, carved with the initial H in shields; some of the chimney-pieces are of *pierre-de-tonnerre*, panelled with French marbles; others are of bronzed metal, with caryatid figures. The stables (for 12 horses) and coach-houses are in the rear of the mansion. W. Cubitt and Co., builders; ornamental work (wainscot doors, ceilings, stone carvings, mahogany case-ments) by French artists; cost about 30,000*l.* There are few pictures here, the collections having been removed to Deepdene, in Surrey. Among the antiques is Sir William Hamilton's second collection, made at Naples. The mansion may be seen by cards obtainable by introduction to the owner.

The collection was formed at the celebrated mansion in Duchess-street, Portland-place, in the decoration of which Mr. Hope, the author of *Anastasis*, exemplified the classic principles illustrated in his large work on *Household Furniture and Internal Decorations*, 1805. Thus the suite of apartments included the *Egyptian or Black Room*, with ornaments from scrolls of papyrus and mummy-cases; the furniture and ornaments were pale yellow and bluish-green, relieved by masses of black and gold. *The Blue or Indian Room*, in costly Oriental style. *The Star Room*: emblems of Night below; and above, Aurora visiting Cephalus on Mount Ida, by Flaxman; furniture, wreathed figures of the Hours. *The Closet or Boudoir*, hung with tent-like drapery; the mantel-piece an Egyptian portico; Egyptian, Hindoo, and Chinese idols and curiosities. *Picture Gallery*: Ionic columns, entablature, and pediment from the Temple of Erectheus at Athens; car of Apollo, classic tables, pedestals, &c. In four separate apartments were arranged 200 Greek vases, including two copies of the Barberini or Portland Vase; the furniture partly from Pompeian models. *The New Gallery*, for 100 pictures of the Flemish school, antique bronzes and vases; furniture of elegant Grecian design. Mr. Hope died at Duchess-street in 1831: he will ever be remembered for his taste and munificence as the early patron of Chantrey, Flaxman, Canova, and Thorwaldsen.

LANSDOWNE HOUSE (Marquis of Lansdowne), which, with its garden, occupies the south side of Berkeley-square, was commenced by Robert Adam for the Marquis of Bute, but was sold unfinished to Lord Shelburne, created Marquis of Lansdowne in 1784. The purchase-money was 22,000*l.*, but the mansion cost Lord Bute 25,000*l.*

The Marquis, in 1804, acknowledged the possession of the secret of the authorship of Junius's Letters, which he promised to publish; but his lordship died in the following week. The "Letters" are believed by some to have been the joint production of Lord Shelburne, Colonel Barré, and Dunning, Lord Ashburton; and their three portraits, painted in one picture by Sir Joshua Reynolds, in 1784-5, have been regarded as evidence of the joint authorship. Possibly, therefore, Junius's Letters were written in Lansdowne, then Shelburne House. It is better established, that oxygen was discovered here, Aug. 1, 1774, by Dr. Priestley, then librarian to Lord Shelburne.

The reception-room contains a fine collection of sculpture, including about fifty statues, as many busts, besides bassi relievi: it was commenced by Gavin Hamilton, who first excavated the site of Adrian's Villa. At the foot of the staircase is a noble statue of Diana launching an arrow; in the great dining-room are nine antique statues in niches, including Germanicus, Claudius, Trajan, and Cicero; also the Sleeping Nymph, the last work of Canova; in the front drawing-room his Venus quitting the Bath; and a statue by Rauch, of Berlin, of a Child holding an alms-dish. In the gallery, 100 feet in length, at the east end are life-size statues of Hercules, Marcus Aurelius, Mercury, Diomedé, Theseus, Juno, an Amazon, Juno standing, Hercules when a youth, Jason, &c.; and here are two Egyptian black marble statues, found at Tivoli. On the sides of the gallery are the busts, reliefs, &c.

The collection of pictures, formed by Henry, third Marquis of Lansdowne, since 1809, is famed for its portraits, including Rembrandt holding a palette, by himself; a Lady (1642), Rembrandt; Velasquez, by himself; Pope Innocent X., Velasquez; A. del Sarto, by himself; a Gentleman, by Titian; Count Frederigo Bozzola, by Seb. del Piombo; Queen Henrietta-Maria, by Vandyke; Sansovino, the Venetian architect, by Giorgione; a Cardinal and Andrea Doria, by Tintoretto; a Burgomaster and Lady in a Ruff, by Rembrandt; Charles V. in his cradle, by Velasquez; Kitty Fisher and Laurence Sterne, by Sir Joshua Reynolds; Alexander Pope, by Jervas; Dr. Franklin, by Gainsborough; Sir Humphry Davy, by Linnell; Francis Horner, by Raeburn; the Marquis of Lansdowne, by Sir Thomas Lawrence; Ladies Ilchester, Mary Cole, and Elizabeth Feilding, by Reynolds; Peg Woffington, by Hogarth; Flaxman the sculptor, by John Jackson; Sir Robert Walpole and his first Wife, Catherine Shorter, by Eekhart, (elaborate black and gold frame by Gibbons), from the blue bedchamber of Strawberry Hill. Also, here are twelve pictures by Sir Joshua Reynolds, including the Strawberry Girl and the Sleeping Girl.

Lansdowne House was long the political meeting-place of the great Whig party: the first Cabinet Council of Lord Grey's administration was held in this house; and here, at the same meeting, it was resolved that Brougham should be Lord Chancellor. Lord Lansdowne, the acknowledged head of the party, died at his seat, Bowood, Jan. 31, 1863: he was distinguished by his friendship for artists and men of letters.

LYNDHURST (LORD), Nos. 25 and 26, George-street, Hanover-square, was the residence of John Singleton Copley, R.A., and was for more than three-quarters of a century the dwelling-house of his son, Lord Lyndhurst, who retired from the Chancellorship in 1846. His Lordship died in the house No. 25, Oct. 12, 1863, aged 91. Here were most of the important works of his father, including—

Portrait of Admiral Viscount Duncan; Sketch of the Princesses Mary, Sophia, and Amelia; Samuel and Eli; portrait of Lord Mansfield; the Boy with a Squirrel, painted in 1760; the celebrated original picture, exhibited anonymously at the Royal Academy, and which was the cause of Mr. Copley's coming to England in 1764; he went to Rome in the same year. Portraits of John Singleton Copley, R.A., with his wife caressing the infant (the future Lord Lyndhurst), and his three other infant children. Portrait of Archbishop Laud in his robes; and portrait of Lady Middleton in a black dress lined with pink satin, pearl necklaces and earrings, holding flowers, by Vandyke; Death of Major Peirson, the celebrated *chef-d'œuvre* of the artist, engraved by Heath—painted originally for Alderman Boydell, and afterwards repurchased by Mr. Copley.

Lord Lyndhurst's pictures realized 5147*l.*; the two freehold houses, sold for 18,000*l.*, have been taken down, and a club-house is built upon the site.

MANCHESTER HOUSE, Manchester-square, was commenced for the Duke of Manchester in 1776, but was not completed until 1788. At the Duke's death the house became the residence of the Spanish Ambassador, who built the Roman Catholic chapel in Spanish-place. Manchester House was next the town mansion of the Marquis of Hertford, a *bon-vivant* companion of the Prince Regent. The French Embassy was next located here; with Talleyrand, Guizot, and Sebastiani, successive representatives.

MARLBOROUGH HOUSE, Pall Mall, was built by Wren, in 1709–10, for the great Duke of Marlborough, upon part of the site of the pheasantry of St. James's Palace, and of the garden of Mr. Secretary Boyle, the latter taken out of St. James's Park. The ground was leased by Queen Anne to Sarah Duchess of Marlborough, who states the Duke to have paid for the building between 40,000*l.* and 50,000*l.*, "though many people have been made to believe otherwise." The house is a fine specimen of red brickwork, Wren being employed as architect, to mortify Vanbrugh. The great Duke died here in 1722. The Duchess loved to talk of "neighbour George," the King, at St. James's Palace; and here, Jan. 1, 1741, she received the Lord Mayor and Sheriffs, to thank her for a present of venison: "she received us," says Sheriff Hoare, "in her usual manner, sitting up in her bed; . . . and after an hour's conversation upon indifferent matters, we retired." The Duchess intended to have improved the entrance to the court-yard: an archway was opened in the wall, but was blocked up; for her Grace was frustrated by Sir Robert Walpole, who, to annoy her, bought the requisite houses in Pall Mall. The court-yard is dull, but the front towards St. James's Park has a cheerful aspect, and a garden. In 1817, Marlborough House was purchased by the Crown for the Princess Charlotte and Prince Leopold; it was the Prince's town-house for several years: and after the death of William IV. the residence of the Dowager-Queen Adelaide, whose personal effects were disposed of here, at the price affixed to each article. In 1850, the mansion was settled upon the Prince of Wales, on his attaining his eighteenth year. In the meantime, the Vernon collection of pictures, and others of the English school, were removed to the lower apartments of Marlborough House: and the upper rooms were granted to the Department of Practical Art, for a library, museum of manufactures, the ornamental casts of the School of

Design, a lecture-room, &c. Here was designed, in 1852, the Duke of Wellington's Funeral Car, which was subsequently exhibited to the public in a temporary building in the court-yard, 1853: it is now in the Crypt of St. Paul's Cathedral.

George IV. (while Regent) proposed to connect Carlton House with Marlborough House and St. James's Palace by a gallery of the Portraits of the Sovereigns and other historic personages of England; but, unfortunately, Mr. Nash's speculation of buying Carlton House and Gardens, and overlaying St. James's Park with terraces, prevailed, and the design of a truly National Gallery was abandoned: although the Crown of England possesses materials for an Historical Collection which would be infinitely superior to that of Versailles.

Marlborough House has been enlarged and re-embellished to adapt it for the town residence of the Prince and Princess of Wales.

An entrance-hall has been added to the north front of the house; the old entrance-hall has been converted into a noble saloon about 40 ft. in length by 30 ft. in width, two stories in height. On the ceiling and upper part of the walls, on three of the sides, are large oil paintings of the great victories of Marlborough, the battles of Hochstet and Blenheim, and the taking of Marshal Tallard prisoner; upon the ceiling are allegories of the Arts and Sciences. These paintings, the work of Laguerre, had been hidden for many years beneath successive layers of whitewash and colour, and were boarded and canvassed over. They have been restored, and in several of them may be recognised the originals of some old engravings of the battles of Ramillies and Blenheim, in which Marlborough on horseback, leading on the troops, is a very prominent figure. On the lower part of the hall is hung tapestry, apparently of the date of Louis Quatorze, the subjects represented being the adventures of Sancho Panza and Don Quixote. In the centre of the principal side is magnificent Gobelins tapestry, the "Destruction of the Mamelukes." The sofas and settees are covered with tapestry of the date of Louis Quatorze; and the furniture includes a magnificent ebony and gold cabinet, and ebony and ormolu terms for busts. The library is on the west side of the mansion. In the furnishing and decoration of the State apartments of Marlborough House, English art and English manufactures have been duly patronized: Spitalfields and Manchester have supplied the silk and damask, and Wilton the Axminster carpets, while the furniture has been made entirely in London workshops.

One of the rooms on the first floor of Marlborough House has been converted into a characteristic representation of a Turkish mandar'ah or reception-room. The room is hung round with souvenirs of the Prince's travels: one of the most interesting articles is a fragment of Egyptian hieroglyphic. Here, also, are amber mouthpieces, embroidered tobacco-bags, a coat of chain armour and a helmet, daggers, swords, &c., artistically arranged; also, specimens of Eastern dress—waist scarfs, abbas, kefishes; and in the centre, over the decwan, is another group of Eastern weapons—daggers and swords of rare temper, armour and helmets.

The new stables have the form of a block with two wings. In the centre of the block is the Royal entrance, leading into the garden skirting the Mall of St. James's Park. On either side of the Royal entrance are two coach-houses: the quadrangle in front, together with the Royal entrance, is covered by an enormous skylight, supported by light iron columns; while the quadrangle itself is lighted with gas, provided with clock, manure-pits, water-tanks, and trapped drains. The stables include forty-five stalls and twelve loose boxes.

#### MONTAGUE HOUSE, Bloomsbury. (See MUSEUM, BRITISH.)

MONTAGUE HOUSE (Duke of Buccleuch), Whitehall, was built for Ralph, third Lord Montague, created in 1689 Duke of Montague and Viscount Monthermer. It had a spacious marble floored and pillared hall; and a large collection of full-length portraits of the Montagues and their connexions, by Vandyke, Lely, and Reynolds; sketches *en grisaille* by Vandyke; a fine assemblage of English Miniatures; and View of Whitehall, by Canaletti. The furniture was in the old French style, richly carved and gilt; and cabinets in buhl or ebony; tables of marble, mosaic, or inlaid wood; hangings of dark velvet, damask, or satin. In the dining-room and library were portraits of the British school; a few Gainsboroughs and Wilsons in the boudoir; and both drawing-rooms were hung with fine old tapestry, representing hunting scenes in the forest of Fontainebleau. The mansion was screened from the street by trees and a garden; and between it and the Thames was a terraced garden, with venerable trees, fountains, and statues, and an open pavilion commanding a fine view of the river.

Montague House was one of the mansions built after the Court had abandoned Whitehall, when various noble families obtained leases of parts of the Privy Gardens. The Dukes of Richmond for a hundred years occupied here a stately mansion surrounded with pleasure-grounds, on part of which is built Richmond-terrace. Pembroke House was erected under like circumstances; between which and the site of Richmond House stood the mansion inherited from the Montague family by the Duke of Buccleuch.

The lease of the site of old Montague House was renewed by the Government, thus securing to the Duke of Buccleuch an acre and a quarter of land, with a river

frontage for ninety-nine years, from 1856. The old mansion was then taken down, and a new house erected in the French style, with lofty Mansard roofs. All the old materials were ground down and made into a sort of concrete to form the foundation of the new building, and every possible precaution taken to make the new mansion water-tight in its lower floors. The new house is substantially fire-proof. Iron has been substituted for wood in all the most important parts of the construction, and every possible precaution has been taken to prevent fire spreading beyond the apartment in which it should arise. In front of the Crown property on the bank of the river, the operation of the Thames Embankment Bill will reclaim no less than five acres and a half of land which would have been admirably adapted for the erection of public offices, had not the lease of Montague House been renewed. These circumstances led to much discussion; but the mansion was completed for the Duke of Buccleuch, and is now His Grace's town residence.

MONTAGUE HOUSE, the elegant detached mansion at the north-west angle of Portman-square, was built for the celebrated Mrs. Elizabeth Montague, who resided here many years; and who annually, on the 1st of May, on the front lawn, regaled the chimney-sweepers of the metropolis, "so that they might enjoy *one* happy day in the year."\* The house is now the residence of Lord Rokeby.

Horace Walpole tells us that in February, 1782, he "dined at Mrs. Montague's new palace, and was much surprised. Instead of vagaries, it is a noble, simple edifice." "When I came home," he adds, "I recollected that although I thought it so magnificent a house, there was not a morsel of gilding. It is grand, not tawdry, nor larded and embroidered and pomponned with shreds and remnants, and clinquant like all the harlequinades of Adam, which never let the eye repose for a moment."

NORFOLK HOUSE (Duke of Norfolk), No. 21, St. James's-square, occupies the site of the residence of Henry Jermyn, Earl of St. Albans (*temp.* Charles II.); the first tenant of the Norfolk family being the seventh Duke, who died here 1701. The old mansion extended to the site of Waterloo-place eastward. In old Norfolk House George III. was born, May 24, 1738 (O. S.); and Edward Augustus Duke of York, March 24, 1739: the room remains, with a ceiling painted by Sir James Thornhill; the stables is preserved at Worksop. The present Norfolk House was commenced by Bretingham, in 1742, for Thomas Duke of Norfolk, and completed for his brother Edward in 1762: the portico was added in 1842. The rooms are gorgeously carved and gilt in the Queen Anne style, and contain a collection of pictures of the Italian, Spanish, and Flemish schools; and conspicuous among the plate displayed at state-banquets, are the coronation-cups received in various reigns by the Dukes of Norfolk as hereditary Earls Marshal: here Queen Victoria and Prince Albert were sumptuously entertained, June 19, 1849.

In the old mansion are deposited the records of the Howard, Fitzalan, and Mowbray families. Among the pictures is a portrait of the first Duke of Norfolk, by Holbein; shield presented to the chivalrous soldier-poet, Henry Howard, Earl of Surrey, at a tournament in 1537; portraits of the family of Thomas Earl of Arundel, who collected the "Marbles;" portrait of his wife, by Rubens.

Here expired, Dec. 16, 1815, Charles, eleventh Duke of Norfolk: a few hours before he died, by his desire, a servant was sent to a bookseller's in Pall Mall to procure Dreilincourt's *Book of Consolations against the Fear of Death*, which was read to the penitent Duke in his last moments.

NORMANTON, LORD, No. 3, Seamore-place, May Fair: here are some important pictures by Holbein; Holy Family, by Parmegiano; and works of the English school.

NORTHUMBERLAND HOUSE (Duke of Northumberland), Strand, occupies the site of the Hospital of St. Mary Rounceval, founded *temp.* Henry III.; its large conventual chapel reaching to the Thames in the Sutherland View of London, 1543. The present mansion was built, about 1605, for Henry Howard, Earl of Northampton, son of the poet, Lord Surrey. The architects were Bernard Jansen and Gerard Christmas; and it was then called *Northampton House*. The Earl of Northampton died here in 1614, having bequeathed the mansion to his nephew, Thomas Howard, Earl of Suffolk, when the name was changed to *Suffolk House*: a drawing by Hollar shows it to have been quadrangular in plan, with a lofty dome-crowned tower at each angle, in the Dutch style. It originally had three sides, the fourth remaining open to the gardens and the Thames; when the quadrangle was completed by the addition of the state-rooms,

\*There was a *fourth* Montague House—viz. the mansion built by Viscount Montague, or his son, upon part of the site of the priory of St. Mary Overey, in Southwark close, 1545; the precinct being named Montague Close.

attributed, but erroneously, to Inigo Jones. After the marriage of Elizabeth, daughter of Theophilus, second Earl of Suffolk, with Algernon Percy, tenth Earl of Northumberland, in 1642, the mansion was called *Northumberland House*. In 1660 General Monk was invited to this house by Earl Algernon; and here, with other leading men of the nation, he proposed and planned the restoration of Charles II. On the death of Joscelyne Percy, the son of Algernon, in 1670, without male issue, his only daughter, Elizabeth, became heiress of the Percy estates. She married, in 1682, Charles Seymour, "the proud Duke of Somerset," who resided at Northumberland House in great state. On the death of the Duke in 1748, he was succeeded by his eldest son, Algernon Earl of Hertford, and seventh Duke of Somerset, created Earl of Northumberland in 1749, with remainder, failing issue male, to his son-in-law, Sir Hugh Smithson, who assumed the name and arms of Percy, and was created Duke of Northumberland in 1766: he was the grandfather of the fourth Duke, and the immediate predecessor of his cousin, the Earl of Beverley, the late Duke. Of the old mansion, little more than the central stone gateway, facing the Strand, remains; this being part of the original work of Gerard Christmas, and, with its characteristic sculpture, a curious example of the Jacobean style. It is surmounted by a lion passant, the crest of the Percys, cast in lead: it is inscribed with the family motto, "Espérance en Dieu." Along the façade was a border of capital letters, in place of the present ugly parapet: One of these letters (S) fell down at the funeral of Anne of Denmark, 1619, and killed a spectator. The date 1749 denotes a year of repairs, and the initials A. S. P. N., Algernon Somerset, Princeps Northumbriæ. In 1766, great part of the northern front was rebuilt; as also after the fire in 1780, which consumed most of the upper rooms. The court-yard is of plain Italian character; and the living apartments are the southern or garden side of the quadrangle. The boast of the interior is the double state-staircase, with marble steps; rich *ormolu* balustrade, chandelier, and lamps; and carved marble podium. The principal drawing-room has medallions by Angelica Kauffmann, and a Raphaelesque ceiling. Beyond is a small room hung with tapestry, designed by Zuccarelli, and worked in Soho-square, in 1758. The state-gallery, or ball-room, is 106 feet long, and 27 wide; it is gorgeously gilt with groups in relief, of eagles, boys, and foliage, and is decorated in compartments with paintings after the Roman school; the chimney-pieces are supported by Phrygian captives in marble: this noble room will accommodate 800 guests. Upon the walls are admirable copies, original size, of the School of Athens, of Raphael, by Mengs; the Presentation, and Marriage of Cupid and Psyche, both also after Raphael, by Pompeo Battoni; and copies of A. Caracci's Bacchus and Ariadne, by Constansi; and Guido's Aurora, by Masaccio. Here are two cabinets of marbles and gems, once the property of Louis XIV., and valued at 1000*l.* each. In the centre is a Sèvres china vase, nine feet high, exquisitely painted with Diana and her Nymphs disarming Cupid: this was presented by Charles X. to Hugh, second Duke of Northumberland, when Ambassador to France,

The most important original picture in the Northumberland collection (principally at Alnwick Castle), is the portrait-group of the "Cornaro Family" (Evelyn called it "ye Venetian Senators"), by Titian, which was bought by Algernon Earl of Northumberland, *temp.* Charles I. from Vandyke, for 1000 guineas. Among the other pictures are San Sebastian, bound on the ground, and two angels in the air, by Guercino, with figures life-size; a small "Adoration of the Shepherds," by G. Bassano; "a pretty Girl with a Candle, before which she holds her hands, by G. Schalcken, of remarkable clearness, and good *pasto*" (*Waagen*); Alnwick Castle, and Westminster Bridge, building and completed, by Canaletti; a curious portrait of Edward VI., with a long inscription, by Mabuse; a Fox-hunt and Deer-hunt by F. Snyders; Christ crowned with Thorns, by Caravaggio; portrait of Napoleon when First Consul, by Phillips (a fine likeness); several family portraits, including Percy Earl of Northumberland, one of Vandyke's finest portraits. Also, carvings in ivory, after pictures by Teniers and others; and sumptuous *ormolu* articles. The mansion can only be seen by special permission.

In the Strand front, west of the central gateway, by an ingenious contrivance, a portion of the wall is opened for the egress of carriages upon state occasions.

Hugh, third duke, who died at Alnwick Castle, was interred from Northumberland House, with great state, in Westminster Abbey, Feb. 22, 1847; the funeral pageant reaching from Charing Cross to the western door of the Abbey: and his successor, Algernon, 4th Duke, who also died at Alnwick Castle, was interred from Northumberland House, with like state, Feb. 25, 1865.

OVERSTONE, LORD, No. 22, Norfolk-street, Park-lane: a valuable collection of Italian, Flemish, and Dutch masters, the latter including examples from the cabinet of Baron Verstolk, at the Hague.

PEEL, SIR ROBERT, BART., M.P., No. 4, Privy Gardens, Whitehall: the mansion

contains a portion of the choice collection of pictures formed by the late Sir Robert Peel; including Rubens's celebrated Chapeau de Paille, for which Sir Robert gave 3500 guineas: also, 3 by Cuypp; 4 Coast-scenes, by Collius; the Poulterer's Shop, by G. Douw; 4 by Hobbema; 2 by Isaac Ostade; Landscape and Cattle, by Paul Potter, 1654; 2 by Ruysdael; 7 by D. Teniers; Genoese Senator and his Wife, by Vandyke; 4 by A. Vandervelde; 7 by W. Vandervelde; 6 by Wouvermans; 2 by Wynants. The Portraits, by Reynolds and Lawrence, have been removed to Drayton Manor. In the dining-room of the above mansion Sir Robert Peel was placed immediately after his fatal accident; and in this room he expired, July 2, 1850. Between the doors hangs Wilkie's fine picture of John Knox preaching.

ROTHSCHILD'S, BARON, Mansion, 147, Piccadilly, occupies a site of 67ft. frontage by 90ft. in depth, and is built on a bed of concrete extending over the whole surface of the basement story. The front walls are of Portland stone. The principal staircase is of marble: its centre flight, opposite the entrance-hall door, is 8ft. wide. The main landing, as well as the stairs, is of marble, and connects the two ante-rooms, which are divided from the staircase by marble screens of columns and arches. These ante-rooms communicate with the first-floor reception-rooms, one of which occupies the whole of the Piccadilly front.

RUTLAND HOUSE, No. 16, Arlington-street, Piccadilly: here, January 5th, 1827, died the Duke of York, second son of George III.

SIBTHORP, COLONEL, 46, Eaton-square.—Here was assembled the rare and costly collection of articles of *vertu*: Oriental curiosities, ancient ornamental silver, carvings in ivory and wood, bronzes, Oriental and Limoges enamel, Raphael and Palissy ware; ornamental glass, German, Bohemian, and Venetian; Dresden, Sèvres, old Worcester, and Chelsea porcelain, silver, silver-gilt, and plated articles.

SPENCER HOUSE (Earl Spencer), St. James's-place, was built by Vardy, a pupil of Kent, for the first Earl Spencer, father of the collector of the *Bibliotheca Spenceriana*. The mansion fronts the Green Park, and has a pediment, upon which are three graceful figures by Spong, a Danish sculptor.

STAFFORD HOUSE (Duke of Sutherland), on the west side of Stable-yard, St. James's Palace, occupies part of the site of the Queen's Library, built by Kent for Caroline, consort of George II.: in Pennant's time it was a lumber-room. The Stafford mansion was commenced in 1825, by B. Wyatt, for the Duke of York, second son of George III. In 1827, it was proposed to appropriate part of the mansion to the use of the Royal Society; the offer was accepted subject to future arrangements, but was not taken advantage of, on account of the increased expenditure which the change would have involved; whilst the apartments were unsuitable for the purposes of the Society. The Duke of York died before the building was completed. The Crown lease was then sold to the first Duke of Sutherland, for 72,000*l.*, subject to an annual ground-rent of 758*l.* The mansion is entirely of hewn stone; the north front in Stable-yard has a Corinthian portico of eight columns, beneath which is the entrance. The garden-fence is curiously made of slate.

The interior was planned by Barry, by whom were added the second and third stories, the latter concealed by a balustrade. The grandest feature is the hall, or tribune, and state-staircase, opening through all the stories, and lighted by a lantern filled with engraved glass, and supported by eighteen palm-trees; the ceiling contains Guercino's celebrated apotheosis of St. Grisogno; and beside the fireplace are Murillo's Prodigal Son's Return, and Abraham and the Angels, from the Soutt Gallery. The walls are imitative Giallo antico, divided by white marble Corinthian columns and pilasters; and in compartments are copies, by Lorenzi, of Paul Veronese's colossal pictures. The whole interior strikingly reminded Dr. Waagen of many of the palaces of Genoa: it is a square of 80 feet, rising in the centre to 120, the roof richly painted and gilt, the floor a sea of red and white marble; and when lighted by scores of candelabra, the effect is truly gorgeous. On the first landing is a marble statue of a Sibyl, by Ronaldi. Thence two flights of stairs diverge upwards to a corridor, decorated with

marble columns and balustrades, round three sides of the hall; the fourth being the gallery, 120 feet long, with a fretted gold roof, and lighted by Roman candelabra in gilt-bronze; the walls are hung with paintings of the Italian, Flemish, Spanish, and modern English schools.

Among the pictures in the gallery are, Vandyke's portrait of Thomas Howard, Earl of Arundel; Morone's portrait of a Jesuit (Titian's Schoolmaster); Correggio's Mule-driver, reputed to have been painted for a tavern-sign; Christ before Pilate, Honthorst's finest work, from the Lucca collection; Christ at Emmaus, by Paul Veronese; Christ bearing his Cross, by Raphael; Don Francis Borgia entering the Jesuits' College, several life-size figures, by Velasquez; and three works of Zurbaran, from the Soult collection; Lord Strafford on his way to the Scaffold receiving Laud's blessing, by Delaroche; and Winterhalter's portrait of the Duchess Dowager of Sutherland.

The other three sides consist of eight state-rooms: three towards the Green Park are drawing-rooms hung with Gobelin's tapestry, designed by Delaroche. Northward is the great dining-room, 70 feet by 30 feet, where is a statue of Ganymede, by Thorwaldsen; and on the third side are two saloons hung with a long series of paintings of the old Italian schools above the bookshelves.

In the dining-room, on the ground-floor, are assembled all the portraits of the Orleans Gallery; the royal and historical personages during the reign of Louis XIV., the Orleans regency, the reign of Louis XV., and the happy part of the life of Louis XVI. and Marie Antoinette. The adjoining rooms are dedicated solely to modern British art; including *chef-d'œuvres* of Reynolds, Lawrence, Opie, Wilkie, Turner, Landseer, Callcott, &c.; busts by Chantrey, and elegant groups by Westmacott, senior and junior; and in her Grace's drawing-room the chimney-piece supports are statues of her two lovely daughters, exquisitely sculptured by the younger Westmacott. Other marble chimney-pieces are adorned with small bronzes and elegant vessels, after the antique; busts, and bas-relief.

Among the pictures on the ground-floor are, Winterhalter's Scene from the Decameron; a River Scene, by J. Van Goyen, his finest work; St. Justina and St. Rufina, half-lengths, by Murillo, very fine; the Marriage of St. Catherine, by Rubens; Festival before the Flood (17 figures), by W. Etty, R.A.; Scene from the *Spectator*, by T. Stothard, R.A.; the Breakfast Table, by Wilkie, R.A.; Cassandra foretelling Hector's Death, by B. R. Haydon; the Passage of the Red Sea by the Israelites, by F. Danby, A.R.A.; the Assuaging of the Waters, by John Martin; Death of the Virgin, by Albert Durer; Head of a Young Man, by Parmegiano; Lady Gower (now Duchess Dowager of Sutherland) and her Daughter (now Duchess of Argyll), by Sir Thomas Lawrence; the Day after the Battle of Chevy Chase, by E. Bird, R.A. Also a drawing, by Prince Albert, of his son, the Prince of Wales; and a life-size bronze statue of the Marquis of Stafford, by Feucheres. Among the historic memorials is a bronze cast taken from the face of Napoleon, after death.

The collection of pictures can only be seen by special invitation or permission of the family.

TOMLINE'S (Mr. G.), No. 1, Carlton House-terrace, contains a few first-class pictures; including the Pool of Bethesda, or Christ healing the Paralytic, by Murillo, purchased by Mr. Tomline from the Soult collection for 7500*l.* Here also is the picture of Christ and the Woman of Samaria, by Annibal Caracci; and the identical portrait of Charles V., to paint which Titian journeyed to Bologna.

UXBRIDGE HOUSE (Marquis of Anglesey), Burlington Gardens, built by Joseph Bonomi, in 1792, occupies the site of Queensbury House (Leoni, architect, 1726), where died the poet Gay, December 4, 1732.

WALKER'S HOUSE (See p. 56).

## MARKETS.

**F**EW of the Market-buildings of the metropolis are of tasteful design, such as we are accustomed to admire in the ancient and modern market-places of the Continent. The early history and location of the London Markets, are, however, curious.

"Shall the large mutton smoke upon your boards?  
Such Newgate's copious market best affords.  
Wouldst thou wish mighty beel augment thy meal?  
See. Leadenhall; St. James's sends thee veal;  
Thames-street gives cheeses Covent Garden fruits;  
Moorfields old books, and Monmouth-street old suits."

Gay's *Trivia*, book ii.

BILLINGSGATE is described at pp. 54 and 55. It was once a landing-place for other merchandise than fish: "1550.—There came a sheppe of egges and shurtes and smockes out of France to Byllynsgesgatte." (*Grey Friars' Chron.*)

BOROUGH MARKET, Southwark, for provisions, occupies the site of a mansion of the see of Rochester; and the ground is held of the Bishop by the parish of St. Saviour, at an annual rent of 14*l.* 13*s.* 6*d.*

CLARE MARKET, at the south-west angle of Lincoln's-inn-fields, for butcher's-meat, fish, and vegetables, was built by William Holles, Baron Houghton and Earl of Clare, in Clement's-inn-fields, about the year 1660, and was first called *New Market*.

The City and Lord Clare had a long lawsuit concerning this estate: the City yielded; "and from the success of this noble lord, they have got several charters for the creating of several other markets since the year 1660: as that of St. James, by the Earl of St. Albans; Bloomsbury, by the Earl of Southampton; Brook Market, by the Lord Brook; Hungerford Market; Newport Market; besides the Haymarket, New Charing Cross, and that at Petty France at Westminster, with their Mayfair in the fields behind Piccadilly."—*Hartl. MS.* 5900.

Here was a chapel for the use of the butchers, whither Orator Henley removed from Newport Market, and preached in a tub covered with velvet and gold; the altar being inscribed "The Primitive Eucharist." Henley, "preacher at once, and zany of the age," lectured "at the Oratory" upon theology, "skits of the fashions," "the beau monde from before Noah's flood," and "bobs at the times;" but straying into sedition, he was cited before the Privy Council, who dismissed him as an impudent fellow. He lectured here for nearly 20 years; the admission was 1*s.*, and he had medals struck as tickets. In Gibbon's-court, Clare Market, was a theatre, where Killigrew's company performed some time. "Nov. 20, 1660.—Mr. Shepley and I to the new playhouse near Lincoln's-inn-fields (which was formerly Gibbon's Tennis-court) where the play of 'Beggars Bush' was newly begun: . . . it is the finest playhouse, I believe, that ever was in England." (*Pepys*.) Its remains were long used as a carpenter's shop, slaughter-houses, &c. Clare Market lying between the two great theatres, its butchers were the arbiters of the galleries, the leaders of theatrical rows, the musicians at actresses' marriages, the chief mourners at players' funerals. In and around the Market were the signs of the *Sun*; *Bull and Butcher*, afterwards *Spiller's Head*; *The Grange*; *The Bull's Head*, where met the "Shepherd and his Flock Club," and where Dr. Radcliffe was carousing when he received the news of the loss of his 5000*l.* venture. Hogarth, when an apprentice, was here an early boon companion of Joe Miller. Next is the *Black Jack*, in Portsmouth-street, the haunt of Joe Miller, the comedian, and where he uttered his time-honoured "jests;" the house remains, but the sign has disappeared. Miller died in 1738, and was buried in St. Clement's upper ground, in Portugal-street, where his grave-stone was inscribed with the following epitaph, written by Stephen Duck: "Here lie the remains of honest Joe Miller, who was a tender husband, a sincere friend, a facetious companion, and an excellent comedian. He departed this life, the 15th day of August, 1738, aged 54 years.

"If humour, wit, and honesty could save  
The humorous, witty, honest, from the grave,  
This grave had not so soon its tenant found,  
With honesty, and wit, and humour crown'd.  
Or could esteem and love preserve our health,  
And guard us longer from the stroke of Death,  
The stroke of Death on him had later fell,  
Whom all mankind esteem'd and loved so well."

The stone was restored by the parish grave-digger at the close of the last century; and in 1816 a new stone was set up by Mr. Jarvis Buck, churchwarden, who added "S. Duck" to the epitaph. At the *Black Jack* (also called the *Jump*), a club known as "the Honourable Society of Jackers" met until 1816. (*See* "Jo: Miller, a biography," by W. H. Wills, prefixed to *The Family Jo: Miller*, 1848.)

Clare Market, which had long been one of the poorest and most squalid neighbourhoods in the metropolis, has of late years been greatly improved by the establishment of a Mission, with a chapel in the centre; also, an orphan refuge, a needlewoman's home, a working man's club, soup-kitchen, Bible-class, &c., to all which the recipients themselves contribute.

COLOMBIA MARKET, Bethnal Green (Darbishire, architect), has been built at the cost of Miss Burdett Coutts, for providing good supplies, with great attention to cleanliness and sanitary regulation; the shops surrounding the market to be let for various trades. The design is old English, and the plan quadrangular, of fine brick and stone, and terra-cotta; in a lofty central tower is the machinery for the water supply. Altogether this is the most picturesque market-place in the metropolis.

CORN MARKET, Mark-lane. (See CORN EXCHANGE, p. 329.)

COVENT-GARDEN MARKET was established towards the end of Charles II.'s reign (see p. 293), on the site of the garden of the Convent at Westminster; and in Chamberlayne's *Notitia*, 1726, it is printed Covent Garden. Strype describes it, in 1698, as held for fruits, herbs, roots, and flowers, "beneath a small grotto of trees," on Tuesdays, Thursdays, and Saturdays, the present market-days. In 1704, when Tavistock-row was built, the market-people were compelled to assemble in the square, and here their stalls increased to dwellings.

Steele (*Tatler*, No. 454, Aug. 11, 1712), in his boat-voyage from Richmond, "soon fell in with a fleet of gardeners, bound for the several market-ports of London. . . . It was very easy to observe by their sailing, and the countenances of the ruddy virgins who were supercargoes, the part of the town to which they were bound. There was an air in the purveyors for Covent Garden, who frequently converse with morning rakes, very unlike the seeming sobriety of those bound for Stocks Market. . . . I landed, with ten sail of apricot boats, at Strand Bridge, after having put in at Nine Elms and taken in melons, consigned by Mr. Cuffe, of that place, to Sarah Sewell and Co., at their stall in Covent Garden."

Still the market was a strange assemblage of shed and penthouse, rude stall, and crazy tenement, coffee-house and gin-shop, intersected by narrow and ill-lit footways, until the site was cleared for a new market in 1829. The present market-buildings were designed by Fowler, and are perfectly fitted for their various uses; evince considerable architectural skill, and are so characteristic of the purpose for which the market has been erected, that it cannot be mistaken for anything else but what it is; unless the inscription, "JOHN DUKE OF BEDFORD, erected MDCCLXXX," over the east end, lead posterity to regard this as a patriotic act; whereas the Bedford family derive a large rental from the market, stated at 5000*l.* per annum. The area is 3 acres. The rent of some of the shops is from 400*l.* to 500*l.* per annum.

The plan consists of a quadrangle, with two exterior colonnades on the north and south sides, in front of shops; and in the central building an avenue open to the roof, with shops on each side for forced articles, the choice fruits, vegetables, &c. At the east end is a quadruple colonnade, with a terrace over, and two large conservatories, a roofed fountain of Devonshire marble, and an emblematical group of figures on the pediment of a screen between the conservatories. At the west end is a colonnade, and below is the iron-roofed Flower Market. There are store-cellars almost throughout the area; and water is supplied from an Artesian well sunk beneath the central path, 280 feet deep, and affording 1600 gallons per hour, distributed throughout the market by a steam-engine.

The supplies of fruit and vegetables sent to this market, in variety, excellence, and quantity, surpass those of all other countries. There is more certainty of being able to purchase a pine-apple here, every day in the year, than in Jamaica and Calcutta, where pines are indigenous. Forced asparagus, potatoes, sea-kale, rhubarb-stalks, mushrooms, French beans, and early cucumbers, are to be had in January and February; in March, forced cherries, strawberries, and spring spinach; in April, grapes, peaches, and melons, with early peas; in May, all forced articles in abundance. The supply of forced flowers, of greenhouse plants, and in summer of hardy flowers and shrubs, is equally varied and abundant; and of curious herbs for domestic medicines, distilleries, &c., upwards of 500 species may be procured at the shop of one herbalist.

From distant counties are sent up the products of acres of turnip-tops, cabbages, and peas; while hundreds of acres in Cornwall and Devon grow early potatoes, broccoli, peas, &c., which reach London by railway. Green peas have been sold here at Christmas at 2*l.* the quart, and asparagus and rhubarb at 15*s.* the bundle. Peaches are sold at 60*s.* a dozen, and cherries at 40*s.* a pound.

The foreign green-fruit trade of Covent Garden is very extensive in pine-apples, melons, cherries, apples and pears. The cheap West India pine-apple trade dates from 1844, when pines were first cried in the streets "a penny a slice."

FARRINGTON MARKET, between the west end of Shoe-lane and Farringdon-street, covers 1½ acres of ground, and was built by William Montague, the City architect; it was opened in 1829, on the removal of Fleet Market. It is well placed for drainage, parallel with Holborn-hill; the site and buildings (including a clock-tower of Italian design) cost about 250,000*l.*; but the Market is little frequented.

HUNGERFORD MARKET, West Strand, occupied the site of a market-place built in 1680 by Sir Edward Hungerford, from his town-house and grounds, extending to the

Thames. In 1685, Sir Stephen Fox and Sir Christopher Wren were proprietors of the market-estate; in the centre was a lofty hall, with a bust of one of the Hungerfords, and an inscription stating the market-place to have been erected "*utilitati publicæ*;" but Strype, in 1720, describes it as "baulk'd at first," and turned to little account. The old hall and a colonnade remained until 1830, when premises adapted from a Roman market, were commenced for a company by Fowler, architect of Covent Garden Market. The lower quadrangle was the fish-market, and the upper for vegetables, fruit, meat, &c. The market was publicly opened July 2, 1833; but proved alike unprofitable with the original Hungerford scheme. The market-place has been removed for the Charing Cross Railway Terminus and Hotel.

LEADENHALL MARKET, Gracechurch-street, is the great poultry and game market, where 4,000,000 birds, &c., have been sold in one year. In 1533 the beef sold here was not to exceed a halfpenny a pound, and mutton a halfpenny half-farthing.

In severe winters here are large supplies of wild ducks, principally from Holland; woodcocks, &c.; snipes from Ireland; pigeons from France; rabbits from Ostend; blackcocks from Scotland. "Sometimes, after a grand *battue*, there is a glut of hares and pheasants in Leadenhall Market." (*Macculloch.*) The returns for poultry, game, and rabbits in one year equal half a million of money. A few years since Ostend rabbits were hardly saleable in London; now, from 50 to 100 tons are imported weekly by steamers, and 1000 persons are employed in this rabbit trade. On Christmas Eve here are displayed 100,000 geese and turkeys, including importations from France, Belgium, Holland, and Ireland. Here, also, is a market for live animals,—fancy dogs and rabbits, cage-birds, &c.

METROPOLITAN CATTLE MARKET, the, erected to supply the place of Smithfield, where the last market was held June 11, 1855, occupies 75 acres of ground. The Market-place is an irregular quadrangle, with a lofty clock-tower in the centre, and four taverns at the four corners; the open area being set off into divisions for the different kinds of live stock. No less than 400,000*l.* have been expended upon the land and buildings. In the parts of the market appropriated for the reception of the different cattle, each central rail is decorated with characteristic casts of heads of oxen, sheep, pigs, &c.: these were designed and modelled by Bell, the sculptor. The open space of the market will accommodate at one time about 7000 cattle and 42,000 sheep, with a proportionate number of calves and pigs. The calf and pig-markets are covered, the roofs being supported by iron columns, which act at the same time as water-drains. In the centre of the whole area is a twelve-sided structure, called "Bank Buildings," surmounted by an elegant campanile, or bell-tower. The twelve sides give entrance to twelve sets of offices occupied by bankers, salesmen, railway companies, and electric telegraph companies.

In one year, 1862, the returns have been 304,741 bullocks, 1,498,500 sheep, 27,951 calves, and 29,470 pigs. The great Christmas sale in the closing year of old Smithfield ranged from 6000 to 7000 bullocks, and between 20,000 and 25,000 sheep. On December 15, 1862, the bullocks were 8340, being a greater number than ever before known at any metropolitan market. The market-days for cattle, sheep, and pigs are Mondays and Thursdays; there is a miscellaneous market for horses, asses, and goats on Fridays.

NEWGATE MARKET, between Paternoster-row and Newgate-street, was formerly kept in the latter street, and was a market for meal. "1548. This yere before Alhalloutyd was sett up the howse for the markyt folke in Newgate Market for to waye melle in." (*Grey Friars' Chron.*) It is now the great Meat Market. Upon the site of the old College of Physicians, Warwick-lane, is held another meat market.

Butcher-Hall-lane (now King Edward-street), Newgate-street, was originally named from the great number of *butchers* living here; and there is extant a petition to Parliament, dated 1380, praying that they might be restrained from throwing the blood and entrails of slaughtered animals into the river Fleet, and that they might be compelled to "kill" at "Knyghtsbrigg," or elsewhere out of London; and this seems to have been done for several reigns.

The City poulterers were strictly prohibited from standing for sale at the Carveu of Leadenhall, a place with "four faces," which was expressly reserved for foreigners; and were compelled, under pain of forfeiture, to stand towards the west of the church of St. Michael, on Cornhill. Similar regulations were in force at Newgate Market, the object being to prevent "denizens" from meddling with the foreigners in sale or purchase. Foreigners were prohibited from carrying their poultry to the houses of denizen poulterers, or lodging in their houses, and were liable to forfeiture and imprisonment if they did not go direct to the market. Any poulterer who sold above the price fixed by the regulations was liable to penalties; and any person who bought above the price was liable to forfeit what he so bought, and to be further punished by the local authorities.

NEWPORT MARKET, Soho, named from the town-house of the Earl of Newport in the neighbourhood, is a meat-market, with its butchers, slaughtermen, and drovers. Here Orator Henley held his mock preaching. The father of John Horne Tooke was a poulterer in Newport market,—as he told his schoolfellows, “a Turkey merchant.”

OXFORD MARKET, north of Oxford-street, was built for Edward, Earl of Oxford, in 1731. Barry, the painter, who lived in Castle-street, describes it ironically as “the most classic London market—that of Oxford.”

SMITHFIELD, or West Smithfield (so called to distinguish it from East Smithfield, east of Tower-hill), was the only “live” market, and the oldest in the metropolis. The name signifies a smooth plain; “smith” being corrupted from the Saxon *smeth*, smooth. Fitzstephen calls it “a certain plain field (*planus campus*), both in reality and name, situated without one of the City gates, even in the very suburbs:” horses and cattle were sold here in 1150, horse-racing was common, and the horse-market was to our day called “Smithfield races.” The original extent of Smithfield was about three acres; the market-place was paved, drained, and railed in, 1685; subsequently enlarged to  $4\frac{1}{2}$  acres, and since 1834 to  $6\frac{1}{4}$  acres. Yet this enlargement proved disproportionate to the requirements: in 1731 there were only 8304 head of cattle sold in Smithfield; in 1846, 210,757 head of cattle, and 1,518,510 sheep. The old City laws for its regulation were called the “Statutes of Smithfield.” Here might be shown 4000 beasts and about 30,000 sheep, the latter in 1509 pens: and there were 50 pens for pigs. Altogether Smithfield was the largest live market in the world, and its sales amounted to 7,000,000*l.* annually. It is thus sketched by Charles Dickens:—

“It was market morning. The ground was covered nearly ankle-deep with filth and mire; and a thick steam perpetually rising from the reeking bodies of the cattle, and mingling with the fog, which seemed to rest upon the chimney-tops, hung heavily above. All the pens in the centre of the large area, and as many temporary ones as could be crowded into the vacant space, were filled with sheep; and tied up to posts by the gutter-side were long lines of beasts and oxen three or four deep. Countrymen, butchers, drovers, hawkers, boys, thieves, idlers, and vagabonds of every low grade, were mingled together in a dense mass: the whistling of drovers, the barking of dogs, the bellowing and plunging of beasts, the bleating of sheep, and grunting and squeaking of pigs; the cries of hawkers, the shouts, oaths, and quarrelling on all sides, the ringing of bells, and the roar of voices that issued from every public-house; the crowding, pushing, driving, beating, whooping, and yelling: the hideous and discordant din that resounded from every corner of the market; and the unwashed, unshaven, squalid, and dirty figures constantly running to and fro, and bursting in and out of the throng, rendered it a stunning and bewildering scene which quite confused the senses.”—*Oliver Twist*.

The market, with its attendant nuisances of knackers' yards, tainted-sausage makers, slaughter-houses, tripe-dressers, cat's-meat boilers, catgut-spinners, bone-houses, and other noxious trades, in the very heart of London, was, however, in 1852, condemned by law to be removed into Copenhagen Fields, Islington.

The posts and rails of the old cattle pens were turned into printing materials, *reglet* chiefly. Upon the site of Smithfield and additional ground, is to be erected a Meat and Poultry Market, of elegant design.

STOCKS MARKET, for fish and flesh, was established in 1282, on the site of the present Mansion House, and was named from a pair of stocks placed there for punishing offenders. In the reign of Edward II. it was decreed one of the City Flesh and Fish Markets. After the Great Fire it became a fine market for fruit, roots, and herbs, “surpassing all the other fruit-markets in London” (*Styrpe*): “where is such a garden in Europe as the Stocks Market?” (*Shadwell*, 1689). At the north end was the Conduit; and the equestrian statue of John Sobieski, set up by Sir Robert Viner, with a new head, as Charles II. The market was removed for the Mansion House site in 1779. A few dealers in costly fruit kept shops hard by until our time.

#### MARK-LANE,

**B**ETWEEN Fenchurch-street and Great Tower-street, is now the site of our great Metropolitan Corn Market, which originated as follows. There exists a token—“Joseph Taylor, in Blanch Appleton-court, at the end of Marke-lane,”—referring us to a spot which now, amid modern alterations and improvements, is somewhat difficult to trace. There is no mention of it in the list of streets, courts, &c., in the city of London, published in 1722; nor is it in Maitland's list or plans (edit. 1756), although it is mentioned in the text (p. 778) as being “a large open square place with a passage for carts,

and corruptly called Blind Chapel-court." It appears from Stow that the north-east corner of Mark-lane (now occupied by the premises of Sharp and Son, tea-dealers), was, as far back as 13 Edward I., the site of a manor-house called Blanch Appleton; and that a lane at the back of it was granted by the king to be enclosed and shut up. Attached to the manor was the privilege of holding a market, or mart, but of which, Stow observes, "nothing remaineth for memory but the name of Mart-lane, and that corruptly termed Marke-lane." In the reign of Richard II. the manor was possessed by Sir Thomas Roos. Stow further informs us, that in 3 Edward IV., "all basket-makers, wyer-drawers, and other forrainers, were permitted to have shops in this mannour of Blanch Appleton, and not elsewhere in this citie, or suburbs thereof." In a communication to the Society of Antiquaries from Mr. T. Lott, relating to the arrangements made by the city of London for the funeral procession of the body of Elizabeth, Queen of Henry VII., some curious particulars are given concerning this place, together with the amount in which the city assessed its inhabitants towards the expense of the procession, &c. Mr. Lott states that this district, which appears to have been a sort of sanctuary for non-freemen, is to this day called in the City Chamberlain's books the "Blanch Appleton lands." Milton's friend, Cyriac Skinner, was a merchant in this lane; and here Dr. Isaac Watts was minister of a Dissenters' meeting house.

#### MARTIN'S (ST.), LANE,

EXTENDING northward from Charing Cross and the east side of Trafalgar-square, to the junction of Long Acre with Cranbourn-street, appears in Aggas's plan (early in Elizabeth's reign) as a *green lane*, with only a few houses beyond St. Martin's Church, abutting into Covent Garden, which extended into Drury-lane. St. Martin's-lane was mostly built about 1613, and was first named "West Church-lane." A few of the houses are spacious and have noble staircases, those on the west side being the largest; some exteriors on the east side are good specimens of brickwork. Among the early tenants was Sir Theodore Mayerne, physician to James I.; Daniel Mytens, the painter; Sir John Suckling, the poet. Sir Hugh Platt, the most ingenious husbandman of his age, had a garden in St. Martin's-lane in 1606. Howell sends a maiden copy of his poem "to Sir Kenelm Digby, at his house in St. Martin's-lane," in 1641. (*Familiar Letters*, 5th edit. 1678, p. 393.) Here also lived the great Earl of Shaftesbury; Dr. Tenison, when vicar of St. Martin's; and Ambrose Philips, the Whig poet. Here too dwelt, nearly opposite May's-buildings, Sir Joshua Reynolds, when he first came to London; Sir James Thornhill, who, at the back of his house, established an artists' school, from which arose the Royal Academy; Roubiliac, who commenced practice in St. Peter's-court, a favourite haunt of artists; Fuseli, at No. 100 (first floor and staircase good). Old Slaughter's Coffee-house was once the great evening resort of artists, and Hogarth was a constant visitor. At No. 101 was built and exhibited the Apollonicon. No. 112 was the picture premises of Mr. Samuel Woodburn, the eminent English dealer in art, who died in 1853, leaving a valuable collection of the Italian, German, and Flemish old masters: among the English pictures was Hogarth's *Midnight Modern Conversation*, painted for Rich, of Covent Garden Theatre. No. 31 has a classically decorated exterior, in the style of Inigo Jones, and is engraved in Hakewell's *Architecture of the Seventeenth Century*, 1853. The first floor has an enriched ceiling.

A labyrinth of courts and alleys about St. Martin's church was removed in 1829 including the Bermudas, Caribbee or Cribbe Islands; and Porridge Island, noted for its cook-shops. Another knot, on the west side of St. Martin's-lane, was cleared away for Trafalgar-square, including Duke's-court. Hereabout Sir Christopher Wren, in conjunction with his friend, John Evelyn, in 1685, arranged the building of Archbishop Tenison's Library.

#### MARTIN'S (ST.) LE GRAND.

A COLLEGE founded by Withred King of Kent, in 700, and rebuilt and endowed about 1056 by the Saxon brothers Ingelric and Girard, was dedicated to St. Martin, to which was added *le Grand*, from its privileges, granted by monarchs who

occasionally resided here. The church and collegiate buildings covered the insulated ground now occupied by the General Post-Office; and the Sutherland View, 1543, shows the lofty spire and tower, wherein curfew was rung. Among the deans was William of Wykeham, who rebuilt the church: the advowsons were given by Henry VI. to the Abbots of Westminster. St. Martin's-le-Grand was a noted sanctuary; and after the demolition of the College, the site was built upon and occupied by non-freemen, to avoid the City jurisdiction. French, Germans, Dutch, and Scotch abounded here; their trades being shoemakers, tailors, makers of buttons and button-moulds, goldsmiths, &c.; and here are said to have first settled in England silk-throwsters. Among its counterfeit finery was the copper "St. Martin's-lace." Each trade had its quarter; hence Mould-maker's-row, removed in our time; and Shoemaker's-row, now the west side of St. Martin's-le-Grand; while Dean's, Bell, and Angel alleys denote the old ecclesiastical locality. In 1828, when the site was cleared for the Post-Office, a crypt by William of Wykeham was destroyed. (See CRYPTS, page 303.) Lower down were found remains of the Roman times: coins, beads, glass, and pottery; amphoræ, Samian ware, funeral urns, lachrymatories, &c.: denoting this to have been an important site of Roman London. (See Kempe's *St. Martin's-le-Grand*.)

Among the distinguished residents of Aldersgate-street, in a line with St. Martin's-le-Grand, was Mr., afterwards Sir William, Watson; at whose house, in 1746, were exhibited the effects of the Leyden phials, then newly invented; and here the Duke of Cumberland, recently returned from Scotland, took the shock with the point of the sword with which he had fought the battle of Culloden.—*The Gold-headed Cane*, p. 115.

In St. Martin's-le-Grand was the *Taborer's Inn*, of the time of Edward II.; and the *Crown Tavern*, at the end of Duck-lane, which, in 1709, had a noble room painted with classical subjects. Between Aldersgate and St. Anne's-lane end, was the *Mourning Bush*, the owner having painted black his carved sign (a bush), after the beheading of Charles I.; its vaulted cellars, with regular courses of Roman brick, form the foundation of the present *New Post-office Coffee House*. Adjoining these massive remains runs a portion of the City wall.

## MARYLEBONE, *and 717 Court*

A MANOR of the hundred of Ossulton, in Middlesex, and the largest parish of London (more than twice the extent of the City, and population greater), was, at the commencement of the last century, a small village about a mile N.W. from the nearest part of the metropolis. It was originally called Tyburn, or Tybourne, from its being on the *bourne*, or brook, which runs from Hampstead into the Thames; and its church being dedicated to St. Mary, the parish was named St. Mary-at-the-bourne, Mary-le-bone, or Marybone. In a record of Henry VIII. it is called Tyborne, alias Maryborne, alias Marybourne (*Lysons*). It extends northward to Primrose Hill, west to Kilburn turnpike, and south to Oxford-street, inclusive: it is  $8\frac{1}{4}$  miles in circumference, and contains about 1700 acres of land; of which, till about 1760, two-thirds were chiefly pasture-fields.

The Manor of Tybourn, valued at 52 shillings in Domesday book, and in King Edward's time at 100 shillings, was exchanged by the then lord, in 1544, with Henry VIII. for certain church lands; it was leased by Queen Elizabeth, in 1583 and 1595, at the yearly rent of 16*l.* 11*s.* 8*d.*; in 1611 it was sold by James I. (*excepting the park*) for 829*l.* 3*s.* 4*d.*; in 1710 it was sold for 17,500*l.*, the rental being then 900*l.* per annum; and about 1813 the manor passed from the second Duke of Portland to the Crown, by an exchange of land valued at 40,000*l.* The manor-house, a large gabled building, not unpicturesque, was taken down in 1791.

*Marylebone Park* was a hunting-ground in the reign of Queen Elizabeth: in 1600 the ambassadors from Russia and their retinue rode through the City to hunt in Marylebone Park; and here Sir Charles Blount (afterwards Earl of Devonshire), one of the challengers in the Field of Cloth-of-Gold, had a tilt with the Earl of Essex, and wounded him. The park, reserved by James I., was assigned by Charles I. as a security for debt; but was sold by Cromwell for 13,215*l.* 6*s.* 8*d.*, including deer, and timber, except that marked for the navy. At the Restoration the park was re-assigned, till the debt was discharged. The site had been previously disparked, and was never afterwards stocked; but was let on leases, upon the expiry of which the ground was relaid out, by Nash, and named Regent's Park.

*Bowling-greens* were also among the celebrities of Marylebone; where, says the grave John Locke (*Diary*, 1679), a curious stranger "may see several persons of quality bowling, two or three times a week, all the summer." The bowling-green of the *Rose Tavern* and gaming-house in High-street is referred to in Lady Mary Wortley Montague's memorable line (see p. 8); and it is one of the scenes of Capt. Macheath's debaucheries, in Gay's *Beggars' Opera*. This and an adjoining bowling-green were incorporated in *Marylebone Gardens*, open gratis to all classes; but the company becoming more select, one shilling entrance-money was charged, an equivalent being allowed in viands. Here were given balls and concerts; Handel's music was played, under Dr. Arne's direction, followed by fireworks, and in 1772, a model picture of Mount Etna in eruption. Burlettas after Shakspeare were recited in the theatre here in 1774; and in 1776 was exhibited a representation of the Boulevards at Paris, Egyptian Pyramids, &c.: the gardens were suppressed in 1777-8, and the site built upon.

A deed of assignment made by Thomas Lowe, the singer, conveying his property in Marylebone Gardens, to trustees, for the benefit of his creditors, in 1769, was in the possession of the late Mr. Sampson Hodgkinson, who was familiar with the parochial history of Marylebone. From this deed we learn that the premises of Rysbraeck, the statuary, were formerly part of the *Great (Marylebone) Garden*. (See Smith's *St. Marylebone*, 1833.)

The orchestra of the Gardens stood upon the site of No. 17, Devonshire-place, nearly opposite the old church described at page 183.

Chatterton wrote a burletta, entitled *The Revenge*, to be performed at Marylebone Gardens; and that fortunate collector, Mr. Upcott, then librarian of the London Institution, found upon the counter of a cheesemonger's shop in the City, the above drama, in the handwriting of Chatterton, with his receipt given to Henslow, the proprietor of the Gardens, for the copy-money paid for the piece. It was published by Tom King, the bookseller and book-auctioneer; but its authenticity was doubted.

*Prize-fighting* was a pastime of this period, and Marylebone a place at which "to learn valour" (*Beggars' Opera*). Here was the boarded house of Figg, "the Atlas of the Sword," whose portrait is in the second plate of Hogarth's *Rake's Progress*. Near Figg's was Broughton's Amphitheatre, often crowded with amateurs of high rank. In the *Evening Post*, March 16, 1715 we find: "On Wednesday last, four gentlemen were robbed and stripped in the fields between London and Mary-le-bon."

Between 1718 and 1729 was built the north side of Tyburn-road, now Oxford-street; and the squares and streets northward were then commenced: still, much of the ground between the new buildings and the village of Marylebone was pasture-fields; and Maitland, in his *History of London*, 1739, states there to have been then only 577 houses in the parish, and 35 persons who kept coaches. In 1795 there were 6200 houses; in 1861, houses 16,370.

In 1841 the Vestry of St. Marylebone accepted tenders from certain contractors to the amount of 4150*l.* for permission to cart away the ashes (breeze) from the several houses in this vast parish.

Marylebone is a parliamentary borough, containing the three parishes of St. Marylebone, Paddington, and St. Pancras. (See CHURCHES, St. Marylebone, p. 183.) In the Parish Register is the following entry: "Georgiana Augusta Frederica Elliott, daughter of H.R.H. George, Prince of Wales, and Grace Elliott; born 30 March, and baptized 30 July, 1782."

### MAY FAIR,

THE district north of Piccadilly, and between Park-lane and Berkeley-square, was originally Brookfield; but received its present name from a *fair* being held there by grant of James II., after the suppression of St. James's Fair, to commence on *May 1*, and continue fifteen days; where multitudes of the booths were "not for trade and merchandize, but for musick, shows, drinking, gaming, raffling, lotteries, stage-plays, and drolls." It was frequented "by all the nobility in town;" but was suppressed in 1708, when the downfall of May Fair quite sunk the price of Pinkethman's tame elephant, and sent his ingenious company of strollers to Greenwich. (See *Tatler*, Nos. 4 and 20). The Fair was, however, revived; and John Carter describes its "booths for jugglers; prize-fighters, both at cudgels and back-sword; boxing-matches, and wild beasts. The sports not under cover were mountebanks, fire-eaters, ass-racing, sausage-tables, dice ditto, up-and-downs, merry-go-rounds, bull-baiting,

grinning for a hat, running for a shift, hasty-pudding-eaters, eel-divers," &c. The site of the Fair is now occupied by Hertford-street, Curzon-street, Shepherd's Market, &c.; but the old wooden public-house, *The Dog and Duck*, with its willow-shaded pond for duck-hunting, is remembered: at fair-time, the second story of the market-house was let for the playhouse. The Fair was not finally abolished until late in the reign of George III. In Curzon-street was "the Rev. Alexander Keith's Chapel," with an entrance like a country church-porch, where marriages at a minute's notice were almost as notorious as at the Fleet—6000 in one year. Keith's charge was one guinea, with a licence on a five-shilling stamp and certificate. The chapel was much frequented during May Fair: here the Duke of Kingston was married to Miss Chudleigh; the Baroness Clinton to the Hon. Mr. Shirley; and James, fourth Duke of Hamilton, in 1752, to the youngest of the two beautiful Miss Gunnings, with a bed-curtain ring, half an hour after midnight. The registers of the May-Fair marriages, in three folio volumes, closely and clearly written, are kept with the parish-books of St. George's, Hanover-square. A minute description of the above district, entitled, "The Fair of May Fair," will be found in *Walks and Talks about London*; and in *London Society*, No. 24, with an engraving of the Fair one hundred years ago, from an original drawing.

## MEWS, ROYAL.

UPON the site of the National Gallery, on the north side of Charing Cross, when falconry was a royal pastime, were kept the King's hawks, in a building called the *Mews*. In 1319 (13 Edward II.) John De la Becke had the custody of the King's Mews ("de mutis apud Charryng juxta Westmonasterium"). In the reign of Richard II., Sir Simon Burley was Keeper of the King's Falcons; and Chaucer was Clerk of the King's Works, and of the Mews at Charing. In 1534, the royal stables at Lomsbery (since Bloomsbury) were burnt; after which the hawks were removed from Charing Cross, and the premises rebuilt for the stabling of the King's horses, in the reigns of Edward VI. and Queen Mary; the building retaining the name of *Mews*, and public stables assuming the same. Here Colonel Joyce was imprisoned by order of Oliver Cromwell; being carried away by musqueteers and put into the Dutch prison, and removed thence to another chamber in the Mews. It was a gamblers' resort: Gay, in his *Trivia*, says of "careful observers":

"Untempted, they contemn the juggler's feats,  
Pass by the Meuse, nor try the thimble's cheats."

In 1732 the façade was rebuilt from the design of Kent, with three stone cupolas. Mac Owen Swiney was made Keeper of the Mews; he had been manager of Drury Lane and the Queen's Theatres, and died in 1754, leaving his fortune to Peg Woffington. At the Mews were kept the royal stud, the gilt state-coach, and the other royal carriages, until their removal to the new Mews at Pimlico, in 1824. The building at Charing Cross was occupied, in 1828, as the exhibition-rooms of the National Repository, and by Cross' Menagerie from Exeter Change; and here was temporarily housed a portion of the Public Records. The premises were taken down in 1830, for the site of the National Gallery. The last of the original Mews was occupied as a barrack: it was built of red Tudor brick, with buttresses, and crenellated; stone window-cases and dressings.

At the Mews-gate lived for more than forty years "honest Tom Payne" (d. 1799), the bookseller; whose little shop, in the shape of an L, was the first named a literary coffee-house, from its knot of literary frequenters.

THE QUEEN'S MEWS, at the rear of Buckingham Palace, Queen's-row, Pimlico, was built in 1824, and consists of two quadrangles, entered by a Doric archway beneath a clock-tower. Visitors are admitted by a ticket from the Master of the Horse. In the first quadrangle are the coach-houses, and in the second the horses. Here are usually forty carriages, besides Her Majesty's state-coach: the dress-carriages are fine specimens of coach-building. The horses include road-teams, saddle-horses, and hacks; and the dun and black Hanoverian state-horses (generally from twelve to fourteen of each) for the state-coach; and here are usually kept the foreign horses presented to the sovereign. In the harness-room is the red morocco state-harness for eight horses,

with massive silver-gilt furniture, the harness for each horse weighing 1 cwt.; besides the purple morocco state-harness made when George IV. was Regent.

*The Mews Clock* has stone dials (6 feet 10 inches in diameter), with the figures sunk (as in the Egyptian monuments), and a sunk centre for the hour-hand to traverse, so as to bring the minute-hand close to the figures, and thus avoid nearly all error from parallax—an improvement by Vulliamy.

*The Riding-House* belonged to Buckingham House: here, in 1771, were publicly exhibited the Queen's elephants, from one of which Lindley Murray, the grammarian, had a narrow escape.

ROYAL MEWS, Prince's-street, Westminster, was built by Decimus Burton, for stables to the House of Commons, upon a space formerly occupied by a nursery of 200 trees, planted upon the site of the markets and narrow streets on the north side of Westminster Abbey, and removed between 1804 and 1808. Here was kept the Speaker's State Coach (See STATE COACHES). In 1854, the Mews was taken down, and upon its foundations was built the present Stationery Office, by Pennethorne; the old office, Lord Milford's house, being taken down, and the site added to Birdcage Walk, in 1855.

### MINORIES, THE,

LEADING from Aldgate High-street to Tower-hill, is named from the "Sorores Minores," "Minoresses," or nuns of the order of St. Clare, founded 1293, whose convent stood in this street: upon its site on the east side, is built the church of the Holy Trinity. The parish was formerly the convent close, and is without the walls of London, although in the Liberty of the Tower of London; therefore its inhabitants have no vote in the Common Council. In Haydon-square is a spring of pure water, which was the convent fountain; and here lived Sir Isaac Newton when warden and master-worker of the Mint: the house was taken down in 1852. On May 24, 1853, during excavations on the west side of Haydon-square, was found a stone sarcophagus of the late Roman period, sculptured with a basket of fruit, a metallic bust, and foliage, and containing a leaden coffin with the remains of a child: the sarcophagus is now in the British Museum. In the Minories neighbourhood have been found sculptured sepulchral stones and urns, and a third brass coin of Valens. In the churchyard are deposited some bones taken from the field of Culloden in 1745; and in the church is preserved a head, though from what body is unknown.

The parish of Holy Trinity is minutely described in the *Archæologia*, in 1803, by the Rev. Dr. Fly, F.S.A., 63 years incumbent of the parish; and the account was reprinted in 1851 (with additions), by the Rev. T. Hill, incumbent. After the dissolution of the convent, there were built here "storehouses for armour and habiliments of war, with divers workhouses serving to the same purpose" (*Stow*):

"The Mulcibers who in the Minories sweat."—*Congreve*.

The street has been noted for its gunsmiths to our time: and in 1816 their shops were plundered by the Spa Fields rioters on their way to "summon the Tower!" From the Minories station the Blackwall Railway crosses the street by an unsightly enclosed viaduct.

### MINT, THE ROYAL,

LONDON, has been the chief seat of the Mint from the remotest period. Some of the Roman emperors are presumed to have coined money here; but "the silver penny of Alfred," says Ruding, "is the first authentic coin yet discovered which can with certainty be appropriated to the London Mint." The Mint in the Tower dates from the erection of that fortress; and it has been worked in almost every reign from the Conquest to our own times. The Mint buildings—"houses, mills, and engines"—used for coining were between the outer and inner ward or ballium, thence named *Mint-street*.

The Roman Mint of London has been ably illustrated in a paper read by Mr. De Salis to the Archæological Institute, "on the coins issued from A.D. 287 to A.D. 330." He commenced with a description of the early coins of Carausius, which are of inferior workmanship and without mint-marks. These were succeeded during the later part of his reign and that of Allectus, by coins of better fabric, bearing the mint-marks of London and Camulodunum, copper only being found of the latter. The coins of Carausius and Allectus were struck between 287 and 296, and all the remaining coins with the mint-marks L, LX, or LOX belong to the reign of Constantine. After the restoration in 296, we have, instead of the copper denarius issued by the two usurpers, a larger coin called the *folles*, which gradually decreases in size from, say a penny, to a farthing. No gold was issued in London during this period, but there are billon coins with the exergual mark, FLX, of Constantine and his sons. Having described the

coins in issue from 296 to 333, Mr. De Salis remarked that the suppression of the Mint of London was one of the many administrative changes which attended the transfer to the east of the imperial residence. It had become an establishment of little importance, not having coined anything but copper and billon since the downfall of Allectus. A temporary revival of this Mint took place under Magnus Maximus, who rebelled in Britain in 383. There are very rare gold solidi with the mint-mark *AVGON*, which are much more likely to belong to Londinium Augusta than to Augusta Trevirorum, of which we have similar coins of the same usurper, marked *TROB* and *SMTR*. No coins with the mint-mark *AVGON* have been found of the successors of Magnus Maximus, and it is probable that the Mint of London, which he was obliged to revive after his successful rebellion, was again closed when he found himself in possession of the Western Empire after the overthrow of Gratian.

In the 35th Henry III. the Mint warden's salary was 2s. a day. The constitution of superior officers established in the reign of Edward II., continued with few alterations until 1815. In 1287, 600 Jews were confined within the Tower at one time for clipping and adulterating the coin of the realm. In 1546, one William Foxley, a pot-maker for the Mint, fell asleep in the Tower, and could not be waked for fourteen days and fifteen nights. Some of the Mint officers are buried in the church of St. Peter in the Tower, the chaplain and rector of which, by grant of Edward III., received 10s. from the clerk of the Mint, 13s. 4d. from the master of the Mint, and 1d. per week from the wages of each workman and teller of coins.

Lully, the alchemist, worked "in the chamber of St. Katherine" in the Tower, and was believed to supply the Mint with gold; and Edward III., Henry VI., and Edward IV. had faith in being able by alchemy to furnish the Mint with cheap gold and silver. In the reign of Edward III., the masters of the Mint were empowered by letters patent to take goldsmiths, smiths, and others, for the works of the Mint in the Tower; and to imprison any rebellious within the said Tower, until the King should determine their punishment; and this power was not discontinued in the reign of Elizabeth. Before the Reformation, ecclesiastics were sometimes comptrollers: "Should we," says Latimer, "have ministers of the Church to be comptrollers of the Mint? . . . I would fain know who comptrolleth the devil at home at his parish, while he comptrolleth the Mint?" (*Sermon*, 1548.) During the re-casting of the corrupt coin in the reign of Elizabeth, the queen publicly coined at the Tower several pieces with her own hand, and distributed them among her suite.

In 1695, Mr., afterwards Sir Isaac Newton, was appointed warden of the Mint; and in 1699 he was promoted to the mastership, which post he held till his death: his mathematical and chemical knowledge was of great service in this office; he wrote an official Report on the coinage, and drew up a table of assays of foreign coins. Newton lived some time in Haydon-square, Minories. In 1851 were sold several Mint *Curiosities*, once possessed by Stanesby Alchorne, king's assay-master: including the standard troy pound, determined by the Mint officers in 1758; also Crocker's Register-book of Drawings for Medals, certified by officers of the Mint, and containing thirty autographs of Sir Isaac Newton,—purchased by the British Museum.

The old Royal Mint—disused after the year 1810—occupied but a very small space within the walls of the Tower of London, and was situated at the north-east corner of the fortress. "The whole of the mechanical appliances—which were of the rudest character—and apparatus for executing the coinage of the realm filled but one room, and that not a particularly large one. The melting department was ridiculously small, and the crucibles used therein were easily moved by hand-power, even when charged with metal. The rolling-mills, of comparatively *miniature* size, were driven by four horses, ever going their 'weary rounds.' The cutting-out presses, of the most primitive kind, and some of which are retained in the new Royal Mint as curiosities, were worked by means of levers and by hand. An implement of a peculiar description called from its shape a 'cow,' was used for raising the protecting edges on the coins, whilst the stamping-presses were put in motion by the muscular strength of gangs of brawny labourers. In the year 1810 the New Mint superseded the Tower Money Factory, and to-day an area of ground as large as that covered by the entire Tower of London itself—within its moat boundary—is occupied by the workshops, coining-rooms, and offices of the British Mint."—*Abridged from the Mechanics' Magazine*.

The establishment formerly consisted of a master and worker, deputy-master, comptroller, king's assay master, king's clerk, and superintendent of machinery and dies; the master assayer, probationer assayer, weigher and teller, surveyor of meltings, surveyor of money-pressers, chief and second engraver, medallist, &c.; besides the company of moneyers, who had coined the public money from a very early

period, with exclusive corporate rights. The office of Warden was abolished in 1817. A new constitution was introduced in 1815, and was changed in 1851: it is now vested in the master and his deputy, subject to the Treasury. The mastership was formerly a political office: it was last so filled by Richard Lalor Sheil; in 1851 was appointed a Master and Worker, Sir John F. W. Herschel, Bart., the astronomer, a worthy successor to the office once filled by the illustrious Newton. The operative branch of the Mint consists of the assayer, the melter, and refiner. The moneyers have been abolished, and Government now coins for the public on its own account; the Master being the executive head of the establishment. The present Master is Professor Graham, F.R.S., the eminent chemist.

The present Mint, upon Little Tower-hill, is a handsome stone structure of mixed Grecian and Roman architecture, commenced by Mr. Johnson, and completed by Sir Robert Smirke, between 1806 and 1811: the cost, including the machinery, was a quarter of a million of money. It was formerly supplied with water through a tunnel from the Tower ditch; and it was one of the earliest public offices lighted with gas. Upon the site was "sometime a monastery, called New Abbey, founded by King Edward III. in 1359." (*Stow.*) After the Suppression, was built here the Victualling Office, subsequently tobacco-warehouses.

At the Mint is executed the coinage of the three kingdoms, and of many of our colonies; and such is the completeness of the steam machinery by Boulton and Watt, Maudslay and Co., and John and George Rennie, that fifty thousand pounds worth of gold received one morning in bullion may be returned the next in coin, strangely contrasting with the old method of striking every piece by hand, and carrying on the whole process in a single room. The present stupendous machinery is unequalled in the mint of any other country. The furnaces have long been supplied with smoke-consuming apparatus. The gold and silver being alloyed, are cast into small bars, are passed through powerful rollers, and by the draw-bench brought to the exact thickness required. The circular disks or blanks are then punched out of the sheets of metal by other machines; and are then separately weighed, sounded, have the protecting rim raised, and are blanched and annealed. The blanks are then taken to the coining-room, and placed in the screw-presses, each of which by the same stroke stamps on both sides, and mills at the edge, thus making a perfect coin: each press will coin between four and five thousand pieces per hour, and feeds itself with the blanks. For the dies a matrix is cut by the Mint engraver in soft steel, which, being hardened, furnishes many dies. In the coining-room are eight presses, which, by the force of a blow of 40 tons weight, impress the face of the Queen, the reverse of the coin, and, at the same time, mill the edge of the coin in the way previously described. From each press, the perfect sovereigns are thrown off at the rate of sixty-four per minute. At this rate, supposing that all the presses could be kept working, a stream of 30,720 sovereigns would run out in an hour. The newly-coined money is now ready for the Trial of the Pix, when one of each coin is placed in a pix or casket, sealed with three seals, and secured with three locks; and the coins are then compared with the trial-plates at Westminster by a jury from the Goldsmiths' Company, the Lord Chancellor, or the Chancellor of the Exchequer, presiding. The early matrices, and the collection of coins and medals, at the Mint, are among its *Curiosities*.

The following are the best Mint engravers from the reign of Charles I. to the present time: Briot, Simon, Rawlins, Roettier (3), Croker or Crocker, Tanner, Dassier, Yeo, Natter, Pingo (2), Pistrucci, and the Wyons (3).

Applications to view the Mint must be made in writing to the Master or Deputy-master; the party of visitors not to exceed six, for whom the applicant is responsible; the order available only for the day specified, and not transferable.

### MINT (THE), SOUTHWARK,

A LARGE section of the parish of St. George the Martyr, and so called from "a mint of coinage" having been kept here by Henry VIII. It was originally named Suffolk Manor; and opposite St. George's church, upon the site of the premises of Messrs. Pigeon, the distillers, was Suffolk Place, the magnificent mansion of Charles Brandon, Duke of Suffolk, brother-in-law of Henry VIII. This house the Duke gave to the King in exchange for a palace of the Bishop of Norwich in the parish of St. Martin's-in-the-Fields: it was then called Southwark Place and Duke's Place. In the Sutherland View of London, 1543, it is shown as "ye Mint."

In the fourth year of Edward VI. (1550) Sir Edward Peckham, Knight was appointed high-treasurer

and Sir John Yorke under-treasurer, of this Mint; and in 1551 were issued crowns, half-crowns, shillings, and sixpences, with the mint-mark Y for Sir John Yorke.

In 1549 Edward VI. came from Hampton Court to visit the Mint, when it was spoken of as "the capital message, gardens, and park in Southwark." Southwark had also its Saxon and Norman Mint, A.D. 978 to 1135; and coins of Ethelred II., Canute, Harold, Edward the Confessor, William I. and II., Henry I. and Stephen, with the Southwark mint-mark, are known to collectors. The old Saxon spelling of Southwark was ZVÐLWERE, *Suthgwere*; and on Saxon coins we find it abbreviated ZVÐ, ZVÐL, ZVÐLE, ZVÐLEW. With the reign of Stephen ceased the power of coining money, granted by the Tower Mint to smaller mints near London, as Southwark, Stepney, &c. The precise site of the original Mint in Southwark is unknown; but it was, probably, within the ancient town of Southwark (now the Guildable Manor) which extended only from St. Mary Overie's Dock, by St. Saviour's Church, to Hay's-lane, and southward to the back of the modern Town Hall. It is conjectured that the Saxon Mint may have been attached to the original Town Hall, nearly opposite the church of St. Olave; or, the Southwark Mint may have been under the direction of the early Bishops of Winchester, at or near their manor of the Clink, and who may have been moneyers here, as well as at the Winchester Mint. Of Henry, Bishop of Winton, and the illegitimate brother of King Stephen, there exists a silver penny (the only specimen known), which was bought at the Pembroke sale for 20*l.* 10*s.*, and is now in the British Museum. We cannot suppose the original Southwark Mint to have occupied the site of the Mint in St. George's parish, which was not within the ancient town, and was not "the King's Manor" until after Henry VIII. had obtained it from Cranmer, Archbishop of Canterbury.

Queen Mary gave the Mint property to Nicholas Heath, Archbishop of York, in recompense for York House, Whitehall, which had been taken from Cardinal Wolsey by Henry VIII. Archbishop Heath sold the Mint in 1557, when a great number of mean dwellings were erected upon the estate; but the mansion was not entirely taken down, or it must have been rebuilt, before 1637, when Alderman Bromfield, Lord Mayor of London, resided at Suffolk Place, which he possessed until 1650.

The Mint is described by Strype as consisting of several streets and alleys; the chief entrance being from opposite St. George's church by Mint-street, "running into Lombard-street, thence into Suffolk-street, and so into George-street;" each entrance having its gate. It became early an asylum for debtors, coiners, and vagabonds; and of the "traitors, felons, fugitives, outlaws, condemned persons, convict persons, felons defamed, those put in exigent of outlawry, felons of themselves, and such as refuse the law of the land," who in the time of Edward VI. herded in St. George's parish. The Mint at length became such a pest, that statutes 8 & 9 William III., and 9 & 11 Geo. I., ordered the abolition of its *privileges*. One of these statutes (9 Geo. I., 1723) relieved all those debtors under 50*l.* who had taken sanctuary in the Mint from their creditors: and the *Weekly Journal* of Saturday, July 20, 1723, thus describes their exodus:

"On Tuesday last, some thousands of the Minters went out of the land of bondage, alias the Mint, to be cleared at the quarter sessions at Guildford, according to the late Act of Parliament. The road was covered with them, in-somuch that they looked like one of the Jewish tribes going out of Egypt; the cavalcade consisting of caravans, carts, and wagons, besides numbers on horses, asses, and on foot. The drawer of the Two Fighting-cocks was seen to lead an ass loaded with Geneva, to support the spirits of the ladies upon the journey. 'Tis said that several heathen bailiffs lay in ambuscade in ditches upon the road, to surprise some of them, if possible, on their march, if they should straggle from the main body; but they proceeded with so much order and discipline, that they did not lose a man upon this expedition."

The Mint was the retreat of poor poets:

"Then from the Mint walks forth the man of rhyme."—*Pope*.

And one of the offences with which Pope reproached his needy antagonists was their "habitation in the Mint." Poor Nahum Tate (once poet laureate) died in the Mint in 1716, where he had sought shelter from his rapacious creditors. The place is a scene of Gay's *Beggars' Opera*; and "Mat of the Mint" figures in Macheath's gang. It was also one of the haunts of Jack Sheppard; and Jonathan Wild kept his horses at the *Duke's Head* in Red-Cross-street, within the precincts of the Mint. Illicit marriages were also performed here, as in the Fleet Prison, May Fair Chapel, &c.

Officers of justice sent here to serve processes were commonly pumped upon almost to suffocation, and even thrown into "the Black Ditch" of mud and filth. Here is said to have occurred the first case of Asiatic cholera in London in 1832. Much of the district still consists of streets and alleys, of wretched tenements inhabited by an indigent and profligate population; also "lodgings for travellers;" but very few of the old houses remain.

### MONUMENT, THE,

ON the east side of Fish-street-hill, occupies part of the site of St. Margaret's Church, destroyed in the Great Fire of 1666. It was erected by Sir Christopher Wren, between 1671 and 1677 (pursuant to 19 Charles II. c. 3, s. 29), to commemorate the Great Fire and rebuilding of the City: the expense was about 14,500*l.*, defrayed out of the Orphans' Fund. The Monument is of the Italo-Vitruvian-Doric order, and is of Portland stone, of which it contains 21,126 solid feet. It consists of a pedestal about 21 feet square, with a plinth 27 feet, and a fluted shaft 15 feet at the base; on the abacus is a balcony encompassing a moulded cylinder, which supports a flaming vase of gilt bronze, indicative of its commemoration of the Great Fire; though some repudiating Roman Catholics assert this termination to be intended for the civic cap of maintenance! Defoe quaintly describes the Monument as "built in the form of a candle," the top making "handsome gilt flame like that of a candle." Its entire height is 202 feet, stated in one of the inscriptions to be equal to its distance eastward from the house where the fire broke out, at the king's baker's, in Pudding-lane.

On the front of the house, on the east side of Pudding-lane, was a stone with this inscription: "Here, by the permission of Heaven, Hell broke loose upon this Protestant City, from the malicious Hearts of barbarous Papists by the Hand of their agent *Hubert*, who confessed, and on the Ruins of this Place declared the Fact, for which he was hanged, viz. That here begun that dreadful Fire which is described and perpetuated on and by the Neighbouring Pillar. Erected Anno 1681, in the Mayoralty of Sir Patience Ward, Kt."—*Hutton*, 1708.

The Monument is loftier than the pillars of Trajan and Antoninus at Rome, or that of Theodosius at Constantinople; and it is not only the loftiest, but also the finest isolated column in the world. Within is a staircase of 345 black marble steps, opening to the balcony, whence the view of the metropolis, especially of its Port, is very interesting. It was at first used by the members of the Royal Society for astronomical purposes, but was abandoned on account of its vibration being too great for the nicety required in their observations. Hence the report that the Monument is unsafe, which has been revived in our time; "but," says Elmes, "its scientific construction may bid defiance to the attacks of all but earthquakes for centuries to come." Wren proposed a more characteristic pillar, with flames blazing from the loopholes of the shaft, and figured in brass-work gilt; a phoenix was on the top rising from her ashes, in brass-gilt likewise. This, however, was rejected; and Wren then designed a statue of Charles II., 15 feet high;\* but the king preferred a large ball of metal, gilt; and the present vase of flames, 42 feet high, was adopted: when last triple regilt, it cost 120*l.* On June 15th, 1825, the Monument was illuminated with portable gas, in commemoration of the laying of the first stone of London Bridge: a lamp was placed at each of the loopholes of the column, to give the idea of its being wreathed with flame; whilst two other series were placed on the edges of the gallery, to which the public were admitted during the evening. The west face or front of the pedestal is rudely sculptured by Caius Gabriel Cibber, in alto and bas-relief: Charles II., be-wigged and be-Romanised, is attended by Liberty, Genius, and Science; in the background are labourers at work and newly-built houses: and at the King's feet is Envy peering from an arched cell, and blowing flames to rekindle the mischief. The scaffolding, ladders, and hodmen are more admired for their fidelity than the monarch and his architect. The north and south sides bear Latin

\* A large print of the Monument represents the statue of Charles so placed, for comparative effect, beside a sectional view of the apex, as constructed. Wren's autograph report on the designs for the summit was added to the mss. in the British Museum in 1852. A model, scale  $\frac{1}{4}$  inch to the foot, of the scaffolding used in building the Monument, is preserved. It formerly belonged to Sir William Chambers, and was presented by Heathcote Russell, C.E., to the late Sir Isambard Brunel, who left it to his son, Mr. I. K. Brunel: the ladders were of the rude construction of Wren's time, two uprights, with nailed treads or rounds on the face.

inscriptions by Dr. Thomas Gale, afterwards Dean of York; that on the north recording the desolation of the city; the south its restoration and improvement, and the means employed; while the east is inscribed with the years in which it was begun and finished, and the names of the Lord Mayors during its erection. Around the base of the pedestal was also the following inscription, beginning at the west:—

(W.) "THIS PILLAR WAS SET VP IN PERPETVAL REMEMBRANCE OF THAT MOST DREADFUL BURNING OF THIS PROTESTANT (S.) CITY, BEGUN AND CARRIED ON BY Y<sup>E</sup> TREACHERY AND MALICE OF Y<sup>E</sup> POPISSH FACTIO, IN Y<sup>E</sup> BEGINNING OF SEPTEM IN Y<sup>E</sup> YEAR OF (E) OUR LORD 1666, IN ORDER TO Y<sup>E</sup> CARRYING ON THEIR HORRID PLOTT FOR EXTIRPATING (N.) THE PROTESTANT RELIGION AND OLD ENGLISH LIBERTY, AND THE INTRODUCING POPERY AND SLAVERY."

And the north inscription concluded with:

"SED FUROR PAPISTICUS QVI TAMDIU PATRAVIT NONDUM RESTINGVITVR."

These offensive legends are not mentioned by Wren, but were added in 1681, by order of the Court of Aldermen, amid the horror of the Papists spread by the Titus Oates plot. They were obliterated in the reign of James II., but recut deeper still in the reign of William III., and excited Pope's indignant couplet:

"Where London's column, pointing at the skies,  
Like a tall bully, lifts the head and lies."

The legends were ultimately erased (by an Act of Common Council) Jan. 26, 1831. On the cap of the pedestal, at the angles, are four dragons, the supporters of the City arms: these cost 200*l.*, and were the work of Edward Pierce, jun. Six persons have committed suicide by throwing themselves from the Monument gallery: 1. John Cradock, a baker, July 7, 1788; 2. Lyon Levi, a Jew diamond-merchant, Jan. 18, 1810; 3. same year, Leander, a baker; 4. Margaret Moyes, daughter of a baker in Hemming's-row, Sept. 11, 1839; 5. Hawes, a boy, Oct. 18, 1839; 6. Jane Cooper, a servant-girl, Aug. 19, 1842. To prevent similar deaths, the gallery has been encaged with iron-work, as we now see it. William Green, a weaver, is erroneously recorded as a suicide, June 25, 1750; for, on reaching over the railing, to look at a live eagle kept there in a wooden cage, he accidentally lost his balance, and fell over against the top of the pedestal, thence into the street, and was dashed to pieces. The fall is exactly 175 feet. In 1732, a sailor slid down a rope from the gallery to the Three-Tuns Tavern, Gracechurch-street; as did also, next day, a waterman's boy. In the *Times* newspaper of August 22, 1827, there appeared the following burlesque advertisement:

"Incredible as it may appear, a person will attend at the Monument, and will, for the sum of 2500*l.*, undertake to JUMP clear off the said Monument, and in coming down will drink some beer and eat a cake, act some trades, shorten and make sail, and bring ship safe to anchor. As soon as the sum stated is collected, the performance will take place; and if not performed, the money subscribed to be returned to the subscribers."

Admittance to the gallery of the Monument from 9 till dusk; charge reduced, in 1851, from 6*d.* to 3*d.* each person. In the reign of George I. the charge was 2*d.* The office of Keeper of the Monument is in the gift of the Corporation of London.

### MOORFIELDS

IS first mentioned by Fitzstephen (*temp.* Henry II.) as "the great fen or moor which watereth the walls of the City on the north side," and stretched "from the wall betwixt Bishopsgate and Cripplegate to Fensbury and to Holywell" (*Stow*). When the Moor was frozen, Fitzstephen tells us the young Londoners, by placing the leg-bones of animals under their feet, and tying them round their ankles, by aid of an iron-shod pole, pushed themselves with great velocity along the ice; and one of these *bone-skates*, found in digging Moorfields, was in the Museum of Mr. C. Roach Smith, F.S.A., 5, Liverpool-street. In the reign of Edward II., Moorfields was let for four marks a year; in 1415, the Mayor made a breach in the wall, and built the Moorgate postern. Bricks are stated to have been made here, before any other part of London, in the 17th Edward IV., for repairing the City wall between Aldgate and Aldersgate; when "Moorfields was searched for clay, and bricks were made and burnt there." Facing the wall was a black ditch; hence "the melancholy of Moorditch." (Shakspeare, *Henry*

IV. Part I.) In 1497, the gardens in Moorfields were made plain; the Moor was drained in 1527, and laid out in walks and planted in 1606.

Moorfields and Finsbury were the great places for recreative walks; while all beyond was open ground, stretching right and left to the nearest villages. Moorfields, in the ancient maps, is covered with linen; and in Thomas Deloney's *Crown Garland of Golden Roses*, may be seen the ballad history of "the two ladies of Finsbury that gave Moorfields to the City, for the maidens of London to dry clothes in," and where he says:

"Now are made most pleasant walks  
That great contentment yield."

while Finsbury fields was the great school of archery, from the time when every man was enjoined by law to "draw a good bow and shoot a good shot," until the entire decay of the science.

There is a curious tract on Moorfields, published by Henry Gosson, in 1607, entitled "The Pleasant Walks of Moorfields: being the gift of two sisters, now beautified to the continuing fame of this worthy city," and is the work of Richard Johnson, author of "Look on me, London." The laying out and planting the fields are here minutely described. This tract has been reprinted by Mr. Payne Collier.

Evelyn, recording the Great Fire, says the houseless people took refuge about Moorfields, under tents and miserable huts and hovels; and Pepys found Moorfields full of people, and "poor wretches carrying their goods there;" next year the fields were built upon and paved. On the south side was erected Bethlehem Hospital in 1675-6 (*see pp. 51-54*), which has disappeared in our time, with the long line of furniture-dealers' shops from the north side.

"Through fam'd Moorfields extends a spacious seat,  
Where mortals of exalted wit retreat;  
Where, wrapp'd in contemplation and in straw,  
The wiser few from the mad world withdraw."

*Gay to Mr. Thomas Snow, Goldsmith, near Temple Bar.*

Under Bethlehem wall, in 1753-4, Elizabeth Canning, by her own testimony, was seized, robbed, and gagged; thence dragged to Mother Wells's at Enfield Wash, and there nearly starved to death; but the whole story was a hoax.

The Moor reached from London Wall to Hoxton; and a thousand cartloads of human bones brought from St. Paul's chanel-house in 1549, and soon after covered with street-dirt, became so elevated, that three windmills were built upon it. (Aggas's plan shows three windmills on the site of Finsbury-square: hence Windmill-hill, now street.) The ground on the south side being also much raised, it was named Upper Moorfields. On the north of the fields stood the Dogge-house, where the Lord Mayor's hounds were kept by the Common Hunt: hence "Dog-house Bar," City-road. Eastward the Moor was bounded by the ancient hospital and priory of Bethlehem, separated by a deep ditch, now covered by Blomfield-street. The lower part of the fields was paled into four squares, each planted with elm-trees, round a grass-plot, and intersected by broad gravel-walks; a favourite promenade in evenings and fine weather, and called "the City Mall;" where beaux wore their hats diagonally over their left or right eye, hence called "the Moorfields cock." Here was the Foundry at which, previous to the year 1706, the brass ordnance for the British Government was cast. Near the Foundry Whitefield built his Tabernacle (*see p. 223*). It was roofed with *pan-tiles*.

Moorfields was, till near Pennant's time, the haunt of low gamblers, the great gymnasium of our capital, the resort of wrestlers, boxers, and football players. Here mountebanks erected their stages, and dispensed infallible medicines to the gaping gulls. Here, too, field-preachers set up their itinerant pulpits, beneath the shade of the trees; and here the pious, well-meaning Whitefield preached so winningly, as to gain from a neighbouring charlatan the greater number of his admirers.

Moorgate was erected opposite the site of Albion Chapel, at the south-west angle of the fields, and was rebuilt in 1672; the central gateway higher than usual, for the City Trained Bands to march through it with their pikes erected. The fields are now covered by Finsbury-square and Circus, and adjoining streets: the name survives in "Little Moorfields," and it has been revived in Moorgate-street. Until comparatively modern times, Moorfields was an open space, uniting with the Artillery-ground (*see p. 24*) and Bunhill-fields (*see p. 75*).

In Finsbury-place was "the Temple of the Muses," built by James Lackington, the celebrated bookseller, who came to London in 1773 with only half-a-crown in his pocket. In 1792 he cleared 5000*l.* by his business; and in 1798 retired with a large fortune, amassed by dealing in old books, and reprinting them at a cheap rate. He was succeeded by his cousin George Lackington, Allen, Hughes, Mavor (a son of the Rev. Dr. Mavor), Harding, and Co.; and next by Jones and Co., the publishers of *London in the Nineteenth Century*. Lackington's "Temple," which was a vast building, was destroyed by fire in 1841.

Moorfields has a sort of ideal association with the notorious "Calves'-Head Club."

In a blind alley about Moorfields met the *Calves'-Head Club*, where an axe hung up in the Club-room, and was revered as a principal symbol in this diabolical sacrament. Their great feast of Calves' heads was held the 30th of January (the anniversary of the martyrdom of King Charles I.), the Club being erected "by an impudent set of people, in derision of the day, and defiance of monarchy." Their bill of fare was a large dish of calves' heads, dressed several ways; a large pike, with a small one in his mouth, as an emblem of tyranny; and a large cod's head, to represent the person of the King (Charles I.) singly, as by the calves' heads before they had done him together with all them that suffered in his cause; and a boar's head, with an apple in its mouth, to represent the king by this as bestial, as by the others they had done foolish and tyrannical. After the repast the *Eikon Basilike* was burnt, anthems were sung, and the oath was sworn upon Milton's *Defensio Populi Anglicani*. The company consisted of Independents and Anabaptists; Jerry White, formerly chaplain to Oliver Cromwell, said grace; and the table-cloth being removed, the Anniversary Anthem, as they impiously called it, was sung, and a calf's skull filled with wine or other liquor, and then a brimmer went about to the pious memory of those worthy patriots that had killed the tyrant, &c. (See the *Secret History of the Calves'-Head Club*, 6th edit. 1706.)

But the whole affair of the Calves'-Head Club was a hoax, kept alive by the pretended *Secret History*. An accidental riot, following a debauch on one 30th of January, has been distributed between two successive years, owing to a misapprehension of the mode of reckoning prevalent in the early part of the last century; and there is no more reason for believing in the existence of a Calves'-Head Club in 1734-5 than there is for believing that it exists in 1867.—(See *Club Life of London*, vol. i. pp. 25-34. 1866.)

*Coleman-street*, named from its builder, was originally part of the "Lower Walks of Moorfields:" it gives name to the Ward. In a house in this street were received and harboured the Five Members accused of treason by Charles I. At the Star tavern, in Coleman-street, Oliver Cromwell and several of his party occasionally met, as given in evidence on the trial of Hugh Peters. In a conventicle in Swan-alley, Venner, a wine-cooper and Millenarian, preached to the soldiers of King Jesus: an insurrection followed, and Venner was hanged and quartered in Coleman-street, Jan. 19, 1660-61. The Cambridge carrier put up at the Bell, in Coleman-street, 1637; and in Great Bell Yard, Bloomfield, author of the *Farmer's Boy*, worked as a shoemaker. Justice Clement, in Ben Jonson's *Every Man in his Humour*, lived in Coleman-street; and Cowley wrote a comedy called *Cutter of Coleman-street*, 1721.

### MUSEUM, THE BRITISH,

GREAT Russell-street, Bloomsbury, occupies the site of Montague House, built for Ralph Montague, first Baron Montague, of Boughton, by Robert Hooke, the celebrated mathematician and horologist. Evelyn describes it, in 1679, as "Mr. Montague's new palace neere Bloomsberry, built somewhat after the French pavilion way," with ceilings painted by Verrio. On Jan. 19, 1686, it was burnt to the ground, through the carelessness of a servant "airing some goods by the fire;" the house being at the time let by Lord Montague to the Earl of Devonshire. Lady Rachel Russell, in one of her letters, describes the sparks and flames covering Sonthampton House and filling the court. The loss is stated at 40,000*l.*, besides 6000*l.* in plate; and Lord Devonshire's pictures, hangings, and furniture. The mansion was rebuilt upon the foundations and burnt walls of the former one, the architect being Peter Puget. La Fosse painted the ceilings, Rousseau the landscapes and architecture, and Jean Baptiste Monnoyer the flowers. Lord Montague, who in 1705 was created Marquis of Monthermer and Duke of Montague, died here in 1709; his son resided here until his mansion was completed at Whitehall. Montague House was built on the plan of a first-class French hotel, of red brick, with stone dressings, lofty domed centre, and pavilion-like wings. In front was a spacious court, inclosed with a high wall, within which was an Ionic colonnade, the principal entrance being in the centre, by the "Montague Great Gate," beneath a picturesque octangular lantern, with clock and cupola; and at each extremity of the wall was a square lantern. The old mansion was removed between 1845 and 1852,

when portions of the painted walls and ceilings, La Fosse's deities, and Baptiste's flowers, were preserved, and sold with the materials.

Montague House and gardens occupied seven acres. In the latter, in 1780, were encamped the troops stationed to quell the Gordon Riots; and a print of the period shows the gardens in the rear of the mansion, laid out in grass terraces, flower-borders, grass-plots, and gravel-walks, where the gay world resorted on a summer's evening: the back being open to the fields, extending west to Lisson-green and Paddington; north to Primrose Hill, Chalk Farm, Hampstead, and Highgate; and east to Battlebridge, Islington, St. Pancras, &c. On the side of the garden next Bedford-square was a fine grove of elm-trees; and the gardens of Bedford House, in Bloomsbury-square, reached to those of the British Museum, before that house was taken down, and Russell-square and the adjacent streets were built on its site. (See FIELD OF FORTY FOOTSTEPS, page 337.)

The *British Museum* has been the growth of a century, between the first purchase for the collection in 1753, and the near completion of the new buildings in 1853. The Museum originated in a suggestion in the will of Sir Hans Sloane (d. 1753), offering his collection to parliament for 20,000*l.*, it having cost him 50,000*l.* The offer was accepted; and by an Act (26th George II.) were purchased all Sir Hans Sloane's "library of books, drawings, manuscripts, prints, medals, seals, cameos and intaglios, precious stones, agates, jaspers, vessels of agate and jasper, crystals, mathematical instruments, pictures," &c. By the same Act was bought, for 10,000*l.*, the Harleian Library of MSS. (about 7600 volumes of rolls, charters, &c.); to which were added the Cottonian Library of MSS., and the library of Major Arthur Edwards. (See LIBRARIES, page 519.) By the same Act also was raised by lottery 100,000*l.*, out of which the Sloane and Harleian collections were paid for; 10,250*l.* to Lord Halifax for Montague House, and 12,873*l.* for its repairs; a fund being set apart for the payment of taxes and salaries of officers. Trustees were elected from persons of rank, station, and literary attainments; and the institution was named the BRITISH MUSEUM. There had also been offered Buckingham House, with the gardens and field, for 30,000*l.*; and at one time it was proposed to deposit the Museum in Old Palace-yard, in the place designed by Kent for new Houses of Parliament. To Montague House were removed the Harleian collection of MSS. in 1755; other collections in 1756; and the Museum was opened to the public January 15, 1759. At first the Museum was divided into three departments, viz.—Printed Books, Manuscripts, and Natural History; the increase of collections soon rendered it necessary to provide additional accommodation for them, Montague House proving insufficient. The present by George III. of Egyptian Antiquities, and the purchase of the Hamilton and Townley Antiquities, made it more imperative to create an additional department—that of Antiquities and Art—to which were united the Prints and Drawings, as well as the Medals and Coins previously attached to the Library of Printed Books and Manuscripts. Next, in 1816, was provided temporary shelter for the Elgin Marbles, this being the last addition to Montague House.

When, in 1823, the Library collected by George III. was presented to the nation by George IV., it became necessary to erect a building to receive it. It was then decided to have an entirely new edifice to contain the whole of the Museum collections, including the recently acquired Library. Sir Robert Smirke, R.A., the architect, accordingly prepared plans. The eastern side of the present structure was completed in 1828, and the Royal Library was then deposited in it. The northern, southern, and western sides of the building were subsequently erected, Montague House being removed piecemeal as the new buildings progressed, so that the Museum was not closed for the rebuilding. Mr. Sydney Smirke, in 1846, succeeded his brother, Sir Robert, as architect to the Museum. The plan consists of a courtyard, flanked east and west with the official apartments. The main buildings form a quadrangle, upon the ground of the gardens of Montague House. The architecture throughout the exterior is Grecian-Ionic. The southern façade consists of the great entrance portico, eight columns in width, and two intercolumniations in projection; on either side is an advancing wing: entire front 370 feet, surrounded by a colonnade of 44 columns, 5 feet at their lower diameter, and 45 feet high; height of colonnade from the pavement  $64\frac{1}{2}$  feet. At the foot of the portico are 12 stone steps, 120 feet in width, terminating with pedestals for colossal groups of sculpture. "Since the days of Trajan or Hadrian, no such stones have been used as those recently employed at the British Museum, where 800 stones, from 5 to 9 tons weight, form the front. Even St. Paul's contains no ap-

proach to these magnitudes." (*Prof. Cockerell's Lectures*, 1850.) The tympanum of the pediment is enriched with a group allegorical of the "Progress of Civilization," and thus described by the sculptor, Sir Richard Westmacott, R.A. :

"Commencing at the western end or angle of the pediment, Man is represented emerging from a rude savage stage through the influence of Religion. He is next personified as a hunter and tiller of the earth, and labouring for his subsistence. Patriarchal simplicity then becomes invaded, and the worship of the true God defiled. Paganism prevails, and becomes diffused by means of the Arts. The worship of the heavenly bodies, and their supposed influence, led the Egyptians, Chaldeans, and other nations to study astronomy, typified by the centre statue—the key-stone to the composition. Civilization is now presumed to have made considerable progress. Descending towards the eastern angle of the pediment is Mathematics, in allusion to Science being now pursued on known sound principles. The Drama, Poetry, and Music balance the group of the Fine Arts on the western side, the whole composition terminating with Natural History, in which such subjects or specimens only are represented as could be made most effective in sculpture." The crocodile is emblematic of the cruelty of man in savage life, the tortoise of his slow progress to civilization. The figure of Astronomy is 12 feet high, and weighs between 7 and 8 tons. The several figures are executed in Portland-stone, and the decorative accessories are gilt.

The ornamental gates and railing inclosing the courtyard were commenced in model by Lovati, who died before he had made much progress; they were completed by Mr. Thomas and Messrs. Collmann and Davis. The railing—spears painted dark copper, with the heads gilt, and with an ornamented band—is raised upon a granite curb. In the centre of the railing is a grand set of carriage-gates and foot-entrances, strengthened by fluted columns with composite capitals, richly gilt, surmounted by vases. The frieze is wholly of hammered iron : the remainder of the iron-work is cast from metal moulds, and was chiefly piece-moulded, in order to obtain relief. The carriage-gates are moved by a windlass, both sides opening simultaneously. Each half of these gates weighs upwards of five tons. The height of the iron-work is 9 feet to the top rail : the length of the whole palisade is about 800 feet. The metal-work was contracted for by Walker, of York, and cost nearly 8000*l.* Upon the granite gate-piers are to be placed sitting statues of Bacon and Newton, and upon the two end piers Milton and Shakspeare. The buildings have altogether cost upwards of 800,000*l.*

As you stand beneath the portico, the effect is truly majestic, and you are impressed with the feeling that this is a noble institution of a great country. The principal entrance is by a carved oak door, 9 feet 6 inches in width, and 24 feet in height. The hall is Grecian-Doric. The ceiling, trabeated and deeply coffered, is enriched with Greek frets and other ornaments in various colours, painted in encaustic. Here are three marble statues : the Hon. Mrs. Damer, holding a small figure of the Genius of the Thames; Shakspeare, by Ronbiliac; and Sir Joseph Banks, Bart., by Chantrey. The statue of Shakspeare was bequeathed by Garrick to the Museum after the death of his widow; the statue of Sir Joseph Banks was presented by his personal friends. Between these statues is the doorway to the Grenville Library. East of the hall is the Manuscripts Department; west, the principal staircase (with carved vases of Huddleston stone), and a gallery which forms the approach to the Collection of Antiquities.

To inspect the several collections in the order in which they are described in the official Guide, the visitor will ascend to the upper floor by the principal staircase, and enter the exhibition rooms of the Zoological Department. These-rooms form part of the southern, the whole of the eastern, and part of the northern sides of the upper floor. The Minerals and Fossils which are next described, are contained in the remaining part of the northern side. The Botanical exhibition is displayed in two rooms in the southern front of the building, which are entered by a doorway on the eastern side of the Central Saloon in the Zoological Department. Following still the order of the Guide, the visitor will descend the principal stairs to the hall, and enter the Department of Antiquities by the doorway near the south-western angle. The Antiquities occupy the whole of the western parts of the ground floor, several rooms connected therewith on the basement, and the western side of the upper floor. On the lower floor, the eastern portion of the south front, and part of the east wing, is the Library of Manuscripts. The remainder of the east side, and the whole of the northern side of the quadrangle, are occupied by the Printed Books.

The entrance to the Grenville room is on the eastern side of the hall, under the clock. In this room is deposited the splendid library bequeathed to the nation in 1847 by the Right Hon. Thomas Grenville, a marble bust of whom, by Comolli, stands in a recess on the southern side. Here, as well as in the Royal library, are exhibited various printed books, selected to show the progress of the art of printing, with specimens of ornamental and curious binding. From the Grenville library the visitor proceeds to the Manuscript Saloon, where selections of manuscripts, charters, autographs, and seals are arranged for inspection. The visitor next enters the Royal library, and here, besides the printed books already mentioned, are exhibited some interesting and valuable specimens from the department of prints and drawings.

**THE ZOOLOGICAL COLLECTIONS.**—Specimens from the existing classes of Animals are contained in three Galleries; and are arranged in two series. The Beasts, Birds,

Reptiles, and Fishes are exhibited in the Wall Cases. The hard parts of the Radiated, Molluscous, and Annulose Animals, (as Shells, Corals, Sea Eggs, Starfish, Crustacea,) and Insects, and the Eggs of Birds, are arranged in a series in the Table-Cases of the several Rooms.

The General Collection of Mammals, or Beasts which suckle their young, is arranged in three Rooms, the Hoofed Beasts (*Ungulata*) being contained in the Central Saloon and Southern Zoological gallery, and the Beasts with claws (*Unguiculata*) in the Mammalia Saloon.

*Central Saloon.*—In the Cases the specimens of the Antelopes, Goats, and Sheep; and the Bats, or *Cheiroptera*. Some of the larger Mammalia are placed on the floor, such as the Giraffes, and the Morse or Walrus. Also, the full-grown male Gorilla, of the female, and of a young male, from the Gaboon, Equatorial Africa; horns of Oxen.

*Southern Zoological Gallery.*—In Cases, the continuation of the collection of the Hoofed Quadrupeds, as the Oxen, Elands, Deer, Camels, Llamas, Horses, and the various species of Swine. Here also are placed the species of Armadillo, Manis, and Sloth. On the Wall Cases are the horns of Antelopes, and on the floor are arranged the different Rhinoceros, Indian Elephant; a very young African Elephant, remarkable for the large size of its ears; specimens of the young, half-grown, and adult Hippopotamus, and the wild Oxen from India and Java. Here is the aurochs, or shaggy-maned Lithuanian Bison, presented by Nicholas, Emperor of Russia, and said to be the finest specimen of stuffing in the Museum. Above the bison of the prairies is the ornithorynchus, with a bird-like bill,—the water-mole of Australia.

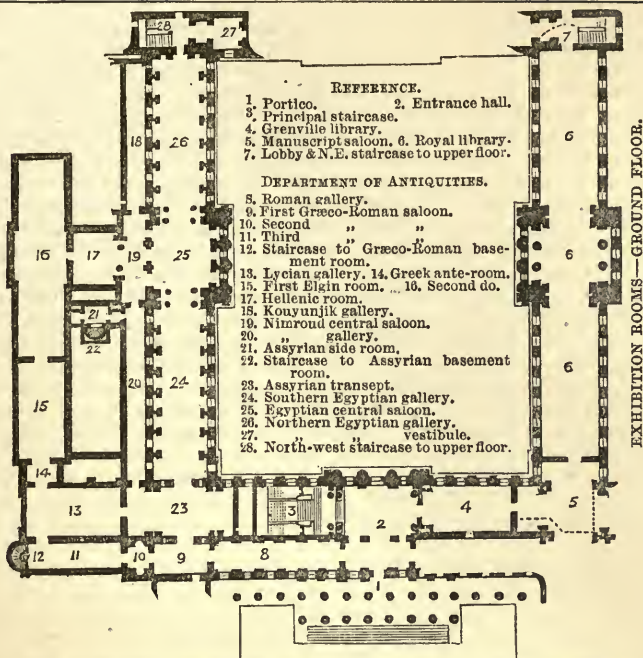

*Mammalia Saloon.*—In the Cases are the specimens of Handed, Rapacious, Glirine, and Pouched Beasts; over the Cases are the different kinds of Seals, Manatees, and Porpoises; and arranged in Table Cases are the general collections of Corals.

*Eastern Zoological Gallery*, 300 feet long and 50 feet wide.—The general collection of Birds; the collection of Shells of Molluscous animals, and a series of horns of Deer and Rhinoceros. Here is a Reeves's Chinese pheasant (tail-feathers 5 feet 6 inches long); and next the ostriches are a Dutch painting of the extinct dodo, a foot of the bird supposed to be more than two and a half centuries old, and a cast of the head; also, a specimen of the rare apteryx, or wingless bird of New Zealand.

Above the Wall Cases are 116 portraits of sovereigns, statesmen, heroes, travellers, and men of science, —a few from the Sloanean and Cottonian collections: including two portraits of Oliver Cromwell (one a copy from an original possessed by a great-grandson of Cromwell; the other an original presented by Cromwell himself to Nath. Rich, a colonel in the parliamentary army, and bequeathed to the Museum, in 1784, by Sir Robert Rich, Bart.); three portraits of Mary Queen of Scots, Richard II., Edward III., Henry V., Edward VI., Queen Elizabeth, James I., Charles I. and II., &c.; three portraits of Sir Haas Sloane; Peter I. of Russia, Stanislaus Augustus I. of Poland, Charles XII. of Sweden, and Louis XIV. of France; Lord Bacon; the poets Pope and Prior; Dr. John Ray, the first great English naturalist; George Buchanan, 1581, on panel; Sir Francis Drake and Captain Dampier; Martin Luther, 1546, on panel; Gutenberg, the inventor of printing; Richard Baxter, the Nonconformist; Vesalius, by Sir Antonio More; Mary Davis, 1688, "ætatibus 74," with a horn-like wen on her head; Sir Robert Cotton, Dr. Birch, Humphrey Wanley, Sir H. Spelman, and Sir W. Dugdale; Camden, on panel; Thomas Britton, the musical small-coal-man; Andrew Marvell, said to be the only portrait extant of him; &c. This is, probably, the largest collection of portraits in the kingdom: many are ill-painted, others very curious, and some unique; the majority of them had long lain in the lumber-lofts of the old Museum, when they were hung up, chiefly at the suggestion of the late Mr. William Smith, of Lisle-street. A very interesting *catalogue raisonnée* of these pictures appeared in the *Times*, Nov. 27 and Dec. 8, 1838.

*Northern Zoological Gallery*—five rooms: 1. Nests of Birds and Insects; larger Reptiles; rarest small Quadrupeds; the Aye-aye of Madagascar; 3. British Zoological Collection—the Vertebrated Animals; the larger species, such as the Whales, Sharks, Tunny, &c., are suspended on the Walls, or placed on the Cases; the eggs of the Birds; a series of British Annulose Animals; the stuffed exotic Reptiles and Batrachia; the hard parts of the Radiated Animals, including the Sea-Eggs, Sea-Stars, and Emericites; 4. The stuffed collection of exotic bony Fish; select specimens of Annulose Animals; Insects—Beetles, Praying Mantis, Walking Stick, and Leaf Insects, White Ants, Wasps and Bees, Butterflies, Spiders, Crustacea; 5. The exotic Cartilaginous Fish, such as the voracious Sharks; the Rays; the Torpedo or Numb-fish; Sturgeons; the saws of various Saw-fish, and larger Sponges.

*North Gallery.*—Fossil Remains in six rooms, partly in Zoological order and partly

EXHIBITION ROOMS—GROUND FLOOR.

EXHIBITION ROOMS—UPPER FLOOR.

in Geological sequence. 1. Plants. 2. Fishes, arranged chiefly after Agassiz. 3. Reptilian Remains: Frog, Tortoise, and Crocodile; the Iguanodon and Megalosaurus; gigantic Salamander, mistaken for a human skeleton; remains of Iguanodon, 70 feet long, from Tilgate Forest, Sussex; of the Hylæosaurus, or Wealden lizard; and the Plesiosaurus; the *Epyornis*, extinct wingless bird from Madagascar, remains referred by Professor Owen to distinct genera, some of which are still living in New Zealand, whilst others are, most probably, extinct. Amongst the living species may be noticed the *Notornis Mantelli*, a very large species of the Rail family. The *Dinornis*, wingless, and gigantic, from 10 to 11 feet in height, *Dicynodon* from South Africa, with two large descending tusks; enormous Tortoise from India. 4. Reptilian Remains; birds and Marsupials. 5. Mammalian Remains: corals, mollusca, nummulites, stone lilies, sea urchins, worms, insects, crustacea, trilobites, fossil shells. 6. Edentata and Pachydermata: skeleton of the Megatherium; Elephant, and Mastodon; cast of the skeleton of the Megatherium Americanum, found in Buenos Ayres; fossil human skeleton from Guadaloupe, &c. In Saurian Fossils the Museum is eminently rich; as well as in gigantic osseous remains; and impressions of vegetables, fruit, and fish.

*Mineral Collection*, mostly on Berzelius's system, in four rooms: mass of Meteoric Iron (1400lbs.) from Buenos Ayres; native Silver from Konsberg; trunk of a tree converted into semi-opal; large mass of Websterite from Newhaven; Tortoise sculptured in Nephrite, or Jade, from the banks of the Jumna; Esquimaux knife and harpoon, of meteoric iron; a large collection of Meteoric Stones chronologically arranged. Here, also, are Diamonds of various forms, and models of celebrated diamonds. The collection is superior to any in Europe, and includes a splendid cabinet of minerals from the Harz Mountains.

THE BOTANICAL OR BANKSIAN DEPARTMENT contains the Herbaria of Sir Hans Sloane (336 volumes bound in 262); the Herbaria of Plukenet and Petiver; collections from those of Merret, Cunningham, Hermann, Robart, Bernard de Jussieu, Tournefort, Scheuchzer, Kamel, Vaillant, Kæmpfer, Catesby, Houston, and Boerhaave; the Plants presented to the Royal Society by the Company of Apothecaries from 1722 to 1796, as rent paid by the Company for the Botanic Garden at Chelsea. Also the Herbarium of the Baron de Moll; the Herbarium of Sir Joseph Banks, mostly in cabinets, nearly 30,000 species, including Sir Joseph's collections upon his voyage with Captain Cook, and the Plants collected in subsequent voyages of discovery; Loureiro's Plants from Cochin China; an extensive series presented by the East India Company; Egyptian Plants, presented by Wilkinson, &c. The Flowers and Fruits preserved in spirits, and the dried Seeds and Fruits, are fine; as are also the various specimens of Woods.

DEPARTMENTS OF ANTIQUITIES.—The collections are divided into two series. The first, consisting of Sculpture, including Inscription and Architectural remains, occupies the Ground Floor of the South-western and Western portions of the building; and to this division have been added some rooms in the basement—Assyria and other countries. The second series, placed in a suite of rooms on the Upper Floor, comprehends all the smaller remains, of whatever nation or period, such as Vases and Terra-cottas, Bronzes, Coins, and Medals, and articles of personal or domestic use. To the latter division are attached the Ethnographical specimens. The four principal series of Sculptures are the Roman, including the mixed class termed Græco-Roman, the Hellenic, the Assyrian, and the Egyptian at right angles to the Roman. To the left of the Hall, on entering the building, is the Roman Gallery. On the South side are miscellaneous Roman antiquities discovered in this country, belonging to British Antiquities. On the opposite side is the series of Roman Iconographical or portrait Sculptures, whether statues or busts.

In 1864 were added nine statues from the Farnese Palace at Rome, purchased from the ex-king of Naples, for 4000*l*. These statues are: 1. A Mercury, nearly identical in pose and scale with the celebrated statue in the Belvedere of the Vatican. 2. An equestrian statue of a Roman Emperor of heroic size. The head is that of a Caligula, but doubts have been entertained whether it belongs to the body: this group is in very fine condition, and especially interesting, as being one of the very few equestrian statues which have been preserved to us from antiquity. 3. The celebrated and unique copy of the Diadumenos of Polyclethus. This figure, engraved in K. O. Müller's *Denkmäler d. a. Kunst*, taf. xxxi. No. 136, represents a Greek athlete binding a diadem round his head, whence the name Diadumenos: used as a canon of proportions in the ancient schools, and which, at a later period, sold for the enormous sum of 100 talents, equal to 25,000*l*. 4. An Apollo playing on the lyre, in the same attitude as the beautiful statue from Cyrene, in the British Museum, but naked. 5. An heroic figure, possibly a King of the Macedonian period in the character of a Deity. 6. A Satyr holding up a basket in which is an

Amorino. The two remaining statues are a group of Mercury and Hersé. An interesting notice of these statues, from the pen of Professor Gerhard, of Berlin, is to be found in Bunsen's great work on the Topography of Rome.

Also, a bronze lamp found on the site of Julian's palace, probably of a date prior to the Christian era, and considered to be Greek—a most beautiful work.

*British and Anglo-Roman Remains*—Tessellated pavements, Roman altars, sarcophagi, Roman pigs of lead; tessellated pavements from the Bank of England and Threadneedle-street and other parts; Roman mill fragments from Trinity House-square, and a sarcophagus from Haydon-square.

In 1864, were added 2000 objects, connected with the first or early appearance of man on this earth, as flint implements, or weapons found in the drift, a section of a Danish Kjekkenmødding, relics from caves of the South of France, implements of bone, engraving and sculpture on bone and horn, remains of the Stone Period, bronze implements, celts and arrow-heads, bronze figures of animals, Roman remains—all extremely interesting to the antiquary and geologist, &c. Also, the Collection of Remains found in the cavern at Abbeville, with specimens of the cave bones and stones, illustrating the Antiquity of Man.

*Greco-Roman Rooms*.—Statues and bas-reliefs by Greek artists, or from Greek originals; busts of mythological, poetical, and historical personages; statues and busts of Roman emperors; architectural and decorative sculptures and bas-reliefs; sepulchral monuments, Etruscan, Greek, and Roman; Roman altars; pavement from Carthage; bas-relief of Jupiter and Leda; the group of Mithra; the Rondini Faun; torso of Venus, from Richmond House; bas-relief of the Apotheosis of Homer, cost 1000*l.*; Persepolitan marbles, presented by Sir Gore Ouseley and the Earl of Aberdeen; a Venus of the Capitol; and other high-class marbles from the collections of Sir W. Hamilton, R. Payne Knight, and Edmund Burke; including, from the latter, the copy of the Cupid of Praxiteles, presented by the painter Barry to Burke. Here also are a sarcophagus from Sidon, sculptured with combats of Greeks, Amazons, and Centaurs; and a magnificent marble tazza 4 feet 3½ inches high, and 3 feet 7 inches diameter.

*The Townley Collection* of bas-reliefs, vases, statues, and groups, heads and busts, includes 83 terra-cottas: the famed Discobolus, or Quoit-thrower, in marble, from the bronze of the sculptor Myron; Venus, or Dione, the finest Greek statue seen by Canova in England; Venus Victrix, of the highest style of art; busts of Pallas, Hercules, Minerva, and Homer; bust of "Clytie rising from a sunflower;" and busts of Greek poets and philosophers. The Bacchus is finest—so beautiful, self-possessed, and severe; Bacchus, the mighty conqueror of India—not a drunken boy—but the *power*, not the *victim* of wine.

These stores of Greek and Roman art were collected by Mr. Charles Townley, chiefly at Rome, between 1765 and 1772; and were arranged by him at No. 7, Park-street, Westminster, with accompaniments so classically correct, that the house resembled the interior of a Roman villa. The dining-room had walls of scagliola porphyry; and here were placed the largest and most valuable statues, lighted by lamps almost to animation. Mr. Townley died in 1805; and his collection of marbles and terra-cottas was purchased by the British Museum for 20,000*l.*, and first exhibited in a gallery built for their reception in 1808. Mr. Townley's bronzes, coins, gems, drawings, &c., chiefly illustrating the sculptures, were subsequently purchased by the Museum for 8200*l.* A bust of Mr. Townley, by Nollekens, is placed near the entrance to the Central Saloon. Subsequent acquisitions have been made by the bequest of the collection of R. Payne Knight, Esq., in 1824, and by various individual purchases and donations.

*Lycian Gallery*.—Reliefs, tombs, and sarcophagi discovered and brought to England by Sir Charles Fellows, principally from the ruins of Xanthus, S. W. Asia Minor; dating from the earliest Greek period to that of the Byzantine empire, and earlier than the Parthenon. Model of the Harpy Tomb, with its actual white marble reliefs, presumed to represent the daughters of Pandarus carried off by Harpies: the tomb itself was a square shaft, 80 tons weight. Model of an Ionic peristyle building, with 14 columns and statues; the friezes representing the conquest of Lycia by the Persians, and the siege of Xanthus. Tomb of Paiafa: roof resembling an inverted boat, and an early Gothic arch; the sides sculptured with combats of warriors on horseback and foot; a chariot, sphinxes, &c. Casts from the sculptured Rock-tomb at Myra, with bilingual (Greek and Lycian) inscription.

*Elgin Rooms*.—The Elgin marbles, brought from the Parthenon at Athens by the Earl of Elgin: some are the work of Phidias himself. (See in this room two models of the Parthenon, each 12 feet long, made by R. C. Lucas, described in *Remarks on the*

*Parthenon* by R. C. Lucas, Sculptor; Salisbury, 1844: 1. The temple after the bombardment in 1687; 2. The Parthenon restored.) The Metopes from the Frieze (15 originals and 1 cast), representing the battle of the Centaurs and Lapithæ, in alto-relievo: for the original the English Government agent bid 1000*l.* at the sale of the collection of the Count de Choiseul Gouffier; but he was outbid by the Director of the French Museum, where the metope now is. The Panathenaic Frieze, 524 feet in length, is probably the largest piece of sculpture ever attempted in Greece: its men, women, and children, in all costumes and attitudes; horsemen, charioteers; oxen and other victims for sacrifice; images of the gods; sacred flags, baskets, &c.,—have an astonishing air of reality. Of the 110 horses, no two are in the same attitude: "they appear," says Flaxman, "to live and move, to roll their eyes, to gallop, to prance, and curvet; the veins of their faces and legs seem distended with circulation." Here are about 326 feet of the Frieze, 76 feet casts, and about 250 feet of the genuine marble which Phidias put up.

"The British Museum," says Professor Welcker, "possesses in the works of Phidias a treasure with which nothing can be compared in the whole range of ancient art." Flaxman said that these sculptures were "as perfect representations of nature as it is possible to put into the compass of the marble in which they are executed—and nature, too, in its most beautiful form." Chantrey spoke enthusiastically of "the exquisite judgment with which the artists of these sculptures had modified the style of working the marble, according to the kind and degree of light which would fall on them when in their places." Lawrence said that, "after looking at the finest sculptures in Italy, he found the Elgin marbles superior to any of them." Canova said, in reply to an application made to him respecting their repair or restoration, that "it would be sacrilege in him or any man, to presume to touch them with a chisel."

Pedimental sculptures, placed upon raised stages: East, the birth of Minerva, Hyperion, and heads of two of his horses: Theseus, ideal beauty of the first order, the finest figure in the collection, of which more drawings have been made than all the other Athenian marbles put together: "the back of the Theseus is the finest thing in the world." Head of a horse from the chariot of Night, valued at 250*l.*, the finest possible workmanship. West pediment: Contest between Athena and Poseidon for the naming of Athens; the recumbent statue of the river god Ilissus, pronounced by Canova and Visconti equal to the Theseus: torso, supposed of Cecrops, grand in outline: fragment of the head and statue of Minerva. Also, a capital and part of a shaft of a Doric column of the Parthenon, piece of the ceiling, and Ionic shaft, from the Temple of Erechtheus at Athens, imperfect statue of a youth, piece of a frieze from the tomb of Agamemnon, exceedingly ancient: circular altars from Delos, bronze sepulchral urn, very richly wrought: casts from the Temple of Theseus, the best preserved of all the ancient Athenian monuments; the Wingless Victory and the Choragic monument of Lysicrates; from the Choragic monument of Thrasylus, a colossal statue of Bacchus, inferior only to the Phidian sculptures; Eros (Cupid), discovered by Lord Elgin within the Acropolis (headless), has in the limbs the grace and elegance of the age of Praxiteles; the Sigean inscription, most ancient Grecian, in the *Boustrophedon* style:—i.e. the lines read as an ox passes from one furrow to another.

To Haydon must be conceded the genius of instantly appreciating the beauty of the Elgin Marbles; yet they were utterly neglected until Canova, on seeing them, declared, "Sans doute, la vérité est telle, les accidents de la chair et les formes sont si vraies et si belles, que ces statues produiront un grand changement dans les arts. Ils renverseront le système mathématique des autres antiques." Haydon soon roused the public interest in the sculptures, and they were purchased by Parliament for 35,000*l.* "You have saved the marbles," Lawrence said to Haydon, "but it will ruin you."—Haydon's *Autobiography*, 1853.

Tuesdays and Thursdays in every week, and the whole month of September in every year (when daylight is usually the steadiest and strongest), are exclusively devoted to artists and students in the Elgin and Townley Galleries.

*Hellenic Room.*—The Marbles have been brought from Greece and its colonies, exclusive of Athens and Attica. Bas-reliefs of the battle of the Centaurs and Lapithæ, and the combat of the Greeks and Amazons, from among the ruins of the Temple of Apollo Epicurius, near Phigaleia; built by Ictinus, contemporary with Phidias, and architect of the Parthenon (*Pausanias*). Their historical value, representing the art of the Praxitelian period, is scarcely less than that of the Parthenon marbles. In two model pediments from the eastern and western ends of the Temple of Jupiter Parhellenius, in the Island of Ægina, are, west, 10 original statues, representing Greeks and Trojans contesting for the body of Patroclus; east, 5 figures, expedition of Hercules and Telamon against Troy, these statues being the only illustration extant of the

armour of the heroic ages. In this saloon, also, are the *Canning Marbles*, or *Bodroum Sculptures*, from Bodroum, in Asia Minor, the site of Halicarnassus; 11 bas-reliefs (combat of Amazons and Greek warriors), formerly part of the celebrated Mausoleum erected in honour of Mausolus, King of Caria, by his wife Artemisia, B.C. 353: it was one of the Seven Wonders of the World. These, and other sculptures from Bodroum, were presented by the Sultan to Sir Stratford Canning (whence their name), and by him to the British Museum.

*Assyrian Galleries.*—*Assyrian Sculptures*, collected by Layard: fragments of the disinterred Assyrian palaces of Nimroud (Nineveh) and Kouyunjik; cuneiform (arrow-headed) and other writing; gypsum or alabaster bas-reliefs that lined the interior walls; detached sculptures; ivories and other ornaments; winged lions, weighing 15 tons each; winged bulls, each 14 feet high; sculptured slabs of battle-pieces and sieges, combats, treaties, and triumphs, lion and bull hunts, armies crossing rivers; winged and eagle-headed human figures; religious ceremonies, sculptured obelisks, inscription on a bull, connecting the Assyrian dynasty of Sennacherib with Hezekiah of the Bible; fragments of a temple built by Sardanapalus, and a basalt Assyrian statue, closely resembling the Egyptian style; costumes, field-sports, and domestic life of 2000 years since. Here also are a few stones with cuneiform inscriptions, excavated by Mr. Rich from the presumed site of Nineveh, near Mosul, but previous to Mr. Layard's researches, "a case scarcely three feet square enclosed all that remained not only of the great city of Nineveh, but of Babylon itself!" (See Layard's *Nineveh and its Remains, Monuments, &c.*) To these has been added a further collection from the same region, excavated in 1853-55, by Mr. Hormuzd Rassam and Mr. W. K. Loftus, under the direction of Sir H. C. Rawlinson, K.C.B.

*Egyptian Galleries.*—The monuments in this collection constitute on the whole the most widely extended series in the range of Antiquity, ascending to at least 2000 years before the Christian æra, and closing with the Mohammadan invasion of Egypt, A.D. 640. The Sculptures (from Thebes, Karnac, Luxor, and Memphis, and 800 in number) are placed in chronological order, from north to south: in the vestibule, early period; northern gallery, 18th dynasty; central saloon, monuments of Rameses II.; and in the southern gallery, those posterior to that monarch, descending to the latest times of the Roman empire. The Egyptian, Assyrian, and Greek Antiquities are thus exhibited in three parallel lines; a fourth, or transverse line, along the southern extremity of the others, being appropriated to Roman remains. Among the sculptures from Egypt are, the celebrated head of Memnon, from Thebes, of first-class Egyptian art. The head and arm of a king, a statue originally 26 feet high. Amenoph III. seated on his throne—the great Memnon in miniature. Two colossal red granite lions, couchant, from Upper Nubia; fine specimens of Early Egyptian art in animal forms. Breccia sarcophagus, supposed tomb of Alexander the Great, carved with 21,700 characters. The Rosetta Stone, black basalt, the most valuable existing relic of Egyptian history, inscribed in hieroglyphics, the ancient spoken language of Egypt, and in Greek, with the services of Ptolemy V. Epiphanes: the deciphering of which has afforded a key to Champollion, Wilkinson, &c. The Tablet of Abydos, giving a chronological succession of the monarchy. Sepulchral tablets and fragments of tombs; Egyptian frescoes, painted perhaps 3000 years ago, yet fresh in colour. Arragonite vases from the fourth dynasty. Plaster casts taken in Egypt, and coloured after the originals. Here is a statue of the son of Rameses the Second, about four feet high. He bears a standard on each side; it is of most beautiful workmanship, placed near the head of Memnon. It is in a very good state of preservation, and is a beautiful specimen of Egyptian Art. It is curious as a lithological specimen, the breccia being formed of the consolidated sand of the desert, inclosing jasper, chert, and other siliceous pebbles.

*Egyptian Rooms* (two), upstairs, contain divinities, and royal personages, and sacred animals; sepulchral remains; and miscellaneous objects, specially illustrative of the domestic manners of the Egyptians; mostly from the collections of Salt, Sams, and Wilkinson. Here are mummies and mummy-cases, wooden figures from tombs, bronze offerings, and porcelain figures; painted, gilt, stone, bronze, silver, and porcelain deities; figures of the jackal, hippopotamus, baboon, lion, cat, ram, &c.; a coffin and body from

the third Pyramid; model of an Egyptian house, granary, and yard; furniture, as tables, stools, chairs, and head-rests, couches and pillows, keys, locks, hinges, bolts, and handles; from the toilet, the black wig and box, caps, aprons, tunics, sandals, shoes, combs, pins, studs, and cases for eye-lid paint; vases and lamps, bowls and cups, agricultural implements, warlike weapons, writing and painting implements, working tools, and weaving looms, toys, and musical instruments. A stand, with a cooked duck and bread-cakes, from a tomb; sepulchral tablets, scarabæi, and amulets; rings, necklaces, and bracelets, and mummy ornaments. Above the Wall-cases are casts of battle-scenes, triumphs, and court ceremonies, coloured after the originals, from temples in Nubia.

*The Temple Collection*, of antiquities, bequeathed to the British Museum in 1856 by the Hon. Sir William Temple, K.C.B. The majority of the specimens belong to that large region of Lower Italy which, prior to the Roman dominion, was extensively colonized and highly cultivated by the Greeks, and thence received the name of Magna Græcia. They comprehend, therefore, specimens of the arts of three different races—the Etruscans, Greeks, and Romans.

*Vase Rooms* (two) contain Etruscan and Græco-Italian vases, painted from the myths or popular poetry of the day: classified into Early Italian, Black Etruscan, and Red Etruscan ware; varnished ware, mostly early; Italian vases, of Archaic Greek style; vases of Transition style, finest Greek, and the Basilicata and latest period. (*Vaux's Handbook*.) Here are the ancient fictile vases purchased of Sir William Hamilton in 1772, and then the largest collection known.

*The Hamilton Vase*, on being examined in 1839 by M. Gerhard, was found to bear the name of each personage depicted on it; from which it appears that the myth, or story, is totally distinct from that assigned to it by M. D'Hancarville, in his schedules of the Vases of the Hamilton collection; thus overturning his theory, and reading a strange lesson to virtuosi and antiquaries.

Here also are Greek and Roman terra-cottas, of various epochs and styles. Above the Wall-cases are painted fac-similes, by Campanari, of entertainments from Etruscan tombs.

*The Barberini or Portland Vase*, the property of the Duke of Portland, has been deposited in the Museum since 1810.

*The Portland Vase* was found about 1560, in a sarcophagus in a sepulchre under the Monte del Grano, 2½ miles from Rome. It was deposited in the palace of the Barberini family until 1770, when it was purchased by Byres, the antiquary; and sold by him to Sir William Hamilton, of whom it was bought, for 1800 guineas, by the Duchess of Portland, at the sale of whose property it was bought in by the family for 1029*l*. The vase is 9½ inches high and 7½ inches in diameter, and has two handles. It is of glass: yet Beval considered it calcedony; Bartoli, sardonxy; Count Tetzl, amethyst; and De la Chaussée, agate. It is ornamented with white opaque figures upon a dark-blue semi-transparent ground; the whole having been originally covered with white enamel, out of which the figures have been cut, like a cameo. The glass foot is distinct, and is thought to have been cemented on after bones or ashes had been placed in the vase. The seven figures, each 5 inches high, are said by some to illustrate the fable of Thaddeus and Theseus; by Bertoli, Proserpine and Pluto; by Winckelmann, the nuptials of Thetis and Peleus; Darwin, an allegory of Life and Immortality; others, Orpheus and Eurydice; Fosbroke, a marriage, death, and second marriage; Tetzl, the birth of Alexander Severus, whose eminary urn the vase is thought to be; while Mr. Windus, F.S.A., in a work published 1845, considers the scene as a love-sick lady consulting Galen. The vase was engraved by Cipriani and Bartolozzi in 1786: copies of it were executed by Wedgwood, and sold at 50 guineas each, the model for which cost 500 guineas: there is a copy in the British and Mediæval Room.

The Portland Vase was exhibited in a small room of the old Museum buildings until February 7, 1845, when it was wantonly dashed to pieces with a stone by one William Lloyd; but the pieces being gathered up, the Vase has been restored by Mr. Doubleday so beautifully, that a blemish can scarcely be detected. The Vase is now kept in the Medal Room. A drawing of the fractured pieces is preserved.

*Bronze Room*.—Figures of divinities, furniture, mirrors, tripods, candelabra, lamps and vases, armour, personal ornaments, &c.; including copper-bronze lions, bronze remains of a throne, fragments of glass vessels and of armour, discovered by Layard in Assyria. A large collection of bronze objects from Greece Proper, from Rome and of the Roman period: and from the sepulchres of ancient Etruria, and the excavations at Pompeii and Herculaneum. These include fragments of statues; spear-heads, daggers, helmets, and Roman eagles; steelyards, amphoræ, and tripods; candelabra, vases, votive figures, and statuettes; mirrors and their cases; the exquisite 798 bronzes bequeathed by R. Payne Knight; and the celebrated bronzes of Siris, from the south of Italy. Miscellaneous Greek and Roman objects, including astragali of crystal, cornelian, and ivory; dice, anciently loaded; tickets for the games; hair-pins and ivory busts; ancient glass vases and pateræ; fragments of cornelian, onyx, and jasper cups, and a

crystal vessel holding gold; animals in bronze; styli for writing; keys, plates, enamel-work; Etruscan and Roman fibulæ and finger-rings. Above the Wall-cases are facsimile paintings of Games, from tombs at Vida.

*British and Mediæval Room*, containing antiquities found in Great Britain and Ireland, and extending from the earliest period to the Norman Conquest; also, Mediæval objects, English and foreign; including

Celts; stone knives, arrow-heads, and hammers; models of Celtic cromlechs, or sepulchres; paintings of Plas Newydd and Stonehenge; bronze celts, swords, daggers, spear-heads, helmet, and buckler; half-baked pottery from British barrows; fragments of Roman buildings; Kimmeridge coal-money; a Coway stake from the Thames; Roman service of plate; Roman glass; Saxon brooches. *Mediæval*: personal ornaments and weapons; ivory chessmen and draughtsmen; paintings from St. Stephen's Chapel, Westminster; Dr. Dee's "crystal ball and wax cakes; and (from Strawberry Hill) the Show-stone (cannel coal) into which Dee "used to call his spirits." Here also are tenure and state swords; Limoges enamels; Venetian glass; Alhambra tiles; Bow porcelain; Wedgwood copy of the Portland Vase, and two superb Chelsea porcelain vases, valued at 300 guineas, presented by Wedgwood.

*The Early Christian Collection* contains a number of pieces of glass vases with ornaments in gold leaf, all discovered in the Catacombs of Rome. The subjects on these are chiefly from the life of our Lord, or antitypes from the Old Testament, such as Jonah, Moses striking the rock. There are also figures of St. Peter and St. Paul, and other saints connected with the Early Roman Church. Here is the famous Blacas Collection of gems and coins, Greek and Roman bronzes, mural painting from Pompeii and Herculaneum, sepulchral inscriptions and manuscripts, Greek vases, silver toilet service of a Roman bride, &c., purchased in 1866, for 48,000*l.*

*The Mediæval Collection* contains Sculpture and Carving, chiefly in ivory; Paintings, Metal-work, Matrices of Seals, Enamels, English Pottery, Venetian and German glass, Italian Majolica, German Stoneware, &c.

*The Ethnographical Room* contains objects illustrating the religion, arts, and industry of various countries; including the model of a moveable Indian temple; a Chinese bell, captured from a Buddhist temple near Ningpo in 1844; a model of Nelson's ship, the *Victory*, and a piece of its actual timber with a 40lb. shot in it from the battle of Trafalgar; a plaster cast of the Shield of Achilles, modelled by Flaxman from the 17th book of Homer's *Iliad*; a colossal gilt figure of the Burmese idol Gaudama; Chinese figures of deities, beggars, mandarins, and trinkets; Hindoo deities, measures, vessels, and arms; Chinese and Japanese matchlocks, bows and arrows, shoes, mirrors, screens, and musical instruments; richly-decorated cloth from Central Africa: a Foulah cloak from Sierra Leone; an Ashantee loom, umbrellas, tobacco-pipes, fly-flappers, and sandals; terra-cotta Mexican figures (mostly from Bullock's Museum); Aztec vases, idols, and armaments; Peruvian mummies and silver images; musical instruments, weapons, tools, ornaments, and costumes, from Guiana, the Marquesas and Sandwich Islands, Tahiti and the Friendly Isles, New Zealand and Australia, Borneo, New Guinea, the Pelew Islands, Siam, &c.; and a tortoise-shell bonnet from the Navigators' Islands.

*The Medal Room* contains a collection of Coins and Medals superior to that of Vienna and Florence, if not Paris. The nucleus of the British Museum collection was Sir Hans Sloane's coins, worth 7000*l.* as bullion, to which were added Sir Robert Cotton's coins; 6000 medals from the Hamilton collection; the Cracherode coins and medals, valued at 6000*l.*; coins from the Conquest to George III. (Roberts's), purchased for 4000 guineas; a series of Papal medals, and a collection of Greek coins; the Townley Greek and Roman coins; a vast collection of foreign coins, presented by Miss Banks; Payne Knight's Greek coins; Rich's early Arabian, Parthian, and Sassanian coins; medals and coins attached to the library of George III.; Marsden's Oriental coins; Burnes's Bactrian coins; and contributions and purchases of *finds* of Anglo-Saxon, Anglo-Gallic, and early English coins. The collection is arranged in, 1. Ancient coins—Greek in Geographical order, and Roman chronologically. 2. Modern coins—Anglo-Saxon, English, Anglo-Gallic, Scotch, and Irish, and the coins of foreign nations, arranged according to countries: the Anglo-Saxon and English series is complete from Ethelbert I. The great collection, with medals, 7700 specimens, formerly in the Bank of England. Of Queen Anne's farthings here are seven varieties, one only of which circulated, the others being pattern-pieces. 3. Medals, including an almost perfect series of British medals, besides the Papal and Napoleonic medals. Here is kept a gold snuff-box set with diamonds, and a miniature portrait of Napoleon, who

presented it to the Hon. Mrs. Damer, by whom it was bequeathed to the Museum, on condition that the portrait should never be copied. Also a gold snuff-box with a cameo lid, presented by Pope Pius VI. to Napoleon, and by him bequeathed to Lady Holland, with a card in Napoleon's handwriting. Here are the engraved gems, antique paste and glass, and gold trinkets, including the breastplate of a British chieftain.

"The coins are a noble collection; here, as in the other departments of the Museum, the solid value of the collection consists in the equal and complete manner in which it covers the whole area of the subject-matter; and in this respect it stands the highest among collections."—*Times*, 1863.

**LIBRARIES.**—*The Royal Library and general collection of Printed Books* occupy the east and north sides of the ground-floor and the internal quadrangle. The *King's Library* is deposited in a magnificent hall 300 feet long and 65 feet wide in the centre, where are four Corinthian columns of polished Peterhead granite 25 feet high, with Derbyshire alabaster capitals: the door-cases are marble, and the doors oak inlaid with bronze. This library, the finest and most complete ever formed by a single individual, is exceedingly rich in early editions of the classics, books from Caxton's press, history of the States of Europe in their respective languages, in Transactions of Academies, and grand geographical collections,—80,000 volumes, exclusive of pamphlets: among the Jesuits' books, purchased in 1768, was the Florence Homer of 1488. Here is one of the most extensive and interesting collections of maps in Europe. The entire collection cost 130,000*l.*; catalogue, 5 vols. folio.

An interesting Department is that devoted to Books inscribed with Autographs. The rarest of all these is a copy of Florio's *Montaigne's Essays*, printed in 1603, and bearing the autograph of William Shakspeare. Here, too, is the autograph of Ben Jonson, in a presentation copy to John Florio of the first edition of his *Volpone*, printed in 1607. In other books we find the autographs of Bacon, Michael Angelo, Calvin, Martin Luther, Philip Melanethon, Milton, Sir Isaac Newton, Sir Walter Scott, Voltaire, &c. In this department are also some curious Proclamations. There is one issued in 1714, offering 100,000*l.* for the apprehension of the Pretender, Prince James, should he attempt to land in England. Another is a Proclamation of Prince Charles Edward, styling himself Prince of Wales, and offering 30,000*l.* for the apprehension of George II., who is therein coolly styled the Elector of Hanover, dated August 22nd, 1745.

*The Grenville Library*, 20,240 volumes, cost 54,000*l.*, was bequeathed to the Museum by the Right Hon. Thomas Grenville, whose bust is placed here. Among its rarities are a Mazarine Latin Bible on vellum, the earliest printed Bible, and the earliest printed book known (supposed Gutenberg and Fust, Mentz, 1455); also the first Psalter, the first book with a date, and earliest printed in colours.

*The General Library* ranks with the public libraries of Vienna and Berlin, and is inferior only to those of Munich and Paris. Among the rarities is Coverdale's Bible, 1535, the first complete edition of the Scriptures in English; *The Game and Playe of the Chesse*, the first book printed in English, from Caxton's press, 1474; the first edition of Chaucer's *Tales of Canterbury*, only two perfect copies known, &c.; pamphlets and periodicals of the Civil Wars of Charles I.; the musical libraries of Sir John Hawkins and Dr. Burney; Garrick's old Plays;\* Tracts of the Revolutionary History of France. The Library is very rich in early folios and quartos of Shakspeare: there are the folios of 1623, 1632, 1664, and 1695. The quartos comprise the unique *Venus and Adonis* of 1602; the rare second edition of the same poem of 1594; the *Romeo and Juliet* of 1597; and many others of fabulous value. Books of Divinity are bound in blue, History in red, Poetry in yellow, and Biography in olive-coloured, leather. The catalogues of the several collections are in themselves a library. The catalogue, 7 vols. 1813-19, has been expanded, by interleaving and manuscript entries, into 67 folio volumes. About 2000*l.* is expended annually in adding old and foreign works to the library; and, under the Copyright Act, 5 and 6 Vic. cap. 48, a copy of every book, pamphlet, sheet of letterpress, sheet of music, chart, or plan, published within her Majesty's dominions, must be delivered to the British Museum.

"The printed book Library is rich in early and rare editions. It boasts that it can challenge the best library of any nation in the world to show a series of the books of any foreign nation that can compare

\* The collection of Shakspeare's Plays are for the most part from the collection of David Garrick; and it is not generally known that he obtained these precious pamphlets—for such they are in form—from the trustees of the Dulwich Gallery, who, as recorded in the *Gentleman's Magazine* of that period, exchanged Alleyne's collection of stage plays for what they thought, in true churchwarden's phrase, something more useful—viz., some encyclopædias of the period, and a collection of voyages and travels, then modern. This fact gives a threefold value to the British Museum collection, as, besides Shakspeare's plays, the collection exchanged comprised several acting copies of older dramatists belonging to Alleyne himself, and used by him in performance.

with those on the shelves in London. Out of Russia, Hungary, Germany, and France, respectively, there are no such Russian, Magyar, German, or French libraries as those of the British Museum."—*Times*, 1863.

The *Newspapers* are the largest collection in England. It was commenced by Sir Hans Sloane; and to it, in 1813, was added Dr. Burney's collection, purchased for 1000*l.*; since which the Commissioners of Stamps have transferred to the Museum copies of all the stamped newspapers. The oldest in the collection is a Venetian Gazette of the year 1570. Dr. Birch's Historical Collections, No. 4106, contain *The English Mercurie* of July 23, 1588, long believed "the earliest English Newspaper," now proved to be a forgery. In Dr. Burney's library is *Newses out of Holland*, May 16, 1619, the earliest newspaper printed in England; and *The News of the Present Week*, May 23, 1622, the first weekly newspaper in England.

The *Reading Room*, in the internal quadrangle of the Museum, occupies an area of 48,000 superficial feet. It originated with Mr. Panizzi, who suggested building a flat, low, circular Reading-room in the quadrangle; the architect of the Trustees, Mr. Sydney Smirke, approved of Mr. Panizzi's suggestion, but proposed a dome and glazed vaulting, to give more air to the readers and a more architectural character to the interior. This grew, on maturer consideration, into the much larger dome as erected from Mr. Smirke's drawings, and under his direction as architect. It occupied three years in construction, and cost about 150,000*l.*

The Reading-room is circular. The entire building does not occupy the whole quadrangle, there being a clear interval of from 27 to 30 feet all round, to give light and air to the surrounding buildings, and as a guard against possible destruction by fire from the outer parts of the Museum. The dome of this reading-room is 140 feet in diameter, its height being 106 feet. In this dimension of diameter it is only inferior to the Pantheon of Rome by 2 feet; St. Peter's being only 139; Sta. Maria, in Florence, 139; the tomb of Mahomet, Bejapore, 135; St. Paul's, 112; St. Sophia, Constantinople, 107, and the Church at Darmstadt, 105. The new reading-room contains 1,250,000 cubic feet of space; its "suburbs," or surrounding libraries, 750,000. The building is constructed principally of iron, with brick arches between the main ribs, supported by 20 iron piers, having a sectional area of 10 superficial feet to each, including the brick casing, or 200 feet in all. This saving of space by the use of iron is remarkable, the piers of support on which our dome rests only thus occupying 200 feet, whereas the piers of the Pantheon of Rome fill 7477 feet of area, and those of the tomb of Mahomet 5593. Upwards of 2000 tons of iron were employed in the construction. The roof is formed into two separate spherical and concentric air-chambers, extending over the whole surface; one between the external covering and brick vaulting, the object being the equalization of temperature during extremes of heat and cold out-of-doors; the other chamber, between the brick vaulting and the internal visible surface, being intended to carry off the vitiated air from the reading-room. This ventilation is effected through apertures in the soffites of the windows, and at the top of the dome; the bad air passing through outlets around the lantern.

The Reading-Room is world famous, and does not need description or praise, though the ingenious fire-proof library that surrounds it may be less known, and is, in fact, part of the vast improvement created by Mr. Panizzi when his Reading-Room was raised. That Reading-Room, with its light and cheerful dome, is the type of the modern and the comfortable, not to say social, as the venerable chamber of the Bodleian is of the older, more severe, and more secluded form of public study. The new library is the most ingenious application of glass and iron to the purposes of economizing space and providing effective accommodation for and sufficient light to an enormous number of books that was ever invented. The space between the dome of the reading-room and the walls of the Museum quadrangle is occupied by a series of parallel wrought-iron bookcases, with passages between them, and a few square courts left in places. The floors of the passages are formed of iron gratings, and each passage and the adjacent bookcases are lit from the roof. This vertical light penetrates to the base of the building, through the successive galleries or passages, that in some places are in tiers one over the other up to three or four stories. This most ingenious library is calculated to hold from 800,000 to 1,000,000 volumes, and by its method of construction solves the problem of future extension for the library, even at its present rapid growth of 20,000 volumes in the year. Calculated to hold the books that may be added for the next forty years, this new library thus shows how another million of books may after that be accommodated on a space of about three-quarters of an acre.—*Times*, 1863. There are twenty-five miles of book-shelves.

The Reading-Room is open every day, except on Sundays, on Ash Wednesdays, Good Fridays, Christmas-day, and on any Fast or Thanksgiving days ordered by authority; except also between the 1st and 7th of May, the 1st and 7th of September, and the 1st and 7th of January, inclusive. The hours are from 9 till 7 during May, June, July, and August (except on Saturdays, at 5), and from 9 till 4 during the rest

of the year. To obtain admission, persons are to send their applications in writing, specifying their Christian and surnames, rank or profession, and places of abode, to the principal Librarian; or, in his absence, to the Secretary; or, in his absence, to the senior under-librarian; who will either immediately admit such persons, or lay their applications before the next meeting of the Trustees. Every person applying is to produce a recommendation satisfactory to a Trustee or an officer of the establishment. Applications defective in this respect will not be attended to. Permission will in general be granted for six months, and at the expiration of this term fresh application is to be made for a renewal. The tickets given to readers are not transferable, and no person can be admitted without a ticket. Persons under 18 years of age are not admissible.

The persons whose recommendations are accepted are Peers of the realm, Members of Parliament, Judges, Queen's Counsel, Masters in Chancery or any of the great law-officers of the Crown, any one of the 48 Trustees of the British Museum, the Lord Mayor and Aldermen of London, rectors of parishes in the metropolis, principals or heads of colleges, eminent physicians and surgeons, and Royal Academicians, or any gentleman in superior post to an ordinary clerk in any of the public offices.

Nichols's *Handbook for Readers*, published in 1866, details the regulations and arrangements affecting the use of the room, and describes the plans and scopes of the various catalogues of the printed books and manuscripts in the National Library.

**MANUSCRIPTS.**—The Manuscript Library is the largest, and both in respect to the intrinsic value of the documents it contains, and to the order in which they are arranged and kept, is inferior to none in the world: the *Cottonian Collection* is especially rich in historical documents from the Saxons to James I.; registries of English monasteries; the charters of the Saxon Edgar and King Henry I. to Hyde Abbey, near Winchester, written in golden letters; and “the Durham Book,” a copy of the Gospels in Latin, written about 800, splendidly illuminated in the style of the Anglo-Saxons by the monks of Lindisfarne, and believed once to have belonged to the Venerable Bede. The collection is rich also in royal and other original letters. *The Harleian Collection* abounds in geographical and heraldic MSS.; in visitations of counties, and English topography; legal and parliamentary proceedings; abbey registers; MSS. of the classics, including one of the earliest known of the *Odyssey* of Homer; in missals, antiphonaries, and other service-books of the Romish Church; and in old English poetry. Also two very early copies of the Latin Gospels, written in golden letters; splendidly illuminated MSS.; an extensive mass of Correspondence; nearly 300 Bibles and biblical books, in the Chaldaic, Hebrew, Greek, Arabic, and Latin, in Manuscript; nearly 200 volumes of the writings of the Fathers of the Church; and works on the arts and sciences. Here is the oldest specimen of a Miracle-Play in English, of the earlier part of the reign of Edward III. *The Sloanean Collection* consists chiefly of MSS. on natural history, voyages, travels, and the arts, and also on medicine. It comprises the chief of Kæmpfer's MSS., with the voluminous medical collection of Sir Theodore Mayerne, and the annals of his practice at the Court of England from 1611 to 1649; also scientific and medical Correspondence, and historical MSS.; the drawings of animals are beautifully rich and accurate: two volumes on vellum, by Madame Merian, contain the insects of Surinam. *The Royal MSS.* contain the collection by our kings, from Richard II. to George II.; including the *Codex Alexandrinus*, in 4 quarto volumes of fine vellum, written, probably, between A.D. 300 and A.D. 500, and presumed to be the most ancient MS. of the Greek Bible now extant in uncial character: it was a present from Cyril, patriarch of Constantinople to King Charles I. Other MSS. came into the royal possession at the dissolution of the monasteries. Old scholastic divinity abounds in the collection; and many of the volumes are superbly illuminated in a succession of periods to the 16th century. Here also are several of the domestic music-books of Henry VIII.; and the *Basilicon Doron* of James I. in his own handwriting. *The Lansdowne Collection*, purchased in 1807 for 4925*l.*, consists of the Burghley and Cæsar papers; the MSS. of Bishop Kennet; numerous valuable historical documents; and about 200 Chinese drawings. Here are Hardyng's Chronicle, presented by the chronicler to King Henry VI.; a copy of the very rare French version of the Bible, upon vellum, translated by Raoul de Prede for Charles V. of France; also five volumes of Saxon homilies, transcribed by Mr. Elstob and his sister; and a fac-simile of the Vatican *Virgil*, made by Bartoli in 1642. *The Hargreave MSS.*, added in 1813, contain, besides early Law Reports, an abridgment of equity practice, in 45 volumes, by Sir Thomas Sewell, Master of the Rolls. *The Burney MSS.*, collected by the Rev. Charles Burney, and purchased in 1818, consist chiefly of the Greek and Latin classics, including the Townley *Homer*, a MS. of the *Iliad* similar to that of the *Odyssey* in the Harleian

collection (cost 600 guineas); also two early MSS. of Greek rhetoricians; a volume of the mathematical tracts of Pappas; and a magnificent Greek MS. of Ptolemy's Geography, enriched with maps of the 15th century. The *Oriental MSS.* include the valuable collection made by Mr. Rich while Consul at Bagdad, and comprising several Syriac copies of the Scriptures; also Arabic and Peruvian MSS. of great value, bequeathed by Mr. J. F. Hull in 1827. Here also are *MSS. of French History and Literature*, bequeathed by the Earl of Bridgewater in 1829. The *Howard-Arundel MSS.*, acquired from the Royal Society in 1831, more than 500 volumes in every branch of learning. In illuminated works, the Collection in the British Museum is not surpassed, in the art of almost every age from the 4th, or certainly the 8th century to the 16th. Even the collection of Paris, or the Vatican itself, is not superior to that in our Museum, which is the most comprehensive in existence. The Oriental manuscripts are of inestimable value.

The *Ancient Rolls and Charters* of the Museum, many thousands in number, partly from the Cottonian, Harleian, and Sloanean collections, illustrative of English history, monastic and other property, are separately catalogued.

*Magna Charta*, if not the original, a copy made when King John's seal was affixed to it, was acquired by the British Museum with the Cottonian Library. It was nearly destroyed in the fire at Westminster in 1731; the parchment is much shrivelled and mutilated, and the seal is reduced to an almost shapeless mass of wax. The MS. was carefully lined and mounted; and in 1733 an excellent *fac-simile* of it was published by John Pine, surrounded by inaccurate representations of the armorial ensigns of the 25 barons appointed as securities for the due performance of Magna Charta. An impression of this *fac-simile*, printed on vellum, with the arms carved and gilded, is placed opposite the Cottonian original of the Great Charter, which is now secured under glass. It is about 2 feet square, is written in Latin, and is quite illegible. It is traditionally stated to have been bought for fourpence, by Sir Robert Cotton, of a tailor, who was about to cut up the parchment into measures! But this anecdote, if true, may refer to another copy of the Charter preserved at the British Museum, in a portfolio of royal and ecclesiastical instruments, marked Augustus II. art. 106; the original Charter is believed to have been presented to Sir Robert Cotton by Sir Edward Dering, Lieut.-Governor of Dover Castle; and to be that referred to in a letter dated May 10, 1630, extant in the Museum Library, in the volume of Correspondence, Julius C. III. fol. 191.

The Commissioners on the Public Records regarded the original of Magna Charta preserved at Lincoln to be of superior authority to either of those in the British Museum, on account of several words and sentences being inserted in the body of that Charter, which in the latter are added at the foot, with reference-marks to the four places where they were to be added. These notes, however, possibly may prove that one of the Museum Charters was really the first written, to which those important additions were made immediately previous to the sealing on Runnemede, and therefore the actual original whence the more perfect transcripts were taken.—Richard Thomson, Author of *An Historical Essay on the Magna Charta of King John, &c.* 1829.

In the Museum, also, is the original Bull, in Latin, of Pope Innocent III. receiving the kingdoms of England and Ireland under his protection, and granting them in fee to King John and his successors, dated 1214, and reciting King John's charter of fealty to the Church of Rome, dated 1213. Also, the original Bull, in Latin, of Pope Leo X. conferring the title of Defender of the Faith upon Henry VIII.

The *Donation Manuscripts* include Madox's collection for his *History of the Exchequer*; Rymer's materials for his *Fœdera*, used and unused; the historical and biographical MSS. of Dr. Birch; the Decisions of the Judges upon the Claims after the Great Fire of London in 1666; also Sir William Musgrave's *Obituary*; Cole's collection for a history of Cambridge and Cambridgeshire, and an *Athenæ Cantabrigienses*: besides many Coptic and other ancient MSS. taken from the French in Egypt; Ducarel's abstract of the Archiepiscopal Registers at Lambeth Palace; and a long series of Calendars of the original rolls from the 1st of Henry VIII. to the 2nd of James I. Also Linacre's translation of Galen's *Methodus Medendi*, on spotless vellum; the presentation copies of Henry VIII. and Cardinal Wolsey: the former illuminated with the royal arms, the latter with the Cardinal's hat.

Here are—the Bible written by Alcuin for Charlemagne, large folio, 449 leaves of vellum, said to have occupied 20 years in transcribing, and illuminated. Psalters of Henry VI. and Henry VIII.; and Prayer-books of Lady Jane Grey and Queen Eliza-

beth. The Breviary of Isabella of Castile, 1496-97; a profusely adorned specimen of Flemish and Spanish art. The Bedford Missal, a Book of Hours, written and sumptuously illuminated in France for the Regent, John Duke of Bedford, and his Duchess, Anne of Burgundy, between 1423 and 1430. MS. of Valerius Maximus, splendidly illuminated. Original Letters of all the great Reformers; the English Kings; and Poets and Philosophers. The MS. of "paper-sparing" Pope's *Homer*, written on the backs and covers of letters. Three original assignments: Milton's *Paradise Lost* to Simmons; Dryden's *Virgil* to Tonson; and Goldsmith's *History of Eminent Persons* to Dodsley. Selections from the Rupert and Fairfax correspondence, 1640-49, including letters of Charles I., Charles II., Fairfax, and Hyde (Lord Clarendon). The original marriage-contract of Charles I. when Prince of Wales. The pocket-book taken from the Duke of Monmouth after the battle of Sedgemoor, certified in the handwriting of James II.

*Papyri*.—In the Egyptian Room is a framed specimen of this style of writing; and among the MSS. is a Greek papyrus, probably of B.C. 135, containing the translation of a deed of sale; and a book of sheets of papyrus sewn together, brought from Egypt, and bearing a copy in Greek of part of the Psalms of David. Several Egyptian papyri, written in the hieroglyphical, hieratical, enchorial, or demotic character, framed and glazed, are arranged in the staircase leading to the Print-Room.

THE PRINT-ROOM has only been an independent department since 1837. In 1836 was purchased from the Messrs. Smith, the Dutch and Flemish portions of Mr. Sheepshanks' collection for 5000*l.* Valuable additions have since been made, and the Print-Room now contains the most perfect collection known of the works of the Engravers of the early Italian, German, Dutch, and Flemish Schools. Among the *Curiosities* are, in the *Early Italian School*, an engraved silver plate (a Roman Catholic Pax), by Maso Finiguerra,  $3\frac{1}{2}$  inches high by  $2\frac{1}{2}$  inches wide, sold in 1824 for 300 guineas. An impression in sulphur, a similar subject, the first step in the discovery in this branch of printing, cost 250 guineas. Another similar subject, printed on paper, probably the earliest exemplar known, cost 300 guineas. Specimens of this description are much more numerous in the British Museum than in all other collections combined. *Early German School*: works of F. Van Bochoit (1466), Martin Schoengauer, Israel van Meeken, Albert Durer (a beautiful series, including some unfinished plates), Lucas van Leyden, &c. *Dutch and Flemish Schools*: works of Rembrandt, worth probably from 15,000*l.* to 20,000*l.*; the large portrait of the Dutch writing-master Coppental is valued at 500 guineas. *French School*: an admirable series of etchings by the hand of Claude. *English School*: works of Sir Robert Strange and Woollett; prints after the pictures of Sir Joshua Reynolds, West, and Sir Thomas Lawrence; 4000 prints after Stothard.

The Print-Room also contains an excellent representative series illustrative of Mezzotint Engraving: specimens by the inventor, Count Siegen, and by its earliest practisers, Prince Rupert, the Canon Furstemberg, &c., are remarkably fine and numerous. Also, an extensive series of British Portraits and British Topography. Some thousand drawings and prints collected and bequeathed by Mr. Crowle, cost upwards of 7000*l.*, including some of Turner's earliest drawings. *Original Drawings* by Raphael, Albert Durer, Holbein, Rubens, Rembrandt, Vandyke; and some beautiful designs by Claude, a portion of his *Liber Veritatis*. Here are the finest specimens in the world of Ostade and Backhuysen; cost 200 guineas each. In an adjoining room is a small selection of the most capital drawings, framed and glazed. In the Print-Room, also, is a carving in hone-stone (Birth of John the Baptist) by Albert Durer, dated 1510, a wonderful cutting in high relief, which cost 500 guineas; also, a beautifully chased silver Cup, attributed to Benvenuto Cellini. The whole contents of the Print-Room are worth considerably more than 100,000*l.* They can only be seen by very few persons at a time, and by particular permission.

The first Keeper of the Prints was Mr. Alexander, so well known for his *Views and Costumes of China*. He was succeeded by Mr. J. T. Smith, the topographer, and author of the amusing *Life and Times of Nollekens*. Mr. Young Ottley, the eminent collector, and author of the *Early History of Engraving*, was his successor; and he was followed by Mr. Henry Jozi, to whose energy a large amount of the present prosperity of this department is due. On his decease in 1845, the post was given to Mr. Carpenter, F.S.A., Keeper, to whose attainments and kindness all visitors to the Print-Room will bear ample testimony. Mr. Carpenter died in 1865. The present keeper is Mr. G. Reid.

Here are a few small portraits—viz., Geoffrey Chaucer, 1400, a small whole-length on panel; a limning of Frederic III. of Saxony, by L. Cranach, Molière, Corneille, an unknown head by Dobson,—all on panel; with the portrait of a Pope or Cardinal.

The public are admitted to the collections of Zoology, Minerals, and Antiquities on Monday, Wednesday, Friday (and Saturday from 12 to 5 during May, June, and July), and the whole of Christmas, Easter, and Whitsun weeks; November, December, January, and February, 10 to 4; September, October, March, April, 10 to 5; May, June, July, and August, 10 to 6; closed the first week in January, May, and September; and on Christmas Day, Good Friday, and Ash Wednesday; and on any special Fast or Thanksgiving Days. The Visitors' Book is in the Hall.

A list of Descriptive Catalogues, &c., published by the British Museum is appended to the Synopsis; with a list of the prices of casts and photographs from ancient marbles, bronzes, &c. in the Museum.

A list of objects added to the several collections in each year is printed in the Parliamentary Return, usually in April or May.

Beneath the portico of the Museum have been set up casts from portions of the famous Lion, which was erected on the sepulchre of the Bœotians who fell in the Battle of Chæronea, B.C. 338: a mound was raised, and a gigantic lion set up on its summit: the mound was excavated, and the fragments found are in almost the finest style of Greek art. This lion is placed close by that Lion of Cnidus, which is thought to be of earlier date.

Principal Librarian and Secretary, Mr. J. Winter Jones, who succeeded Mr. Panizz in 1866. Superintendent of Natural History, Professor Richard Owen.

### MUSEUMS.

**A**DELAIDE GALLERY OF PRACTICAL SCIENCE (THE), Adelaide-street, Strand, was built by Jacob Perkins, the engineer, and opened by a Society in 1832, for the exhibition of Models of Inventions, works of Art, and specimens of Novel Manufacture. Here, in a canal, 70 feet long, and containing 6000 gallons of water, were shown steamboat models, with clock-work machinery; experimental steam-paddles; lighthouse models, &c. Next were exhibited the combustion of the hardest steel; the compression of water; a mouse in a diving-bell; steam sugar-mill and gas-cooking apparatus; a model of the Liverpool and Manchester Railway; electro-magnets; a mechanical trumpet; a magic bust; models, from the Temples of Egypt to the Thames Tunnel; looms at work; mummy-cloth 2000 years old; and Carey's Oxy-hydrogen Microscope, shown on a disc 17 feet diameter; automatic ship and sea, &c.

Here *Perkins's Steam-Gun* was exhibited, propelling balls with four times greater force than that of gunpowder, the steam being raised to from 300 to 500 lbs. to the square inch; and the balls, on reaching the cast-iron target, fired at a distance of 100 feet, were reduced to the substance of tin-foil. It was possible to propel 420 balls in a minute, or 25,200 balls in an hour; and the gun was promised to mow down a regiment in less than ten minutes! The Duke of Wellington predicted its failure in warfare.

*A living Electrical Eel* (*Gymnotus*) was brought here from South America in 1833; its length was 40 inches, and it resembled in appearance dark puce and brown plish. Professor Faraday obtained from it a most intense electric spark; and by one shock not only was the needle of a galvanometer deflected, but chemical action and magnetic induction were obtained. The eel died March 14, 1842. In 1776, a living *Gymnotus* was exhibited in London, 5s. each visitor.

**ANATOMICAL MUSEUMS**, mostly from the Continent, are often exhibited in London; and Anatomical Collections are attached to the Hospitals.

**ANTIQUARIES, SOCIETY'S, MUSEUM**, Somerset House, contains Egyptian, Greek, and Etruscan antiquities; Roman antiquities, mostly found in Britain; British and Anglo-Roman remains; hair of Edward IV., and fragment of his queen's (Elizabeth) coffin; dagger, &c., found near the site of Sir W. Walworth's residence; stone-shot from the Tower moat; brass-gilt spur from Towton battle-field; reputed sword of Cromwell; Bohemian astronomical clock, 1525; presumed Caxton woodcut-block; matrices of mediæval seals; decorative tiles found in London; coins, medals, and provincial tokens; Worcester Clothiers' Company's pall, and human skin from the doors of Worcester Cathedral; West Indian antiquities and curiosities; geological specimens (elephant's fossil teeth from Pall Mall); Porter's map of London (Charles I.). A synopsis of the contents of the Museum is presented to the Fellows of the Society.

Among the old pictures are a "Greek paynting on wood;" folding Picture of Preaching at Paul's Cross, and Procession of James I., 1616; the Fire of London, from near the Temple; 26 ancient pictures (Kerrick's). Portraits of Philip the Good of Burgundy, Henry V. of England, Henry VI., Edward VI., Margaret of York, Richard III., Henry VII. (four portraits), Mary of Austria, Ferdinand the Catholic, Louis XII., Francis I., Queen Mary, William Fowlett, Marquis of Winchester (*see* Catalogue, by G.

Scharf). Drawings of ancient mural paintings in St. Stephen's Chapel, Westminster (*see* Catalogue, by A. Way, F.S.A.); portraits of distinguished Antiquaries; the very curious prescriptions ordered for Charles II. on his deathbed, signed by 16 doctors (*Medicorum Chorus*), the names, according to court etiquette, being written at full length; and not, as ordinarily indicated, by initials only. Among "the Milton Papers" preserved here is the signature of John Bunyan to a memorial to Cromwell and the Council of the Army, dated 1653.

ANTIQUITIES, LONDON.—This extensive collection of Roman and Mediæval relics, was formed by Mr. Charles Roach Smith, at 5, Liverpool-street, City. It consists chiefly of objects illustrative of the domestic and social life and customs of the inhabitants of London in the time of the Romans and during the Middle Ages. In the first of these divisions are a bronze shield and weapons from the Thames; remarkably fine bronze statuettes of Apollo and Mercury; a bronze hand of colossal size; a pair of forceps elaborately decorated with busts of gods and goddesses, and with heads of animals; an extensive series of fictile vessels, among which are embossed red bowls and vases of great beauty and rarity; wall-paintings from houses, and tiles for conducting the heated air to the apartments; flat glass, such as the Romans, or their predecessors, used for windows; also other Roman glass. Some of the tiles used in the buildings are stamped PR. BRIT. LON., and are remarkable as presenting, perhaps, the earliest example extant of an abbreviation of the word Londinium, now London. The leather sandals are rare and curious specimens of Roman costume. Steel styli for writing, personal ornaments, and many examples of coloured and ornamented glass, are also worthy of reference; while the coins, chiefly from the Thames, include rare types. Of the later antiquities, the Saxon knives, swords, and spears present some uncommon examples. There is also a rival to the celebrated Alfred Jewel in the Ashmolean Museum at Oxford, in an *ouche*, or brooch, of gold filigree work, set with pearls and enclosing a portrait of a regal personage, or possibly a saint, exquisitely worked in opaque, coloured, vitreous pastes. This valuable relic, and some Norman bowls in bronze, preserved in this collection, have been engraved in the *Archæologia*. Bone skates curiously illustrate Fitzstephen's account of an old City pastime, as practised on the ice on the site of Moorfields; and the *cuir bouilli*, or stamped leather, shows how artistically this useful material was worked in the Middle Ages. The shoes of the time of Edward III. and Richard II. are elegant in their ornamentation; and one is covered with mottoes in Latin and in Norman French, and with designs of groups of figures. The Pilgrims' Signs, in lead, form an almost unique series, illustrative of an old religious observance; and there are some fine early leaden Tokens of London tradesmen. A few of the objects have been engraved in the *Collectanea Antiqua*; and an illustrated Catalogue of the whole has been printed, for subscribers. The Collection is now in the British Museum.

ARCHÆOLOGICAL ASSOCIATION AND INSTITUTE.—Neither of these Societies possesses a Museum of noteworthy specimens. The Institute has presented its principal articles to the British Museum, for the room of British Antiquities. Each Society, however, usually assembles a Museum in the city or town wherein is held its annual meeting.

At the Rooms of the Archæological Institute, 26, Suffolk-street, in 1853, was exhibited the *Feteveryay Museum*, illustrative of the history of Art, and consisting of Egyptian remains, purely artistic; Etruscan remains, principally in bronze; engraved gems; Egyptian, Assyrian, Babylonian, ancient Persian, Etruscan, Greek, and Roman remains. The collection comprises also a noble set of Majolica ware, twenty-five pieces in number, two painted by Giorgio, two others by Santi, and several after designs by F. Francia; a very curious case of niello-work, one piece of which belonged to Luigi Sforza, Duke of Milan; many curious terra-cottas; some striking Byzantine objects; artistic antiquities illustrative of art in Hindostan, China, Persia, &c. &c.; a mass of Celtic objects; and a rare assemblage of Hungarian, Transylvanian, and Slavonic coins.

The *British Archæological Association*, 32, Sackville-street, Piccadilly, was established in 1843; and in the same year *The Archæological Institute of Great Britain and Ireland*, 1, Burlington Gardens. Each Society publishes its journal quarterly. *The Surrey Archæological Society*, 8, Danes Inn, Strand, was established in 1853; and *The London and Middlesex Archæological Society* in 1856, 22, Hart-street, Bloomsbury. The objects of these several societies are cognate; each paying special attention to the locality specified in the title.

ARCHITECTS, BRITISH, ROYAL INSTITUTE MUSEUM, No. 9, Conduit-street, contains a series of busts and portraits of architects; an original statuette in terra-cotta

of Inigo Jones, by Rysbraeck; medals, &c., of Schadow and Perrier; examples of Continental marbles; two flutes of the Parthenon; "growing stone" from Hieropolis; auriferous quartz from California; building-stones, including 117 specimens whence was chosen the stone for the New Palace at Westminster; casts of ornaments from ancient and mediæval buildings; models of public buildings, roofs, and scaffoldings; apparatus for painting the dome of St. Paul's Cathedral, &c.

**ARCHITECTURAL MUSEUM (THE)**, South Kensington, originated by Mr. G. G. Scott, F.S.A., was opened in 1853, as an exhibition and study for workmen sketching and modelling, in connexion with a School of Art for Architectural Workmen. The leading objects of this Museum are plaster casts of foliage, figures, &c.; casts or impressions of ancient seals or gems; tracings of stained glass, wall decorations, ornamental pavements, &c.; rubbings of brasses and incised stones; specimens or casts of ancient metal-work and pottery; photographs, or other faithful drawings; architectural books, prints, &c. Here are casts from effigies in our Cathedrals, Westminster Abbey, and a beautiful selection from the Chapter House; panels from the Baptistery gates at Florence; figures and details from the French Cathedrals, casts from Venice, &c. The Museum is supported by architects, builders, and sculptors; and small subscriptions from students, carvers, and other artist-workmen.

**ARMOURIES**:—1. At the Hall of the Armourers and Braziers' Company, Coleman-street, where is Northcote's well-known picture of the Entry into London of Richard II. and Bolingbroke; 2. Artillery Company's Museum (*see* p. 25).

**ASIATIC SOCIETY (ROYAL)**, 5, New Burlington-street. This Museum contains oriental coins and medals, marbles and inscriptions; armour and weapons, including Malay and Ceylonese spears, and an entire suit of Persian armour; Ceylonese jingals, and Hindoo statues. The public are admitted on Tuesday, Wednesday, or Thursday, by Members' tickets.

**AUTOGRAPHS**.—The collections in the metropolis are too numerous for us to detail. The late Mr. Robert Cole, F.S.A., assembled nearly 200 volumes of MSS. and Original Letters, including *Queen Caroline's*: Her Letters to Lady Anne Hamilton; the draft of the Queen's Letter to George IV., claiming the right to be crowned with him: the Narrative of her sojourn on the Continent, from her leaving England to her return as Queen, the whole autograph, continued by Lady Anne Hamilton to the Queen's death in 1821. Also, a mass of Letters and Poetry inscribed to the Queen; and many of the original Addresses presented at Brandenburgh House, with drafts of the replies, in Dr. Robert Fellowes's handwriting. Several hundred Letters from "the Princess Olive of Cumberland." *Nell Gwyn*: Treasury order for payment of Annuity to Nell; her signature E. G. to receipts; her power of attorney to Fraser, signed E. G., and witnessed by Thomas Otway, the poet. Nell's apothecary's bill, and many accounts for silks and satins, hay and corn, ale, spirits, &c., supplied to her. *Lewis Paul*: his papers and Cotton-manufacture Patents, granted many years before Arkwright's, proving that Paul was the original inventor of Cotton-spinning Machinery. *Regalia of Charles II.*: Papers relating to those made for his coronation. *Flora Macdonald*: her only known letter. *Nelson*: the introduction letter; the gunner's expense-book at the battle of St. Vincent, signed by Nelson. The original *Jubilee Address* of the Royal Academy to George III., signed by all the Members. Also, Letters, &c. of James Watt and John Rennie, James Barry, &c. This collection has been dispersed by auction.\*

**BOTANICAL SOCIETY**, 20, Bedford-street, Covent Garden, has an extensive herbarium, open to members and other botanists, to facilitate the exchange of British and foreign specimens in forming herbaria.

**BROOKES'S MUSEUM**, Blenheim-street, in the rear of 13, Great Marlborough-street (subsequently Colburn, the publisher's), was a fine anatomical collection of more than 6000 preparations, models, and casts, made by Joshua Brookes, F.R.S., during thirty

\* Among the Dealers in Autographs is Waller, Fleet-street.

years. The greater part was sold in 1828. Brookes was for more than forty years a distinguished teacher of anatomy, and had 7000 pupils; yet he died in comparative poverty, and in dependency at the dispersion of his Museum.

**BULLOCK'S MUSEUM.** (See EGYPTIAN HALL, p. 320.)

**CIVIL ENGINEERS, INSTITUTION OF (THE),** 25, Great George-street, Westminster, formerly possessed a Museum of models and specimens, which, on the extension of the library and theatre, were distributed among other scientific societies. At the annual *Conversazione* of the President of the Institution is assembled a large collection of working models of new machinery, works of art, and specimens of manufacture. In the theatre are portraits of Thomas Telford, and of succeeding Presidents of the Institution. (See LIBRARIES, p. 517.)

The Institution of Civil Engineers first met at the *King's Head Tavern*, Poultry, Jan. 2, 1818; and was incorporated 1828. Telford bequeathed to the Society a large portion of his library, professional papers, and drawings; and a considerable sum of money, the interest to be expended in annual premiums. Mr. Charles Manby, F.R.S., Hon. Secretary.

**COLLEGE OF PHYSICIANS' (ROYAL) MUSEUM,** Pall Mall East, contains the very curious preparations which Harvey either made at Padua, or procured from that celebrated school of medicine. They consist of six tables or boards, upon which are spread the different nerves and blood-vessels, carefully dissected out of the body: in one of them are the semilunar valves of the aorta, which, placed at the origin of the arteries, must, together with the valves of the veins, have furnished Harvey with the most conclusive arguments in support of his novel doctrines of the Circulation of the Blood. Of the Lectures which he read to the College in 1616, the original MSS. are preserved in the British Museum. The above preparations were presented to the College, in 1823, by the late Earl of Winchelsea, the direct descendant of Lord Chancellor Nottingham, who married Harvey's niece, and possessed his property. Here also is Dr. Matthew Baillie's entire collection of anatomical preparations, mostly put up by his own hands, and from which his great work on anatomy is illustrated. Like Harvey, Baillie gave this collection in his lifetime (1819). The preparations were restored in 1851, by Mr. G. E. Blenkins, whom the College presented with a silver ink-stand and a purse of fifty guineas. Here also is a gold-headed cane, which had been successively carried by Drs. Radcliffe, Mead, Askew, Pitcairn, and Baillie, whose arms are engraved on the head: presented by Mrs. Baillie. Among the MSS. is *Bustorum aliquot Reliquiæ*, Baldwin Harvey's account of his contemporaries, and the amount of their fees; and in the library are Harvey's MS. notes and criticisms upon Aristophanes. Admission by a Physician's order.

**COLLEGE OF SURGEONS' (ROYAL) MUSEUM,** Lincoln's Inn Fields, was commenced with the collection of John Hunter, of specimens in natural history, comparative anatomy, physiology, and pathology, purchased by the Corporation of Surgeons, and first opened in 1813; greatly enlarged in 1836, and again in 1853. The total number of specimens is 23,000, of which 10,000 belonged to Hunter's original Museum, the remainder having since been added. There are elaborate catalogues of the whole: arranged in "the Physiological Department, or Normal Structures;" and "the Pathological Department, or Abnormal Structures." Besides the anatomical preparations are the following *Curiosities*: fossil shell of a gigantic extinct armadillo; fossil skeleton of the mylodon, a large extinct sloth from Buenos Ayres; skeleton of a hippopotamus; bones of the pelvis, tail, and left hind-leg of the mighty megatherium; skeleton (8 ft. high) of Charles O'Brien, the Irish giant, who died in 1783, aged twenty-two; skeleton (20 in. high) of Caroline Crachami, the Sicilian dwarf, who died in 1824, aged ten years; plaster casts of hand of Patrick Cotter, another Irish giant, 8 ft. 7 in. high; and hand of M. Louis, a French giant, 7 ft. 4 in. high; glove of O'Brien; plaster casts of bones of the extinct bird, the *dinornis giganteus* of New Zealand, which must have stood 10 ft. high; skeleton of the gigantic extinct deer, exhumed from beneath a peat-bog near Limerick (span of antlers, 8 ft.; length of antler, 7 ft. 3 in.; height of skull, 7 ft. 6 in.); great penguin from the southernmost point touched by Sir James Ross; skeleton of the giraffe; skeleton of the Indian elephant

Chnee, purchased for 900 guineas, in 1810, to appear in processions on Covent Garden Theatre stage, and subsequently sold to Mr. Cross at Exeter Change, where it was shot in 1826, during an annual paroxysm, aggravated by inflammation of one of the tusks, but not killed until it had received more than 100 bullets (see Hone's *Every-day Book*, vol. i.): the skeleton was sold for 100 guineas: the head is 13 ft. from the ground; the bones weighed 876 lbs., the skin 17 cwt. Plaster cast of a young negro, and a bust of John Hunter, by Flaxman; skeleton of a man who died from water on the brain, skull 48 in. in circumference; skulls of a double-headed child, born in Bengal, who lived to be four years old, when it was killed by the bite of a cobra di capello: the skulls are united by their crowns, the upper head being inverted; it had four eyes, which moved in different directions at the same time, and the superior eyelids never thoroughly closed, even when the child was asleep. Skeleton, whose joints are ankylosed, or rendered immovable, by unnatural splints of bone growing out in all directions. "The shaft case:" the chest of a man impaled by the shaft of a chaise, the first tug-hook also penetrating the chest, and wounding the left lung; the patient recovered, and survived the injury eleven years: the preparation of the chest is side by side with the shaft. Iron pivot of a try-sail, which, in the London Docks, Feb. 26, 1831, was driven through the body of John Taylor, a seaman, and passed obliquely through the heart and left lung, pinning him to the deck; the try-sail mast 39 ft. long, and 600 lbs. weight: Taylor was carried to the London Hospital, where he recovered in five months, so as to walk from the hospital to the College and back again, and he ultimately returned to his duties as a seaman. Wax cast of the band uniting the bodies of the Siamese twins. Among the mummies is the first wife of the noted Martin van Butchell; and a female who died of consumption in 1775, the vessels and viscera injected with camphor and turpentine. Also a sitting mummy, supposed of a Peruvian nobleman, who immolated himself with his wife and child some centuries ago. Since 1835, Professor Owen, F.R.S., has been Conservator of the Museum, and the catalogues have been prepared by him. Here are:

Twelve wax models of the anatomy of the Cramp-fish (*Torpedo galbani*), presented by Professor Owen. Fossil Bones of the Dinornis, or extinct gigantic wingless Bird of New Zealand (tibia 3 feet in length). Coloured casts of the Eggs of the gigantic extinct Bird of Madagasear (*Epyornis*), supposed the original Roc of Arabian romance. One egg contains the matter of 12 ostrich-eggs, 140 hen's-eggs, and 10,000 humming-bird's eggs.

Skeleton of the Skulls of the great Chimpanzee (*Troglodytes gorilla*). This animal is upwards of 5 feet high, of prodigious muscular strength, and much dreaded by the Negroes of the West coast of Tropical Africa.

A series of prepared Skulls of different classes of Animals, illustrative of Professor Owen's "Archetype of the Vertebrate Skeleton."

Skeleton of male Boshman (diminutive Hottentot); and plaster casts of the male and female, from life.

Here, too, are some preparations similar to those of Harvey in the College of Physicians; they originally belonged to the Museum of the Royal Society, kept at Gresham College, and were the gift of John Evelyn, who bought them at Padua, where he saw them taken out of the body of a man, and very curiously spread upon four large tables: they were the work of Fabritius Bartoletus, then Veslingius's assistant. The Council of the College of Surgeons has presented to all the recognised provincial hospitals possessing libraries sets of the valuable illustrated catalogues of the Museum, of the collective value of 690*l.* The metropolitan Hospitals, and many learned and scientific societies both at home and abroad, had previously experienced a similar act of collegiate liberality.

The Museum is open to Fellows and Members of the College, and to visitors introduced by them, or by written orders (not transferable), on Mondays, Tuesdays, Wednesdays, and Thursdays, from twelve to four o'clock; on Fridays it is open only for the purposes of study. The arrangements for the admission of learned and scientific foreigners, state-officers, church and law dignitaries, and members of scientific bodies, are liberal and judicious.

CORPORATION MUSEUM, Guildhall, contains the relics of Roman London discovered in excavating for the foundation of the Royal Exchange, arranged by Mr. Tite, F.R.S.: 1. Pottery and glass: moulded articles, bricks and tiles; jars, urns, vases, amphoræ; terra-cotta lamps; Samian ware; potters' marks; glass. 2. Writing materials: tablets, and styles in iron, brass, bone, and wood. 3. Miscellaneous: domestic articles; artificers' tools; leather manufactures. 4. Coins, of copper, yellow brass, silver, and silver-plated brass, of Augustus, Tiberius, Claudius, Nero, Vespasian,

Domitian, &c.; Henry IV. of England, Elizabeth, &c.; foreign, Flemish, German, Prussian, Danish, Dutch. 5. Horns, shells, bones, and vegetable remains. 6. Antiquities and articles of later date. The Catalogue, printed for the Corporation in 1846, is scarce. Here, also, is the City charter (William I.): the Shakspeare deed of sale,\* &c. (See LIBRARIES, pp. 518, 519.)

Here is a Cabinet of the *London Traders', Tavern, and Coffeehouse Tokens* current in the 17th century, presented to the Corporation Library by Henry Benjamin Hanbury Beaufoy, citizen and distiller. They consist of Tokens of iron, lead, tin, brass, copper, and leather, and 9 Royal (Copper) Farthing Tokens; in all 1174. The Leaden Tokens were issued anterior to 1649, and the others from 1649 till 1672, by traders of the City, as small change and advertisement; each Token generally bearing the name, residence, and sign of the house; the index of them being a record of the olden topography and history of London, and a Key to streets and localities long lost. Here is the Token struck by Farr, of the *Rainbow Coffee-house*, Fleet-street, which escaped the Great Fire of 1666; and the Tokens of the *Turk's Head*, in Change-alley; and the *Boar's Head Tavern*, Eastcheap. A Descriptive Catalogue of these Tokens, with historical notes, ably edited by Jacob Henry Burn, was printed for the Corporation in 1853; and enlarged and reprinted in 1855.

COTTINGHAM MUSEUM, 43, Waterloo-road, Lambeth, collected by the late S. N. Cottingham, F.S.A., architect, contained about 31,000 specimens of Domestic and Ecclesiastical Architecture, Sculpture, and Furniture; a complete series of studies from the Norman period to the close of the reign of Elizabeth. Here was an Elizabethan ante-room and parlour, with a pair of enamelled fire-dogs, once Sir Thomas More's; a ceiling from Bishop Bonner's Palace, Lambeth; busts of Elizabeth, Mary Queen of Scots, Raleigh, and Burghley; ebony table from Norwich; Queen Anne Boleyn's sofa, from the Tower; a gallery and a ceiling from the council-chamber of Crosby Place, *temp.* Richard II. (see p. 298); perforated Spanish brass lantern-chandelier, *temp.* Henry VII.; Spanish pattern lantern, date 1600; fireplace from the Star-chamber, Westminster; figures of saints and bishops, and busts of English monarchs; Flemish oak screen (1490), carved with the history of our Lord, and figures in niches, richly painted and gilt; a reliquary, sixteenth century, painted and carved; cabinet with ceiling (Henry VII.), and Decorated window painted with Henry VII. and his queen; models and casts of tombs of the children of Edward III., William of Windsor, and Blanche de la Tour; a gallery with ceiling, Henry VI.; oak panelling from the palace of Layer Marney, Essex; fac-simile of doorway, Rochester Cathedral; altar and altar-piece, with canopied figures; ancient stall-seats (thirteenth century); throne, and figures; grand figures of the Virgin, Mary Magdalen, &c.; splendid fac-similes of lofty tombs, with recumbent effigies; seven rooms filled with models and casts; branches, with prickets for candles, *temp.* Henry V.; supposed canopy of Chaucer's tomb; marble keystone mask from Pompeii; cast from the Stratford bust of Shakspeare; fragments from Hever castle, St. Katherine's-at-the-Tower, the palace and abbey at Westminster, &c.; processional cross from Glastonbury Abbey, &c. The collection, sold by auction in 2205 lots, Nov. 1851, produced but 2009*l.* 13*s.* 6*d.*, being depreciated at least fifty per cent. by this dispersion. The collection is well described in an illustrated Catalogue, by Henry Shaw, F.S.A.

COX'S MUSEUM, Spring Gardens, formed by James Cox, jeweller, consisted of several magnificent pieces of mechanism and jewelled ornaments: the tickets were a quarter-guinea each: the collection was disposed of by lottery, by Act of Parlia-

\* The most important fact of the town property of Shakspeare is that first pointed out by Mr. Halliwell in his *8vo* Life of the Poet—viz. that the house purchased by him of Henry Walker, in March 1612-13, and the counterpart of the conveyance of which is preserved in the Guildhall Library, with Shakspeare's signature attached, and which is described there as "abutting upon a streete leading doune to Puddle Wharfe (Blackfriars) in the east part right against the Kinges Majesties Wardrobe," is still identified, or rather sheltered, in the churchyard of St. Andrew's there. The *very house* was, most probably, destroyed in the Great Fire of 1666; but the house stands on its proper spot; and until within these few years, it had been tenanted by the Robinson family, to whom Shakspeare leased it. Close behind this house, in Great Carter-lane, stood the *Old Bell Inn*, mentioned in a letter addressed to Shakspeare (see p. 452); and the poet was probably often in this house, the site of which was noted, after the destruction of the original building, by a richly-sculptured *bell*, dated 1637, and subsequently affixed to the front of a house in Great Carter-lane, on the north side.

ment, in 1774; the schedule contains a descriptive inventory. Walpole mentions "the immortal lines on Cox's Museum;" and Sheridan, in the *Rivals*, "the bull in Cox's Museum." At its dispersion, some articles were added to Weeks's Museum (See p. 606.)

CUMINGIAN MUSEUM, 80, Gower-street, Bedford-square, collected by Mr. Hugh Cuming, contains upwards of 124,000 species and varieties, including 68,000 specimens of Shells; besides Genera in spirits, with the animals carefully preserved; from Patagonia, Chili, Peru, Columbia, Central America, the Gallapagos Islands, Sumatra, the Malayan Peninsula, Java, the Philippines, and the South Pacific Islands.

In the luxuriant forests, on the arid plains, the mountain-sides, the sheltered bays and rocky shores of these countries, and by exploring the floor of the ocean, species of Mollusca, hitherto imperfectly known, were found in abundance, and numerous forms were discovered entirely new to science; entitling Mr. Cuming to rank with Sloane, Hunter, and Montague. The collection has been sold to the British Museum.

DANIEL, GEORGE, MUSEUM AND LIBRARY OF, Canonbury-square, dispersed by auction in July, 1864, the sale occupying ten days.

Among the gems was a collection of 70 black-letter ballads, 1559-1597, which brought 750*l.* Munday's *Banquet of Dainty Conceits*, 1588, the only known copy, 250*l.* Joe Miller's *Jests*, 1st edition, extremely rare. On the Shakspeare day, a copy of Shakspeare's Sonnets, one of only two perfect copies known with the same imprint, which cost Narcissus Luttrell one shilling, was knocked down for 215 guineas! Separate plays of Shakspeare, original editions, produced more than 300 guineas each: the "first folio," bought for Miss Burdett Coutts at 632 guineas. Among the Tokens was that of the *Boar's Head*, said to be unique; and the *Mermaid Tavern*, rare. There were many original drawings, engraved portraits, and curious examples of art and virtu. Among the portraits were Betterton, Bullock, and Barton Booth; the very rare mezzotint of George Harris as Cardinal Wolsey; Miss Norsa, painted and engraved by Bernard Lens, exceedingly rare; and Shuter, as he spoke Joe Haynes's epilogue, mounted on an ass. Among the oil-paintings were an old portrait of Shakspeare, bought at the sale of Mr. Symes's effects, at old Canonbury Tower, and a whole length of Napoleon I., taken from life by Barlow while on board the *Bellerophon*. Among the memorials was an octagonal casket, with conical lid, surmounted by the bust of Shakspeare, carved by Sharp from the famed mulberry-tree, with vine-leaves and grapes within ornamented arches, formerly in the possession of Garrick. With this relic was allotted Garrick's cane, malacca, gold-mounted, presented by Garrick to King the actor, and which he used as a stage dress cane in Lord Ogleby, &c. King gave this cane to John Bannister, who gave it to John Pritt Harley, at the sale of whose effects, in 1858, it was purchased by Mr. Daniel. A crucifix in hard wood, exquisitely carved, it was said, by Cellini, and the plinth by Gibbons, brought thirty guineas; and the double cup, in silver, from the Strawberry Hill Collection, was sold for 80*l.*

ENTOMOLOGICAL SOCIETY'S MUSEUM, 12, Bedford-row, Holborn: a collection of insects, commenced with Mr. Kirby's specimens, from which the first of monographs ever published was formed. (Kirby and Spence's *Introduction*.) Here is also a library of reference on Entomology.

GEOLOGY, PRACTICAL, MUSEUM OF, Nos. 28 to 32, Jermyn-street, originated in a suggestion by Sir H. De la Beche, C.B., in 1835, for the collection of geological and mineralogical specimens during the progress of the Geological Survey of the United Kingdom. The collections were first exhibited in a house in Craig's-court, Charing Cross; but becoming too extensive for this accommodation, the present handsome edifice was erected, with entrance in Jermyn-street, and frontage in Piccadilly; Penne-thorne, architect; style, Italian palazzo.

In the lower hall is a collection of British building and ornamental stones—sand-stones, oolites, limestones, granites, and porphyries, in six-inch cubes. The entrance is lined with Derbyshire alabaster; and the hall has pilasters of granite from Scotland, serpentine from Ireland, and limestones from Devonshire, Derbyshire, &c. On one side is an elaborate screen, with Cornish serpentine pilasters and cornice; and Irish serpentine panels, framed with Derbyshire productions. Here is a large copy of an Etruscan vase cut in Aberdeen granite; and on the floors are a very fine tessellated pavement of Cornish clay, and examples of encaustic tiles; pedestals of British marbles support vases and statuettes of artificial stone, cement, &c.

The principal floor has an apartment 95 feet by 55 feet, with an iron roof, glazed with rough plate-glass. Around run two light galleries. Here are specimens of iron, copper, tin, lead, manganese, antimony, cobalt, &c., of the United Kingdom and the colonies; also a good collection of similar ores from the most important metalliferous countries of the world. The processes of raising these from the mines are illustrated by an extensive series of models, with the modes of dressing the ores for the market, and the final production of the metal; mining tools, safety-lamps, &c.; including models of Taylor's Cornish pumping-engine, the water-pressure engine, the turbine and other

wheels, and a beautiful set of valves. The models of mines can be dissected, and the mode of working shown; with the machines for lowering and raising the miners, models of stamping and crushing engines, and iron-smelting by the hot and cold blast. Here, also, are tools of the Cornish, German, Russian, and Mexican miners.

The history of the metals may also be read in a collection of bronzes and brasses, and gold and silver ornaments; examples of metal casting and steel manufacture are shown; as are also metal statuettes, electrotype deposits, and illustrations of electro-plating and gilding, and photographic processes. Here is also a large and valuable collection of ancient glass, in beads, bottles, jugs, &c., historically arranged: the old Venetian glass is exceedingly curious. The processes of enamelling are illustrated; and here are specimens of fine Limoges, modern works, and Chinese enamels. Next is a collection of Roman pottery. The China clays, China stone, and other raw materials of earthenware and porcelain, are shown; and here is a complete series of the wares of the Staffordshire potteries; also, specimens of those of Derby, Worcester, Swansea, Chelsea, Bow, and other districts, in comparison with the earthenware of the ancients, the ceramic manufactures of Italy, Germany, France, and the Orientals.

In the galleries round the large room is a very complete collection of British fossils, arranged in the order of their occurrence and labelled, so that a collector may compare and identify any specimen he may find.

Attached to the Museum is the Mining Records Office, in which are collected plans and sections of existing and abandoned mines. Here also are a Library, and a Lecture-theatre with 580 sittings. Lastly are well-fitted Laboratories, communicating by a hydraulic lift with a fire-proof room in the basement-story, containing an assay-furnace. The collections are open to the public gratuitously on the first three days of the week; and on the other three days to the students of the Royal School of Mines, &c.

GEOLOGICAL SOCIETY'S MUSEUM, Somerset House, is rich in the original types of fossils described in the *Geological Transactions*. The collection contains a series of British fossils and rocks, arranged stratigraphically; likewise, an assemblage of selected minerals, and a foreign collection geographically arranged. The Society possesses also a fine library of works upon geological science.

GEOLOGICAL: MR. J. S. BOWERBANK'S Collection, 3, Highbury-grove, Islington, consisting more especially of British fossils stratigraphically arranged; and particularly rich in the crag, London clay, and chalk formations; the whole occupying 400 drawers. Also the most extensive collection of British and foreign Sponges in Europe, consisting of many hundred species from Australia, Africa, the West Indies, &c.

GUIANA EXHIBITION, 209, Regent-street (Cosmorama), was a Museum of objects illustrative of the ethnography and natural history of British Guiana, collected by Mr. (afterwards Sir) H. Robert Schomburgk, and exhibited in 1840. The saloon was fitted up as a Guianese hut; and here were three living natives, part of Schomburgk's boat's crew, in their picturesque costumes. Besides collections of mammalia, birds, reptiles, fishes, mollusca, and insects, specimens in osteology, geology, &c., here was a painting of the Victoria Regia lily; Guianese furniture, clothing, and other manufactures; poisoned arrows and blowpipe; a native hammock and bark shirt; the boa, puma, and ant-eater; splendid rock manakins and humming-birds, &c. The three natives, wearing only waistcloths, and jaguar-skin cloaks, and teeth necklaces, and feather-caps, and their skins painted and tattooed, exhibited their blowpipe shooting and dances, which were very attractive.

At the Cosmorama was revived, in 1839, the "Invisible Girl" of some thirty years previously, the invention of M. Charles, and detailed by Sir David Brewster in his *Natural Magic*. The poet Moore inscribed, with exquisite fancy, "Lines to the Invisible Girl." The invention "consisted of an apparatus with trumpets, communicating by a pipe beneath the floor of the room to an apartment in which sat a lady, who, through a small hole in the partition, saw what was going on in the exhibition-room, and answered through the tube accordingly; the sound losing so much of its force in its passage, as to appear like the voice of a girl."

HOSPITALS, the principal, possess Anatomical Museums.

HUDSON'S BAY COMPANY'S HOUSE, Fenchurch-street, possessed many years since a Museum of stuffed Birds, and other objects of natural history from Rupert's Land; the

greater portion of which has been presented to the British Museum and the Zoological Society.

HUNTER'S (WILLIAM) MUSEUM was collected at his large house on the east side of Great Windmill-street, Haymarket. Hunter employed many years in the anatomical preparations and in the dissections; besides making additions by purchase from the museums of Sandys, Falconer, Blackall, and others. Here was a sumptuous library of Greek and Latin classics; and a very rare cabinet of ancient medals, besides coins, purchased at 20,000*l.* expense. Minerals, shells, and other specimens of natural history were gradually added to this Museum, which hence became one of the Curiosities of Europe. The cost of the whole exceeded 70,000*l.*; it was bequeathed by Hunter to the University of Glasgow, with 8000*l.* to support and augment the whole.

INDIA MUSEUM, Fife House, Whitehall-yard, formerly the residence of the Earl of Liverpool. This collection was re-arranged in 1858, and has been removed from the East India House, as above. In the old Museum, so long one of the sights of London, trophies of war were the most conspicuous objects, and the specimens of natural history and rare literary treasures were secondary attractions compared with the silver elephant-howdah and the tiger-organ of Tippoo Sahib. The new collection contains some monumental and artistic records of the progress of British empire in the East, but its principal object is to illustrate the productive resources of India, and to give information about the life and manners, the arts and industry, of its inhabitants.

Here are models and groups of figures representing the varieties of race, caste, dress, occupation, worship, and everything belonging to the public or the domestic life of the people of India: specimens of their agricultural implements, manufacturing tools, and rude machinery; of their conveyances by land and water, of their household furniture and their musical instruments. There is a model of a Sepoy encampment, the huts with their bamboo framework supporting the walls of Durmah matting, topped by a heavy roof of straw thatch; a model, also, of a kutcherric, or law-court. In the industrial portion are shown Calcutta and Madras leather; specimens of paper made from jute fibre and plantain leaf; matwork; metalwork, as—bangles, rings, bracelets, brooches, tassel knots for dresses, hookah mouthpieces; Trichinopoly filigree work; from the Bengal presidency a superb necklace of gold set with pearls and emeralds; a gold bracelet thickly set with pearls and diamonds; a necklace of emeralds, pearls, and rubies; a bracelet of three rows of large diamonds, about 90 in number; and a number of curiously formed gold and silver spice boxes. Portrait of Runjeet Singh, sitting at his Durbar: round his neck is a string of 280 pearls, said to be the largest and most valuable in the world; (now in the possession of her Majesty). His head-dress is a perfect mass of rubies and emeralds, while on his arms is a cluster of armlets of jewels, one a noble emerald. Here are enormous silver chains of great weight and such strength as to carry the heavy arms and accoutrements of the hill tribes of Thibet, with native charm rings and rough-looking bracelets. Also, turquoises of the largest size and purest water, uncut and unpolished, found amid the mountains of Thibet. Specimens of carved woodwork, the inlaid work of wood, metal, and ivory, and the lacerated work of Lahore, Bareilly, and Scinde; metal works and brass wares from Madras, Travancore, Darjheeling, Delhi, and Benares. The formidable knives of the Ghoorkas, the long matchlocks of the men of Oude, the shields and spears of the Santals, the keen-edged swords of the Rajpoots, and the camel guns of the old Mahrattas. Here, too, is actually a revolver musket at least 60 years old, which at once disposes of the claims of both Colt and Adams to originality even of construction. This revolver, we believe, was taken by Sir David Baird at the storming of Seringapatam. Among the costumes are dresses embroidered with beetles, &c. Here are marble statues of Wellington, Clive, and Hastings; pictures; models of Indian craft; antelopes, stags, leopards, and other large stuffed animals. A fine collection of the Elliot marbles, from the ruins of Amrawutti. The Museum is open Monday, Wednesday, and Friday, 10 to 4, free.

KING'S COLLEGE MUSEUM, Strand, consists of the collection formed at the Kew Observatory by King George III., and of a cabinet of natural history specimens from Kew Palace; presented to the College in 1843, and known as "George the Third's Museum." Here are the celebrated "Boyle models," and "forty-one brass plates, engraved with astronomical, astrological, and mathematical delineations;" a large orrery, date 1733; an armillary sphere, 1731; apparatus made for Desaguliers' lectures; a rude model of Watt's steam-engine; Attwood's large arch of polished brass vousoirs, &c. There have been added Wheatstone's speaking-macline; a model, fifteen feet long, of the celebrated Schaffhausen timber bridge; a bust of Queen Victoria, by Weekes; and a statuette of George III., by Turnerelli. The collection also includes small philosophical apparatus, entomological specimens, fossils, minerals, &c. Here also is a portion of Mr. Babbage's Calculating Machine, which has succeeded in printing mathematical and astronomical tables. At the College is likewise an Anatomical Museum, a Cabinet of Natural History; and a Chemical Theatre, with a Daniell constant battery of great power.

The College possesses a beautifully-illuminated MS. containing the Statutes of the Order of the Garter; a drawing of the House of Lords, *temp.* Edward I.; and the Statutes in more elegant Latin.

corrected in the handwriting of King Edward VI., superbly emblazoned with arms, &c. The Museum can be seen by the Curator's order.

LEVERIAN MUSEUM: (*See LEICESTER-SQUARE*, p. 512.)

LINNEAN SOCIETY, 32, Soho-square (the house of Sir Joseph Banks, and bequeathed by him to the Society), formerly contained in its Museum the herbarium of Linnæus, purchased, with the library, by Sir J. E. Smith, for 1000*l.* The herbarium was kept in three small cases, and was a curious botanical antiquity, of great value in ascertaining with certainty the synonyms of the writings of Linnæus. The museum is very rich in the botanical department, containing the herbaria of Linnæus, Smith, Pulteney, Woodward, Winch, &c.; besides a valuable herbarium presented by the East India Company in 1833. The entomological collections are extensive; the zoology is rich in Australian marsupials, birds, and reptiles; and the shells are fine. Here also was a collection of paintings, including a portrait of Linnæus, from the original by Roslin at Stockholm, described as the most striking likeness ever executed. This copy was painted for Archbishop Von Troil, by whom it was presented to Sir Joseph Banks. In this house Sir Joseph Banks gave public breakfasts on Thursdays, and *conversazioni* on Sunday evenings, to the Fellows of the Royal Society, during his long presidency. He left an annuity of 200*l.*, his library, and botanical collections, for life, to his librarian, Mr. Robert Brown, F.R.S., afterwards to come to the British Museum; but by arrangement the library and collections were at once transferred to the Museum.

MANUFACTURES AND ORNAMENTAL ART MUSEUM, Marlborough House, Pall Mall was opened temporarily in 1852, with purchases from the Great Exhibition, with 5000*l.* voted by Parliament; including gorgeous scarfs and shawls from Cashmere and Lahore; the French shawl of Duché aîné et C<sup>o</sup>, the most perfect specimen of shawl-weaving ever produced; glittering swords, yataghans, and pistols from Tunis and Constantinople; the famous "La Gloire" vase from the Sèvres manufacture; Marcel Frères' hunting-knife of St. Hubert; Changarnier's sword, from the workshop of Froment Meurice; Vecte's splendid shield; a facsimile of the celebrated Cellini cup; and other art-illustrations of the highest order. To these were added purchases; and the articles were grouped into six classes: woven fabrics, metal works, pottery, furniture, and miscellanies. The metal-work department consisted also of the rich and splendid manufacture of the East, with a few rude specimens illustrative of the innate taste of their workmen; the silver and bronze materials of France, cups of English and brooches of Irish manufacture, and Elkington's electrotypes. The division of pottery was enriched by the Queen's Sèvres collection, and by valuable works from Baring, Minton, Copeland, Webb, and Farrar: the royal collection, though of forty-two pieces only, being worth 12,000*l.* The casts of ornamental art were removed here from Somerset House; and the collection included ancient Greek and Roman, mediæval or Romanesque, Saracenic or Gothic, Renaissance, figures, busts, masks, animals, &c.; the Renaissance (A.D. 1400 to 1600) arranged chronologically.

There was a collection of 3489 specimens of enrichment, British and foreign examples, for the guidance as to style of the carvers employed in the New Houses of Parliament; and another collection of 3283 casts, from models prepared for stone and wood carvings, deposited in the Government Works at Thames Bank, and at the New Houses of Parliament. These examples cost 7000*l.*, and are intended to form part of a National Museum of Mediæval Art.—*First Report Dep. Practical Art*, 1853.

The Car for the Funeral of the Duke of Wellington, in 1852, modelled by Pupils of the Department, was subsequently exhibited here. The collection was removed to South Kensington, upon Marlborough House being prepared for the reception of the Prince and Princess of Wales; the Car being removed to St. Paul's Cathedral.

MEAD'S (DR.) MUSEUM was in the garden of No. 49, Great Ormond-street, where was also a library of 10,000 volumes. The collection included prints and drawings, coins and medals; marble statues of Greek philosophers and Roman emperors; bronzes, gems, intaglios, Etruscan vases, &c.; marble busts of Shakspeare, Milton, and Pope, by Scheemakers; statues of Hygeia and Antinous; a celebrated bronze head of Homer; and an iron cabinet (once Queen Elizabeth's) full of coins, among which was a medal with Oliver Cromwell's head in profile, legend, "the Lord of Hosts, the word at Dunbar, Sept. 1650;" on the reverse, the parliament sitting. After Dr. Mead's death, in 1754, the sale of his library, pictures, statues, &c. realized between 15,000*l.* and 16,000*l.*

Mead, when not engaged at home, generally spent his evenings at Batson's coffee-house, Cornhill; and in the forenoons, apothecaries came to him at Tom's, Covent Garden, with written or verbal reports of cases, for which he prescribed without seeing the patient, and took half-guinea fees. Dr. Mead's gay *conversazioni*, in Ormond-street, were the first meetings of the kind.

MISSIONARY MUSEUM, THE, 8, Bloomfield-street, Finsbury, contributed chiefly by the missionaries of the London Missionary Society, and travellers generally, is remarkable for its great number of idols and objects of superstitious regard, costumes, domestic utensils, implements of war, music, &c. from islands in the Pacific Ocean, China, and ultra-Ganges; India, including the three Presidencies; Africa and Madagascar; North and South America; "especially the idols given up by their former worshippers, from a full conviction of the folly and sin of idolatry." Here also is an assemblage of natural history specimens, principally Polynesian: its Tahitian collection rivals Capt. Cook's, in the British Museum.

Some of the idols are 12 feet high. Among the rarities are 18 model pictures of Japanese costumes obtained at great risk; and six coloured etchings by a Chinese artist, the Progress of the Opium-smoker, a counterpart to Hogarth's "Rake's Progress." Admission by Director's or officer's tickets.

NATIONAL REPOSITORY, THE, was formed in 1828, in the upper gallery of the south-west side of the King's Mews, Charing Cross; and 35 adjoining rooms were reserved for the reception of products from the chief manufacturing towns. Here were silks, looms to work at certain hours, English Mechlin lace, crystallo-ceramic ornamental glass; models of steam-engines, steam-boat paddles, suspension-bridges, and public buildings; new kaleidoscopes, rain-gauges, musical glasses, Indian corn-mills, life-buoys, &c. The exhibition proved unattractive, notwithstanding the King (George IV.) and his Ministers took much interest in the project. The collection was removed to a house on the east side of Leicester-square, and there merged into the "Museum of National Manufactures and the Mechanical Arts." It was soon dispersed; but, doubtless, suggested the Polytechnic Exhibitions at the Adelaide Gallery, and in Regent-street and elsewhere.

NAVAL MUSEUM ("The Model Room"), Somerset House. Here were models of the science and trade of ship-building, with sections of interior and exterior construction, from the *Great Harry* and the *Sovereign of the Seas* to our own time. In the central room was a large model of the *Victoria*, 110 guns, laid down in 1839; and above hangs a model of the *Victory*, built 1735, and lost in 1744, with an admiral and its entire crew. Here also were models of the *Bucentaur*; a Chinese Junk; a Burmese War-boat; the *Queen*, 110 guns; and the *Agamemnon* steam-screw war-ship, 91 guns. This collection was removed to the Naval Court of the South Kensington Museum, in 1864.

PHARMACEUTICAL SOCIETY, THE, 17, Bloomsbury-square, incorporated 1842, possesses the most extensive and complete Museum of the kind in existence; comprising rare specimens of the animal, vegetable, and mineral kingdoms; and substances and products used in Medicine and Pharmacy. Also, groups and series of authenticated specimens, valuable for identifying, comparing, and tracing, the origin and natural history of products. Here is the valuable Museum of the late Dr. Pereira, including collections of Cinchona barks by eminent foreign naturalists. The collection may be seen daily, except Saturdays, by Member's order, or on application to the curator.

RACKSTROW'S MUSEUM, at No. 197, was a Fleet-street sight of the last century. Rackstrow was a statuary, and had Sir Isaac Newton's Head for a sign: his museum consisted of natural and artificial curiosities and anatomical figures; and "the circulation of the blood, shown by a red liquor conveyed through glass tubes, made in imitation of the principal veins and arteries of the human body; the heart and its auricles, and likewise the lungs, are put in their proper motions." Rackstrow died at his house in Fleet-street, in 1772; and in seven years after, the collection was dispersed by auction. One of the prodigies of the collection was the skeleton of a whale, more than 70 feet long. Donovan, the naturalist, subsequently exhibited here his *London Museum*, which was soon after dispersed.

ROYAL SOCIETY'S MUSEUM, Burlington House, was commenced in 1665, with "the collecting of a repository, the setting up a chemical laboratory, a mechanical operatory, an astronomical observatory, and an optick chamber:" next year Evelyn presented "the table of veins, arteries, and nerves, which he had made out of the natural human bodies, in Italy." Sir R. Moray presented "the stones taken out of Lord Balcarras's heart, in a silver box;" and "a bottle full of stag's tears." Hooke gave "a petrified fish, the skin of an antelope which died in St. James's Park, a petrified fœtus," and other rarities. In 1681, when Dr. Grew published his curious catalogue, the Museum contained several thousand specimens of zoological subjects and foreign curiosities; among the eighty-three contributors are Prince Rupert, the Duke of Norfolk, Boyle, Evelyn, Hooke, Pepys, &c. (Weld's *History of the Royal Society*, vol. ii. p. 278.) Ned Ward (*London Spy*, part iii.) satirically describes this Museum of Wiseacres' Hall, or Gresham College. The account of its rarities in Hatton's *London*, 1708, fills 20 pages; and it is curious to observe how much it must have propagated error. Thus we find among Dr. Grew's rarities:—

"The Quills of a Porcupine, which, on certain occasions, the creature can shoot at the pursuing enemy and erect at pleasure.

"The Flying Squirrel, which, for a good nut-tree, will pass a river on the bark of a tree, erecting his tail for a sail.

"The Leg-bone of an Elephant, brought out of Syria for the thigh-bone of a giant. In winter, when it begins to rain, elephants are mad, and so continue from April to September, chained to some tree, and then become tame again.

"Tortoises, when turned on their backs, will sometimes fetch deep sighs, and shed abundance of tears.

"A Humming-bird and Nest, said to weigh but 12 grains; his feathers are set in gold, and sell at a great rate.

"A Bone, said to be taken out of a Mermaid's head.

"The Largest Whale, liker an island than an animal.

"The White Shark, which sometimes swallows men whole.

"A Siphalter, said with its sucker to fasten on a ship, and stop it under sail.

"A Stag-beetle, whose horns worn in a ring are good against the cramp.

"A Mountain Cabbage: one reported 300 feet high."

Of the Society's pictures there is a good catalogue by Mr. Weld, Assistant Secretary, who has also, from the Charter-book, collected into a volume fac-similes of 300 of the Fellows (from the period of the institution of the Royal Society to the present time), an illustrious set of autographs.

*Relics of Sir Isaac Newton.*—An autograph note from the Mint Office; one of the solar dials made by Newton, when a boy; his richly-chased gold watch, with a medalion of Newton, and inscribed: "Mrs. Catherine Conduitt to Sir Isaac Newton. Jan. 4, 1708." "The first reflecting telescope, invented by Sir Isaac Newton, and made with his own hands," 1761; the mask of his face, from the cast taken after death, which belonged to Roubiliac; a small lock of Newton's silver-white hair: and three portraits of him in oil, painted by Jervas, Marchand, and Vanderbank. Here likewise is the original model of the Safety-lamp, made by Sir Humphry Davy's own hands in 1815.

SALTERO'S (DON) MUSEUM was first established at a coffee-house, afterwards the *Swan Tavern*, in Cheyne-walk, Chelsea, in 1695, by one Salter, a barber, who assembled there a collection of Curiosities: they remained in the coffee-room till August, 1799, when they were dispersed by public auction; previous to which printed Catalogues were sold, with the names of the principal benefactors to the collection. In Dr. Franklin's *Life* we read: "Some gentlemen from the country went by water to see the College, and Don Saltero's Curiosities," at Chelsea. The collection is also noticed at p. 90.

SAULL'S MUSEUM, 15, Aldersgate-street, was a private collection, which the proprietor liberally allowed to be inspected. The *Antiquities*, principally excavated in the metropolis, consisted of early British vases, Roman lamps and urns, amphoræ, and dishes, tiles, bricks, and pavements, and fragments of Samian ware; also, a few Egyptian antiquities; and a cabinet of Greek, Roman, and early British coins. The *Geological Department* contained the collection of the late Mr. Sowerby, with additions by Mr. Saull; together exceeding 20,000 specimens, arranged according to the probable order of the earth's structure. Every article bore a descriptive label; and the localization of the antiquities, some of which were dug up almost on the spot, rendered these relics so many medals of our metropolitan civilization. Mr. Saull, F.G.S., died in 1855, when the collection was distributed to the British Museum and other institutions.

**SLOANE MUSEUM, THE**, collected by Sir Hans Sloane, at Chelsea, consisted of natural and artificial Curiosities, which cost Sir Hans 50,000*l.*: after his death in 1753, they were sold to Parliament for 20,000*l.*, and formed the nucleus of the British Museum. The collection consisted of a library of 50,000 volumes; MSS. upon natural history, voyages and travels, and the arts, especially medicine; 23,000 medals and coins; anatomical preparations; natural history specimens; and an herbarium of 336 volumes. The Catalogue of the collection extended to 38 vols. folio, and 8 vols. 4to. (*See BRITISH MUSEUM*, p. 574.)

**SOANE MUSEUM, THE**, 13, Lincoln's Inn Fields (north side), was founded and endowed by Sir John Soane, the architect, with 30,000*l.* 3 per cents, and a house in Lincoln's Inn Fields, to support the Museum. At Soane's death, in 1837, the Trustees appointed by Parliament took charge of the "Museum, Library, Books, Prints, Manuscripts, Drawings, Maps, Models, Plans, and Works of Art, and the House and offices;" providing for the free admission of amateurs and students in painting, sculpture, and architecture; and general visitors.

The Museum is open to general visitors on any Wednesday, Thursday, or Friday in April, May, and June; and likewise on the Wednesdays in February, March, July, and August.

Admission is obtained by cards, to be applied for either to a Trustee, by letter to the Curator, or personally at the Museum.

Access to the books, drawings, MSS., or permission to copy pictures or other works of art, is granted on special application to the Trustees or the very obliging Curator, Mr. Joseph Bonomi, who resides at the Museum.

A general description of the Collection, abridged from that printed by Sir John Soane in 1835, may be had at the Museum. The larger work (only 150 copies printed) is interspersed with poetical illustrations by Mrs. Hofland.

The house, built by Mr. Soane in 1792, was in 1812 faced with a stone screen, in which are introduced Gothic corbels, 12th century; and terra-cotta canephora, copied from the caryatides of the Temple of Pandrosus at Athens. The entrance-hall is decorated with medallion reliefs after the antique. The dining-room and library ceiling are painted by H. Howard, R.A. Here are a large collection of drawings of buildings by Sir John Soane;\* plaster models of ancient Greek and Roman edifices, restored; a cork model of Pompeii; fictile vases, alabaster urns, and antique bronzes; windows filled with old stained glass; busts of Homer, Shakspeare, Ben Jonson, Camden, and Inigo Jones; Greek and Etruscan vases, and Wedgwood's imitations; Sir Joshua Reynolds' Snake in the Grass, purchased for 510 guineas by Soane, at the Marchioness of Thomond's sale; and a portrait of Soane, almost the last picture painted by Lawrence, 1829. Here also is a walnut-tree and marble table, formerly Sir Robert Walpole's: on this table is exhibited the celebrated Julio Clovis' MS. The Little Study contains marble fragments of Greek and Roman sculpture, antique bronzes, and some natural Curiosities. In the Monk's Yard are Gothic fragments of the ancient palace at Westminster, picturesquely arranged to resemble a ruined cloister. In the Corridor are casts from Westminster Hall; and Banks's model of a Sleeping Girl, at Ashbourne; also two engravings, the Laughing Audience, and the Chorus, by Hogarth; and a drawing by Canaletti. The Monk's Parlour has its walls covered with fragments and casts of mediæval buildings. The Monument Court contains architectural groups of various nations. The Picture-room has moveable planes, which serve as double walls, on each side of which are hung the pictures: here are Hogarth's Rake's Progress, eight paintings, purchased for 570 guineas; and Hogarth's Election, four paintings, for 1650 guineas; also, three pictures by Canaletti, one, the Grand Canal of Venice, his *chef-d'œuvre*; Van Tromp's Barges entering the Texel, by J. M. W. Turner, R.A.; the Study of a Head, from one of Raphael's Cartoons,—a relic saved from the wreck of the lost Cartoon, which remained in the possession of the family of the weaver who originally worked the Cartoons in tapestry; also copies of two other heads from the same, by Flaxman; pictures by Watteau, Fuseli, Bird, Westall, Turner, Callcott, Hilton, &c. The fifteen Indian-ink Drawings of Pæstum, by Piranesi, are very fine.

\* Sir John Soane, the son of a Berkshire bricklayer, designed a greater number of public edifices than any contemporary; from the Bank of England in the City, to Chelsea Hospital at the western extremity; from Walworth in the southern to the Regent's Park in the north-western suburbs. His last work (1833), the State Paper Office, in St. James's Park, was very unlike any other of his designs. He died at his house in Lincoln's Inn Fields, Jan. 20, 1837.

Upon tables are displayed several illuminated MSS., a MS. Tasso, the first three editions of Shakspeare, sketch-books of Sir Joshua Reynolds, and other curious works.

In the Catacombs are ancient marble cinerary urns and vases. In the Sepulchral Chamber is the Sarcophagus discovered in 1817, by Belzoni, in a royal tomb near Gournou, Thebes. It was bought by Sir John Soane of Mr. Salt, the traveller, in 1824, for the sum of 2000*l*. When first discovered, this Sarcophagus was considered by Dr. Young to be the tomb of Psammis; and the hieroglyphics in the cartouche to indicate Osiezi-menephtha, the father of Ramos II.; although Sir Gardner Wilkinson considers it was not that monarch's sarcophagus, but his cenotaph. Mr. Bonomi has illustrated to the Syro-Egyptian Society Belzoni's very animated description of this Sarcophagus by a section and plan of the catacomb, which is excavated to a depth of one hundred yards into the solid rock. The sarcophagus is completely covered with hieroglyphics and 659 figures (each 2 inches high), all of which were originally filled in with a blue paste. The subjects on both sides are of a religious character, while that on the floor of the sarcophagus is personal. Two subjects of particular interest are pointed out, one as representing the ancient Cosmical philosophy, and the other as exhibiting in a very perfect manner the doctrine of the Metempsychosis. Mr. Bonomi also considers that the sarcophagus reveals two remarkable features which have not been seen in any other example: the first in the existence of two holes at each end of the lid, for the admission of ropes to ensure the gradual adjustment of the cover into its proper place; and the next the evidence of a means of preserving the edges of the sarcophagus from fracture during the process of lowering, and affording the means of hermetically closing it. It is formed of a large mass of arragonite, or alabaster: it is 9 feet 4 inches long, and 2 feet 8 inches deep. The seventeen fragments which formed part of the cover have been put together: and 19 plates of the whole have been carefully drawn by Mr. Bonomi, and described by Mr. S. Sharpe.

In the Crypt are several cork models of ancient tombs and sepulchral chambers discovered in Sicily, the walls decorated with painting and sculpture; and in the centre the remains of the deceased, amidst vases and other funereal accompaniments.

In various apartments are a plaster cast of the Apollo Belvedere, taken by Lord Burlington about 1718; a marble bust of Sir John Soane, presented by the sculptor, Chantrey; a richly-mounted pistol, taken by Peter the Great from the Turkish Bey at Azof, 1696, presented by Alexander Emperor of Russia to the Emperor Napoleon at Tilsit in 1807, and given by him to a French officer at St. Helena; also, a portrait of Napoleon in his 28th year, by a Venetian artist; and a miniature of Napoleon, painted at Elba, in 1814, by Isabey; statuettes of Michael Angelo and Raphael, cast from the model, by Flaxman, in Mr. Rogers's collection; marble bust of Sir William Chambers; bust of R. B. Sheridan, by Garrard; carved and gilt ivory table and chairs, formerly Tippoo Saib's; the watch, measuring-rods, and compasses used by Sir Christopher Wren; a large collection of ancient gems and intaglios; and a set of the Napoleon Medals, once the Empress Josephine's. (See LIBRARIES, p. 525.)

The *Sculpture, Marbles, Casts, and Models*, contain 40 specimens of Flaxman, including a plaster cast of his "Shield of Achilles;" 10 works of Banks; and specimens of Michael Angelo, John de Bologna, Donatello, Rysbræck, Westmacott, Chantrey, Gibson, Baily, Rossi, &c.

The *Architectural* department includes drawings, models of buildings, and details. Among the drawings are those of all Sir John Soane's works, and others by Piranesi, Zucchi, Bibiena, Campanella, Thornhill, Chambers, Kent, and Smirke; and a volume of drawings by Thorpe, the Elizabethan architect. There are busts of Palladio, Wren, Chambers, Dance, &c.

The nine Etruscan Vases exhibit the variety of shapes to be found in much larger collections; one (the Englefield) is of extreme rarity; and the Cawdor vase is of extraordinary size and elegantly enriched. Among the Roman antiquities are real specimens and casts from the temple of Jupiter Stator at Rome, and of the Sibyl or Vesta at Tivoli, &c.

The *Antiquities and Curiosities* are as useful to artists and pattern-drawers as the new rooms in the Louvre at Paris. The entire collection cost Sir John Soane upwards of 50,000*l*.

The Museum is not merely interesting as a sight or show-house, but of great service for artistic study in architecture, sculpture, painting, and house decoration. The number of visitors in a year are from 2000 to 3000 persons. The removal of the contents of the Museum has been proposed, to extend its beneficial effects; but it is urged, and we think with success, that the donor intended the Collection should never be removed from its present location, as he fitted up the house for its reception in the most elaborate and peculiar manner.—(See "A Morning in Sir John Soane's Museum," in *Walks and Talks about London*; and a paper, with four large engravings in the *Illustrated London News*, May, 1864.)

SOCIETY OF ARTS, 18, John-street, Adelphi (the house built by the brothers Adam, in

1772-74), has Barry's celebrated pictures upon the walls of the Council-room, and a few portraits, &c. ; to be seen gratis, between 10 and 4 daily, except Wednesday and Sunday. The collection is constantly receiving interesting additions.

The Model Repository, 42 feet by 35 feet, on the ground-floor, contains one of the most extensive collections of models in Europe.

Here are "hands for the one-handed, and other instruments for those who have lost both; clothes of all sorts of materials from all countries; medals of Charles I.'s reign, and the last new stove of Victoria's; fire-escape ladders to run down from windows and scaffolds, rising telescope fashion out of a box, to mount roofs; beehives and turnip-slicers, ploughs and instruments to restrain vicious bulls, pans to preserve butter in hot countries, safety-lamps; models of massive cranes and of little tips for umbrellas; life-buoys and maroon-locks; diving-bells and expanding keys; safety-coaches and traps; clocks, and tail-pieces for violoncellos; instruments to draw spirits and to draw teeth; samples of tea, sugar, cinnamon, and nutmegs, in different stages of growth; models of Tuscan pavement; beds for invalids; methods to teach the blind how to write" (Knight's *London*); also, the first piece of gutta serena seen in Europe, and presented to the Society 1843.

In the Ante-room, upstairs, are Nollekens's medallion of Jephtha's Vow, Barry's picture of Eve tempting Adam, &c. The large pictures in the Council-room were presented gratuitously by Barry, between 1777 and 1783, and were commenced when he had but sixteen shillings in his pocket! They are—1. Orpheus Civilizing the Inhabitants of Thrace. 2. A Grecian Harvest-home. 3. Crowning the Victors at Olympia. 4. Commerce, or the Triumph of the Thames. 5. The Distribution of Premiums in the Society of Arts. 6. Elysium, or the State of Final Retribution. Barry has published etchings of these pictures, and has minutely described the subjects in his published Works, vol. ii. p. 323, edit. 1809. They were exhibited, and produced Barry 500*l.*, to which the Society added 200*l.* The Victors at Olympia is the finest work of the series: Canova declared the sight of it to be worth a voyage to England. In the Distribution picture are introduced portraits of Shipley, Arthur Young, the Prince of Wales, Mrs. Montagu, Sir George Savile, Bishop Hurd, Soame Jenyns, the two beautiful Duchesses of Rutland and Devonshire, the Duke of Richmond, Lord Folkestone, William Lock, Edmund Burke, and Dr. Johnson. The Retribution contains great and good men of all ages and times. Each of the latter pictures is 42 feet long. Barry died in 1806, and his remains lay in state in the room which the grandeur of his genius had so magnificently adorned. In the ante-room is a portrait of Barry; and in the large room are portraits of Lord Folkestone, by Gainsborough; Lord Romney, by Sir Joshua Reynolds; a marble statue of Dr. Ward, by Carlini; busts of Dr. Franklin and Barry; and casts of Venus, Mars, and Narcissus, by John Bacon.

The Society have held in the Great Room annual Exhibitions of Decorative Manufactures, and ancient and Mediæval Art; and the collected works of Mulready, Etty, and other artists of note. But the benefits which the country has derived from the Society of Arts culminate in their initiative services in the origin and organization of the Great Exhibitions of 1851 and 1862, under the wisdom-tempered zeal of the Royal President of the Society, Prince Albert, the beneficial effects of whose sagacity, foresight, and integrity in contributing to the true glory of the nation become, year by year, the more fully appreciated.

SOUTH KENSINGTON MUSEUM commenced with the erection in 1856 of an iron structure under the superintendence of Sir W. Cubitt (which, from its engineering unsightliness, got the sobriquet of "the Boilers"), and when completed was given by the Commissioners of the Exhibition of 1851, into the possession of the Science and Art Department. Since that date a permanent brick and-iron structure, with terracotta decorations, has been erected. The building was planned, and its construction superintended up to the year 1865, by Captain Fowke, R.E. Its decorations, external and internal, were designed by Mr. Godfrey Sykes, originally a student of the Sheffield School of Art. The site is of irregular form, bounded on three sides by straight lines, and with three slightly acute angles, the narrowed portion being towards the north or rear. The two longer boundaries abut on the Cromwell and Exhibition Roads; the former measuring about 740 feet, the latter about 600 feet; the principal front and the entrances towards the south—that is, Cromwell-road. It would occupy more space than is at our disposal to describe the plan of the several Museum buildings, to be erected from time to time, as the requisite funds are voted by Parliament. The central portion

is Italian in general effect. The most novel characteristics are due to the employment of coloured materials—namely, for the construction, bright red bricks, in two tints; and for the ornament, terra-cottas of deep red, and a pale, but not harshly white, hue; tile tesserae in chocolate and warm grey for mosaics, inserted in panels on the front, and for a large one in the pediment; and majolica with white ground, relieved with yellow and blue, for the soffits of the arches of the columnar recess in front, for the arcades, &c. The great central columns are modelled with figures testifying the three divisions of Man's Life, Childhood, Manhood, and Old Age, alternating with a bough modelled from nature, and laid over fluting. The figures are mediæval in character, in the style of Michael Angelo and Raphael. The subject for the tile-mosaic of the pediment is an allegorical representation of the Queen opening the great Exhibition of 1851. The columns above described stand before the new Lecture Theatre, a handsome hall, calculated to seat about 600 persons.

The contents of the South Kensington Museum may be classified as follows:—

1. The Art Collections, which now number 12,530 objects, illustrative of the history, principles, and processes of decorative art in sculpture, carvings in wood and ivory, decorative furniture, metal work, goldsmiths' work, jewellery and lapidaries' work, engraved gems, niello work, arms, armour, pottery, glass, enamels, ancient lac work, textile fabrics, miniatures, &c. &c. An important feature in these collections is the reproduction by means of casting, and electrotypy, of rare and costly works of art in other countries, with which the Department of Science and Art is desirous of effecting exchanges of such reproductions. Another feature is the permanent Loan Exhibition of valuable objects of art belonging to private owners. The Museum also contains a large and valuable number of modern English paintings mainly presented by the late Mr. Sheepshanks, and water-colour drawings, principally bequeathed by Mr. Ellison, as well as the Cartoons of Raphael lent by her Majesty; and it affords temporary accommodation for the exhibition of many paintings of the British School which belong to the National Gallery.

2. The Art Library, containing about 15,000 volumes relating to art, and a great number of original drawings, illuminations, and engravings.

3. The Educational Museum and Library, containing many educational works in various European languages, and scientific apparatus and diagrams, chiefly lent by the inventors and publishers.

4. The Museum of Construction and Building Materials, containing examples of materials and apparatus of use in building, draining, and decorating houses; and many architectural models.

5. The Museum of Animal Products and Food Collection, principally formed by the transference by English and Foreign commissions of collections exhibited in the International Exhibitions of London in 1851 and 1862, and of Paris in 1855.

6. The Naval Models, belonging to the Admiralty, supplemented by loans from private builders and owners. The Admiralty Collection shows the various changes in the construction of men-of-war from 1416 down to the present time.

The following are the terms on which the Museum is open to the public:—

The Museum is open daily, Sundays excepted, free, on Mondays, Tuesdays, and Saturdays, from 10 A.M. till 10 P.M. The Students' days are Wednesdays, Thursdays, and Fridays, when the public are admitted on payment of 6d. each person, from 10 A.M. till 4 P.M. Tickets of admission to the Museum, including the Art-library and Educational Reading-room, are issued.

Here, also, is the Museum of Patents, mainly founded by Mr. Benet Woodcroft, and greatly extended by the zeal of the present curator, F. Petit Smith. The collection includes "patriarchal models," from the parent engine of Steam Navigation to the model of the engine of the Great Eastern; historical locomotives, and machines of endless ingenuity; with a collection of portraits of inventors, scientific library, &c. (*See PATENT SEAL OFFICE LIBRARY*, p. 522.)

The authorities at the South Kensington have considerably encouraged mosaic decoration. Their first proposition was to decorate with mosaics the façade of the picture-galleries of the 1862 Exhibition building. Subsequently they caused a number of mosaics of divers kinds to be inserted in various parts of the new and permanent buildings of the South Kensington Museum. The most important of these is the series of figures which are inserted in compartments of the wall-arcade of the south court of the Museum. Of these the most important are Apelles, Mr. Poynter, Cimabue, Mr. F. Leighton, A.R.A.; the Raphael, Godfrey Sykes; the Giorgione, Mr. Prinsep.

The Sheepshanks' valuable collection of Pictures by modern British artists is fully equal, and is in some respects superior, to the Vernon Collection. The works of Leslie, R.A., and Mulready, R.A., can nowhere be studied to greater advantage. *Observe*: Highland Drovers, The Shepherd's Chief Mourner, Jack in Office, the Breakfast, all by E. Landseer, R.A.; Duncan Gray and the Broken Jar, by Sir D. Wilkie; Choosing the Wedding Gown, The Ball, Giving a Bite, First Love, all by W. Mulready, R.A.; Scene from the Merry Wives of Windsor, Uncle Toby and Widow Wadman, both by C. R. Leslie, R.A. Paintings in oil, 233 specimens; Drawings and Sketches, 103 specimens.

On May 20, 1867, here was laid with great State, by Queen Victoria, the first stone of "the Royal Albert Hall of Arts and Sciences," a vast elliptical building, of red brick, with terra-cotta decorations, estimated to cost 200,000*l*.

TRADESCANTS' MUSEUM, at South Lambeth (*see* p. 185), contained not only stuffed animals and dried plants, but also minerals; implements of war and domestic use, of various nations; and a collection of coins and medals. In the Catalogue en-

titled *Museum Tradescantium*, 1656, we find, "Two feathers of the phoenix taylor;" "a natural dragon;" and a stuffed specimen of the Dodo, believed to have been exhibited alive in London in 1638; its head and foot are preserved in the Ashmolean Museum at Oxford, of which the Tradescants' collection formed the nucleus.

TRINITY HOUSE MUSEUM, Tower Hill, contains various models of lighthouses, floating-lights, life-boats, and a noble model of the "Royal William," 150 years old. Among the naval Curiosities is the flag taken by Sir Francis Drake, in 1588, from the Spaniards; pen-and-ink plans of sea-fights, *temp.* Charles II.; Chinese map; pair of colossal globes, &c.; besides a large picture, by Gainsborough, of the Elder Trinity Brethren, and numerous portraits and busts. To be seen by Secretary's order.

UNITED SERVICE INSTITUTION MUSEUM, Whitehall-yard, contains an Armoury, Chinese cabinet and model gallery, antiquities, and an ethnological collection; a lecture-theatre and library. This institution, which was founded in 1830, under the patronage of King William IV. and the Duke of Wellington, has the support of most of the officers of rank in both services, and has received from her Majesty a Royal charter of incorporation.

The visitor first passes through rooms containing the arms and armour of the Esquimaux, New Zealander, inhabitants of the Polynesian Islands, Australia, and of Africa, and then enters the European armoury. Round this room are displayed firearms from the time of Henry VIII. to Victoria; in the windows are cases containing swords of heroes, amongst them the sword of Cromwell which he carried at the siege of Drogheda; a small sword of Nelson; and dirks and yataghans from the Greek Islands. In a spacious room are arranged a series of models of steam-engines from the first appliance of steam to the screw-engines of the present time; here also are models of tents by Major Rhodes and Mr. Turner. The next room contains a collection of the arms, accoutrements, clothing, and field equipment of a soldier of the Line and rifleman of our own and of the Prussian, Austrian, Belgian, and Sardinian armies, with the addition in the case of Sardinia of those of a cavalry and artillery soldier. These have been presented to the institution by the respective Governments. The grand staircase is guarded, as it were, by two men-at-arms of the time of Charles I. On the walls are pikes, spears, helmets, and long two-handed swords, and on either side shirts of ringed mail of the time of the Crusaders; a genuine English longbow of the time of Henry VIII.; and arrows taken out of the citadel of Aleppo, supposed to be of the time of the Crusaders. The Asiatic Armoury has its walls covered with spears, sabres, shields, matchlocks, and other descriptions of arms and armour from Borneo, Java, and Ceylon, to the Punjab and Afghanistan. In this room are also to be seen the dress worn by Tippee Sahib at the capture of Seringapatam, and the pistols taken from his body after his fall. Next is the Enfield Rifle Room, where is exhibited the Enfield rifle in all stages of manufacture, from specimens of the raw material to the finished rifle. In the naval departments are models of vessels, from the most perfect model of a line-of-battle ship, put together in a bottle by one of the French prisoners of war in Norman Cross Prison, to a large one of the *Cornwallis*, 74, built in Bombay; and from the heavy, cumbersome build of the Dutch man-of-war of 1650 to the beautiful lines of the modern frigate; also, models of guns and anchors, Cuninghams' plan for reefing topsails from the deck, Clifford's boat-lowering apparatus, life-boats, and gun-rafts. Next are curiosities: from Drake's walking-stick to Cook's punch-bowl and chronometer; models of foreign craft, from the Maltese galley to the Malay proa and the birch-bark canoe of the Indian. Here, also, is the table made from the wood of the *Victory* when under repair, on which are the relics of the various expeditions in search of Sir J. Franklin. Also, an Australian Boomerang; the stone upon which Capt. Cook fell dead at Owhyhee; war implements from all parts of the world; a piece of the deck of the *Victory*, from the spot on which Nelson fell; Napoleon Bonaparte's fusil, razor and shaving-brush, and fragment of his coffin; articles found on the field of Waterloo; relics of the *Royal George*, sunk 1782, and the *Mary Rose*, 1545; chronological series of firearms (James II. to William IV.); skeleton of the horse Marengo, rode by Napoleon at Waterloo; Chinese trophies and chain-shot; Polar bear and wolf shot by Sir George Back; wooden Chinese cage for human prisoner; first uniform worn in the British navy; hat of Lord Nelson; Chinese magic mirror; models of ships of all nations; fortification models; great model of Linz and its camp; and pictures of battles. Also, Capt. Siborne's Model of the Battle of Waterloo; scale, 9 feet to a mile, area 440 square feet; showing the entire field, and the British, French, and Prussian armies, by 190,000 metal figures; with the villages, houses, farmyards, and clumps of trees: cost Captain Siborne 4000*l.*; purchased for the Institution by subscription. Here, also, are Colonel Hamilton's model of the South of the Crimea; models of the different systems of fortification, with relics commemorative of the Peninsular, Waterloo, and the Crimean campaigns. The Library contains between 11,000 and 12,000 volumes of works on naval and military history, biography, improvements in arms, and general science. The topographical department contains the naval charts, and maps, and plans, supplied by the Admiralty and War Departments; here on maps are marked out, by pins and coloured cards, warlike operations or peaceful movements over the world. The reading-room is well supplied with the military periodicals of the day. During the season lectures on subjects of passing interest, or bearing on the naval or military services, are delivered. The United Service Institution is supported by entrance-fees, 1*l.*; annual subscription, 10*s.* The public are admitted daily, free, by members' orders.

UNIVERSITY COLLEGE, Gower-street. The Anatomical Museum, based upon the collection of Sir Charles Bell, consists of 4066 specimens in catalogue, and large additions. Also, the models in wax by Tuson, including the celebrated case of Ichthyosis cornea; 700 coloured drawings by Sir R. Carswell, and 200 by Armstrong; the heart and throat of Ramo Samee (the sword-swallowing Indian juggler), ob. 24 July, 1849; a Skull from the Wreck of the *Royal George*; bones and a Skull from ancient Greek

graves; a Head from the Catacombs in Paris; an Elephant's Heart; reputed fragments of bones of the Good Duke Humphrey and Robert Bruce; and a cast from Hervey Leach (Hervio Nano), ob. March, 1847. Here, also, is the skeleton of Jeremy Bentham, dressed in the clothes which he usually wore, and with a wax face modelled by Dr. Talrych: also a portion of skin from the body of the first person obtained under the New Anatomical Act (Lady Barrington). A Museum of Comparative Anatomy, and a fine Materia Medica collection. The Natural Philosophy Models are good. In the Drawing School are three marble figures in relief of the Hindoo Trinity, Brahma, Vishnu, and Siva, dug up from the ruins of a city in a forest 50 miles east of Baroda. In the School, also, is a collection of Casts, including the Apollo made in Rome for Flaxman, the Laocoon, &c.

WATERLOO MUSEUM, Pall Mall, was a collection of portraits, battle-scenes, costumes, and trophies, cuirasses, helmets, sabres, and fire-arms, from the field of Waterloo, exhibited 1815.

WEEKS'S MUSEUM, 3, Tichborne-street, established about 1810, was famed for its mechanical Curiosities. The grand room, by Wyatt, had a ceiling painted by Rebecca and Singleton. Here were two temples, 7 feet high, supported by 16 elephants, and embellished with 1700 pieces of jewellery. Among the automata were the tarantula spider and bird of paradise. Weeks's Museum has long been dispersed; after his death, March 23, 1864, were sold many of the large mechanical pieces originally exhibited at his museum, comprising the large swan of chased silver; also temples, birdcages, clocks, and automaton figures, several with musical movements; also a great variety of clocks and candelabra, miniatures, musical birdboxes, watches, &c. The chased silver swan was in the Great Paris Exhibition of 1867. Weeks's Gallery was subsequently the show-rooms of the Rockingham Works, where, in 1837, was exhibited a splendid porcelain dessert-service, made for William IV.: 200 pieces, painted with 760 subjects, occupied 5 years, and cost 3000*l.* In 1851 the place was refitted by Robin, the conjuror.

ZOOLOGICAL SOCIETY'S MUSEUM, THE, was originally commenced in Bruton-street, then removed to No. 26, Leicester-square; and is now contained in a building erected for it in the Society's Garden, Regent's Park, about 1843. This Museum was projected upon an extensive scale: during the earlier years of its formation, it was, scientifically, the great collection of this country; but it soon became eclipsed by the rapid accumulation with which Dr. Gray enriched the galleries of the British Museum; and as the national collection gradually assumed the important place which it now occupies among the great public institutions of Europe, the Council of the Zoological Society withdrew from the competition, and concentrated their efforts towards their Vivarium. Their Museum is arranged to convey an idea of the Generic Forms of the Vertebrate Division of the Animal Kingdom. By this method, most of the essential differences of form are well illustrated in a reduced number of specimens, so as to impress a casual observer with the distinctive features of each family. Among the animals preserved are many of the rarest and most curious known to exist, and selected from the original collection, commenced with the gifts of Sir Thomas Stamford Raffles, the first President of the Zoological Society: and Mr. N. A. Vigors, its first Secretary.

PRIVATE COLLECTIONS.—The following have been mostly dispersed; or when they exist can only be seen by private introduction to the proprietors.

*Auldjo, Mr. John, Noel House, Kensington*: an extensive assemblage of Antique and Mediæval Articles of Vertu; including a portion of a Greek glass vase, of similar execution to the Portland Vase: it is ornamented with foliage and birds, and was found at Pompeii in 1833. This collection has been dispersed.

*Gwilt, Mr. George, 8, Union-street, Southwark*; and *Gwilt, Mr. Joseph, 20, Abingdon-street, Westminster*: Collections of Architectural Antiquities; the former especially rich in Southwark relics (some Roman), old London Bridge, &c.

*Londesborough, the late Lord, 8, Carlton House-terrace*, formed a collection of Antiquities ranging from the earliest English period. Saxon remains, urns, arms, and articles of personal decoration, principally excavated by his lordship from tumuli in Kent. Also Irish gold antiques, valuable and curious; and mediæval gold and silver

work in jewels, cups, &c., and a very fine collection of Anglo-Saxon relics, principally ornaments, from the Isle of Wight. Arms and armour, artistically wrought and richly decorated (but chiefly preserved at Grimstone, in Yorkshire). Lady Londesborough also collected a series of many hundred antique rings, ranging from the early Egyptian times to the seventeenth century. These collections were shown at *conversazioni* given by Lord and Lady Londesborough during the London season. There is a privately printed Catalogue, by Mr. T. Crofton Croker, F.S.A.

*Magniac, Mr. H., 87, Jermyn-street, St. James's*: a collection chiefly remarkable for its fine Ecclesiastical Works—crossiers, reliquaries, pyxes, &c. Also fine examples of Ancient Carved Furniture, and other specimens of mediæval art.

*Marryat, Mr. Joseph*, author of a *History of Pottery*, until 1866 possessed a large collection of Ceramic Works, particularly Flemish and German, but exhibiting generally the varied forms and peculiarities of the entire manufacture: formerly at Richmond-terrace, Whitehall; removed to the Ynescedwyn Iron-works, Swansea.

*Morgan, Mr. Octavius, F.S.A., 9, Pall Mall*, possesses a very valuable series of Ancient Clocks and Watches; particularly remarkable for its historic illustration of the gradual improvement in Watches, from the earliest period to that of Quare and Tompion.

*Rothschild, the Baron Lionel de, 148, Piccadilly*, has a costly collection of Mediæval Art. Also Antique Pottery, including a candlestick formed of white clay, rare Henry II. ware (French), which cost the Baron 220*l.*: not more than 27 articles of this ware are known to exist.

*Sainsbury, Mr., 13, Upper Ranelagh-street, Pimlico*: Historical MSS. and Autographs, 1473 to 1848; enamels, miniatures, medals, and coins; books, drawings, and prints; Shakspeare relics (including the Garrick cup); Napoleon Collection exhibited at the "Napoleon Museum," at the Egyptian Hall, Piccadilly. This collection has been dispersed.

*Slade, Mr. Felix, Walcot-place, Lambeth*, possesses a collection of Pottery and Glass of the Middle Ages: the latter unmatched in examples of Venetian workmanship.

*Windus, the late Mr. T., Stamford Hill*, collected, in a building of style 1550, carvings in ivory, mother-of-pearl, and wood; crystals, antique gems, and rings; mosaics, cameos, medals, and coins; Grecian pottery; drawings by Rubens, Rembrandt, and Vandyke; fac-simile of the sarcophagus in which the Portland Vase was found.

## MUSIC HALLS.

THE following list of these places of entertainment, licensed by the Magistrates under the Act of George II. for "music and dancing," together with the cost of building and fittings, and the number of persons accommodated, is thus given in a statement laid before Parliament:—

	Cost of Buildings and Fittings.	No. of Persons Ac- commodated Daily.		Cost of Buildings and Fittings.	No. of Persons Ac- commodated Daily.
Crystal Palace ...	£1,000,000	100,000	Lord Raglan, Theobald's-rd.	£12,000	1,500
Agricultural-hall ...	50,000	20,000	Middlesex, Drury-lane ...	12,000	1,200
St. James's-hall ...	50,000	5,000	London Pavilion, Tich- borne-street ...	12,000	2,000
St. Martin's-hall ...	50,000	4,000	South London, London-rd.	8,000	1,200
Exeter-hall ...	50,000	6,000	Marylebone ...	8,000	800
Gallery of Illustration ...	5,000	500	Oriental, Poplar ...	7,000	800
Egyptian-hall ...	5,000	500	Borough ...	6,000	1,000
Polygraphic-hall ...	5,000	500	Bedford, Camden-town ...	5,000	800
Polytechnic ...	20,000	1,000	Deacon's, Clerkenwell ...	5,000	800
Alhambra, Leicester-sq. ...	50,000	5,000	Trevor, Knightsbridge ...	5,000	800
Oxford, Oxford-street ...	40,000	2,000	Sun, Knightsbridge ...	5,000	800
Strand, Strand ...	30,000	1,500	Lansdowne, Islington ...	4,000	600
Canterbury-hall, Lambeth	25,000	1,500	Rodney, Whitechapel ...	3,000	600
Metropolitan, Edgware-rd.	25,000	2,000	Apollo, Bethnal-green ...	3,000	600
Regent, Westminster ...	25,000	1,500	Westminster, Pimlico ...	3,000	800
Wilton's, Wellclose-sq. ...	20,000	1,500	Nag's Head, Lambeth ...	2,000	500
Evans's, Covent-garden ...	20,000	1,000	Woodman, Hoxton ...	2,000	500
Weston's, Holborn ...	20,000	1,500	Eastern Alhambra ...	2,000	1,000
Philharmonic, Islington...	20,000	1,500	Swallow-street ...	2,000	500
Highbury Barn, Highbury	20,000	2,000			
Cambridge, Shoreditch ...	16,000	2,000			
Winchester, Southwark ...	15,000	2,300			
			Totals, 41 places ...	£1,667,000	179,300

From this list a number of small tavern-concert rooms are excluded. It should be further diminished by the removal of the "Gallery of Illustration," which has been licensed by the Chamberlain for theatrical entertainments. The first of these places opened was CANTERBURY HALL, Lambeth, with its expensive decorations, its large marble reliefs by Geefs; and its handsome Picture Gallery, and really good collection of modern paintings. The new enterprise proved very successful, and there sprang up in different quarters of the metropolis, Music-halls, the great majority of which were successful speculations, and they are now more numerous than the regular theatres. The second Music Hall was WESTON'S, High Holborn, of splendid, if not tasteful ornamentation.

THE OXFORD, Oxford-street, is decorated in the Italian style, and is 94 feet in length, 44 feet in width, between Corinthian columns which support the roof, with a promenade beyond on each side. The ceiling is coved on to the walls, and springs from the top of an ornamental entablature. The columns are arranged in pairs. A large glass chandelier here has a very pretty effect from below,—a tree of light. The hall is lighted with star burners.

THE ALHAMBRA PALACE, Leicester-square, formerly the Panopticon, according to a statement laid before Parliament, represents a capital of 100,000*l.*, and employs 320 persons of both sexes, paying wages at the rate of nearly 450*l.* per week. It has increased the wages of ballet-girls at least 20 per cent. It receives on an average 3000 visitors every night, at an average admission price of 1*s.* per head; and the expenditure of each person in drink, eatables, and cigars, averages about 7*d.* The working classes, for whom an upper gallery capable of holding 1000 persons is provided, attend in large numbers. The item in the statement relative to the consumption of refreshments shows that the money expended by the visitors on eating and drinking amounts to little more than half the money received for admission.

PHILHARMONIC HALL, Islington, is an Italian Renaissance saloon, of large size, with a classic entrance, Ionic distyle in antis.

ST. JAMES'S HALL is described at p. 426; and ST. MARTIN'S HALL at p. 427.

EVANS'S, Covent Garden, is mentioned at p. 294. This noble room, designed by Finch Hill, was built in 1855, upon the garden in the rear of Evans's Hotel. It is in a bold, handsome style, with a coved ceiling, richly ornamented. It is divided by fluted columns into nave and aisles, and embellished with figures of Poetry, the Drama, Music, &c.; and it is brilliantly lighted by gas in ten richly-cut lustres. Here are sung glees, madrigals, and other fine old melodies; besides pieces from foreign operas, and songs and ballads by living composers.

STRAND MUSIC HALL, Strand, in the main building covers what was the site of new Exeter Change, and the area and promenade is stated to contain about 6000 square feet. The roof is of wrought iron and zinc, and here is the large lighting chamber, with its 350 ventilating tubes, conducted into enormous shafts, to convey the vitiated air out of the building. The gas-light from several thousand burners passes through the coloured glass of the roof or ceiling, supported by cast-iron columns, with wrought-copper foliated capitals. The Strand front (Keeling, architect), is partly of stone, five stories, elaborately sculptured by Tolmie, with capitals, marble shafts, and medallion heads of composers (Handel, Mozart, Rossini, Bishop, Mendelssohn, &c.), and metal work. The porch has scarcely an inch of surface that is not carved: yet, notwithstanding its sculptured heads, the building does not speak its purpose. Continental Gothic is the basis of this eclectic design.

AGRICULTURAL HALL, Islington, is described at p. 424. Its exhibitions and performances are miscellaneous. In 1865, the profits of the Horse show exceeded those of 1865 by more than 1000*l.*, and those of the Cattle show by more than 900*l.* The Metropolitan and Provincial Working Men's Exhibition in 1865 was visited by nearly half a million persons, and produced to the Company a net rent of nearly a thousand pounds.

HIGHBURY BARN, Islington, has one of the few remaining old assembly-rooms of the last century; and in addition, a very elegant theatre for dramatic performances.

GRECIAN, City-road, has a large and elegant Hall for dancing, and out-door orchestra, and platform, in addition to a commodious Theatre.

HANOVER SQUARE ROOMS, on the east side of Hanover-square, were built for concerts and balls, by Sir John Gallini, formerly one of the managers of the Italian Opera in this country. They have lately been re-decorated in elegant style.

The ceiling of the large room (the only decorations of which previously to these alterations were the old pictures by Cipriani) has been ornamented with enrichments in composition and "carton pierre;" a trellis pattern being placed in the bands across the ceiling, and a laurel in the longitudinal bands, with a crest ornament on the ceiling round each panel. The fluted pilasters on the walls have been retained; but the cornice over them has been deepened about 7 in., and has been enriched by the addition of mouldings, and with festoons of fruit and flowers to the frieze all round. The old Royal box has been re-constructed in wood and "carton pierre," surmounted by an arched top, having a lozenge with the Royal cipher supported by the figures of two boys, the top being supported by two pilasters and the figures of two female Caryatides, terminating in scroll-work, with fruit and flowers running down the panels of the pilasters. The front of the orchestra has been ornamented with musical trophies and festoons of fruit and flowers, with medallions placed over the two doorways at the sides. The panels over the looking-glasses are each filled with a medallion, painted in bas-relief, of some of the most celebrated composers—Bach, Beethoven, Handel, Haydn, Weber, Rossini, Purcell, and others, with their names, and the century in which they flourished. In the two wide panels in the orchestra are painted medallions of Calcott and Bishop. The plinth round the room under the pilasters is decorated in imitation of various coloured marbles. The Royal box is finished in white, buff, and gold, with paintings representing Peace and Plenty, and the four Seasons, and crimson and gold damask hangings. The old method of lighting by means of sunlights has been dispensed with, and a novel mode of lighting has been introduced by suspending from the ceiling, along each side, hemispheres of silvered glass, with the flat sides upwards, having twelve jets to each, radiating to the centre, in a star-like form underneath.—*Abridged from the Builder.*

SURREY MUSIC HALL, Walworth, was erected in 1856, upon the site of the Surrey Zoological Gardens, Horace Jones, architect. The hall was oblong, with semi-octagonal ends, and three tiers of galleries round three sides, the orchestra occupying one end. There were four octagonal staircases, one at each corner; and on the side next the lake were two external galleries. The hall had an arched roof, and externally cappings, partaking of the Chinese pagoda and the Turkish minaret. The vast apartment was 153 feet long, 68 wide, and 77 high in the centre, and would hold 12,000 persons besides 1000 in the orchestra; it was 20 feet longer and 30 feet wider than Exeter Hall, and cost about 18,200*l.* Its acoustic properties were perfect. It was opened in July, 1856. On October 19th, following, during a religious service here, by the Rev. C. H. Spurgeon, eight persons were killed, and thirty seriously injured, in consequence of a false alarm of fire raised in the hall. Its success as a musical speculation was short-lived; and the premises were subsequently let for the temporary St. Thomas's Hospital, removed here from Southwark. (*See p. 435.*)

### NEW RIVER,

A FINE artificial stream, yielding almost half the water-supply of London, or nearly the whole of the City, and a large portion of the metropolis northward of the Thames. The New River rises from Chadwell Springs, and springs at Amwell, between Hertford and Ware, 21 miles from London, and is fed by the river Lea and wells sunk in the chalk. One of these ancient springs—the old Amwell spring—oozed away silently about 1830 into the bed of the Lea. The Chadwell spring, that mysterious, circular, chalky pool in the Hertfordshire valley, which has been the drinking fountain for centuries of countless thirsty millions, no longer gives forth drink with its accustomed liberality.

The New River was projected by Hugh Myddelton, a native of Denbigh, and "citizen and goldsmith," who proposed to the City to bring to London a supply of water at his own cost. His offer was accepted; and April 20, 1608, was commenced the work, with very imperfect mechanical resources. Myddelton embarked the whole of his fortune in the undertaking; the original number of shares was only 36; the labourers received half-a-crown a day. The works were stopped at Enfield for want of funds; Myddelton applied to the citizens for aid, which they refused; he then solicited James I., who, on May 2, 1612, stood by his side and shared his venture. From the Calendar of State Papers it appears that the total payments out of the Treasury on account of the New River works amount to 8609*l.* 14*s.* 6*d.* The King obtained thereby 36 shares for the Crown, of each of which the value is now about 17,000*l.*, and all of which the necessities of Charles I. compelled him to alienate for a fee-farm

rent of 500*l.* a year! The assertions that half-a-million was spent in the construction of the New River, that Myddelton made it out of the profits of a Welsh silver mine, that he died in poverty, &c., are without foundation. The river was constructed for about 17,000*l.*, and Myddelton himself lived long enough to derive a large profit from its financial prosperity. King James, by the way, tumbled into it; and when he was pulled out "there came much water out of his mouth and body;" and much cholera thereupon when he afterwards encountered Myddelton, and complained of his omitting to put up a fence. Sir Hugh was obliged to part with his 36 shares, when they were divided among various persons; these are called "adventurers'" shares. The 72 parts into which the property is now divided are still counted as 36 "adventurers'" and 36 "King's" shares, and the Royal annuity is still paid out of the profits apportioned to the latter. It is a curious fact that Sir Hugh precluded James from taking any part in the management of the company, although he allowed a person to be present at the meetings, to prevent injustice to his Royal principal. This preclusion still extends to the holders of the Royal shares. The works were now resumed; and on the 29th Sept. 1613, five years and five months from the commencement of the undertaking, and the day on which Sir Thomas Myddelton, Hugh's brother, was elected Lord Mayor, the water was let into the basin at Clerkenwell (which had been previously a ducking-pond—"an open, idoll pool") with great ceremony, before the Lord Mayor, aldermen, and principal citizens: a troop of labourers "wearing green Monmouth caps, and carrying spades, shovels, and pickaxes," marched after drums round the cistern; and one man delivered forty-eight lines in verse, ending with:—

"Now for the fruits, then. Flow forth, precious spring,  
So long and dearly sought for, and now bring  
Comfort to all that love thee; loudly sing,  
And with thy crystal murmurs struck together,  
Bid all thy true well-wishers welcome hither."

"When the floodgates flew open, the stream ran gallantly into the cisterne, drummes and trumpets sounding in triumphall manner, and a brave peal of chambers (guns) gave full issue to the intended entertainment." There is an engraving by George Bickham of this animated ceremony. It shows the water flowing into a round reservoir, around which are grouped various persons, conspicuous among whom is the Lord Mayor, upon a white horse. On his left is Sir Hugh Myddelton, on the right is his brother, between Sir Thomas and Sir Henry Montague, the Recorder. Bishop Parker speaks of "the greate destruction of cheese-cakes at the opening of the New River;" Islington having long been celebrated for its cakes and cream.

Then came the difficulty of distributing the water "by pipes of stone and lead." In Hughson's *London*, vol. vi. p. 358, is the copy of a lease granted in 1616 by Hugh Myddelton to a citizen and his wife "of a pipe or quill of half-inch bore, for the service of their yarde and kitchene by means of two swan-necked cockes," for 26*s.* 8*d.* yearly. And we read of the governor of Christ's Hospital, in 1631, paying for "New River water 4*l.*" the year. And in 14th Report of Commissioners of Charities, up to 1825: Stafford's Almshouses in Gray's-inn-lane, for 10 persons, in 1651, stood upon half an acre taken out of Liqueurpond-field; 30*s.* per annum paid to the New River Company for water taken there. Such as lived at a distance from the main were supplied by the water-carriers, who carried the water in wooden pails slung from a yoke across their shoulders, and cried, "Any New River water here?" In Tempest's *Cryes of London*, 1711, is engraved one of these old water-bearers. Hone, in 1827, said the cry was scarcely extinct; and we recollect water thus cried at Hampstead, about 1851.

Myddelton was created a baronet in 1622. The proprietors were incorporated in 1619 as the New River Company, Sir Hugh being appointed the first governor, and this being the first water company; although Ben Jonson, in 1598, says, "We have water-companies now, instead of water-carriers." (*Every Man in his Humour.*) The Charter makes it a penal offence to cast into the river earth, rubbish, soil, gravel, stones, dogs, cats, cattle, carrion, &c.; prohibits, "under penalty of the King's displeasure," persons from washing clothes, wool, &c., in it, and from conveying thereto any sink, sewer, ditch, &c.; and forbids the planting of fallows, willows, or

elms within five yards of it. In the Calendar of State Papers of this period are many entries of grants of rents and profits, and places of emolument; but when, in 1665, the King recommended Simon, son of Sir Hugh Myddelton, as clerk of the Company, this appointment was refused. No dividend was made by the Company till 1633, when 11*l.* 9*s.* 1*d.* was divided upon each share. The second dividend amounted to only 3*l.* 4*s.* 2*d.*

Sir Hugh died December 10, 1631, and was buried in the churchyard of St. Matthew, Friday-street, London. He died, holding shares in the Company, and others in mines in Wales. He bequeathed to the Goldsmiths' Company one New River Share, which formerly produced 314*l.* per annum, but does not now reach 200*l.*; the produce is distributed half-yearly among the poor of the Company, especially to men of Myddelton's name or kindred. There is a fine portrait of Sir Hugh, by Janssen, at Goldsmiths' Hall.

Lady Myddelton, the mother of the last Baronet, "received a pension of 20*l.* per annum from the Goldsmiths' Company, which, after her death, was continued to her son Hugh, though he possessed other property: he was a person of dissipated habits, and with him the baronetcy became extinct. In July, 1808, the Corporation of London ordered an annuity of 50*l.* to be paid to a male descendant of the Myddelton family, then in great distress. Another lineal descendant, Jabez Myddelton, received a pension of 52*l.* per annum from the Corporation until his death, 27th March, 1828; and in July of that year, Mrs. Jane Myddelton Bowyer had 30*l.* a year allowed her. This annuity was reduced to 7*s.* a week in September, when Mrs. Plummer, another of the family (since dead) was permitted to receive the same weekly stipend. The Corporation have since passed a resolution to the effect that they will grant no more relief to Myddelton's family."—Pinks's *History of Clerkenwell*, p. 468.

The River, in its devious course from the fountain-head at Chadwell, meanders through the towns and villages of Hoddesden, Cheshunt, Enfield, Hornsey, Stoke Newington, and Islington; enters the parish of Clerkenwell at the bridge under the Goswell-road, and flowing through Owen's-row, submerges beneath St. John-street-road; thence it proceeds between Myddelton-place and Sadler's Wells, and passing beneath a third bridge, enters the Company's grounds, where its waters are received into the great reservoir called its Head. By the formation, since the year 1852, of more direct channels at Warmley, Theobalds, Forty Hill, Enfield, Southgate, Wood Green, and Hornsey, the river has been shortened by about ten miles. The river, between the Thatched House, Islington, and Colebrook-row, has, from the first, passed through an underground arch or tunnel. The stream between Bird's-buildings and the Head was covered by iron pipes in the year 1861. The Company obtained two Acts of Parliament—1852, 15 & 16 Vict., cap. cix.; and 1854, 17 Vict., cap. lxxii.—to empower them to shorten the river, to filter the water, to cover their filtered water reservoirs, and otherwise to improve and greatly enlarge their Works, at a cost of nearly a million sterling. About where the New River enters Islington parish, it was formerly conducted over the valley by an enormous wooden trough, 462 feet in length, and 17 feet high, lined with lead, and supported on brick piers, and it then went by the name of "the Boarded River;" but in 1776, a passage for the stream was made in a bank of earth nearly along the old track. There was a similarly boarded aqueduct constructed at Bush-hill, Edmonton, in 1608. Myddelton's house here gave, perhaps, the first occasion to the project; and the great addition this stream made to the pleasures of Theobalds, encouraged James I., who resided there, to have the design completed, as it ran through his park and gardens. As a specimen of early engineering, this great work has an interesting and instructive history.

The New River Head is a vast circular basin enclosed by a brick wall, whence the water is conveyed by sluices into large brick cisterns, and thence by mains and riders, named according to the districts which they supply. Here is the Company's house, originally built in 1613: the board-room, over one of the cisterns, is wainscoted, and has a fine specimen of Gibbons's carving; on the ceiling are a portrait of William III., and the arms of Myddelton and Green.

North of the New River Head, the stream was formerly let into a tank or reservoir under the stage of Sadler's Wells Theatre, which was drawn up by machinery for

“real water” scenes, the water being sufficiently deep for men to swim in. Formerly, in the fields behind the British Museum, the New River pipes were propped up six or eight feet, so that persons walked under them to gather water-cresses.

The entire works have cost upwards of a million and a half of money. The main source of supply is now the River Lea. The water has only been filtered since 1852; the filtering-beds, gravel and Harwich sand, have cost upwards of 35,000*l.* The water having reached the Works at Islington, is there filtered, and delivered into a tunnel 800 feet long, and 8ft. by 6ft. 6in. diameter, whence it is passed by steam-engines of 300 horse power, into the service reservoir and distributing mains: the channels at Islington, by Mylne, contain two millions and a half of bricks. The east service reservoir at Pentonville, built in hydraulic lime, contains 4 millions of bricks, of which nearly 40,000 were laid in one day; and the covering of this reservoir cost 21,000*l.* The Stoke Newington Works comprise five filter-beds, each exceeding one acre, fed from a reservoir, which covers nearly 40 acres; and the engine-house contains six steam-engines—1000 horses—which convey the water to service reservoirs, near Highgate, each of which will contain  $7\frac{1}{2}$  million gallons of filtered water. Notwithstanding this is the oldest metropolitan water supply, it is still called New River. The Company have removed their old aqueducts and reservoirs in different parts of the metropolis, and have built on the sites they occupied. The well-known canal which used to supply the real water to Sadler’s Wells Theatre has been drained dry, and filled in, and large iron water-pipes have been placed in its bed. The reservoir in Coppice-row has also been removed. The name of Myddelton is honoured in Clerkenwell and Islington: street and square and hall bear his name, as well as Chadwell and Amwell; and of Mylne, the engineer of the Company. Upon Islington-green is a portrait statue of Sir Hugh Myddelton, presented by Sir Morton Peto, Bart., M.P.; it is the work of John Thomas, and is of Sicilian marble, 8 feet 6 inches high, the figure being in the costume of the period. It is on a pedestal sculptured with dolphins and nautilus-shells, fountains, festoons of shells, water-flowers, &c.; the group in the centre of a basin for water, with a bold ornamental curb, in the Italian style.

The marketable value of the Company’s shares has varied considerably at different periods. In 1727, a King’s share was valued at 5000 guineas; in 1766, the clear annual value of a King’s share was 154*l.*; in August, 1770, a similar share, said to yield 240*l.* per annum, was advertised for sale, and fetched 7000*l.*; in 1805, one was sold at the General Coffee House for 4400*l.*; at Garraway’s, in 1813, an adventurer’s share produced 8000*l.*, and in 1814, 7450*l.*; in August, 1822, a moiety of one of the same shares sold for 4725*l.* In 1838, an original share sold for 18,000 guineas; in 1837, two quarter shares were sold at the rate of 18,900*l.* per share; and in the beginning of 1839, two whole shares were sold, one for 17,000*l.*, the other for 17,500*l.* On Jan. 28, 1852, three-sevenths of a quarter of a King’s share sold for 1000*l.*, the dividend on this portion producing 90*l.* per annum. The value of a share at the present time is about 20,000*l.* Sir Henry Nevill, Knt., who was one of the original adventurers with Myddelton, mentioned among the grantees of the Company’s Charter, June 21, 1619, and who died in 1629, possessed two parts in thirty-six parts of the Water-course and New River running from Chadwell and Amwell, then valued at 13*l.* 0*s.* 4*d.* per annum. The annual rental of the Company in 1851 was 135,794*l.*, and it is now 204,750*l.* About 112,000 houses are now supplied with water by the New River. The daily supply is 25 millions of gallons. The Company have nearly 600 miles of pipes, &c., valued at about 600,000*l.*

### NEW-ROAD.

THE New-road was formed by Act of Parliament of the 29th of Geo. II., in the year 1756, but not without much petty opposition thereto from the landholders whose property lay in the line of the proposed new route to the west-end. Horace Walpole notices, in one of his letters, the objection of the Duke of Bedford to it on account of the “dust it would make in the rear of Bedford-house;” and adds, that “the duke is too short-sighted to see the prospect.” A complaint was made by one of the Duke’s tenants, who held from him a large cow-farm in the intended route, at a rental of 3*l.* an acre, “that the dust and the number of people must entirely spoil her fields, and make them no better than common-land; she intreats his Grace to prevent such an evil, as it would be impossible for her to hold his estate without a large abatement of rent.”

On such frivolous opposition the *Public Advertiser*, of Feb. 20, 1756, remarks that “all objections to new roads, which arise merely from partial and separate interests, that happen in this respect to be opposite to the interests of the public, should have no

weight." The journalist then proceeds to notice the advantages to the public in general of the proposed thoroughfare. "How much the communication with almost every part of the metropolis will be facilitated. Drovers from the west will pass from the extremity of the city to the centre in one continued straight line. Persons that have business in other parts may reach them by cross-roads communicating with the main line; and persons of fashion, who live in the great squares and buildings about Oxford-road, may come into the city without being jolted three miles over the stones, or perhaps detained three hours by a stop in a narrow street. It must also be remembered that those who shall find it necessary to pass through the streets will pass much more commodiously, as the number of carriages will be lessened and the pavement preserved."

In the preamble of the Act of 29th Geo. II., it is stated, "that in times of threatened invasion, the New Road will form a complete line of circumvallation, and his Majesty's forces may easily and expeditiously march their way into Essex to defend our coasts, without passing through the cities of London and Westminster."

When this great trunk-line of road was in course of construction, the progress made upon it was from time to time noticed in the public journals. Thus, under date May 8, 1756, we are apprised of its early commencement by being informed that on the Wednesday following, the trustees would meet, and that on the next day the men were to work upon it. At this period the expense of making the road was computed at 8000*l*. After the lapse of a few months, during the interval of which the road-makers must have worked industriously, the following appeared in print on the 13th of September, 1756:—"It is with pleasure we assure the public that great numbers of coaches, carriages, and horsemen daily pass over the New-road, from Islington to Battle-bridge." Five days later, September 17th, we are informed that the banks and fences of the land between Paddington and Islington were levelled, and the New Road across the fields opened to the public. In the December of 1756, the expensiveness of the road was adverted to, and 100,000 cart-loads of gravel estimated to be required for its completion.

Within half a century, Bedford House was levelled to the ground, and the fields beyond it are now covered with houses, enlarging by many thousands the income of the Bedford family, with a reversionary interest in a city of itself. The New-road is the great omnibus route from Paddington to the City; whereas in 1798 only one coach ran from Paddington to the Bank, and the proprietor was nearly ruined by the speculation! Shillibeer, the first omnibus-proprietor, fared no better in 1829.

The pleasant aspect of this grand thoroughfare during several months of the year, which the trees and the gardens in front of most of the houses contribute chiefly to impart, is owing to a clause in the original Act for making the road, prohibiting the erection of any building within 50 feet of it; whilst at the same time it empowers the authorities of parishes through which the road passes to pull down any such erection, and levy the expenses on the offender's goods and chattels. The lapse of a century, however, seems to have materially modified this penal enactment, for numerous are the instances in which the 50-feet plot is built upon.

The New-road is now variously named as follows:—Between the *Angel* at Islington and King's-cross, the *Pentonville-road*; from King's-cross to Osnaburgh-street, *Euston-road*; and from Osnaburgh-street to Edgware-road, the *Marylebone-road*. J. T. Smith has left this reminiscence of the New-road:—

Wilson was fond of playing at skittles, and frequented the *Green Man* public-house in the New-road, at the end of Norton-street, originally known as "The Farthing Pye House;" where bits of mutton were put into a crust shaped like a pie, and actually sold for a farthing. This house was kept in my boyish days by a very facetious man named Price, of whom there is a mezzotint portrait. He was an excellent salt-box player, and frequently accompanied the famous Abel when playing on the violoncello. Wilkes was a frequenter of this house, to procure votes for Middlesex, as it was resorted to by many opulent freeholders.

In 1856, Harley House, in the New-road, was the residence of the ex-Royal Family of Oude, with their retinue, 110 persons. Here were the young Prince, the heir-apparent, and his uncle, brother to the deposed King; and the Queen Mother, with her female attendants, some thirty in number.

## NEWGATE-STREET,

NAMED from the City-gate at its east end, has on the south side the end of Newgate Prison, and extends eastward to Cheapside, with lanes and courts on the south leading to Paternoster-row. On the north side is the front of the great hall of Christ's Hospital, built upon the site of Grey Friars' monastery; the principal gates have characteristic casts and sculpture. Nearly opposite is *Warwick-lane*, with a bas-relief of Guy Earl of Warwick, dated 1668. In the Lane was the old College of Physicians, taken down in 1866. Here are the old inns, the *Bell* and *Oxford Arms*. Next is *Ivy-lane*, "so called of ivy growing on the walls of the Prebend-house." (*Stow*.) Dr. Johnson, in 1748, with Hawkesworth and Hawkins, formed a Club for literary discussion. Here also have lived publishers for two centuries.

"I was at Rayston's shop, in Ivie Lane, Febr. the 8, 1661. Hee printed the Marquis of Winchester's conference with the King; hee printed most of the Royalists' Works, as Hamonds', Taylor's pieces, and others."—*Diary of the Rev. John Ward*.

On the north side, up a passage, is Christ Church, described at p. 157. Next is *King Edward-street*, so named in 1843; formerly Blowbladder-street, Butcher-hall-lane, Chick-lane, and Stinking-lane. Above Bull-head-court, is a stone bas-relief of William Evans, 7 feet 6 inches high, porter to Charles I.; and Jeffrey Hudson, the King's Dwarf, 3 feet 9 inches high. *Bath-street*, first Pincock or Pentecost-lane, and next Bagnio-court, was named from there being here the first bagnio in town, after the Turkish manner. (*See BATHS*, p. 38.)

In Newgate-street, nearly opposite, is *Panyer-alley*, where is the sculptured stone described at p. 516: it is stated by Stow to have been a sign. In Ben Jonson's *Bartholomew Fair* we read of the stinking tripe of Panyer-alley. In *Queen's Head-passage* is a Queen Anne tavern, now *Dolly's Chop-house*: Gainsborough is said to have painted Dolly. The Passage is named from the *Queen's Head Tavern*, which occupied the site of the premises of Alderman Sir B. S. Phillips, Lord Mayor, 1865-6.

## NEWINGTON, OR NEWINGTON BUTTS,

A LARGE parish in Surrey, adjoining St. George, Southwark, north and east; Camberwell, south; and Lambeth, west. In Domesday Book (11th century), the only inhabited part of this parish was Walworth, where, according to the Norman survey, was a church, upon the rebuilding of which on a new site it probably became "surrounded with houses, which obtained the name of *Neweton*, as it is called in the most ancient records; it was afterwards spelt Newenton and Newington." (*Lysons's Environs*, vol. i. p. 389.) Here were *butts* for archery practice: the earliest record of *Newington Butts* is in the register of Archbishop Pole at Lambeth, date 1558. In the reign of Henry VIII. (1546), three men were condemned as Anabaptists, and "brent in the highway beyond Southwark, towards Newenton." (*Stow's Chronicle*, p. 964.) The only manor in the parish is *Walworth*, given by King Edmund Ironside to Hitard, his jester, who, in the reign of Edward the Confessor, gave the vill of Walworth to the monks of Christ Church at Canterbury. They received from Edward II. a grant of free-warren here; and in the reign of Edward III. and Richard II., and subsequently, the manor is said to have been held by persons of a family named from this place: thus, Margaret de Walworth, lady of the manor in 1396, was the widow of the famous Sir William Walworth; and at Walworth is a modern sign of his killing Wat Tyler in Smithfield. In the museum of the Society of Antiquaries is a dagger which was found on the supposed site of Sir William's house at Walworth. (*See FISHMONGERS' HALL*, p. 401.) Sir George Walworth died seized of the manor in 1474. In the valuation of Church property, 26 Henry VIII., it is rated at 37l. 8s. In the reign of Henry III., the queen's goldsmith held of the king, *in capite*, one acre of land in Neweton, by the service of rendering one gallon of honey. The old church (St. Mary's) is described at p. 187. There are district churches and various sectarian chapels. South of Newington Causeway (the first road across the swampy fields) is Horsemonger-lane, opposite which was formerly a hay-market. In the lane are the County Gaol and Surrey Sessions-house, built upon the site of a market-garden, three and a half acres, by George Gwilt, 1798-9. At Walworth, upon a demesne once

attached to the manor-house, were the Surrey Zoological Gardens, whither Cross removed his menagerie from the King's Mews in 1831; and where, in 1856, was built a large Music Hall, described at p. 609, subsequently occupied as St. Thomas's Hospital. In Walworth-road is a handsome Vestry-hall, Lombardic in style, red brick, with dressings of Portland stone, and shafts of polished red granite.

Maitland notes: west of the Fishmongers' Almshouses (*see* p. 8) "is a moorish ground, with a small watercourse denominated the river Tygris, which is part of Cnut's trench; the outflux of which is on the east side of Rotherhithe parish, where the Great Wet Dock is situate." In 1823, when the road between the almshouses and Newington Church was dug up for a new sewer, some piles and posts were discovered, with rings for mooring barges; also a pot of coins of Charles II. and William III. A parishioner named Farns, who died, aged 109 years, early in the present century, remembered when boats came up this "river" as far as the church at Newington. (Brayley's *Surrey*, vol. iii. p. 405.) The old *Elephant and Castle* is noticed at p. 453.

#### NEWINGTON, OR STOKE NEWINGTON,

**I**N Domesday, Newton, and Stoke Neweton as early as 1391, is named from the Saxon *stoc*, wood, it having been part of the ancient forest of Middlesex; and in 1649 here were upwards of 77 acres of woodland in demesne. It is separated from Hackney and Ossulston by the great road, anciently the Ermen-street. Tradesmen's tokens were issued from here in the 17th century: one exists with "Laurence Short, Adam and Eve" (in the field between Islington church and the City-road); and another, "John Ball, at the Boarded House, neere Newington Greene," who kept a low house for bull-baiting, duck-hunting, &c. at Ball's Pond, long since filled up, but it gives name to a little hamlet. At Stoke Newington Daniel Defoe (whence *Defoe-road*) and Thomas Day (*Sandford and Merton*) were educated; John Howard the philanthropist lodged here, and married his landlady; Hannah Snell, the soldier, lived in Church-street; here died Mrs. Barbauld, in 1825, in her 82nd year. The mansion of Sir Thomas Abney, where Dr. Watts resided with his pious friend, existed until 1844, when the fine grounds were converted into the Abney Park Cemetery. Mrs. Abney, the daughter of Sir Thomas, ordered by her will that this estate should be sold, and the produce distributed in charitable donations, which was accordingly done: it amounted to many thousand pounds.

*Newington Green*, in the parishes of Stoke Newington and Islington, had, within the present century, several ancient houses, one of which, on the south side, was traditionally a palace of Henry VIII.; and a path leading from the Green to Ball's Pond turnpike has been, time out of mind, called King Henry's Walk: the house was, however, evidently built in the reign of James I. At the north-west corner of the Green was "Bishop's Place," where Henry Algernon, Earl Percy, is said to have written his memorable letter disclaiming matrimonial contract with Queen Anne Boleyn, dated "at Newington Greene," the 13th of May, 28th Henry VIII. Thomas Sutton, founder of the Charterhouse, was once an occupant of the Manor House; one of its ancient hostleries, the *Three Crowns*, was the place of refreshment for James VI. of Scotland when he was met on Stamford-hill by the Lord Mayor, on his way from Holyrood to London; and the Earls of Bath and Oxford had mansions here. Here lived several of the ejected ministers, towards the close of the 17th century: Colonel Popham and Charles Fleetwood, two of Cromwell's best men; and many of the heroes of the Revolution of 1688 found shelter here. Adjoining Bishop's Place was a porch-house, wherein was born, in 1762, Samuel Rogers, the poet.

Stoke Newington is one of the few rural villages in the immediate environs. Though, as the crow flies, but three miles from the General Post Office, it is still rich in parks, and gardens, and old trees. Here is a cedar which dates from the first introduction of this noble tree into England; mulberry, oak, walnut, and elm trees abound; gardens where horticulture is practised according to the latest lights; and here was established the first Chrysanthemum Society.

#### NEWSPAPERS.

**T**HE earliest printed London newspapers are preserved in the British Museum, and described at p. 585. *The News of the Present Week*, edited by Nathaniel Butler, was ridiculed in Ben Jonson's *Staple of News*, 1625; and a few months after, in Fletcher's

*Fair Maid of the Inn*: it was sold "at the Exchange, and in Pope's-head Pallace." In 1696 there were nine newspapers published in London, all weekly. In 1709 the newspapers had increased to eighteen: in this year appeared the *Daily Courant*, the first morning paper; and to the reign of Queen Anne the first publication of "regular newspapers" must be referred. In 1724 there were three daily, six weekly, seven three times a week, three halfpenny posts, and the *London Gazette* twice a week; in 1792, thirteen daily, and 20 semi-weekly and weekly papers.

The *English Chronicle*, or *Whitehall Evening Post*, was started 1747;\* the *Public Ledger* was commenced Jan. 12, 1760, by Newbery, the bookseller, and in it appeared Goldsmith's *Citizen of the World*; the *St. James's Chronicle*, 1761; and the *Morning Chronicle*, 1769.

The *Morning Chronicle* was conducted by William Woodfall till 1789, when he was succeeded by James Perry, who introduced the present system of reporting the debates in Parliament. Mr. (Serjeant) Spankie was long editor of the *Chronicle*; Lord Campbell commenced on it his London career, and was its theatrical critic in 1810. Coleridge and Campbell were contributors. Sheridan names the *Chronicle* in his *Critic*: Canning in a poem; Byron addressed to it a familiar letter: Hazlitt was its theatrical critic; and here first appeared *Sketches by Boz* (Charles Dickens). After Perry's death (1821), the *Chronicle* was purchased for 42,000*l.* by Mr. Clement, who, in 1834, sold it to Sir John Easthope, Bart., who was connected with it until 1847. The *Chronicle* was discontinued March 20, 1862. Until 1822, it was printed at 143, Strand: and in the same office was subsequently printed, by John Limbird, the *Mirror*, the first of the cheap illustrated periodicals.

The *Morning Post*, established in 1772, circulated in 1795 only 350 a-day. Coleridge, in his *Table-Talk*, states that he raised the sale in one year to 7000; in 1803 it was 4500:

"Coleridge, long before his flighty pen  
Let to the *Morning Post* its aristocracy."—Byron's *Don Juan*.

Sir James Mackintosh and Charles Lamb were also contributors; and Mackworth Praed, the poet, was some time editor.

The *Morning Herald* was commenced November 1, 1780, by Mr. Bate, afterwards Sir Henry Bate Dudley, who seceded from the *Morning Post*.

The *Times* was commenced by John Walter, in Printing-house-square, Blackfriars, previously the site of the King's Printing-House.† The first number, January 1, 1788 (that in the British Museum has no stamp), was a continuation of the *Daily Universal Register*, No. 939, which, with the *Times*, was "printed logographically," *i. e.* with stereotyped words and metal letters. In 1803, the late John Walter, son of the above, became joint-proprietor and exclusive manager of the *Times*, whence by priority of its intelligence, it has risen to be the "leading journal of Europe." The *Times* of November 29, 1814, was the first newspaper printed by steam, from two machines made by Kœnig, which produced 1800 per hour, until 1827, when they were superseded by Applegath and Cowper's four-cylindrical machine, yielding 5000 impressions per hour; and in 1848 was erected Applegath's vertical machine, producing 8000 copies in an hour. Mr. Walter died in Printing-house-square in 1847, bequeathing a large personal estate, and having erected and endowed a handsome church at Bearwood, Berks. He devised his interest in the *Times* to his son, John Walter, M.P. for Nottingham, the present proprietor; the journal being thus still in the hands of the family of its founder, and in this respect standing alone amongst the morning papers. (Hunt's *Fourth Estate*, vol. ii. p. 153.) Amongst the many valuable services rendered by the *Times* to the commercial world, was the detection and exposure of the Bogle conspiracy in 1841; in indemnification of which, 2625*l.*—the *Times* Testimonial—was subscribed by the London merchants and bankers, but was declined; and the amount was invested in scholarships at Christ's Hospital and the City of London School, where and in the Royal Exchange are commemorative tablets, as also upon the façade of the *Times* Office.

The *Times Printing Machinery* may be inspected by previously obtaining cards, at

\* There had previously been a *London Chronicle*, which was regularly read by George III., whose copy of it may be seen in the British Museum.—Hunt's *Fourth Estate*, vol. ii. p. 99.

† Beneath the *Times* Office is a fragment of the Roman wall, upon which is a Norman or Early English reparation; and upon that are the remains of a passage and window, which probably belonged to the Blackfriars monastery.—*National Miscellany*, October, 1853.

11 A.M., when the second edition of the paper is being printed. We can only describe generally this great improvement in newspaper printing—a machine in which the type is placed on the surface of a cylinder of large dimensions, which revolves on a vertical axis, with a continuous rotary motion. The cylinder is a drum of cast iron; the form, or pages of type, are made segments of its surface, just as a tower of brick might be faced with stone. Eight printing cylinders are arranged round the drum, and eight sheets are printed in every revolution. The type only covers a small portion of the circumference of the drum, and in the interval there is a large inking table, fixed like the type on its circular face. This table communicates the ink to eight upright inking rollers, placed between the several printing cylinders—the rollers, in their turn, communicating the ink to the type. So far the arrangement is perfectly simple, the machine being, in fact, composed of the parts in ordinary use, only made circular and placed in a vertical instead of a horizontal position. The great problem of the inventor was the right mode of “feeding,” or supplying the sheets of paper to their printing cylinders in their new position—or changing the sheet of paper (the *Times* newspaper) in less than four seconds, from a horizontal to a vertical position and back again; and through still more changes of direction; which is done by passing through endless tapes and vertical rollers in rapid motion, which convey it round the printing cylinders, each of which always touches the type at the same corresponding point, the surfaces moving with a great velocity. The *Times* machines are also well described in Weale’s *London*, p. 76.

“No description,” says Hansard (*Ency. Brit.*, 8th edit.), “can give any adequate idea of the scene presented by one of these machines in full work,—the maze of wheels and rollers, the intricate lines of swift-moving tapes, the flight of sheets, and the din of machinery. The central drum moves at the rate of six feet per second, or one revolution in three seconds; the impression cylinder makes five revolutions in the same time. The layer-on delivers two sheets every five seconds, consequently fifteen sheets are printed in that brief space. The *Times* employs two of these eight-cylinder machines, each of which averages 12,000 impressions per hour; and one nine-cylinder, which prints 16,000.” Also, Hoe’s American machine, with ten horizontal cylinders, for working 20,000 impressions in an hour.

The *Times* has nearly quadrupled its circulation since 1838. Its daily number in 1853 was between 42 and 43,000. The Paper and Supplement, 72 columns, is made up of more than a million of pieces of type. In 1846, the profit on each paper was stated to be three-eighths of a penny, out of which were to be defrayed all the expenses of the journal, except paper and stamp. The annual amount of stamp duty was 60,000*l.* Among the largest issues of the *Times* were, Oct. 29, 1844 (opening of the New Royal Exchange), 50,000. Jan. 28, 1846, (Sir R. Peel’s speech on the Corn Laws and the Tariff), 52,000, when the usual number was between 27 and 28,000. March 1, 1848 (French Revolution), 48,000. April 11, 1848 (Chartist Meeting), 46,000. May 2, 1851 (opening of the Great Exhibition), 55,000. Sept. 15 and 16, 1852 (Death of the Duke of Wellington), 2 days, each 53,000. Nov. 19, 1852 (Funeral of the Duke), 70,000. The advertisements during June 1853 averaged 1500 each day; and in one day in June there were 2250 inserted! then the greatest number that had ever appeared in one paper. It has been stated, that in printing one of the above large issues were used 7 tons of paper; surface printed, 30 acres; weight of type, 7 tons.

Among the literary *collaborateurs* of the *Times*, the names of Barnes, Sterling, and Twiss are prominent. Mr. Justice Talfourd and Baron Alderson were once upon its staff; as were also Mr. Gilbert à Beckett, and Mr. Thackeray. The editorship was offered to Southey, with a salary of 2000*l.* per annum, but was declined; and a similar offer was made to the poet Moore, with a like result.

The *Morning Advertiser* was established in 1795, as the organ of the interests and charities of Licensed Victuallers.

The *Daily News* dates from 1846.

The *Star*, the first daily evening newspaper, established in 1788 by Peter Stuart, was first conducted by Dr. Tilloch, editor of the *Philosophical Magazine*.

*Johnson’s Sunday Monitor*, the first newspaper published on the Sabbath, appeared in 1778. The oldest weekly newspaper is the *Observer*, established 1792. *Bell’s Weekly Messenger* dates from 1796.

*The Illustrated London News*, projected by Herbert Ingram, and commenced by him May 14, 1842, enjoys the largest sale of the high-priced weekly papers. In 1852 there were sold 230,000, double number (Funeral of the Duke of Wellington). The issues have since far exceeded this number—as at Christmas, double sheet. The sale throughout the Crimean war approached 200,000 each week.

*The City Press* is entitled to commendable mention here for its special attention to London antiquities, as well as its weekly chronicle of current events.

After the remission of the stamp duty, the number of daily newspapers considerably increased, so that there are now published in the metropolis 25 daily papers.

On Monday, March 9, 1863 (Marriage of the Prince of Wales and the Princess Alexandra of Denmark), the circulation of the *Times* was 135,000; of these three papers, at one penny, *Daily Telegraph*, 230,000; *Morning Star* and *Standard* between 80,000 and 100,000 each. The day of the Wedding was Tuesday, the 10th, and on Wednesday, the 11th, the circulation was sustained and increased. The *Illustrated London News*' orders were for 315,000, but only 200,000 could be executed. The value of the *Times*' edition amounts to 1687l. 10s.: the *Daily Telegraph* to 953l. 6s. 8d.; the *Illustrated London News*, at 10d., to 8333l. 6s. 8d. The daily circulation of the *Daily Telegraph* in 1866 was 138,704.

### OLD BAILEY.

THE street extending from Ludgate-hill to Newgate-street; "outside of Ludgate, parallel with the walls as far as Newgate." Hence the name—from the *ballium*, or outer space, near Ludgate,\* its relative position in regard to the ancient wall of the City; the remains of which might be traced in some massive stone-work in Seacoal-lane, at the bottom of Breakneck-steps, west of the Old Bailey; and opposite its entrance from Ludgate-hill, in St. Martin's-court. (See p. 539.) Maitland, however, refers Old Bailey to Bail-hill; an eminence whereon was situated the *bail*, or bailiff's house, wherein he held a court for the trial of malefactors: and the place of security where the Sheriff keeps the prisoners during the session is still named the *Bail-dock*. Stow states the Chamberlain of London to have kept his court here in the reign of Edward III. In Pennant's time, here stood Sydney House (then occupied by a coachmaker), the mansion of the Sydneys till they removed to Leicester-fields (see p. 511). The Old Bailey Sessions-house is described at pp. 506–507.

"By a sort of second-sight, the Surgeons' Theatre was built near this court of conviction and Newgate, the concluding stage of the lives forfeited to the justice of their country, several years before the fatal tree was removed from Tyburn to its present site. It is a handsome building, ornamented with Ionic pilasters, and with a double flight of steps to the first floor. Beneath is a door for the admission of the bodies of murderers and other felons, who, noxious in their lives, make a sort of reparation to their fellow-creatures by becoming useful after death."—*Pennant*.

After the execution of Lord Ferrers, at Tyburn, in 1760, the body was conveyed in his own landau and six to Surgeons' Hall, to undergo the remainder of the sentence. A large incision having been made from the neck to the bottom of the breast, and another across the throat, the lower part of the belly was laid open, and the bowels were taken away. The body was afterwards publicly exposed to view in a first-floor room; and a print of the time shows the corpse "as it lay in the Surgeons' Hall." Here sat the Court of Examiners, by whom Oliver Goldsmith was rejected 21st December, 1758; and in the books of the College of Surgeons, amidst a long list of candidates who passed, occur: "*James Bernard, mate to an hospital. Oliver Goldsmith, found not qualified for ditto.*" "A rumour of this rejection long existed; and on a hint from Maton, the king's physician, Mr. Pryor succeeded in discovering it." (*Forster's Life and Adventures of Oliver Goldsmith*, p. 140.) Surgeons' Hall was taken down in 1809, and upon its site was built the New Sessions-house; whence the prison of Newgate extends on the east side of the street, widened at the north end by the removal of the houses of the Little Old Bailey. Here the place of execution was changed from Tyburn in 1783, and the first culprit executed Dec. 9. The gallows was built with three cross-beams, for as many rows of sufferers; and between February and December, 1785, ninety-six persons suffered by "the new drop," substituted for the cart. About 1786, here was the last execution followed by burning the body; when a woman was hung upon a low gibbet, and life being extinct, fagots were heaped around her and over her head, fire was set to the pile, and the corpse burnt to ashes. On one occasion the old mode of execution was renewed: a triangular gallows was set up in the road opposite Green Arbour-court, and the cart was drawn from under the criminals' feet.

\* The church of St. Peter in the Bailey, at Oxford, derives its appellation from having formerly stood within the outer ballium of Oxford Castle.

*Memorable Executions in the Old Bailey.*—Mrs. Phepoe, murderess, Dec. 11, 1797. Governor Wall, murder, Jan. 23, 1802. Holloway and Haggerty, murder, Feb. 22, 1807 (30 spectators trodden to death). Bellingham, assassin of Mr. Perceval, May 18, 1812. Eliza Fenning, poisoning, July 26, 1815. Arthur Thistlewood and four others (Cato-street gang), murder and treason, May 1, 1820 (their bodies were decapitated by a surgeon on the scaffold). Fautleroy, the banker, forgery, Nov. 30, 1824. Joseph Hunton (Quaker), forgery, Dec. 3, 1828. Bishop and Williams, murder (burkers), Dec. 5, 1831. John Pegsworth, murder, March 7, 1837. James Greenacre, murder, May 2, 1837. Courvoisier, murder of Lord William Russell, July 6, 1840. Francis Müller, murder in a railway carriage, 1864. Seven pirates for murder on the high seas, Feb. 23, 1864.

It was formerly the usage to execute the criminal near the scene of his guilt. Those who were punished capitally for the Riots of 1790 suffered in those parts of the town in which their crimes were committed; and in 1790 two incendiaries were hanged in Aldersgate-street, at the eastern end of Long-lane, opposite the site of the house they had set fire to. Since that period there have been few executions in London, except in front of Newgate. The last deviation from the regular course was in the case of the sailor Cashman, who was hung, in 1817, in Skinner-street, opposite the shop of Mr. Beckwith, the gunsmith, which he had plundered.

In Green Arbour-court, No. 12, at the corner of Breakneck-steps, in Seacoal-lane. leading from Farringdon-street, lodged Oliver Goldsmith from 1758 to 1760, when he wrote for the *Monthly Review*; and the editor, Griffiths, became security for the suit of clothes in which Goldsmith offered himself for examination at Surgeons' Hall. In this miserable lodging he was writing his *Polite Learning Enquiry*, when Dr. Percy called upon him, and the fellow-lodger's poor ragged girl came to borrow "a chamberpotful of coals." The house was taken down thirty years since.

Peter Bales, the celebrated penman, in Queen Elizabeth's reign, kept a writing-school, in 1590, at the upper end of the Old Bailey, and published here his *Writing Schoolmaster*: in a writing trial he won a golden pen, value 20*l.*; and the "arms of caligraphy, viz. azure, a pen or, were given to Bales as a prize." (*Sir George Buck.*) Prynne's *Histriomastix* was printed "for Michael Sparke, and sold at the Blue Bible, in Little Old Bayly, 1633."

William Camden, "the nourrice of antiquitie," was born in the Old Bailey, where his father was a painter-stainer. In Ship-court, on the west side, was born William Hogarth, the painter; and at the corner of Ship-court, No. 67, three doors from Ludgate-hill, William Hone kept a little shop, where he published his noted *Parodies* in 1817, for which he was three times tried and acquitted. Next door, at No. 68, lived the infamous Jonathan Wild.

### OLD JEWRY,

A STREET leading from the Poultry to Cateaton-street; and "so called of Jews some time dwelling there and near adjoining" (*Stow*), first brought here by William Duke of Normandy. They had here, at the north-west corner, a synagogue, suppressed in 1291; it was next the church of the Friars of the Sack: here Robert Large kept his mayoralty in 1439; Hugh Clopton in 1492; and in *Stow's* time it was the *Windmill Tavern*, mentioned in Ben Jonson's *Every Man in his Humour*: its site is denoted by Windmill-court. "In the reign of Henry VI., at the north end was one of the king's palaces" (*Hatton*); in the reign of Richard III. it was called the Prince's Wardrobe; and in 1548, Edward VI., it was sold to Sir Anthony Cope. On the west side, about 40 yards from Cheapside, was built in 1670 the Mercers' Chapel Grammar School, removed in 1787, when Old Jewry was widened.

In a courtyard here was the stately mansion built by Sir Robert Clayton for keeping his shrievalty in 1671-2. It was nobly placed upon a stone balustraded terrace, in a courtyard, and was of fine red brick, richly ornamented. John Evelyn, who was a guest at a great feast here, describes, in his *Diary*, Sept. 26, 1672, the mansion as "built indecde for a greate magistrate at excessive cost. The cedar dining-room is painted with the history of the Gyants' War, incomparably done by Mr. Streeter; but the figures are too near the eye." Mr. Bray, the editor of the *Diary*, adds (1818), "these paintings have long since been removed to the seat of the Clayton family, at Marden Park, near Godstone, in Surrey;" in the possession of the present baronet. In 1679-80 Charles II. and the Duke of York supped at the mansion in the Old Jewry, with Sir Robert Clayton, then Lord Mayor. The balconies of the houses in the streets were illuminated with flambeaux; and the King and the Duke had a passage made for them by the Trained Bands upon the guard from Cheapside. Sir Robert represented the

metropolis nearly thirty years in Parliament, and was Father of the City at his decease. His son was created a baronet in 1731-2. Sir James Thornhill painted the staircase of the Old Jewry mansion with the story of Hercules and Omphale, besides a copy of the "Rape of Deianira," after Guido. The house had several tenants before it was occupied by Samuel Sharp, the celebrated surgeon. In 1806 it was opened as the temporary home of the London Institution, with a library of 10,000 volumes. Here, in the rooms he occupied as librarian of the Institution, died Professor Porson, on the night of Sunday, Sept. 25, 1808, "with a deep groan, exactly as the clock struck twelve." Dr. Adam Clarke has left a most interesting account of his visits to Porson here. The Institution removed from the house in 1810, and it was next occupied as the Museum of the London Missionary Society, and subsequently divided into offices. The Lord Mayor's Court was latterly held here. The mansion was taken down in the autumn of 1863. Although it had been built scarcely two centuries, this mansion was a very handsome specimen of the palace of a merchant-prince, carrying us back to the sumptuous civic life of the seventeenth and eighteenth centuries, when our rich citizens lived in splendour upon the sites whereon they had accumulated their well-earned wealth.

In Ben Jonson's *Every Man in his Humour*, Master Stephen dwells at Hogsden, the dwellers of which have a long suburb to pass before they reach London. "I am sent for this morning by a friend in the Old Jewry to come to him: it is but crossing over the fields to Moorgate." In the Old Jewry dwelt 'tob the waterman, by the wall at the bottom of Coleman-street, "at the sign of the *Water Tunkard*, hard by the *Green Lattice*."—C. Knight's *London*, vol. I, p. 368.

### OLD STREET,

OR *Eald-street*, is part of a Roman military way, which anciently led from the eastern to the western parts of the kingdom. Old-street extends from opposite the north-eastern corner of Charter-house garden to St. Luke's Church (see p. 176); whence to Shoreditch Church (see p. 173) the continuation is *Old-street-road*, where are St. Luke's (see p. 438) and the London Lying-in Hospitals. St. Leonard's, Shoreditch, was anciently a village upon the Eald-street, at some distance north of London; Hoxton, or Hocheston, was originally a small village, and had a market; and the manor of Finsbury, in the reign of Henry VIII., consisted chiefly of fields, orchards, and gardens. Old-street was also famous for its nursery-grounds; and here were several almshouses, mostly built when this suburb was open, healthful ground. *Pest-house-lane* (now Bath-street) was named from a pest-house established here during the Great Plague of 1665, and removed in 1737. In *Brick-lane* is one of the three earliest stations established by the first Gas Light Company in the metropolis, incorporated in 1812.

*Pichhatch*, a profligate resort, named in the plays of Shakspeare, Ben Jonson, and Middleton, was supposed to have been in Turnmill-street, Clerkenwell, until Mr. Cunningham identified Pichhatch with "Pickaxe-yard," in Old-street, near the Charter-house. (See *Handbook*, 2nd edit. p. 400.)

At the corner of Old-street-road, in the City-road, are Vinegar-works, formerly the property of Mr. James Calvert, who won the first 20,000*l.* prize ever drawn in an English lottery, and in a subsequent lottery gained 5000*l.*; yet he died in extreme poverty, Feb. 26, 1799.

### OMNIBUS, THE,

A HACKNEY carriage for 12 or more passengers inside, is stated to have been tried about the year 1800, with four horses and six wheels, but unsuccessfully. We remember a long-bodied East Grinstead coach in 1808; and a like conveyance between Hemel Hempstead, Herts, and the metropolis. The Greenwich stages were mostly of this build; and a character in the farce of *Too Late for Dinner*, produced in 1820, talks of "the great green Greenwich coach," the omnibus of that period. Still, its invention is claimed for M. Baudry, of Nantes. It has been extended to all parts of the world: even in the sandy environs of Cairo you are whisked to your hotel in an Oriental omnibus.

Mr. Shillibeer, in his evidence before the Board of Health, states that on July 4, 1829, he started the first pair of omnibuses in the metropolis—from the Bank to the *Yorkshire Stingo*, New-road; copied from Paris, where M. Lafitte, the banker, had

previously established omnibuses in 1819. Each of Shillibeer's vehicles carried 22 passengers inside, but only the driver outside; and each omnibus was drawn by three horses abreast; the fare was 1s. for the whole journey, and 6d. for half the distance; and for some time the passengers were provided with periodicals to read on the journey. Shillibeer's first "conductors" were the two sons of British naval officers, who were succeeded by young men in velvet liveries. The first omnibuses were called "Shillibeers," and the name is common to this day in New York. Omnibuses ruined the elder branch of the Bourbons in 1830: the accidental upset of an omnibus suggested the first idea of a barricade and thus changed the whole science of revolutions. Nevertheless, a *barricade* of vehicles was one of the strategies employed three centuries before, in England. There are numerous private speculators in omnibuses, who, no doubt, convey a large amount of passengers; but the London General Omnibus Company alone earns from 10,000*l.* to 15,000*l.* a week, and must employ several thousand servants. In Exhibition weeks, the receipts have reached 17,000*l.* (HACKNEY-COACHES AND CABS, *see* pp. 392-393.)

### OXFORD-STREET,

ORIGINALLY *Tyburn-road*, and next *Oxford-road* (the highway to Oxford), extends from the site of the village pound of St. Giles's (where High-street and Tottenham-court-road meet), westward to Hyde Park Corner,  $1\frac{1}{2}$  mile in length, containing upwards of 400 houses. Hatton, in 1708, described it "between St. Giles's Pound east, and the lane leading to the gallows west." It follows the ancient military road (*Via Trinovantica*, Stukeley), which crossed the Watling-street at Hyde Park Corner, and was continued thence to Old-street (Eald-street), north of London. During the Civil War, in 1643, a redoubt was erected near St. Giles's Pound, and a large fort with half bulwarks across the road opposite Wardour-street. In a map of 1707, on the south side, King-street, Golden-square, is perfect to Oxford-road, between which and Berwick-street are fields; hence to St. Giles's is covered with buildings, but westward not a house is seen; the north side contains a few scattered buildings, but no semblance of streets west of Tottenham-court-road. A plan of 1708 shows, at the south end of Mill-hill Field, the Lord Mayor's Banqueting-house, at the north-east corner of the bridge across Tyburn brook, over which is built the west side of Stratford-place. In the above plan is also shown the *Adam and Eve*, a detached roadside public-house in the "Dung-field," near the present Adam-and-Eve-court, almost opposite Poland-street; and in an adjoining field is represented the boarded house of Figg, the prize-fighter. "The row of houses on the north side of Tyburn-road was completed in 1729, and it was then called *Oxford-street*" (Lysons's *Environ's*); a stone upon a house on the north side is inscribed, "Rathbone-place, Oxford-street, 1718:—" it was built by Captain Rathbone. In this year were commenced Hanover-square, and "round about, so many other edifices, that a whole magnificent city seems to be risen out of the ground. On the opposite side of the way, towards Marylebone, is marked out a square, and many streets to form avenues to it." (*Weekly Medley*, 1718.) Vere-street Chapel and Oxford Market were built about 1724; five years later were begun most of the streets leading to Cavendish-square.

A map of 1742 shows the little church of St. Marylebone, in the fields, with two zigzag ways leading to it: one near Vere-street, then the western limit of the new buildings; and the second from Tottenham-court-road. Rows of houses, with their backs to the fields, extend from St. Giles's Pound to Oxford Market; but Tottenham-court-road has only one cluster on the west side, and the spring-water house. Thus, Oxford-street, from Oxford Market to Vere-street, south and west, Marylebone-street, north, and the site of Great Titchfield-street east, form the limit of the new buildings: the zigzag way from Vere-street (now Marylebone-lane) leading from the high-road to the village.

Pennant (born in 1726) remembered Oxford-street "a deep hollow road, and full of sloughs; with here and there a ragged house, the lurking-place of cut-throats:" inasmuch that he "never was taken that way by night," in a hackney-coach, to his uncle's in George-street, but he "went in dread the whole way."

Yet this main arterial thoroughfare was called *Oxford-street* in the reign of Charles II., as attested in the following passage from the Statute of 1678, enacting the boundaries of the parish of St. Anne, then just taken out of St. Martin's:—

The houses beginning at the sign of the *Crooked Billet*, near St. Giles's Pound, and bounded by the way leading from the said sign to the end of Cock-lane near Long-acre, with the south side of the lane and all the ground called the Military-ground, and all the houses and ground leading thence to Cranbourne-street and Little Leicester-street, *alias* Bear-street, including Leicester-house and garden, as it is abutting upon Leicester-square, with all the houses on the west side of the square from Leicester-garden wall to the *Sun Tavern*, &c., including the wall abutting on the highway leading from Piccadilly to the west side of the Military-ground, and abutting on the highway leading to the field called Kemp's-field, including all the fields to the sign of the *Blue Anchor*, being the corner house at the south end of the east side of Soho-street, abutting upon Kemp's-fields, with all the east side of Soho-street to the sign of the *Red Cow*, being the corner house at the north end of Soho-street, abutting upon the King's highway, or Great-road (that is, what is now called Oxford-street), with all the houses and grounds abutting on and upon the said road leading from the sign of the *Red Cow* to the *Crooked Billet*; and all the houses, &c., included in these boundaries were erected into the new parish of St. Anne.

*Cumberland-place*, begun about 1774, was named from the hero of Culloden, of whom there is a portrait-sign at a public-house in Great Cumberland-street. No. 58, *Cumberland-street* has an elegant portico of terra-cotta, designed by A. H. Morant, for Lord Strangford. At the western extremity of Oxford-street, in the first house in Edgware-road, immediately opposite to Tyburn turnpike, lived for many years the Corsican General Paoli, who was godfather to the Emperor Napoleon. (*Notes and Queries*.) *Stratford-place* was built 1787-90, upon the site of Conduit-Mead. At the north end is Aldborough House (erected for Edward Stratford, Earl of Aldborough), with a handsome Ionic stone front and a Doric colonnade. Here, until 1805, stood a naval trophied Corinthian column with a statue of George III., set up in 1797 by Lieut.-Gen. Strode. No. 315, Oxford-street is the façade of the Laboratories of the COLLEGE OF CHEMISTRY (see p. 273). The view through the gate of Hanover-square, the massive church and the lofty and handsome houses, presents a very fine architectural *coup-d'œil*.

*Portland-place* was built by the architects Adam, about 1778: it is 126 feet wide, and in 1817 was terminated at the north end by an open railing looking over the fields towards the New-road; when "the ample width of the foot-pavement, the purity of the air, and the prospect of the rich and elevated villages of Hampstead and Highgate, rendered Portland-place a most agreeable summer promenade." (Hughson's *London*.) At No. 43, lived Sir Felix Booth, Bart., from whom Sir John Ross named Boothia Felix; Lord Chief-Justice Denman at No. 38. In Park-crescent long resided the Count de Surveilliers (Joseph Bonaparte); and in the garden, facing Portland-place, is a well-modelled bronze statue (height 7 feet 2 inches), by Gahagan, of the Duke of Kent, father of Queen Victoria.

The Crystal Palace in Hyde Park was nearly the length of Portland-place. "I walked out one evening," says Sir Charles Fox, "and there setting out the 1848 feet upon the pavement, found it the same length within a few yards; and then considered that the Great Exhibition Building would be three times the width of that fine street, and the nave as high as the houses on either side."

*Newman-street* and *Berners-street*, built between 1750 and 1770, were from the first inhabited by artists of celebrity. In the former lived Banks and Bacon, the sculptors; and West and Stothard, the painters: in the latter, Sir William Chambers, the architect; and Fuseli and Opie, the painters. Facing is the Middlesex Hospital, described at p. 439. The *Pantheon*, on the south side of Oxford-street, was originally built by James Wyatt, in 1768-71; was burnt down in 1792, but was rebuilt; taken down in 1812, and again reconstructed. (See PANTHEON.) Nearly opposite is the *Princess's Theatre*, No. 73, formerly the Queen's Bazaar, opened in 1840. (See THEATRES.) *Wardour-street*, built 1686, and named from Lord Arundel of Wardour, is noted for its curiosity-shops. (See CARVING, pp. 78-81.) *Hanway-street* bears a stone dated 1721, and was originally a zigzag lane to Tottenham-court-road: it was called Hanway-yard to our time, and is noted for its china-dealers and curiosity-shops, as it was in the reign of hoops, high-heeled shoes, and stiff brocade. No. 54, corner of Berners-street, has a *Renaissance* or Elizabethan shop-front and mezzanine floor; a picturesque composition of pedestals, consoles, and semi-caryatid figures. No. 76 has a Byzantine façade. No. 86 has a front of studied design. At No. 15 was exhibited, in 1830-32, a large painted window of the Tournament of the Field of Cloth-of-Gold, by Wilmshurst; destroyed by fire in 1832. At the east end of Oxford-street, in 1838, were laid experimental specimens of the various roadway Wood Pavements.

Nollekens, the sculptor, one day, in a walk with J. T. Smith, stopped at the corner of Rathbone-

...nearly becomes the tale of Major infant; and it is in making the secondary male character so appealing that Mr. Locke has made his one mistake. For once his hero is a little hurried in outline by the intrusion of others. But only a little. For the most part the book holds the reader interested from first to last. And in the character of Myra, the devoted servant with tragic history behind her sombre manner, Mr. Locke has succeeded in adding to the gallery of forgettable portraits he has drawn for us.

## NEW NOVELS.

"Ovington's Bank." By Stanley J. Weyman. (London: John Murray.) 7s. 6d.

Could there be a better introduction to modern English history, we think, than the four novels in which Stanley Weyman has depicted Waterloo, the Reform Bill, the Free Trade crisis, and now the railway mania? Each of them is a masterpiece of broad-scale action, brilliant in its display of mass movements, glowing superbly to its crisis, and handling great events with an art fully worthy of their significance. "Ovington's Bank" is certainly not the least

charity. Tanner speaks of Paddington as a parish, *temp.* Richard II.; and by the Valor Ecclesiasticus of Henry VIII., the rectory yielded, like the manor, a separate revenue to the Abbey. Upon the dissolution of the Bishopric of Westminster, the manor and rectory were given by Edward VI. to Ridley, Bishop of London, and his successors for ever; they were then let at 41*l.* 6*s.* 8*d.*, besides 20*s.* for the farm of "Paddington Wood," 30 acres.

The population of Paddington, by the Subsidy Roll of Henry VIII. scarcely exceeded 100; in Charles II.'s reign it was about 300; in 1811, the population was 4609; from 1831 to 1841, it increased 1000 per annum; from 1841 to 1851, above 2000 annually; and in 1861, it had 75,807. Thus, from the forest village has risen a large town, and one of the three parishes forming the Parliamentary borough of Marylebone.

"A city of palaces has sprung up within twenty years. A road of iron, with steeds of steam, brings into the centre of this city, and takes from it in one year, a greater number of living beings than could be found in all England a few years ago; while the whole of London can be traversed in half the time it took to reach Holborn Bars at the beginning of this century, when the road was in the hands of Mr. Miles, his pair-horse coach, and his redoubtable Boy,"\* long the only appointed agents of communication between Paddington and the City. The fares were 2*s.* and 3*s.*; the journey took more than three hours; and to beguile the time at resting places, "Miles's Boy" told tales and played upon the fiddle. A portion of Paddington is called *Tyburnia*; but the distinction has not been so readily adopted as in the case of *Belgravia*.

In the middle of the last century, nearly the whole of Paddington had become grazing-land, upwards of 1100 acres; and the occupiers of the Bishop's Estate kept here hundreds of cows. At the beginning of the last century, next to the rurality of Paddington, the gallows and the gibbet were its principal attractions. About 1790 were built nearly 100 small wooden cottages, tenanted by a colony of 600 journeyman artificers; but these dwellings have given way to Connaught-terrace.

\* *Paddington, Past and Present*, by William Robins, 1853; an able contribution to our local history.

his mother often took him to the top of that street which then stood on the site of the chapel in Chartery person at a hatch belonging to the miller, for old me (continues Smith), that his mother took him between Oxford-road and Grosvenor-square, the north the brewhouse between Rathbone-place and the end fifteen large and fine walnut-trees standing on the vulgarly called Hanover-yard, afterwards Hanway-ann, beyond the Star Brewery.—*Nollekens and his*

## Derby House Activity.

Politics can bring liveliness into the quietest spots. Passing that stately cul de sac, Stratford-place, yesterday, I noticed it was full of motor-cars and bustle, while a footman between six and seven feet high stood at the Oxford-street end calling for taxicabs to come in and swell the crowd.

For there at the end of the place, blinking at the busy street of bargain-hunters, is Derby House, the London residence of the new War Minister, and a lot of general business is being transacted there.

Lord Derby's house was, until 1910 when he acquired it, known as Stratford House, for it was built in 1773 along with Stratford-place, by Edward Stratford, the second Earl of Aldborough, after designs by Robert Adam. The Duke of St. Alban, Prince Esterhazy, and many other distinguished persons have lived in since. Up to 1910 it was occupied by Lord Colebrooke. Lord Derby has enlarged it considerably—big as it was—and spoiled to some extent its Adamite character. 2706-19

by Gahagan, of the

place, and observed that when he was a little boy, his mother often took him to the top of that street to walk by the side of a long pond, near a windmill, which then stood on the site of the chapel in Charlotte-street; and that a halfpenny was paid by every person at a hatch belonging to the miller, for the privilege of walking in his grounds. He also told me (continues Smith), that his mother took him through another halfpenny hatch in the fields, between Oxford-road and Grosvenor-square, the north side of which was then building. When we got to the brewhouse between Rathbone-place and the end of Tottenham-court-road, he said he recollected thirteen large and fine walnut-trees standing on the north side of the highway, between what was then vulgarly called Hanover-yard, afterwards Hanway-yard, and now Hanway-street, and the *Castle* inn, beyond the Star Brewery.—*Nollekens and his Times*, i. 37.

Towards the west end of Oxford-street several houses of lofty and ornamental design have replaced the incongruous dwellings which reminded one of Oxford-road. Here was Camelford House, sometime inhabited by the Princess Charlotte and her husband, Prince Leopold.

NEW OXFORD-STREET, extending the houses from 441 to 552, and occupying part of the site of St. Giles's "Rookery," was opened in 1847: the house-fronts are of Ionic, Corinthian, domestic Tudor, and Louis XIV. character, including a glass-roofed Arcade of shops.

### PADDINGTON,

NAMED from the Saxon *Pædingas* and *tun*, the town of the Pædings (Kemble's *Saxons in England*), was, in the last century, a pleasant little rural village, scarcely a mile north of Tyburn turnpike, upon the Harrow-road. Paddington is not mentioned in Domesday Book; and the charters professedly granting lands here by Edgar to the monks of Westminster are discredited as forgeries. The district would rather appear to have been cleared, soon after the Norman Conquest, from the vast forest of Middlesex (with pasture for the cattle of the villagers, and the fruits of the wood for their hogs), and to have lain between the two Roman roads (now the Edgware and Uxbridge roads) and the West bourn, or brook, the ancient Tybourn. In the first authentic document (31 Hen. II.), Richard and William of Paddington transfer their "tenement" to the Abbot and Convent of Westminster; and from the close of the thirteenth century, the whole of the temporalities of Paddington (rent of land, and young of animals, valued at *8l. 16s. 4d.*), were devoted to charity. Tanner speaks of Paddington as a parish, *temp.* Richard II.; and by the Valor Ecclesiasticus of Henry VIII., the rectory yielded, like the manor, a separate revenue to the Abbey. Upon the dissolution of the Bishopric of Westminster, the manor and rectory were given by Edward VI. to Ridley, Bishop of London, and his successors for ever; they were then let at *41l. 6s. 8d.*, besides 20s. for the farm of "Paddington Wood," 30 acres.

The population of Paddington, by the Subsidy Roll of Henry VIII. scarcely exceeded 100; in Charles II.'s reign it was about 300; in 1811, the population was 4609; from 1831 to 1841, it increased 1000 per annum; from 1841 to 1851, above 2000 annually; and in 1861, it had 75,807. Thus, from the forest village has risen a large town, and one of the three parishes forming the Parliamentary borough of Marylebone.

"A city of palaces has sprung up within twenty years. A road of iron, with steeds of steam, brings into the centre of this city, and takes from it in one year, a greater number of living beings than could be found in all England a few years ago; while the whole of London can be traversed in half the time it took to reach Holborn Bars at the beginning of this century, when the road was in the hands of Mr. Miles, his pair-horse coach, and his redoubtable Boy,"\* long the only appointed agents of communication between Paddington and the City. The fares were 2s. and 3s.; the journey took more than three hours; and to beguile the time at resting places, "Miles's Boy" told tales and played upon the fiddle. A portion of Paddington is called *Tyburnia*; but the distinction has not been so readily adopted as in the case of *Belgravia*.

In the middle of the last century, nearly the whole of Paddington had become grazing-land, upwards of 1100 acres; and the occupiers of the Bishop's Estate kept here hundreds of cows. At the beginning of the last century, next to the rurality of Paddington, the gallows and the gibbet were its principal attractions. About 1790 were built nearly 100 small wooden cottages, tenanted by a colony of 600 journeyman artificers; but these dwellings have given way to Connaught-terrace.

\* *Paddington, Past and Present*, by William Robins, 1853; an able contribution to our local histories.

Paddington consists chiefly of two hills, Maida-hill and Craven-hill; the north-eastern slope of Notting-hill; and a valley through which runs the Tybourn, a favourite resort of anglers early in the present century, but now a covered sewer. From this brook, the newly-built district, mostly of palatial mansions, is named *Tyburnia*.

*Paddington Green*, now inclosed and iron-bound, was the green of the villagers, shown in all its rural beauty in prints of 1750 and 1783. Upon a portion of it were built the Almshouses, in 1714; their neat little flower-gardens have disappeared. South of the green is the new Vestry-hall. At *Dudley Grove* was modelled and cast, by Matthew Cotes Wyatt, the colossal bronze statue of the Duke of Wellington, now upon the Green Park Arch: it is thirty feet high, and was conveyed from the foundry, upon a car, drawn by 29 horses, Sept. 29, 1846, to Hyde Park Corner.

*Westbourne Green* has been cut up by the Great Western Railway; and Westbourne-place, built by Ware, with the materials of old Chesterfield House, May Fair, has disappeared. Close by is the terminus of the *Great Western Railway*, with a magnificent Hotel, designed in the Louis Quatorze taste, by P. Hardwick, R.A.: the allegorical sculpture of the pediment is by Thomas: the rooms exceed 130.

At *Craven Hill* was the Pest-house Field, exchanged for the ground in Carnaby-street, given by Lord Craven as a burial-place, if London should ever be again visited by the Plague: but the field is now the site of a handsome square of houses named Craven Gardens. *Bayswater* is a hamlet of Paddington. *Knotting*, or *Notting Hill* seems but to have been a corruption of *Nutting*; the wood on and around the hill of that name having for centuries been appropriately so named. *Kensell*, or *Kensale*, is "the Green-lane" and Kingsfelde Green in a Harleian MS. of Mary's reign. (See p. 81.) *Maida Hill* and *Maida Vale* were named from the famous battle of Maida, in Calabria, fought between the French and British, in 1806.

The *Grand Junction Waterworks* were established in 1812; and on Camden-hill is a storing reservoir containing 6,000,000 gallons. At Paddington the basin of the *Grand Junction Canal* joins the Regent's Canal, which passes under Maida-hill by a tunnel 370 yards long. On the banks of the canal, the immense heaps of dust and ashes, once towering above the house-tops, are said to have been worth fabulous thousands.

"*The Bishop's Estate*" (Bishop's-road, Blomfield-terrace, &c.) produces 30,000*l.* a year to the Bishop of London and the lay lessees. Among the parochial *Charities*, the anniversary festival of an Abbot of Westminster is thought to explain "the Bread and Cheese Lands;" and until 1838, in accordance with a bequest, bread and cheese were thrown from the steeple of St. Mary's Church, to be scrambled for in the churchyard. (See LOCK HOSPITAL, p. 438; ST. MARY'S, p. 439.)

*Oxford and Cambridge Squares and Terraces* will long keep in grateful memory the munificence of the Lady Margaret, Countess of Richmond, to the Universities of Oxford and Cambridge.

Paddington possessed a church before the district was assigned to the monks of Westminster, in 1222. An "old and ruinous church" was taken down about 1678, and was thought, from its painted window, to have been dedicated to *St. Katharine*. Next, *St. James's Church* was built by the Sheldons, *temp.* Charles I.: here Hogarth was married to Sir James Thornhill's daughter, in 1729. This church was taken down, and *St. Mary's* built upon the Green, 1788-91, "finely embosomed in venerable elms:" near it were the village stocks, and in the churchyard were an ancient yew-tree and a double-leaved elder. Here is the tombstone of John Hubbard, who died in 1665, "aged 111 years." Near the grave of Mrs. Siddons lies Haydon, the ill-fated painter, who devoted "forty-two years to the improvement of the taste of the English people in high art:" he lived many years at 1, Burwood-place, Edgware-road; and here, June 22, 1846, with his own hand, he terminated the fitful fever of his existence. *St. Mary's Church* is described at p. 187. Next was built *Bayswater Chapel*, by Mr. Orme, the printseller, in 1818; *Connaught Chapel*, in 1826, now St. John's; and at the western extremity of the Grand Junction-road, *St. James's*, which in 1845 became the parish church. In 1844-6 was built *Holy Trinity Church*, Bishop's-road (see p. 208): cost 18,458*l.*, towards which the Rev. Mr. Miles gave 4000*l.* In 1847 was erected, in Cambridge-place, *All Saints Church*, upon a portion of the site of the old Grand Junction Waterworks' reservoir, at the end of Star-street. *St. John's*, in Southwick-

crescent, has a fine stained window. The erection of Dissenters' places of worship was long restricted in Paddington by the Bishops of London; but there are several chapels, including one for the Canal boatmen, constructed out of a stable and coach-house. At the western extremity of the parish is a large Roman Catholic church.

Paddington has long been noted for its *old public-houses*. The *White Lion*, Edgware-road, dates 1524, the year when hops were first imported. At the *Red Lion*, near the Harrow-road, tradition says, Shakspeare acted; and another *Red Lion*, formerly near the Harrow-road bridge over the bourn, is described in an inquisition of Edward VI. In this road is also an ancient *Pack-horse*; and the *Wheat-sheaf*, Edgware-road, was a favourite resort of Ben Jonson. (See Robins's *Paddington*.)

Paddington and Marylebone appear to have been favoured by religious enthusiasts. At No. 26, Manchester-street, died, in 1814, the notorious Joanna Southcott, after having imposed upon six medical men with the absurd story of her being about to give birth to the young "Shiloh." Richard Brothers, the self-styled "Nephew of God," lodged at No. 58, Paddington-street, and died in Upper Baker-street, in 1824. Spence, the disciple of Emanuel Swedenborg, lived in Great Marylebone-street: he was known as "Dr. Spence," when he was the only surgeon in the *village* of Marylebone. Paddington, with all its antique fame, does not make us forget two odd things that have been said of the district:—

" Pitt is to Addington,  
As London is to Paddington."—*Canning*.

And Lord Byron remarks: "Here would be nothing to make the Canal of Venice more poetical than that of Paddington, were it not for its artificial adjuncts."

### PAINTED CHAMBER, THE,

REPRESENTED to have been the bed-chamber and death-place of Edward the Confessor, in the old Palace at Westminster, existed in its foundation-walls until the Great Fire in 1834. It was also called St. Edward's Chamber; and assumed its second name after it had been *painted* by order of Henry III. In the ceremonial of the marriage of Richard Duke of York, in 1477, the Painted Chamber is called St. Edward's Chamber; and Sir Edward Coke, in his Fourth Institute, states that the causes of Parliament were in ancient time shown in *La Chambre Depeint*, or St. Edward's Chamber. This interesting historical apartment had two floors, one tessellated, and the other boarded: it was 80 feet 6 in. in length, 26 feet wide, and its height from the upper floor was 31 feet. The ceiling, *temp.* Henry III., was dight with gilded and painted tracery, including small wainscot pateræ, variously ornamented. It was hung with tapestries, chiefly representing the Siege of Troy, probably put up *temp.* Charles II. Sandford, in his *Coronation of James II.*, mentions these tapestries as "Five pieces of the Siege of Troy, and one piece of Gardens and Fountains." In 1800, these hangings and the wainscoting were removed,\* when the walls and window-jamb were found covered with paintings of the battles of Maccabees; the Seven Brethren; St. John, habited as a pilgrim, presenting a ring to King Edward the Confessor; the canonization of King Edward, with seraphim, &c.; and black-letter Scripture texts. The paintings are noticed in the MS. Itinerary of Simon Simeon and Hugo the Illuminator (Franciscan friars), in 1322; who name "that well-known chamber, on whose walls all the histories of the wars of the whole Bible are painted beyond description;" and an Exchequer Roll, 20 Edw. I. anno 1292, headed, "*p'ma op'ac'o picture*," or first work of Painting, contains an account of the disbursements of Master Walter, the painter, for the emendation of the pictures in the King's *Great Chamber*, as the Painted Chamber was then called.† Specimens of these paintings are given by J. T. Smith in his *Antiquities of Westminster*; and in the *Vetusta Monumenta*, vol. vi.; and in 1835, drawings of the pictures were exhibited to the Society of Antiquaries.

In the Painted Chamber, Parliaments were opened, before the Lords sat in the Court of Requests. Here Conferences of both Houses were held; here sat in private

\* About the year 1820, the tapestry was sold to Mr. Charles Yarnold, of Great St. Helen's, for 10*l*.

† There are also entries in the Close Rolls, 13 Hen. III. (1228), for painting the Great Exchequer Chamber; and 1236, for the King's Great Chamber; proving that oil-painting was practised in England nearly two centuries before its presumed discovery by John van Eyck, in 1410.

the High Court of Justice for bringing Charles I. to trial; and here the death-warrant of the unhappy King was signed by the Regicides. The body of Lord Chatham lay in State here. After the Fire of 1834, the walls of the Chamber were roofed, and the interior was fitted up as a temporary House of Lords. The building was taken down in 1852, when the brick and stone work of the north side, and the ends of the Chamber, including several Gothic stone window-cases, were sold for 50*l*.

#### PAINTED GLASS.

THE finest specimens will be described under WINDOWS, PAINTED.

#### PALACES, ROYAL.

THE three royal metropolitan palaces are, Buckingham Palace, the residence of the Sovereign and the Court; St. James's Palace, used exclusively for State purposes; and Kensington Palace, the birthplace of Her Majesty, 1819; and where she held her First Council, 1837.

Hutton (in 1708) says: "Of Courts of our Kings and Queens there were heretofore many in London and Westminster: as the *Tower of London*, where some believe Julius Cæsar lodged, and William the Conqueror; in the *Old Jewry*, where Henry VI.; *Baynard's Castle*, where Henry VII.; *Bridewell*, where King John and Henry VIII.; *Tower Royal*, where Richard II. and King Stephen; *Wardrobe*, in Great Carter-lane, where Richard III.; also at *Somerset House*, kept by Queen Elizabeth; and at *Westminster*, near the Hall, where Edward the Confessor and several other kings kept their Courts. But of later times, the place for the Court, when in town, was mostly *Whitehall*; a very pleasant and commodious situation, looking into St. James's Park, the canal, &c. west, and the noble river of Thames east: Privy Gardens, with fountains, statues, &c., and an open prospect to the statue at Charing Cross, north. This palace being, in January, 1697, demolished by fire, except the Banqueting House (built by Inigo Jones, *temp.* James I.), there has since been no reception for the Court in town but *St. James's Palace*, which is pleasantly situated by the Park; and *Whitehall* will doubtless be rebuilt in a short time, being designed one of the most famous palaces in Christendom.

"Her Majesty has also these noble palaces for the Court to reside in at pleasure: *Kensington House* (so near, that it may be said to be in town), *Campden House*, *Windsor Castle*, *Hampton Court*, *Winchester House*; all which palaces, for pleasant situation, nobleness of building, delightful gardens and walks, externally; and for commodious, magnificent rooms, rich furniture, and curious painting, internally,—cannot be matched in number and quality by any one prince on earth."

BUCKINGHAM PALACE, the town residence of the Sovereign, on the west side of St. James's Park, was built by Nash and Blore, between 1825 and 1837, upon the site of Buckingham House, of which the ground-floor alone remains. The northern side of the site was a portion of the Mulberry-garden, planted by James I. in 1609, which in the next two reigns became a public garden. Evelyn describes it in 1654 as "y<sup>e</sup> only place of refreshment about y<sup>e</sup> towne for persons of y<sup>e</sup> best quality to be exceedingly cheated at;" and Pepys refers to it as "a silly place," but with "a wilderness somewhat pretty." It is a favourite locality in the gay comedies of Charles II.'s reign.

Dryden frequented the Mulberry Gardens; and according to a contemporary, the poet ate tarts there with Mrs. Anne Reeve, his mistress. The company sat in arbours, and were regaled with chessecakes, syllabubs, and sweetened wine, wine-and-water at dinner, and a dish of tea afterwards. Sometimes the ladies wore masks. "The country ladies, for the first month, take up their places in the Mulberry Gardens as early as a citizen's wife at a new play."—Sir C. Sedley's *Mulberry Garden*, 1668.

"A princely palace on that space does rise

Where Sedley's noble muse found mulberries."—*Dr. King*.

Upon the above part of the garden site was built *Goring House*, let to the Earl of Arlington in 1666, and thence named *Arlington House*: in this year the Earl brought from Holland, for 60*s*., the first pound of tea received in England; so that, in all probability, *the first cup of tea made in England was drunk upon the site of Buckingham Palace*. There is a rare print of Arlington House, by Sutton Nichols, and a copy by John Seago. In 1698 the property was sold to Sheffield, Duke of Buckingham, for whom the house was rebuilt in 1703, in the heavy Dutch style, of red brick, with stone finishings. Some vignettes of the mansion, then *Buckingham House*, are engraved at the heads of chapters, and in illuminated capitals, of the second volume of the collected poems of Buckingham, "the Musés' friend, himself a Muse." On the four sides he inscribed, in gold, four pedantic mottoes: "Sic siti lætantur Lares;" "Rus in urbe;" "Spectator fastidiosus sibi molestus;" and "Lente inceptit, cito perfectit." The house was surmounted with lead figures of Mercury, Secrecy, Equity, Liberty, Truth, and Apollo; and the Four Seasons. Defoe describes it as "one of the great beauties of London, both by reason of its situation and its building:" its fine garden, noble

terrace (with prospect of open country), a little park with a pretty canal; and the basin of water, and Neptune and Tritons' fountain in the front court. The Duke of Buckingham, in a letter to the Duke of Shrewsbury, minutely describes the mansion: its hall painted in the school of Raphael; its parlour by Ricci; its staircase with the story of Dido; its ceiling with gods and goddesses; and its grand saloon by Gentileschi. The flat leaded roof was balustraded for a promenade; and here was a cistern holding 50 tons of water, driven up by an engine from the Thames.

To his third wife, a natural daughter of James II. by Catherine Sedley, the Duke was tenderly attached, and studied her convenience in planning Buckingham House: "the highest story of the private apartments," he tells us, "is fitted for the women and children, with the floors so contrived as to prevent all noise over my wife's head during the mysteries of Lucina."

Buckingham House was purchased by George III. for 21,000*l.* in 1762, shortly after the birth of the Prince of Wales at St. James's Palace: their Majesties soon removed here, and all their succeeding children were born here. In 1775 the property was settled on Queen Charlotte (in exchange for Somerset House), and thenceforth Buckingham House was called "the Queen's House." Here the King collected his magnificent library, now in the British Museum (*see* p. 584). Dr. Johnson, by permission of the librarian, frequently consulted books; and here he held his memorable conversation with George III.

"It is curious that the royal collector (George III.) and his venerable librarian (Mr. Barnard) should have survived almost sixty years after commencing the formation of this, the most complete private library in Europe, steadily appropriating 2000*l.* per annum to this object, and adhering with scrupulous attention to the instructions of Dr. Johnson, contained in the admirable letter printed by order of the House of Commons."—*Quarterly Review*, June, 1826.

In 1766 the Cartoons of Raphael were removed here, to an octagonal apartment at the south-east angle: thence they were transferred to Windsor Castle in 1788. The Saloon was superbly fitted as the Throne-room, and here Queen Charlotte held her public drawing-rooms; in the Crimson, Blue Velvet, and other rooms, was a fine collection of pictures. Thus the mansion remained until 1825, externally "dull, dowdy, and decent"; nothing more than a large, substantial, and respectable-looking red brick house."

The Palace, as reconstructed by Nash, consisted of three sides of a square, Roman-Corinthian, raised upon a Doric basement, with pediments at the ends; the fourth side, enclosed by iron palisades, with a central entrance arch of white marble, adapted from that of Constantine at Rome. Mr. Nash was succeeded by Mr. Blore, who raised the building a story; and the palace was opened for public inspection in 1831; when appeared, in *Fraser's Magazine*, an architectural description of the Palace, written by Allan Cunningham. William IV. and Queen Adelaide did not remove here; but on July 13, 1837, Queen Victoria took up her residence here. In 1846 the erection of the east side was commenced; and in 1851 the Marble Arch was removed to the north-east corner of Hyde Park. There have since been added a spacious Ball-room, &c., on the south side of the Palace.

The East Front of Buckingham Palace is German, of the last century: its extent is 360 feet, height 77 feet; extreme height of centre 90 feet; frontage 70 feet in advance of the former wings. The four central gate-piers are capped by an heraldic lion and unicorn, and dolphins; and the state entrances have golden grilles of rich design. The wings are surmounted by statues of Morning, Noon (Apollo), and Night; the Hours, and the Seasons; and upon turrets flanking the central shield (bearing "V. R. 1847") are colossal figures of Britannia and St. George; besides groups of trophies, festoons of flowers, &c. The Royal Standard is hoisted on the west front when her Majesty is resident at the Palace. The inner front has a central double portico; the tympanum is filled with sculpture, and the pediment crowned with statues of Neptune, Commerce, and Navigation in the centre. Around the entire building is a scroll frieze of the rose, shamrock, and thistle. The Garden or Western Front, architecturally the principal one, has five Corinthian towers, and a balustraded terrace; the upper portion having statues, trophies, and bas-reliefs, by Flaxman and other sculptors. The materials are Portland-stone and cement.

The *Marble Hall and Sculpture Gallery* have mosaic bordered floors, and ranges of Carrara columns with mosaic gold bases and capitals. The sculptures consist

chiefly of busts of the Royal Family and eminent statesmen. Beyond the Sculpture Gallery is the *Library*. The *Grand Staircase* is marble, with ornolu acanthus balustrades: the ceiling has frescoes by Townsend, of Morning, Evening, Noon, and Night, on a gold ground; besides wreaths of flowers, imitative marbles, &c., in the Italian manner. The brief pageant of the Queen leaving the Palace to proceed in state to open Parliament may be witnessed by Tickets of admission to the Hall, issued by the Lord Great Chamberlain. Upon such occasions, the Yeomen of the Guard, Yeomen Porters, and other official persons, in their rich costumes, while the Sovereign proceeds to the State-carriage, present a magnificent scene. The *Vestibule* is richly decorated with vermilion and gold: here are a marble statue of the Queen, by Gibson, R.A.; and of Prince Albert, by Wyatt; also bas-reliefs of Peace and War, by John Thomas. The looking-glass and ornolu doors cost 300 guineas a-pair, and each mosaic gold capital and base 30 guineas.

The principal *State Apartments* are: the *Green Drawing-room*, in the centre of the east front, and opening upon the upper portico: for state balls, Tippoo Sahib's Tent is added to this room, upon the portico, and is lighted by a gorgeous "Indian sun," 8 feet in diameter. Next is the *Throne Room*, which is 64 feet in length: the walls are hung with crimson satin; and the coved ceiling is emblazoned with arms, and gilded in the boldest Italian style of the fifteenth century. Beneath is a white marble frieze, sculptured by Baily, with the Wars of the Roses, Stothard's last great design.\* On the north side of the apartment is an alcove, with crimson velvet hangings, gilding, and emblazonry, and a fascia of massive gilt wreaths and figures. In this recess is placed the Royal throne, or chair of state; seated in which, surrounded by her Ministers, great officers of State, and the Court, her Majesty receives addresses. In this room also are held Privy Councils. The *Picture Gallery*, in the centre of the palace, is about 180 feet in length by 26 feet in breadth, and has a semi-Gothic roof, with a triple row of ground-glass lights, bearing the stars of all the orders of knighthood in Europe; but Von Raumer considers the light false and insufficient, and broken by the architectural decorations. Occasionally, this gallery has been used as a ball-room, and for state banquets.

The door-cases have colossal caryatid figures, and are gorgeously gilt; and the marble chimney-pieces are sculptured with medallion portraits of great painters.

The collection of pictures formed by George IV. is pre-eminently rich in Dutch and Flemish art. The chief exceptions are Reynolds's Death of Dido, his Cymon and Iphigenia, and Sir Joshua's portrait in spectacles; the Penny Wedding, and Blind Man's Buff, by Wilkie; a Landscape by Gainsborough, and a few recent English works; and 4 pictures by Watteau. In the collection are an Altar-piece by Albert Durer; 7 pictures by Rembrandt, including the Shipbuilder and his Wife, for which George IV., when Prince of Wales, gave 5000 guineas; Rubens, 7; Marriage of St. Catherine, and 4 others, by Vandyke; Vandervelde, 7; younger Vandervelde, 4; G. Dow, 8; Paul Potter, 4; A. Ostade, 9; younger Teniers, 14; Vandermeulen, 13; Wouvermans, 9; Cuyp, 9.

In the State Rooms are royal portraits, by Kneller, Lely, A. Ramsay, N. Dance, Copley, Gainsborough, Wright, Lawrence, Wilkie, Winterhalter, &c.

In the Western Front is the *Grand* (central) *Saloon*, north of which is the *Yellow Drawing-room*, communicating with the Private Apartments of her Majesty, which extend along the north front of the palace. The *Grand Saloon* has a semicircular bay, and scagliola lapis-lazuli columns with mosaic gold capitals, supporting a rich architrave, and bas-relief of children with emblems of music; the domed ceilings are richly gilt with roses, shamrocks, and thistles, acanthus-leaves, and the royal arms in the spandrels. The large apartment, formerly the *State Ball-room*, north of the Grand Saloon, has scagliola porphyry Corinthian columns, with gilded capitals, carrying an entablature and coved ceiling, elaborately gilt: here are Winterhalter's portraits of the Queen and Prince Albert; and Vandyke's Charles I. and Henrietta-Maria. South of the Ball-room is the *State Dining-room*, which has an elegantly wrought ceiling, and circular panels bearing the regal crown and the monogram V. R.; the whole in stone tint: here are Lawrence's whole length of George IV. in his coronation robes, and other royal portraits.

The *South Wing*, added since 1850, contains the kitchen and other domestic offices,

\* The venerable Stothard was between seventy and eighty years old when he designed this frieze; yet it possesses all the vigour and imagination which had distinguished his best days. The drawings were sold at Christie's, on the decease of the painter; Mr. Samuel Rogers became the purchaser.

on the two lower stories; and above them, a Ball-room, 139 feet long; Supper-room, 76 feet; and Promenade-gallery, 109 feet; the wing harmonizing with the Palace, as built for George IV. The Ball-room was designed to be used for State-balls, State concerts, and, on special occasions, as a State reception-room and banqueting room. The ceiling is divided by broad and deep bands into twenty-one square compartments, resting on a bold and highly-enriched cove, which runs round the whole room. The enrichments are all executed in plaster, carefully modelled and highly finished. The walls on each side of the room are divided into thirteen compartments. Fourteen of the twenty-six are windows, the others being filled in with paintings, representing the twelve hours, copied from the small originals by Raphael, existing in Rome. The silk hangings of the walls were woven in Lyons, from a design made to suit the room.

The lighting of the room is peculiar, and very effective. In each compartment of the ceiling there is a large sunlight gas-burner (21 in all), each enclosed in a chandelier or lustre of richly-cut glass, executed by Osler, and forming a brilliant pendant in the centre of each compartment. A great portion of the light is, however, obtained, and a most brilliant effect is produced, by the novel method of illuminating the fourteen windows, which in most rooms are left either as dark blots, or are concealed by draperies. Next the room these windows are glazed with deeply-cut glass stars of large size, surrounded by borders similarly cut, and lighted by gas-burners, arranged between the outer and inner sashes in such manner as to bring out the full brilliancy of the cut-glass in all its detail. Great attention has been paid to the ventilation of the room. There are also ten magnificent candelabra of gilt bronze, each holding 43 wax candles, and standing upon the raised platform.

At the west end a kind of throne or recess has been formed for the Queen, with Corinthian columns carrying an entablature and a bold detached archivolte, on which rests a medallion, containing the profiles of her Majesty and the Prince Consort, supported by emblematic figures of History and Fame; these, and all other sculptures, around the doors, above the large mirrors placed opposite the doors, and throughout the whole suite of apartments, were executed by Mr. Theed. The recess formed at the east end, above the attendants' rooms, is appropriated to the organ and the orchestra; the latter, for 70 performers, can be enlarged for 120.

The merit of the architectural sculptures is their *nationality*. The friezes and reliefs of scenes in British history are mostly by Baily, R.A.; those of Alfred expelling the Danes, and delivering the Laws, on the garden-front, and the Progress of Navigation, on the main front, are fine compositions; as are also Stothard's Wars of the Roses, in the Throne-room; and the eastern frieze of the rose, shamrock, and thistle. But the marble chimney-pieces and door-cases, sculptured with caryatides, fruit and flowers, and architectural ornament, often present a strange mixture of fragments of Egypt, Greece, Etruria, Rome, and the Middle Ages, in the same apartment.

In the garden were formerly two Ionic Conservatories; the southernmost of which is now the *Palace Chapel*, consecrated by the Archbishop of Canterbury, March 25, 1843. The aisles are formed by rows of Composite cast-iron columns; and at the west end, facing the altar, is the Queen's closet, supported upon Ionic columns from the screen of Carlton House. In the garden is the western boundary-stone of the parish of St. Martin's-in-the-Fields, where, on Holy Thursday is performed the ceremony of "striking the stone."

The *Pleasure-grounds* comprise about 40 acres, including the lake of 5 acres; at the verge of which, upon a lofty artificial mound, is a picturesque pavilion, or garden-house, with a minaret roof. In the centre is an octagonal room, with figures of Midnight and Dawn; and 8 lunettes, painted in fresco, from Milton's *Comus*, by Eastlake, Maclise, Landseer, Dyce, Stanfield, Uwins, Leslie, and Ross; besides relief arabesques, medallions, figures and groups, from Milton's poems. On the right is a room decorated in the Pompeian style, copied from existing remains. The apartment on the left is embellished in the romantic style, from the novels and poems of Sir Walter Scott. (See Gruner's *Illustrations*, described by Mrs. Jameson.)

Buckingham Palace has been the scene of two superb Costume Balls—in 1842 and 1845: the first in the style of the reign of Edward III.; and the fête in 1845 in the taste of George II.'s reign.

The *Royal Mews* is described at p. 565. The Riding-house has been covered with cement ornamentation; in the pediment is a large equestrian group, sculptured by Theed, and upon the walls have been placed several large circular vases; the bank has here been raised and planted with trees, to screen the palace-garden.

Immediately under the Palace passes "The King's Scholars' Pond Sewer," the main drain of one of the principal divisions of the Westminster connexion of sewers, occupying the whole channel of a rivulet formerly known as Tye Brook, having its source at Hampstead, and draining an area of 2000

acres, 1500 of which are covered with houses. A large portion of the sewer arches was reconstructed, under densely-populated neighbourhoods, without any suspicion on the part of the inhabitants of what was going on a few feet below the foundations of their houses. In its present complete state, this is, perhaps, one of the most remarkable and extensive pieces of sewerage ever executed in this or any other country.

ST. JAMES'S PALACE, Westminster, on the north side of St. James's Park, and at the western end of Pall Mall, occupies the site of a hospital, founded by some pious citizens prior to the Norman Conquest, for fourteen leprous females, to whom eight brethren were added to perform divine service. The good work was dedicated to St. James, and was endowed by the citizens with lands; and in 1290, Edward I. granted to the foundation the privilege of an annual Fair, to be held on the eve of St. James and six following days. The house was rebuilt by Berkyngge, abbot of Westminster, in Henry III.'s reign; and in 1450 its perpetual custody was granted by Henry VI. to Eton College. In 1532, Henry VIII. obtained the hospital in exchange for Chartistisham and other lands in Suffolk: he then dismissed the inmates, pensioned the sisterhood; and having pulled down the ancient structure, he "purchased all the meadows about St. James's, and there made a faire mansion and a parke for his greater commoditie and pleasure" (*Holinshead*): the Sutherland View of 1543 shows the palace far away in the fields. "The Manor House," as it was then called, is believed to have been planned by Holbein, and built under the direction of Cromwell, Earl of Essex. Henry's gatehouse and turrets face St. James's-street: the original hospital, to judge from certain remains of stone mullions, labels, and other masonry, found in 1838; on taking down some parts of the Chapel Royal, was of the Norman period. It was occasionally occupied by Henry as a semi-rural residence, down to the period when Wolsey surrendered Whitehall to the Crown. Edward and Elizabeth rarely resided at St. James's: but Mary made it the place of her gloomy retirement during the absence of her husband, Philip of Spain: here she expired. The Manor House, with all its appurtenances, except the park and the stables or the mews, were granted by James I. to his son Henry in 1610; at whose death, in 1612, they reverted to the Crown. Charles I. enlarged the palace, and most of his children (including Charles II.) were born in it: here he deposited the gallery of antique statues principally collected for him by Sir Kenelm Digby. In this reign was fitted up the chapel of the hospital, on the west side, as the *Chapel Royal*, described at pp. 140-1. Here Charles I. attended divine service on the morning of his execution; "from hence the king walked through the Park, guarded with a regiment of foot and partisans, to Whitehall." (*Whitelock's Memorials*, p. 374.) The *Queen's Chapel*, now the *German Chapel*, was built for Catherine of Braganza, in the friary of the conventual establishment founded here by her Majesty, under the direction of Cardinal Howard.

The Queen first heard mass there on Sunday, September 21, 1662, when Lady Castlemaine, though a Protestant, and the King's avowed mistress, attended her as one of her maids of honour. Pepys describes "the fine altar ornaments, the fryers in their habits, and the priests with their fine crosses, and many other fine things."—*Diary*, vol. i. p. 312.

At "St. James's House" Monk resided while planning the Restoration. In the old bed-chamber, now the ante-chamber to the levee-room, was born James (the old Pretender), the son of James II. by Mary of Modena: the bed stood close to the back stairs, and favoured the scandal of the child being conveyed in a warming-pan to the Queen's bed. In this reign Verrio, the painter, was keeper of the palace-gardens. During the Civil Wars, St. James's became the prison-house, for nearly three years, of the Duke of York and Duke of Gloucester, and the Princess Elizabeth: on April 20, 1648, the Duke of York escaped from the palace-garden into the Park, through the Spring Garden, to a hackney-coach in waiting for him; and, in female disguise, he reached a Dutch vessel below Gravesend. After the Restoration, the Duke occupied St. James's; and one of its rooms was hung with portraits of the Court Beauties, by Sir Peter Lely. Here the Duke slept the night before his coronation as James II., and next morning proceeded to Whitehall.

On December 18, 1688, William Prince of Orange came to St. James's, where, three days afterwards, the peers assembled, and the household and other officers of the abdicated sovereign laid down their badges. Evelyn says: "All the world goes to see the Prince at St. James's, where there is a greate court. There I saw him: he is

very stately, serious, and reserved." (*Diary*, vol. i. p. 680.) King William occasionally held councils here: but it was not until after the burning of Whitehall, in 1697, that this Palace became used for state ceremonies, whence dates *the Court of St. James's*. William and Mary, however, resided chiefly at Kensington; and St. James's was next fitted up for George Prince of Denmark, and the Princess Anne, who, on her accession to the throne, considerably enlarged the edifice. George I. lived here like a private gentleman: in 1727 he gave a banquet here to the entire Court of Common Council. The fourth plate of Hogarth's "Rake's Progress" shows St. James's Palace gateway in 1735, with the quaint carriages and chairs arriving on the birthday of Caroline, George II.'s consort: her Majesty died at St. James's in 1737. The wing facing Cleveland-row was built for Frederick Prince of Wales, on his marriage in 1736. The State Rooms were enlarged on the accession of George III., whose marriage was celebrated here September 6, 1761. George IV. was born here August 12, 1762; and shortly afterwards the Queen's bed was removed to the Great Drawing-room, and company were admitted to see the infant prince on drawing-room days. The court was held here during the reign of George III., though his domestic residence was at Buckingham House. St. James's was refitted on the marriage of the Prince of Wales, April 8, 1795, in the Chapel Royal. On January 21, 1809, the east wing of the palace, including their majesties' private apartments and those of the Duke of Cambridge, was destroyed by fire, and has not been rebuilt. In 1814 the State Apartments were fitted up for the Emperor of Russia and the King of Prussia, when also Marshal Blucher was an inmate of the palace. In 1822 a magnificent banquetting-hall was added to the state-rooms. In January, 1827, the remains of the Duke of York lay in state in the palace. William IV. and Queen Adelaide resided here; but since the accession of her present Majesty, St. James's has only been used for courts, levees and drawing-rooms, and occasionally for State-balls.

The lofty brick gatehouse bears upon its roof the bell of the *Great Clock*, dated A.D. 1731, and inscribed with the name of Clay, clockmaker to George II. It strikes the hours and quarters upon three bells, requires to be wound every day, and originally had only one hand. A print of the court-yard, with the meeting of Mary de Medicis and her daughter Henrietta-Maria, in 1638, shows a dial which must have belonged to a previous clock. The present clock was under the care of the Vulliamys, the Royal clockmakers, from 1743, until the death of B. L. Vulliamy.

When the gatehouse was repaired in 1831, the clock was removed, and not put up again, on account of the roof being reported unsafe to carry the weight. The inhabitants of the neighbourhood then memorialized William IV. for the replacement of the timekeeper: the King, having ascertained its weight, shrewdly inquired how, if the palace roof was not strong enough to carry the clock, it was safe for the number of persons occasionally seen upon it to witness processions, &c. The clock was forthwith replaced, and a minute-hand was added, with new dials: the original dials were of wainscot, in a great number of very small pieces, curiously dovetailed together.

The gatehouse enters the quadrangle, named the *Colour Court*, from the colours of the military guard of honour being placed here: in this court one of the three regiments of Foot Guards is relieved alternately every morning at eleven o'clock, when the keys of the garrison are delivered and the regimental standard exchanged, during the performance of the bands of music. Westward is the *Ambassadors' Court*, where are the apartments of certain branches of the Royal Family; and beyond it the *Stable-Yard*, anciently the stable-yard of the palace, and where was the Queen's Library, upon the site of Stafford House. Here is Clarence House, described at p. 547. On the east side is the Lord Chamberlain's office, where permission may be obtained to view the palace. Eastward of the gatehouse is the *Office of the Board of Green Cloth*; and still further, the office of the Lord Steward of Her Majesty's Household. Beyond are the gates leading to the quadrangle, known of old as "*the Chair Court*." The *State Apartments*, in the south front of the palace, front the garden and St. James's Park. The Sovereign enters by the garden gate; and it was here, on the 2nd of August, 1796, that Margaret Nicholson attempted to assassinate George III. as he was alighting from his carriage. The *State Apartments* are reached by the Great Staircase, the *Entrée Gallery*, the *Guard Chamber* (its walls covered with weapons in fanciful devices), and a similar apartment. Here are stationed the Yeomen of the Queen's Guard; and the honours of the Guard-Chamber are paid to distinguished personages.

on levee and drawing-room days. George III. held Drawing-rooms much more frequently than they are held at present. To quote the *Court Guide* of 1792, "the King's Levee days are Wednesday and Friday, and likewise Monday during the sitting of Parliament; his Drawing-room days every Sunday and Thursday."

*Yeomen of the Guard* were first instituted in 1485, by Henry VII., upon the model of a somewhat similar band retained by Louis XI. of France. They were at first archers; but on the death of William III. all took the partisan, as now carried. The dress has continued almost unaltered since the reign of Charles II.

*The Corps of Gentlemen-at-Arms* (changed from Pensioners by William IV.) was instituted by Henry VIII., disbanded during the Civil Wars, but reconstructed at the Restoration, and at the Revolution of 1688. In 1745, when George II. raised his standard on Finchley Common, these "Gentlemen" were ordered to provide themselves with horses and equipment to attend his Majesty to the field. Their present uniform is scarlet and gold; and the corps carry on parade small battle-axes covered with crimson velvet. On April 10, 1848, on the apprehension of a Chartist outbreak, St. James's Palace was garrisoned and guarded by these ancient bodies.

Beyond the Guard-Chamber is the *Tapestry Room*, hung with gorgeous tapestry made for Charles II., and representing the amours of Venus and Mars. The stone Tudor arch of the fireplace is sculptured with the letters H. A. (Henry and Anne Boleyn), united by a true-lover's knot, surmounted by a regal crown; also the lily of France, the portcullis of Westminster, and the rose of Lancaster. Here the sovereigns of the House of Brunswick, on the death of their predecessors, are received by the Privy Council, and from the capacious bay window proclaimed and presented to the people assembled in the outer court, where are the sergeants-at-arms and band of household trumpeters. The proclamation of her present Majesty, on June 21, 1837, was a touching spectacle. Next the Tapestry-Room is *Queen Anne's Room*, the first of the four great state apartments. In this room the remains of Frederick Duke of York lay in State in January 1827. This apartment opens to the *Ante-Drawing-Room*, leading by three doors into the *Presence Chamber* or *Throne Room*, beyond which is the *Queen's Closet*. The throne, at the upper end of the Presence Chamber, is large and stately, and emblazoned with arms: the window-draperies here and in the Queen's Closet are of splendid *tissu-de-verre*. The entire suite is gorgeously gilt, hung with crimson Spitalfields damasks, brocades, and velvets, embroidered with gold; and the Wilton carpets bear the royal arms.

The public are admitted to the corridor by tickets to see the company upon Drawing-room days; and upon certain occasions, when bulletins of the health of the sovereign are issued, they are shown to the public as they pass through the state-rooms.

*Pictures in the State Apartments.*—Large paintings of the Siege of Tournay, and the Siege of Lisle by the Duke of Marlborough. Portraits of Charles II., George I., George II., and Queen Anne; George III., the Prince of Wales, and the Duke of York, by Sir Joshua Reynolds; George IV. and the Duke of York, by Sir Thomas Lawrence. Count La Lippe, and the Marquis of Granby, by Sir Joshua Reynolds. Beauties of the Court of Charles II., copied from Hampton Court. Lord Nelson, Earl St. Vincent, and Lord Rodney, by Hopper. The Battles of Vittoria and Waterloo, by G. Jones, R.A. In the Entrée Gallery are whole-length portraits of Henry VIII., reputed by Holbein; Queen Mary; Queen Elizabeth, by Zucchero; James I., Charles I., after Vandyke; Charles II., James II., and William and Mary.

The curious pictures which were here in Pennant's time have been removed: including a Child, three years six months old, in the robes of a Knight of the Garter, the second son of James I.; also Geoffrey Hudson, the Dwarf; and Mabuse's Adam and Eve, painted with nails.

Here George IV. formed a fine collection of pictures, to which was added, in 1823, Haydon's "Mock Election," which the King purchased of the painter for 500 guineas.

KENSINGTON PALACE, about two miles west of the metropolis, is named from the adjoining town, although it is situated in the parish of St. Margaret, Westminster:

"High o'er the neighbouring lands,  
Midst greens and sweets, a regal fabric stands."—*Tickell*.

The original mansion was purchased (with the grounds, six acres) by King William III., in 1691, of Daniel Finch, second Earl of Nottingham. Evelyn notes:

"Feb. 25, 1690-1.—I went to Kensington, which King William had bought of Lord Nottingham and altered, but was yet a patched-up building; but with the gardens, however, it is a very neat villa."—*Memoirs*, vol. ii.

In the following November the house was nearly destroyed by fire, and the king narrowly escaped being burned in his bed. The premises had been possessed by the Finch family about half a century; and after Sir Heneage Finch's advancement to the peerage, the mansion was called "Nottingham House." William III. employed Wren and Hawksmoor, who built the King's Gallery and the south front; the eastern front

was added by George I., from the designs of Kent; the north wing is part of old Nottingham House. The entire palace is of crimson brick, with stone finishings; and consists of the Clock Court, Prince's Court, and Princess' Court. King William held councils in this palace; its decoration was the favourite amusement of Queen Mary; and it was next fitted up as the residence of Queen Anne and Prince George of Denmark: for her luxurious Majesty was built the Banqueting-House, described at page 493. The principal additions made by Kent, for George I., were the Cupola Room and the Great Staircase; the latter painted with groups of portraits from the Court, Yeomen of the Guard, pages, a Quaker, two Turks in the suite of George I., and Peter the Wild Boy. George II. and Queen Caroline passed most of their time here; and during the King's absence on the Continent, the Queen held at Kensington a court every Sunday. In this palace died Queen Mary and King William; Queen Anne and the Prince Consort; and George II.

The *Great Staircase*, of black and white marble, and graceful ironwork (the walls painted by Kent with mythological subjects in chiaroscuro, and architectural and sculptural decoration), leads to the suite of twelve State Apartments, some of which are hung with tapestry and have painted ceilings. The *Presence Chamber* has a chimney-piece richly sculptured by Gibbons with flowers, fruits, and heads; the ceiling is diapered red, blue, and gold upon a white field, copied by Kent from Herculaneum; the pier-glass is wreathed with flowers by Jean Baptiste Monnoyer. The *King's Gallery*, in the south front, has an elaborately painted allegorical ceiling; and a circular fresco of a Madonna, after Raphael. The *Cube Room* is forty feet in height, and contains gilded statues and busts; and a marble bas-relief of a Roman marriage, by Rysbraeck. The *King's Great Drawing-room* was hung with the then new paper, in imitation of the old velvet flock. The *Queen's Gallery* in the rear of the eastern front, continued northwards, has above the doorway the monogram of William and Mary; and the pediment is enriched with fruits and flowers in high relief and wholly detached, probably carved by Gibbons. The *Green Closet* was the private closet of William III., and contained his writing-table and escritoire; and the *Patchwork Closet* had its walls and chairs covered with tapestry worked by Queen Mary.

During the reign of George III. the palace was forsaken by the sovereign; towards its close, a suite of rooms was fitted up for the Princess of Wales, and her aged mother the Duchess of Brunswick. The lower south-eastern apartments beneath the King's Gallery were occupied by the late Duke of Kent: here, May 24, 1819, was born Queen Victoria; christened here on June 24th following; and on June 20, 1837, her Majesty held here her first Council, which has been admirably painted by Wilkie.

At Kensington Palace the Princess Victoria received the intelligence of the death of William IV., as described in the *Diaries of a Lady of Quality*: "June, 1837. On the 20th, at 2 A.M., the scene closed, and in a very short time, the Archbishop of Canterbury and Lord Conyngham, the Chamberlain, set out to announce the event to their young Sovereign. They reached Kensington Palace at about five; they knocked, they rang, they thumped for a considerable time before they could rouse the porter at the gates; they were again kept waiting in the courtyard, then turned into one of the lower rooms, where they seemed forgotten by everybody. They rang the bell, desired that the attendant of the Princess Victoria might be sent to inform H.R.H. that they requested an audience on business of importance. After another delay, and another ringing to inquire the cause, the attendant was summoned, who stated that the *Princess* was in such a sweet sleep she could not venture to disturb her. Then they said, 'We are come to the *Queen* on business of State, and even her sleep must give way to that.' It did: and to prove that *she* did not keep them waiting, in a few minutes she came into the room in a loose white nightgown and shawl, her nightcap thrown off, and her hair falling upon her shoulders—her feet in slippers, tears in her eyes, but perfectly collected and dignified.

"The first act of the reign was of course the summoning of the Council, and most of the summonses were not received till after the early hour fixed for its meeting. The Queen was, upon the opening of the doors, found sitting at the head of the table. She received first the homage of the Duke of Cumberland, who, I suppose, was not King of Hanover when he knelt to her; the Duke of Sussex rose to perform the same ceremony, but the Queen, with admirable grace, stood up, and, preventing him from kneeling, kissed him on the forehead. The crowd was so great, the arrangements were so ill-made, that my brothers told me the scene of swearing allegiance to their young Sovereign was more like that of the bidding at an auction than anything else." [Sir David Wilkie has painted the scene—but with a difference.]

The south wing of the older part of the palace was occupied by the late Duke of Sussex, who died here April 21, 1843.

Here the Duke of Sussex, during 25 years, collected the celebrated *Bibliotheca Sussezianna*, numbering nearly 50,000 printed books and MSS., purchased volume by volume, at the sacrifice of many an object of princely luxury and indulgence. The collection included nearly 300 Theological MSS. of the tenth, twelfth, thirteenth, fourteenth, and fifteenth centuries; besides about 500 early printed books

relating to the Holy Scriptures. Among the rarities were 48 Hebrew MSS., some rolled; a richly illuminated Hebrew and Chaldaic Pentateuch, thirteenth century; a Greek New Testament, thirteenth century, illuminated; 16 copies of the Vulgate, on vellum, two with 100 miniatures in gold and colours; a splendidly illuminated Psalter, tenth century; missals, breviaries, hours, offices, &c.; *La Bible Moralisée* (fifteenth century); *Historia del Vecchio Testamento*, with 519 miniatures of the school of Giotto; several copies of the Koran, including that found by the conquerors of Seringapatam in the library of Tippoo Sultan, with his spectacles between the leaves, as if the perusal of it had been one of the latest acts of Tippoo's life; Armenian copy of the Gospels, thirteenth century; MSS. in the Pali, Burman, Cingalese, &c. In the printed books were all the celebrated Polyglots, in fine condition; 7½ editions of the Hebrew Bible; 17 Hebrew-Samaritan and Hebrew Pentateuchs (Bomberg editions), and the Great Rabbinical Bible, magnificent specimens of Hebrew printing; Greek Bibles, of precious value; Latin Bibles, 200 editions; Bibles in other languages, 1200 editions. In the Divinity classes were, the first Armenian, the first Irish, the first Slavonic, the first German, and the first Reformed editions of Luther; the first English Bible, by Coverdale; the first Greek Bible, or Cranmer's, &c.; besides Classics, Lexicography, Chronicles, Law, and Parliamentary Histories, of immense extent. The theological collection filled an apartment 100 feet in length; and here, seated in a curtained chair, the Duke passed the life of a toil-worn student. In these rooms His Royal Highness gave his *conversazioni* as President of the Royal Society.

In Kensington Palace was formerly deposited the greater part of the royal collection of paintings, commenced by Henry VIII.; and removed here by William III., as appears from a catalogue taken in 1700, and now in the British Museum. The collection was much augmented by Queen Caroline, but after the death of George II., several of the finest pictures were removed to Windsor and elsewhere. In 1818, however, here were more than 600 pictures, which were catalogued by B. West, P.R.A. Few now remain: but in the southern apartments is a collection of Byzantine, early Italian, German, and Flemish paintings, formerly the property of Prince Louis D'Ottingen Wallerstein, and purchased by the late Prince Consort. The majority of these 102 pictures are curious specimens of sacred art,—triptychs, altar-pieces, and other works of primitive design and elaborate antiquity.

The *Green*, westward of the Palace, and called in ancient records "the Moor," was the military parade when the Court resided here, and the royal standard was hoisted daily. Here are barracks for foot-soldiers, who mount guard at the Palace. Northward of the Palace were the kitchen-gardens, about 20 acres, now Queen's-road, with two lines of elegant villas. (See KENSINGTON GARDENS,\* pp. 493, 494).

CARLTON HOUSE occupied that portion of Waterloo-place which is south of Pall Mall. It was originally built for Lord Carlton, in 1709: bequeathed by him to his nephew, Lord Burlington, the architect, and purchased, in 1732, by Frederick Prince of Wales, father of George III.: here the Princess of Wales died in 1772. The house was of red brick. The name of the original architect, in the time of Queen Anne, is not known, but the celebrated landscape gardener-architect Kent laid out the grounds when the property was in Lord Burlington's hands, between 1725 and 1732. These gardens extended along the south side of Pall-mall, and are said to have been in imitation of Pope's garden at Twickenham, with numerous bowers, grottoes, and terminal busts. Mr. Cunningham speaks of an engraving of them by Woollett. When the property was assigned in 1783 as the residence of the Prince of Wales—afterwards George IV.—great alterations were made in Carlton House, under Holland, the Prince's architect.

Horace Walpole writes, Sept. 17, 1785: "We went to see the Prince's new palace in Pall Mall, and were charmed. It will be the most perfect in Europe. There is an angust simplicity that astonished me. You cannot call it magnificent; it is the taste and propriety that strike. Every ornament is at a proper distance, and not one too large, but all delicate and new, with more freedom and variety than Greek ornaments [designed by Goult] . . . and there are three most spacious apartments, all looking on the lovely garden, a terrene, a state apartment, and an attic. The portico, vestibule, hall, and staircase will be superb, and, to my taste, full of perspectives: the jewel of all is a small music-room, that opens into a green recess, and winding walk of the gardens. In all the fairy tales you have been, you never was in so pretty a scene, Madam [Countess of Ossory.] I forget to tell you how admirably all the carving, stucco, and ornaments, are executed; but whence the money is to come, I conceive not; all the tin mines in Cornwall could not pay a quarter. How sick one shall be after this chaste palace of Mr. Adam's gingerbread and sippets of embroidery!"—*Letters*; Cunningham's edit, vol. ix. p. 13.

The main front of the house had a central portico, was hexastyle, and of the Corinthian order. The hall was square on the plan, and on each side was an opening, or a recess, with a segmental coffered arch, enclosing two Ionic columns and entablature, the last supporting vases and chimærae. A landing of the staircase was octagonal in plan,

\* "The gravel of Kensington is of European repute. At the gardens of Versailles, and Caserta, near Naples, the walks have been supplied from the Kensington gravel-pits."—*Quarterly Review*, No. cxxxix. p. 237.

with well-hole and lantern-light; and the angles of the ceiling there, were formed by fan-shaped springers. One of the dining-rooms was circular, with columns and recesses, somewhat after the arrangement of those features in the Pantheon at Rome. At the opposite sides of this room were large mirrors. The general decoration of the house was of pseudo-classical character. Trophies were freely introduced; and panels, even those of doors, were enriched with lyres, wreaths, and festoons. One common introduction was that of terminal figures. Generally, the ceilings were painted to represent the sky and clouds. In the furniture gilding was used to a great extent. In many of the rooms, the furniture was entirely gilt, with crimson or crimson and black cushions. The most important point for notice as to the interior of Carlton House, is the absence of the Louis Quinze style. The Carlton House chair and table are remembered. Among the rooms were the Crimson Drawing-room; the Blue Velvet-room; the Golden Drawing-room, or Corinthian-room: the Gothic Dining-room. The conservatory, said to be in "imitation of a cathedral, or Henry VII.'s chapel," but equally suggestive of Roslyn Chapel: the ribs of the fan-tracery were filled in with stained glass.

Here was a remarkably fine collection of arms and costumes, including two swords of Charles I.; swords of Columbus and Marlborough, and a *couteau-de-chasse* used by Charles XII. of Sweden, which relics are now in the North Corridor at Windsor Castle. Carlton House was sumptuously furnished for the Prince's ill-starred marriage in 1795: here, Jan. 7, 1796, was born the Princess, baptized Feb. 11, Charlotte-Augusta; and on May 2, 1816, married here to Leopold, subsequently King of the Belgians. The ceremonial of conferring the Regency was enacted at Carlton House with great pomp, Feb. 5, 1811, and on June 19 following, the Prince Regent gave here a superb supper to 2000 guests; a stream with gold and silver fish flowing through a marble canal down the centre table.

Upon the screen of Ionic columns fronting Pall Mall, Bonomi wrote the following epigram:

"Care colonne, che fatti quà?  
Non sapiamo, in verità:"

Thus anglicized by Prince Hoare:

"Dear little columns, all in a row,  
What *do* you do there?  
Indeed we don't know."

Sheridan's allusion to these columns was not much more complimentary. About the time that the Duke of York took possession of Melbourne House, now Dover House, near the Horse-Guards, of which the most remarkable feature is the cupola in front, some discussions were raised in Parliament about the debts of the Duke and his royal brother at Carlton House. The virtuous indignation of the Opposition was tremendous: and some of their remarks having been reported to Sheridan when he entered the House of Commons, "I wonder," said he, "what amount of punishment would satisfy some people! Has not the one got into the Roundhouse, and the other into the *Pillory*?" This is another version of the anecdote related at page 549.

In 1827, Carlton House was removed: the columns of the portico (adapted from the Temple of Jupiter Stator at Rome) being subsequently used in the portico of the National Gallery, and the ornamental interior details (as marble mantel-pieces, friezes, columns, &c.) transferred to Buckingham Palace. The colonnade pillars are employed in one of the orangeries in Kew Gardens. Thus disappeared Carlton House. Upon the site of the gardens have been built the York Column and Carlton House-terrace: the balustrades of the latter originally extended between the two ranges of houses; but were removed to form the present entrance into St. James's Park, by command of William IV., very soon after his accession. Upon the site of the courtyard and part of Carlton House are the United Service and Athenæum Clubhouses, and the intervening area facing Waterloo-place. The Riding-house and Stables had a semicircular conch-headed recess, intersected by an entablature; the Doric columns supporting the latter, being without bases, and fluted, but Roman in character.

### PALL MALL.

"A FINE spacious street between the Haymarket N.E., and St. James's-street S.W." (*Hutton*, 1708), and one-third of a mile in length, is named from the French game of *paille-maille* having been played there. The space between St. James's House and Charing Cross, about 1560, appears to have been fields, with three or four houses at the east end of the present Pall Mall, and opposite a small church, the name

of which Pennant could not discover. Down this road came Sir Thomas Wyatt, "on foot, hard by the Court-gate of St. James's, with four or five auncients, his men marching in good way," and thus proceeded to Charing Cross and Whitehall.

At the east end of Pall Mall, in the reign of Henry VI., stood a group of monastic buildings called "the Rookery," belonging to the monks of Westminster: here resided Erasmus, by favour of Henry VIII. and the interest of Anne Boleyn. When these buildings were demolished at the Reformation, tradition relates there was found a secret smithy, which had been erected by order of Henry VI. for the practice of alchemy. The premises were subsequently used as an inn, and upon the site was built the first Carlton House.

"The Mall," in St. James's-park, not many years since, was commonly regarded as the place where the game of "Paille-maille" was first played in England, and whence the Park-avenue was said to have taken its name. Strutt calls it "the game of Mall," and thus favours the above notion; but, in Hatton's "spacious street" we have preserved the entire name of the game. Charles II. caused the Mall in the Park to be made for playing the game, which was a fashionable amusement in his reign; but it was introduced into England much earlier, and was not played in the Park until the original alley had grown into a street, and taken the name of the game itself. Blount, in his *Glossography*, edit. 1670, says, "this game was heretofore used in the long alley near St. James's, and vulgarly called Pall Mall." The name, however, occurs much earlier; for King James I., in his *Basilicon Doron*, recommends "Palle Malle" as a field-game for the use of his eldest son, Prince Henry; proving the Mall in the present street to have existed as early as the reign of the above King. In a crown survey, referred to by Mr. Cunningham, we find "Pell Mell Close," partly planted with apple-trees (Appletree-yard, St. James's-square, still exists): and in the above document are also named 140 elm-trees, standing on both sides of Pall Mall walk; Faithorne's plan, 1658, shows a row of trees on the north side; and the name of Pall Mall, as a street, occurs in the rate-books of St. Martin's-in-the-Fields under the year 1656. The name is derived from *Palla*, a ball; and *Maglia*, a mallet; the implements with which the game was played. In 1854 were found in the roof of the house of Mr. B. L. Vulliamy, No. 68, Pall Mall, a box containing four pairs of the mailles, or mallets, and one ball, such as were formerly used for playing the game upon the site of the above house. Each maile is 4 feet in length, and is made of lance-wood; the head is slightly curved, and measures outwardly  $5\frac{1}{2}$  inches, the inner curve being  $4\frac{1}{2}$  inches, the diameter of the maile-ends is  $2\frac{1}{2}$  inches, each shod with a thin iron hoop: the handle, which is very elastic, is bound with white leather to the breadth of two hands, and terminated with a collar of jagged leather. The ball, is of box wood,  $2\frac{1}{2}$  inches in diameter. A pair of mailles and a ball are now in the British Museum. Mr. Vulliamy was born in the above house, and died here in January, 1854, aged 74 years; and here his family lived before him for 130 years, thus carrying us beyond the date of Pepys seeing Paille Maille first played. The Vulliamys were clockmakers to the Sovereign in five reigns. B. L. Vulliamy, the scientific horologist, who died as above, bequeathed his large and very valuable collection of works on Horology to the Institution of Civil Engineers. At the house of his very old friend, Mr. Vulliamy, died Professor Rigaud, the astronomer, March 16, 1839.

In the reign of Charles II. Pall Mall was occasionally called Catharine-street. Faithorne's Plan, 1658, shows a row of trees on the north side. Pepys mentions, in 1660, an old tavern, "Wood's at the Pell Mell." In 1662 was fought here the duel between Mr. Jermyn and Capt. Thomas Howard, the latter wearing mail under his dress. The *London Gazette* of 1685 has an advertisement address, "the *Sugar-loaf* in the Pall Mall." Dr. Sydenham died here, in 1689, at his house next *The Golden Pestle and Mortar*; which sign remained to our day, on the north side of the street. Another olden sign, *The Golden Ball*, lasted to our time; but *The Golden Door* and *The Barber's Pole* disappeared. Of Sydenham's residence here, Cunningham relates an anecdote told by Mr. Fox to Mr. Rogers—that Sydenham was sitting at his window, looking on the Mall, with his pipe in his mouth, and a silver tankard before him, when a fellow made a snatch at the tankard and ran off with it. Nor was he overtaken (said Fox) before he got among the bushes in Bond-street, where they lost him.

At the corner of St. Alban's-street lived Gilray, the caricaturist, when assistant to

Holland, the printseller. In a house opposite Market-lane, the "Royal Academy of Art" met, from the time of their obtaining the patronage of George III. until their removal to Somerset House, in 1771.

Among the coffee-houses of Pall Mall was the *Smyrna*, of the days of the *Tatler* and *Spectator*; where subscriptions were taken in by Thomson for publishing his *Seasons*, &c. At the *Star and Garter Tavern*, at a meeting of the Nottinghamshire Club, Jan. 26, 1765, arose the dispute between Lord Byron and his relation and neighbour Mr. Chaworth, as to which had the most game on his estates: they fought with swords across the dining-table, by the light of one tallow candle, when Mr. Chaworth was run through the body, and died next day. Lord Byron was tried before his peers in Westminster Hall, and found guilty of manslaughter; but claiming the benefit of the statute of Edward VI., he was discharged on payment of his fees. In the same house (the *Star and Garter*), Winsor made his gas-lighting experiments; he lighted the street wall in 1807. (See GAS-LIGHTING, p. 371.) In the old *Star and Garter* house was exhibited, in 1815, the *Waterloo Museum* of portraits, battle-scenes, and arms. At the *Queen's Arms Tavern*, Lord Mohun supped with his second on the two nights preceding his fatal duel with the Duke of Hamilton, in Hyde Park. At the *King's Arms* met the Liberty or Rump-steak Club of Peers, in opposition to Sir Robert Walpole. *Almack's Gaming Club* was on the site of No. 50, and is described at page 240.

Nearly opposite the south-west corner of the Opera-house, "Thomas Thynne, Esq., on Sunday (Feb. 12, 1681), was barbarously shot with a muskatoon in his coach, and died next day." The instigator was Count Konigsmarck, in hopes of gaining Lady Elizabeth Ogle, the rich heiress, to whom Thynne was either married or contracted. Three of Thynne's ruffians were tried at the Old Bailey, found guilty, and hanged at the spot whereon the murder was committed. Borosky, "who did the murder," was hung in chains beyond Mile End Town: the Count was tried as an accessory, but was acquitted. The assassination is sculptured upon Thynne's monument in Westminster Abbey. Pall Mall had early its notable sights and amusements. In 1701 were shown here models of William the Third's Palaces at Loo and Hundstaerdike, "brought over by outlandish men," with Curiosities disposed of "on public raffling-days." In 1733, "a holland smock, a cap, checked stockings, and laced shoes," were run for by four women in the afternoon, in Pall Mall; and one of its residents, the High Constable of Westminster, gave a prize laced hat to be run for by five men, which created so much riot and mischief that the magistrates "issued precepts to prevent future runs to the very man most active in promoting them." Here lodged George Psalmanazer, when he passed for an islander of Formosa, and invented a language which baffled the philologists of Europe. Here lived Joseph Clark, the posture-master, celebrated for personating deformities: now deceiving, by feigned dislocated vertebræ, the great surgeon, Moulins; then perplexing a tailor's measure with counterfeit humps and high shoulders. At the Chinese Gallery was exhibited, in 1825, "*the Living Skeleton*" (Anatomic Vivante), Claude Ambroise Seurat, a native of Troyes, in Champagne, 28 years old. His health was good, but his skin resembled parchment, and his ribs could be counted, and handled like pieces of cane: he was shown nude, except about the loins; the arm, from the shoulder to the elbow, was like an ivory German flute; the legs were straight, and the feet well formed. (See Hone's *Every-day Book*.) At No. 59, Salter spent five years in painting his great picture of the Waterloo Banquet at Apsley House, engraved for Alderman Moon. At No. 121, Campanari exhibited his Etruscan and Greek Antiquities, in rooms fitted up as the Chambers of Tombs. In apartments at No. 120, Captain Marryat wrote his *Poor Jack*.

Nell Gwyn lived in 1670, "on the east end, north side;" and from 1671 to her death, in 1687, in a house on the south side, with a garden towards the Park; and it was upon a mount in this garden that "the impudent comedian" stood, to hold her familiar discourse with Charles II., who stood "on y<sup>e</sup> green walk" under the wall. The scene, as described by Evelyn, has been cleverly painted by Mr. E. M. Ward, R.A. The site of Nell's house is now occupied by No. 79, Society for the Propagation of the Gospel in Foreign Parts.

"Nelly at first had only a lease of the house, which as soon as she discovered, she returned the conveyance to the King, with a remark characteristic of her wit, and of the monarch to whom it was ad-

dressed. The King enjoyed the joke, and perhaps admitted its truth; so the house in Pall Mall was conveyed *free* to Nell and her representatives for ever. The truth of the story is confirmed by the fact, that the house which occupies the site of the one in which she lived, now No. 79, is the only freehold on the south or Park side of Pall Mall." (Cunningham's *Nell Gwyn*, p. 115.) Mr. Cunningham adds: "No entry of the grant is to be found in the Land Revenue Record Office."

A relic of Nell Gwyn, her looking-glass, is preserved in the Visitors' Dining-room of the Army and Navy Club-house, in Pall Mall. The glass was bought with Lord De Mauley's house, which was taken down for the Club-house site.

Eastward of Nell Gwyn's lived Sir William Temple, and the Hon. Robert Boyle, and Bubb Dodington; and on the south side, Doctor Barrow, and Lady Southesk, the celebrated Countess of De Grammont's Memoirs. In Marlborough House lived the great Duke of Marlborough (*see* p. 552); and in a house in front of the mansion Sir Robert Walpole. Of Schomberg House, Nos. 81 and 82, built for the great Duke of Schomberg, the centre and the west wing remain. (*See* p. 449.)

Dr. Graham's "Goddess of Health," who figured here, was a lady named Prescott. Mr. Cosway, R.A., the next tenant of Schomberg House, was the fashionable miniature-painter of his day; and here his accomplished wife, Maria Cosway (also a painter), gave her musical parties, the Prince of Wales being a frequent visitor. Mrs. Cosway made a pilgrimage to Loretto, which she had vowed to do if blessed with a living child. (*Notes and Queries*, No. 147.) At Schomberg House was first concocted the dramatic scheme of "The Beggars' Opera."

In the Mall, in 1689, resided "the Lady Griffin, who was seized for having treasonable letters put into false bottoms of two large brandy-bottles, in the first year of his majesty's reign." De Foe characterizes Pall Mall, in 1703, as "the ordinary residence of all strangers, because of its vicinity to the Queen's palace, the Park, the Parliament-house, the theatres, and the chocolate and coffee houses, where the best company frequent." Gay thus celebrates the modish street in his time:

"O bear me to the paths of fair Pall Mall!  
Safe are thy pavements, grateful is thy smell!  
At distance rolls the gilded coach,  
Nor sturdy carmen on thy walks enroach;  
No lets would bar thy ways were chairs deny'd,  
The soft supports of laziness and pride;  
Shops breathe perfumes, through sashes ribbons glow,  
The mutual arms of ladies and the beau."—*Trivia*, book ii.

Styve describes Pall Mall as "a fine long street," with garden-houses on the south side, many with raised mounts, and prospects of the King's garden and St. James's Park. In gay bachelor's chambers in Pall Mall lived Beau Fielding, Steele's "Orlando the Fair;" here he was married to a supposed lady of fortune, brought to him in a mourning-coach and widow's weeds, which led to his trial for bigamy. Fielding's namesake places Nightingale and Tom Jones in Pall Mall, when they leave the lodgings of Mrs. Miller in Bond-street. Lætitia Pilkington, for a short time, kept here a pamphlet and print shop. At the sign of "Tully's Head," Robert Dodsley, formerly a footman, with the profits of a volume of his poems and a comedy (published through the kindness of Pope), opened a shop in 1735; and here he published his *Annual Register*, *Economy of Human Life*, and Sterne's *Tristram Shandy*. Dodsley retired in 1759; but his brother James, his partner, continued the business until his death in 1797; he is buried in St. James's Church, Piccadilly. "Tully's Head" was the resort of Pope, Chesterfield, Lyttleton, Shenstone, Johnson, and Glover; Horace Walpole, the Wartons, and Edmund Burke. Walpole writes of 1786, a period when robberies in capitals appear to have been a sort of fashion—"on Jan. 7, half an hour after eight, *the mail from France was robbed in Pall Mall*—yes, in the great thoroughfare of London, and within call of the guard at the palace. The chaise had stopped, the harness was cut, and the portmanteau was taken out of the chaise itself. What think you of handitti in the heart of such a capital?"

At No. 90 died, in 1849, Mr. W. J. Denison, in his 80th year, bequeathing 2½ millions sterling: he sat in Parliament 31 years for Surrey. No. 91, Buckingham House, was built by Soane for the Marquis of Buckingham, 1790–4. At No. 100 lived Mr. Angerstein, whose pictures were bought for the nation, and were shown here before their removal to the National Gallery; and at No. 50 died Mr. Robert Vernon, who

Styree describes Pall Mall as "a fine long stre south side, many with raised mounts, and prosp James's Park. In gay bachelor's chambers in Pall "Orlando the Fair;" here he was married to a sup strength. Mr. Hall sees the world smoked glass, and to the first glance tures yield nothing but their sad g Browns. After a while the greens an and other notes disclose themselves their exquisiteness and delicate tone r and the picture ceases to be dingy or s nous. Collectively these landscapes a because they are all painted with th niggardly palette. Mr. Hall either perception of the different aspects of t sons and hours of the day and of atmo conditions, or he forces all nature of s pose into a convenient formula. His pa a beautiful quality, neither too unctud too rough. Everything that appertains structure of the ground is stated with when Mr. Hall carries this solidity of st into the sky and gives his clouds the a ance of solid rocks.

At No. 90 died, in 1849, Mr. W. J. Denison, in lthens Mr. Hall carries this solidity of st into the sky and gives his clouds the a ance of solid rocks.

The first thing that strikes one abo McEvoy's water-colours in the ad room is that artist's incredible facility a power of saving all that is essential i

introduced as a piquant contrast to low tones of the faces and ragged The characterisation is invariably though the people he paints generally fixed expression as though they wer fortably conscious of sitting for th traits. In this respect, and in the of his hand, he falls far below Mr. John, with whom he has otherwise in common. But this very heavines in a solidity of form and a sense o which is of inestimable value in the up of his pictures. For sheer beauty nothing in this exhibition can come "George and Albert" (No. 40). "Aryes" (No. 15) and "Betsy Aryes" recall Frans Hals in freshness and expressiveness of brushwork.

## THE LEICESTER GALL

Mr. Oliver Hall and Mr. Ambrose are strange stable-companions at the Galleries. Fortunately each of them away in his own stall, with a divid between them, so that there is no dar clash. Mr. Hall's landscapes should before Mr. McEvoy's portrait studies colour—and they should be examined one by one, for, as a complete group, so depressingly monotonous that the letter the visitor to the gallery from inspection which they so fully deserv one who has had occasion to protect against the glare of the sun by pu smoked glass spectacles must have exp low, at the first moment, all colour ave gone out of the landscape until gets accustomed to the smoke-toned fi begins to distinguish the different hough they are modified and redu strength. Mr. Hall sees the world smoked glass, and to the first glance tures yield nothing but their sad g Browns. After a while the greens an and other notes disclose themselves their exquisiteness and delicate tone r and the picture ceases to be dingy or s nous. Collectively these landscapes a because they are all painted with th niggardly palette. Mr. Hall either perception of the different aspects of t sons and hours of the day and of atmo conditions, or he forces all nature of s pose into a convenient formula. His pa a beautiful quality, neither too unctud too rough. Everything that appertains structure of the ground is stated with when Mr. Hall carries this solidity of st into the sky and gives his clouds the a ance of solid rocks.

The first thing that strikes one abo McEvoy's water-colours in the ad room is that artist's incredible facility a power of saving all that is essential i

bequeathed to the country his pictures of the English School, which were for a short time exhibited here.

No. 50 was built by Alderman Boydell as the *Shakspeare Gallery*, for his pictures illustrative of Shakspeare, painted by West, Reynolds, Northcote, and others, and which were dispersed by lottery after being engraved. In 1806 the gallery was purchased by a committee of noblemen and gentlemen, by whom was established here the *British Institution*, for the exhibition of the works of Living Artists in the spring, and Old Masters in the autumn. Here was exhibited West's large picture (9 ft. by 14 ft.) of Christ healing the Sick in the Temple; bought by the British Institution for 3000 guineas, and presented to the National Gallery. Upon the house-front is a large bas-relief of Shakspeare attended by Poetry and Painting, for which Alderman Boydell paid Banks, the sculptor, 500 guineas; and in the hall is Banks's colossal Mourning Achilles, a noble work of pathos and heroic beauty. No. 53 is the House of the *New Society of Painters in Water-colours*.

No. 86, the *War Office*, was originally built for Edward Duke of York, brother of George III., and was subsequently a Subscription Club-house, called the Albion Hotel; this being the first modern club-mansion in Pall Mall, which had its "houses for clubbing" in Pepys's time. In the court-yard of the War Office is the bronze statue of Lord Herbert of Lea, Secretary of State for War: sculptor, Foley, R.A.; erected by public subscription, June 1, 1867. (See STATUES.) After the removal of Carlton House, in 1827, the erection of the present splendid club-houses in Pall Mall was commenced with the Senior United Service and the Athenæum. (See CLUB HOUSES, pp. 241 and 258.) Near Warwick-street stood *Warwick House*, whence the Princess Charlotte, in 1814, escaped in a hackney-coach to the house of her mother, as vividly described by Lord Brougham in the *Edinburgh Review*. In Warwick-street is a public-house with the old sign of *The Two Chairmen*, recalling the sedans of Pall Mall:

"Who the footman's arrogance can quell,  
Whose flambeau gilds the sashes of Pall Mall,  
When in long rank a train of torches flame,  
To light the midnight visits of the dame."—Gay's *Trivia*, book iii.

Here, in 1731, were found, in digging the great sewer of Pall Mall, the fossil teeth of an elephant, 28 feet underground: they are preserved in the Museum of the Society of Antiquaries, Somerset House.

PALL MALL EAST, on the north side of Cockspur-street, contains the University Club-house, described at p. 259; and the College of Physicians, described at p. 277. Here also is M. C. Wyatt's equestrian statue of George III. (see STATUES). At No. 4 (Harding, Lepard, and Co.) were exhibited, in 1831, the exquisite water-colour copies made by Hilton and Derby for Lodge's *Portraits of Illustrious Personages*, from pictures by Titian, Holbein, Vandyke, Mark Gerard, Zuccherò, Jansen, Retel, Walker, Van Somer, Honthorst, Lely, Ant. More, Mytens, Kneller, Reynolds, Dahl, Jarvis, Riley, Rubens, Fleck, Juan de Pantoja, Mirevelt, and P. Oliver. No. 5 is the *Gallery of the Society of Painters in Water-colours*. At No. 1, Dorset-place, lived John Thelwall, the classic elocutionist and dramatic lecturer, who late in life left political agitation for the calm pursuits of literature. He was worthily characterized by Coleridge as "intrepid, eloquent, and honest; perhaps the only acting democrat that is honest." Between Whitecomb-street and Charing Cross was formerly Hedge-lane, 300 yards in length; in the days of Charles I. a lane through the fields, and bordered with hedges. At a low tavern in Suffolk-street, on January 30, 1735, sprung the drunken frolic, out of which arose "the Calves' Head Club" (see p. 573).

### PANTHEON, OXFORD-STREET,

ABOUT one-third of a mile on the left from St. Giles's, was originally built by James Wyatt for musical promenades, and was opened January 27, 1772, when 2000 persons of rank and fashion were present. It contained fourteen rooms, exclusive of the rotunda: the latter had double colonnades, ornamented with Grecian reliefs; and in niches at the base of the dome were statues of the heathen deities, Britannia, and George III. and Queen Charlotte. Walpole described it as "the new winter Ranelagh," with pillars of artificial *giallo antico*, and with ceilings and panels painted

from Raphael's loggias in the Vatican. In the first winter here were assemblies without music or dancing; and the building was exhibited at 5s. each person! In 1783, Delpini, the clown, got up a masquerade here, to celebrate the Prince of Wales's attaining his majority; tickets three guineas each. Next year Garrick was present at a masquerade here as King of the Gypsies. Gibbon was also a frequenter of its gay bachelors' masque fêtes. In 1784, also, the "Commemoration of Handel" was performed here, when the King, Queen, and Royal Family were present. The Pantheon was next converted into a theatre for the Italian Opera company in 1791, the orchestra including Giardini, La Motte, Cramer, Fischer, Crosdil, and Cervetto.

The Pantheon was burnt down January 14, 1792: Turner painted the conflagration, which he exhibited at the Royal Academy two years after he became an exhibitor. The loss by the fire was stated at 80,000*l.* The Pantheon was rebuilt in 1795, Wyatt's entrance-front in Oxford-street and in Poland-street being retained. It was then let as a theatre, and for exhibitions, lectures, and music. The theatre was reconstructed in 1812, when Miss Stephens (subsequently Countess of Essex), first appeared in London here as a concert-singer; and first appeared on the stage, at Covent Garden Theatre, in 1813. In 1814 a patent was sought from Parliament to open the Pantheon with the regular drama; but the application failed. In 1832 the property was sold for 16,000*l.*: the premises are freehold, except the Oxford-street front, which is leasehold. In 1835 the premises were remodelled by Sydney Smirke, A.R.A., and opened as a Bazaar. (See p. 41.) The building was, in 1867, closed, to be converted into a Wine Dépôt. Spa Fields Chapel, in Clerkenwell, was originally built in imitation of the West-end Pantheon.

PANCRAS, ST.,

ORIGINALLY a solitary village "in the fields," north of London, and one mile from Holborn Bars, is the most extensive parish in Middlesex, being 18 miles in circumference. It is a prebendal manor, and was included in the land granted by Ethelbert to St. Paul's Cathedral about 603; it was a parish before the Conquest, and is called St. Pancras in Domesday. The history of its church, which Norden thought "not to yield in antiquitie to Paules in London," is narrated at pp. 193-4. The prebendary of St. Pancras was anciently confessor to the Bishop of London: in the list are Lancelot Andrewes, Bishop of Winchester; Dr. Sherlock, and Archdeacon Paley. Lysons supposes it to have included the prebendal manor of Kentish Town, or Cantelows,\* which now constitutes a stall in St. Paul's Cathedral. The church has about 70 acres of land attached to it, which were demised in 1641 at 10*l.* reserved rent; and being subsequently leased to Mr. William Agar, are now the site of *Agar Town*. In Domesday, Walter, a canon of St. Paul's, holds one hide at Pancras, which is supposed to form the freehold estate of Lord Somers, on which *Somers Town* is built.

St. Pancras' parish contained, in 1251, only 40 houses; in 1503 the church stood "all alone," and in 1745 only 3 houses had been built near it. In 1766 the population was not 600; in 1801, 36,000;

	Houses.	Inhabitants.
1821 .....	9,405 .....	71,838
1841 .....	15,658 .....	129,969
1851 .....	18,584 .....	166,596
1861 .....	21,928 .....	198,832

A return shows that the single parish of St. Pancras was assessed in 1862, to the property tax under Schedule A, the schedule for the annual value of land (including the houses built upon it, the railways, &c.), at 3,798,521*l.* This is the most populous parish in the metropolis: it includes one-third of the hamlet of Highgate, with the hamlets of Kentish-town, Battle-bridge, Camden Town, Somers Town, to the foot of Gray's-Inn-lane: also part of a house in Queen-square" (*Lysons*), all Tottenham-court-road, and the streets west of Cleveland-street and Rathbone-place.

Stukeley affirmed the site of the old church to have been occupied by a Roman encampment (Cæsar's), of which he has published a plan (*Itinerarium Curiosum*, 1758); and the neighbouring *Brill* of Somers Town Stukeley traces to a contraction of Bury

\* Anciently Kentesstoune, where William Bruges, Garter King-at-arms in the reign of Henry V., had a country-house, at which he entertained the Emperor Sigismund.

or Burgh Hill, a Saxon name for a fortified place on an elevated site; following Camden in his illustration of the village of Brill in Buckinghamshire.

At *Battle-bridge*, in 1842, was discovered a Roman inscription attesting the great battle between the Britons under Boadicea, and the Romans under Suetonius Paulinus, to have been fought on this spot.

The inscription bears distinctly the letters *LEG. XX.* (the twentieth legion), one of the four which came into Britain in the reign of Claudius; and the vexillation of which was in the army of Suetonius Paulinus, when he made that victorious stand in a fortified pass, with a forest in his rear, against the insurgent Britons. The position is described by Tacitus. On the high ground above *Battle-bridge* are vestiges of Roman works; and the tract of land to the north was formerly a forest. The veracity of the following passage of the historian is therefore fully confirmed:—"Deligitque locum artis faucibus, et a tergo silvâ clausum; satis cognito, nihil hostium nisi in fronte, et apertam planitiem esse sine metu insidiarum." He further tells us, that the force of Suetonius was composed of "quartadecima legio, cum vexillarîs *viccesimanis*, et e proximis auxiliares." (*Tacit. Annal. lib. xiv.*) So that, almost to the letter, the place of this memorable engagement seems, by the discovery of the above inscription to be ascertained.

In Ben Jonson's play, the *Tale of a Tub*, the characters move about in the fields near Pancridge (St. Pancras); Totten-court is a mansion in the fields; a robbery is pretended to be committed "in the ways over the country" between Kentish Town and Hampstead Heath; and a warrant is granted by a "Marribone" justice.

St. Pancras had formerly its mineral springs, which were much resorted to. Near the old churchyard, in the yard of a house, is the once celebrated St. Pancras' Well, slightly cathartic. St. Chad's Well, in Gray's-Inn-road, has a similar property; and the Hampstead Wells and Walks were given in 1698 to trustees for the benefit of the poor. The Hampstead Water was formerly sold in flasks in London.

In St. Pancras are the Termini of the two largest Railways in England: the North-Western, Euston-square; and the Great Northern at King's Cross, 45 acres. The name of King's Cross dates from the accession of George IV., when the streets were commenced building on the ground known as *Battle-bridge*, then in ill repute, and subsequently changed to the royal designation. In a house in Montgomery's nursery-gardens, the site of the north side of Euston-square, lived Dr. Wolcot (*Peter Pindar*), the satirist.

The vicarage was valued at 28*l.* in 1650; it is rated in the King's books at 9*l.*; and at this time is stated at 1700*l.* St. Pancras Churches, Old and New, are described at pp. 193-194. Under the belfry of the old church was interred privately, in a grave 14 feet deep, the body of Earl Ferrers, executed at Tyburn in 1760.

*The Cemetery* for St. Pancras, 87 acres (being the first extra-mural burial-ground for the metropolis, by Act 15 and 16 Victoria, cap. 85), was commenced in 1853, on "Horse-shoe Farm," in the Finchley-road, about 4½ miles from St. Pancras Workhouse, and 2 miles from the extreme northern boundary of the parish. *St. Pancras Workhouse* often contains upwards of 1200 persons, equal to the population of a large village. The excellent Female Charity School in the Hampstead-road dates from 1776.

In the northern part of the parish, between Kentish Town and Haverstock Hill, is Gospel Oak Field, traditionally said to be the spot where the Gospel was first preached in this kingdom; the site is inclosed by a wooden railing containing the boundary stone of St. Pancras and the adjoining parish of St. John's, Hampstead. When Wickliffe attended the citation at St. Paul's Cathedral, he is said to have frequently preached under this tree; at the Reformation, from under its branches were promulgated the doctrines of Protestantism; and here Whitefield preached nearly three centuries later. Some thirty years after, the tree died; and when a young tree was planted in its place, it as often was killed. However, the site was marked; and within memory, it was the practice, when beating the bounds of the parish, to regale the children, when the Vicar of the parish attended, and offered up prayer. There are seven churches of St. Pancras in England, another in France, another in Giessen in Hesse Darmstadt; another, indeed many, in Italy, one celebrated church in Rome itself.—See *The Life and Times of St. Pancras*. By Edward White. 2nd edit. 1856.

Although the Midland Railway has cut through Gospel Oak Field, here are edifices in keeping with the ancient religious associations of the place. Here is St. Martin's, a carefully finished specimen of the Third Pointed, or Perpendicular style; St. Andrew's, in the First Pointed, and somewhat Byzantine; a Congregational Chapel, of some architectural character; and a large Roman Catholic Convent. Here, too, is the Birkbeck School, built in place of the School removed for the Railway.

#### PARIS GARDEN,

A PORTION of the manor of that name on the Bankside, and so called from Robert de Paris, who had a house and grounds there, in the reign of Richard II., and "who,

by proclamation ordained that the butchers of London should buy that garden for receipt of the garbage and entrails of beasts; to the end the City might not be annoyed thereby."—Blount's *Glossographia*, edit. 1681.

This manor was given to the monastery of Bermondsey in 1113, and Robert de Paris must have been a lessee under the Abbot of Bermondsey. In 1537, the manor was conveyed to Henry VIII.; and Queen Elizabeth, in the twentieth year of her reign, granted the manor in exchange, to Henry Carey, Lord Hunsdon. It was subsequently held by Thomas Cure, saddler to the Queen, and founder of the Almshouses in Southwark which bear his name; and lastly by Richard Taverner and William Angell, citizens. The moated manor-house was called *Holland's Leaguer*, from Shakerly Marmion's satirical tract on this house and its inmates, entitled "Holland's Leaguer, or a Discourse on the life and actions of Donna Brittannia Hollandia, the Arch-mistress of the wicked Women of Utopia" (4to, 1632). It had succeeded the stews of Bankside as a public brothel, and in the reigns of James I. and Charles I. was a fashionable resort. A rude wood-cut of the house, with a draw-bridge crossing the moat, is prefixed to the tract. The site of the house and garden is partly occupied by the present Holland street, and Pellatt's Glass-house occupies part of the site of the Falcon theatre, and is named therefrom. In 1670, the manor of Paris Garden was constituted the parish of Christchurch, and a church built thereon, rebuilt 1738. In 1867, the Metropolitan Board of Works took a portion of the manor, for which they paid 500*l.* Paris Garden had its theatre, to be described under THEATRES.

"There is, or used to be, a ditch or dyke running across Great Surrey-street, Blackfriars-road, but for some few years past it has been covered or built upon. All buildings thereon are subject to a ground-rent, payable to the Steward of the Manor of 'Old Paris Garden,' and collected half-yearly."—*Notes and Queries*, No. 265, 1854.

### PARKS.

THE Parks have been well denominated by an amiable statesman (Windham), "the lungs of London;" for they are essential to the healthful respiration of its inhabitants. There are fourteen Royal Parks and Pleasure-grounds in or about London; the parks being those of Battersea, Bushy, Greenwich, Hampton Court, Kennington, Kensington, Regent's, Richmond, St. James's, Green, Hyde, and Victoria; and the pleasure-grounds of Hampton Court and Kew. The grounds of the Hospital and Military Asylum at Chelsea, with Holyrood Park and Longford River, are also included under the above heading, the total estimate of charges connected with which amounts, for the financial year 1867-8, to 125,326*l.* Of this sum, 5095*l.* are paid to the Ranger's departments of Greenwich, Richmond, St. James's, Green, and Hyde Parks; the grounds of the Hospital and Military Asylum at Chelsea costing 1704*l.* The income derived from the Royal Parks is about 5000*l.* per annum, and is paid to the Consolidated Fund.

ALBERT, or FINSBURY PARK, equidistant from Regent and Victoria Parks, is to commence at Highbury Crescent, passing along the right side of Holloway and Hornsey roads to the Seven Sisters'-road, and including all the space of fields to the west of Newington Green; afterwards inclining towards the New River, which it is proposed to cross north of the Horse-shoe, excluding the Junction Railway, and extending to the bottom of Highbury Grove, completing the enclosure of 300 acres.

BATTERSEA PARK consisted, prior to its formation, of small Lammas Lands, in lieu of which a Lammas Hall has been erected in Battersea. In 1846, its conversion into a park was decided by Act of Parliament. Before it was fit even to walk upon it was necessary to raise the entire surface. Fortunately, about this time the London Docks (Victoria) Extension were commenced. It was requisite to excavate and remove thence to a distance immense quantities of earth, which were gladly received at Battersea-fields; and from this and other sources not less than 1,000,000 cubic yards of earth have been deposited on this site. This occupied several years, and the actual formation of the park could not be commenced till 1856: the drives, walks, and ornamental lake were then laid out and formed; the planting began in 1857. Large quantities of earth were deposited and formed into undulating mounds and banks, and

several acres were thus reclaimed along the banks of the river. These deposits of earth were well adapted to the growth of trees and shrubs, which consist of the choicest kinds of both, and this park contains one of the richest collections in or near London. About 200 acres are here appropriated to ornamental and recreative purposes—viz., grass surface, 100 acres; water, 20; and shrubberies, plantations, drives, and walks, 80. About 34 acres have been prepared for cricket, in match-grounds and practice-ground for schools, and for organized clubs. Other large open spaces are used for the drill and exercises of the troops stationed at Chelsea New Barracks, as also of various Volunteer corps, and the district Police. Portions are set apart for trap-ball, rounders, and other games; and when the cricket season terminates football is commenced. The lake is an artificial one, and is fed partly from the river Thames and partly by a steam-engine, fixed for the purpose of supplying the park with water for the lodges, drinking fountains, roads, flower-beds, &c. The depth of the water is too shallow for bathing, being only  $2\frac{1}{2}$  feet deep. The lake, however, is extensively used for boating. The peninsula, comprising an area of  $5\frac{1}{2}$  acres, is laid out in the English landscape style, combining a series of mounds with gentle slopes, between which are picturesque vistas. Nearly at its centre there is a reservoir, which is excavated below the level of the neighbouring springs. The water from this self-supplied source is as clear as crystal; it is pumped into an elevated tank which holds 20,000 gallons, from which are laid service pipes for the supply of the park. A horse-ride has been formed about 40ft. wide; and the South-eastern portion of the park is appropriated as a gymnasium and playground.

Here is the Sub-Tropical Garden, nearly 4 acres in extent. Here is a bed of *caladium esculentum*, from the West Indies, with big leaves not to be matched in England. Australian tree ferns throw out their graceful leaves as luxuriantly as though they were still under glass. The India-rubber plant is growing in great profusion. So is the Banana and the curious Indian shot plant. Further on we come to the variegated Croton, and the beautiful scarlet foliage of the Dragon's-blood tree from South America. Here is a tropical plant, the *Canna limbata*, which bravely contends with the rigours of an English winter. Among many others are—the large-leaved tobacco plant; a new variety of the sugar-cane from Japan; the coral tree, with its beautiful and suggestive flower; the *Dracena nutans*, drooping, combined with upright leaves; a Southern emblem, the Palmetto palm; the Date palm; the Rice-paper plant of China; the Papyrus plant of Egypt, and the veritable Bulrush of the Nile. In another part of the park is a rosary, the soil of which is well suited to the production of the queen of the English garden.

CHelsea HOSPITAL GROUNDS, on the northern bank of the Thames, have been relaid out: the surface has been raised on the south  $4\frac{1}{2}$  feet, and elsewhere from 10 to 24 feet, in which work, some 100,000 cubic yards of stuff have been deposited; an avenue of old pollard lime-trees, planted some 150 years ago in the centre of the grounds, has been removed by powerful machines, four or five tons of earth being taken with each tree; and the whole of the trees have been formed into two avenues, and the grounds planted with flowering shrubs. A portion of the grounds occupying the site on which Ranelagh House formerly stood is devoted to the private use of the inmates of the Hospital, and has been re-formed and laid out. Here allotments are set apart for the pensioners, consisting of a square rod each; and they are so successfully cultivated by some of these men, that as much as 10*l.* or 11*l.* has been realized on one allotment. This is done chiefly by the cultivation of the musk plant, of which two and three crops are obtained in a season, and for which there is an easy sale to hawkers.

GREEN PARK, THE, 60 acres in extent, adjoins St. James's Park on the north, and extends westward to Hyde Park Corner, the line of communication being by the fine road *Constitution Hill*. It was formerly called Little St. James's Park, and was reduced in 1767, by George III., to add to the gardens of Buckingham House. At the Peace Commemoration, in 1814, here was erected a vast Temple of Concord, with allegorical paintings and illuminations and fireworks. In 1840–41 the entire Park was drained, and the surface relaid and planted; and the Deputy-Ranger's Lodge, towards the north-west corner, was then taken down. At the north-east corner was formerly the Chelsea Waterworks Reservoir, reconstructed in 1829, 44 feet above Trinity high-water mark of the Thames, and containing 1,500,000 gallons. The Reservoir has been filled up. This high ground commands fine views of the Norwood and Wimbledon hills, and of the roof of the Crystal Palace at Sydenham.

On the east side of the Park is a line of noble mansions, including Stafford House,

Brigewater House; and Spencer House, with its final statues, commended by Sir William Chambers. The gardens of the several houses are leased of the Crown.

Dr. King relates, that Charles II. having taken two or three turns one morning in St. James's Park, attended only by the Duke of Leeds and Lord Cromarty, walked up Constitution Hill; and as the king was crossing the road into Hyde Park, met the Duke of York in his coach, returning from hunting. The duke alighted to pay his respects to the king, and expressed his surprise to meet his majesty with such a small attendance, adding that he thought the king exposed himself to some danger. "No kind of danger, James; for I am sure no man in England will take away my life to make you king," was Charles's reply.

In Constitution-hill-road, near the Palace, three diabolical attempts have been made to shoot Queen Victoria: by a lunatic, named Oxford, June 10, 1840; by Francis, another lunatic, May 30, 1842; and by an idiot, named Hamilton, May 19, 1849. On June 29, 1850, at the upper end of the road, Sir Robert Peel was thrown from his horse; he died at his house in Whitehall Gardens, on July 2.

The Arch at the entrance of the road from Hyde Park Corner is a poor adaptation from the Arch of Titus at Rome, and was originally designed as an entrance to Buckingham Palace Gardens. It bears the colossal equestrian statue of the Duke of Wellington.

The Green Park has been greatly improved, from almost a bare field to a resort of some picturesqueness and variety. A new horse-ride has been made, from Buckingham Palace to Stable-yard Gate, St. James's.

HYDE PARK extends from Piccadilly westward to Kensington Gardens, and lies between the great western and Bayswater roads. It is the site of the ancient manor of Hyde, which belonged to the monastery of St. Peter, Westminster, until it was conveyed to Henry VIII. in 1536, soon after which a keeper of the park is mentioned. In 1550 the French Ambassador hunted here; and in 1578 the Duke Casimir shot a doe from amongst 300 other deer in Hyde Park. In 1652 the Park was sold by order of Parliament, for 17,000*l.*; the deer being valued, in addition, at 765*l.* 6*s.* 2*d.* The park then contained 620 acres, and extended eastward to Park-lane, and on the west almost to the front of Kensington Palace: it is described in the indenture of sale as "that impaled ground called Hyde Park;" but, with the exception of Tyburn meadow, the enclosure for the deer, the old lodge at Hyde Park Corner, and the Banqueting House, the park was left in a state of nature; and De Grammont describes it as a barn-field in the time of Charles II. Ben Jonson mentions its great spring show of coaches; Brome names its races, horse and foot; and in Shirley's play of *Hyde Park*, 1637, is the scene of a race in the park between an Irish and English footman. After the sale by Parliament, tolls were levied.

"11th April, 1653.—I went to take the aire in Hide Park, when every coach was made to pay a shilling, and every horse sixpence, by the sordid fellow (Anthony Deane, of St. Martin's-in-the-Fields, Esq.) who had purchas'd it of the State, as they were call'd."—*Evelyn*.

The park does not appear to have been thrown open to the public until the time of Charles I., and then not indiscriminately.

In the *Character of England*, 1659, it is described as "a field near the town, which they call Hyde Park; the place not unpleasant, and which they use as our course; but with nothing of that order, equipage, and splendour; being such an assembly of wretched jades and hackney-coaches, as, next a regiment of carmen, there is nothing approaches the resemblance. This parke was, it seems, used by the late king and nobility for the freshness of the air and the goodly prospect; but it is that which now (besides all other exercises) they pay for here in England, though to be free in all the world besides; every coach and horse which enters buying his mouthful and permission of the publicane who has purchased it, for which the entrance is guarded with porters and long staves."

At the Restoration, Mr. Hamilton was appointed Ranger of the park, which he let in farms until 1670, when it was enclosed with a wall, and re-stocked with deer. Refreshments were thus early sold; for 25th April, 1669, Pepys carried his pretty wife to the lodge, and there in their coach ate a cheesecake, and drank a tankard of milk. De Grammont describes the promenade as "the rendezvous of fashion and beauty. Every one, therefore, who had either sparkling eyes or a splendid equipage, constantly repaired thither; and the king (Charles II.) seemed pleased with the place." *Maying* was a favourite custom here: May 1, 1661, Evelyn "went to Hyde Park to take the air; where was his Majesty and an innumerable appearance of gallants and rich coaches, being now the time of universal festivity and joy." Even in the Puritan times, May (1654) "was more observed by people going a-maying than for divers years past; and, indeed, much sin committed by wicked meetings, with fiddlers, drunkenness,

ribaldry, and the like. Great resort came to Hyde Park, many hundreds of coaches, and gallants in attire: but most shameful powdered-hair men, and painted and spotted women." A few days after, the Lord Protector and many of his Privy Council witnessed in Hyde Park "a bowling of a great ball by fifty Cornish gentlemen of one side, and fifty of the other; one party playing in red caps, and the other in white. The ball they played withal was silver, and designed for that party which did win the goal." Evelyn, in May, 1658, "went to see a coach-race in Hyde Park;" and Pepys, August, 1660, "To Hyde Park by coach, and saw a fine foot-race three times round the park." Here a strange accident happened to Cromwell in 1654:

"The Duke of Holstein made him (Cromwell) a present of a set of gay Friesland coach-horses; with which, taking the air in the park, attended only with his secretary, Thurloe, and a guard of Janizaries, he would needs take the place of the coachman, and not content with their ordinary pace, he lashed them very furiously. But they, unaccustomed to such a rough driver, ran away in a rage, and stopped not till they had thrown him out of the box, with which fell his pistol fired in his pocket, though without any hurt to himself; by which he might have been instructed how dangerous it was to meddle with those things wherein he had no experience."—*Ludlow*.

Cromwell was partial to Hyde Park here Syndercombe and Cecill lay wait to assassinate him, when "the hinges of Hyde Park gate were filed off, in order to their escape." *The Ring* was, from all time previous to the Restoration till far in the reigns of the Georges, the fashionable haunt. It was situated to the north of the present Serpentine, and part of the Ranger's grounds cover its site; some of the old trees remain, with a few of the oaks traditionally said to have been planted by Charles II. Near the ring was the lodge called the "Grave Prince Maurice's Head," and in later times the "Cake house;" a slight stream ran before it; and the house, approached by planks, presented a very picturesque appearance: it is engraved in the *Gentleman's Magazine* for 1801.

Reviews have, for nearly two centuries, been favourite spectacles in Hyde Park. At the Restoration, during a splendid show, the Lord Mayor received notice that "Colonel John Lambert was carried by the park a prisoner into Whitehall."

Pepys "did stand" at another review in 1664, when Charles II. was present, while "the horse and foot march by and discharge their guns, to show a French marquise (for whom this muster was caused) the goodness of our firemen; which, indeed, was very good, though not without a slip now and then; and one broadside close to our coach as we had going out of the parke, even to the nearness to be ready to burn our hairs. *Yet methought all these gay men are not the soldiers that must do the king's business, it being such as these that lost the old king all he had, and were beat by the most ordinary fellows that could be.*"

The Militia review by George II. in 1759, the Volunteers by George III., and the encampment of the troops after Lord George Gordon's Riots in 1780, also belong to the military shows of Hyde Park. Here George III. inspected the Volunteers on his birth-day, June 4th, for several years: in 1800 the troops numbered 15,000. In August, 1814, were held in this park the Regent's Fête and Fair, when a mimic sea-fight was exhibited on the Serpentine, and fireworks from the wall of Kensington Gardens; and here have been held in the present century three "Coronation Fairs," and firework displays. Of sterner quality was the rendezvous of the Commonwealth troops in the park during the Civil War. Essex and Lambert encamped their forces here; and Cromwell reviewed his terrible Ironsides. In 1643 the citizens threw up the line of fortification drawn round the City and suburbs, drawn by order of Parliament; and one of its strongest works, "Oliver's Mount," faced Mount-street, in Park-lane. (*See FOR-TIFICATIONS*, p. 354.) Here was the celebrated "Mount" Coffee-house.

Hyde Park continued with little alteration, till, in 1705, nearly 30 acres were added to Kensington Gardens, by Queen Anne; and nearly 300 acres by Caroline, Queen of George II. (*see KENSINGTON GARDENS*, p. 493), by whose order also, in 1730-3, was formed the Serpentine River. The Park has also been reduced by grants of land, between Hyde Park Corner and Park-lane, for building; and according to a survey taken in 1790, its extent was 394 acres 2 roods 38 poles. In 1766, John Gwynne, the architect, proposed to build in Hyde Park a royal palace for George III.; and in 1825, a Member of Parliament published a magnificent design for a palace near Stanhope Gate.

Permission to "vend victuals" in Hyde Park was granted by George II. to a pilot who saved him from wreck in one of his voyages from visiting his Hanoverian dominions; and it is stated that the pilot's descendants to this day exercise the privilege.

At the same time the King gave his deliverer a silver-gilt ring, which bears the arms of Poland impaled with those of Lithuania, surmounted by a regal crown. This ring was exhibited to the British Archæological Association, Feb. 9, 1853.

The *Conduits* of Hyde Park are described at p. 289. Upon the east side, 70 feet above Trinity high-water mark of the Thames, was the Chelsea Waterworks Reservoir, which contained about 1,500,000 gallons: the iron railing and dwarf wall were added to prevent suicides, which were formerly frequent here. The reservoir has been emptied, and the site laid out as a sunk garden, with much taste; here is a classic drinking fountain; A. Munro, sculptor. Upon the east side was *Walnut-tree Walk*, shaded by two rows of noble walnut-trees, extended to a large circle; these trees were cut down about 1800, and the wood was used by Government for the stocks of soldiers' muskets.

The colossal statue near the south-east corner of the park, cast by Sir R. Westmacott, R.A., from twelve 24-pounders, weighing upwards of 30 tons, is about 18 feet high, and occupies a granite pedestal, bearing this inscription: "To Arthur Duke of Wellington, and his brave companions in arms, this statue of Achilles, cast from cannon taken in the battles of Salamanca, Vittoria, Toulouse, and Waterloo, is inscribed by their countrywomen." On the base is inscribed: "Placed on this spot on the 18th day of June, 1822, by command of his Majesty George IV." The figure is copied from one of the antique statues on the Monte Cavallo at Rome, and is most improperly called Achilles! it has never received its sword! The cost of this monument, 10,000*l.*, was subscribed by ladies.

*Gates.*—The principal entrance is at Hyde Park Corner, through a triple-arched and colonnaded screen, designed by Decimus Burton: eastward is Apsley House, nearly upon the site of which stood the old lodge of the park. In Park-lane is Stanhope-gate, opened about 1750; and Grosvenor-gate, in 1724, by subscription of the neighbouring inhabitants. Cumberland-gate, at the west end of Oxford-street, was opened about 1744-5, at the expense of the inhabitants of Cumberland-place and the neighbourhood: it was a mean brick arch, with side entrances: here took place a disgraceful contest between the people and the soldiery at the funeral of Queen Caroline, August 15, 1821, when two persons were killed by shots from the Horse-guards on duty. In 1822, the unsightly brick and wooden gate was removed; and handsome iron gates were substituted, at the cost of nearly 2000*l.*, by Mr. Henry Philip Hope, of Norfolk-street, Park-lane. In 1851 these gates were removed for the marble arch from Buckingham Palace, and placed on each side of it; the cost of removing the arch and rebuilding it being 4340*l.* (See ARCHES, p. 21.) In the Bayswater-road is Victoria-gate: nearly opposite is the handsome terrace, Hyde-Park-gardens. Upon the south side of the park are the Kensington-gate; the Prince of Wales's-gate, near the site of the Half-way House; and Albert-gate, Knightsbridge.

*Rotten Row*, on the south side of the park, extends about  $1\frac{1}{2}$  mile from the lodge at Hyde Park Corner to the Kensington-gate: it is for saddle-horses, who can gallop over its fine loose gravel without danger from falling; and it is crowded with equestrians between 5 and 7 P.M., during the high London season. The name *Rotten* is traced to *rotteran*, to muster; which military origin may refer to the park during the Civil War; but the derivation is disputed. Between Rotten-row and the Queen's Drive was erected the Building for the Great Exhibition of 1851:

"But yesterday a naked sod,  
The dandies sneered from Rotten-row,  
And sauntered o'er it to and fro,  
And see 'tis done!  
As though 'twere by a wizard's rod,  
A blazing arch of lucid glass  
Leaps like a fountain from the grass,  
To meet the sun!  
A quiet green but few days since,  
With cattle browsing in the shade,  
And lo! long lines of bright arcade  
In order raised;  
A palace as for fairy Prince,  
A rare pavilion, such as man  
Saw never since mankind began,  
And built and glazed!"

*May-day Ode*, by W. M. Thackeray: *Times*, May 1, 1851.

*The Crystal Palace*, as the building was appropriately so named, we believe, by Douglas Jerrold, its roof and sides being of glass, was designed by Mr. (subsequently Sir Joseph) Paxton; and was constructed by Mr. (subsequently Sir Charles) Fox, and Mr. Henderson. The ground was broken July 30, 1850; the first column was placed Sept. 26; and the building was opened May 1, 1851.

It was a vast expansion of a conservatory design, built at Chatsworth by Mr. Paxton, for the flowering of the Victoria Lily. The Crystal Palace was cruciform in plan, with a transept, nave, and side aisles; consisting of a framework of wrought and cast-iron, firmly braced together, and based upon a foundation of concrete. It was built without a single scaffold-pole, a pair of shears and the Derrick crane being the only machinery used in hoisting the materials. In the plan, every measurement was a multiple of 8. Thus the columns were all 24 feet high, and 24 feet apart; and the centre aisle or nave was 72 feet, or 9 times 8. Again, one single area, bounded by 4 columns and their crowning girders, was the type of the whole building, which was a simple aggregation of so many cubes, in extreme length 1861 feet, corresponding with the year of the Exhibition; width 408 feet; with an additional projection on the north side, 936 feet long by 48 wide. The great avenues ran east and west; very near the centre crossed the transept, 72 feet high, and 108 wide. Its roof was semicircular, designed by Mr. (subsequently Sir Charles) Barry, so as to preserve three fine old elms. The other roofs, designed by Mr. Paxton, were flat.

The entire area of the building was 772,784 square feet, or about 19 acres, nearly seven times as much as St. Paul's Cathedral. "The Alhambra and the Tuileries would not have filled up the eastern and western nave; the National Gallery would have stood beneath the transept; the palace of Versailles (the largest in the world) would have extended but a little way beyond the transept; and a dozen metropolitan churches would have stood erect under its roof of glass." (*Athenaeum*, No. 1227.) The ground area was divided into a central nave, four side aisles, and several courts and avenues; and a gallery ran throughout the building. There were about 3000 columns, nearly 3500 girders, and altogether about 4000 tons of iron built into the structure. The iron skeleton progressed with the framing and glazing, requiring 200 miles of wooden sash-bars, and 20 miles of Paxton gutters for the roof, which required 17 acres of glass; besides which, there were 1500 vertical glazed sashes. Flooring 1,000,000 square feet; total wood-work, 600,000 cubic feet. The hollow cast-iron columns conveyed the rain-fall from the roof. The effective ventilation was by *Jonvre*-boards.

The decoration of the interior, devised by Owen Jones, consisted of the application of the primitive colours, red, blue, and yellow, upon narrow surfaces; it was charmingly artistic, and was rapidly executed by 500 painters. During the months of December and January, upwards of 2000 workmen were employed throughout the building.

The vast Palace was filled with the World's Industry: in the western portion were the productions of the United Kingdom, India, and the Colonies; and the eastern, those of Foreign Countries. The value of the whole (except the Koh-i-noor diamond) was 1,781,929*l.* 11*s.* 4*d.*

The opening of the Exhibition, on May 1, 1851, was proclaimed by Queen Victoria, accompanied by Prince Albert, the Prince of Wales, and the Princess Royal. Between May 1 and Oct. 11 the number of visits paid was 6,063,986; mean daily average 43,536. On three successive days there entered 107,815, 109,915, 109,760 persons, who paid respectively 6175*l.*, 5231*l.*, and 5283*l.* There were counted in the Palace 93,000 persons at one time. Cost of the building, 176,030*l.* 13*s.* 8*d.* Oct. 15, Jury Awards and closing ceremonial. The whole building was removed before the close of 1852; and, on Nov. 7, 1853, it was proposed to place upon the site a memorial of the Exhibition, to include a statue of Prince Albert, the originator of this display of the Industry of all Nations.

This splendid National Memorial is now (1867) being erected in Hyde Park, as nearly as may be, at the intersecting point of central lines of the two Great International Exhibitions (Hyde Park and South Kensington), originated by the Prince Consort.

The design by Gilbert Scott, R.A., though in some sense a "Memorial Cross," differs widely in type from the form usually described by that term. It is, in fact, a vast canopy or shrine, overshadowing a colossal statue of the personage to be commemorated, and itself throughout enriched with artistic illustrations of or allusions to the arts and sciences fostered by the Prince, and the virtues which adorned his character. The canopy or shrine which forms the main feature of the Memorial is raised upon a platform approached on all sides by a vast double flight of steps, and stands upon a basement or podium rising from this elevated platform to a level of about 12 feet. Upon the angles of this podium stand the four great clusters of granite shafts that support the canopy, which is itself arched on each side from these massive pillars, each face being terminated by a gable, and each angle by a lofty pinnacle; while over all rises a *flèche* or enriched spire of metal work, surmounted by a gemmed and floriated cross. Beneath the canopy, and raised upon a pedestal, will be placed the *quasi*-enthroned statue of the Prince Consort.

The idea of the architect in his design of the canopy, was this:—The first conception was a shrine. The exquisite metal and jewelled shrines of the 12th and 13th centuries are nearly always ideal models of larger structures, but of structures of which the original type never existed. Their pillars were of gold or silver-gilt, enriched with wreaths of exquisite pattern-work in many-coloured enamel. Their arches, gables, and other architectural features were either chased in beautiful foliage cut in gold or silver, or enriched with alternate *plaques* of enamel pattern work and of filigree

studded with gems. Their roofs were covered with patterns of *repoussé* work or enamel, and enriched with sculptured medallions; the crests of roofs and gables were griled with exquisite open foliage in gold or silver, while every part was replete with sculpture, enamel paintings, and jewellery. The architect's aim, then, was to reproduce in some degree at full size the ideal structure which these wonderful old jewellers represented in model. This idea could not, of course, be literally carried out; but it has determined the leading characteristics of the monument, and at least so far as the metal-work is concerned, is being faithfully acted on, while in the more massive parts of the structure it cannot be carried further than to give its tone to the decorations.

Hyde Park being for the most part high and dry, is perhaps the most airy and healthy spot in London. The north-west or deer-park, verging upon Kensington Gardens, is even of a rural character: the trees are picturesque, and deer are occasionally here. The Serpentine has upon its margin some lofty elms: but from other positions of the park many fine old timber-trees have disappeared, and the famous Ring of Charles II.'s days can be but imperfectly traced. The drives and walks have been greatly extended and improved: for the brick wall has been substituted iron railing; and the opening of three gates (Victoria, Albert, and Prince of Wales), and the Queen's Drive south of the Serpentine, denominate the improvements in the present reign. From this high ground the artistic eye enjoys the *syloan* scenery of the park; the old trees fringing the Serpentine, and its water gleaming through their branches: backed by the rich woods of Kensington Gardens; and the bold beauty of the Surrey hills.

Among the floral improvements in Hyde Park is the promenade along the east side, from Apsley House to the Marble Arch, where the beds of massed flowers are beautifully effective; and they are continued from the gates by Apsley House down to the Serpentine. Plantations of ornamental trees are extended along the south side, in pleasure grounds tastefully planted with shrubs and flowers. Finally, horse-rides have been made to extend from Victoria Gate to the Magazine Barracks.

Flowers are now grown in Hyde Park, with great success. The first attempt was made by Sir Benjamin Hall, in 1856, when Chief Commissioner of Works; but Mr. Cowper, in 1860, made a regular garden of the space between Stanhope-gate and the Marble Arch, where the massing of colours is very successful; between the Marble Arch and Kensington Gardens, the flowers are in patches among the trees. The flower-beds were so successful in Hyde Park that they were adopted by the side of Rottenrow, and in other parks. Pipes are laid under ground for the water-mains, and the Parisian plan of hose is adopted for watering the flowers and the grass borders.

*The Serpentine* (so called in distinction from the previous straight canals) is a pool of water covering fifty acres, formed from natural springs, and originally fed at the Bayswater extremity by a stream from West-End, near Hampstead, and the overplus of certain reservoirs, one of which occupied the site of Trinity Church. In 1834 the stream, or rather sewer, at Bayswater was cut off, and the deficiency was made up from the Chelsea Waterworks. At the eastern end the Serpentine imperfectly supplies an artificial cascade, formed in 1817; and descending into the "leg of mutton" pond, the stream leaves Hyde Park at Albert Gate, divides the parish of Chelsea from that of St. George's, Hanover-square, and falls into the Thames at Chelsea. The Serpentine supplies the Knightsbridge Barracks and the Horse-guards, the lake in Buckingham Palace Gardens, and the ornamental water in St. James's Park. The depth in Hyde Park varies from 1 to 40 feet, of which Sir John Rennie found, in 1849, in the deepest parts, from 10 to 15 feet of inky, putrid mud—"a laboratory of epidemic miasma." The Serpentine is deepest near the bridge: the whole sheet was deepened, at a cost of from 10,000*l.* to 20,000*l.* Here 200,000 persons, on an average, bathe annually, sometimes 12,000 on a Sunday morning; and in severe winters the ice is the greatest metropolitan skating-field. In 1847, pleasure-boats for hire were introduced upon the Serpentine: the boat-houses are picturesque.

On the north margin *The Royal Humane Society*, in 1794, built their principal receiving-house, upon ground presented by George III. In 1834 the house was rebuilt, from the design of J. B. Bunning; the first stone being laid by the late Duke of Wellington: over the Ionic entrance is sculptured the obverse of the Society's medal, —a boy striving to rekindle an almost extinct torch by blowing it; legend, *Lateat scintilla forsam*—"Perchance a spark may be concealed." In the rear are kept

boats, ladders, ropes and poles, wicker-boats, life-preserving apparatus, &c. The Royal Humane Society was founded in 1774, by Drs. Goldsmith, Heberden, Towers, Lettsom, Hawes, and Cogan. Its receiving-houses in the parks cost 3000*l.* a year. In odd contiguity to the Society's House in Hyde Park is the Government Magazine, containing stores of ammunition and gunpowder.

*Duels fought in Hyde Park.*—*Temp.* Henry VIII., the Duke of B. and Lord B., "near the first tree behind the Lodge;" both killed,—1712. The Duke of Hamilton and Lord Mohun, both killed,—1763. Wilkes and Mr. S. Martin, the hero of Churchill's *Duellist*.—1770. Baddeley, the comedian, and George Garrick.—1773. Mr. Whately and Mr. Temple.—1780. The Earl of Shelburne and Col. Fullarton.—1780. Rev. Mr. Bate and Mr. R., both of the *Morning Post*.—1782. Rev. Mr. Allen and Mr. Dulany.—1783. Lient.-Col. Thomas and Col. Gordon, the former killed.—1787. Sir John Macpherson and Major Browne.—1792. Messrs. Frizell and Clarke, law-students, the former killed.—1796. Mr. Carpenter and Mr. Pride (Americans), the former killed.—1797. Col. King and Col. Fitzgerald, the latter killed.—Lieut. W. and Capt. I., the latter killed.—1822. The Duke of Bedford and the Duke of Buckingham.

Near the site of the Humane Society's Receiving-house formerly stood a cottage, presented by George III. to Mrs. Sims, in consideration of her having lost six sons in war; the last fell with Abercrombie at Alexandria, March 21, 1801. This cottage has been painted by Nasmyth, and engraved in the *Art Journal*, No. 59, N.S.

The Law, with regard to the Parks, according to the opinion of the law-advisers of the Crown, November, 1856, is in effect that—

There is a right to close the gates and exclude the public; or, the gates being open, to exclude persons; but that persons who have once entered cannot be turned out without notice that the license is withdrawn. No force, therefore, can be brought to bear against bodies or masses, which might contain many who have not had notice. They also say that it would not be practicable to remove any number individually and prevent them from returning, and remark on the probability of disorder if even an individual were turned out. The effect is that the Government have nothing but the common law of trespass to rely upon with its incidents, which are most important. In July, 1866, the above-mentioned opinion was submitted to Sir W. Bovill and Sir Hugh Cairns, who were particularly requested to say whether there was any legal authority to disperse by force any meeting for political purposes in the Park. Their answer was that there is no such authority for any practical purpose. They state that when persons have once entered the Park they can only be ejected after notice served on or brought home to each individually. If the assembly remain peaceable the police can do nothing but hand out man after man. In no case can they legally clear the Park by a charge, and it is most important that this should be known. The Commissioners of Works, spending public money, represent the public. The Rangers more properly represent the Crown. All these things are important when we are thrown back upon the technical law of trespass.

On July 23, 1866, a political meeting in Hyde Park having been forbidden by the Home Secretary of State, and the gates being closed, under the direction of Sir Richard Mayne, Chief Commissioner of Police, the railings were torn down, and the mob entered, and committed wanton damage to the flower-beds and shrubberies. The cost of the erection of new iron railings and foot-gates round Hyde Park, in the main rendered necessary by the above riot, is stated at upwards of 10,000*l.*

KENNINGTON PARK, formerly Kennington Common, which is described at p. 487, was completed 1852-3. In laying out this little park, of 34 acres, an amalgamation of the plan geometrical and the English styles has been adopted. It is furnished with a gymnasium and a playground, which, in that populous neighbourhood, are in constant use. There is likewise a handsome drinking-fountain, presented by Mr. Felix Slade, of Lambeth, and designed by Mr. Driver. It is constructed of polished granite, surmounted by a bronze casting, which represents Hagar and Ishmael at the well. There are two large grass enclosures in the centre of these grounds, in which a very good plan, and one worthy of adoption elsewhere, is pursued to preserve the turf from utter destruction. Different portions of the Park are closed and opened alternately to the public. Were it not for this precaution, there would not be a living blade of grass to be seen by the end of July; every vestige of turf would be trampled to death. The Park is surrounded by a wrought-iron fence, backed by a privet-hedge. The area thus encircled is only about twelve acres; and around the lodge—which will be recognised as the model lodging-house of the Exhibition of 1851—there is an effective arrangement of common garden flowers in sunk panels of turf. Most of the flowers are raised on the spot.

POPULAR RECREATION GROUNDS, situated between the High-street and East India Dock-road have been completed, by the Metropolitan Board of Works, and were opened in May, 1867. The grounds occupy about five acres in extent, and adjoin the churchyard of St. Matthias, which occupies nearly the same area. The site was

purchased at a cost of 12,000*l.*, towards which the Metropolitan Board of Works contributed 6000*l.*, and 1500*l.* has been realized by the sale of old materials. The remainder is borrowed, and 20 years allowed for its repayment.

PRIMROSE HILL PARK, about 50 acres at the foot of Primrose Hill, is enclosed and laid out for cricket, and planted with trees and shrubs, by the Commissioners of Woods and Forests. On the south side of the hill is a fine open-air gymnasium, which is more frequented than any other in London.

REGENT'S PARK, of 403 acres, lies between the south foot of Primrose Hill and the New-road, and includes "Marylebone Farm and Fields." The relaying out of the estate was proposed in 1793, and a large premium offered for the best design; but it was not until 1812 that any plan was adopted—the plan of John Nash, architect, who built most of the fine terraces by which it is surrounded, and proposed to connect this new part of the town with Carlton House and St. James's: this has been effected in Regent-street, which, with the Park, is named from their having been projected and laid out during the Regency of George IV. The Park is nearly circular in plan, and is comprised within a ride, or drive of about two miles. The south side is parallel to the Marylebone-road; the east side extends northward to Gloucester-gate; the west side to Hanover-gate; and the northern curve nearly corresponds with the sweep of the Regent's Canal, at the north-western side of which are Macclesfield-bridge and gate. In the south-west portion of the Park is a sheet of water, in outline resembling the three legs on an Isle-of-Man halfpenny: it is crossed by wire suspension-bridges, and has some picturesque islets, large weeping-willows, shrubs, &c. There are 18 or 20 acres of water on which boats are to be had for hire, and where angling from the banks is permitted at all times while the gates are open. Near the southernmost point is the rustic cottage of the Toxophilite Society. In the southern half of the Park are two circles: the Inner Circle, formerly Jenkins's nursery-ground, was reserved by Nash as the site for a palace for George IV.: it is now the garden of the Botanic Society (see p. 369). On the eastern slope, at the north end of the Park, is the garden of the Zoological Society. On the east side, a little south of Gloucester-gate, are the enclosed villa and grounds of the Master of St. Katharine's Hospital; the church and domestic buildings are opposite. (See pp. 166–7.) Among the detached villas in the Park are the Holme, in the centre, built by William Burton, architect; St. John's Lodge (Sir Francis Henry Goldsmid's), adjoining the Inner Circle; St. Dunstan's Villa, and Holford House, on the Outer Road; and near Hanover-gate is Hanover Lodge, formerly the Earl of Dundonald's. The portico of St. Dunstan's Villa is adapted from the Temple of the Winds at Athens: the roof is Venetian; and in a recess near the entrance are the two gigantic wooden figures, with clubs and bells, from old St. Dunstan's Church, Fleet-street (see p. 160): they were purchased by the late Marquis of Hertford for 200*l.* At the south-east corner of the Park is the Diorama building, converted into a Baptist chapel in 1854; beyond is the Colosseum, described at pp. 280–3. On the south, east, and north-west sides of the Park are highly-embellished terraces of houses, in which the Doric and Ionic, the Corinthian, and even the Tuscan, orders have been employed with ornate effect, aided by architectural sculpture. In the Inner Circle, adjoining South Villa, is the *Observatory*, erected in 1837 by Mr. George Bishop, F.R.S., F.R.A.S. It consists of a circular equatorial room, with a dome roof; and an arm containing the altitude and azimuth instrument, micrometers, &c.

The Avenue, an area of four acres, at the south end of the Broad Walk, has been laid out in flower gardens. Here the flowers are grouped in ribands, arranged with an artist's eye to colour, the gradations of silver-white, orange, purple, and scarlet seem designed to produce a prismatic effect. Instead of being mixed with other colours, the yellow *calceolaria* is massed here and there. The shrubs and foliage plants grow in great luxuriance. Nearly all the former are flowering shrubs. The specimens of *yucca recurva* and the standard hollies—green, golden, and silver, on straight stems—are especially noticeable. The *point d'appui* of the garden is a large *tazza* filled with flowers, and supported by four griffins. This is placed in the centre of a large curbed bed, and thirty smaller *tazzas* and vases are grouped in different parts of the garden. There are fine beds of foliage plants, such as the castor-oil plant, the *Ferdinandia eminens*, *Canna*, and *Centaurea*. The flowering shrubs are enclosed by a hornbeam hedge, trained as a trellis. A few Lombardy poplars, with their silvery flickers, break the monotony, and add greatly to the apparent extent of the narrow strip of ground. In the summer the flowers and shrubs, flanked by the horse-chestnuts in full blossom and the fine elms, make a glorious show. Here is a not unpicturesque red-brick gardener's cottage; and there have been added two fountains—one near Gloucester-gate, and the other in the middle of the Broad Walk, the space round the latter beautifully laid out with exotics.—*Abridged from the Times.*

Unlike the other parks, this contains within its boundaries several handsome private residences, surrounded by picturesque pleasure grounds. Each of the two elder parks is completely surrounded by houses, so that in one case we have 1000, and in another nearly 500 acres of trees, grass, and flowers in the interior of our immense metropolis, just as are the squares in other cities and towns.

**SOUTHWARK PARK.**—The Metropolitan Board, after eight years' deliberation, purchased the land for this new Park, at about 911*l.* per acre. The site consists of 65 acres of land in the parish of Rotherhithe, bounded by Jamaica Level, Union-road, the Rotherhithe New-road, and the South-Eastern Railway. Of the 65 acres, only 45 are devoted to the purposes of the Park: the remainder being appropriated to building plots, and a road to encircle the Park.

**ST. JAMES'S PARK** is in plan an irregular triangle, in form resembling a boy's kite, eighty-three acres in extent. It was originally a swampy field attached to St. James's Hospital: the ground was drained and enclosed by Henry VIII., who thus made it the pleasure-ground both of the Hospital—which he had converted into St. James's Palace—and of Whitehall, whose tilt-yard, cockpit, tennis-court, and bowling-green were on the eastern verge of the Park; but during the reigns of Elizabeth and the first two Stuarts it was little more than a nursery for deer, and an appendage to the tilt-yard. A procession of 15,000 citizens, "besides wifflers and other awayters," on May 8, 1539, passed "rounde about the Parke of St. James." In the reign of Charles I. a sort of royal menagerie took the place of the deer with which the "inward park" was stocked in the days of Henry and Elizabeth. Charles, as he walked through the Park to Whitehall on the fatal January 30, 1648–9, is said to have pointed to a tree which had been planted by his brother, Prince Henry, near Spring Gardens. Here Cromwell, as he walked with Whitelock, asked him, "What if a man should take upon him to be king?" to which the memorialist replied: "I think that remedy would be worse than the disease." Evelyn, in his *Sylva*, mentions the branchy walk of elms in the Park, "intermingling their reverend tresses."

Charles II. added thirty-six acres to the Park, extended the wall towards Pall Mall, had it planted by Le Nôtre, and, it is believed, by Dr. Morison, formerly employed by the Duke of Orleans. The original account for "workes and services" is signed by Charles himself. Pepys and Evelyn record the progress of the works:—

"16 Sept. 1660. To the Park, where I saw how far they had proceeded in the Pell Mell, and in making a river through the Park." "11 Oct. 1660. To walk in St. James's Park, where we observed the several engines at work to draw up water." "4 Aug. 1661. Walked into St. James's Park, and there found great and very noble alterations." "27 July, 1662. I to walke in the Parke, which is now every day more and more pleasant by the new works upon it." "1 Dec. 1662. Over the Parke, where I first in my life, it being a great frost, did see people sliding with their skatees, which is a very pretty art." "15 Dec. 1662. To the Duke (of York), and followed him into the Parke, where, though the ice was broken and dangerous, yet he would go slide upon his skatees, which I did not like; but he slides very well." "11 Aug. 1664. This day, for a wager, before the king, my lords of Castlehaven and Arran, a son of my Lord of Ormond's, they two alone did run down and kill a stout buck in St. James's Park."—*Pepys*. "19 Feb. 1666–7. In the afternoon I saw a wrestling match for 1000*l.* in St. James's Park, before his Maty, a world of lords, and other spectators, 'twixt the Western and Northern men. Mr. Secretary Morice and Le Gerard being the judges. The Western men won. Many greate sums were betted."—*Evelyn*.

The courtly Waller commemorates the Park, "as lately improved by his Majesty," 1661. Faithorne's plan, taken soon after the Restoration, shows the north half of the parade occupied by a square enclosure, surrounded by twenty-one trees, with one tree in the centre; and in the lower part of the parade broad running water, with a bridge of two arches in the middle. Later views show the Park with long rows of young elm and lime trees, fenced with palings, and occasionally relieved by some fine picturesque old trees.

*The Mall*, on the north side, a vista half a mile in length, was named from the game of "pale maille" played here: it was a smooth hollow walk planted on each side, and having an iron hoop suspended from the arm of a high pole, through which ring the ball was struck by a *maille*, or mallet. (See a drawing, *temp.* Charles II., engraved in Smith's *Antiquities of Westminster*, and a plate in Carter's *Westminster*.) Here Charles and his courtiers often played: the earth was mixed with powdered cockle-shells to make it bind; "which, however," says Pepys, "in dry weather turns to dust, and deads the ball." (See the account of the game, at p. 636.)

"2 April, 1661. To St. James's Park, where I saw the Duke of York playing at pall-mall, the first time that I ever saw the sport."—*Pepys*.

Cibber tells us that here he had often seen Charles playing with his dogs and feeding his ducks, which made the common people adore him.

*The Bird-cage Walk*, on the south side of the Park, nearly in the same line as the road which still retains the name, had in Charles II.'s time the cages of an aviary disposed among the trees which bordered it. The keeper of the Volary, or Aviary, was Edward Storey, from whom or his house is named *Storey's Gate*. The carriage-road between this and Buckingham Gate was, until 1828, only open to the Royal Family, and the Hereditary Grand Falconer, the Duke of St. Albans.

In the "inward park" was made a formal *Canal*, 2800 feet in length and 100 feet broad, running from the Parade to Buckingham House. On the south of this canal, near its east end, was the *Decoy*, a triangular nexus of smaller canals, where water-fowl were kept. Within the channels of the Decoy was *Duck Island*, of which Sir John Flock and St. Evremond were, in succession, appointed governors (with a salary) by Charles II.; and Queen Caroline is said to have given the sinecure to the thresher-poet, Stephen Duck: "the island itself," says Pennant, "is lost in the late improvements."

The Park, as well as the Palace, sheltered persons from arrest; for, in 1632, John Perkins, a constable, was imprisoned for serving the Lord Chief-Justice's warrant upon John Beard in St. James's Park. To draw a sword in the Park was also a very serious offence. Congreve, in his *Old Bachelor*, makes Bluffe say, "My blood rises at that fellow. I can't stay where he is; and *I must not draw in the Park*." Traitorous expressions, when uttered in St. James's Park, were punished more severely. Francis Heat was whipped, in 1717, from Charing Cross to the upper end of the Haymarket, fined ten groats, and ordered a month's imprisonment, for saying aloud in St. James's Park, "God save King James III., and send him a long and properous reign!" and, in 1718, a soldier was whipped in the Park for drinking a health to the Duke of Ormond and Dr. Sacheverell, and for saying "he hoped soon to wear his right master's cloth." The Duke of Wharton, too, was seized by the guard in St. James's Park for singing the Jacobite air, "The king shall have his own again." See Cunningham's *Handbook*, p. 260; where are printed, from the Letter-book of the Lord Steward's Office, two letters, dated 1677, sent with two lunatics to Bethlehem: Deborah Lyddal, for offering to throw a stone at the queen; and Richard Harris, for throwing an orange at the king, in St. James's Park.

Evelyn thus records the introduction of skating:—"Dec. 1, 1662. Having seene the strange and wonderful dexterity of the sliders on the new canal in St. James's Park, performed before their Majesties by divers gentlemen and others, with scheets after the manner of the Hollanders, with what swiftness as they pass, how suddainly they stop in full career upon the ice, I went home." Some of the cavaliers had, probably, acquired the art when seeking to while away a Dutch winter; and but for the temporary overthrow of the monarchy, we should not thus early have had skating in England. The Park soon became a resort for all classes, since, in 1683, the Duke of York records, Dec. 4 (a very hard frost), "This morning the boys began to slide upon the canal in the Park."

Evelyn, in 1664, went to "the Physique Garden in St. James's," where he first saw "orange-trees and other fine trees." He enumerates in the menagerie, "an ornocratylus, or pelican; a fowle between a storke and a swan; a melancholy water-fowl, brought from Astracan by the Russian ambassador; a milk-white raven; two Balearian cranes," one of which had a wooden leg "made by a soulder:" there were also "deere of severall countries, white, spotted like leopards; antelopes, an elk, red deer, roebucks, staggs, Guinea goates, Arabian sheepe, &c." There were "withy-potts, or nests, for the wild fowle to lay their eggs in, a little above y<sup>e</sup> surface of y<sup>e</sup> water."

"25 Feb. 1664. This night I walk'd into St. James his Parke, where I saw many strange creatures, as divers sorts of outlandish deer, Guiny sheepe, a white raven, a great parrot, a storke. . . . Here are very stately walkes set with lime trees on both sides, and a fine pallmall."—*Journal of Mr. E. Browne, son of Sir Thomas Browne*.

Evelyn, on March 2, 1671, attended Charles through St. James's Park, where he saw and heard "a familiar discourse between the King and Mrs. Nelly, as they called an impudent comedian; she looking out of her garden on a terrace at the top, and the

King standing on the green walk under it." "Of the mount, or raised terrace, on which Nelly stood, a portion may still be seen under the park-wall of Marlborough House." (Cunningham's *Nell Gwyn*, p. 118.) In the royal garden where Charles stood, and which was then the northern boundary of the Park, we find Master Pepys, in his *Diary*, stealing apples like a schoolboy. Pepys also portrays a court cavalcade in the Park, all flaunting with feathers, in which Charles appears between the Countess of Castlemaine and the Queen, and Mrs. Stewart.

Succeeding kings allowed the people the privilege of walking in the Mall; and the passage from Spring Gardens was opened in 1699 by permission of King William. Queen Caroline, however, talked of shutting up the Park, and converting it into a noble garden for St. James's Palace: she asked Walpole what it might probably cost; who replied, "Only three crowns." Dean Swift, who often walked here with the poets Prior and Rowe, writes of skating as a novelty to Stella, in 1711: "Delicious walking weather," says he; "and the Canal and Rosamond's Pond full of rabble sliding, and with skaitts, if you know what it is." The gloomy *Rosamond's Pond*, of oblong shape, and overhung by the trees of the Long Avenue, is mentioned in a grant of Henry VIII. It occurs as a place of assignation in the comedies of Otway, Congreve, Farquhar, Southern, and Colley Cibber; and Pope calls it "Rosamonda's Lake." Its name is referred to the frequency of love-suicides committed here. The pond was filled up in 1770, when the gate into Petty France was opened for bringing in the soil to fill up the pond and the upper part of the canal. Hogarth painted a large view and a cabinet view of Rosamond's Pond: for the latter he received but 1*l.* 7*s.*, the receipt in the handwriting of Mrs. Hogarth. In a house belonging to the Crown, at the south-east corner of Rosamond's Pond, was born George Colman the Younger, who describes the snow-white tents of the Guards, who were encamped in the Park during the Riots of 1780. *The Wellington Barracks*, built near the site of Rosamond's Pond, were first occupied by troops on March 1, 1814; the Military Chapel was opened May 1, 1838.

The trees have been thinned by various means. Dryden records, by a violent wind, February 7, 1698-9: "The great trees in St. James's Park are many of them torn up from the roots, as they were before Oliver Cromwell's death, and the late Queen's." The uniformity of Bird-cage Walk has been spoiled by the new road. Samonelle, in his *Compendium of Entomology*, figures a destructive moth "found in July, in St. James's Park, against trees."

St. James's Park was a favourite resort of Goldsmith, and is thus characterized by him:—

"If a man be splenetic, he may every day meet companions on the seats in St. James's Park, with whose groans he may mix his own, and pathetically talk of the weather." (*Essays*.) The strolling player takes a walk in St. James's Park, "about the hour at which company leave it to go to dinner. There were but few in the walks; and those who stayed, seemed by their looks rather more willing to forget that they had an appetite, than gain one." (*Essays*.) And dinnerless, Jack Spindle mends his appetite by a walk in the Park.

After the death of Charles II., St. James's Park ceased to be the favourite haunt of the Sovereign, but it continued to be the promenade of the people; and here, in the summer, till early in the present century, gay company walked for one or two hours *after dinner*; but the evening dinner robbed the Park of this charm, and the Mall became principally a thoroughfare for busy passengers.

"My spirits sunk, and a tear started into my eyes, as I brought to mind those crowds of beauty, rank, and fashion, which, till within these few years, used to be displayed in the centre Mall of this Park on Sunday evenings during the spring and summer. How often in my youth had I been a delighted spectator of the enchanted and enchanting assemblage! Here used to promenade, for one or two hours after dinner, the whole British world of gaiety, beauty, and splendour. Here could be seen in one moving mass, extending the whole length of the Mall, 5000 of the most lovely women in this country of female beauty, all splendidly attired, and accompanied by as many well-dressed men. What a change, I exclaimed, has a few years wrought in these once happy and cheerful personages. How many of those who on this very spot then delighted my eyes, are now mouldering in the silent grave!"—Sir Richard Phillips's *Morning's Walk from London to Kew*, 1817.

For the Peace Commemoration Fête, on August 1, 1814, the Mall and Bird-cage Walk were lighted with Chinese lanterns; a Chinese bridge and seven-storied pagoda were erected across the canal: they were illuminated with lamps, and fireworks were discharged from them, which set fire to the pagoda, and burnt its three upper stories, when two persons lost their lives. Canova, when asked what struck him most forcibly during his visit to England, is said to have replied, "that the trumpety Chinese bridge

in St. James's Park should be the production of the government, whilst that of Waterloo was the work of a private company."—*Quarterly Review*.

*The State-Paper Office*, further south, occupying part of the site of the house of Lord Chancellor Jeffreys, was built by Sir John Soane in 1833: it was his latest work, and resembled an Italian palazzo: it was taken down for the site of the new FOREIGN AND INDIA OFFICES. At No. 17, Duke-street, died in 1849, aged 81, Sir Marc Isambard Brunel, the engineer of the Thames Tunnel.

Upon the south side of the Park, too, is Milton's garden-house, in Petty France. Hazlitt lived in this house in 1813, when Haydon was one of a christening-party of "Charles Lamb and his poor sister, and all sorts of odd clever people, in a large room, wainscoted and ancient, where Milton had meditated." (Haydon's *Autobiography*, vol. i. p. 211.) In the garden-wall is a doorway, now blocked up, but which once opened into the Park, and was probably that used by Milton in passing from his house to Whitehall. In Queen-square-place, and looking upon the garden-ground of Milton's house, was the house of Jeremy Bentham, who died here in 1832.

The hints for supplanting the forest-trees which skirt the Park, by flowering shrubs, and dressing the ground in a gayer style, so as to convert even the gloomy alleys of St. James's Park into a lively and agreeable promenade, were first published in "A Letter to the Rt. Hon. Sir Charles Long," &c., 1825.

In 1827 was commenced the relaying out of the inner Park. The straight canal was altered and extended to a winding lake, with islands of evergreens: at the west end was a fountain. The borders of the principal walk are planted with evergreens, which are scientifically labelled; some of the fine old elms remain. The glimpses of grand architectural objects from this Park are very striking, and include the towers of Westminster Abbey and the new Houses of Parliament; the extensive front of Buckingham Palace; the York Column, rising from between terraces of mansions; and the Horse-Guards, terminating the picturesque vista of the lake; although the ornamental effect is spoiled by an ugly engineering bridge. Upon the eastern island is the Swiss cottage of the Ornithological Society, built in 1841 with a grant of 300*l.* from the Lords of the Treasury: the design is by J. B. Watson, and contains a council-room, keeper's apartments, steam-hatching apparatus; contiguous are feeding-places and decoys; and the aquatic fowl breed on the island, making their own nests among the shrubs and grasses. In 1849 an experimental crop of Forty-day Maize (from the Pyrenees) was successfully grown and ripened in this Park. For the privilege of farming the chairs, 25*l.* is paid annually to the office of Woods and Forests.

The fine old trees of the grounds of Carlton House formerly overhung the road by the park-wall, now the site of the Pæstum-Doric substructure of Carlton-house-terrace; the opening in which to the York Column was formed by command of William IV., as had been the Spring Garden gate by William III. *Milk Fair*, leftward of this gate, commemorated by Tom Brown, in 1700, has disappeared. The vista of the Mall, which consists of elms, limes, and planes, is terminated by the grand front of Buckingham Palace.

On the Parade is the immense mortar cast at Seville by order of Napoleon, employed by Marshal Soult at the siege of Cadiz in 1812, and abandoned by the French army in their retreat from Salamanca: it was presented by the Spanish Cortes to the Prince Regent. The gun-metal bed and carriage were cast at Woolwich in 1814, and consist of a crouching dragon, with upraised wings and scorpion-tail, involving the trunnions; it is allegorical of the monster Geryon, destroyed by Hercules. The mortar itself is 8 feet long, 12 inches diameter in bore, and has thrown shells 3½ miles: it weighs about 5 tons. On the pedestal are inscriptions in Latin and English. When Soult was in England, in 1838, he good-humouredly recognised his lost gun. Here was also formerly a small piece of artillery which had been taken from Bonaparte at Waterloo.

Upon the Parade was marshalled the State Funeral Procession of the great Duke of Wellington, November 18, 1852. The body was removed from Chelsea Hospital on the previous midnight, and deposited in the Audience-Chamber at the Horse-Guards. Beneath a tent upon the Parade-ground was stationed the Funeral Car, whereon the coffin being placed, and the command given, the *cortège*, in slow and solemn splendour, moved down the Mall past Buckingham Palace, whence the procession was seen by Her Majesty and the Royal Family.

VICTORIA PARK, Bethnal-green, equal to the entire area of Kensington Gardens, originated as follows:—In the 4th and 5th years of Her present Majesty's reign, an Act was passed to enable the Commissioners of Woods and Forests to complete the sale of York House, and to purchase with the proceeds a Royal Park. The Duke of Sutherland paid 72,000*l.* for the remainder of the lease of York House, and this money was applied to the purchase of about 290 acres of land, situated in the parishes of St. John, Hackney; St. Matthew, Bethnal-green; and St. Mary, Stratford-le-Bow, county of Middlesex. Nearly one-third of the acreage mentioned is taken for building ground; the rest is Victoria Park. Its site had been previously market-gardens and brickfields. The ornamental lake is made over the rough brickfield, near to which stood Bishop Bonner's famous hall. The Park is bounded on the north side by Hackney; on the south by Sir G. Duckett's Canal, running nearly east and west; and on the west by the Regent's Canal. It is divided into two portions—the Ornamental or West Park, and the East Park. In the former there is an ornamental lake about ten acres of surface, with three islands. Here boats are hired out; and there are waterfowl of various kinds. On the south-west side of the lake there is a fine avenue of elm trees, with a carriage-drive and shady walks; and an arcade, furnished with seats. On the north-west end of the lake is a walk called "The Vale," which is planted with choice trees, shrubs, and flowers. Close adjacent are the greenhouses and pits for raising and wintering the plants. In this portion of the Park there are several separate flower-gardens, riband borders 300 yards long, and mixed flower-beds. The East Park is used for games, and contains two bathing lakes, which are well supplied with water. These are much frequented; as many as 7000 persons often bathe here in one morning. The extent of these two lakes is about six acres. At the extreme end of the Park is the cricket-ground, of 35 or 40 acres. Here 60 or 80 wickets are often pitched on Saturdays. About one-third of the way through the Park is the superb Victoria Drinking-fountain, presented by Miss Burdett Coutts, described at page 358; and, to add to the means afforded for public exercise and recreation, there is a gymnasium, as there are also swings and merry-go-rounds. The Park has often 30,000 visitors in a single day. Wednesday afternoon is the children's day. In the neighbourhood has been swept away a wretched village of hovels, once known as Botany Bay, from so many of its inhabitants being sent to the *real place*. Formerly this Park was on Sundays the great resort of controversialists, especially such as believe in all manner of unbelief, and who attracted here congregations of different persuasions; but the preaching of so many of them being language of the most blasphemous description, in 1856, all preaching here was forbidden by authority.

In fine weather, when the band plays, over 100,000 persons are frequently collected in this Park. The people are orderly, most of them being of the humbler classes, and their appreciation of the flowers is quite as keen as that of frequenters of the West-end parks. Some of the Spitalfields weavers have a great fondness for flowers, and contrive somehow or other in the most unlikely places to rear very choice varieties. In small, wretched-looking yards, where little air and only the mid-day sun can penetrate, you may see patches of garden, evidently tended with uncommon care, and yielding to their cultivators a fair reward in fragrance and in blossom. Some of the weavers even manage by bits of broken glass and a framework which just holds together, to put up something which does duty as a greenhouse; and in this triumph of patience and ingenuity they spend much of their leisure, happy when they can make up a birthday bouquet for some friend or relation. The flowers in the neighbouring park, with their novel grouping and striking contrasts of colour, are, of course, a continual fund of pleasure to these poor artisans, and gladden many a moment when perhaps work is not too plentiful and home thoughts are not very happy. In Victoria Park the plants and flowers are labelled in letters which he who walks may read, without need of getting over fence or bordering. A smaller lake than that in which the boating and the bathing go on is devoted to yacht-sailing. This amusement seems almost confined to East London; and here on a summer evening, when a cap-full of wind is to be had, you may see the lake whitened by forty or fifty toy boats and yachts, of all rigs and sizes, while here and there a miniature-steamboat is puffing and panting. There is even a yacht-club whose members compete with their toy-yachts for silver cups and other prizes. The expense of keeping up a yacht here is not considerable, and the whole squadron may be laid up until wanted in a boathouse provided for the purpose. But the matches and trials of these tiny craft are a special attraction of the Park, and draw together every evening hundreds of people. Ample space is available for cricket; and in the two gymnasia candidates for swinging, jumping, and climbing appear to be never wanting.—*Times, September, 1864.*

PARLIAMENT HOUSES, THE,

STYLED also "New Westminster Palace," occupy the site of the Royal Palace of the monarchs of England, from Edward the Confessor to Queen Elizabeth.

*Westminster Palace* is first named in a charter of Edward the Confessor, "made" soon after 1052: here the Confessor died, Jan. 14, 1066. On the Easter succeeding, King Harold came here from York. William the Norman held councils here; and in 1069 Alfric, Abbot of Peterborough, was tried before the king *in curia* at Westminster,—this being one of the first records of the holding of a *law-court* on this spot. William Rufus added the *Great Hall*, wherein he held his court in 1099; as did also Henry I. Stephen founded the palace chapel, which was dedicated to St. Stephen. In the reign of Henry II., Fitzstephen records: "on the west, and on the bank of the river, the Royal Palace exalts its head, and stretches wide, an incomparable structure, furnished with bastions and a breastwork, at the distance of two miles from the City." The Close Rolls, in the Tower of London, contain many curious entries concerning the palace in the time of John and Henry III.: here, in a great council, Henry confirmed the *Magna Charta* and the *Charta de Foresta*: in his reign, also, the gibbet was removed from the palace. In 1238 the whole palace was flooded by the Thames, and boats were afloat in the Great Hall. There are numerous records in this reign of painting and decorating the palace, storing its cellars with wine, &c. (See PAINTED CHAMBER, p. 625.) Of the repairs of the mews, the new buttery and kitchen, and the rebuilding and painting of *St. Stephen's Chapel*, in the reign of Edward I., there are minute accounts. In 1298 the palace was nearly destroyed by fire, but was restored by Edward II. *St. Stephen's Chapel* was completed by Edward III. The poet Chaucer was clerk of the palace works in the reign of Richard II., who rebuilt Westminster Hall nearly as we now see it. In 1512 a great part of the palace was "once again burnt, since which time it has not been re-edified: only the Great Hall, with the offices near adjoining, are kept in good repairs; and it serveth, as before it did, for feasts at coronations, arraignments of great persons charged with treasons, keeping of the courts of justice, &c.; but the princes have been lodged in other palaces about the City, as at Baynard's Castle, at Bridewell, and Whitehall (sometimes called York Place), and sometimes at St. James's." (Strype's *Stow's London*, vol. ii. p. 628, edit. 1755.) Some buildings were added by Henry VIII., who is supposed to have built the Star Chamber; a portion of which, however, bore the date 1602. Parliaments were held in Westminster Hall *temp.* Henry III., and thenceforth in the Painted Chamber and White Chamber. After the Suppression, the Commons sat in *St. Stephen's Chapel*, until its destruction by fire Oct. 16, 1834, with the House of Lords, and the surrounding Parliamentary buildings. The scene of the conflagration was painted by J. M. W. Turner, R.A.

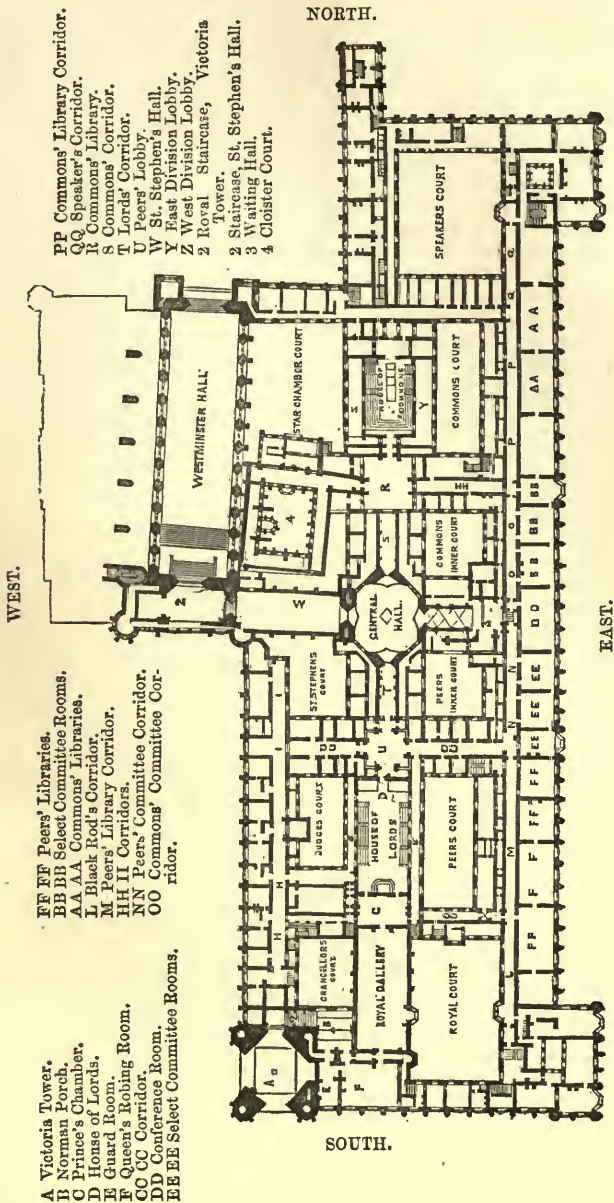

The demesne of the Old Palace was bounded on the east by the river Thames; on the north by the Woolstaple, now Bridge-street; on the west by the precincts of *St. Margaret's Church* and *Westminster Abbey*, behind *Abingdon-street*; and on the south by the line of the present *College-street*, where formerly ran a stream, called the *Great Ditch* (now a sewer), outside the palace garden-wall.

Among the more ancient buildings which existed to our time, was the *Painted Chamber*. Next was the *Old House of Lords* (the old Parliament Chamber), rebuilt by Henry II. on the foundations of Edward the Confessor's reign; the walls were nearly seven feet thick, and the vaults (Guy Fawkes' cellar) had been the kitchen of the Old Palace: this building was taken down about 1823, prior to the erection of the Royal Gallery and Entrance, by Soane, R.A. Southward was the *Prince's Chamber* (then also demolished), with foundations of Edward the Confessor's time, and a superstructure with lancet-windows, *temp.* Henry III.: the walls were painted in oil with scriptural figures, and hung with tapestry representing the birth of Queen Elizabeth. Next was the *Old Court of Requests*, supposed to have been the Great Hall of the Confessor's palace: this was, until 1834, the House of Lords, and was hung with tapestry representing the defeat of the Spanish Armada in 1588: it was destroyed in the Great Fire, after which the interior was refitted for the House of Commons.

The Armada Tapestry was woven by Spiering, from the designs of Henry Cornelius Vroom, at Haarlem, for Lord Howard of Effingham, Lord High Admiral of the English fleet which engaged the Armada. It was sold by him to James I., and consisted originally of ten compartments, with borders containing portraits of the officers of the English fleet. These hangings were engraved by Pine in 1739.

*St. Stephen's Chapel* had its beautiful architecture and sumptuous decoration hidden

GROUND-PLAN OF THE NEW HOUSES OF PARLIAMENT.

until the enlargement of the interior in 1800, when its painting, gilding, and sculpture, its traceried and brilliant windows, were discovered. Among the mural paintings were the histories of Jonah, Daniel, Jeremiah, Job, Tobit, Judith, Susannah, and of Bel and the Dragon; the Ascension of Christ, and the Miracles and Martyrdom of the Apostles; and in the windows were the stories of Adam and Eve, and of Noah and his family, of Abraham, Joseph, and the Israelites; and of the Life of the Saviour, from his baptism to his crucifixion and death. Among the decorations were figures of angels and armed knights, Edward III. and his family, and heraldic shields. The jewels, vestments, and furniture of the chapel were very superb. The *Cloisters* were first built in 1356, south of the chapel, on the spot subsequently called Cotton Garden.\* The *Crypt*, or under-chapel of St. Stephen is described at p. 304.

On the south side, probably, was the small chapel of *St. Mary de la Pewe*, or Our Lady of the Pew; wherein Richard II. offered to the Virgin, previously to meeting the insurgents under Wat Tyler in Smithfield, in 1381. *Westminster Hall* will be described hereafter. Upon its western side were built the Law Courts, by Soane, R.A., upon the site of the old Exchequer Court, &c. On the east side of New Palace-yard was an arch, *temp.* Henry III., leading to the Thames; and the old Exchequer buildings and the Star Chamber, described at p. 450. On the northern side of New Palace-yard, directly fronting the entrance-porch of the Great Hall, on a spot subsequently hidden by the houses on the terrace, stood the famous *Clock-tower*, built and furnished with a clock, *temp.* Edward I., with a fine of 800 marks levied on Chief-Justice Sir Ralph de Hingham for altering a record: the keepers of this clock-tower were appointed by the Sovereign, and were paid 6*d.* a day at the Exchequer. The tower was taken down about 1707; and its bell, "Great Tom of Westminster," was subsequently re-cast (with additional metal) for the great bell of St. Paul's Cathedral.

Hatton describes the House of Commons, altered by Sir Christopher Wren, in 1706, as "a commodious building, accommodated with several ranks of seats, covered with green cloth (baize?), and matted under foot, for 513 gentlemen. On three sides of this house are beautiful wainscot galleries, sustained by cantaleevers, enriched with fruit and other carved curiosities."

Of the House of Lords, in 1778, we have a portion in Copley's fine picture of the fall of the great Earl of Chatham. Of the several *Gates* to the old palace, the only one of which we have any record is that begun by Richard III. in 1484, at the east end of Union-street, and taken down in 1706; and a century later, in a fragment of this gate built into a partition-wall, was found a capital, sculptured with William Rufus granting a charter to Gislebertus, Abbot of Westminster: this capital was sold by Mr. Capon to Sir Gregory Page Turner, Bart., for 100 guineas. A plan of the old palace, measured 1793-1823, is engraved in *Vetusta Monumenta*, vol. v.; in J. T. Smith's *Antiquities of Westminster*; and in Brayley and Britton's *Westminster Palace*, 1836, admirably illustrated, from drawings by R. W. Billings.

For rebuilding, in 1836 was selected from 97 sets the design of Charles Barry, R.A. The coffer-dam for the river-front was commenced 1837; the river-wall 1839; and, on April 27, 1840, was laid the first stone, at the north end of the Speaker's house. The exterior material is fine magnesian limestone, from Anston, in Yorkshire; and Caen stone for the interior; the river-terrace is of Aberdeen granite; the whole building stands on a bed of concrete 12 feet thick. The vast pile covers about eight acres, and has four principal fronts, the eastern or river being 940 feet in length. The plan contains 11 open quadrangles or courts, which, besides 500 apartments and 18 official residences, flank the royal state-apartments, the Houses of Lords and Commons, and the great Central Hall. The interior walls are fine brick; the bearers of the floors are cast-iron, with brick arches turned from girder to girder; the entire roofs are of wrought-iron covered with cast-iron plates galvanized; so that timber has not been used in the carcasses of the entire building; and the principle of making the Palace as nearly fire-proof as possible in the roofs has been thoroughly carried out.

\* Sir Robert Cotton had a house and garden abutting against the Painted Chamber; and it was there that his collection of MSS., now in the British Museum, was originally stored. In Cotton House in 1820, were lodged the Italian witnesses against Queen Caroline on her Trial.

The New Palace is the largest public edifice which has been erected for several centuries in England; and in the arrangement of its apartments for the transaction of public business, in its lighting, ventilation, fire-proof construction, supply of water, &c., it is the most perfect building in Europe. The style is Tudor (Henry VIII.), with picturesque portions of the town-halls of the Low Countries, and three grand features: a *Clock Tower* at the northern extremity, resembling that of the Town-house at Brussels; a great *Central Hall*, with an open stone lantern and spire; and the *Royal* or *Victoria Tower*, at the south-west angle.

In 1841 was issued the *Finé Arts Commission* for rebuilding the Houses of Parliament; and in 1843 the Commission to superintend the completion of the New Palace. Certain portions of the external stonework having decayed, a Commission was issued to investigate the cause; competing chemical processes were adopted as remedies by hardening or indurating the stone, which had been injudiciously selected: time can only decide the merits of these processes. For details, see *Year-Book of Facts*, 1861 and 1862.

The vast edifice covers at least twice the site of the old Palace of Westminster, about half the new ground occupied being taken from the Thames. *The East or River Front* has at the ends projecting wings, each 120 feet in length, with towers of beautiful design, leaving between them a terrace 700 feet long, and 33 feet wide. The entire length is 940 feet. The wing-towers have crested roofs, and open-work pinnacles, which, with those of the bays, carry gilded vanes. Between the principal and one-pair floors is a rich band of sculpture, composed of the royal arms of England in each reign, from William I. to Queen Victoria. The band below the principal floor is inscribed with the date of each Sovereign's accession and decease; and the panels on each side of the coat-of-arms have sceptres and labels, with badges and inscriptions. In the parapet of each bay is a niched figure of an angel bearing a shield. The carved panels of the six oriel windows have the arms of Queen Victoria, to indicate that the building was erected in her reign. The wing-towers, with their octagonal stone pinnacles and perforated iron ornaments at their angles and crests, remind one of the picturesque roofs of the châteaux and belfry-towers of the Low Countries.

*The North Front* has bays and buttresses similar to those of the River Front; the bands are sculptured with the quarterings of the kings of England between the Heptarchy and the Conquest, inscriptions and dates of accession, &c.; while the niches between the windows in each bay contain effigies of the Sovereigns whose arms are below. This front terminates at the west with the *Clock Tower* and turreted lantern spire. The height of this tower is 316 feet from high-water mark (Trinity standard) to the top of the sceptre on its roof. The clock has the largest dials in the world—that is, where the clock is an integral portion of the design; the only larger one being that of Mechlin, the dial of which is of open metal-work, applied over, but unconnected with the architecture. The roof is fully ornamented and finished with gilding and colour to an extent not elsewhere to be seen in this country. For this tower two great hour-bells were provided; both of which were broken, as described at p. 44. The weight of gold-leaf used in decorating the clock-tower up to June 30, 1857, was about 95½ ounces; cost of gold-leaf 890*l.* 6*s.* 3*d.*; wages of artificers, 229*l.* 11*s.* 3*d.*; completion of the work, about 400*l.* The gold is pure, and treble the thickness of ordinary gold-leaf.

The Clock was made by Mr. Dent, junior, from the designs of Mr. E. Denison, about 1855. The four dials are 22 feet in diameter, and are considered to be the largest in the world, with a minute-hand, which, on account of its great length, velocity, weight, friction, and the action of the wind upon it, requires at least twenty times more force to drive it than the hour-hand. This clock goes for 3 days. The great wheel of the going part is 27 inches in diameter; the pendulum is 15 feet long, and weighs 680 pounds; and the scape-wheel, which is driven by the musical-box spring, weighs about half an ounce. All the wheels, except the scape-wheel, are of cast-iron. The barrel is 23 inches in diameter, but only 14 inches long, as it does not require a rope above a quarter of an inch thick. The second wheel is 12 inches in diameter. The great wheels have all 180 teeth, the second wheel of the hour striking part has 105, and a pinion of fifteen. The great wheels in the chiming part of the clock are 33½ inches in diameter. The clock is said to be at least eight times as large as a full-sized cathedral clock. It occupies its keepers two hours a week in winding it up. It goes with a rate of under one second a week, in spite of any atmospheric changes. (*Curiosities of Clocks and Watches*, p. 205.) It reports its own time to Greenwich by electrical connexion, and the clockmaker who takes care of it receives Greenwich time by electricity, and sets the clock right whenever its error becomes sensible, which seldom has to be done more than once a month. It may be relied on within less than one second a week, which is seven times greater accuracy than was required in the original conditions. The entire machinery of the clock occupies a space 16 feet long, by 5 feet in width, and its weight is over four tons. An arrangement is also made which will admit of the wheels being taken out of the frame singly with-

out disturbing the others, and the clock is fitted with the patent gravity escapement of Mr. Dent. The barrel is so constructed as that the hands will keep going while the clock is being wound up. The lines of the clock are of patent wire rope, and the pallets of the escapement are jewelled with sapphires, and not with agate, as is usually the case. The minute-hand is 16 feet long, and, notwithstanding that it is made of copper and beaten out as thin as is consistent with its length and strength, it still weighs 2 cwt. The hour hand is nine feet long, and is fastened with the minute-hand to the centre of the dial by a huge gilt rose (part of the arms of Westminster), which is about the size of a small dining-table. All the interstices between the figures and work on the clock face are glazed in with enamelled glass, so as to present the appearance of a white dial in the day and allow it to be illuminated during the night. Each dial is lit with 60 gas jets, which are turned on and off by a peculiar adaptation of the clock-work. The light in the dial thus wanes as day dawns and increases with the fading twilight. The cost of the gas for this is 500*l.* per annum. The clock, altogether, cost more than 22,000*l.*

The *South Front* resembles the north, has similar decorations chronologically arranged, and terminates westward with the *Victoria Tower*.

*Saxon Kings and Queens at the South Front*, commencing at the wing tower, and proceeding from base to summit in each bay:—Agatha, Harold II., Editha, Edward III., Hardicanute, Harold, Emma, Canute, Elgiva, Edmund, Emma, Ethelred, Edward II., Elfleda, Edgar, Edwin, Edred, Elgiva, Edmund, Athelstan, Elfleda, Edward I., Elwitha, Alfred, Ethelred, Ethelbert, Ethelbald, Judith, Egbert, Ethelwulf; two kings of Mercia, Northumberland, East Anglia, Wessex, Essex, Kent, and Sussex; the whole sculptured in stone by John Thomas.

The *Victoria Tower* is the largest and highest square tower in the world, being 75 feet square, and 336 feet high to the top of the pinnacle, and over 400 feet to the top of the flag-staff. The foundation is of solid concrete, 9 feet 6 inches deep, with solid brickwork over that, the whole inclosed and strengthened by piling. The building was commenced April 2, 1842, and grew at the rate of 23 feet per year until completed; it presses upon the foundation with a weight little short of 30,000 tons. The walls are 12 feet thick up to the base of the first tier of windows, and thence 6 feet. The storied windows are 44 feet high by 32 feet wide, and 5 feet deep. The figures, which look so small and infantine in the niches on the sides, are colossal masses, nearly 10 feet high, and weighing many tons. The supporters of the coats of arms of our kings are as large as horses; and a well staircase of iron winds up in apparently endless spirals, till the circling balustrade is merged together in the long perspective, terminating at a dim bluish spot no bigger than your hand, which marks the outlet on to the tower-roof. A person standing on the ground under the centre of the tower can see up at a glance, as through a telescope, from the bottom to the top. The tower is fireproof, and was intended to be used as a grand repository for the State papers, records, and muniments of the nation; and for this purpose it is divided into eleven stories, each of which, with the exception of the basement story and the first floor immediately over it, contains sixteen fireproof rooms. The roof, though made as light as is consistent with its safety from the wind, nevertheless weighs upwards of 400 tons. That little pierced parapet, which from the street looks scarce sufficient to prevent a man from falling over, is actually sixteen feet high. The lions and crowns on its battlemented top are more than six feet high, while even the gilt tops to the four turrets, which from the ground are hardly distinguishable, are wrought-iron crowns 5 feet 2 inches in diameter, and weighing one ton each. The roof, sixteen feet above the parapet, is surrounded with a gilt railing six feet high, the four corners are guarded by four stone lions twenty feet high; and from the base of the corners spring four cast-iron flying arched buttresses, formed in the centre in a kind of crown about thirty feet above the roof. Here is the colossal flagstaff, of rolled sheet iron bolted together, 110 feet long, 3 feet in diameter at the base, and weighing between sixteen and eighteen tons. The flag, 60 feet long by 45 feet broad, required upwards of 400 yards of bunting to make it; it has to be hauled up by machinery. The little turrets at the corners reach ninety feet above the roof. They are divided into two stories, the first or lower being about sixty feet above the roof; and here a low balcony, with stone work breast-high, allows the visitor to come right out upon the outside of the turret and walk around it. The view almost repays the effort made to reach it. All London lies beneath you, looking like a diminished and smoky model of itself, in which somehow the streets seem broader and more empty, and the houses lower and more regular, than they ever appear to those on *terra firma*. On a clear day not only all London can be seen from the summit of these pinnacles, but even all its suburbs, from Hounslow to Shooter's-hill on one side, and from Harrow to the red bleak-looking downs beyond Addington on the other. The portal is of sufficient capacity to admit the Royal State

coach to be driven to the foot of the staircase within the tower. Colossal statues of the Lion of England, bearing the National Standard, flank the portal; while carving, rich and emblematical, adorns the walls and groined roof of the interior. High above a rich quatrefoil band, differing in design, and containing heraldic badges, foliage, and initials, comes the first tier of windows, with their rich tracery and lofty two-centred arches. Above these windows are strange devices in the way of shields and supporters, which here and there show the three lions *passant guardant*, supported by such animals as are unknown to modern English heraldry. Nevertheless, these are the Royal arms of England's former kings. Within the perch and over the archway on the east side are niches, containing statues of the Guardian Saints of the United Kingdom—St. George of England, St. Andrew of Scotland, and St. Patrick of Ireland; while the similar archway on the north side, which forms the access to the Royal staircase has niches of accordant design, one containing a large statue of her Majesty Queen Victoria in the centre, while those on either side contain allegorical figures of Justice and Mercy. Recurring to the exterior of the Tower, immediately over the above great entrance, as well as on the south side, is a row of rich niches, the centre one higher than the rest, and containing a statue of the Queen; while the others are occupied by her Majesty's father and mother, the late Duke and Duchess of Kent, and other members of the Royal Family. (Abridged chiefly from *The Times* journal.)

*The West Front*, towards New Palace-yard, is composed of bays divided by bold buttresses, terminating in rich pinnacles. This land-front will hereafter embrace the area of the present Law Courts. The niches of the buttresses will contain statues of eminent commoners. The portion of this front complete, is that opposite Henry the Seventh's Chapel, called St. Margaret's Porch; and the gable of Westminster Hall, which has been advanced southward, the great window being replaced, thus forms St. Stephen's Porch, with much of the varied and piquant character of the Town-hall of Louvain. The turrets contain statuettes of Edward III. and Queen Philippa, St. George and St. Andrew, Henry VII. and Elizabeth of York, St. Patrick and St. Stephen. In the gable are statuettes of Edward the Confessor and William Rufus, William IV. and Queen Victoria; and this façade is richly sculptured with the Royal arms, the separate insignia of England, Ireland, and Scotland, badges, &c. The whole composition should be seen from Poet's Corner, and it combines well with Henry the Seventh's Chapel.

Between the Victoria Tower and St. Stephen's Porch is a range of buildings four stories in height, with a central clock-tower 120 feet high. Besides the great towers already named, oriels and turrets add effect to the sky-line of the building, whether viewed from the exterior or from the courts.

The whole front from St. Stephen's Porch to Victoria Tower is appropriated for offices of the House of Peers, including peers' private entrance and staircase, committee-rooms, waiting-rooms, and the numerous other apartments required. It also includes a large room to be called the *Peers' Robing-Room*, which is to be decorated in fresco by Mr. Herbert, R.A. This is lighted from the top, and fitted up in oak, as is the case with the other apartments. The frescoes will be eight in number, of large size,—the subjects Scriptural.

"The Palace of Westminster stands alone and matchless in Europe among the architectural monuments of this busy age. From the border of the Thames, from St. James's Park or Waterloo-place, from Piccadilly, or the bridge across the Serpentine, the spectacle of that large square tower, of the central needle, and far away of the more fantastic *Beffroi*—all grouping at every step in some different combination—stamp the whole building as the massive conception of a master mind."—(*Saturday Review*.)

One of the *Public Entrances to the Houses of Parliament* is by *St. Stephen's Staircase*, ascending from St. Margaret's Porch: the bosses, panels, and decorative work of the ceiling and the supporting arches are very elaborate; the walls will be embellished with frescoes. Westminster Hall forms the grand vestibule of approach from the north. About midway, on the east side of the Hall, is the *Members' Entrance to the House of Commons*, through the restored *Cloisters of St. Stephen's*: the fan-tracery of the roof, and a small projecting chapel or oratory, are very beautiful. A cloister built by Henry VIII. has been restored, as a relic of English mediæval art. An upper

cloister has been added, by which is a staircase to the House of Commons. Returning to Westminster Hall, at the south end is a flight of steps to *St. Stephen's Porch*, 65 feet in height: the great central window is 48 feet high and 25 feet wide, and is filled with stained glass, by Hardman, charged with the insignia of the Sovereigns of England. On the right is the entrance from *St. Stephen's Staircase*, and on the left is a superb doorway leading into *St. Stephen's Hall*, 95 feet long by 30 feet wide, and 56 feet high, reared upon the ancient Crypt of *St. Stephen's*, which has been restored for use as the Palace Chapel. From the floor of *St. Stephen's Hall* there is no one step throughout the whole extent,—*all is of one level*. Next is

*The Central Hall*, an octagon 70 feet square, with the largest span of stone Gothic roof, of similar form, in Europe: the height from the floor to the key-stone is 75 feet, and the bosses measure 4 feet in diameter. The eight sides contain alternately great doorways and windows, the latter to be filled with stained glass; and the niches between the arches contain portrait and costume statues of the English Sovereigns and their Queens, sculptured in Caen stone by John Thomas. Among the most striking are William I.; Henry I.; Richard I. and his Queen; King John; Eleanor Queen of Edward I.; Edward III. and his Queen Philippa; Henry V. and his Queen Katherine; Richard III.; Henry VII. and his Queen Elizabeth. The encaustic-tile pavement is very fine. Thence a corridor leads north to the Commons' Lobby and House of Commons, and south to the Peers' Lobby and House of Peers. The archway west communicates with *St. Stephen's Hall*: and the east leads to the *Lower Waiting Hall*; the *Conference Hall*, in the River Front; and the *Upper Waiting Hall*, embellished with frescoes, including the *Patience of Griselda* (from Chaucer), by Cope; *Disinheritance of Cordelia* by King Lear (from Shakspeare), by Herbert, R.A.; the *Temptation of Adam and Eve* (from Milton), by Horsley; and *St. Cecilia* (from Dryden), by Tenniel.

*The Electric Telegraph Office* (opened April 1, 1853) is in the Central Hall; whence wires are laid to the Company's Office and the metropolitan stations. The north gable of Westminster Hall and the adjoining Law Courts, Sir Charles Barry\* proposed to make accord with this beautiful front; New Palace Yard being inclosed by parliamentary buildings, thus making it, by means of an important gateway looking towards Whitehall, the entrance courtyard of the new Palace, as it was originally of the old Palace of the time of Richard II.†

THE ROYAL ENTRANCE is by the Victoria Tower, already described. At the summit of the Royal Staircase is the *Norman Porch*, named from its statues of kings of the Norman line, and frescoes of scenes from Anglo-Norman history; its beautifully groined roof and clustered columns, rich bosses and ribs, are of the same period. To the right is the *Queen's Robing-room*, painted by Dyce, R.A., with frescoes allegorical of chivalry fostering generous and religious feelings. Here are two frescoes in large panels, by Maclise, R.A.: the Meeting of Wellington and Blucher after Waterloo; the Death of Nelson—one side only is completed; Mr. Dyce died February 14, 1864. Next is the *Victoria or Royal Gallery*, 110 feet in length by 45 feet in width, and 45 feet high; to be decorated with frescoes from English history, an armorial band beneath the stained-glass windows, and a panelled and superbly enriched ceiling. To this gallery the public are admitted, by tickets (to be obtained of the Lord Great Chamberlain), to view the procession of her Majesty to open and prorogue Parliament.

*The Prince's Chamber*, a kind of ante-room to the House of Lords, has the entrance-

\* A very beautiful memorial tablet to perpetuate the memory of the late Sir Charles Barry has been erected in the nave of Westminster Abbey, over the spot where the distinguished architect of the Houses of Parliament lies buried; and nearly adjoining the grave of the late Mr. Robert Stephenson, to whom, it will be remembered, a monumental brass, representing a full-length figure of the eminent engineer, was inscribed a few years since. The memorial, which has been placed in the Abbey by the family of the late Sir C. Barry, consists of a large cross let into a massive slab of black marble about 12 feet in length by 5 feet in width, and the inscription on the cross is as follows:—"Sacred to the memory of the late Sir C. Barry, R.A., F.R.S., architect of the New Palace at Westminster and other buildings, who died on the 12th of May, 1860, aged 64 years, and lies buried beneath this brass." The following text is also inscribed round the outside of the marble slab:—"Whatsoever ye do, do it heartily, as to the Lord and not unto men, for ye serve the Lord Christ." *Colossians* iii. 23, 24.

† "The new Palace Yard being anciently enclosed by a wall, there were four gates therein, the only one at present remaining is that on the east side leading to Westminster Stairs—the three others which were demolished were that on the north which led to Woolstaple, that on the west called Highgate, a very beautiful and stately edifice, situate at the east end of Union-street: it was taken down in the year 1706, as was also the third at the north end of St. Margaret's-lane, anno 1731."—*Maitland* 1739.

doorway richly decorated with the national arms, armorial roses and quatrefoils; and opposite, on the north side, in a corresponding arch, is the statue of Queen Victoria, with figures of Justice and Mercy, and bas-reliefs, by Gibson, R.A. Upon the walls are twelve bas-reliefs, by Theed, carved in oak, of memorable events in Tudor history; and over these panels, are twenty-eight portraits of the same period, painted on a gold ground. The frieze is enriched with oak-leaves and acorns, and armorial shields and labels; the windows are painted with the rose, thistle, and shamrock, and regal crowns; and the armorial ceiling and Tudor fire-places are dight with colour, gilding, and sculpture. From the Prince's chamber we enter

THE HOUSE OF LORDS, extremely rich in gilding, polychromy, wrought metal, and carved work. Its dimensions are, length in the clear, 91 feet, breadth 45 feet, and height 45 feet, so that it is a double cube. The walls are 3 feet 1 inch thick. East and west are twelve lofty windows, six on either side, filled with painted-glass whole-length portraits of the kings and queens, consort and regnant, of the United Kingdom: six containing figures of the royal line of England before the union of the crowns; three, of the royal line of Scotland from Bruce to James VI.; and three, of the Sovereigns of Great Britain from the reign of Charles I. The style of colouring in these windows is that of 1450-1500.

At each end of the House are three archways, within which are these wall-frescoes:—

*Over the Throne:* Edward III, conferring the Order of the Garter on the Black Prince; C. W. Cope, R.A. The Baptism of St. Ethelbert; W. Dyce, R.A. Prince Henry acknowledging the authority of Judge Gascoigne; C. W. Cope, R.A.

*Over the Strangers' Gallery:* The Spirit of Justice; D. Maclise, R.A. The Spirit of Religion; J. C. Horsley. The Spirit of Chivalry; D. Maclise, R.A.

Between the windows, archways, and in the corners, are canopied niches, with pedestals supported by angels bearing shields charged with the arms of the eighteen barons who obtained Magna Charta from King John, and whose bronze effigies occupy the niches. Above these niches are segments of arches, which, as trusses, support the main arches of the ceiling, and are elaborately pierced and carved.

The ceiling is flat, and divided into compartments containing lozenges charged with devices and symbols: the royal monogram, the monograms of the Prince of Wales and Prince Consort; the cognisances of the white hart of Richard II.; the sun of the House of York; the crown in a bush, Henry VII.; the falcon, dragon, and greyhound; the lion passant of England, the lion rampant of Scotland, and the harp of Ireland; sceptres, orbs, and crowns; the scales of Justice; mitres and crosiers, and swords of mercy; coronets, and the triple plume of the Prince of Wales. Among the devices are the rose of England and the pomegranate of Castile; the portcullis of Beaufort, the lily of France, and the lion of England; and the armorial shields of the Saxon Heptarchy. The massive beams appear like solid gold: they are inscribed on the sides with religious and loyal mottoes.

Beneath the windows, the walls are covered with oak panelling and carved busts of the Sovereigns of England; and above is the inscription "God save the Queen," in Tudor characters. Thence springs a coving, in the southern division emblazoned with the arms of lord chancellors and their Sovereigns, and northward with the bishops' arms. This coving supports a gallery with wrought-metal railing, richly-carved paneling, and pillars which support a brattishing.

The centre of the southern end of the House is occupied by the Throne, on either side of which is a doorway leading to the Prince's Chamber. At the northern end of the House, over the principal doorway, is the *Strangers' Gallery*, behind the *Reporters' Gallery*, upon the front of which are painted the badges of the sovereigns of England; and over the archways are painted on shields the coat-armour of the Saxon, Norman, Plantagenet, Tudor, Stuart, and Hanoverian Houses; the arms of the archiepiscopal sees, and some of the bishoprics; and in front of the gallery is a clock with an exquisitely carved case and dial enamelled in colours. On the right of the Bar is the seat of the Usher of the Black Rod. The Peers' seats (accommodating 235) are ranged longitudinally from north to south. At the south end is the clerks' table; and beyond it are the woolsacks, covered with crimson cloth. At the north end is *The Bar*, a dwarf screen, at which appear the Members of the House of Commons, and at which

counsel plead. At the four angles of the area is a superb brass candelabrum, by Hardman, 17 feet high, and weighing  $11\frac{1}{2}$  cwt.

THE ROYAL THRONE, at the south end, is elevated on steps (the centre three, and the sides two), which are covered with a carpet of bright scarlet, powdered with white roses and lions, and fringed with gold-colour. The canopy to the throne is in three compartments: the central one, much loftier than the others, for her Majesty; that on the right hand for the Prince of Wales, and that on the left for the Prince Consort. The back of the central compartment is panelled with lions passant, carved and gilded, on a red ground; and above are the royal arms of England, elaborately emblazoned, surmounted by the royal monogram and "Dieu et mon droit," in perforated letters; and a brattishing of Greek crosses and fleur-de-lis crests. Above are the crests of England, Scotland, Ireland, and Wales, richly carved; the ceiling bears the monogram V. R. within an exquisite border, and the flat surfaces painted with stars. The spandrels of the canopy, and the octagonal pillars with coronal capitals, are exquisitely carved. In front of the canopy, above a brattishing of perforated Tudor flowers, are five traceried ogee arches: in the central one is the figure of St. George and the Dragon; and in the two sides are knights of the Garter and Bath, the Thistle and St. Patrick. The angle-butresses of this canopy have coronal pendants; on the fronts and sides are animals, on the summits open-worked royal crowns. On the sides likewise are shields of the arms of England, Scotland, Ireland, and Wales, beautifully carved, painted, and gilded; and upon pedestals are sitting figures of winged angels holding shields enamelled with the arms of England. The side compartments of the canopy have, the one the heraldic symbols of the Prince of Wales, and the other those of Prince Albert, blended with the architectural features: they have covings, gilded, and pedestals supporting a lion and unicorn holding shields of arms; the angle-butresses have coronal pendants, and the shafts are surmounted by crowns. On either hand is a dwarf wing with pedestal, on which are seated the royal supporters, the lion and unicorn, holding standards enamelled with the arms of England.

*The Queen's Chair of State, or Throne*, in general outline resembles "the coronation chair:" the legs rest upon four lions couchant; the base has quatrefoil panels, with crowns and V. R.; sprays of roses, shamrocks, and thistles; and a broad bar of roses and leaves: in the panels beneath the arms of the chair are lions passant and treillage; upon the back pinnacles are a lion and unicorn, seated, holding scrolls and flanking the gable, within which is a circle of exquisitely quatre-foiled ornament, inclosing the monogram V. R.; the exterior ridge is carved with roses, and the apex surmounted with a richly decorated crown. The back of the chair is bordered with large egg-shaped pieces of crystal, within which are the royal arms of England, embroidered on velvet. The *Footstool* has carved sides, and a crimson velvet top, gorgeously embroidered with roses in a border of fleurs-de-lis.

*The State Chairs for the Prince of Wales and Prince Consort* are curule-shaped, have circular-headed backs, embroidered on velvet with the ostrich triple-plume and the shield of arms. The throne and footstool, and the two princes' chairs, are gilded throughout.

The House of Peers was first occupied by their lordships April 15, 1847.

*The Peers' Lobby* is 38 feet square and 33 feet high, and has on either side a lofty arch, above which are painted, within arches, the arms of the Saxon, Norman, Plantagenet, Tudor, Stuart, and Hanoverian royal lines, each surmounted by a royal crown. The north doorway opens into the House of Commons Corridor, the south doorway opens into the House of Lords: the arch is boldly sculptured with Tudor roses, royally crowned; the inner arch is enriched with gilded oak-leaves. The space over is filled with the royal arms, roses, thistles, and shamrocks, coloured and gilded. The gates are of massive brass, by Hardman, and of richly floriated design, the frames studded with Norman roses. These gates weigh  $1\frac{1}{2}$  tons, are 11 feet high, and 6 feet wide; and are of a material not used in England for such a purpose for nearly 400 years. The side-wall compartments of the Lobby are filled with ogee arches; and the upper stories are windows, painted by Hardman, and Ballantyne, and Allan, with the arms of the early families of the aristocracy of England. The roof is painted with roses,

thistles, and shamrocks, in squares, on a blue ground, and relieved with gilding. The pavement is encaustic tiles, by Minton; alleys of black marble, including "Dieu et mon droit" in tiles, V. R., the lions of England, &c.; and in the centre is a Tudor rose of Derbyshire marble, bordered with engraved brass. At each corner of the lobby is a magnificent gas-standard, about 12 feet high.

*The Peers' Libraries* are a magnificent suite of rooms; above the oak book-shelves is a frieze, with panels of the arms of the Chief Justices of England. *The Peers' Robing-room* it is proposed to decorate with frescoes illustrating Human Justice and its development in Law and Judgment, by Herbert, R.A. The one executed is in water-glass; the subject, Moses bringing down the Second Tables of the Law, occupied the painter three years: size 22 feet by 10 feet 6 inches; figures life-size.

Returning to the Peers' Lobby, the archway on the north side gives access to the Peers' Corridor, corresponding with the Commons' Corridor immediately opposite in the Central Hall, the walls of which are panelled for frescoes, some of which have been completed. The decorations of the Corridors leading from the Central Hall, to the Houses of Lords and Commons, are as follows:—

*The Peers' Corridor.*—C. W. Cope, R.A., The Burial of Charles I.; The Parting of Lord and Lady Russell; Expulsion of the Fellows of a College at Oxford for refusing to sign the Covenant; The Embarkation of the Pilgrim Fathers for New England; The Defence of Basing House; The setting out of the Train Bands from London to relieve Gloucester; Charles I. erecting his standard at Nottingham.

*The Commons' Corridor.*—E. M. Ward, R.A., Alice Lisle assisting the Fugitives to Escape after the Battle of Sedgemoor; Jane Lane assisting Charles II. to Escape after the Battle of Worcester; The Last Sleep of Argyle; The Execution of Montrose; The Landing of Charles II. at Dover.

*The Central Hall* has been already described. Leaving this through an arched doorway on the west side, we enter *St. Stephen's Hall*, which occupies the site of the old St. Stephen's Chapel. The Hall has a beautiful stone vaulting, the bosses of which have subjects from the life of St. Stephen; its windows are filled with appropriate glass, and on pedestals are marble statues of Selden, Foley, R.A.; Hampden, Foley, R.A.; Lord Falkland, Bell; Lord Clarendon, Marshall, R.A.; Lord Somers, Marshall, R.A.; Sir Robert Walpole, Bell; Lord Chatham, M'Dowell, R.A.; Lord Mansfield, Baily, R.A.; Burke, Theed; Fox, Baily, R.A.; Pitt, M'Dowell, R.A.; Grantham, Carew. A small staircase at one end leads to *St. Stephen's Crypt*, described at p. 304. In the niches of the doorway to St. Stephen's Hall are twelve statues of early Kings and Queens. We leave the Hall for *St. Stephen's Porch*, whence a fine view is obtained of Westminster Hall, which it was proposed by Sir Charles Barry to make an antechamber to the House of Legislature. By a beautiful new doorway on the east side we enter the *Cloisters of St. Stephen's*, which have been restored and enlarged. From the upper Cloister by the Lobby we enter

THE HOUSE OF COMMONS, 75 feet long, 45 feet wide, and 41 feet high; the size being as small as possible for speaking and hearing without effort during the average attendance of Members, about 300. The twelve side windows are painted with the arms of boroughs, by Hardman; and at each end is a stone screen filled with brass tracery. The ceiling has the sides and ends inclined, and the centre flat: it is divided by massive ribs into compartments, which are filled with ground-glass tinted with the rose, portecullis, and floriated circles; behind were originally placed the gas-lights, with Faraday's patent ventilation, cutting off connexion between the gas and the air of the apartment, the vitiated air being conveyed away by tubes into a chamber above the ceiling. The artificial light is now supplied from the chamber above the ceilings, in which about 1000 feet of gas are consumed per hour in the evening sittings; none of the products of combustion escape into the House. The floor of the House is of perforated cast iron, covered with matting, through which hot and cold air are admitted.

*The Ventilation* at present adopted in the two Houses is that of exhaustion, the air being put in motion by means of heat applied by coke-fires in great upcast shafts, the two chief being in the Victoria Tower and the Clock Tower. Under as well as above ground are hundreds of air-courses; some for supplying cold air, others for warm air, others for carrying off vitiated air. There are in this great palace steam-pipes, of which the aggregate length is about 15 miles, and 1200 stop-cocks and valves connected with these pipes. Taking the House that sits longest, we learn from Dr. Percy's able Report, that the air for the House of Commons is admitted from the Star Court and the Commons Court; it is strained through gauze, and then warmed when necessary by Gurney's batteries; after which it ascends through the floor of the House. Dr. Percy tells us that, although a great number of minor details are

defective and need completion, yet all appliances for effective ventilation exist; experiments have demonstrated that the supply of fresh air passing through the Houses under varying conditions has generally exceeded the proportion declared by the highest authorities to be amply sufficient. Satisfactory as this may be, Dr. Percy reminds us that too *much* fresh air cannot be supplied, provided its temperature and its state as to moisture be suitable, and no draught be perceptible—a condition which should be regarded as a fundamental principle in every so-called system of ventilation. While in some instances the complaints made may be well founded, it is pretty certain that in other instances they resulted from the special bodily conditions of the individuals making them; as the state of the stomach as to the quantity of food which it contains, the amount of alcoholic liquor circulating through the system, the muscular exertion which the body may have recently undergone, as well as the condition of mental exertion or excitement, will greatly modify our impressions as to the agreeableness of the temperature and the perfection of the ventilation.

It is impossible to burn the House down: you might set fire to and destroy the furniture and fittings; but the flooring, walls, and roof would remain intact. The walls are panelled with oak two-thirds up, carved with the linen-pattern, armorial shields, pendants, foliated mouldings, and brattishings. Upon three sides are galleries for *Members and Strangers*; the *Reporters' Gallery* being at the north end, over the *Speaker's Chair*, a sort of canopied throne elaborately carved with the royal arms, &c. Behind the brass tracery above the *Reporters' Gallery* is a gallery for ladies. At the northern end of the House is *The Bar*, temporarily formed by sliding rods of brass; and here is the special seat of the *Serjeant-at-arms*. The Ministerial seats are on the front bench to the right of the Speaker, the leaders of the Opposition occupying the front bench opposite. Below the Speaker's Chair is the *Clerks' Table*, whereon, during the business of the House, is placed the *Speaker's Mace*; not, as generally supposed, "the fool's bauble" which Cromwell ordered to be taken away, but the mace made at the Restoration. Along both sides of the House are the Division Lobbies, "Ayes" west, and "Noes" east; these being oak-panelled corridors, with stained-glass windows: the chandeliers are of chased brass.

The Commons first assembled in their new House February 3, 1852; eight days after which (February 11), Mr. Barry received knighthood.

*The Commons Lobby* is a rich apartment 45 feet square, and has on each side an archway; carved open screens inscribed "Domine salvam fac Reginam;" and windows painted with the arms of parliamentary boroughs: the brass gas-standards, by Hardman, are elaborately chased. The doorways lead to the Library, the Post-office, Vote-paper Office, Central Hall, &c. *The Libraries* are fitted with dark oak. *The Refreshment Rooms* for the Peers and Commons are similarly arranged, and respectively are divided by a carved oak screen.

The public are admitted to view both Houses of Parliament, and all the public portion of the New Palace of Westminster, every Saturday between 10 and 4 o'clock, during the session, by tickets; which are obtainable on Saturdays, between 11 and 4 o'clock, at the Office of the Lord Great Chamberlain, in the Royal Court.

Admission to hear the Debates: *Lords*—A Peer's order; *Commons*—Any Member's, or the Speaker's, order. The House of Lords is open to the public, without ticket, during the hearing of Appeals.

*The Speaker's House* occupies part of the two pavilions, forming the end of the river front of the Palace, next Westminster Bridge, and is approached by archways from Palace-yard. It comprises from sixty to seventy rooms, and is finished throughout in the style of the structure generally. The staircase, with its carvings, tile-paving, and brass-work, is exceedingly effective and elegant, and everywhere there is a large amount of painted and gilded decoration. Cloisters, approached from the House, surround a court about 20 feet square: the window openings in the cloisters are filled with stained glass, containing the arms of all the Speakers, with the date of election. The principal floor includes the State dining-room; the drawing-room, 37 feet 3 inches by 28 feet 9 inches; morning-room, 34 feet 6 inches by 23 feet 9 inches; and a smaller dining-room, 34 feet by 24 feet 6 inches. The State dining-room is 45 feet by 23 feet 6 inches. Frames are set in the walls to receive a collection of portraits of past Speakers. The rooms are lighted at night by wax-candles in coronæ; to light the four rooms requires 400 wax-candles.

*A Descriptive Handbook for the Pictures in the Houses of Parliament*, by T. J. Gullick, Painter (published by authority), will at once satisfy the requirements of artists and the general public: the accounts of the Pictures are written with care

and discrimination. And a *Guide to the Palace* is printed by permission of the Lord Great Chamberlain, and published by Warrington and Co.

## PATERNOSTER-ROW,

**B**ETWEEN the north side of St. Paul's Churchyard, and the south of Newgate-street, is one of a knot of monastic localities; and is named from the turners of rosaries, or Pater Nosters (tenth beads), dwelling there, with stationers or text-writers, who wrote and sold A B C, with the Pater Noster, Ave, Creed, Graces, &c., in the reign of Henry IV. Hatton describes it 1708 "between Cheapside Conduit east, and Amen-corner west; and the name, as also those of Ave-Maria-lane (at its west end), Creed-lane (in Ludgate-street, opposite), and Amen-corner, given by reason of the religious houses formerly of Black and Gray Friars, between which these streets are situated." Paternoster-row was next "taken up" by mercers, silkmen, and lacemen: we read of Pepys, in 1660 buying here "moyre for a morning waistcoat;" and the street was oftentimes blocked up with the coaches of the nobility and gentry. But few names of publishers are met with as carrying on business in Paternoster-row before the Great Fire: one of these is "R. Harford, in Queen's-head-alley, Paternoster-row, 1642," and another, "Christopher Meredith, Crane-alley, Paternoster-row." After the Great Fire, the mercers mostly migrated westward, as to Holywell-street and Covent Garden; but in a periodical of 1707 we read of "the sempstresses of Paternoster-row:" and Strype, in 1720, enumerates among its inhabitants tire-women, mercers, and silkmen. Here lived Alderman Thomas, the mercer, whose shop bore the motto of Sir William Turner, "Keep your shop, and your shop will keep you." (*Spectator*, No. 509.) Strype also mentions "at the upper end, some stationers and large warehouses for booksellers;" but we find, as early as 1564, that Henry Denham, bookseller, lived at the Star, in Paternoster-row, with the motto, *Os homini sublime dedit*. In the reign of Queen Anne the booksellers removed here from Little Britain; and, from about 1774, the trade became changed to publishing books in "Paternoster-row numbers." Among their publishers were Harrison, Cook, and the Hoggs; to the latter succeeded their shopman, Thomas Kelly, Alderman of Farringdon Within, and Lord Mayor, 1836-7.

Here was the printing-office of Henry Sampson Woodfall, the printer of the *Public Advertiser*, wherein originally appeared *Junius's Letters*.

At "the Bible and Crown" (the sign boldly carved in wood, coloured and gilt, in the string-course above the window), lived the Rivingtons, the High-Church publishers, from 1710 to 1853: here they continued the *Annual Register*, originally Dodsley's, with Edmund Burke as a contributor; and here, in 1791, the Rivingtons commenced the *British Critic*: but "the old shop," where Horsley and Tomline, Warburton and Hurd, used to meet, was, in 1854, altered to a "shawl emporium." At No. 47 lived Robert Baldwin, publisher of the *London Magazine*, commenced 1732. The premises are now the publishing-house of Messrs. William and Robert Chambers, of Edinburgh: the former Lord Provost, 1866. Here the Robinsons established themselves 1763, the head of the firm being "King of the Booksellers:" here they published the *Annual Register*, with a sale of 7000 copies each volume; and the unsatisfactory *Biographical Dictionary*, by Alexander Chalmers. At No. 39 have lived nearly a century and a half the Longmans; the imprint of Thomas Longman, with Thomas and John Osborne, at the sign of "the Ship and Black Swan," is dated 1725; and the same year we find a book of Whiston's bearing the same names, although an edition of Rowe's *Dramatic Works*, 2 vols., 1725, is stated to be the earliest book with Longman's imprint. Here was commenced the original *Cyclopædia*, by Ephraim Chambers, upon which was based the *New Cyclopædia* of Dr. Rees. For several years the firm gave here dinners and *soirées* to authors and artists; and they have acquired world-wide repute as the publishers of the works of Scott, Mackintosh, Southey, Sydney Smith, Moore, and Macaulay. Messrs. Longman's own sale of books has amounted to five millions of volumes in the year. They possess some portraits of eminent literary persons.

The premises were rebuilt in handsome Renaissance style in 1863; the design including the rebuilding of the adjoining house of Messrs. Blackwood and Sons, of Edin-

burgh, at the extreme north-west corner. The façade is executed in Portland stone. The character of the carving, especially of the lower stories, is somewhat symbolical natural foliage. On the key-stone of the central arch is represented Literature supported by the Arts, Sciences, and Education. In the spandrels of the same are the "Ship" and the "Swan," being half-size copies of two medallions, saved from the old buildings, and which had been trade signs or parts of these premises since the Great Fire.

No. 33, Hamilton, Adams, and Co., has been rebuilt in handsome style; also No. 23, Kent and Co. No. 56, the Dépôt of the Religious Tract Society, was erected in 1844, at a cost of 12,000*l.*: the handsome stone frontage, of 120 feet, is in the Italian style. The Society commenced operations, in 1799, with a small handbill; its annual distribution of books and tracts in 1853 was nearly 26 millions, and its gross income 9497*l.*; in 1866, circulation 46,000,000. The Society issues five illustrated periodicals, including the *Leisure Hour* and the *Sunday at Home*.

No. 50, long the *Chapter Coffee-house*, described at pp. 263-4, was closed as a coffee-house, in December, 1853; having been for a century and more the resort of authors, booksellers, and politicians: the house is referred to in the correspondence of Chatterton.

"A contemporary anecdote exhibits Goldsmith paymaster, at the Chapter Coffee-house, for Churchill's friend, Charles Lloyd, who, in his careless way, without a shilling to pay for the entertainment, had invited him to sup with some friends of Grub-street."—Forster's *Life of Goldsmith*, p. 232.

Between Paternoster-row and Newgate-street is Newgate Market: here, in 1709 (*Tatler*, No. 44), was exhibited the Groaning Board:

"At the sign of the Woolsack, in Newgate Market, is to be seen a strange and wonderful elm-board; which being touched with a hot iron, doth express itself as if it were a man dying with groans, &c. It been presented to the king and his nobles, and hath given great satisfaction."—*Advertisement*.

Panyer-alley, conjectured to have been named from its having been the standing of bakers with their paniers, when bread was only sold in markets, and not in shops or houses, is described at pp. 416 and 614.

At "the sign of the Castle," in Paternoster-row, Tarlton, Queen Elizabeth's favourite stage-clown, kept an ordinary, stated to have been on the site of Dolly's chop-house. "The Castle," of which a token exists, was destroyed in the Great Fire, but was rebuilt; and here "the Castle Society of Music" performed. The premises were subsequently the Oxford Bible Warehouse, destroyed by fire in 1822, and rebuilt.

*Warwick-lane* and *Ivy-lane* are noticed at p. 614.

There are likewise a *Paternoster-row* and *Little Paternoster-row* in Spitalfields, where was formerly the Priory of St. Mary Spittle.

### PENTONVILLE,

A DISTRICT of St. James's parish, was originally a field of the Clerkenwell Nunnery. It was in part the estate of Henry Penton, Esq.; and when the New-road was formed through it, White Conduit House, and the house attached to Dobney's Bowling-green, were almost the only buildings here. One of the earliest was Hermes House (in Hermes-street), built by Dr. de Valangin (a pupil of Boerhaave), who lived to see Penton's *vile* or town rising around him. Here lived the noted William Huntington, S.S., when he married the widow of Sir James Sanderson, Bart., ex-Lord Mayor. Upon the north side of the New-road (Pentonville-hill) is St. James's Chapel, built 1788: it has a clever altar-picture of Christ raising the damsel Tabitha. Below the Chapel is the London Female Penitentiary, established 1807. In Regent-terrace died the popular sporting writer, Pierce Egan, in 1849, at the full age of 77: and in Penton-place lived Grimaldi, "Old Joe," born in Stanhope-street, Clare-market, in 1778, the year preceding that in which Garrick died.

Gerard, in his *Herbal*, edit. 1633, describes certain kinds of orchis growing in dry pastures and heaths, and upon chalky hills, and "plentifully in sundry places, as in the field by Islington, near London, where there is a bowling-green, under a few old shrubby oaks." The spot alluded to seems to have been Winchester-place, now the Pentonville-road. Thomas Cooke, the notorious miser, lived here.

## PICCADILLY,

A LEADING street, 110 yards less than a mile in length, extends, in a line with Coventry-street, from the north end of the Haymarket westward to Hyde Park Corner. The name is derived from the ruffs, called "pickadils" or "peccadilloes," worn by the gallants of James I. and Charles I.; and the stiffened points of which resembled spear-heads, or picardills, a diminutive of *pica*, spear, Spanish and Italian. Blount, in his *Glossographia* (1656), interprets it as the round hem about the edge or skirt of a garment, and a stiff collar or band for the neck and shoulders; whence the wooden peccadilloes (the pillory) in *Hudibras*. Hence the first house built in the road may have been named "from its being the utmost or skirt house of the suburbs that way;" and may not the name have originated from the pillory having been often set up in this suburb or open ground? Mr. Peter Cunningham took considerable pains to unravel this question. Pennant traces the name to Piccadillas, turnovers or cakes, which may have been sold in the suburban fields. Others say it took name from this: "that one Higgins, a tailor, who built it, got most of his estate by piccadillas." But the name occurs many years earlier than the mention of the first house, or Piccadilly House: thus Gerard, in his *Herbal* (1596), states that "the small wild bu-glosse growes upon the drie ditch-banks about Pickadilla." The road is referred to, in Stow's narrative of Sir Thomas Wyatt's rebellion in 1554, as "the highway on the hill over gainst St. James's;" and in Aggas's Map (1560) it is lettered, "The Waye to Redinge." The upper part of the Haymarket, and the fields adjoining north and west, were the Pickadilly of the Restoration. Evelyn quotes the Commissioners' orders, July 13, 1662, to pave "the Haymarket about Pigudello;" and tradesmen's tokens of this date bear "Pickadilla" and "Pickadilly."

*Piccadilly Hall* appears to have been built by one Robert Baker, "in the fields behind the Mews," leased to him by St. Martin's parish, and sold by his widow to Colonel Panton, who built Panton-square, and Panton-street. Lord Clarendon, in his *History of the Rebellion*, speaks of "Mr. Hyde going to a house called Piccadilly for entertainment and gaming;" this house, with its gravel walks and bowling-greens, extended from the corner of Windmill-street and the site of Panton-square, as shown in Porter and Faithorne's Map, 1658. Mr. Cunningham found (see *Handbook*, 2nd edit. p. 396), in the parish accounts of St. Martin's, Robte Backer, of Pickadilly Halle;" and the receipts for Lammas money paid for the premises as late as 1670. Sir John Suckling, the poet, was one of the frequenters; and Aubrey remembered Suckling's "sisters coming to the Peccadillo bowling-green, crying, for the feare he should lose all their portions." The house was taken down about 1685: a tennis-court in the rear remained to our time, upon the site of the Argyll Rooms, Great Windmill-street. The Society of Antiquaries possess a printed proclamation (*temp.* Charles II. 1671) against the increase of buildings in Windmill-fields and the fields adjoining Soho; and in the Plan of 1658, Great Windmill-street consists of straggling houses, and a windmill in a field on the west side. The spacious house upon the east side was built for Dr. William Hunter in 1770: it had an amphitheatre and a magnificent museum (see p. 597). He died here March 30, 1783. At the north-east end of the Haymarket stood the gaming-house built by the barber of the Earl of Pembroke, and hence called *Shaver's Hall*: it is described by Gerard, in a letter to Lord Strafford in 1635, as "a new Spring Gardens, erected in the fields beyond the Mews;" its tennis-court remained in James-street, until 1867, when it was altered for another occupation.

From Piccadilly being applied to the Hall and the buildings in the fields north and west of the Haymarket (in "Dogs-fields, Windmill-fields, and the fields adjoining Soho"), early maps show the name to have been extended to the line of street to Swallow-street, where begins Portugal-street, named after Catherine of Braganza, queen of Charles II.: in an Act 3 James II. is named "the mansion-house of the Earl of Burlington, fronting Portugal-street;" but that it was considered a subordinate street, is shown by Wren having made the principal front of St. James's Church face Jermyn-street, with its handsome Ionic door. The name of Piccadilly, however, became gradually extended to the whole line. Hatton, 1708, describes Piccadilly as

between Coventry-street and the end of the Haymarket, and Portugal-street. Until 1721 the road was mostly unpaved, and coaches were often overturned in the hollow. The line from Devonshire House westward was, until the year 1740, chiefly occupied by the figure-yards of statuarys, where also "numberless wretched figures were manufactured in lead for gardens."\* About this time an adjoining field was bought by a brewer for his empty butts at 30*l.*, and sold in 1764 for 2500*l.* (*Malcolm.*) In 1757 a tract of ground was leased to James Hamilton, Esq., who built thereon *Hamilton-place*.

*Hamilton-place* is called after James Hamilton, Esq., Ranger of Hyde Park in the reign of Charles II., and the elder Hamilton of De Grammont's Memoirs. No. 1, in 1813, was inhabited by Lady Catherine Tylney Long:—

"Long may Long Tylney Wellesley Long Pole live."

In 1818, this house passed to Lord Chancellor Eldon. No. 4, in 1814, passed to the great Duke of Wellington, whose London house it was when the Battle of Waterloo was won by this fine genius for war. In this house, the bibliophile, Mr. Grenville, collected the fine Library bequeathed by him to the British Museum. (See page 584.) No. 5 was bought by Mr. Joseph Denison, M.P., for 10,000 guineas, and presented to his sister, Marchioness of Conyngham, who assembled here a fine collection of china; she died in 1861, aged 92. At No. 7, Mr. John Philip Miles, of Leigh Court, made his collection of pictures of the Italian school. This same No. 7 was afterwards inhabited by the late Mr. H. A. J. Munro, of Novar, and the rooms refitted with another fine collection of pictures. Here were to be seen the celebrated "Madonna del Candelabri," of Raffaele, some noble landscapes by Turner, and a View of Venice, by Bonington. No one house that I can call to mind, has held two private collections of pictures equally famous as were once to be seen at No. 7.—*Peter Cunningham; Builder*, March 4, 1865.

Westward was *The Hercules Pillars*, which, with other noted Piccadilly inns, is described at p. 455. In one of these petty taverns at Hyde Park Corner, Sir Richard Steele and the poet Savage dined together, after having written a pamphlet, which Savage sold for two guineas, to enable them to pay the reckoning. Among the straggling houses here was the school kept by a Roman Catholic convert named Deane, where Pope spent nearly two years of his boyhood; and got up a play out of Homer, the part of Ajax being performed by the gardener.

"Towards Hyde Park" was Winstanley's mathematical water-theatre, mentioned in the *Tatler*, No. 74 (Sept. 29, 1709): it had a windmill at the top; and the quantity of water used in the exhibition was from 200 to 300 tuns, "with which curious effects produced by hydraulic pressure were exhibited in the evening." Evelyn speaks of Winstanley, who built the first Eddystone Lighthouse; and of another mechanical genius, Sir Samuel Morland, who writes from his "hut near Hyde Park Gate."

NORTH SIDE.—*Apsley House*, east of Hyde Park Gate, is described at pp. 541–543. No. 142, Lord Willoughby de Eresby's mansion, was sold in 1866 for 25,250*l.*, crown lease, forty years; in the same year its works of art realized upwards of 9000*l.* At No. 145, the Marquis of Northampton, as President of the Royal Society, gave his *conversazioni*. No. 147, the Baron Lionel de Rothschild's (see p. 547), is partly built upon the site of the mansion of William Beckford, the author of *Vathek*. At Nos. 138 and 139, Piccadilly, lived the Duke of Queensbury, "Old Q.," the voluptuous millionaire, who died at the age of eighty-six. At No. 138, in 1865, was dispersed the valuable collection formed by the late Earl of Cadogan of plate; Sèvres, Chelsea, Dresden, and other porcelain; antiquities, and objects of art and virtù, many of historic interest; the old silver plate brought from one to three guineas per oz.

No. 137, *Gloucester House*, is described at p. 549. Next is *Park Lane*, formerly Tyburn-lane. Twenty years since, or thereabout, the Duke of Wellington was walking up the narrow roadway of Park-lane, when, opposite Gloucester House, a carter came along with a country wagon and team of horses: he called to the Duke, who, being very deaf, did not hear the man, who had very nearly, with his wain, thrown down and driven over the hero of a hundred fights. Opposite, in the Green Park, was the Deputy-Ranger's Lodge, built by Robert Adam, 1768, taken down, 1841; the pair of graceful stags upon the gate-piers, placed there by Lord William Gordon, when Deputy-Ranger, was removed to the piers of Albert Gate, Hyde Park.

\* East of Hertford House, "near the Queen's Mead House, in Hyde-park-road," was the leaden figure-yard established by John Van Nost, who came to England with King William III. A favourite garden-figure was an African kneeling with a sun-dial on his head, such as we see to this day in the garden of Clement's Inn, and commonly said to have been brought from Italy by Lord Clare!

At the corner of Down-street (leading to MAY FAIR, see p. 564), is the mansion of Mrs. Hope, described at p. 551; and further east, No. 106, COVENTRY HOUSE (see p. 246), closed as a club, March, 1854; No. 105, HERTFORD HOUSE, p. 550; No. 94, CAMBRIDGE HOUSE, p. 547; No. 82, BATH HOUSE, p. 544; DEVONSHIRE HOUSE, p. 548.\*

Mr. Hope died at his mansion, in Piccadilly. He was the eldest son of the wealthy capitalist of Amsterdam (the author of *Anastasius*), by Miss Beresford, youngest daughter of Lord Decies, Archbishop of Tuam, who married secondly the late Marshal Viscount Beresford. He was consequently brother of Mr. Adrian Hope, of the banking firm at Amsterdam, and of Mr. Alexander Beresford Hope. He sat in Parliament for East Looe and Gloucester, and was a Conservative in politics. His only child married, in 1861, the Earl of Lincoln, now Duke of Newcastle. Mr. Hope was one of the earliest promoters of the London and Westminster Joint-Stock Bank; and the first Chairman of the Great Eastern Steamship Company.

*Half-moon-street* was built in 1730, and was named from the *Half-moon Ale-house* at the corner. *Clarges-street* was built 1717-18, and named from Sir Walter Clarges. At the south-west corner is the mansion of the Duke of Grafton, designed by Sir Robert Taylor: here is the magnificent Louvre portrait of Charles I. on his horse, by Vandyke. At No. 12, Clarges-street, lived for eight years Edmund Kean, the tragedian, who kept in the house a tame puma. Next door, at No. 11, lived Lady Hamilton at the time of Lord Nelson's death.† *Bolton-street* was in 1708 "the most westerly street in London, between the road to Knightsbridge south, and the fields north" (*Hatton*). Here lived the Earl of Peterborough, who, in his autobiography (fortunately never printed), confesses having committed three capital crimes before he was twenty years of age.

No. 80, Piccadilly, was the house from which Sir Francis Burdett was taken into custody, April 6, 1810, by the Serjeant-at-Arms, after a resistance of four days:

"The lady she sate and she played on her lute,  
And she sung, 'Will you come to the bower?'"  
The serjeant-at-arms had stood hitherto mute,  
And now he advanced, like an impudent brute,  
And said, 'Will you come to the Tower?'"

In the riot which ensued, the Life Guards charged the mob, whence they got the flash *sobriquet* "Piccadilly Butchers."

*Stratton-street* was named from the Stratton line of the Berkeleys, on whose estate it was built. No. 1 was the mansion of Mrs. Coutts, the widow of the rich banker, and afterwards Duchess of St. Albans, "who brought back the dukedom to the point from which it set out—the stage" (*Leigh Hunt*). By her grace the mansion was bequeathed, with the greater portion of her immense wealth, to Miss Angela Burdett Coutts, youngest daughter of Sir Francis Burdett, Bart.

*Berkeley-street*, built in 1642, and then the extremity of Piccadilly, was named from Berkeley House, on the site of Devonshire House. *Dover-street* was built about 1688, upon the estate of Henry Jermyn, Lord Dover, who resided on the east side; as did John Evelyn, who had been "oftentimes so cheerful, and sometimes so sad, with Chancellor Hyde" on that very ground. On the west side lived Dr. John Arbuthnot, physician to Queen Anne, "Martinus Scriblerus," and the friend of Pope, Swift, Gay, and Prior. No. 37, sculptured with a mitre, is the town-house of the Bishop of Ely. At No. 38 lived Lord King, who wrote a life of his profound kinsman, John Locke; published 1829. *Albemarle-street* was built by Sir Thomas Bond, of Peckham, on part of the site of Clarendon House. In 1708 it was "a street of excellent new buildings, inhabited by persons of quality, between the fields and Portugal-street."

"The earliest date now to be found upon the site of Clarendon House is cut in stone, and let into the south wall of a public-house, the sign of *The Duke of Albemarle* in Dover-street, thus: 'This is

\* The ticket of admission to the performances of the *Guild of Literature and Art* (first given at Devonshire House, 1851), was designed by E. M. Ward, A.R.A. On the left is Richard Wilson, the painter, with a picture under his arm, entering a pawnbroker's shop. On the right is Daniel Defoe coming out of Edmund Curll's shop, with the manuscript of *Robinson Crusoe* in his hand; his wife is inquiring as to his success in selling the manuscript, and her little girl is standing in front. In the centre foreground are grouped a palette, brushes, and books; and at the top is a kneeling child smelling a rose, and another pouring water into a rose-bud.

† In 1853 were added to the MSS. in the British Museum 63 autograph letters of Lord Nelson, addressed to Lady Hamilton, from 1798 to 1805; including the last letter Nelson ever wrote, found in his cabin, after the battle of Trafalgar, October 21st, 1805.

Stafford-street, 1636.' In a plan of London etched by Hollar, in 1636, it is evident that the centre of Clarendon House must have occupied the whole of the site of Stafford-street."—Smith's *Streets*.

*Clarendon House* was commenced by Lord Chancellor Clarendon in 1664, "encouraged thereto by the royal grant of land, by the opportunity of purchasing the stones which had been designed for the repairs of St. Paul's, and by that passion for building to which he was naturally too much inclined." (*Evelyn*.) About the same time, Lord Berkeley began to build Berkeley House on the west; and Sir John Denham, Burlington House on the east. During the war and the plague year, Clarendon employed about 300 workmen, which raised a great outcry against him: "some called it 'Dunkirk House,' intimating that it was built by his share of the price of Dunkirk: others called it 'Holland House,' because he was believed to be no friend to the war; so it was given out that he had the money from the Dutch. It was visible that in a time of public calamity he was building a very noble palace." (*Burnet*.) Pepys records that some rude people, in 1667, "had been at my Lord Chancellor's, where they cut down the trees before his house and broke his windows; and a gibbet either set up before or painted upon his gate, and these words writ: 'Three sights to be seen—Dunkirk, Tangier, and a barren queen.'" He was lampooned also in one of the *State Poems*, entitled "Clarendon's House-warming." The day before his lordship's flight, Evelyn "found him in his garden at his new-built palace, sitting in his gowt wheele-chayre, and seeing the gates setting up towards the north and the fields. He looked and spake very disconsolately. Next morning I heard he was gone." Evelyn, dining at Clarendon House with the Lord Chancellor's eldest son, Lord Cornbury, after his father's flight, describes the mansion as "now bravely furnished, especially with the pictures of most of our English and modern wits, poets, philosophers, famous and learned Englishmen;" most of these pictures have been brought from Cornbury, a seat of the Earls of Clarendon, Oxon, to the Grove, Watford, Herts.

Clarendon House was subsequently let to the great Duke of Ormond. After Lord Clarendon's death in exile, it was sold, in 1675, for 26,000*l.* to the young Duke of Albemarle, who soon parted with it to Sir Thomas Bond, by whom the mansion was taken down, and *Bond-street* and *Albemarle-buildings* (now *street*) and *Stafford-street* were built upon the site. A map in the Crowle Pennant shows the entrance-gate to the court-yard to have been in Piccadilly, directly opposite St. James's-street; and the grounds to have extended to the site of Bruton-street. Two Corinthian pilasters, long preserved, at the *Three Kings' Inn* gateway, No. 75, in Piccadilly, are believed to have belonged to Clarendon House; the name is preserved in the *Clarendon Hotel*, built upon a portion of the gardens between Albemarle and Bond-streets.

"All the waste ground at the upper end of Albemarle and Dover-streets is purchased by the Duke of Grafton and the Earl of Grantham, for gardening; and the road there leading to May Fair is ordered to be turned."—The *British Journal*, March 30, 1723. (This purchase is commemorated in *Grafton-street*.)

In Albemarle-street, at an apothecary's, lodged Dr. Berkeley when he was made Dean of Derry. Richard Glover, the merchant-poet, who wrote "*Leonidas*" and "*Admiral Hosier's Ghost*," died here in 1785. On the east side is the *Royal Institution*; the columnar façade by L. Vulliamy, 1838, adapted from the remains of Mars Ultor and Jupiter Stator, and the Pantheon at Romè. No. 23 is the *ALFRED CLUB-HOUSE* (see p. 240). At No. 50, since 1812, have lived John Murray, father and son, publishers; the former, "the friend and publisher of Lord Byron," died 1843. Opposite is Grillion's Hotel, where Louis XVIII. sojourned in 1814: here and at the Clarendon were held the Roxburgh Club Dinners.

*Bond-street* was commenced in 1686 by Sir Thomas Bond, Bart., Comptroller of the Household to Queen Henrietta-Maria. "Bond-street loungers, who pass from 2 till 5 o'clock," are mentioned in the *Weekly Journal*, June 1, 1717. At No. 41, "at the Silk-Bag Shop," died, March 18, 1768, Laurence Sterne, broken-hearted, neglected, and in debt: some of the most touching scenes in *Tom Jones* are laid at Mr. Allworthy's lodgings in Bond-street. Here lodged James Boswell when he gave a dinner to Johnson, Goldsmith, Reynolds, and Garrick. No. 27 was the library of Ebers, who in seven years lost 44,080*l.* by the Italian Opera-house, Haymarket. No. 10 has a large billiard-room, painted 1850 in encaustic by E. F. Lambert, with panels bordered with arabesques; the principal subjects being Bacchus and Ariadne, Hebe, "Willie

brew'd a peck o' maut," "Let me the cannikin clink," and the "Wassail bowl." The tasteful house-front, No. 21, was designed by the Inwoods, architects of St. Pancras' Church, Euston-road.

In 1766, the mansion, now the Clarendon Hotel, was let by the Duke of Grafton to Mr. Pitt (Earl of Chatham), for his town house. M. Grillon, proprietor of the Clarendon Hotel, was once rather unexpectedly honoured by the visit of two guests, the French ex-Queen Amélie and Prince Napoléon Jérôme. To each the presence of the other was made known, but the ex-Queen acknowledged the right of the Prince to the hotel. The Prince, like a gentleman, offered to withdraw if his presence gave the venerable lady any displeasure; but the ex-Queen would not hear of his being put to any inconvenience. The delicacy and courtesy of M. Grillon were taxed, but stood the test. The Clarendon has more issues than one, and the worthy host contrived that the two illustrious personages should never find themselves on the same staircase.—*Athenæum*, No. 2001.

*Burlington Gardens*, originally "Ten-Acres Fields," extended from Bond-street to Uxbridge House, noticed at p. 557: here died, April 29, Anglesey, K.G., aged 86. In *Cork-street* the Marshal Wade a house with a beautiful front, illustrated by Rubens, but in vain: Lord Chesterfield said he would not live in it, but intended to take the house there. At the south-east corner of *Grafton-street* the author, who published so many pretty picture-books in *d-street* was the Clifford-street Club (see p. 245). an open field called Conduit-mead (now street), which were found in 1867, in excavating large Nos. 34 and 35, New Bond-street: these cellars are, and will contain upwards of half a million elson lodged in 1797. At No. 21 was exhibited, by Haydon for Sir Robert Peel, and upon which met.

et, are the BURLINGTON ARCADE (see p. 20), and No. 52, adjoining, are the *Albany Chambers*, let in 1712, designed by Sir William Chambers, was sold to the 1st Viscount Melbourne, who exchanged it with the Duke of Devonshire, House, Whitehall. In 1804 the mansion was sold to the Duke of Devonshire, and first let in chambers, named *Albany* from the name of the Duke.

The ceilings of the mansion were painted for the Duke of Devonshire, by Sir James Gandon, and Rebecca. In chambers here have lived the Duke of Devonshire, Lord Byron, Lord Lytton, Lord Macaulay, and the Duke of Devonshire. The site were originally the houses of the Earl of Devonshire, and the Duke of Devonshire.

et in London without a turning: at the corner of the street, died Sir William Petty, the earliest writer of the history of the County of Devonshire in England, and ancestor of the Lansdowne family:

a letter from Sir William Petty to Pepys is dated Piccadilly, September, 1687. The Dilettanti Club met at *The Prince*, in this street, in 1783.

*Swallow-street* is named from "Swallow Close," part of the crown lands granted to Lord Chancellor Clarendon: here was the oldest Scottish Presbyterian church in the metropolis, and rebuilt (see p. 222). *Swallow-street* originally extended northward to Tyburn-road, from the centre of the present Regent-street. ST. JAMES'S HALL is described at pp. 426-427. *Ayr* or *Air-street* was in 1659 the most westerly street.

SOUTH SIDE.—Hyde Park Corner turnpike-gate was removed in 1825. The long dead wall of the Park (now open railing) was hung with ballads; here robberies after dark were frequent.

*Arlington-street*, "a very graceful and pleasant street" (*Hatton*, 1708), was built upon the property of Henry Bennet, Earl of Arlington, about 1689: hence, also, *Bennet-street*. In Arlington-street lived the Duchess of Cleveland, after the death of Charles II.; Lady Mary Wortley Montague, before her marriage; William Pulteney, Earl of Bath, on the west side, next door to Sir Robert Walpole, where was born Horace Walpole, who wrote in 1763, "From my earliest memory, Arlington-street has been the ministerial street;" in 1750 he records a highwayman attacking a post-chaise in Piccadilly, at 11 o'clock on a Sunday night, and escaping. Upon the site

Stafford-street, 1686.' In a plan of London etched by Hollar, in 1686, it is evident that the centre of Clarendon House must have occupied the whole of the site of Stafford-street."—Smith's *Streets*.

*Clarendon House* was commenced by Lord Chancellor Clarendon in 1664, "encouraged thereto by the royal grant of land, by the opportunity of purchasing the stones which had been designed for the repairs of St. Paul's, and by that passion for building to which he was naturally too much inclined." ## OIL NEWS

UNITED BRITISH OIL TRINIDAD.—(Combined production 30 August amounted APEX (TRINIDAD).—Gross crude oil for month of August

brew'd a peck o' maut," "Let me the cannikin clink," and the "Wassail bowl." The tasteful house-front, No. 21, was designed by the Inwoods, architects of St. Pancras' Church, Euston-road.

In 1766, the mansion, now the Clarendon Hotel, was let by the Duke of Grafton to Mr. Pitt (Earl of Chatham), for his town house. M. Grillion, proprietor of the Clarendon Hotel, was once rather unexpectedly honoured by the visit of two guests, the French ex-Queen Amélie and Prince Napoléon Jérôme. To each the presence of the other was made known, but the ex-Queen acknowledged the right of the Prince to be in the hotel. The Prince, like a gentleman, offered to withdraw if his presence gave the venerable lady any displeasure; but the ex-Queen would not hear of his being put to any inconvenience. The delicacy and courtesy of M. Grillion were taxed, but stood the test. The Clarendon has more issues than one, and the worthy host contrived that the two illustrious personages should never find themselves on the same staircase.—*Athenæum*, No. 2001.

*Burlington Gardens*, originally "Ten-Acres Fields," extended from Bond-street to Swallow-street: here is UXBRIDGE HOUSE, noticed at p. 557: here died, April 29, 1854, Field-Marshal the Marquis of Anglesey, K.G., aged 86. In *Cork-street* the Earl of Burlington designed for Field-Marshal Wade a house with a beautiful front, ill-contrived inside to suit a large cartoon by Rubens, but in vain: Lord Chesterfield said that "to be sure he (the Marshal) could not live in it, but intended to take the house over against it, to look at it" (*Walpole*). At the south-east corner of *Grafton-street* was the book-shop of Benjamin Tabart, who published so many pretty picture-books for children. At the corner of *Clifford-street* was the Clifford-street Club (see p. 245).

*New Bond-street* site was in 1700 an open field called Conduit-mead (now street), from the Conduit there, remains of which were found in 1867, in excavating large wine-cellar for Mr. Basil Woodd, at Nos. 34 and 35, New Bond-street: these cellars cover more than one-third of an acre, and will contain upwards of half a million bottles of wine. At No. 141, Lord Nelson lodged in 1797. At No. 21 was exhibited, "Napoleon at St. Helena," painted by Haydon for Sir Robert Peel, and upon which Wordsworth wrote his memorable sonnet.

In Piccadilly, east of Old Bond-street, are the BURLINGTON ARCADE (see p. 20), and BURLINGTON HOUSE (see p. 545). No. 52, adjoining, are the *Albany Chambers*, let in suites to single gentlemen. The centre, designed by Sir William Chambers, was sold in 1770, by Lord Holland, to the first Viscount Melbourne, who exchanged it with the Duke of York for Melbourne, now Dover, House, Whitehall. In 1804 the mansion in Piccadilly was altered and enlarged, and first let in chambers, named *Albany* from the second title of the Duke of York. The ceilings of the mansion were painted for Lord Melbourne by Cipriani, Wheatley, and Rebecca. In chambers here have lived George Canning, M. G. (Monk) Lewis, Lord Byron, Lord Lytton, Lord Macaulay, and Lord John Manners. Upon the site were originally the houses of the Earl of Sunderland, Sir John Clarges, and Lady Stanhope, with large gardens.

*Sackville-street* is the longest street in London without a turning: at the corner house, east, opposite St. James's Church, died Sir William Petty, the earliest writer on the science of political economy in England, and ancestor of the Lansdowne family: a letter from Sir William Petty to Pepys is dated Piccadilly, September, 1687. The Dilettanti Club met at *The Prince*, in this street, in 1783.

*Swallow-street* is named from "Swallow Close," part of the crown lands granted to Lord Chancellor Clarendon: here was the oldest Scottish Presbyterian church in the metropolis, and rebuilt (see p. 222). *Swallow-street* originally extended northward to Tyburn-road, from the centre of the present Regent-street. ST. JAMES'S HALL is described at pp. 426-427. *Ayr* or *Air-street* was in 1659 the most westerly street.

**SOUTH SIDE.**—Hyde Park Corner turnpike-gate was removed in 1825. The long dead wall of the Park (now open railing) was hung with ballads; here robberies after dark were frequent.

*Arlington-street*, "a very graceful and pleasant street" (*Hatton*, 1708), was built upon the property of Henry Bennet, Earl of Arlington, about 1689: hence, also, *Bennet-street*. In Arlington-street lived the Duchess of Cleveland, after the death of Charles II.; Lady Mary Wortley Montague, before her marriage; William Pulteney, Earl of Bath, on the west side, next door to Sir Robert Walpole, where was born Horace Walpole, who wrote in 1768, "From my earliest memory, Arlington-street has been the ministerial street;" in 1750 he records a highwayman attacking a post-chaise in Piccadilly, at 11 o'clock on a Sunday night, and escaping. Upon the site

of Walpole's house Kent built No. 17, for Pelham the Minister, the house now the Earl of Yarborough's. Lord Nelson lodged in this street in 1800-1, when Lady Nelson separated from him. At No. 16 (the Duke of Rutland's), the Duke of York, second son of George III., lay sick, from August 26, 1826, to his death, Jan. 5, 1827, as touchingly narrated by Sir Herbert Taylor. No. 26, BEAUFORT HOUSE, was in 1854 sold to the Duke of Hamilton. The houses on the west side of the street command a charming view of the Green Park.

ST. JAMES'S-STREET, *Bury-street, Jermyn-street, King-street, and St. James's-place*, are described at pp. 480-483.

No. 160, Piccadilly, is the entrance to the Wellington Dining-House (formerly Crockford's Club). The EGYPTIAN HALL is described at p. 319.

At No. 169, Wright, the publisher of the *Anti-Jacobin*, kept shop, which was the resort of the friends of the Ministry, as Debrett's was of the Opposition. In a first-floor met the editors of the *Anti-Jacobin*, including Canning, Frere, and Pitt; with Gifford as working editor, and Upcott (Wright's assistant) as amanuensis. (See *Notes and Queries*; and *Poetry of the Anti-Jacobin*, new edition, 1854.) In Wright's shop, Peter Pindar (Wolcot) was castigated by Gifford. No. 177 was the shop of William Pickering, the eminent publisher, whose title-pages bear the Aldine anchor: his valuable stock of old books, rare works on angling, modern copyrights and reprints, was dispersed in 1854. No. 182 (Fortnum and Mason's) is designed from a mansion at Padua, renovated and altered. The MUSEUM OF PRACTICAL GEOLOGY is described at p. 595. In the Inventory of Rich's Theatrical Properties (*Tatler*, July 16, 1709) is "Aurungzebe's scymitar, made by Will. Brown in Piccadilly." *Regent Circus* (see REGENT-STREET).

No. 201, Piccadilly, is the *St. James's Gallery of Art*, where is exhibited a most remarkable collection of pictures principally in Water-Colours, painted by E. Façon Watson, from nature; mostly scenes of rural life, one hundred in number: they unite solidity with brilliancy of colour, and are distinguished by the most elaborate care and delicacy of manipulation; the foliage, flowers, and grasses (especially the ferns), are of microscopic accuracy, and the atmosphere of remarkable transparency and characteristic beauty. Many of them are executed in a new style in the practice of the art, which is the artist's secret." They were painted in the leisure of a life-time, and are unquestionably exquisite works of art.

ST. JAMES'S CHURCH is described at p. 169: in 1867 the interior was renovated and altered according to Wren's original intention: it has two large sunlights in the ceiling.

Nollekens, the sculptor, when a boy, with Scheemakers, the sculptor, in Vine-street, "had an idle propensity for bell-tolling, and in that art, for which many allowed him to have a superior talent, he would frequently indulge by running down George-court to St. James's Church, to know how funerals went on. Whenever his master missed him, and the dead-bell was tolling, he knew perfectly well what Joey was at."—Smith's *Life of Nollekens*.

### PICTURE GALLERIES (PUBLIC).

NATIONAL GALLERY (The), on the north side of Trafalgar-square, was built between 1832 and 1838, from the design of Professor Wilkins, R.A., and was his latest work. Its length is 461 feet, and the greatest width 56 feet; and it is built partly with the materials of the King's Mews, the site of which it occupies. The best feature is the centre, the Corinthian columns of which are from the portico of Carlton House, and are adapted from the Temple of Jupiter Stator at Rome.\* This portico has interior columns, the only example in the metropolis; and the view commands the broad vista of Parliament-street and Whitehall, and the picturesque towers of the Palace at Westminster. But the Gallery central dome is ill-proportioned and puny; and the corresponding cupolas upon the wings are poor imitations of Vanbrugh's embellishment of private mansions. Through the eastern wing is a thoroughfare to Duke's-court, claimed by the inhabitants as a *right of way* long enjoyed by them through the King's Mews. The vestibule is divided, by screens of scagliola columns (with scenic effect), into two halls; and from each is a staircase leading to the upper floors, each a suite of five rooms. The eastern wing is appropriated to the ROYAL ACADEMY OF ARTS, which see. The western wing is occupied by the national collection of pictures. The ground-floor is mostly official apartments, but was originally intended as a depository for public records.

In the hall are S. Joseph's marble statue of Sir David Wilkie, R.A., with his palette

\* A complete set of casts from these fine specimens of ancient art exists in the Museum of Mr. Joseph Gwilt, F.S.A., Abingdon-street, Westminster.

inserted beneath glass in the pedestal; a fine alto-relievo, in marble, by T. Banks, R.A., of Thetis and her Nymphs rising from the Sea to condole with Achilles on the loss of Patroclus; and a bronze bust of the Emperor Napoleon; and a marble bust of William Mulready, R.A., by H. Weekes, R.A.

The National Gallery was founded in 1824, by the purchase of Mr. Angerstein's collection of pictures for 57,000*l.*: it is said, upon the suggestion of George IV.; but it originated equally in Sir George Beaumont's offer, in 1823, to the Trustees of the British Museum, to present his collection to the public. The Angerstein pictures (38) were first exhibited in the house of Mr. Angerstein, 100, Pall Mall, May 10, 1824; whither Sir George Beaumont's 16 pictures were transferred in 1826. In 1831, 35 pictures were bequeathed by the Rev. W. Holwell Carr; in 1836, 6 pictures were presented by William IV.; 17 bequeathed in 1837 by Lieut.-Col. Ollney; 15 bequeathed in 1838 by Lord Farnborough; 14 bequeathed in 1846 by R. Simmons: and the Gallery has since been increased, by donations, bequests, and comparatively few Government purchases, to about 495 pictures; independently of the Vernon and Turner collections.

The current expenses connected with the National Gallery amount to an annual sum of 15,894*l.*, of which the Director receives 1000*l.*, and the Keeper and Secretary 750*l.* The establishment at Trafalgar-square costs 1523*l.*, of which 327*l.* is given to curators, and 786*l.* to police. A sum of 621*l.* is spent at South Kensington, 2000*l.* is allowed for travelling expenses, agency, &c., and 10,000*l.* for the purchase of pictures.

The first Catalogue of the National Gallery, by W. Young Ottley, has long been out of print: the fullest extant is by R. N. Wornum. Among the more notable pictures are two Groups of Saints and the Baptism of Christ, (eleven pictures,) by Taddeo Gaddi, painted in tempera, bright colour upon a gold background; curious specimens of middle-age art.

*Italian School:* The Virgin and Child, with Saints and a Dead Christ (nunette) from an altar-piece, by Francesco Francia, early Bolognese School. Virgin and Child, with St. John, by P. Perugino; divinely holy in character and expression. The Raising of Lazarus, by Sebastian del Piombo: the figure of Lazarus by Michael Angelo. St. Catherine of Alexandria, the Vision of a Knight, portrait of Pope Julius II., and fragment of a Cartoon of the Murder of the Innocents, by Raphael; and the Madonna, Infant Christ, and John, (Garvagh Raphael, 9000*l.*) Three of Correggio's greatest works: Mercury instructing Cupid in the presence of Venus; the Ecce Homo; and the Holy Family (La Vierge au Panier): the three pictures cost 14,400*l.* A Holy Family, Noli me tangere, and Bacchus and Ariadne, by Titian. Susannah and the Elders, by Ludovico Caracci. Eight works of Annibale Caracci: Silenus gathering Grapes; Pan (or Silenus) teaching Apollo to play on the Reed; and Christ appearing to St. Peter. Nine works of Guido, including Susannah and the Elders; Andromeda and the "Ecce Homo." Ten works of Claude (Landscapes and Seaports), including the Chigi and Bouillon Claudes, the latter the Embarkation of the Queen of Sheba. A fine Landscape (Mercury and the Woodman) by Salvator Rosa. Gaston de Foix, by Giorgione. The Madonna and Child enthroned, with Saints John and Christopher, with the Doge Giovanni Mocenigo, in adoration, by Vittore Carpaccio. St. Rock with the Angel, by Paolo Morando. Venetian Senator, by Francesco Bonsignori. The Madonna, Infant Christ, and St. Anne, by Libri. Madonna in Prayer, and Madonna and Child, by Sasso Ferrato. Christ and his Disciples going to Emmaus, by Melone. Milanese Nobleman, by Solario. "Ecce Homo," by La Spagna.

*Spanish School:* Philip IV. of Spain hunting the Wild Boar, Portrait of Philip, the Nativity, (in the Manger), and the Dead Warrior, by Velasquez. The Holy Family, St. John with the Lamb, and the Spanish Peasant-boy, by Murillo.

*Flemish School:* Portraits of a Flemish Gentleman and Lady, in a bedchamber; under the mirror is written "Johannes de Eyck fait hic, 1434." Nine works of Rubens: including the Sabine Women; Peace and War, presented to Charles I. by Rubens, in 1630; the Brazen Serpent; St. Bavon, harmonious and picturesque; Rubens's own Château; the Judgment of Paris, from the Orleans Collection; and the Apotheosis of James I., sketched for the Whitehall ceiling. Vandyke's magnificent St. Ambrosius and the Emperor Theodosius; and the same painter's "Gevartius;" or Vander Geest, a portrait scarcely equalled in the world,—but by some attributed to Rubens. The Woman taken in Adultery, one of Rembrandt's finest early works; Christ taken down from the Cross; Christ blessing little Children; his Adoration of the Shepherds; a Woman Bathing; and three of his marvellous portraits. A sunny Landscape, with cattle and figures, by Cuyp. The Misers, or Money-changers, by David Teniers.

*French School:* Eight works of Nicholas Poussin, including two Bacchanalian Festivals, and the Plague of Ashdod, very fine. Also, six works of Gaspar Poussin, including his masterpiece, a Landscape with Abraham and Isaac; and his fine classical picture of Dido and Æneas in a Storm.

*English School:* Sun rising in a Mist, and Dido building Carthage, by J. M. W. Turner. Mr. Lewis, the comedian, "Gentleman Lewis," by M. A. Shee, bequeathed by the son of Mr. Lewis, with 10,000*l.* in money, the proceeds, about 300*l.* a year, to be laid out in the improvement of the Fine Art.

THE TURNER PICTURES are arranged chronologically, and comprehend *three distinct styles*, mostly corresponding with Turner's three visits to Italy in 1819, 1829, and 1840. The first period reaches to his 27th year, when he was forming a style, by studying his English predecessors, Wilson, Louthborough, and Gainsborough; his earliest oil-pictures resemble those of Wilson in style. In the second period, 1802 to 1830, Turner is seen at first as a follower of Claude and Gaspar Poussin, and then striking out a style of landscape-painting, entirely original, and wholly unrivalled for brilliancy of colouring and effect; the majority of his greatest works belong to that

period, from his Calais Pier, 1803, to the Ulysses deriding Polyphemus, 1829. In his third period, dated from 1830, during the last twenty years of his life, everything else was sacrificed to the splendour of light and colour; yet some of Turner's finest works belong to this period—as his *Childe Harold's Pilgrimage*, 1832, and the *Téméraire*, 1839. The Turner pictures, as arranged by Mr. Wornum, have been hung in the west room of the National Gallery.

ROYAL ACADEMY OF ARTS (THE) occupies the east wing of the National Gallery, already described. The Academy originated in a Society of Artists in Peter's-court, St. Martin's-lane.\* With its apparatus Hogarth established the Society of Incorporated Artists, who held their first Exhibition at the house of the Society of Arts, in the Adelphi, April 21, 1760; next in Spring Gardens. In 1768 certain artists seceded from the Society, were constituted a "Royal Academy," removed to Pall Mall, and elected Reynolds president (at the first Exhibition, in 1769, there were 136 pictures, and only three sold); and George III. granted them, in 1771, apartments in Old Somerset House.

The Foundation consists of 40 Royal Academicians; 20 Associates, from whom the members are chosen to fill up vacancies; and six Associate Engravers. The Academicians elect from among themselves annually the President; they also appoint a Secretary and Keeper. The Council of eight members elect among the body Professors of Painting, Sculpture, and Architecture; and appoint a Professor of Anatomy, who must be a surgeon. Dr. Johnson was first President of Ancient Literature; and Dr. Goldsmith, Professor in Ancient History, was succeeded by Edward Gibbon. Lectures are delivered to the students and exhibiting artists, free of expense: and prize medals are awarded biennially and annually. Students are also sent to Rome at the expense of the Academy. The members are under the superintendence and control of the Queen, who confirms and signs all appointments.

Among the Foundation Members of the Academy were Sir Joshua Reynolds (*President*); Sir William Chambers, the architect of Somerset House; Gainsborough and Wilson, the eminent landscape-painters; Benjamin West (*the second President*); Joseph Wilton, the sculptor; F. Bartolozzi, the engraver; Charles Catton, Master of the Painter-Stainers' Company; and Angelica Kauffmann and Mary Moser.—(*See Zoffany's Picture of the Royal Academicians, 1773.*)

Upon the rebuilding of Somerset House, apartments in the western wing were given to the Academicians; and the first Exhibition here was opened May, 1780.

The *Library* ceiling was painted by Sir Joshua Reynolds and Cipriani: the centre, by Reynolds, represents "the Theory of Painting," a majestic female, holding compasses and a label inscribed, "Theory is the knowledge of what is truly nature." The four compartments, by Cipriani, were personifications of Nature, History, Allegory, and Fable. The *Council-room* was painted by West: centre, the Graces unveiling Nature, surrounded by figures of the Four Elements; oval pictures of Invention, Composition, Design, and Colouring, by Angelica Kauffmann; medallions of Apelles, Phidias, Apollodorus, and Archimedes; and a circle of chiaro-scuro medallions of Palladio, Bernini, Michael Angelo, Fiammingo, Raffaele, Domenichino, Titian, and Rubens, painted by Rebecca.

Horace Walpole writes to Mason:—"You know, I suppose, that the Royal Academy at Somerset House is opened. It is quite a Roman palace, and finished in perfect taste, as well as boundless expense. . . . Gainsborough has five landscapes there, of which one especially is worthy of any collection and of any painter that ever existed." Walpole's copy of "the Exhibition Catalogue" for 1780 exhibits against the landscapes by Gainsborough MS. expressions of "charming," "very spirited," "as admirable as the great masters."

In 1838 the Academy removed to the National Gallery. They possess a library of prints, and books on art (*see p. 464*), which is open to students. Here are also several pictures by old masters. The School for Drawing from the Antique is held in the Sculpture-room; the School for Painting in the West-room; and the School for Drawing from the Life-model is held in the interior of the dome of the edifice. In the Hall of Casts (mostly presented by George IV., and procured through the intervention of Canova) are a beautiful group of Niobe and her Daughters; the graceful Mercury of the Vatican; Fauns with their Cymbals; the Egyptian Jupiter, and the Olympian; Apollo and the Muses; the Laocoon; the Fighting and Dying Warrior; a mutilated remnant of a statue of Theseus, &c. Upon the ceiling of the Council-room are the paintings, by Sir Joshua Reynolds and other Academicians, transferred from the Library and Council-room at Somerset House.

\* This Society (according to Edwards) was formed from a "Life School," or Living Model Academy, which was established in the house of Peter Hyde, a painter, in Greyhound-court, between Milford-lane and Arundel-street, Strand, under the direction of Mr. Moser, afterwards the first Keeper of the Royal Academy. The School removed to Peter's-court about 1739. The houses in Greyhound-court were taken down between 1851 and 1854.

The *Diploma Pictures and Sculptures* (each member presenting a work of art upon his election) are placed in the Council-room, and include Sir Joshua Reynolds' full-length portrait of George III.; Fuseli's "Thor battering the Serpent of Midgard in the boat of Hymer the Giant;" a Rustic Girl, by Lawrence; the Tribute-Money, by Copley; Charity, by Stothard; Jael and Sisera, by Northcote; the Falling Giant, by Banks; and Apollo and Marpessa, and a cast of the Shield of Achilles, by Flaxman; Christ blessing little Children, by West; Boys digging for a Rat, by Wilkie; Opie's Infancy and Age; portrait of Gainsborough, by himself; Sir William Chambers, by Reynolds; and Sir Joshua in his doctor's robes, by himself. Cupid and Psyche, by Nollekens; bust of Flaxman, by Baily; West, by Chantrey, &c.

There are, also, a celebrated copy, size of the original, of the Last Supper, by Leonardo da Vinci, made by his pupil, Marco d'Oggione; copies of the Descent from the Cross, and the two Volets, by Rubens, made by Guy Head; and copies of the Cartoons of Raffaele, by Thornhill,—the size of the originals. Also, small copies in oil of the frescoes by Raffaele in the Vatican; two fine Cartoons (the Holy Family and St. Anna, and Leda) by L. da Vinci; bas-relief in marble of the Holy Family, by Michael Angelo, presented by Sir George Beaumont, &c. Among the memorials preserved by the Academy are two palettes of Reynolds and Hogarth. The Diploma Pictures, &c., may be seen by application in writing to the Keeper of the Gallery.

The *Exhibition* is opened annually on the first Monday in May; admission 1s., catalogue 1s.: it closes the last week in July; but there is an after-exhibition. All works sent for exhibition are submitted to the Council, whose decision is final. The receipts at the door have reached, in one season, 11,600*l.*

The qualifications for becoming a Student of the Royal Academy are, an approved drawing or model by the applicant, and testimony of his moral character; and next, an approved drawing or model of an antique figure in the Academy, accompanied by outline drawings of an anatomical figure and skeleton, not less than two feet high, with list, references, &c. A similar rule applies to Architectural Students.

The Annual Dinner is given by the Academicians on Saturday previous to the opening of the Exhibition, in the West Room, where hangs the massive chandelier presented to the Academy by George IV.

In less than a ninety-nine years "crown and public" tenure of existence [1769-1866] *The "Royal Academy of Arts" in London* has had five presidents:—1. Sir Joshua Reynolds; 2. Benjamin West, who declined knighthood; 3. Sir Thomas Lawrence; 4. Sir Martin Archer Shee; 5. Sir Charles Lock Eastlake.

Total sums received from the Annual Exhibition, from 1769 to 1859 (inclusive), less the expenses attending the same, 267,583*l.* 15*s.* 5*d.*,—sums received by dividends on stock, &c., 91,667*l.* 8*s.* 9*d.*,—sums received from his Majesty's Privy Purse, from 1769 to 1780, 5116*l.* 2*s.*,—Turner bequest, 20,000*l.*,—sums expended by the Royal Academy, from the commencement of the institution, in the gratuitous instruction of the students, general management, &c., 218,469*l.* 5*s.*,—paid in pensions to distressed and superannuated members and their widows, from 1803 to 1859, 28,739*l.* 0*s.* 7*d.*, donations to distressed and superannuated artists and their families, from 1769 to 1859, 32,772*l.* 5*s.* 10*d.* The balance in favour of the Academy in 1867 was 104,499*l.* 19*s.* 8*d.*

A new Gallery for the Academy is in course of erection in the rear of Burlington House, Piccadilly, which is to form the frontage of the Academy.

THE SHEEPSHANKS' PICTURES, were, in 1857, by a deed of gift presented to the nation by Mr. Sheepshanks of Rutland-gate, and are deposited in a building erected for the purpose at South Kensington.

It comprises 233 oil paintings, cabinet size, ranging over a period of fifty years, and embracing very choice examples of many of the most eminent painters of the time. The collection is incidentally noticed at page 604. A complete list appeared in the *Athenæum*, No. 1530. It is especially rich in the works of Mulready, Leslie, Landseer, Wilkie, Stothard, and Webster. Of Mulready there are 34 examples—the earliest painted in 1806, the latest in 1848: among them is the famous *Choosing the Wedding Gown*. By Leslie there are 24 paintings, the best illustrations from Shakespeare, Molière, and Sterne. By Landseer there are 16 paintings, besides drawings and sketches; the largest picture is the *Drover's Departure*—scene in the Grampians; also the *Old Shepherd's Chief Mourner*. The five pictures by Turner include, the vessel in distress off Yarmouth; and Venice. The only fine picture by Wilkie is *The Refusal*—Duncan Gray. The six by Webster are all good examples. Stothard's 10 pictures include several of his Shakespeare pieces. Further, here are 9 examples by Collins; 6 by Constable; as many by Redgrave; 3 each by Stanfield, Roberts, Lee, and Danby; 2 each by Eddy, Eastlake, and Creswick; 9 by Callcott; 11 by Cooke; 9 by Cope; 4 by Uwins, &c.; besides drawings by Turner, Prout, &c.

THE VERNON COLLECTION OF THE ENGLISH SCHOOL, 162 pictures, temporarily exhibited at South Kensington, was presented to the nation in 1847, by Mr. Robert Vernon, who died at his house, No. 50, Pall Mall, May 22, 1849, in the 75th year of his age.

Among the pictures are: Sir Joshua Reynolds—the *Age of Innocence* (very fine), cost Mr. Vernon 1450 guineas. Gainsborough—*Landscape: Sunset* (fine). Richard Wilson—four small pictures (fine). Sir A. W. Callcott—*Littlehampton Pier* (fine). Wilkie—*The Newsmongers* (fine); *The Bagpiper* (fine).

Collins, R.A.—Happy as a King. J. M. W. Turner, R.A.—William III. landing at Torbay; Composition Landscape (fine); Two Views in Venice (fine). Clarkson Stanfield, R.A.—The Entrance to the Zuyder Zee (fine). David Roberts, R.A.—Interior of St. Paul's at Antwerp (fine). Sir Edwin Landseer, R.A.—Peace and War (Peace very fine); Highland Piper and Dogs; Spaniels of King Charles's breed; the Dying Stag; High Life and Low Life Dogs. W. Mulready, R.A.—The Last In; the Ford. T. Webster R.A.—The Dame School (fine). D. Maclise, R.A.—Play Scene in Hamlet. E. M. Ward, R.A.—South Sea Bubble; Disgrace of Clarendon.

Both the above collections are open on Mondays, Tuesdays, and Saturdays, free; and on Wednesdays, Thursdays, and Fridays (students' days) on payment of 6*d.* each.

THE NATIONAL PORTRAIT GALLERY, 29, Great George-street, Westminster, was established in 1856, with a Government grant for 2000*l.*, when the Earl of Ellesmere presented the famous Chandos Shakspeare, which he had purchased at the Stowe sale in 1848, for 355 guineas; the Gallery has since been supported by an annual grant of 2000*l.* for purchases, and by donations of portraits of unquestionable importance, subject to the approbation of the trustees, without partisan or sectarian exclusiveness. Admission free on Wednesdays and Saturdays.

THE NATIONAL PORTRAIT EXHIBITION of Pictures, obtained by loan, originated by the Earl of Derby, was held in the new building at the South Kensington Museum, in the year 1866-7; the historic periods of the paintings extending from the twelfth century to 1688; and in 1867, from 1688 to 1800.

DULWICH GALLERY, founded by Sir Francis Bourgeois, R.A., who left to the College 354 pictures, 10,000*l.* to erect and keep in repair a building, and 2000*l.* to provide for the care of the pictures: built by the suggestion of John Philip Kemble, the actor, at Allyn's College, Dulwich. (See p. 274.) The Murillos and Cuyps (19) are especially fine. Teniers, 21 in all. Mrs. Sheridan and Mrs. Tickell, by Gainsborough, full-lengths, very fine. Mrs. Siddons, and his own portrait, by Sir Joshua Reynolds, are indifferent duplicates. This is the only Collection free to the public which affords an opportunity for studying the Dutch masters. Open each week free, except Thursday and Friday, charge 6*d.*

Among the private Picture Galleries of London are several to which access can be obtained by accredited application, by letter, to the proprietor. Such are—the collection in Devonshire House (see p. 548), rich in Italian pictures, and more particularly of the Venetian school; Sir Robert Peel's, of which Waagen speaks so highly as “a series of faultless pearls of the Flemish and Dutch schools;” the Bridgewater, formerly the Stafford Gallery (p. 545), to which a great work in four folio volumes has been specially dedicated, and which holds the first rank among English collections, being rich in all schools—pre-eminently so in the highest, and containing above 300 pictures; the collection in Stafford House (p. 557), belonging to the Duke of Sutherland; Lord Ashburton's (p. 544); the Duke of Wellington's (p. 542); Mrs. Hope's (p. 551); and the Marquis of Westminster's, better known as the Grosvenor Gallery (p. 550), one of the wealthiest in the country in the works of Rembrandt, and the Dutch and Flemish painters, and containing many and valuable works in all the other chief schools.

### PIMLICO,

A NAME of gardens of public entertainment, often mentioned by our early dramatists, and in this respect resembling “Spring Garden.” In a rare tract, *News from Hogsden*, 1598: “Have at thee, then, my merrie boys, and hey for old Ben Pimlico's nut-browne!” and the place, in or near Hoxton, was afterwards named from him. Ben Jonson has,

“A second Hogsden,  
In days of Pimlico and eye-bright.”—*The Alchemist*.

“Pimlico path” is a gay resort of his *Bartholomew Fair*; and Meercraft in *The Devil is an Ass*, says:—

“I'll have thee, Captain Gilthead, and march up  
And take in Pimlico, and kill the bush  
At every tavern.”

In 1609 was printed a tract entitled *Pimlico, or Prince Red Cap, 'tis a Mad World at Hogsden*. The name is still preserved in “Pimlico Walk,” from opposite St. John's church to High-street, Hoxton, a “near cut” to the Britannia Theatre. Sir Lionel

Rash, in Greene's *Tu Quoque*, sends his daughter "as far as Pimlico for a draught of Derby ale, that it may bring colour into her cheeks." Massinger mentions,

"Eating pudding-pies on a Sunday,  
At Pimlico or Islington."—*City Madam*.

Aubrey, in his *Surrey*, speaks of "a Pimlico Garden on Bankside."

PIMLICO, the district between Knightsbridge and the Thames, and St. James's Park and Chelsea, was noted for its public gardens: as the Mulberry Garden, now part of the site of Buckingham Palace; the Dwarf Tavern and Gardens, afterwards Spring Gardens, between Ebury-street and Belgrave-terrace; the Star and Garter, at the end of Five-Fields-row, famous for its equestrianism, fireworks, and dancing; and the Orange, upon the site of St. Barnabas' church. Here, too, were Ranelagh and New Ranelagh. But the largest garden in Pimlico was Jenny's Whim, to the left of the road over Ebury (late the Wooden) Bridge, formerly Jenny's Whim Bridge. The site is now covered by St. George's-row. The tavern was opened *temp.* George I. for fireworks, and in its grounds were a pond for duck-hunting, garden-plots, alcoves, and grotesque figures: it was a summer resort of the upper classes; and a tract of 1755 is entitled "Jenny's Whim, or a sure Guide to the Nobility and Gentry," &c. In later years it was frequented by crowds from bull-baiting in the adjoining fields. Among the old signs were the *Bag o' Nails*, Arabella-row, from Ben Jonson's "Bacchanals;" the *Compasses*, of Cromwell's time (near Grosvenor-row); and the *Gun Tavern* and Tea-gardens, Queen's-row, with its arbours, and costume figures, the last to disappear. Pimlico is still noted for its ale-breweries.

Upon the verge of St. James's Park were Tart Hall, and Arlington, subsequently Buckingham, House, architect, Captain Wynde or Wynne, a native of Bergen-op-Zoom.

So late as 1763, Buckingham House enjoyed an uninterrupted prospect south and west to the river, there being only a few scattered cottages, and the Stag Brewery, between it and the Thames.—*W. Bardwell*.

Pimlico contains the *Belgrave* district, including Belgrave, Eaton, and Chester Squares, and the *Grosvenor-road*; beyond which the *Eccleston* sub-district of new squares, terraces, and streets, extends to the Thames. Here are two churches in the Early Decorated style: Holy Trinity, close to Vauxhall Bridge; and St. Gabriel's, Warwick-square, with a spire 160 feet high.

*Ebury Street and Square* are named from Ebury Farm, 430 acres (lammas land), leased by Queen Elizabeth at 21*l.* per annum.

In Lower Belgrave-place, corner of Eccleston-street, Sir Francis Chantrey, R.A., lived 27 years, and executed his finest busts, statues, and monuments: he died here Nov. 25, 1841. Next door but one, at No. 27, lived Allan Cunningham, the poet, and foreman to Chantrey.

In Stafford-row died, in 1796, Richard Yates, the celebrated comedian, and teacher of acting, aged 89. He was found dead through disappointment of a dinner of eels, which he ordered of his housekeeper, but which she failed to provide.

At Pimlico, facing the south wing of Buckingham Palace, is the office of the Duchy of Cornwall, formerly at Somerset House. The site was purchased by the public from the land revenues, at 4300*l.*, and the building cost about 10,000*l.* The fronts are mostly formed in cement, painted stone-colour. Here are managed the affairs of the Duchy of Cornwall, from the revenues of which is derived more than half the income of the Prince of Wales.

Pimlico is also the name of a place near Clitheroe, in Lancashire; Lord Orrery (in his *Letters*) mentions "Pimlicoe, Dublin;" and "Pemlico" is the name of a bird of Barbadoes, "which presageth storms."—*Notes and Queries*, Nos. 29, 31, and 125.

### PLAGUE, THE GREAT.

LONDON has frequently suffered from the ravages of pestilence; and thousands and tens of thousands of the inhabitants have been swept by its virulence into one common grave. But at no period of its history was the mortality so devastating as in the year 1665, the "last great visitation," as it is emphatically entitled by Defoe in his *Journal of the Plague Year*. This work was originally published in 1722: now, as Defoe was only two years of age when the Great Pestilence occurred, his *Journal*

was long considered as much a work of imagination as his *Robinson Crusoe*; but there is abundant evidence of his having compiled the *Journal* from contemporary sources; as the Collection of all the Bills of Mortality for 1665, published as *London's Dreadful Visitation*; the *Loimologia* of Dr. Hodges; and *God's Terrible Voice in the City*, by the Rev. Thomas Vincent, 1667; and many of the events which De Foe records derive collateral support from the respective Diaries of Pepys, Evelyn, and Lord Clarendon—works which were not published until very long after Defoe's decease, and the manuscripts of which he could never have perused. Defoe is believed to have been familiar with the manuscript Account of the Great Plague by William Boghurst, a medical practitioner, formerly in the Sloane Collection, and now preserved in the British Museum: it is a thin quarto manuscript of 170 pages, from which only a few extracts have been published. Boghurst was an apothecary in St. Giles-in-the-Fields; and he states that he was the only person who had then (1666) written on the late Plague from experience and observation. Rapin and Hume have recorded the event in little more than a single sentence; but Dr. Lingard has grouped the details of De Foe's *Journal* into a terrific picture, which has been compared to the celebrated delineation of the Plague of Athens by Thucydides.

"No one can take up the book (Defoe's) without believing that it is the saddler of Whitechapel who is telling his own story; that he was an eye-witness to all he relates; that he actually saw the blazing star which portended the calamity; that he witnessed the grass growing in the streets, read the inscriptions upon the doors of the infected houses; heard the bellman crying, 'Bring out your dead!' saw the dead-earts conveying people to their graves, and was present at the digging of the pits in which they were deposited."—*Wilson's Life and Times of Defoe*.

The Great Plague was imported, in December, 1664, by goods from Holland, where, in Amsterdam alone, 20,000 persons had been carried off by the same infection within a short time. The infected goods were opened at a house in St. Giles's parish, near the upper end of Drury-lane, wherein died four persons; and the parish books record of this period the appointment of searchers, shutting up of infected houses, and contributions by assessment and subscription. A Frenchman, who lived near the infected house in Drury-lane, removed into Bear-binder-lane (leading to St. Swithin's-lane), where he died, and thus spread the distemper in the City. Between December and the ensuing April the deaths without the walls of the City greatly increased, and in May every street in St. Giles's was infected. In July, in August, and September the deaths ranged from 1000 to 7000 per week; and 4000 are stated to have died in one fatal night! In the latter month fires were burnt in the streets three nights and days, "to purge and purify the air."

"St. James's Park was quite locked up;" and, July 22: "I by coach home, not meeting with but two coaches and but two carts, from White Hall to my own house, that I could observe; and the streets mighty thin of people."—*Pepys*.

"June 7th.—The hottest day that ever I felt in my life. This day, much against my will, I did in Drury-lane see two or three houses marked with a red cross upon the doors, and 'Lord have mercy upon us!' writ there."—*Pepys*.

"Sept. 7.—I went all along the City and suburbs, from Kent-street to St. James's,—a dismal passage, and dangerous, to see so many coffins exposed in the streets, now thin of people; the shops shut up, and all in *mournful silence*, as not knowing whose turn it might be next."—*Evelyn*.

"Within the walls,  
The most frequented once and noisy parts  
Of town, now midnight silence reigns e'en there;  
A midnight silence at the noon of day!  
And grass, untrodden, springs beneath the feet."—*Dryden*.

The Court removed from Whitehall to Hampton Court, and thence to Salisbury and Oxford; and the Londoners, leaving their city, carried the infection into the country; so that it spread, towards the end of this and the following year, over a great part of England. The Plague gradually abated in the metropolis; but it was not until Nov. 20, 1666, that public thanksgivings were offered up to God for assuaging the pestilence in London, Westminster, and within the bills of mortality. There were reported dead of the Plague in 1664–5, 68,596; probably less by one-third than the actual number. Among the Plague medicines were Pill Rufus and Venice treacle. Another antidote was sack. Tobacco was used as a prophylactic; and amulets were worn against infection. Among many touching episodes of the Plague, is that of a blind Highland bagpiper, who, having fallen asleep upon the steps of St. Andrew's Church, Holborn-hill, was conveyed away in the dead-cart; and but for the howling of his faithful dog, which waked him from his trance, he would have been buried as a corpse. Of the piper and

his dog a group was sculptured by Caius Gabriel Cibber: it was long after purchased by John the great Duke of Argyll, subsequently to whose death it for many years occupied a site in a garden in the front of No. 178, Tottenham-court-road, whence it disappeared about 1825. (See *London Magazine*, April, 1820.)

Another episode is that of a grocer in Wood-street, Cheapside, who shut himself up with his family, with a store of provisions, his only communication being by a wicket made in the door, and a rope and pulley to draw up or let anything down into the street; and thus they escaped infection.

In the *Intelligencer*, for the year 1665, No. 51, appeared the following advertisement:—

“This is to notify that the master of the *Cock and Bottle*, commonly called the *Cock Alehouse*, at Temple Bar, hath dismissed his servants and shut up his house for this long vacation, intending (God willing) to return at Michaelmas next; so that all persons whatsoever who have any accounts with the said master, or *farthings belonging to the said house*, are desired to repair thither before the 8th of this instant July, and they shall receive satisfaction.” One of these farthings is still preserved at the *Cock Tavern*.

Forty years before, Evelyn records 1625 as “the year in which the pestilence was so epidemical, that there dy’d in London 5000 a week.”

In another great Plague year, 1603, there died 30,561:—

“London now smokes with vapors that arise  
From his foule sweat, himselfe he so bestirres:  
‘Cast out your dead!’ the carease-carrier cries,  
Which he by heapes in groundlesse graves interres.  
\* \* \* \* \*

“The London lanes (thereby themselves to save)  
Did vomit out their undigested dead,  
Who by cart-loads are carried to the grave:  
For all these lanes with folke were overfed.  
\* \* \* \* \*

“Time never knew, since he begunne his houres  
(For aught we reade), a plague so long remaine  
In any citie as this plague of ours;  
For now six yeares in London it hath laine.”

*The Triumph of Death*, by John Davies, 1609.

It will be recollected, from the several accounts of the Plague in London, that a cross was affixed by the authorities to the door of the house where there was infection. In the Guildhall Library, not long since, among some broadsides, was found one of these “Plague Crosses.” It was the ordinary size of a broadside, and bore a cross extending to the edges of the paper, on which were printed the words, “Lord have mercy upon us.” In the four quarters formed by the limbs of the cross were printed directions for managing the patient, regulations for visits, medicines, food, and water. This “Cross” unfortunately, is not now to be found.

## POLICE.

THE original Police of the metropolis (which until the commencement of the last century, comprised only the “City and liberties,” with Westminster) consisted of the aldermen, deputy-aldermen, common-councilmen, ward-clerk, ward-bedell, inquestmen or leet jury, and constables of the several wards, who were formerly themselves the night-watchmen by rotation, of Englishmen,—for no stranger was allowed to discharge so responsible an office: the ward, with its precincts, being no other than the highest development of the Anglo-Saxon hundred with its tithings. We find this form of Police to have existed from the earliest settlement of the valley of the Thames by a northern nation; and to have continued in use, as the type and model for the rest of the realm, until the institution of the present Police.

The few officers of the central Police in the City,—the upper-marshal, the under-marshal, and the marshalmen,—under whom was organized, at a very modern date, a subordinate force of sixty-eight men, were in like manner the type of the Bow-street and other police attached to the several magistrates’ offices established in the outlying portions of the metropolis so recently as the close of the last century.

In the metropolitan parishes without the City, the watch was chiefly under local acts; the establishment in each consisting of a beadle, constables, and generally head-boroughs, street-keepers, and watchmen, as in the several wards of the City, but working to a result much worse: the petty constables being served by deputies, in many instances characters of the worst and lowest description; having no salary, but living by extortion, and countenancing all species of vice.

To abolish such a system, Sir Robert Peel's Metropolitan Police Act of the 10th of George IV. c. 44, was passed, superseding the Bow-street foot-patrol, and the whole of the parochial police and watch outside the City, by one force both for day and night duty; in the sole appointment, order, and superintendence of two Commissioners, acting under the responsibility of the Secretary of State for the Home Department.\*

The Metropolitan Police force consisted at the beginning of 1867, of 7548 men—namely, 27 superintendents, 221 inspectors, 818 sergeants, and 6482 constables, a small increase over the return of the previous year. The highest salary of a constable was 78*l.*, the lowest 49*l.* 8*s.*, exclusive of clothing and coals. The cost of the police for the year 1866, including the dockyard police and all incidental expenses, such as for refreshments supplied to destitute prisoners and medical aid for poor persons in cases of accident in the public thoroughfares, amounted to 621,819*l.* The Metropolitan Police-rate of 1866 produced 383,133*l.*; the Treasury contributed 117,519*l.*, besides large special payments for the dockyard police and services at military stations and public offices. Private individuals or companies paid 6204*l.*, and the theatres 258*l.* for the services of the police. The cost of the police courts in 1866 amounted to 49,535*l.*; it falls upon the public purse. There is one chief magistrate receiving 1500*l.* a year, and 22 magistrates with 1200*l.* The fees and penalties levied at the police-courts of these magistrates, and of other justices within the district, amounted to 15,186*l.*; these fees and penalties are paid over to the Exchequer.

The first chief magistrate (and, indeed, the first stipendiary magistrate, in the sense of being paid by stipend only, to the exclusion of fees) was Sir J. Fielding, the half-brother of Henry Fielding, the novelist. The following is a list of the chief magistrates from the institution of the office to the present day:—Sir John Fielding, Sir W. Addington, Sir Richard Ford, Mr. Read, Sir Nathaniel Conant, Sir Robert Baker, Sir Richard Birnie, Sir Frederic A. Roe, Mr. Hall, Sir Thomas Henry. Sir Robert Baker resigned his office in 1821, in consequence of a complaint that had been made of his conduct in allowing the funeral procession of Queen Caroline to be diverted from the appointed course. Sir Frederic A. Roe, who was knighted in 1832, received a baronetcy in 1836, upon succeeding to the estates of his uncle, Mr. Adair Roe. Sir Richard Birnie was the only chief magistrate who had not been a junior magistrate.

The great living machine keeps guard over our metropolis, with its millions of rateable property, and watches at night, in order that its resident population may sleep in safety; although six thousand professional thieves are constantly on the watch for opportunities to plunder. During the night the Police never cease patrolling the whole time they are on duty, being forbidden even to sit down. The Police District is mapped out into divisions, the divisions into subdivisions, the subdivisions into sections, and the sections into beats, all being numbered, and the limits carefully defined. To every beat certain constables are specifically assigned; and they are provided with little maps called beat-cards. So thoroughly has this arrangement been carried into effect, that every street, road, lane, alley, and court within the metropolitan district—that is, the whole of the metropolis—is visited constantly day and night by some of the police. Within a circle of six miles from St. Paul's, the beats are ordinarily traversed in periods varying from 70 to 25 minutes; and there are points which, in fact, are never free from inspection. Nor must it be supposed that this system places the wealthier localities at a disadvantage; for it is an axiom in police, that you guard St. James's by watching St. Giles's.

“Intelligence is conveyed from one constable to the other till it reaches the station-house; thence, by an admirable arrangement of routes and messengers, it passes to the Central Office at Whitehall, thence along radiating lines to each division, and from the divisional station-house to every constable in the district. In a case of emergency,

\* The late Vincent George Dowling claimed to be the originator of the plan on which this new police system was organized; even the names of the officers—inspector, sergeant, &c.—were published in *Bel's Life in London* (of which newspaper Dowling was editor) nearly two years before the system was proposed by Sir Robert Peel. Mr. T. Duffus Hardy contributed, from documents in the Record Office, important information to Sir Robert Peel on the ancient police arrangements of London.

the Commissioner could communicate intelligence to every man in the force, and collect the whole of the men in one place, in two hours. The power of rapid concentration has worked so effectually, that since the establishment of the Metropolitan Police, it has never been found necessary to call the military into actual operation in aid of the civil force. Nor can clearer proof be given of perfect discipline, than the fact that 5000 men in the prime and vigour of life, with moderate wages,—2s. 5d. to 3s. per day,—exposed in an unusual degree to the worst temptations of London, and discharging, for the most part during the night, a very laborious duty, always irksome and often dangerous, are kept in complete control without any extraordinary coercive power.”—*Edinburgh Review*.

The Corporation have their own Police; the ordering of the force being vested in the Commissioner, subject to the approbation of the Lord Mayor and Aldermen, or any three of them; and also of the Secretary of State for the Home Department. In addition to a Commissioner, chief superintendent, surgeon, receiver, and four clerks, the force consists of 1 superintendent, 14 inspectors, 14 station-sergeants, 12 detective-sergeants, 56 sergeants, and 590 constables. The entire annual cost is about 65,000*l.* The clothing, helmets, stocks, and armlets cost, for the year, 2951*l.* 0s. 2*d.*; lanterns and oil, 310*l.* The estimated income for the year is 67,161*l.* 9s. 2*d.*; derived from the following sources:—Produce of 8*d.* in the pound on the assessable rental of the City (1,518,332*l.*), after deducting 6 per cent. for poundage and deficiencies, 47,575*l.*; proportion of expenses from City's cash, 15,175*l.* 16s. 6*d.*; estimated fines and penalties, 550*l.*; payment out of Bridge-house estate for watching London and Blackfriars Bridges, 668*l.* 4s.; rents from constables, 1078*l.* 4s.; payment for men on private service at the Bank, Post-office, Blackwall Railway, City of London Union, Inland Revenue-office, *Times*-office, Guildhall justice-room, as assistant-gaoler, omnibus time-keepers, Messrs. Gooch and Cousens, Messrs. Pawson and Co., and Messrs. Kearns, Major, and Field, 2114*l.* 4s. 8*d.* These accounts show an estimated surplus of receipts over expenditure amounting to 2597*l.* 10s. 8*d.*

The *Horse Patrol* was added in 1836; and the *Thames Police*, with the *Westminster Constabulary* and the *Police-office Agency*, in 1838, when the old detective force was superseded.

Before the establishment of the Thames Police, by Mr. R. Colquhoun, the annual loss by robberies alone upon the river was half a million sterling; the depredators being termed river-pirates, light and heavy horsemen, mud-larks, cope-men, scuffle-hunters. They were frequently known to weigh a ship's anchor, hoist it with the cable into a boat, and when discovered, to hail the captain, tell him of his loss, and row away. They also cut craft and lighters adrift, ran them ashore, and cleared them. Many of the light-horsemen cleared five guineas a night; and an apprentice to a game-waterman often kept his country-house and saddle-horse. In 1797, the first year of the Police, the saving to the West India merchants alone was computed at 190,000*l.*; and 2200 culprits were convicted of misdemeanours on the river during the same period.

## POPULATION.

**T**APERELL and Innes's Map of London and Westminster in the early part of the reign of Queen Elizabeth (1560), based upon Vertue's Map, 1737, shows on the east the Tower, standing separated from London, and Finsbury and Spitalfields with their trees and hedge-rows; while on the west of Temple Bar, the villages of Charing, St. Giles's, and other scattered hamlets are aggregated, and Westminster is a distinct city. The intervening north bank of the river Thames, or the Strand, has a line of seats and gardens of the nobility. At the date of this map London contained about 145,000 inhabitants. In the narrative of the visit of the Duke de Nayera to the Court of Henry VIII. in 1543, London is described as one of the largest cities in Christendom, "its extent being near a league." "There were 150,000 houses in London before the Fire. About 15,000 or 16,000 die yearly in London when no plague, which is thrice more than in Amsterdam. The excise in London comes to about 12,000*l.* a year. London stands on 460 acres of ground. Lost in books 150,000*l.* at the Fire of London. London Bridge is 800 feet long, 60 feet high, and 30 broad; it hath a drawbridge in the middle, and 20 feet between each arch."—*Diary of the Rev. John Ward*, 1648 to 1673.

Sir William Petty, in his *Political Arithmetic*, printed in 1683, after much study of

statistical returns and bills of mortality, demonstrates that the growth of the metropolis must stop of its own accord before the year of grace 1800; at which period the population would, by his computation, have arrived at exactly 5,359,000. Nay more, were it not for this halt, he shows that the increase would double in forty years, with a slightly accelerating increment, as he gives the amount of human beings in the city for 1840 at 10,718,880! The identical year 1800, the commencement of a truly important century, found London still enlarging: brick-fields and scaffolding were invading all its outskirts; but the inhabitants, who had increased in a reasonably rapid ratio, numbered only 830,000.

"There are no accurate accounts of the population of London previously to the Census of 1801. The population of the City was estimated by Graunt, in his famous *Treatise on Bills of Mortality*, at 384,000 in 1661; and adding one-fifth to this for the population of Westminster, Lambeth, Stepney, and other outlying parishes, he estimated the entire population at about 460,000. (*Observations, &c.*, 5th ed. pp. 82, 105.) In 1696 the population of the City and the out-parishes was carefully estimated, by the celebrated Gregory King, at 527,560; and considering the great additions that had been made to the metropolis between the Restoration and the Revolution, this increase does not seem to be greater than we should have been led to infer from Graunt's estimate. The population advanced slowly during the first half of the last century; indeed, it fell off between 1740 and 1750. In his tract on the population of England, published in 1782, Dr. Price estimated the population of London in 1777 at only 543,420 (p. 5). But there can be no doubt that this estimate, like that which he gave of the population of the kingdom, was very decidedly under the mark; and the probability seems to be, that in 1777 London had from 640,000 to 650,000 inhabitants."—*Macculloch's Geographical Dictionary*.

A return made in 1867 from the metropolitan police-office states that within a radius of six miles from Charing-cross there are 2637 miles of streets. Since 1849 the number of houses has increased by upwards of 60,000, and the length of streets by nearly 900 miles.

The Registrar-General, in his Report for 1866, says:—London is growing greater every day, and within its present bounds, extending over 122 square miles of territory, the population amounted last year by computation to 3,037,991 souls. In its midst is the ancient City, inhabited at night by about 100,000 people; while around it, as far as a radius of 15 miles stretches from Charing-cross, an ever-thickening ring of people extend within the area which the metropolitan police watches over, making the whole number on an area of 687 square miles around St. Paul's and Westminster Abbey 3,521,267 souls.

The "London" of the Registrar-General, which is identical with the Poor Law Union London, and is the London of the Census, stretching from Hampstead to Norwood, and from Hammersmith to Woolwich, is returned as comprising 194 parishes, 77,997 statute acres, and 2,803,989 people, with property assessed for the county-rate at more than 12,000,000*l*. Of its area 2778 acres are covered with water, being part of the river Thames. Of its population in 1861, 2,030,814 were in the county of Middlesex, 579,748 in the county of Surrey, and 193,427 in the county of Kent. Since the Census of 1851 the Middlesex portion of the population, nearly three-fourths of the whole, had increased 16 per cent., the Surrey portion 20 per cent., and the small portion in Kent (not much larger than Sheffield) no less than 44 per cent.; the entire population increased 18·7 per cent., or 441,753—a number which would people all Liverpool or Manchester. This is more than a fifth of the increase in all England and Wales, though the metropolis, even in 1861, did not contain quite a seventh of the population. In the ten years, 1851–60, 528,306 persons were married in the metropolis, 864,563 children were born there, and 610,473 persons died there. Among its varieties it has eight parishes, none of which has 100 inhabitants; and it has six parishes, each of which has above 100,000. At the census it had 5625 in-patients in its hospitals, and 10,658 inmates of its orphan asylums, and other principal charitable institutions. It has more than its share of women; in 1851 there were 113·47 females to every 100 males, and in 1861 there was one female more (114·40) to every 100 males; but the births within the metropolis in the ten years, 1851–60, produced only 96·18 females to every 100 males; such are the changes wrought by death and emigration. The returns state that at the date of the census, in districts at the west-end containing 284,000 persons, 6120 residents were out of town, and 2460 visitors were temporarily staying there; it was not the London season, and it was but a week after Easter-day.

The revised Census returns show that on the 8th of April, 1861, the number of

houses inhabited by the population of England and Wales was 3,739,505. There was, therefore, one house to every 5·36 persons, or 536 persons to 100 houses. In 1851 there were 547 persons to 100 houses, so that notwithstanding increased numbers there is rather more house-room than there was. In the metropolis, however, taken as a whole, these returns show that the crowding is rather greater than less than it was; in 1851 there were 772 persons to 100 houses, in 1861 780 persons. Mr. Scott, the City Chamberlain, shows by curious statistics, that, taking the area of the metropolis at sixteen miles from Charing Cross—which is the Metropolitan Police district—the population of London, in 1801, ranged at equal distances, would stand each man twenty-one yards from his neighbour. In 1851 each person would have stood fourteen yards apart. In 1866, there would have been only nine yards between each person: and in fifty years hence, supposing the population to go on increasing at its present rate, to keep within the sixteen miles area, there will only be standing-room for each person. A Census of the City shows the night population of the City and liberties numbered 113,387: the mercantile and commercial population engaged in the City daily amounted to 170,133; the total day population residing in the City to 283,520; and the number of persons resorting to the City daily in sixteen hours, not included in the above, being customers, clients, and others, to 509,611. The persons frequenting the City daily in twelve hours, from 6 A.M. to 6 P.M., were 549,613; in sixteen hours, from 5 A.M. to 9 P.M., they were 679,744; and in twenty-four hours they were 728,986.

Taken as a whole, the more crowded part of London contained 1,150,000 persons in 1851, and about the same number were found there in 1861; but it is something to have thrown into the suburbs the increase of the ten years—in the whole metropolis 440,000, almost precisely the population of Liverpool.

The present population of London is supposed to represent the number of inhabitants living in England and Wales four centuries and a half ago, in the reign of Edward III.

A late return shows the number of passengers and vehicles passing over London Bridge in twenty-four hours. The total number of passengers in carriages and on foot amounted, in the twenty-four hours, to 167,910, or at the average rate of about 6996 per hour, night and day. The largest number passed between ten and eleven in the morning, and eight and nine in the evening, averaging at those hours 224 per minute. Between three and four in the morning is the quietest time in the streets of London, and then as many as 111 persons passed over the bridge in an hour. If we take the above 167,910 as an average of the number of passengers who cross London Bridge during the working days, and only half that number on the Sundays, the number will amount in the year to fifty-six millions. This is nearly as many as twice the population of the United Kingdom. At times, during the throng of business, there are 2000 persons on London Bridge. During the twenty-four hours the number of carriages amounted to 20,498, or an average of about 854 an hour. The greatest number of carriages in any hour was between ten and eleven o'clock in the forenoon, when 1764 carriages passed over the bridge.

### PORT OF LONDON.

SIR JOHN HERSCHEL felicitously observes: "It is a fact not a little interesting to Englishmen, and, combined with our insular situation in the great highway of nations, the Atlantic, not a little explanatory of our commercial eminence, that London occupies nearly the centre of the terrestrial hemisphere."—(*Treatise on Astronomy*). On the other hand it is held that the great distance of London from the mouth of the river, and also from the coal country and the centre of manufacturing districts, are serious drawbacks, in spite of which London has become the immense port she undoubtedly is.

Tacitus describes London, in the year 61, as not dignified with the name of a colony, but very celebrated for the number of its merchants and commerce. In 211 it was styled "a great and wealthy city;" and in 359 there were engaged 800 vessels in the import and export of corn to and from Londinium alone.

An edict of King Ethelred (A.D. 978) refers to the fact that "the Emperor's men, or Easterlings, come with their ships to Billingsgate." The Easterlings were the merchants of the Steelyard, and paid a duty to the port. William the Norman fortified London; but in the charter which he granted to the inhabitants, he made no mention of commerce. Henry I. and other sovereigns, however, granted them privileges; and Fitz-Stephen, in his *Life of St. Thomas à Becket*, thus describes the merchandize of London:—

“Arabia’s gold, Sabæa’s spice and incense,  
Scythia’s keen weapons, and the oil of palms  
From Babylon’s deep soil: Nile’s precious gems;  
China’s bright, shining silks; and Gallic wines;  
Norway’s warm peltry, and the Russian sables;  
All here abound.”

Edward I. expelled the Jews, but offered some special advantages to other foreign traders. Edward III. founded three of the great guilds which at one time held the commerce of London in their hands—the Goldsmiths, the Merchant Taylors, and the Skinners; being the oldest of the now existing companies, with the single exception of the Fishmongers, which was founded in the reign of Edward I. Before the close of Edward III.’s reign the Grocers, Salters, Drapers, and Vintners were founded. The Mercers belong to the reign of Richard II.; the Haberdashers to that of Henry VI.; and the Ironmongers and Clothworkers to that of Edward IV.

Under an Act of Charles II., the Port of London is held to extend as far as the North Foreland. It, however, practically extends  $6\frac{1}{2}$  miles below London Bridge, to Bugsby’s Hole, beyond Blackwall. The actual Port reaches to Limehouse, and consists of the Upper Pool, the first bend or *reach* of the river, from London Bridge to near the Thames Tunnel and Execution Dock; and the Lower Pool, thence to Cuckold’s Point. In the latter space colliers mostly lie in tiers; a fair way of 300 feet being left for shipping and steamers passing up and down. The depth of the river insures London considerable advantage as a shipping port. Even at ebb-tide there are 12 or 13 feet of water in the fair way of the river above Greenwich; the mean range of the tide at London Bridge is about 17 feet; of the highest spring-tides about 22 feet. To Woolwich the river is navigable for ships of any burden; to Blackwall for those of 1400 tons; and to St. Katherine’s Docks for vessels of 800 tons.

The several DOCKS are described at pp. 309-312; the CUSTOM HOUSE at p. 305; and BILLINGSGATE at p. 54.

“In one day (Sept. 17, 1849) there arrived in the Port 121 ships, navigated by 1387 seamen, with a registered tonnage of 29,699 tons: 106 British, 15 foreign: 52 cargoes from our colonies, 69 from foreign states—from the inhabitants of the whole circuit of the globe. The day’s cargoes included 32,290 packages of sugar, from the West Indies, Brazil, the East Indies, Penang, Manila, and Rotterdam; 317 oxen and calves, and 2734 sheep, principally from Belgium and Holland; 3967 quarters of wheat, 13,314 quarters of oats from Archangel or the Baltic; potatoes from Rotterdam; 1200 packages of onions, from Oporto; 16,000 chests of tea, from China; 7400 packages of coffee, from Ceylon, Brazil, and India; 532 bags of cocoa from Grenada; 1460 bags of rice from India, and 350 bags of tapioca from Brazil; bacon and pork from Hamburg, and 8000 packages of butter and 60,000 cheeses from Holland; 767 packages of eggs (900,000); of wool, 4458 bales, from the Cape and Australia; 15,000 hides, 100,000 horns, and 3600 packages of tallow, from South America and India; hoofs of animals, 13 tons, from Port Philip, and 140 elephants’ teeth from the Cape; 1250 tons of granite from Guernsey, copper ore from Adelaide, and cork from Spain; 40,000 mats from Archangel, and 400 tons of brimstone from Sicily; cod-liver oil, and 3800 sealskins, from Newfoundland; 110 bales of bark from Arica, and 1100 casks of oil from the Mediterranean; lard, oil-cake, and turpentine, from America; hemp from Russia, and potash from Canada; 246 bales of rags, from Italy; staves for casks, timber for our houses, deals for packing-cases; rosewood, 876 pieces; teak for ships, logwood for dye, lignum vitæ for ships’ blocks, and ebony for cabinets; cotton from Bombay, zinc from Stettin, 1000 bundles of whisks from Trieste, yeast from Rotterdam, and apples from Belgium; of silk, 900 bales from China, finer sorts from Piedmont and Tuscany, and 200 packages from China, Germany, and France: Cashmere shawls from Bombay; wine, 1800 packages, from France and Portugal; rum from the East and West Indies, and scheidam from Holland; nutmegs and cloves from Penang, cinnamon from Ceylon, 840 packages of pepper from Bombay, and 1790 of ginger from Calcutta; 100 barrels of anchovies from Leghorn, a cargo of pine-apples from Nassau, and 50 fine live turtles; 54 blocks of marble from Leghorn; tobacco from America; 219 packages of treasure—Spanish dollars, Sycee silver from China, rupees from Hindostan, and English sovereigns.”—*A Day’s Business in the Port of London*, by T. Howell, Esq.

“Again, in one day’s consumption, we find corahs, or silk handkerchiefs, from India; whale-fins and sperm-oil from our deep-sea fisheries; from India shell-lac, indigo, and lac-dye; saltpetre for gunpowder, and hemp and jute for cordage; quicksilver from the mines in Spain; isinglass and bristles from Russia; Iceland moss, honey, and leeches from Hamburg; manna from Palermo, camphor from Calcutta, macerari from Naples, sugar-candy from Holland, and lemon-oil from Messina; 81,000lbs. of currants from the Ionian Islands, 5760 bars of iron from Sweden, and bees-wax from the coast of Africa; tea, sugar, coffee, pepper, tobacco, spirits, and wine; watches, clocks, gloves, and glass-ware; needlework, ladies’ shoes, bonnets, and feathers; toys, lace, and slate-pencils; zaffery and stavesacre from Hamburg; and inkle from France.”—*Ibid.*

The river is protected by an admirable system of Police, established in 1798, and merged into the Metropolitan Police in 1839. *Execution Dock, at Wapping*, the name of one of the outlets of the river, preserves the memory of many a tale of murder and piracy on the high seas; for here used to be executed all pirates and sailors found guilty of any of the greater crimes committed on ship-board. Opposite Blackwall we remember to have seen the gibbets, on which the bodies were left to decay. The loss

of life upon the Thames, by collision of vessels and other accidents, is of frightful amount; 500 persons being annually drowned in the river, and one-third of the number in the Pool.

## PORTUGAL-STREET,

IN the rear of the south side of Lincoln's-Inn-fields (formerly Portugal-row) has been the site of three theatres, upon the north side of the street. The first theatre (named the *Duke's Theatre*, from the Duke of York, its great patron; and the *Opera*, from its musical performances), was originally a tennis-court; it was altered for Sir William Davenant, and opened in 1662 with his operatic *Siege of Rhodes*, when regular scenery was first introduced upon our stage. In the same year was produced here Cowley's *Cutter of Coleman-street*. Here Pepys saw, March 1st, 1662, *Romeo and Juliet*, "the first time it was ever acted;" and May 28, "Hamlett done, giving us fresh reason never to think enough of Betterton." "Nov. 5. To the Duke's house to see *Macbeth*, a pretty good play, but admirably acted." Pepys describes "a mighty company of citizens, ordinary prentices, and mean people in the pit;" where he first saw Nell Gwyn, April 3, 1665, during the performance of Lord Orrery's *Mustapha*, when the king and my Lady Castlemaine were there; Pepys sat in the pit next to "pretty witty Nell" and Rebecca Marshall, of the King's house. Etherege's *Love in a Tub* was so attractive here, that 1000*l.* was received in one month, then a great sum. Here female characters were first sustained by women; for which purpose Davenant engaged Elizabeth Davenport, the first Roxalana in the *Siege of Rhodes*; Mary Saunderson, famous as Queen Katherine and Juliet, and afterwards the wife of Betterton; Mary or Moll Davis,\* excellent in singing and dancing, afterwards the mistress of Charles II.; Mrs. Long, the mistress of the Duke of Richmond, celebrated in male characters; Mrs. Norris, mother of Jubilee Dicky; Mrs. Johnson, noted as a dancer, and as Carolina in Shadwell's comedy of *Epsom Wells*. The famous Mrs. Barry was brought out here after Davenant's death.

Among the actors at the Duke's were Thomas Betterton, the rival of Burbage and Garrick, and the last survivor of the old school of actors: Joseph Harris, famous for acting Romeo, Wolsey, and Sir Andrew Aguecheek; William Smith, a barrister of Gray's Inn, celebrated as Zanga in Lord Orrery's *Mustapha*; Samuel Sandford, called by King Charles II. the best representative of a villain in the world; James Nokes, famous for his bawling fops; and Cave Underhill, clever as Cutter in Cowley's comedy, and as the grave-digger in *Hamlet*.—Abridged from Cunningham's *Story of Nell Gwyn*.

From 1665 (the Plague) until after the Great Fire, the theatre was closed. Davenant usually resided here.

"April 9th, 1668. I up and down to the Duke of York's playhouse, there to see, which I did, Sir W. Davenant's corpse carried out towards Westminster, there to be buried. Here were many coaches and six horses, and many hacknies, that made it look, methought, as if it were the buriall of a poor poet."—*Pepys*.

In 1671-2, in Lord Orrery's play of *Henry V.*, at the Duke's Theatre, the actors Harris, Betterton, and Smith wore the coronation suits of King Charles, the Duke of York, and Lord Oxford. This year the company removed to Dorset Gardens; and the King's company, burnt out from Drury-lane, played at the Duke's Theatre till 1673-4, when they left it, and it again became a tennis-court. It was refitted and re-opened in 1695, with (first time) Congreve's comedy of *Love for Love*. This second theatre was taken down, and a new house built for Christopher Rich, and opened by John Rich, in 1714, with Farquhar's comedy of the *Recruiting Officer*; when also Rich introduced the first pantomime, Rich himself playing harlequin. Here Quin played his best parts; and from a fracas in which he was embroiled, originated the sergeant's guard at the Theatres Royal. The first English opera was performed here in 1717-18; here was originally used the stage motto, *Veluti in speculum*; and here in 1727-8 the *Beggar's Opera* was produced, and played sixty-two nights the first season, making "Gay rich and Rich gay." In 1732, Rich having built a theatre in Covent Garden, removed there; and the Portugal-street house was by turns let for

\* In the part of Celania, in the *Rivals*, altered by Davenant from Beaumont and Fletcher's *Two Noble Kinsmen*, Moll Davis sang "My lodging is on the cold ground" "so charmingly, that not long after it raised her from her bed on the cold ground to a bed royal."—Downes's *Roscius Anglicanus*, p. 23, ed. 1708.

Italian operas, oratorios, for balls, concerts, and exhibitions; to Giffard, of Goodman's-fields, in 1756; next as a barrack and auction-room; and Spode and Copeland's China Repository, until 1848, when the premises were sold to the College of Surgeons, August 28, and were taken down for enlarging their museum. Of the theatre little remained, save the outer walls, built upon an arched cellar: there was a large Queen Anne staircase, a saloon upon the first floor; and the attic, lighted by windows in the roof, had been probably the scene-painting loft. Upon this site the College of Surgeons completed in 1854 a third Hall for their Museum, by aid of a Parliamentary grant of 15,000*l*.

In Carey-street, nearly opposite, was a public-house and stable-yard, described in Sir William Davenant's *Playhouse to be Let* as "our house inn, the Grange." It was taken down in 1853 for the site of KING'S COLLEGE HOSPITAL, *see* p. 438. At the north-east corner of Portugal-street was one of its olden resorts, *Will's Coffee-house*. Portugal-street was the last locality in London where *stocks* lingered; those of St. Clement Danes' parish being removed from here about 1820: they faced the burial-ground, where lay Joe Miller. Portugal-street acquired a sort of cant notoriety from the Court for the Relief of Insolvent Debtors being here. (*See* p. 509.)

#### POST-OFFICE.

THE General Post-office has had five locations since the Postmaster to Charles I. fixed his receiving-house in Sherborne-lane, in 1635, whence dates "the settling of the letter-office of England and Scotland." The office was next removed to Cloak-lane, Dowgate; and then to the Black Swan, Bishopsgate-street. After the Great Fire, the office was shifted to the Black Pillars, in Brydges-street, Covent-garden; thence, early in the last century, to the mansion of Sir Robert Viner (close to Sherborne-lane), in Lombard-street (*see* pp. 394, 592); and the chief office to St. Martin's-le-Grand in 1829.

The General Post-office occupies the site of the College of St. Martin's-le-Grand, at the junction with Newgate-street. It was designed by Sir R. Smirke, R.A., and was built between 1825 and 1829: it is insulated, and is externally of Portland stone; 400 feet long, 130 wide, and 64 high. It stands in the three parishes of St. Anne and St. Agnes, St. Leonard, and St. Michael-le-quern; and 131 houses and nearly 1000 inhabitants were displaced to make room for this single edifice. Several Roman remains were found during the progress of the work). The St. Martin's-le-Grand façade has three Ionic porticoes: one at each end, tetrastyle, of four fluted columns; and one in the centre, hexastyle, of six columns (from the temple of Minerva Polias, at Athens): it is surmounted by a pediment, in the tympanum of which are sculptured the imperial arms of the United Kingdom; and on the frieze is inscribed, "GEORGIO QUARTO REGE, MDCCCXXIX." Beneath are entrances to the Grand Public Hall, 80 feet long by about 60 wide, divided by Ionic columns into a centre and two aisles; and in the vaulted basement are the warm-air apparatus and gasometers. North of the Hall are the offices for newspapers, inland letters, and foreign letters; south are the offices of the London local post; the communication being by a tunnel and railway under the Hall floor. In the middle story north are the offices for dead, mis-sent, and returned letters; south, secretary's offices, board-rooms, &c. The clock, over the principal entrance, was made by Vulliamy; the bob of the pendulum weighs 448 lbs., the object being to counteract the effect of wind on the hands of the dial. In the eastern front, facing Foster-lane, the letter-bags are received. The mechanical contrivances for the despatch of the business of the office display great ingenuity; steam-power is variously employed: two endless chains, worked by a steam-engine, carry, in rapid succession, a series of shelves, each holding four or five men and their letter-bags, which are thus raised to various parts of the building.

King James II. has the credit of having established something like an organized foreign post: when a man could more speedily receive a reply to a letter sent to Madrid than he could to one despatched to Ireland or Scotland. The home post was in the hands of carriers, and also of pedestrian wayfarers: and the former even could not convey a note to the North, and bring an answer back, under two months at the very earliest. Witherings, one of the chief postmasters of Charles I.'s days, reformed this abuse. He established a running-post, as it was called, between England and Scotland, the riders pushing forward night and day; and it was hoped, if the thing was not actually accomplished at the time, that the writer of a letter from London to Edinburgh would receive a reply within a week! When this

running, or rather riding, post was established, very sanguine was Witherings. "If the post," he said, "be punctually paid, the news will come sooner than thought." He considered that news which passed from Edinburgh to London in three days and nights, by relays of horses, whose swinging trot never ceased, was outstripping thought.—*Athenæum*.

The arrangements for the Foreign Mails in the present day show, in a forcible manner, the wonderful extent of British commerce and relationships. Here are departments for Austria, Baden, Bavaria, France, Norway, Denmark, and the most northern latitudes; the Brazils, Chili, the Equator, Spain, Sardinia, Switzerland, United States of America, North America, the various districts of India, Australia, &c. Here arrangements are made for the overland Indian and other mails. The letters, newspapers, and books are secured in cases of sheet-iron, which, when full, are carefully soldered up and inclosed in wooden chests, which are branded with crosses of red or black, and marked with the name of the district, city, &c., at which its arrival is awaited. Each of the boxes referred to weighs, when filled with letters and papers, about 86 lbs., and the ordinary Australian mail, exclusive of the portion sent overland, generally consists of 480 boxes of books and newspapers, and 100 boxes of letters—in all 580 boxes. These would weigh altogether 49,880 lbs., equal to nearly twenty-two tons and a half.

*The Mails* were originally conveyed on horseback and in light carts, until 1784, when mail-coaches were substituted by Mr. Palmer. The first mail-coach left the Three Kings yard, Piccadilly, for Bristol, Aug. 24th, 1784. The speed of the mails was at once increased from three and a half to more than six miles an hour, and subsequently still greater acceleration was effected. About the year 1818, Mr. Macadam's improved system of road-making began to be of great service to the Post-office, by enabling the mails to be much accelerated. Their speed was gradually increased to ten miles an hour, and even more; until, in the case of the Devonport mail, the journey of 216 miles, including stoppages, was punctually performed in twenty-one hours and fourteen minutes. In 1830, upon the opening of the line between Liverpool and Manchester, the mails were for the first time conveyed by railway. In 1835 Lieutenant Waghorn commenced transmission to India, by the direct route through the Mediterranean and over the Isthmus of Suez, a line of communication subsequently extended to China and Australia. In 1859 the distance over which mails were conveyed by mail-coaches, railways, foot-messengers, and steam-packets was about 133,000 miles per day, this being about 3000 miles more than in the year ending 1857. In the year 1859 the whole distance traversed by the various mails was *thirty-seven millions, five hundred and forty-five thousand miles!* The annual procession of the mail-coaches on the birthday of George III. (June 4) was once a metropolitan sight which the king loved to see from the windows of Buckingham House. The letters are now conveyed to the railways in omnibuses, nine of which are sometimes filled by one night's mail at one railway. In 1839 was invented the travelling post-office, in which clerks sort the letters during the railway journey, and the guard ties in and exchanges the letter-bags, without stopping the train. Four miles an hour was the common rate of the first mail-carts; a railway mail-train now averages twenty-four miles an hour; while, between certain stations on certain lines, a speed of fifty miles an hour is attained. By the Pneumatic Despatch the mail-bags are blown through the tube in iron cars in about one minute, the usual time occupied by the mail carts being about ten minutes. Persons have been conveyed through the tube, and returned by vacuum, without having experienced the slightest discomfort.

*The Rates of Postage* varied according to distance until December 5th, 1839, when the uniform rate of *4d.* was tried; and January 10th, 1840, was commenced the uniform rate of *1d.* per letter of half an ounce weight, &c. The Government received 2000 plans for a new system, and adopted that of Mr. Rowland Hill; but not until the change had been some years *agitated* by a *Post Magazine* established for the purpose. Among the opponents of the uniform penny stamp was the Secretary of the Post-office, who maintained that the revenue would not recover itself for half a century, and that the poor would not write. Lord Lichfield pointed to the absurdity of supposing that letters, the conveyance of which cost on an average twopence-halfpenny each, could ever be carried for a penny and leave a profit on the transaction! The uniform rate was pronounced by Colonel Maberly to be "impracticable;" and as to pre-payment, he was sure the public would object to it, however low the rate might be! And a Scotch

journalist ridiculed the idea of persons having to stick pieces of paper upon their letters! The stamped postage-covers came into use May 6, 1840;\* but the idea of a prepaid envelope is as old as the time of Louis XIV. A pictorial envelope was designed by W. Mulready, R.A., but little used. A fancied value is attached to this envelope; for we have seen advertised in the *Times*:—"The Mulready Postage Envelope—For sale, an Indian-proof impression. One of six, from the original block engraved by John Thompson in the year 1840, price 20 guineas." The postage label-stamps were first used in 1841; perforated, 1854.

*Number of Letters.*—The greatest number of letters, under the old system, ever known to pass through the General Post-office in one day, was received there on July 15, 1839, viz. 90,000; the amount of postage being 4050*l.*, a sum greater by 530*l.* than any hitherto collected in one day. In the third week of February the number of letters is usually highest. The ordinary daily average is 400,000 letters; on 19th August, 1853, it reached 630,000. The number of letters which pass through the Post-office in a year is nearly 400,000,000. In 1864, 679,084,822 letters passed through the post, being an increase of 37,000,000 over the previous year; and in the same period the number of book-packets and newspapers which were transmitted rose to over 50,000,000, or 7,000,000 more than in 1863.

"It is estimated that there lies, from time to time, in the Dead-Letter Office, undergoing the process of finding owners, some 11,000*l.* annually, in cash alone. In July, 1847, for instance—only a two months' accumulation—the post-haste of 4658 letters, all containing property, was arrested by the bad superscriptions of the writers. They were consigned—after a searching inquest upon each by that efficient coroner, the "blind clerk"—to the post-office *Morgue*. There were bank-notes of the value of 1010*l.*, and money-orders for 407*l.* 12*s.* But most of these ill-directed letters contained coin in small sums, amounting to 310*l.* 9*s.* 5*d.* On the 17th of July, 1847, there were lying in the Dead-Letter Office bills of exchange for the immense sum of 40,410*l.* 5*s.* 7*d.*" (Dickens's *Household Words*, No. 1.) The value of property contained in missing letters, during twelve months, is about 200,000*l.*

There are employed in the General Post-office, including the London District letter-carriers, but exclusive of the receivers, 2500 persons, in different offices:—Secretary's, Accountant's, Receiver's, Dead-Letter, Money-Order, Inland, and London District Offices. For more than half a century there were only two secretaries to the Post-office, Sir Francis Freeling and Colonel Maberly. Sir Francis was brought up in the Post-office, had performed the humblest as well as the highest duties of the department, and was a *protégé* of Mr. Palmer, the great Post-office reformer. He was succeeded by Lieut.-Col. Maberly, M.P., who retired in 1854, when Mr. Rowland Hill, the originator of the penny-post, was appointed secretary; his services were rewarded in 1846 by a public testimonial of 13,360*l.*; Knighthood and grant. It is singular that all postal reformers have been unacquainted with the department which they have revolutionized.

The net Revenue of the Post Office to the end of the year 1865 was 1,482,522*l.* The number of effective persons employed was 25,082; of pensioners, 1274; salaries, wages, allowances, &c., 1,295,153*l.*; postage stamps, 22,064*l.*; stationery, 32,396*l.*; buildings, repairs, &c., 75,331*l.*; conveyance by coaches, carts, &c., 140,517*l.*; by railways, 528,220*l.*; of mails by private ships and by packets, &c., 796,397*l.*; over the isthmuses of Suez and Panama, with salaries of Admiralty agents, &c., 28,786*l.*; and for mail-bags and boxes, tolls, &c., 22,220*l.*; a total for conveyance of 1,516,442*l.*

THE PENNY POST was originally projected by Robert Murray, a milliner, of the Company of Clothworkers; and William Dockwra, a sub-searcher in the Customs. It was commenced as a foot-post, in 1680, with four deliveries a day. These projectors, however, quarrelled: Murray set up his office at Hall's Coffee-house, in Wood-street;

\* But a Stockholm paper, *The Fryskitten*, says, that so far back as 1823, a Swedish officer, Lieutenant Trekenber, petitioned the Chamber of Nobles to propose to the Government to issue *stamped paper* specially destined to serve for envelopes for prepaid letters; but the proposition, though warmly supported as likely to be convenient to the public and the post-office, was rejected by a large majority. For ten years England alone made use of the postage stamp. France adopted it on the 1st of January, 1849; the Tour and Taxis Office introduced it into Germany in the year 1850; and it is now in use in 69 countries in Europe, 9 in Africa, 5 in Asia, 36 in America, and 10 in Oceania. About 50 postage stamps may be counted in the United States alone. Van Diemen's Land possesses its own; also Hayti, Natal, Honolulu, and Liberia. A very curious little book gives an account, in the form of a catalogue, of the postage stamps of all nations. Of these there are more than 1200 varieties. Not only have the colonies of this and other countries, as the Bahamas and Iceland, their separate stamps, but in America many cities also, such as New Orleans and Nashville. No effigy is so frequently on postage stamps as that of Queen Victoria. Some of the colonies, however, have indulged in a little variety. The New Brunswick 17 cents stamp bears on it the figure of the Prince of Wales in a Scotch dress. In the same colony a stamp was prepared having on it the effigy of Mr. O'Connell, the local postmaster-general, but this appears not to have been issued.

and Dockwra, at the Penny Post-house in Lime-street, formerly the mansion of Sir Robert Abdy. But this was considered an infringement on the right of the Duke of York, on whom the Post-office revenue had been settled; and in a suit to try the question, a verdict was given against Dockwra. He was compensated by a pension, and appointed Comptroller of the Penny Post, but was dismissed in 1698. The first office was in Cornhill, near the 'Change: parcels were received. In 1708, one Povey set up the "Halfpenny Carriage" private post, which was soon suppressed by the Post-office authorities. They continued to convey parcels down to 1765, when the weight was limited to four ounces. The postage was paid in advance down to 1794. In 1801 the Penny Post became a Twopenny Post; and the postage was advanced to three-pence beyond the limits of London, Southwark, and Westminster; but in 1840 they were consolidated with the Penny General Post.

The *Money-Order Office*, a distinct branch of the Post-office, is a handsome new edifice on the west side of St. Martin's-le-Grand. Money-orders are issued by millions during the year, in numbers and amount, and have considerably added by commission to the Post-office revenue.

### POULTRY.

THE street extending from the east end of Cheapside to Mansion-house-street was anciently occupied by the poulterers' stalls of Stocks Market, who in Stow's time had "but lately departed from thence into other streets" (Gracechurch-street and Newgate-market). In Scalding-alley (now St. Mildred's-court) was a large house where the poulterers scalded their poultry for sale. It was also called Coneyhope, or Conning-shop, or Cony-shop, lane, from the sign of three conies (rabbits) hanging over a poulterer's stall at the lane end. Here was built the chapel of St. Mildred, called in old records, *Ecclesia Mildredæ super Walbrooke, vel in Pulletria; una cum capella beatæ Mariæ de Conyhop eidem annexa*: the site is now occupied by the church of *St. Mildred in the Poultry*, described at p. 192.

On the same side, between Nos. 31 and 32, was the *oultry Compter*, a Sheriff's prison, taken down in 1817, and *Poultry Chapel* built upon the site. To the Compter were sent persons committed by the Lord Mayor; and to the prisoners was given the broken victuals from the Mansion-house tables. "Doctor Lamb," the conjuror, died in this prison, Jan. 13, 1628, after being chased and pelted by the mob across Moor-fields; for which outrage the City was fined 6000*l*. Here died six Separatists who had been committed by Bishop Bonner for hearing the Scriptures read in their own houses. John Dunton, the bookseller, in 1688, on the day the Prince of Orange entered London, transferred himself and his sign of the *Black Raven* opposite the Poultry Compter, where he prospered for ten years. The prison was, in 1806, in a ruinous condition; but the court was cheerful, "having water continually running:" it was the only prison in England that had a ward exclusively for Jews; there were "the Bell," and two other rooms, "very strong, studded with nails," for felons. The debtors were allowed to walk upon the leads with the gaoler.

Hatton (1708) calls the Poultry "a broad street of very tall buildings." At No. 22 lived the booksellers Dilly, famed for their hospitality to literary men: here Dr. Johnson first met Wilkes; and Boswell, Cumberland, Knox, and Isaac Reed often met. Dilly was the first publisher of Boswell's *Life of Johnson*; the firm was also noted for the works of Doddridge, Watts, Lardner, &c. At No. 31 lived Vernor and Hood, the publishers of Bloomfield's poems; and the *Beauties of England and Wales*, an unequal and unsatisfactory work. Hood was the father of Thomas Hood, the wit and humorist, who was born in the Poultry in 1798: "there was a dash of ink in my blood (writes Tom); my father wrote two novels, and my brother was decidedly of a literary turn."

No. 25, Poultry, was the old *King's Head Tavern*, where Charles II. stopped, on the day of his restoration, to salute the landlady. It was, to the last, noticed for its "lively turtle." In the Beaufoy Collection, in the Corporation Library, are Tokens of the *Rose Tavern*, in the Poultry, mentioned by Ned Ward (*London Spy*, 1709) as

famous for its wine; the *Three Cranes*, destroyed in the Great Fire, but rebuilt; and the *Exchange Tavern*, 1671, with, on the obverse, a view of the Royal Exchange quadrangle. At the *Three Cranes* met "the Mendicants' Convivial Club," subsequently removed to Dyot-street, St. Giles's.

### PRIMROSE-HILL

WAS named from the primroses that formerly grew here in great plenty, when it was comparatively an untrodden hillock, in the fields between Tottenham Court and Hampstead. It has also been called *Green Berry-Hill*, from the names of three persons executed for the murder of Sir Edmund Berry Godfrey, whose body was found here, Oct. 17, 1678. On the south side of the hill, during a summer drought, may be traced a green line, which was once a ditch, extending from east to the ground westward now occupied by the New-River Reservoir. In that ditch, near the site of the Waterworks steam-engine chimney-shaft, was found Godfrey's body, as thus described in a letter written in 1681:—

"As to the place, it was in a ditch on the south side of Primrose Hill, surrounded with divers closes, fenced in with high mounds and ditches; no roads near, only some deep, dirty lanes, made only for the conveniency of driving cows in and out of the ground; and those very lanes not coming near five hundred yards of the place, and impossible for any man on horseback with a dead corpse before him at midnight to approach, unless gaps were made in the mounds, as the constable and his assistants found by experience when they came on horseback thither."

At the trial, before the Lord Chief-Justice Scroggs, Feb. 10, 1679, the infamous witnesses, Oates, Prance, and Bedloe, declared that the unfortunate magistrate, Godfrey, "was waylaid and inveigled into the Palace (Somerset House), under the pretence of keeping the peace between two servants who were fighting in the yard; that he was there strangled, his neck broke, and his own sword run through his body; that he was kept four days before they ventured to remove him; at length his corpse was first carried in a sedan-chair to Soho, and then on a horse to Primrose Hill," as represented on one of the several medals struck as memorials of the mysterious murder. The body was carried to "the White House," then the farm-house of the estate of Chalcott's, abbreviated to Chalcs, and then corrupted to Chalk Farm, which was long a tavern noted for duels fought here. The summit of the hill is 206 feet above the Trinity high-water mark of the Thames. (See PRIMROSE-HILL PARK, p. 650.)

Primrose Hill is a portion of the land bequeathed by "sundry devout men of London" to St. James's Hospital, but granted by Henry VI. to Eton College, surrendered to Henry VIII., but again returned to the College, who, a few years since, transferred it to the Government in exchange for a piece of crown-land near Windsor; which was done principally through the exertions of Mr. Hume, M.P., and an Association of persons formed for securing the ground to the public. In the ridge adjoining is the Primrose Hill Tunnel of the London and North-Western Railway; its extent is 3493 feet, or more than five-eighths of a mile: in tunnelling near the base of the hill, fossil nautili were discovered.

*The View from Primrose Hill* comprises not only London, with its masses of houses and hundreds of spires, but also the once rural retreats of Hampstead and Highgate, now almost become portions of the great town itself. Opposite is St. John's Wood, and in the rear of St. John's Wood the graceful spire of Harrow-on-the-Hill; nearer the spectator are the close streets of Portland Town, and the elegant domain of Regent's Park. The eye, after resting upon St. Paul's as the nucleus of the vast city, glances over Islington and Holloway to the undulating hills of Kent and Surrey; and upon a clear day may be described the bright roofs of the Crystal Palace at Sydenham.

### PRISONS.

UPWARDS of 30,000 criminals and other persons (exclusive of debtors) are stated to pass through the metropolitan gaols, houses of correction, bridewells, and penitentiaries, every year. The number of prisons is smaller than half a century since; but the prisons themselves are of much larger extent. In 1796 there were eighteen prisons in London, which in 1854 had been reduced one-third. About the year 1849 Mr. Dixon wrote in the *Daily News* an account of the chief prisons, which was reprinted in 1850; and Mr. Henry Mayhew's work on the Criminal Prisons, 1855, was

completed in 1863. Mr. Dixon tells us that, "All the great London gaols are provided with stands of arms, by which men could be armed in a few minutes; beside signal-rockets, which would instantly convey intelligence to the Horse Guards, and to the barracks in St. James's and Hyde Parks, of any attack; so that 2000 or 3000 men could be concentrated at any prison in half an hour."

BOROUGH COMPTER, Mill-lane, Tooley-street (solely for debtors from the Borough of Southwark), was originally part of the church of St. Margaret, at St. Margaret's Hill, where the prison site is denoted by Counter (Compter) street.

BRIDEWELL, Bridge-street, Blackfriars, the prison taken down in 1862, is described at pp. 62-65.

BRIXTON COUNTY HOUSE OF CORRECTION, Surrey, was built in 1820, for prisoners sentenced to hard-labour. The plan of the prison is octagonal, with a chapel in the centre. The prisoners are separated into classes; here have been imprisoned at one time 340. The treadmill, adapted from an old contrivance, by Cubitt, an engineer, of Lowestoft, was first set up at Brixton Prison in 1817; from its severity of application it became very unpopular, and "Brixton" became a low cant word.

CITY PRISON, Camden-road, Holloway, is built upon land originally purchased by the Corporation for a cemetery, during the raging of the cholera in 1832. The extent is 10 acres within the boundary-wall, 18 feet high. The prison, designed by Bunning, is built in the castellated style, has fortified gateways, and is embattled throughout the six radiating wings; the number of cells is 436; the building is fire-proof; the ventilation is by a shaft 146 feet high; the water-supply from an Artesian well, 319 feet deep. The prisoners are variously employed; and the discipline is neither entire separation nor association, but the middle course. The prison was first opened Oct. 6, 1852. Cost, about 100,000*l*.

CLERKENWELL BRIDEWELL.—There were formerly two gaols in Clerkenwell, adjoining each other; the oldest was the New Prison, or Bridewell, built by the Justices in 1615, upon the site of "the Cage," for the punishment and employment of rogues and vagabonds of Middlesex. On Shrove Tuesday, 1617, the turbulent London 'prentices "had a cast at the New Bridewell." Between 1622 and 1626, many popish priests were imprisoned here, among whom was Collington, whose release was granted at the instance of Count Gondomar. A friend of the wife of Pepys was imprisoned here in 1661; and the *Diary* tells us that he went, December 11, with his "wife by coach to Clerkenwell to see Mrs. Margaret Penny, who is at school there," undergoing correction, of course. On Shrove Tuesday, 1668, a mob of the London 'prentices again assailed the New Prison, and released a number of their riotous associates imprisoned there. In 1679 the greatest part of the prison was burnt down, suspected to be the wicked work of a papist prisoner. About 1630, Taylor, the water poet, noticed the prison as

"A jayle for hereticks,  
For Brownists, Familists, and Schismatics."

In 1651 several enthusiasts were committed here for blasphemy. In 1669, Richard Baxter, the Nonconformist, was confined here for preaching in his own house at Acton. The honest jailor allowed him to walk in the garden at Clerkenwell, and while here he published the second part of his *Directions to the Converted*. Here, 1775, was committed the first person convicted of dog-stealing. This bridewell was taken down about 1804. (See NEW PRISON, p. 699.)

CLINK, THE, Bankside, was named from being the prison of the "Clink Liberty," in Southwark, belonging to the Bishops of Winchester; and was used in old time "for such as would brabble, frey, or break the peace on the said bank, or in the brothel-houses." (*Stow*.) About 1745, the old prison, at the corner of Maid-lane, was abandoned, and a dwelling on the Bankside appropriated in its stead; this was burnt in the riots of 1780, and no other prison has since been established for the liberty.

The palace of the Bishops of Winchester, at Bankside, was made a prison during the Civil Wars: Sir Kenelm Digby, while confined here as a Royalist, wrote his refutation of Browne's *Religio Medici*.

COLDBATH FIELDS PRISON, OR HOUSE OF CORRECTION, is for criminals sentenced

to short terms of imprisonment, and is supported out of the county (Middlesex) rates. The prisoners are compelled to labour as a punishment and towards their support. The prison is named from the Coldbath well, the site of which is now occupied by the treadmill. The original House of Correction was built in the reign of James I., the City authorities giving 500*l.* towards it, for keeping their poor employed. The present gaol was erected by the county, in 1794, on the eastern slope of the Fleet, on Gardner's Farm, or Field, the ground being considerably raised; architect, Charles Middleton; cost, 65,656*l.*, providing for only 232 prisoners, in separate cells, upon the plan of John Howard. It was opened in 1794, but soon got into disrepute; "men, women, and boys were indiscriminately herded together in this chief county prison, without employment or wholesome control; while smoking, gaming, singing, and every species of brutalizing conversation, tended to the unlimited advancement of crime and pollution." (Chesterton's *Revelations of Prison Life*). The dungeons were composed of bricks and stones, without fire or any furniture but straw, and no other barrier against the weather but iron grates. The Minister Pitt, in the year 1799, visited the prison, and found the prisoners without fire or candles, denied all society, exposed to the cold and rain, allowed to breathe the air out of their cells only for an hour, &c.; Pitt ironically supposing that those who managed the prison "kindly subjected the prisoners to so much pain in this world, that less punishment might be inflicted on them in the next." Coleridge and Southey, in the *Devil's Walk*, sung:

"As he pass'd through Coldbath Fields he looked  
 At a solitary cell,  
 And he was well pleased, for it gave him a hint  
 For improving his prisons in hell;  
 He saw a turnkey tie a thief's hands,  
 With a cordial tug and a jerk;  
 'Nimble,' quoth he, 'a man's fingers can move  
 When his heart is in his work.'"

Much scandalous mismanagement continued so late as 1829. Captain Chesterton, in his Evidence before the Magistrates, stated that "on becoming Governor of the House of Correction he found it usual to fleece the prisoners of every farthing they possessed or could procure from their friends—all the officers having paid for their posts, and being eager to indemnify themselves. If a prisoner had no money he was kicked and buffeted in the most merciless manner. The visit of a magistrate was always known and prepared for beforehand. Every cell was a depôt for contraband articles, especially for wine and spirits. The prisoners slept three in a cell."

The *mixed* system means silence by day and sleep at night in separate cells. The *mark* system means substitution of a labour sentence for time sentences; instead of a sentence to fourteen years' imprisonment, the culprit would be sentenced to perform a certain quantity of labour, represented by marks instead of money; the criminal to be liberated when the prescribed task was accomplished, whether he occupied one year or twenty about it. Here 272 persons were employed to superintend 692 prisoners; yet even this large staff were found insufficient to prevent all intercourse among the criminals. The necessity for punishment perpetually arose. There were no less than 6794 punishments inflicted for talking in a single year.

The governor Aris, formerly a baker in Clerkenwell, was denounced as "a reputed tyrant and torturer;" and in 1800, a riot took place in the prison, which the Clerkenwell volunteers suppressed. Volunteers from the adjacent parishes then watched the prison, and the Clerkenwell cavalry paraded round the outer gates for several nights to keep the mob off. Aris was dismissed from his office, and he died in poverty. In 1830, several persons were confined here for selling unstamped newspapers, when an attack being meditated to liberate the "political martyrs," the prison was put in a state of defence: "we received," says the late governor, Colonel Chesterton, "in addition to what we already possessed, from the Tower, 25 carbines, 2000 rounds of ball-cartridge, and 1500 hand-grenades;" scaling ladders were manufactured, and the governor's house was fortified, but no attack was made. In 1834 the silent system was introduced, and 914 prisoners were suddenly apprised that "all intercommunication by word, gesture, or sign was prohibited." The treadmill had been previously introduced, 12,000 feet of ascent being the amount of the daily "hard labour" sentence, which being injurious to health, was limited to 1200 feet. The picking of oakum or coir is enforced here, the silent associated system is continued, and the prison "has the thorough aspect of an old English jail."

The prison uniform is coarse woollen blue cloth for misdemeanants, and dark grey for felons: each prisoner is known only by the number on his back; and a star upon the arm denotes good conduct. The workshop is an interesting scene; but the oakum-picking-room, with its felon faces, is a painful sight: and the treadmill, employing 320 prisoners at a time, is another repulsive feature. Carpenters,

tinmen, blacksmiths, and other handicraftsmen work here; and in the ground is the upper part of a vessel, with masts and rigging, for teaching boys the sea-service; there are also schools and reformatory visits. (See Dixon's *London Prisons*, 1850.)

Large additions have been made to this prison. In 1830, a vagrants' ward for 150 was added, then a female ward for 300; the gaol has proper accommodation for upwards of 1500 prisoners, males only. There were formerly six distinct treadwheels, there is now treadwheel labour for 160 prisoners: the mill grinds wheat, and from the flour which it yields (about 30 cwt. daily) bread for the three county prisons is made. In 1862, there were here upwards of 1700 felons, misdemeanants, and vagrants, and sometimes are 700 or 800 in excess of the number of cells. The annual ordinary charge per prisoner has been estimated at 21*l.* 19*s.* 4*d.* Money received in the year for products of the prisoners' labour, 1901*l.* 3*s.* 5*d.*; prisoners' earnings in work for the county, 4300*l.* 18*s.* 3*d.*—viz., shoemaking, bricklaying, and other repairs, tailoring, washing, needlework, and painting. There are two chapels and two chaplains, two schoolmasters, and abundance of books of religious and secular instruction. The prison is well described in Pinks's *History of Clerkenwell*, 1865.

In 1820 the Cato-street conspirators were lodged here before being sent to the Tower. John Hunt was imprisoned here for a libel on George IV. "I sometimes," says Mr. Redding, "beguiled an hour with him at chess. He had a lofty and comfortable, though small apartment, at the top of the prison, where the air was excellent. Townsend, one of the Bow-street officers, was governor of the prison, and an excellent governor he made. John Hunt had the privilege of walking for a couple of hours daily in the governor's garden, for which he alone was indebted to the governor himself."—Cyrus Redding's *Recollections*.

In 1863, the prison was enlarged by the addition of 326 cells on the separate system, heated, lighted, and ventilated, and each furnished with a bed or hammock; previously, about 250 slept every night on the floor of a work-room. The wall circuit has also been extended, so as to inclose the piece of vacant ground facing the governor's house, and this has been rebuilt, as well as the lofty prison gateway, with the three sabres and the conventional fetters, a pair of gigantic knockers, &c. The warders wear blue uniforms instead of the gaolers' habit as of old.

FLEET PRISON is described at pp. 344-346.

GILTSPUR-STREET COMPTER, or the City House of Correction, was built by George Dance, in 1791, to supersede the wretched prison in Wood-street, whence the prisoners were removed in 1791: it was then only used for debtors, but subsequently for remands and committals for trial, and minor offenders. The rear of the prison abutted on Christ's Hospital, and its towers are visible from the yard: the happy shouts of the boys at play were heard by the prisoners, and the balls often fell within the prison-yards, as if to remind the fallen inmates how much innocence they had outlived! In 1808 Sheriff Phillips described Giltspur-street, with its corner, entitled "Ludgate" (for citizen debtors, clergymen, proctors, and attorneys), and the whole prison, as greatly overcrowded by the removal to it of the Poultry Compter debtors. The solitary confinement was in front of the building, where, however, the prisoners could see the busy street, and the crowds to witness executions in front of Newgate. About 6000 prisoners were annually committed to Giltspur-street; but it was one of the worst managed and least secure of the metropolitan prisons, and the escapes from it were the most frequent. As a proof of the lenity of its management, it is related that, on the death of Mr. Teague, the humane governor of Giltspur-street Compter, in 1841, nearly every prisoner wore a black crape hat-band! The prison was closed in 1854, when the keeper had a retiring allowance of 300*l.* a year: it has since been taken down.

HORSEMONGER-LANE GAOL, on the south side of Newington Causeway, was built upon the plan of John Howard, in 1791-9 (George Gwilt, architect), upon the site of a market-garden. It is a common gaol for the county of Surrey, under the Sheriff, Court of Quarter Sessions, and Magistrates, and is for debtors and criminals. Three sides of the prison quadrangle are for the confinement of felons, and one side for debtors, the latter arranged in classes. Among several small benefactions to the debtors is a donation made to the old White Lion Prison in Southwark (mentioned by Stow), by Mrs. Margaret Symcott, or Eleanor Gwynne, of 65 penny-loaves, every eight weeks, issuing from the Chamberlain's office. (Manning and Bray's *Surrey*, vol. iii. App.—

See INNS, page 458). The employments are knitting, netting, oakum-picking, lime-washing, and cleansing the gaol: it will contain about 400 prisoners.

Upon the roof of the north lodge were executed, on Feb. 21, 1803, Colonel Edward Marcus Despard and six associates, who had been tried and found guilty, by a special commission, of high treason; Richard Patch for murder, April 8, 1806; and Nov. 13, 1849, the Mannings, husband and wife, for murder. Leigh Hunt was imprisoned here for a libel on the Prince Regent, in 1813; and here he was first introduced to Lord Byron. (See Leigh Hunt's *Autobiography*, vol. ii.) In June, 1849, three burglars escaped from their cells in this prison by means of a key which they made from a pewter pot; but they were recaptured in scaling the 20-foot wall.

LUDGATE PRISON is described at page 538, where the romantic story of Sir Stephen Forster is narrated. This ancient City gate was made a prison in 1373, for poor debtors who were free of the City, who, however, had to pay lodgings, chamber-rent, and for water, since Forster's provisions were neglected. When the gate was taken down, the prisoners were removed to the London Workhouse, in Bishops-gate-street.

This prison had some curious regulations. To preserve order the master, keeper, and prisoners chose from among themselves a reader of divine service; an upper steward, called the master of the box; an under steward, and seven assistants by turns daily; a running assistant, two churchwardens, a scavenger, a chamberlain, a running post; and the criers or beggars at the gate (such as we remember at the Fleet), who were generally six in number. The reader, besides attending to prayers, had to ring the bell twice a day, and for a quarter of an hour before nine at night, to warn strangers to depart the prison: besides his salary and fees, he had a dish of meat out of the Lord Mayor's basket. The master of the box, with the under steward, assistants, and churchwardens were elected monthly by the prisoners; and the election of other officers was conducted in the most orderly manner. The officiating assistant could commit a prisoner to the stocks, or shackles, for abusing any person, and he had to see the cellar cleared out at ten o'clock; he had also to set up candles, look after the dock, &c. The churchwardens had to call to prayers, after the bell had done ringing. The scavenger had to keep the prison clean, to fetter offenders, and put them in the stocks. The chamberlain took care of all the prison bedding and linen, and appointed lodgings for new comers, and gave notice to strangers to leave at ten o'clock. The running post had to fetch in a basket the broken meat from the Lord Mayor's table, provisions from the clerk of the market, from private families, and the charities given in the streets. Two of the criers begged daily at the gates; he at Ludgate-street was allowed a fourth of what was given, and he on the Blackfriars' side one-half. Notwithstanding this complex machinery corruption crept in: the keeper and turnkey of the prison claimed fees without either right or reason. The prisoners had to pay 8*d.* a month for clean sheets, and not above two were to lie in a bed; for a couch, 1*d.* a week; for chamber-room, &c., 1*d.* a week for lamps and candles. A freeman of the City, on being arrested for debt, could insist upon being carried to the Ludgate Prison; bailiffs' fees, 4*s.* or 5*s.*, due 2*d.* If new comers could not pay the demands, the clothes of the poor prisoner were privately taken from him, and not returned until the money was paid. He was, however, allowed to go abroad, on giving good security to return at night, for the charge of a keeper's fee, 1*s.* 6*d.*; head turnkey, 2*s.* 6*d.* Often the discharge fees came to more than the debt. Hungry, and at times almost naked, the poor prisoners lay in these unsanitary dens until death. There was a gift to this prison, called Nell Gwynne's dole, distributed to prisoners every ninth week. Some of the old statues from Ludgate remain, but railway trains now rattle over the prison site.

As early as 1218, Ludgate was a common gaol for felons taken in London City; and so lately as 1457, Newgate, and not the Tower, was the prison for the nobility and great officers of State. In 1252, one John Offrem, committed to this prison for having killed a prior, escaped, which so displeased King Henry III. with the City, that the sheriffs were sent to the Tower, and there remained a month. In 1431, in consequence of a false complaint made by the keeper of Newgate, eighteen freemen were taken to the compters, and chained as if they had been felons.

MARSHALSEA PRISON, "so called as pertaining to the Marshalles of England" (*Stow*), stood in High-street, Southwark. Here were confined persons guilty of piracies and other offences on the high seas. (See page 509). In 1377 it was broken into by a mob of sailors, who murdered a gentleman confined in it for killing one of their comrades, but had been pardoned. During the rebellion of Wat Tyler, in 1381, the marshal of this prison, and the governor of the King's Bench, Sir John Imworth, was seized and beheaded.

"To the Marshalsea Bishop Bonner was sent, on losing his see of London for adherence to Rome. A man meeting him cried, 'Good morrow, bishop quondam;' to which Bonner replied, 'Farewell, knave semper.' He lived ten years in the Marshalsea, and died there Sept. 5, 1569; he was buried at midnight, with other prisoners, in St. George's, Southwark. In the reigns of Henry VIII., Mary, and Elizabeth, the Marshalsea was the second prison in importance in London, being inferior only to the Tower. Christopher Brooke, the poet, was confined in the Marshalsea for being concerned in the wedding of Dr. Donne. George Wither was committed here for writing the satire, *Abuses Stript and Whipt*; but he procured his release by his *Satire to the King*."—Dixon, *London Prisons*, abridged.

Garrick played for the benefit of the prisoners, at Drury-lane, "being the first application of this

kind," the *Provoked Wife*, Sir John Brute, Garrick; Lady Fanciful, Mrs. Clive; Lady Brute, Mrs. Pritchard. *Farce of Duke and No Duke*, Trappolin, Mr. Woodward. Tickets to be had at the Marshalsea Prison, Southwark.

The Marshalsea escaped the riots of 1780. The old prison, which contained about sixty rooms and a chapel, occupied the site of the house, No. 119, High-street; it was then removed to other premises nearer St. George's Church; and these were taken down in 1842, when the prisoners were drafted to the Queen's Bench. (See MARSHALSEA and PALACE COURT, page 509.)

MILLBANK PRISON, Westminster, near the foot of Vauxhall Bridge, is the largest penal establishment in England. The site was purchased, in 1799, of the Marquis of Salisbury, for 12,000*l.*; but the building was not commenced until 1812, when a contract was entered into by the Government with Jeremy Bentham; and the edifice is a modification of his "Panopticon, or Inspection House." It was next changed into a regular Government prison for criminals, adult and juvenile, and became the general dépôt for transports waiting to be drafted to other prisons, or placed on shipboard for dockyard labour; and here are sent the most reckless and hardened criminals from all parts of the country. The soil of the site is a deep peat, and the buildings are laid on a solid and expensive concrete; but the situation is low and unhealthy. The prison cost half a million of money, or about 500*l.* for each cell! The only entrance is in the Thames front. The ground-plan consists of six pentagonal buildings, radiating from a circle, wherein is the governor's house; and each line terminates in a tower in the outer octagonal wall, which incloses about 16 acres; 7 covered with buildings, including 12 chapels and airing-yards, and 9 laid out as gardens. The corridors are upwards of 3 miles long; there are about 1550 cells; and from 4000 to 5000 persons pass through the prison yearly. There are 40 staircases, making in all 3 miles distance. In 1843 the name of the Penitentiary was changed, by Act of Parliament, to the Millbank Prison. From the general resemblance of its conical-roofed towers to those of the Bastille du Temple at Paris, as well as from the severity of its system, the Penitentiary has been stigmatized as "the English Bastille."

"The dark cells, 20 steps below the ground-floor, are small, ill-ventilated, and doubly barred; and no glimpse of day ever enters this fearful place, where the offender is locked up for three days, fed upon bread and water, and has only a board to sleep on."—*Dixon*, 1850.

NEWGATE, on the east side of the Old Bailey, is now used as a gaol of detention for persons about to be tried at the adjacent Central Criminal Court; here are also confined prisoners convicted of assaults or offences on the high seas, and those who are under sentence of death. Until 1815, when Whitecross-street prison was built, Newgate was used for debtors as well as felons: hence its "Debtors' Door."

Sheriff Hoare, 1740-1, tells us how the names of the prisoners in each gaol were read over to him and his colleague; the keepers acknowledged them, one by one, to be in their custody; and then tendered the keys, which were delivered back to them again; and after having executed the indentures, the Sheriffs partook of sack and walnuts, provided by the keepers of the prison, at a tavern adjoining Guildhall. Formerly the Sheriffs attended the Lord Mayor, on Easter-eve, "through the streets, to collect charity for the prisoners in the City prisons."

Old Newgate prison was over and about the City gate "so called, as built after the four principal gates were reckoned old." It was merely a tower or appendage to the gate, which stretched across the west end of Newgate-street; still, from the time of King John to that of Charles II., it was sufficient prison-room for the City and county. It was originally "Chamberlain Gate," and was rebuilt by the executors of Sir Richard Whittington, whose statue, with the traditional cat, was placed in a niche upon the wall. Here were also statues of Concord, Mercy, Justice and Truth, Peace and Plenty, &c.

"In the Beanfoy Collection, at Guildhall, is a Newgate Prison Token, No. 715. *Obv.* Belonging to ye cellor on the masters side at—1669. *Rev.* Newgate—View of Newgate and the Debtors' Prison. This token was struck as a monetary medium among the prisoners, and is of the utmost rarity and interest, from the delineation of the prison it affords."—*Burn's Descriptive Catalogue*, p. 133.

Newgate was restored by Wren in 1672, after the Great Fire; but it was burnt to the ground in the riots of 1780, when the rioters stole the keys, which were found some time after in the basin of water in St. James's-square. Dr. Johnson and Dr. Scott (Lord Stowell) saw Newgate in ruins, "with the fire yet glowing:" the iron bars were eaten through, and the stones vitrified by the intense heat.

On the top of Old Newgate, as shown in prints, was a windmill, an early attempt at ventilation. "For," says Chamberlain, in 1770, "a contagious disease, called the gaol distemper, has frequently destroyed great numbers of prisoners, and even carried its contagion into courts of justice, when trials were held. To prevent as much as possible these dreadful effects, a ventilator has been placed on the top of Newgate, to expel the foul air, and make way for the admission of such as is fresh; and during the time that the sessions are held herbs are also strewed in the court of justice, and in the passages leading thereto, to prevent infection," which practice is continued to this day.

*Memorable Imprisonments.*—Newgate was used as a state-prison long before the Tower. Robert Baldock, chancellor to Edward III., died here. Here were imprisoned John Bradford, of Manchester, the friend of Ridley; the intrepid John Rough; John Field and Thomas Wilcox, in 1572, for writing the celebrated *Admonition to Parliament for the Reformation of Church Discipline*; and here, in prison, they maintained the Whitgift controversy. Dr. Leighton (ten years), for writing his *Appeal to Parliament*. George Wither, the poet, for writing the *Vox Vulgi*. George Sackville, poet, rake, and Earl of Dorset, occupied a cell in Newgate. In 1672, Penn, the founder of Pennsylvania, was confined here six months, for street-preaching; Titus Oates and Dangerfield were sent here, and Dangerfield died in the prison. At the Revolution, Bishops Ellis and Leyburn were confined here, and were visited by Burnet. Defoe was committed to Newgate for writing his *Shortest Way with Dissenters*; and here he wrote *An Ode to the Pillory*, and commenced his *Review*. Major Bernardi, suspected of plotting with Rookwood against King William, died in Newgate, after seven years' confinement. Richard Akerman, Boswell's friend, was gaoler. (Abridged from Dixon on the *London Prisons*.) Dr. Dodd, while imprisoned here, finished a comedy (*Sir Roger de Coverley*); and after conviction, wrote his *Prison Thoughts*. Jack Sheppard escaped from "the Castle in Newgate;" and from "the Middle Stone Room," after his being retaken in Drury-lane. His portrait was painted in the prison by Sir James Thornhill. The *Beggar's Opera* was first called *A Newgate Pastoral*. The trials are reported in the *Newgate Calendar*; and in the *Annals of Newgate*, by the Rev. Mr. Vilette, Ordinary.

The present "prison of Newgate" was designed, in 1770, by George Dance, R.A., and is one of his finest works: the architecture bespeaks the purposes of the structure, and its solidity and security at once impress the spectator. The first stone was laid, 23rd May, 1770, by Lord Mayor Beckford, this being his last public act. John Howard objected to the plan, but was overruled. While yet unfinished, in 1780, Newgate was attacked by Lord George Gordon's rioters, who broke open the doors of the tenanted portion, and set 300 prisoners at large; they then set fire to the building, which was reduced to a shell: it was repaired and completed in 1782. The plan consists of a centre (the keeper's house); two lodges, stamped with gloomy grandeur and severity; and two wings of yards right and left, but not suited for the classification or reformation of the prisoners. The façades are 297 feet and 115 feet long, and are externally a good specimen of prison architecture. The outer walls are three feet thick. Early in the present century nearly 800 prisoners were confined here at one time, when a contagious fever raged. In 1808, Sheriff Phillips states, the women in Newgate usually numbered from 100 to 130; and each had only 18 inches breadth of sleeping-room, packed like slaves in the hold of a slave-ship! In this shrievalty, the cells were first ordered to be whitewashed twice a year. Mrs. Fry describes the women as "swearing, gaming, fighting, singing, dancing, drinking, and dressing up in men's clothes;" and in 1838, gambling, card-playing, and draughts were common among the male prisoners. The chapel has galleries for the male and female prisoners: below, and in the centre of the floor, is placed a chair for the condemned culprit; but the public are no longer admitted to hear the "condemned sermons" on Sundays before executions: the criminal's coffin was also placed at his feet during the service! Formerly sixty persons have been seen on one Sunday in "the condemned pew," the woodwork of which was cut with the name of many a hardened wretch. Here the Rev. W. Dodd, D.D., preached his own funeral sermon from Acts xv. 23, on Friday, June 6, 1777, before he was hanged for forgery. The custom practised for many years in Newgate of having a small portion of scripture read daily and explained, for the prisoners to meditate upon, was always attended with good results, but since the prisoners have been kept separately the influence of it has been far greater.

In the lower room, on the south side of the prison, died Lord George Gordon, of the gaol distemper, after several years' imprisonment, for libelling the Queen of France. The culprit in the furthest cell on the ground-floor is within a yard of the busy passers-by in the street. In the hall is a collection of ropes; also casts taken from the heads of the principal criminals who have been executed in the front of the prison.

The kitchen was formerly the hall in which debtors were received: it opens by "the Debtors' Door," through which criminals pass to the scaffold in the street, a passage being made through the kitchen by black curtains. The place of execution was changed to this spot in December, 1783, at the suggestion of John Howard.

Within the walls is a cemetery, where, since 1820, have been buried the bodies of executed criminals: the first deposited there were Thistlewood and the other Cato-street conspirators. The bodies are buried, without service, at eight in the evening of the day of their execution, and at each grave is a tall stone with the rudely-inscribed name.

The Press-yard, between Newgate and the Old Bailey Courts, is described at page 556. It was formerly customary for the Lord Mayor and Sheriffs, when proceeding to proclaim Bartholomew Fair, on Sept. 2, to stop at Newgate, and drink "a cool tankard" to the health of the Governor of Newgate; but this practice was discontinued in the second mayoralty of Alderman Matthew Wood in 1821. Two watchmen are stationed on the roof of the prison during the night.

One of the last persons confined in Newgate for a political offence was Mr. Hobhouse (now Lord Broughton), for publishing his pamphlet, *The Trifling Mistake*; when Lord Byron's prediction, that Hobhouse "having foamed himself into a reformer, would subside into Newgate," literally came to pass: and great was the enthusiasm of the people in the street at seeing Mr. Hobhouse's hat above the prison parapet, as he walked upon the roof for exercise!

The cost of maintaining the prisoners in Newgate is 37*l.* a head annually. The old associated system is pursued here; the silent system at Millbank, in Coldbath-fields, and Tothill-fields; and the separate system at Pentonville, Millbank, and the House of Detention; yet Newgate has the advantage, as seven out of eight of its prisoners never return to it. Nevertheless, says an official authority:

"Newgate prison is a complete quarry of stone, without any order or possibility of order in it. There are a vast number of rooms in it, over which there is no inspection whatever; and nothing as a prison can remedy it. It has a most imposing exterior, which is perhaps its greatest use as a deterrent from crime, and the worst possible interior."—*Captain Williams, Prisons Inspector.*

The interior of the prison has been reconstructed upon the cellular system, similar to that of the City Prison, Holloway. The front portion of Newgate was completed in 1858. In the middle is a large central corridor that occupies the entire length of the structure. On each side of it are four galleries, which communicate with the cells of the prisoners. There are no fireplaces in the cells, but warming and ventilation is provided for by the admission of fresh air from an altitude of 40 feet, conveyed downwards, and which, passing through a tunnel under the building, comes in contact with a series of pipes heated by steam. This heated air then passes through flues that have an area of 60 inches, and are inserted in the middle of the walls, one flue passing to each cell, on the opposite side of which is a large chamber common to all, by which the air is conveyed to a ventilating shaft, that is highly rarified by coils of steam-pipes that generate the circulation. For the purposes of warming and ventilation, two steam boilers have been provided, each 18 feet long by 5 feet 6 inches diameter. The basement of the structure contains the reception and punishment cells, bath-rooms, boiler-house, and stores. The building is so isolated all round that if a prisoner, in his attempt to escape, even gained the roof, he could not possibly escape without running the risk of losing his life. The greatest improvements that appear to have been effected by the system adopted in the new building, are separating the prisoners, affording adequate accommodation for the officers in charge of the inmates, and the provision of airing-yards to admit of external exercise.

NEW PRISON was erected towards the close of the seventeenth century, south of Clerkenwell Bridewell, intended "as an ease for Newgate," for such as were charged with misdemeanours. Jack Sheppard was committed here, with Edgeworth Bess, on a charge of felony, when they marvellously escaped. In 1774-5, the New Prison was rebuilt: on the rusticated stone gate was sculptured a large head expressive of criminal despair and anguish, chains with handcuffs, fetters, &c. In Howard's time, 1776, there were 83 felons confined here, with the county allowance of a penny-loaf a day, and each new comer had to pay 1*s.* 4*d.* for "garnish." Near the outer gate was a trap, whence the prisoners were supplied with liquors at a wicket made for the purpose in the wall. In the Riots of 1780, the rioters with pickaxes broke open the gates and let the prisoners out. In 1812, the prisoners here were not even provided with straw, but slept in their rugs on the boarded floor, and the county allowance was but one pound of bread a day. In 1818, this prison was almost entirely rebuilt on a more extensive plan, and cost upwards of 35,000*l.* to provide for 240 prisoners in separate cells. In 1845 the prison was taken down, and upon its site was built the House of Detention for the reception of prisoners before trial, the accused only: the first built upon that plan, modified from the separate system at Pentonville; there are 286 cells. Here are shown Jack Sheppard's fetters, double the usual weight; and the boundary-wall of New Prison remains.

PENTONVILLE PRISON, in the road from the foot of Pentonville-hill to Holloway, and over against Barnsbury, was commenced April 10, 1840, during the administration of Lord John Russell, and completed in 1842, at a cost of nearly 100,000*l.*, upon the plan of Lieut.-Col. Jebb, R.E. The area within the lofty walls is 6 $\frac{3}{4}$  acres, besides a cur-

tain-wall, with massive posterns in front, where is a frowning entrance-gateway, its arched head filled with portcullis-work, and not altogether unpicturesque; from the main building rises a lofty Italian clock-tower. From the inspection or central hall radiate five wings or galleries, on the sides of four of which are the cells, in three stories.

Each cell is 13½ feet long by 7½ feet broad, and 9 feet high: it has an iron water-closet, pail, and wash-basin supplied with water; a three-legged stool, table, and shaded gas-burner, and a slung hammock, with mattress and blankets; in the door is an eyelet hole, that the officer may inspect from outside; and the meals are conveyed through a spring trap-door.

The heating is from stoves in the basement; and the ventilation is by an immense shaft from the roof of each wing. The chapel is fitted up with separate stalls or sittings for the prisoners, of whom the officers have the entire surveillance. The organ is by Gray. The exercising-yards, between and in front of the wings, are radiated, so that an officer may watch the prisoners, each in a walled yard. The discipline is the separate system and the silent system modified; and here were formerly sent convicts for probation, prior to transportation to the penal colonies, the plan being an adaptation from the Philadelphian system. Each cell cost 180*l.*; victualling and management nearly 36*l.* a head; and the prisoners' labour is unproductive. The building was first named "the Model Prison," as the plan was proposed for the several gaols in the kingdom; but, from its partial success, the name has been changed to the Pentonville Prison, although it is in the parish of Islington. The prison has been a costly experiment, and was planned so as to be easily altered in case of failure. A set of views of the Model Prison appeared in the *Illustrated London News*, 1843.

POULTRY COMPTER is described at page 628.

QUEEN'S PRISON, Southwark, formerly the King's Bench and Queen's Bench, was situated here in the reign of Richard II., when the Kentish Rebels, under Wat Tyler, "brake down the houses of the Marshalsea and King's Bench, in Southwarke." (*Stow*.) To this prison the Prince of Wales, afterwards Henry V., was committed by Chief Justice Gascoigne, for endeavouring to rescue a convicted prisoner, one of his personal attendants (*Stow's Chronicle*); and the room in which he was confined was known as the Prince of Wales's Chamber down to the time of Oldys. In 1579 the prisoners daily dined and supped in a little low parlour adjoining the street. In this year, through "the sickness of the house," the prisoners petitioned the Queen's Privy Council for the enlargement of the prison and the erection of a chapel. During the Commonwealth it was called the Upper Bench Prison. Rushworth, author of the *Historical Collections*, was confined here for six years; and Baxter, the Nonconformist, was imprisoned here eighteen months, under a sentence passed by the infamous Judge Jeffreys. The original King's Bench was built on the east side of the High-street, on the site of Layton's-buildings, adjoining the Marshalsea and White Lion prisons. Defoe describes the prison-house "not near so good as the Fleet." The present prison is situated at the lower end of the Borough-road: Wilkes was one of the early prisoners here.

After his return to Parliament for Middlesex, in 1763, Wilkes was arrested on a writ of *capias utlegatum*, when he was rescued by the mob as the officers were conveying him to the King's Bench Prison, to which he afterwards went privately. He was still under confinement upon the meeting of Parliament, when a mob assembled before the prison to convey him in triumph to the House of Commons. A riot ensued—the military fired, and killed and wounded several rioters. Judgment was then pronounced on Wilkes for two libels, and he was heavily fined, and sentenced to imprisonment for the two terms of ten and twelve months; during which upwards of 20,000*l.* was raised for the payment of his fines and debts, and presents of all kinds were heaped upon him—plate, jewels, wine, furniture, and embroidered purses of gold!

The building was set on fire, and the prisoners were liberated, by the mob in the Riots of 1780. (*See ST. GEORGE'S FIELDS*, p. 376). By the Act 5 Victoria, c. 22, the Queen's Bench, Fleet, and Marshalsea were consolidated as the Queen's Prison, for debtors, prisoners committed for libel, assault, courts-martial, &c., under the control of the Home Secretary of State. The dietary and other expenses, 1500*l.* a year, were paid by the English and Welsh counties.

"On the propriety of styling the especial Royal Court of Judicature—at which the sovereign anciently presided in person—the Court of Queen's Bench, some hesitation may arise, determinable, however, by former practice. Does the Saxon derivation of Queen extend further in strict meaning than a royal consort; and is not the Queen regnant *de facto* King, as exercising the kingly office?"—A. J. K., *Gentleman's Magazine*, June, 1839

"All that is squalid and miserable might now be summed up in the one word—Poet. That word denoted a creature dressed like a scare-crow, familiar with combers and sponging-houses, and perfectly qualified to decide on the comparative merits of the Common Side in the King's Bench Prison, and of Mount Scoundrel in the Fleet."—*Edinburgh Review*, No. 107; Macaulay on Croker's *Boswell*.

The prison is inclosed by a wall 35 feet high, surmounted by *chevaux-de-frise*; it contains 224 rooms and a chapel. The wall is well adapted for rackets, once much played here. Defoe said, "to a man who had money, the Bench was only the name of a prison;" but the classification of the prisoners abated its licence and riotous living.

In 1820 was published a humorous volume in verse, entitled *Sketches of St. George's Fields*. By *Giorgione di Castelchiuso*. The author portrays the characters and incidents of the King's Bench at the above period in some 170 pages; and in his Preface humorously describes the Bench as "a certain spring of great repute," and compares temporary imprisonment here to *drinking the waters* (? of oblivion). "I was only," he says, "required to drink for some time at the *very spring* of a certain fountain in St. George's-fields, over which a pump is placed, and by which a vast casino is built, capable of containing many hundreds of patients, and surrounded by a lofty wall. These waters are in infinitely greater repute than those of Aix, of Pyrmont, or Barèges; and I have in one morning met with inhabitants of remotely-distant countries gathered together before this famous spring." "It was during the time in which I partook of the salubrious potatoes of that spring, which, for I know not what reason, is called *Number Sixteen*"—the number of the staircase in the prison.

*Remarkable persons confined in the King's Bench*.—Robert Recorde, physician, "the first useful English writer," his family Welsh, and he himself a Fellow of All Souls' College, Oxford, in 1531, died in 1558, in the King's Bench, where he was confined for debt: some have said he was physician to Edward VI. and Mary.

Sir William Resesby, Bart., son and heir of the celebrated author, *Le Neve* states, in his MSS. preserved in the Heralds' College, became a tapster in the King's Bench Prison, and was tried and imprisoned for cheating in 1711. He was addicted to the fights of game-cocks, and the fine estate of Dennaby is said to have been staked and lost by Sir William on a single main.—(*Burke's Anecdotes of the Aristocracy*, 2nd S.)

The original prison was in that part of the Borough where was held Southwark Fair; for we read of Joe Miller mourning his departed master, Dogget, at the *Angel Tavern*, which then stood next door to the King's Bench; and among the Burney play-bills for the year 1722, is this newspaper cutting: "Miller is not with Pinkethman, but by himself! At the *Angel Tavern*, next door to the King's Bench, who acts a new droll called the Faithful Couple; or, the Royal Shepherdess."—(*W. H. Wills*.)

Chatterton was here in 1770: he writes: "A gentleman, who knows me at the Chapter as an author, would have introduced me as a companion to the young Duke of Northumberland, in his intended general tour. But alas! I spoke no language but my own. *King's Bench for the present*, May 14, 1770."—(*Dix*, p. 267.)

Colonel Hanger, the youngest son of Gabriel, first Lord Coleraine, was by turns a successful gamester, a prisoner in the King's Bench, a gallant soldier in King George's army, fighting against the Americans, and a favourite guest at the Prince of Wales's table, at Carlton House.

The amiable Valentine Morris, when Governor of the Isle of St. Vincent, and the colony fell into the hands of the French, was refused reimbursement by the British Government: thus sinned against, he was thrown into the King's Bench Prison by his creditors, on his return to England; and during the space of seven years, endured all the hardships of extreme poverty. Thus reduced, his wife, who was niece to Lord Peterborough, and who sold her clothes to purchase bread for her husband, became insane. Morris was at length released, after long years of suffering.

George Morland, the painter, was long in the Bench and the Rules, and usually spent his evenings at a tavern in the latter; there it was that he astounded an old gentleman by telling him he knew what would hang him, and then produced—a rope.

Jethro Tull, "the father of the drill and horse-hoeing husbandry," died in the Bench Prison, where he had been thrown by some merciless creditor.

Lord Cochrane was imprisoned here in 1815, for his Stock Exchange affair; he escaped, and went immediately to the House of Commons, whence the Marshal of the King's Bench conducted him back to prison.

Henry Constantine Jennings, of Shiplake, Oxon, descended from the Nevils, and who reckoned the celebrated Sarah, Duchess of Marlborough, among his progenitors, is supposed to have died in the King's Bench, about 1818; his inveterate love of the fine arts was, no doubt, the cause of it. In 1815 he was living in Lindsey-row, Chelsea; and in or about the same time he preferred a claim to an abeyant peerage.

About the year 1820, one Winch, a printer's joiner, while confined here for debt, constructed the working model of a printing machine, which resembled a mangle.

In 1821, Messrs. Weaver, Arrowsmith, and Shackell, proprietors of the *John Bull* newspaper, were heavily fined, and imprisoned here nine months, for a libel upon the memory of Lady Caroline Wrottesley.

William Hone, while writing his *Every-day Book*, was arrested by a creditor, and thrown into the King's Bench. Here he remained for about three years, during which time he finished his *Every-day Book*, in two volumes; and began and finished his *Table-book* and *Year-book*, two volumes. These three works will probably preserve the name of the compiler after everything else that he did shall be forgotten.

Dr. Mackay, who had lost 40,000*l.*—which he had amassed in Mexico by a long life of labour—on the Stock Exchange, was found by Haydon in the King's Bench in 1827, planning steam-coaches, and to set off for Mexico as soon as he was free.

A friend finding a poor author in the Queen's Bench for the third time, and in good spirits, said, "Why, you must like it." So—of Haydon—to what humorous account he turned his difficulties. In 1834 he notes: "Directly after the Duke's (Wellington) letter came with its enclosed cheque, an execution was put in for the taxes. I made the man sit for Cassandra's hand, and put on a Persian bracelet. When the broker came for his money, he burst out a laughing. There was the fellow, an old soldier, pointing in the attitude of Cassandra—upright and steady, as if on guard. Lazarus's head was painted just after an arrest: Euclis finished from a man in possession; the beautiful face in Xenophon in the afternoon, after a morning spent in begging mercy of lawyers; and now Cassandra's head was finished in agony not to be described, and her hand completed from a broker's man." Haydon painted his "Mock Election" and "Chairing Members" from a burlesque election in the prison when he was confined there; and thence he petitioned Government, and trumpeted his own distresses. The best account of the King's Bench of our time will be found in Haydon's *Autobiography*; and its motley life is the staple of three volumes of *Scenes and Stories of a Clergyman in Debt*, written by F. W. N. Bayley.

In September, 1860, Sir Francis Desanges, who had been Sheriff of London and Middlesex in 1818, and also Sheriff of Oxfordshire, expired in the Queen's Prison, of which he had been an inmate upwards of four years, at the suit of a solicitor; he was 75 years old, and had long bitterly complained of his imprisonment.

*The Rules* (privileges for prisoners to live within three miles round the Prison, and to go out on "day rules") are said to have been first granted in time of plague. For these Rules large sums were paid to the Marshal, who, in 1813, received 282*l.* from the rules and "liberty tickets," and 87*l.* from the sale of beer! These malversations were, however, abolished. Kit Smart, the translator of Horace, died within the Rules; here Smollett wrote his *Sir Launcelot Greaves*. Smollett has minutely described the King's Bench Prison in his *Roderick Random*, as quarters which Hatchway and Tom Pipes coveted earnestly. Shadwell, in his comedy of *Epsom Wells*, 1676, says the Rules extend to the East Indies; which Lord Ellenborough quoted when he was applied to to extend the Rules.

*Public Advertiser*, Oct. 4, 1764: "A gentleman, a prisoner in the Rules of the King's Bench, a branch of the family of the Hydes, Earls of Clarendon and Rochester, has a most remarkable coffin by him, against his interment. It was made out of a fine solid oak which grew on his estate in Kent, and hollowed out with a chisel. The said gentleman often lies down and sleeps in his coffin, with the greatest composure and serenity." Oct. 6 it was added: the coffin "weighs 500 lbs., and was not long since filled with punch, when it held 41 gallons 2 quarts 1½ pint."

John Palmer, the actor, was living within the Rules of the King's Bench when he was committed to the Surrey Gaol under the "Rogue and Vagrant Act," for illegal performances at the Royal Circus, in 1789. Palmer's engagement at this theatre (of which he was acting-manager, at a weekly salary of 20*l.*) led to the abridgment by

Lord Chief Justice Kenyon, of the general privileges which debtors had possessed in Surrey, by excluding public-houses and places of amusement from the *Rules*.

William Combe was confined here when he received Rowlandson's drawings, upon which Combe wrote *Dr. Syntax*. He lived a reckless life, by turns in the King's Bench Prison and the Rules, the limits of which do not appear to have been to him much punishment. Horace Smith, who knew Combe, refers to the strange adventures and the freaks of fortune of which he had been a participator and a victim: "a ready writer of all-work for the booksellers, he passed all the latter portion of his time within *the Rules*, to which suburban retreat the present writer was occasionally invited, and never left without admiring his various acquirements, and the philosophical equanimity with which he endured his reverses." We remember him in the Rules, in St. George's-place, where we learnt that he had written a memoir of his chequered life. Campbell, in his *Life of Mrs. Siddons*, states that Combe lived nearly 20 years in the King's Bench, which is not correct.

Theodore Hook, in April, 1824, was removed from a spunging house in Shire-lane, to the Rules (Temple-place), where he worked hard, in addition to the editorship of the *John Bull*, in founding his most profitable fame.

The *King's Bench Gazette*, and other papers published from time to time, have portrayed the recreant life of the prisoners. When Abbot Lord Tenterden was the Lord Chief Justice, the King's Bench was nicknamed "Abbot's Priory," and "Tenterden Priory." A Bolter is one who, having the privilege of a day rule, runs off and leaves his bondsmen, or the marshal, to pay his debt; or who decamps from the Rules. The *Brace Tavern* was originally kept by two brothers named Partridge, from whence it obtained its punning name, they being a brace of partridges. The delicate address of the Bench was 65, Belvedere-place; as that of the Fleet Prison was No. 9, Fleet-market.

Latterly, the Prison was governed by Orders appointed by one of the Secretaries of State; the Rules were abolished, and the prisoners classified, which changes broke up the licentious life of the place. It is now used as a military prison.

About the year 1843, the case of a Mr. Miller, who had been imprisoned 47 years for a debt which it is doubtful if he ever owed, and who still remained in custody in the Queen's Bench, excited great sympathy. A subscription was made to place in a position above penury this poor man, who had reached his 77th year, and who, without some such assistance, would, by the operation of the new Bankruptcy Act, have been thrown penniless on the world.

Lord Chancellor Westbury, in submitting to the House of Lords a Bill for shutting up this prison, June 28, 1862, gave the following *précis* of its history:—

"The prison, of which the present building was the representative, originated in very early times; it was probably coeval with the Court of Queen's Bench itself. At a very early period there were three principal prisons in London—the Queen's Bench Prison, the Fleet Prison, and the Marshalsea. The Queen's Prison was appropriated to prisoners committed by the Court of Queen's Bench, the Court of Exchequer, and Court of Common Pleas. The Fleet prison received prisoners from the Court of Chancery; and the Marshalsea from the Lord Steward's Court, the Palace Court, and the Admiralty. The first fruits of the measure passed in 1842 for the abolition of arrest for debt on mesne process was to enable Parliament to reduce the three prisons to one, the Queen's Prison being substituted for the Marshalsea and the Fleet. The present Queen's Bench Prison was formed in 1759; it had accommodation for 300 prisoners, and occupied an area of ground between two and three acres in extent. He understood that the value of this space of ground was between 200,000*l.* and 300,000*l.* The sum hitherto voted by Parliament for maintaining this prison was between 3000*l.* and 4000*l.* a year, which would be saved to the country, with the exception of the allowances and continuous payments to which an Act of this kind would necessarily give rise. . . . Their lordships would, therefore, see that the necessity for continuing the Queen's Bench had entirely ceased. The object of the present Bill was to transfer the few prisoners therein confined to Whitecross-street Prison, where there was admirable accommodation for a much greater number of persons than in all human probability would ever be confined there for debt. Their lordships were probably aware that even the present number of persons in the Queen's Bench would not have been so large but for the practice which had been introduced—he could hardly tell why—under which any debtor in any prison throughout the country might be removed by writ of *habeas* to the Queen's Bench. Prisoners often availed themselves of this privilege, because in the Queen's Bench they had amusements—such as playing at ball and other games, by which time was whiled away."

At an early clearance by Mr. Hazlitt, one of the Registrars in Bankruptcy, there came before him the case of Mr. Whittington, who very reluctantly presented himself. In the course of his examination he stated that he was not in custody for debt, but for costs in an action which he had brought against Mr. Roupell, M.P., for trespass on some lands. He alleged that the costs were really costs in the cause, and that besides, as the proceedings were still pending, his incarceration was wholly illegal. He stated that he had no debts, and that his assets amounted to over 1,000,000*l.* in value; that they consisted for the most part of lands in England, America, Australia, and the Falkland Islands. In the Falkland Islands he said he was possessed of 100 square miles of territory, and he had spent 43,000*l.* in endeavouring to establish a colony there. He held also mortgages of property of various kinds to the amount of 20,000*l.* He was adjudged a bankrupt, with instant discharge, a course against which he protested.

SAVOY PRISON, the west end of the ancient Palace of the Savoy, on the south side

of the Strand, was used as a military prison for deserters, impressed men, convict soldiers, and offenders from the Guards; at one period their allowance was only four-pence a day. The gateway bore the arms of Henry VII., and the badges of the rose, fleur-de-lis, and portcullis. The premises were taken down in 1819, to form the approach to Waterloo Bridge, after which deserters were imprisoned on board a vessel moored off Somerset House; but the Savoy may be said to have been first used as a prison when John King of France was confined here after the battle of Poitiers, in 1356.

TOTHILL-FIELDS' BRIDEWELL was first built, in 1618, as a House of Correction.

"Over the gate is this inscription: 'Here is several sorts of work for the poor of this parish of St. Margaret's, Westminster; as also correction according to law for such as will beg and live idly in this City of Westminster. Anno 1655.'"—*Hutton*.

In the reign of Queen Anne it was converted into a gaol for criminals. "Howard describes it as being remarkably well managed in his day; and holds up its enlightened and careful keeper, one George Smith, as a model to other governors." (Dixon's *London Prisons*.) Here Colonel Despard, the traitor, was imprisoned in 1803.

Upon a site adjoining was commenced, in 1830, the erection of a new prison, from the design of Robert Abraham: it was first occupied in June, 1834, when the old Bridewell was deserted and taken down, and the stone bearing the above inscription was built into the present garden-wall. The new prison, seen from Victoria-street, resembles a substantial fortress: the entrance-porch, on the Vauxhall side, is formed of massive granite blocks, iron gates, portcullis, &c. It is built on the panopticon plan, and contains a gaol for untried male prisoners, a house of correction for male convicts, and a prison for women; 8 wards, 2 schools, and 8 airing-yards; 42 day-rooms and 348 sleeping-apartments; besides 120 dark cells in the basement, all ranged round a well-kept garden; while in front is the governor's house, over which is built the chapel; these forming the keep-like mass which is seen from Pimlico and Piccadilly, and is one of the finest specimens of brickwork in the metropolis. The prison will hold upwards of 800 prisoners: the only labour is oakum-picking and the treadwheel.

TOWER, THE, used as a state-prison from about 1457 to our own time, is described with the general history of that palace, prison, arsenal, and fortress.

WESTMINSTER GATEHOUSE, used as a prison for State, ecclesiastical, and parliamentary offenders, as well as for debtors and felons, is described at page 373.

WHITECROSS-STREET PRISON, in the street of that name, Cripplegate, is entirely a Debtors' Prison: the first stone was laid by Alderman Matthew Wood, in July, 1813.

The prisoners were classified as Sheriffs' prisoners, Queen's Bench prisoners, prisoners committed from the Bankruptcy Court and the County Courts. The prison is built to accommodate 365 prisoners. Those who are able to sustain themselves are allowed to do so, and are kept distinct from those who cannot do so: the latter class are called dietary prisoners, and have the following diet:—one and a half pound of bread daily, cocoa twice a day, three ounces of meat (without bone) daily, half-pound of potatoes four days a week, and so upon the other two days. The twenty-five dormitories have the beds separated by corrugated iron partitions. In the yard adjoining the female wards are two strong rooms or refractory cells, for turbulent prisoners. The doors of the building are massive, and loaded with iron. The cost for the year ending September 29th, 1862, amounted to no less a sum than 4663*l.* 13*s.* 8*d.*, and that for the maintenance of an average number of about seventy prisoners. Here are no private apartments, but a modern instance of the wise saw, "Misery acquaints a man with strange bedfellows." Opposite the Debtors' Door, in Whitecross-street, is the City Greenyard, established in 1771: here is kept the Lord Mayor's State-Coach.

WOOD-STREET (Cheapside) COMPTER was first established in 1555, when the prisoners were removed here from Bread-street Compter. The first Wood-street Compter was burnt down in the Great Fire, but was rebuilt: its hall was hung with the story of the Prodigal Son; the prisoners were removed from here to Giltspur-street in 1791.

### QUEENHITHE,

UPPER Thames-street, was originally the *hithe* (wharf or landing-place) of Edred the Saxon, and thence called Edred's-hithe; but falling into the hands of King

Stephen, it was given by him to Will. de Ypre, who gave it to the Convent of the Holy Trinity within Aldgate: however, it came again to the Crown, and it is said to have been given by King John to his mother, Eleanor, queen of Henry II.; whence it was called *Ripa Reginae*, the queen's bank, or queen's hithe, it being a portion of her majesty's dowry. It is described by Stow as "the very chief and principal watergate of this city," "equal with, and of old time far exceeding, Belinsgate." In the reign of Henry III., ships and boats laden with corn and fish for sale were compelled to pass *beyond* London Bridge, "to the Queen's-hithe only," a drawbridge being pulled up to admit the passage of large vessels. - In 1463, the market at Queen-hithe was "hindered by reason of the slackness of drawing up London Bridge." Stow enumerates the customs and dues exacted from the ships and boats, and specifies "salt, wheat, rye, or other corn, from beyond the seas; or other grains, garlic, onions, herrings, sprats, eels, whiting, plaice, cod, mackerel, &c.:" but corn was the principal trade, whence the quay was sometimes called *Cornhithe*. Stow describes here a corn-mill placed between two barges or lighters, which "ground corn, as water-mills in other places, to the wonder of many that had not seen the like." The charge of Queenhithe was subsequently delivered to the sheriffs; but Fabyan states, that in his time it was not worth above twenty marks a year. Its trade in fish must, however, have been considerable when Old Fish-street northward was the great fish-market of London, before Billingsgate, in 1699, became "a free and open market." Beaumont and Fletcher speak of "a Queen-hithe cold;" and the locality is often mentioned by our old dramatists. It is now frequented by West-country barges laden with corn and flour; the adjoining warehouses, with high-pitched gables, were built long since for stowage of corn; and the opposite church of St. Michael, with its vane in the form of a ship, the hull of which will contain a bushel of grain, is emblematic of the olden traffic in corn at the Hithe.

Tom Hill was originally a drysalter at Queenhithe; and here he assembled a fine library, described by Southey as one of the most copious collections of English poetry in existence: it was valued at 6000*l.*, when, through a ruinous speculation in indigo, Hill retired upon the remains of his property to the Adelphi. (*See* p. 1.) Hill was the patron of the almost friendless poets, Bloomfield and Kirke White.

At Queenhithe, No. 17, lived Alderman Venables, lord mayor 1826-7; at Nos. 20-21, Alderman Hooper, lord mayor 1847-8; and at No. 23, Alderman Rose, lord mayor 1863-4.

Queenhithe gives name to the ward, wherein were seven churches in Stow's time. Westward is *Broken Wharf*, "so called of being broken and fallen down into the Thames." Here was the mansion of the Bigods and Mowbrays, Earls and Dukes of Norfolk; sold in 1540 to Sir Richard Gresham, father of Sir Thomas Gresham. Within the gate of this house was built, in 1594-5, an engine, by Bevis Bulmer, for supplying the middle and west of the City with Thames water.

In 1809 or 1810 was found in the bed of the river, opposite Queenhithe, a massive silver seal, with a motto denoting it to have been the official seal of the port of London, *temp.* Edward I. It is engraved with Laing's Plan of the Custom House.

### RAILWAY TERMINI.

LONDON is girdled with Railways, and has an inner and outer circle; but few of the Termini present grand or noticeable features. The *Blackwall* line has a terminus of elegant design, by W. Tite, F.R.S., at Brunswick Wharf. The *Great Northern* Terminus, King's Cross, occupies 45 acres of land. For the site of the Passenger Station, the Small-pox Hospital and Fever Hospital were cleared away. The front towards St. Pancras-road has two main arches, each 71 feet span, separated by a clock-tower 120 feet high; the clock has dials nine feet in diameter, and the principal bell weighs 29 cwt. The *Great Western* Terminus, at Paddington, has few artistic features; the handsome Hotel adjoining is described at p. 441. The *North-Western* Terminus, at Euston-square, has a *propylæum*, or architectural gateway, pure Grecian Doric: its length exceeds 300 feet; its cost was 35,000*l.*; and it contains 80,000 cubic feet of Bramley Fall stone. The columns are higher than those of any other building in London, and measure 44 feet 2 inches, and 8 feet 6 inches diameter at the base, or

only 3 feet 1 inch less than that of the York column. The height, to the summit of the acroterium, is 72 feet; a winding staircase in one angle leads to an apartment within the roof, used as the Company's printing-office; the rich bronze gates are by Bramah.

This propylæum is unprecedented in our modern Greek architecture, and "exhibits itself to most advantage when viewed obliquely, so as to show its line of roof and depth, especially as the cornice is of unusually bold and new design, being not only ornamented with projecting lion-heads, but crowned by a series of deep antefixæ; while, when beheld from a greater distance, the large stone slabs are also seen that cover the roof."—*Companion to the Almanack*, 1839.

The paved platforms within the gateway contain nearly 16,000 superficial feet of Yorkshire stone, some of the stones 70 to 80 square feet each; and each shaft of the granite Doric colonnade is a single stone. The Great Hall, designed by P. C. Hardwick, has the ceiling panelled, deeply recessed, and enriched, and is connected with the walls by large ornamented consoles. The walls are splashed as granite; and the Ionic columns are painted like red granite, with white caps and bases. The sculpture, by John Thomas, are a group, Britannia supported by Science and Industry; and beneath the ceiling, 8 panels, in *alto-relievo*, symbolic figures of London, Birmingham, Manchester, Chester, Northampton, Carlisle, Lancaster, and Liverpool. The hall is warmed by some miles of hot-water pipes, on Perkins's system. Here was placed, April 10, 1854, Baily's colossal marble statue of George Stephenson, the originator of the railway system: this statue was purchased by the subscriptions of 3150 working-men, at 2s.; and 178 private friends, at 14l. each.\* The *South-Eastern* station, London Bridge, is of great extent, and provides for the Greenwich Railway, opened December 14, 1836, the first completed line from the metropolis. The large Hotel is described at p. 442. The *South-Western*, Waterloo-road, is noticed at p. 501. The *Charing Cross* line from London Bridge, through Southwark, has a station at Cannon-street, terminus at Charing Cross, and two stupendous bridges across the Thames. The Hotels are described at pp. 442-443. The *Metropolitan*, beneath the crowded streets of London, Fowler, engineer-in-chief, extends from Paddington to Finsbury,  $4\frac{1}{2}$  miles; the difficulties of construction—through a labyrinth of sewers, gas and water mains, churches to be avoided, and houses left secure—proved an herculean labour; but one of the greatest difficulties was to construct an engine of great power and speed, capable of consuming its own smoke, and to give off no steam. This Mr. Fowler surmounted by inventing an engine which, in the open air, works like a common locomotive, but when in the tunnel, consumes its own smoke, or rather makes no smoke, and by condensing its own steam, gives off not a particle of vapour. It is proposed, by extensions at either end of the underground line, and by a new line, to be called the "Metropolitan District Railway," to complete what will form pretty nearly an inner circle, and will also throw out branches to connect itself with the suburban systems north and south of the Thames; so that when the entire scheme is in working order we shall have something like a combination of two circles—the inner and the outer—as a thorough railway system for the metropolis. Of the progress of the works a specimen is afforded in 2000 men, 200 horses, and 58 engines many months working; and whole terraces, streets, and squares in south-west London being tunnelled under almost without the knowledge of the inhabitants. The *London, Chatham, and Dover* extension line has a massive bridge at Blackfriars, and Byzantine terminus at Ludgate. The *North-London* line has few noticeable works.

The *Pneumatic Railway*, Rammell, engineer, is an extension of the Atmospheric principle: it had already been tested in a Despatch tube, through which parcels were propelled on ledges or rails, in cars, on the signal being given, by the exhaustion and pressure of the air in the tube by a high-pressure engine; this motive power, in the Pneumatic Railway, being applied to passengers in an enlarged tube. The propulsion is likened to the action of a pea-shooter, the train to the pea, which is driven along in one direction by a blast of air, and drawn back again in the opposite direction by the exhaustion of the air in front of it; the motion being modified by mechanical arrangements. The air is exhausted from near one end of the tube by means of an apparatus,

\* More than 2000 parcels per day are booked at the North-Western Railway Station. In Christmas week, 5000 barrels of oysters have been sent off within twenty-four hours, each barrel containing 100 oysters = half a million.—Lardner's *Railway Economy*, p. 130.

from which the air is discharged by centrifugal force. The contrivance may be compared to an ordinary exhausting fan. The rails are *cast* in the bottom of the tubes; a few strips of vulcanized India-rubber screwed round the fore-end of the carriage constitute the piston, leaving three-eighths of an inch clear between the exterior of the piston and interior of the tube; there is no friction, and the leakage of air does not interfere with the speed of transit. The Whitehall and Waterloo Pneumatic Railway will extend from the station in Scotland-yard, carried in brickwork beneath the tunnel of the Underground District Railway, and then under the Low Level Sewer to the northern abutment, from which iron tubes of sixteen feet diameter are to be laid on the clay beneath the Thames.

We shall not be expected to detail the various lines now in course of construction, or projected, in and around the metropolis; to attempt this might lead us to record the construction of works never to be executed, and anticipations never to be realized. The number of metropolitan lines and branches proposed in 1865 was 148, and the extent of the whole in miles about 370. "A New Map of Metropolitan Railways" is, from time to time, published by Stanford, Charing Cross.

Sir Joseph Paxton proposed a magnificent railway extension, for the better communication between different parts of the metropolis, so as to avoid all underground work. For this purpose he designed an immense *boulevard*, or girdle railway, to run in an extended *crystal palace* of about  $11\frac{1}{2}$  miles; to be built of iron, and roofed with glass, 72 feet broad and 180 feet high. On either side were to be erected houses and shops, with an ordinary roadway between them; at the rear of these there were to be two lines of railway, equal to eight sets of rails. The railways were to be constructed on the top of a raised corridor, at the average height of 26 feet, so as to enable the line to pass over, without obstruction, the present streets and thoroughfares; and the premises under to be used as shops or tenements, were to have double walls, with a current of air passing between them, which it was said would prevent annoyance from the vibration and noise of the railway. The girdle was to commence at the Royal Exchange, to cross Cheapside opposite the Old Jewry; then to cross the river by a bridge of sufficient dimensions to have houses built upon it, at Queenhithe; the road then to pass through the Borough, and next a portion of Lambeth to the South-Western Railway; from which a loop was to be constructed, to pass over a bridge to be built near Hungerford, to terminate at the Regent-circus. The main line to cross the South-Western Railway, carried direct over a bridge at Westminster, and thence, by Victoria-street, through Belgravia, Brompton, Gore House, Kensington Gardens, Notting Hill, to the Great Western station at Paddington. The line then to be carried on the north side to the London and North-Western and the Great Northern Railways; and then through Islington to the starting-point at the Royal Exchange. The railways were to be worked on the atmospheric principle. The total cost was set down at about 34,000,000*l.*, to be provided by a Government guarantee, at 4 per cent. Among the receipts, the houses upon the three bridges, it was computed, would let each at 600*l.* a year; and this, with other revenues, it was estimated, would leave a profit of nearly 400,000*l.* The drawings of this great project were beautifully executed; but the scheme was altogether too gigantic and costly for execution.

### RANELAGH,

**A** PUBLIC garden, opened in 1742, on the site of the gardens of Ranelagh House, eastward of Chelsea Hospital, was originally projected by Lacy, the patentee of Drury-lane Theatre, as a sort of winter Vauxhall. The Rotunda, 185 feet in diameter, had a Doric portico, an arcade, and gallery outside. There was also a Venetian pavilion in the centre of a lake, upon which the company were rowed in boats; and a print of 1751 shows the grounds planted with trees and *allées vertes*. The several buildings were designed by Capon, the eminent scene-painter. The interior was fitted with boxes for refreshments, and in each was a painting: in the centre was an ingenious heating apparatus, concealed by arches, porticoes, and niches, paintings, &c.; and supporting the ceiling, which was decorated with celestial figures, festoons of flowers, and arabesques, and lighted by circles of chandeliers. The Rotunda was opened with a public breakfast, April 5, 1742. Walpole describes the high fashion of Ranelagh: "The prince, princess, duke, much nobility, and much mob besides, were there." "My Lord Chesterfield is so fond of it, that he says he has ordered all his letters to be directed thither." The admission was one shilling; but the *ridottos*, with supper and music, were one guinea. Concerts were also given here: Dr. Arne composed the music, Tenducci and Mara sang; and here were first publicly performed the compositions of the Catch Club. Fireworks and a mimic Etna were next introduced; and lastly, masquerades, described in Fielding's *Amelia*, and satirized in the *Connoisseur*, No. 66, May 1, 1755; wherein the Sunday-evening's tea-drinkings at Ranelagh being laid aside, it is proposed to exhibit the story of the Fall of Man in a masquerade! Dr. Johnson said there was more of Ranelagh than of the Pantheon; or rather, indeed, the whole

Rotunda appeared at once, and it was better lighted: "the *coup d'œil* was the finest thing he had ever seen."—Boswell's *Life of Johnson*, vols. ii. and iii.

But the promenade of the Rotunda to the music of the orchestra and organ soon declined: "There's your famous Ranelagh, that you make such a fuss about; why what a dull place is that!" (Miss Burney's *Evelina*.) In 1802, the Installation Ball of the Knights of the Bath was given here; and the Picnic Society gave here a breakfast to 2000 persons, when Garnerin ascended in his balloon. Of the Peace Fête which took place here in 1803, and for which allegorical scenes were painted by Capon, Bloomfield sings in homely rhyme:

"A thousand feet rustled on mats,  
A carpet that once had been green;  
Men bow'd with their outlandish hats,  
With corners so fearfully keen.  
Fair maids, who at home, in their haste,  
Had left all clothing else but a train,  
Swept the floor clean, as slowly they paced,  
And then—walk'd round and swept it again."

Ranelagh was now deserted, and in 1804 the buildings were taken down. In 1813, the foundation-walls of the Rotunda, the arches of some cellars, and the site of the orchestra, could be traced: part of the ground was next included in "the Old Men's Gardens" of Chelsea Hospital; and the name is attached to the Sewers District, and to a long street leading from Pimlico to the site of Ranelagh.

*Ranelagh House* was built about 1691, by Jones, first Earl of Ranelagh and third Viscount, who was a great favourite of Charles II. The ground was granted to the Earl by William III.; and the mansion is shown in a view of the Thames-bank painted by Canaletti in 1752.

In 1854, a large house built upon part of the site of Ranelagh, with some of its materials, and another mansion, Clarence House, were cleared away, to form the new road from Sloane-street to the Suspension-bridge and Battersea Park.

### RECORDS, PUBLIC.

"THE Records of this country have no equal in the civilized world, in antiquity, continuity, variety, extent, or amplitude of facts and details.\* From Domesday they contain the whole materials for the history of this country, civil, religious, political, social, moral, or material, from the Norman Conquest to the present day. (Of the decisions of the Law Courts a series is extant from the beginning of the reign of Richard I.) With the Public Records are now united the State Papers and Government Archives, and by their aid may be written the real history of the Courts of Common Law and Equity; the statistics of the kingdom in revenue, expenditure, population, trade, commerce, or agriculture, can from the above sources be accurately investigated. The Admiralty documents are important to naval history; and others afford untouched mines of information relating to the private history of families."—*Sir Francis Palgrave, Deputy-keeper of the Records.*

They include the official Records of the Courts of Common Law, of Parliament, of Chancery, of the Admiralty, the Audit Office, the Registrar-General's Office, the Commissariat, the Treasury Books, the Customs' Books, the Privy Signet Office, the Welsh and County Palatinate Courts, &c. These were deposited in more than sixty places, until the passing of the Public Records Act, 1 & 2 Victoria, cap. 94, the great object of which was the consolidation of all the Records in one depository; which has been attained by the erection of a building on the Rolls Estate, between Fetter-lane and Chancery-lane. The architect is Mr. Pennethorne; and the plan is to provide sufficient space not merely for all the Records now in the custody of the Master of the Rolls, but for all such as may be expected to accrue for fifty years to come. The building consists of a north front and two wings; the three portions to contain 228 rooms, 200 of which would receive nearly half a million cubic feet of Records. The front faces the north: the style is late Gothic, or Tudoresque, somewhat of German character; the outer walls are supported by massive buttresses, between which are the windows, which are decorated. The materials are Kentish rag-stone, with dressings of Anstone-

\* William Lambard, the eminent lawyer and antiquary, was, in 1597, appointed Keeper of the Rolls and House of Rolls, in Chancery-lane; and in 1600, Keeper of the Records in the Tower.

stone. The floors are formed with wrought-iron girders and flat brick arches, laid on the top with white Suffolk tiles. The sashes and door-frames are of metal, the doors of slate, the roof iron. The hall, entered from the south side of the building, has a panell'd ceiling, formed in zinc and emblazoned. Two windows are provided for each room, which is fifteen feet high, divided by a gallery or iron floor: hence the windows are unusually lofty, to light both floors, and to throw the light twenty-five feet down the passages between the Records; accordingly the front is a mass of window. As in the same architect's Museum of Practical Geology, in Piccadilly, there is no entrance in the principal façade. Upon the front tower is a statue of Queen Victoria; Durham, sculptor.

In the first consignment of documents to the New Repository were, among the papers of the Solicitor to the Treasury, the Solicitor's proceedings against Bishop Atterbury and others; with an important mass of papers respecting the rebellion of 1745-6; and "very numerous documents relating to prosecutions brought by the Crown against authors or publishers of pamphlets or newspapers." The charge and superintendence of the Public Records is vested in the Master of the Rolls, to whose custody the accumulating Records above twenty years old are delivered. Searches may be made at any of the departments of the Record Office by payment of the fees, and extracts taken; but the Deputy-keeper is authorized to grant any *literary* inquirer permission to search and make notes, extracts, or copies, in pencil, without payment of fees, on the Deputy-keeper being satisfied that the application is for a *bonâ fide* literary purpose. To show the value of this privilege to literary inquirers, it may be stated that in 1852 one applicant consulted nearly 7000 documents, principally at the Rolls Chapel, for compiling the history of a single township.

To Lord Romilly, Master of the Rolls, the nation is specially indebted for the able and efficient manner in which has been carried out the recommendations of the Record Commission and the Parliamentary Committees of 1800 and 1836. In the latter Report the object first specified is, "to provide for the better arrangement and preservation of the Records of the Kingdom." This is more fully expressed in the executory clause of every Commission, which enjoins the Commissioners "to methodize, regulate, and digest the records, rolls, instruments, books and papers in any of our public offices and repositories, and to cause such of the said records, rolls, instruments, books and papers, as are decayed and in danger of being destroyed, to be bound and secured." The next object is, with a view to providing for "their more convenient use, to make Calendars and Indexes of any of the said records, rolls, instruments, books and papers." Sir John Romilly at once directed that the Calendars of the diplomatic documents, then preserved in the Record Office in the Tower of London, which had been some time in hand, should be prepared for publication. He gave directions for printing the Calendars of documents in the Queen's Remembrancer's Office and Augmentation Office, upon which officers had also been engaged for fifteen years. This was the true beginning of his task. It was not until the incorporation of the State Paper Department with the Public Record Office, in the year 1854, that the Master of the Rolls was enabled to accomplish his design. He applied to the Lords of Her Majesty's Treasury for assistance. He proposed that a certain number of competent persons, unconnected with the office, should be employed to co-operate with the officers of the establishment in the compilation of Calendars of the Diplomatic Papers, commencing with the reign of Henry VIII., the period at which the modern history of Europe may be said to commence; and to leave the portion anterior to that reign in the Record Repository to be calendared by the officers of the establishment, whenever they could be spared from the performance of the current business of the office.

The proposition was readily approved by the Lords Commissioners of the Treasury, and a number of persons, including one lady, were appointed to the work. Every calendar which comes out has its own interest, its own revelations. Every department of history and biography is enriched from day to day by new discoveries. The life of this nation is being re-written for us, not at third hand, but from the guesses of those who knew little and invented much, but from the original vouchers of all true history. These Calendars give us not only a new history of England, but the best history of England that has ever been written.—(*Athenæum*.) In graceful recognition of these eminent services, a marble bust of the Master of the Rolls has been placed by subscription in the Record Office.

The several Records have been removed from the Branch Offices to the Repository. The Chapter House has been entirely cleared of the remaining portion of its contents. The Records brought from it have been incorporated in the Repository with the Common Law and other Records to which they respectively belong. In consequence of the proposed destruction of the State Paper Office to make room for the erection of new Government Offices, it was found necessary to remove the Records from the State Paper Branch Office into the Repository. Here, also, have been removed the Home Office Papers; and the Records of the Colonial Office have been united with the other Colonial Documents already to be found in the Repository, which contained about 4000 volumes of Colonial Papers; together with the Foreign Papers to the end of the reign of George II. Consequently, the whole of the Home, Foreign and Colonial Papers, and all other Records, Printed Books, Maps, &c., have been removed to the Repository; with the exception of the Foreign Correspondence commencing with the reign of

George III., and Ratifications of Treaties, intended to be removed to two houses in Whitehall-yard. In the Record Office are some very fine examples of bookbinding; there are also several curiously wrought cases for rolls and books, and coffers, in which they have been kept for centuries. Amongst the most remarkable of these is an ancient iron chest, which is called of Anglo-Norman date. The strength and massiveness of this piece of smithwork is remarkable: it seems as solid as a sarcophagus. In this coffer, in the Chapter-house of Westminster Abbey, the famous Domesday Book of William was for many centuries kept with the greatest care.

In 1860 her Majesty's Government, with the concurrence of the Master of the Rolls (Lord Romilly), determined to apply the art of photozincography to the production of a facsimile of the whole of the Domesday Survey, under the superintendence of Colonel Sir Henry James, R.E., Director of the Ordnance Survey at Southampton, who had devoted himself to the improvement of that scientific process, completed in 1863.

The Reports of the Deputy Keeper are annually made and laid before Parliament. They usually include, in addition to the statement of proceedings in the Public Record Office, appendices containing inventories and calendars of records made during each year to which they relate, and refer to documents interesting and useful to the public generally. They have been found especially valuable in assisting persons engaged in genealogical, topographical, and antiquarian pursuits, and are of great practical use to Government departments having papers deposited in the Public Record Office.

The Victoria Tower of the Houses of Parliament was originally intended to be used as a Record repository; but the only means of access to this tower is by a narrow winding staircase of 170 iron steps up to the first floor; and to the eighth floor (sixty-four rooms in all) there are 266 steps, which, added to the 170 from the ground to the first landing, make a total of 436 steps. There are no fire-places.

### REGENT STREET,

**I**N length 1730 yards (30 yards less than a mile), was designed by John Nash, in 1813, and named from his patron the Prince Regent; although in 1766 Gwynne had proposed a great street to lead nearly in the same line. It commences at *Waterloo-place*, opposite the site of Carlton House, and proceeds northward, crossing Piccadilly, by a Circus, to the County Fire-Office, designed by Abraham, with a rustic arcade, like that at Somerset House. The roadway is probably the finest specimen of macadamization in the metropolis. On the *East* side are the *Junior United Service Club* (see p. 254); *Gallery of Illustration* (p. 308); the *Parthenon Club* (p. 254). On the *West* are *St. Philip's Chapel* (p. 215); and *Club Chambers* (p. 245).

At No. 5, Waterloo-place, in the collection of Thomas Walesby, in 1854, was George IV. and the Duke of Wellington on the field of Waterloo, painted by B. R. Haydon; Gore House, Kensington, with portraits of the Duke of Wellington, Lady Blessington, Count D'Orsay (the painter of the picture), &c.; also, Sir Joshua Reynolds' sitters' chair, after his decease in the possession of Sir Thomas Lawrence and Sir M. A. Shee.

From the County Fire-Office, the street trends north-west by a Quadrant, so as to avoid a commonplace elbow: it exhibits Nash's genius in overcoming difficulties, for by no other contrivance could this sweep of the street have been made so ornamental; its geometrical fitness can only be fully appreciated in the view from the balcony of the York Column. The *Quadrant* had originally two Doric Colonnades, projecting the extent of the foot-pavement; the columns of cast-iron, from the Carron Foundry, each 16 feet 2 inches high, exclusive of the granite plinth, supported a balustraded roof. This was a most scenic piece of street architecture; the continuous rows of columns swept in charming perspective, and the effect was very picturesque. The colonnades were removed in November, 1848, and a balcony was added to the principal floor. The property has been much improved by this change; but the tasteful public unwillingly parted with this grand street ornamentation, which reminded them of a classic city of antiquity. The 270 columns were sold at 7*l.* 5*s.* and 7*l.* 10*s.* each.

No. 45, the junction of Regent Circus with the Quadrant, has a superb shop-front, designed, in 1839, by F. Hering, in the Revival style; with fluted Ionic columns, Italianized arches, enriched pediment-heads, spandrels, esocochrons, cognisances, and panels; the ornaments being of composition laid upon wood. Each plate of glass in the windows, 140 inches by 82 inches, cost 160*l.*; the plate-glass in the façade and interior 1000*l.*; and the entire execution nearly 4000*l.*

From the Quadrant the vista is very fine: the blocks or groups of houses, &c. are by Nash, Soane, Cockerell, Repton, Abraham, Decimus Burton, &c.

*East*—*Archbishop Tenison's Chapel*, between Nos. 172 and 174, is described at p. 215. *Faubert's Place*, between Nos. 206 and 208, is named from Monsieur or Major Faubert, who, in 1681, established here a riding-academy, on premises formerly the mansion of the Countess of Bristol. Evelyn, in his *Diary*, mentions that Faubert's project was recommended by the Council of the Royal Society.

"18th Dec. 1684.—I went with Lord Cornwallis to see the young gallants do their exercise, M. Faubert having newly railed in a menage, and fitted it for the academy. Here were the Duke of Norfolk and Northumberland, Lord Newburgh, and a nephew of (Duras) Earle of Faversham. The exercises were: 1. Bunning at the ring; 2. Flinging a javelin at a Moor's head; 3. Discharging a pistol at a mark; and lastly, taking up a gauntlet with the point of a sword; all these perform'd in full speede."

When Swallow-street was removed, the riding-school premises, then livery-stables, were taken down, except one house. The *Argyll Rooms*, built for musical entertainments, at the corner of Little Argyll-street, were destroyed by fire in 1830. (See p. 22.)

*West*—Nos. 207 and 209, the *Cosmorama* (see p. 308). *Hanover Chapel*, built 1823, by Cockerell (see p. 211). The line crosses Oxford-street by *Regent Circus*, and extends thence to the tower and spire of *All Souls' Church* (see p. 147). The street then sweeps past the *Langham Hotel* (see p. 442), built upon the site of the gardens and houses of Sir James Langham, and part of the site of Foley House, which was bought by Nash, with the grounds, for 70,000*l.*: hence the crookedness of Regent-street.

No. 309, Regent-street, the *Polytechnic Institution*, erected by Thompson in 1838, and enlarged in 1848, contains a Hall of Manufactures, with machines worked by steam-power, and several other apartments filled with models, &c.; *Cosmoramaic Rooms*; and Theatres for lectures and optical exhibitions. The *Diving-Bell*, long the paramount attraction, is of cast-iron, and weighs 3 tons; 5 feet in height, and 4 feet 8 inches in diameter at the mouth. The Bell is about one-third open at the bottom, has a seat all round for the divers, and is lit by 12 openings of thick plate-glass. It is suspended by a massive chain to a large swing-crane, with a powerful crab; the chain having compensation weights, and working into a well beneath. The air is supplied from two powerful air-pumps, of 8-inch cylinder, conveyed by the leather hose to any depth: the divers being seated in the Bell, it is moved over the water, and directly let down within two feet of the bottom of the tank, and then drawn up; the whole occupying only two minutes and a half. Each person paid a fee for the descent, which produced 1000*l.* in one year. The cost of the Bell was about 400*l.*

In the rear of the premises, at No. 5, Cavendish-square, then the *St. George's Chess Club*, was played, 27th May, 1851, the Chess Tournament, by the first general meeting of players from different parts of the world; among whom were, Szen, Horwitz, Kieseritzky, Löwenthal, Staunton, and Anderssen.—See the Games, with notes, by H. Staunton.

## ROMAN LONDON.

ALTHOUGH Londinium was in the power of Rome for more than 400 years, or nearly one-fourth of its existence in history, the aspect of Roman London is but matter of conjecture; and tessellated pavements, incised stones, and sepulchral urns, found upon its site, are but fragmentary evidences that *wherever the Roman conquers he inhabits*. London was, however, previously a settlement of some importance, and of British origin, as we read in Llyn-dun, the hill-fortress on the lake; or Llong-dinas, the city of ships, from its maritime character; whence the Roman designation Londinium. It is not mentioned by Cæsar, though he entered the Thames; nor was it occupied as a Roman station so early as Colchester and Verulam. The Romans are supposed to have possessed themselves of London in the reign of Claudius, about 105 years after Cæsar's invasion. Londinium is first mentioned by Tacitus (*Ann.* xix. 33) as not then dignified with the name of a *colonia*, but still as a place much frequented by merchants, and as a great depôt of merchandize. It was subsequently made a *colonia* under the name of Augusta (*Amm. Marcell.* xxvii. 8).

Londinium, as we know, was a place of commercial activity before the Roman Conquest.

It was the principal mart of exchange between Britain and the Continent, and received for the corn, the cattle, the minerals, the slaves, and the dogs of native production, every article of southern luxury for which a market was to be found among our rude ancestors. The site of London was, no doubt, peculiarly advantageous for commerce. It was the only great maritime port on a tidal river known to the Romans; and while it was supplied by a very fertile tract of country behind it, its position on a gentle declivity, with dense forests in the rear, and a broad expanse of swamp before it, rendered it from the first a place of considerable strength. London probably remained British, or rather Cosmopolitan; while such places as Colchester, Chester, and Caerleon, the stations of legions and seats of government, became merely bastard Italian.

Ptolemy the geographer, who lived in the reigns of Trajan, Hadrian, and Antoninus Pius, places Londinium in the region of the Cantii, and some recent discoveries have proved that the Roman city or its suburbs did actually extend over what is now known as Southwark. The Itinerary of Antoninus shows that a large proportion of the British routes are regulated and arranged with reference to Londinium, either as a starting-point or a terminus. This city is made the central or chief station to which the main military roads converge: a map of Roman Britain based on this Itinerary strikingly resembles one of modern England; so close is the analogy by which we may assign a metropolitan importance to Roman London. When in the reign of Diocletian and Maximian it was sacked by the Franks, it is termed by Eumenius the orator, *oppidum Londiniense*; and under the dominion of Carausius and Allectus it became a place of mintage. "P. LON." (*Pecunia Londiniensis*) appears on coins of Constantine, Helena, Fausta, Crispus, Constantine the Younger, and Constantius the Younger; and in the *Notitia* Londinium takes a place among the capitals of the provinces under the title of Augusta, as the seat of the Treasury of Britain, controlled by a special officer,—*Præpositus thesaurorum Augustensium in Britannis*. "*Vetus oppidum*," says Ammianus Marcellinus, who wrote about A.D. 380, "*quod Augustam posteritas appellavit*."

The site of Roman London has been densely built on and inhabited, without interruption, from the first century of our era to the present time. It has been buried beneath the foundations of the modern city, or rather beneath the ruins of a city several times destroyed and as often rebuilt; and it is only at rare intervals that the excavators of drains and other subterranean works strike down upon the venerable remains of the earliest occupation. The Romans found the place a narrow strip of firm ground lying between the great fen (Moorfields) almost parallel to the river. At right angles to both ran the Walbrook, and on the east the Langbourne; habitations ranged closely from Finsbury to Dowgate, whence to the Tower site, villas studded the bank of the Thames. The finding of sepulchral remains outside these natural boundaries proves the Romans to have there had their burial-grounds, as it was their custom always to inter their dead without their cities. That Southwark, on the opposite bank of the Thames, was also a Roman settlement, is proved by relics of the reign of Nero; outside which are likewise evidences of Roman interment.

"Roman London thus enlarged itself from the Thames towards Moorfields, and the line of wall east and south. The sepulchral deposits confirm its growth; others, at more remote distances, indicate subsequent enlargements; while interments discovered at Holborn, Finsbury, Whitechapel, and the extensive burial-places in Spitalfields and Goodman's-fields, denote that those localities were fixed on when Londinium, in process of time, had spread over the extensive space inclosed by the wall."—*C. Roach Smith, F.S.A.*

After the Great Fire, the excavations brought to light much of the antiquarian wealth of "the Roman stratum" of tessellated pavements, foundations of buildings, and sculptural remains; coins, urns, pottery, and utensils, tools, and ornaments. Whenever excavations are made within the limits of the City of London, the workmen come to the floors of Roman houses at a depth of from 12 to 18 or 20 feet under the present level. (T. Wright, F.S.A.: *The Celt, the Roman, and the Saxon*, p. 123.) These floors are often covered with fragments of the broken fresco-paintings of the walls, of which Mr. Roach Smith has a large variety of patterns, such as foliage, animals, arabesque, &c.; and pieces of *window-glass* have often been found among these remains.—T. Wright, F.S.A., *Archæological Album*.

London was inwalled A.D. 306. (See CITY WALL AND GATES, pp. 233-246.)

The following are the principal localities in which remains of Roman London have been, from time to time, discovered:—

*Aldgate, 1753.*—Stone and brick tower of the Roman wall, discovered by Maitland, south of Aldgate; the bricks sound, as newly laid.

*Barbican.*—A roman *specula*, or watch-tower (the *Castrum Exploratum* of Stukeley's Itinerary), stood without London, near the north-west angle of the walls, and was called in the Saxon times the *Burghkenning* or *Barbican*, which gave name to the present street leading from Aldersgate-street to Whitecross-street.—(Brayley's *Londiniana*, vol. i. p. 40.) See, also, BARBICAN, p. 32.

*Bevis Marks.*—A fine statue of a youth found, and rescued from the *employés* of the Commissioners of Sewers by Mr. Roach Smith.

*Billingsgate, 1774.*—In the parish of St. Mary-at-Hill were found human bones, fragments of Roman bricks, and coins of Domitian of the middle brass; and, in 1824, urns and pavements were discovered near St. Dunstan's church, north of Billingsgate. In 1848, portions of an apartment and a hypocaust were laid open in digging the foundation of the new Coal Exchange, nearly opposite Billingsgate. The apartment is paved with common red tesserae; the outer wall, 3 feet thick, is built of tile-like bricks and Kentish rag-stone, the mortar containing pounded brick, an unfailing evidence of Roman work. The hypocaust, or hollow floor for receiving heated air when wood was burnt in the furnace, and thus to warm the apartment above (probably a bath), agrees to half an inch in the dimensions with those given by Vitruvius in his instructions for the *hypocaustum*. The bottom is formed of concrete; and piers support the covering tiles, also covered with concrete. Pipes were also found, which, opening into the hypocaust, were inserted in the walls, and conducted the warm air throughout the building. The whole has been preserved. 1859.—In excavating for a house on the east side of the Coal Exchange, an additional portion of the Roman building, including part of a hypocaust, was thrown open. It was found at a depth of about 11 feet from the present surface. The hypocaust is nearly square, with a semicircle added towards the east: the covering has been broken down, and exposes the piers formed of square tiles as in other cases: some of these are also broken down. Bones of various descriptions, Roman tiles and portions of flues, fragments of pottery and glass, portions of tesserae about an inch square, and pieces of vessels of mediæval date, were discovered. To the west of the hypocaust, against the Coal Exchange, is an ancient wall, built upon a foundation of Roman materials: in one part formed of stones of large size: this may have been a portion of the old wall of the Thames. (See BILLINGSGATE, p. 54.)

*Bishopsgate, 1707.*—A tessellated pavement, urns with ashes and burnt bones, a blue glass lachrymatory, and remains of the Roman wall, found at the west end of Camomile-street, Bishopsgate, by Dr. Woodward. In rebuilding Bishopsgate Church in 1725, several urns, patera, and other remains were discovered, with a vault arched with equilateral Roman bricks, and Dr. Stukeley saw there, in 1726, a Roman grave, constructed with large tiles, which kept the earth from the body. In 1836 a pavement of red, white, and grey tesserae, in a guilloche pattern, was discovered under a house at the south-west angle of Crosby-square, Bishopsgate; supposed very early Anglo-Roman. (*Archæologia*, vol. xxvii. p. 397.) Maitland describes a similar pavement found on the north side of Little St. Helen's gateway in 1712; the site of St. Helen's Priory was probably occupied by an extensive Roman building; and remains of floors prove Crosby Hall to be on the site of a magnificent Roman edifice.

*Blackfriars.*—A fragment of the old wall, and parts of the monastic buildings erected upon it, are still preserved below the offices of the *Times* newspaper. One part of this interesting relic is evidently much older than the other, and the most ancient was found to be so hard, as to set at defiance the tools of the workmen. During alterations, several encaustic tiles, the finials of the fleur-de-lis shape, a Roman tile, and in the neighbourhood of the printing-office, several melting-pots and pieces of glass, mostly in a half-manufactured state, were found: they are carefully preserved at the *Times* office. (See BLACKFRIARS, p. 56.)

*Broad-street, Old, 1854.*—On taking down the Excise Office, at about 15 feet lower than the foundations of Gresham House (on the site of which the Excise Office was built), was found a pavement, 28 feet square.

It is a geometrical pattern of broad blue lines, forming intersections of octagon and lozenge compartments. The octagon figures are bordered with a cable pattern, shaded with grey, and interlaced with a square border, shaded with red and yellow. In the centres, within a ring, are expanded flowers, shaded in red, yellow, and grey; the double row of leaves radiating from a figure called a true love-knot, alternately with a figure something like the tiger-lily. Between the octagon figures are square compartments bearing various devices: in the centre of the pavement is Ariadne, or a Bacchante, reclining on the back of a panther; but only the fore-paws, one of the hind-paws, and the tail remain. Over the head of the figure floats a light drapery, forming an arch. Another square contains a two-handled vase. In the demi-octagons, at the sides of the pattern, are lunettes: one contains a fan ornament; another, a bowl crowned with flowers. The lozenge intersections are variously embellished with leaves, shells, truelove-knots, chequers, and an ornament shaped like a dice-box. At the corners of the pattern are truelove-knots. Surrounding this pattern is a broad cable-like border, broad bands of blue and white alternately; then a floral scroll; and beyond this an edge of demi-lozenges, in alternate blue and white. An outer border, composed of plain red tesserae, surrounds the whole. The ground of the pavement is white, and the other colours are a scale of full red, yellow, and a bluish grey. This pavement is of late workmanship. Various Roman and mediæval articles were turned up in the same excavation: among these are a silver denarius of Hadrian, several copper coins of Constantine, and a small copper coin bearing on the reverse the figures of Romulus and Remus suckled by the traditional wolf; several Roman and mediæval tiles and fragments of pottery; a small glass of a fine blue colour, and coins and tradesmen's tokens.

*Cannon-street, 1852.*—Tessellated pavement, fragments of Samian ware, earthen urns and lamp, and other Roman vessels, found from 12 to 20 feet deep, near Basing-lane, New Cannon-street, upon the supposed site of Tower Royal. 1850.—Among the ruins of a Roman edifice, at 11 feet deep, was found in Nicholas-lane, near Cannon-street, a large slab, inscribed, "NVM PROV BRITA" (Numini Cæsaris Provincia Britannia).

There was every reason to believe the residue was at hand, but neither the contractor nor the civic authorities would countenance a search. With some little difficulty the stone, apparently the dedicatory inscription of a temple, almost unique of its class in this country, was received into the Guildhall, and deposited at the foot of the staircase leading into the library; but it has since disappeared.

*Cheapside, 1595.*—A vault and pavement found at the depth of 17 feet, at the north-west corner of Bread-street; and near it a tree cut into steps, on the supposed edge of a brook that had run towards Walbrook. In 1671 Sir Christopher Wren, in digging for the foundation of the church of St. Mary-le-Bow, at 18 feet deep, reached a Roman causeway, of bricks and rubble firmly cemented, which, it is supposed, formed, at the time it was constructed, the northern boundary of the colony; and upon this was laid the foundation of the church-tower. Wren mistook the crypt of the ancient Norman church for Roman, from a number of Roman bricks being used in the arches. (See Godwin's *Churches of London*, 1839.)

*Crutched Friars, 1842.*—A group of the *Deæ Matres* discovered in excavating a sewer in Hart-street, Crutched Friars, at a considerable depth, among the ruins of Roman buildings; these sculptured remains are in the Guildhall Library.

*Dowgate.*—The discovery of a large building and tessellated pavement here has suggested that Dowgate was the palace of the Roman prefect, and the basilica or court of justice.

*Finsbury.*—Opposite the Circus, at 19 feet deep, has been discovered a well-turned Roman arch, at the entrance of which, on the Finsbury side, were iron bars, apparently to restrain sedge and weeds from choking the water-passage.

*Foster-lane, 1830.*—In excavating for the New Goldsmith's Hall, was found, 15 feet below the level of the street, in a stratum of clay, a stone altar of Diana, 23 inches high, sculptured in front with a figure closely resembling the Diana Venatrix of the Louvre. The sides each contain the type of a tree; on the back are the remains of an inscription, below which are a tripod, a sacrificial vessel, and a hare. The finding of this altar supports the inference that the ground was the site of the Temple of Diana, referred by some antiquaries to the spot where St. Paul's now stands. The altar is preserved in Goldsmith's Hall. (See *Archæologia*, vol. xxix. p. 145.)

*Grey Friars, 1836.*—A fluted pillar, supposed Roman, found in the fragment of a wall of the Grey Friars' Monastery: it is almost the only specimen of the kind noticed.

*Houndsditch, 1845.*—The torso of a white marble statue of a slinger, discovered 17 feet deep, in Petticoat-lane.

*Islington*.—In the fields, about midway between White Conduit House and Copenhagen House, near Islington, were, until built over, considerable remains of Reedmont (or Redmont) Field; a camp said to have been occupied by Suetonius Paulinus, A.D. 61, whose contest with Boadicea at Battle-bridge has been confirmed by a Roman inscription discovered in 1842. Highbury, the summer camp of the Romans, is noticed at p. 420. In 1825, arrow heads and figured pavement were found at Reedmont.—(Hone's *Every-day Book*, vol. ii. p. 1566.)

*King-William-street, Lothbury, and Prince's-street*, 1834, 1835, 1836.—Various remains found in forming the new thoroughfare across the heart of the City, from London Bridge to the line of the old wall at Moorgate. Evidences of Roman habitations, at the depth of 14 and 20 feet, on either side of the line of King William-street. Near St. Clement's Church, pavement, earthenware lamps, Samian ware, and coins. Along the line of Princes-street, brass scales, fibulæ, styli, needles in brass and bone, coins, a sharpening steel, several knives, and vessels of Samian ware. In Lothbury, at 10 or 12 feet deep, chisels, crowbars, hammers, &c.; a leathern sandal, red and black pottery, &c.; a coin of Antoninus Pius, with Britannia on the reverse. From Lothbury to London Wall, brass coins of Claudius, Vespasian, and Trajan; spatulæ, styli, needles, a gold ring, brass tweezers, a hair-pin, and pottery. Near the Swan's Nest in Coleman-street, a pit of earthen vessels, a coin of Ailectus (296), a boat-hook, and a bucket-handle. At Honey-lane, under some Saxon remains, a few Roman coins. In Bread-street, richly figured Samian vases, circular earthen cooking-pans; and wall designs, fresh in colour, and resembling those of modern paper-hangings. (C. R. Smith, F.S.A. *Archæologia*, vol. xxvii.) At the corner of St. Swithin's-lane have been found several skeletons, fragments of pottery; and coins, in second-brass, of Antonia, Claudius, Nero, and Vespasian.

*Leadenhall-street*, 1576.—A pavement found at the Leadenhall-street end of Lime-street, at 12 feet deep; and between Billiter-lane and Lime-street, a stone wall and arched gate, which Stow supposes to have belonged to a Roman house destroyed by fire in the reign of Stephen. 1803.—A magnificent pavement discovered in front of the India House, Leadenhall-street, described at p. 319. 1863.—A pavement found near the site of the portico of the India House in Leadenhall-street. It forms a square or about five feet, set in a floor of common red tesserae. The pattern is ingenious. Under the pavement were found broken portions of plaster, with red, black, and grey stripes, very perfect as to colour.

*Lombard-street*, 1786.—At about 13 feet deep were found brick ruins, upon three inches thick of wood ashes, beneath which was Roman pavement, common and tessellated (Sir John Henniker; *Archæologia*, vol. viii.). Also, near Sherborne-lane, at 12 feet deep, a pavement running across Lombard-street, between which and the Post-office, but along the north side, ran a wall 10 feet below the street-level, built of "the smaller-sized Roman bricks," and pierced by perpendicular flues, the chimneys of a mansion. Other fragments of walls and pavements were found; and in Birchin-lane was uncovered a tessellated pavement of elegant design; with great quantities of Roman coins, fragments of pottery and glass bottles, keys and beads, a large vessel of figured Samian ware, &c. (See LOMBARD-STREET, p. 531.)

*London Stone*, Cannon-street, is described at pp. 533-534.

*Lothbury*, 1805.—Tessellated pavement: now in the British Museum.

*Ludgate*.—Upon the site of the present church of St. Martin, Wren found a small sepulchral stone monument to Vivianus Marcianus, a soldier of the second legion, erected by his wife, and sculptured with his effigies and a dedicatory inscription: this monument is now among the Arundel Marbles at Oxford. 1792.—Barbican or watch-tower of the City Wall discovered between Ludgate and the Fleet-ditch. 1800.—Sepulchral monument found in the rear of the London Coffee-house, Ludgate-hill (see p. 539.) This relic has been removed to the Corporation Museum, Guildhall.

*Moorfields*.—An inscribed stone, in memory of Grata, the daughter of Dagobitus, has been discovered at London Wall. Mr. Roach Smith is of opinion that the London of the Britons was situated in Moorfields; and on this aboriginal establishment the Romans afterwards enlarged. In 1818 a large portion of the wall on both sides of Moorgate was demolished.

*Pavements* discovered in Bush-lane, Cannon-street, in 1666; near St. Andrew's Church, Holborn, in 1681; at Crutched Friars in 1787; behind the Old Navy Pay-Office in Broad-street; in Northumberland-alley, Fenchurch-street; and in Long-lane, Smith-field,—about the commencement of the present century; near the church of St. Dunstan's-in-the-East, in 1824; in East Cheap in 1831; at St. Clement's Church, and in Lothbury, opposite Founders'-court, in 1834; in Crosby-square in 1836; behind Winchester House, Bankside, in 1850; and in various places on both sides of High-street, Southwark, between 1818 and 1831. (G. L. Craik, in Knight's *London*, vol. i.) Some stamped *tiles* bear the earliest abbreviation of the name of Londinium: they read PBR LON and P-B-LON, supposed *Probatum Londinii* proved of the proper quality at London; or *Prima* (cohors) BRITONUM LONDINII, the first (cohort) of the Britons at London. (C. R. Smith, *F.S.A.*) Or, Mr. Wright interprets P. PR. BR. upon another tile, as *Proprator Britannia Londinii*, the Proprator of Britain at Londinium; showing that Roman London was the seat of the government of the province. See a list of potter's stamps on pottery found in different metropolitan localities in the *Antiquarian and Architectural Year-book* for 1844.

*Royal Exchange*, 1841.—In excavating for the foundations was opened an ancient gravel-pit, filled with various Roman relics, described at p. 326; many of which are preserved in the Corporation Museum. Remains of buildings covered the whole site of the present Exchange, denoting this to have been one of the most magnificent portions of Roman London.

*Shadwell*, 1615.—Two coffins (stone and lead), with bones, lachrymatories, and two ivory sceptres, found in Sun Tavern Fields.

*Southwark*.—Discoveries of tessellated pavements on and about the site of St. Saviour's Church, and other remains of buildings, pottery, lamps, glass vessels, &c., throughout the line of High-street, denote this to have been within Roman London; and a burial-ground of the period has been discovered on the site of that now attached to the Dissenters' Chapel, Deverill-street, New Kent-road.

*Spitalfields*.—Urns, with ashes and burnt human bones, coins (Claudius, Nero, Vespasian, and Antoninus Pius), lachrymatories, lamps, and Samian ware, found in the Lottesworth or Spitalfield.

*Strand*.—"The Old Roman Spring Bath" in Strand-lane, between Nos. 162 and 163, is of accredited antiquity. The bath itself is Roman: the walls being layers of brick and thin layers of stucco; and the pavement of similar brick covered with stucco, and resting upon a mass of stucco and rubble: the bricks are  $9\frac{1}{2}$  inches long,  $4\frac{1}{2}$  inches broad, and  $1\frac{3}{4}$  inches thick, and resemble the bricks in the City Wall. The property can be traced to the Danvers (or D'Anvers) family, of Swithland Hall, Leicestershire, whose mansion stood upon the spot.

*St. George's-in-the-East*, 1715.—Many sepulchral remains found in digging the foundations of St. George's Church, near Goodman's Fields; and in 1787, fragments of urns and lachrymatories, and an inscribed Roman stone, were dug up in the Tenter-ground.

*St. Martin's-lane*, 1772.—In digging the foundations of the new church of St. Martin-in-the-Fields, were found, at 14 feet deep, a Roman brick arch; and "buffalo-heads," according to Gibbs, the architect. In Sir Hans Sloane's Museum was a glass vase containing ashes, which was found in a stone coffin upon the site of St. Martin's portico.

*St. Martin's-le-Grand*, 1819.—Roman vaultings, discovered in digging for the foundations of the General Post-office.

*St. Pancras*, 1758.—"Cæsar's Camp," near St. Pancras Church, discovered by Dr. Stukeley (see p. 641).

*St. Paul's Churchyard*.—In 1675, Wren, in excavating for the foundations of the present St. Paul's Cathedral, discovered many Saxon and British graves; and 18 feet or more deep, Roman urns intermixed,

"belonging to the colony, when the Romans and Britons lived and died together. The more remarkable Roman urns, lamps, and lachrymatories, fragments of sacrificing vessels, &c. were found deep in the ground, about a claypit (under the north-east angle of the present choir) which had been dug by the Roman potters, 'in a stratum of close and hard pot-earth, that extends beneath the whole site of St. Paul's; here the urns, broken vessels, and pottery-ware' were met with in great abundance."—Wren's *Parentalia*.

Wren "rummaged" the ground, but failed to discover any traces of the Roman Temple of Diana or Apollo reputed to have been built here. Dr. Woodward, however, possessed sacrificing vessels, bearing representations of Diana, said to have been dug up at St. Paul's; besides a brass figure of Diana, found between the Deanery and Blackfriars and believed Roman.\* As Londinium was the great centre of the commerce of Britain it might be expected that it would supply specimens of the pottery of antiquity: accordingly *nowhere* in

ter from Dow-

Walbrook, 1774.—Wood-ashes found, gate through Walbrook.

Whitechapel, 1776.—Monumental stone to a soldier of the 24th legion, found in a burial-ground at the lower end of Whitechapel-lane.

\* In excavating, in 1853, for Cook's colossal warehouse (built in 90 days), on the south side of St. Paul's Churchyard, there was found at twenty feet deep a Danish gravestone, inscribed in Runic—KINA caused this stone to be laid over, or in memory of, TUKI. The date of this relic is about A.D. 1000; and it is said to be the only Runic monument known to have been discovered in London.—*Proc. Royal Society of Northern Antiquaries.*

*Pavements* discovered in Bush-lane, Cannon-street, in 1666; near St. Andrew's Church, Holborn, in 1681; at Crutched Friars in 1787; behind the Old Navy Pay-Office in Broad-street; in Northumberland-alley, Fenchurch-street; and in Long-lane, Smith-field,—about the commencement of the present century; near the church of St. Dunstan's-in-the-East, in 1824; in East Cheap in 1831; at St. Clement's Church, and in Lothbury, opposite Founders'-court, in 1834; in Crosby-square in 1836; behind Winchester House, Park-lane, in 1852.

*St. Paul's Churchyard*.—In 1675, Wren, in excavating for the foundations of the present St. Paul's Cathedral, discovered many Saxon and British graves; and 18 feet or more deep, Roman urns intermixed,

"belonging to the colony, when the Romans and Britons lived and died together. The more remarkable Roman urns, lamps, and lachrymatories, fragments of sacrificing vessels, &c. were found deep in the ground, about a claypit (under the north-east angle of the present choir) which had been dug by the Roman potters, 'in a stratum of close and hard pot-earth, that extends beneath the whole site of St. Paul's; here the urns, broken vessels, and pottery-ware' were met with in great abundance."—Wren's *Parentalia*.

Wren "rummaged" the ground, but failed to discover any traces of the Roman Temple of Diana or Apollo reputed to have been built here. Dr. Woodward, however, possessed sacrificing vessels, bearing representations of Diana, said to have been dug up at St. Paul's; besides a brass figure of Diana, found between the Deanery and Blackfriars and believed Roman.\* As Londinium was the great centre of the commerce of Britain it might be expected that it would supply specimens of the pottery of antiquity: accordingly *nowhere* in England has such an immense quantity of various kinds been discovered. John Conyers, the antiquary, in 1677, observed the remains of Roman kilns, which were brought to light in digging the foundations of St. Paul's. Specimens of the ornamented pottery made in the Castor district have been also found here, and nowhere has the red glazed pottery known as "Samian" ware, been found more plentifully; the potters' stamps present upwards of 300 varieties.

*Thames River.*—A silver Harpocrates found in 1825 in the bed of the Thames, and now in the British Museum. 1837.—Bronzes found in ballast-heaving in the Thames, near London Bridge, including Mercury, Apollo, and Atys; probably the penates of some opulent Roman family.—(C. Roach Smith, F.S.A., *Archæologia*, vol. xxvii.) Brass pins of various lengths, stated to have been found on the paper, in a cellar on the northern bank of the Thames in excavating for the South-Eastern Railway bridge: they have solid globose heads.

*Threadneedle-street*, 1840–1841.—Tessellated pavements found beneath the old French Protestant Church in Threadneedle-street, at about 12 or 14 feet deep: they are preserved in the British Museum. In 1854 was found a large deposit of Roman *débris*, in excavating the site of the church of St. Bennet Fink; consisting of Roman tiles, flue-tiles, fragments of black, pale, and red Samian pottery; glass, &c. Various fragments of Roman vases found, together with the lid of an Early-English stone coffin and part of the tracery of a Gothic window, probably part of the church that stood here before the Great Fire.

*Tower*, 1777.—In digging the foundations of a new office for the Board of Ordnance, within the Tower, at a great depth, were discovered remains of ancient buildings; a silver ingot impressed "EX OFFIC. HONORII," and three gold coins of Honorius and Arcadius; a small glass crown, and an inscribed stone; thus indicating that the Romans had a fortress upon the Tower site.

*Tower Hill*, 1852.—Fragments of a Roman building found at the northern portion of the City Wall, including the supposed volute of a capital, and other enriched remains; besides a Roman sarcophagus nearly entire: now in the British Museum. Also, inscription in memory of Alfidius Pompus, set up in compliance with his will by his heir; another at the same time, in the same place, commemorating some person of greater distinction.

*Upper Thames-street*, 1839.—Opposite Vintners' Hall, at 10 feet from the surface, were found remains of the Wall parallel with the Thames; and about the middle of Queen-street, 19 feet from the surface, was unearthed a fine tessellated pavement. 1865.—At the corner of Suffolk-lane, on part of "the Manor of the Rose," from some 15 or 16 feet deep, a large quantity of Roman foundation-tiles and fragments of the embankment-wall for the river. 1866.—Several articles from the old Steelyard, including bone pins, styli, spatulæ, and other Roman antiquities in bronze, together with some iron keys. The bronze objects were of a brilliant golden hue, derived from the damp soil in which they had been buried for, probably, not less than eighteen centuries.

*Lower Thames-street.*—Bricks and coins, urns and pavements; a very fine hypocaust; and a portion of a Roman building and another hypocaust, remains of wall, &c.

*Walbrook*, 1774.—Wood-ashes found, 22 feet deep, in making a sewer from Dowgate through Walbrook.

*Whitechapel*, 1776.—Monumental stone to a soldier of the 24th legion, found in a burial-ground at the lower end of Whitechapel-lane.

\* In excavating, in 1853, for Cook's colossal warehouse (built in 80 days), on the south side of St. Paul's Churchyard, there was found at twenty feet deep a Danish gravestone, inscribed in Runic—KINA caused this stone to be laid over, or in memory of, TUKI. The date of this relic is about A.D. 1000; and it is said to be the only Runic monument known to have been discovered in London.—*Proc. Royal Society of Northern Antiquaries.*

In Mr. Charles Roach Smith's Museum of London Antiquities, described at p. 590, are 523 Roman items, collected in the metropolis during street-improvements, sewerage, and the deepening of the bed of the Thames. These objects include Roman sculpture, bronzes, pottery, terra-cotta lamps, red glazed pottery, potters' stamps, glass; tiles, pavements, and wall-paintings; personal ornaments, sandals in leather, utensils and implements, and coins. The Museum contains the same number of Anglo-Saxon and Norman, and Mediæval remains. (See the Catalogue, with illustrations by F. W. Fairholt, F.S.A., printed for the Subscribers only, 1854.)

The list of Roman coins found in London and enumerated in the above catalogue amounts to upwards of 2000; yet this list contains those only which, for about the last 30 years, have passed under the eye of Mr. Roach Smith, chiefly from the bed of the Thames.

"A much larger number within that period of time must have been found. Six hundred, or more, picked up from gravel dredged from the Thames, and strewed along the bank of the Surrey Canal, were collected by the late Mr. R. Pimm, of Deptford. It is well to record this fact, because the gravel taken from the bed of the Thames below London-bridge has been extensively used for repairing the banks of the river at Barnes and other places, and this gravel contained large quantities of coins, the finding of which in some future day may puzzle and deceive persons ignorant of their history. A board of denarii of the Higher Empire was found in the City, which, the corporation having declined purchasing, was bought by Mr. Mark Boyd. Vast quantities are said to have been found in removing the piers of old London-bridge and in excavating the approaches to the new bridge. Of these, and of those exhumed in the City in former times, scarcely a record has been preserved. The list here presented will not give more than an imperfect notion of the number actually brought to light, but it will serve to convey a faint idea of the incalculable quantity which must have been met with, both in modern times and in past ages."—*C. Roach Smith, F.S.A.*

### \* ROTHERHITHE,

A MANOR and parish between Deptford and Bermondsey, on the Surrey bank of the Thames, was anciently called *Retherhith*, probably from the Saxon *redhra*, a mariner, and *hyth*, a haven—*i.e.* the sailor's harbour. (Brayley's *Surrey*.) It is vulgarly *Redriff*. At the time of Domesday, it was included in the royal manor of Bermondsey; but it was not surrendered until the reign of Charles I. A fleet was fitted out at Rotherhithe in the reign of Edward III., by order of the Black Prince and John of Gaunt. Lambarde states that Henry IV. lodged in an "old stone house here while he was cured of a leprosie;" and two of Henry's charters are dated here, July, 1412. The mother-church of St. Mary is described at p. 187: Gataker, the erudite Latin critic, was rector from 1611 to 1654; he was imprisoned in the Fleet by Laud, and is buried here. In the churchyard lies Prince Le Boo. The registers, commencing 1556, contain many entries of ages from 90 to 99 years, and one of 120 years. Admiral Sir Charles Wager possessed the manor between 1740 and 1750. The brave Admiral Sir John Leake was born here June, 1656; but Admiral Benbow, stated by Manning and Bray to have been born at Rotherhithe, was a native of Coton-hill, Shrewsbury. (See *Gent. Mag.* Dec. 1809.) George Lillo, the dramatist, who wrote the plays of *George Barnwell*, *Arden of Feversham*, and *Fatal Curiosity*, was a jeweller living at Rotherhithe in 1735.

Swift's *Captain Gulliver*, he tells us, was long an inhabitant of Rotherhithe. There is such a reality given to this person by Swift that one seaman is said to have sworn that he knew Captain Gulliver very well, but he lived at Wapping, not at Rotherhithe. Lord Scarborough fell in company with a master of a ship who told him he was very well acquainted with Gulliver, but that the printer had mistaken; that he lived in Wapping, not in Rotherhithe. "It is as true as if Mr. Gulliver had spoken it," was a sort of proverb among his neighbours at Redriff. Rogers, the poet, remarked in the churchyard at Banbury several inscriptions to persons named Gulliver, and on his return home, looking into *Gulliver's Travels*, Mr. Rogers found to his surprise that the said inscriptions are mentioned there as a confirmation of Mr. Gulliver's statement, that "his family came from Oxfordshire;" so completely is the joke kept up.

"In five long years I took no second spouse;  
What Redriff wife so long hath kept her vows?"

*Gay's Epistle—Mary Gulliver to the Captain.*

A fire, June 1, 1765, destroyed here 206 houses, and property worth 100,000*l.* In 1804, a tunnel from Rotherhithe, beneath the Thames, to Limehouse, was commenced by Vasey and Trevethick, but failed. The "Thames Tunnel," by Brunel, commences at a short distance east of St. Mary's Church. The Commercial Docks at Rotherhithe are described at p. 309.

Gerard mentions the *Water Gladiole* as growing "by the famous river Thamesis, not far from a peece of ground called the Divel's neckerchiefe neere Redriffe by London." The Devil's Neckerchief

was a zigzag piece of swampy ground, which became perverted to *Neckinger*, as the vulgar phrase *Muckinger* is applied to a pocket-handkerchief. The ground is now "the Neckinger-road," with Neckinger Mills, &c.: it is in the parish of Bermondsey, not far from the boundary of Rotherhithe. It has been called "the devil's neck in danger," from the dangerous course of the road between two ditches, as shown in Sayer's Map of London, 1768, in which the name is spelled "Neckincher." In Phillips's *Bermondsey*, 1841, it is stated that the Neckinger Ditch is an ancient water-course, and was formerly navigable to Bermondsey Abbey.—See *Notes and Queries*, 2nd s. Nos. 71 and 73.

ROYAL ACADEMY OF ARTS.—See PICTURE GALLERIES, p. 676.

ROYAL EXCHANGE.—See EXCHANGES, pp. 322-329.

### ROYAL INSTITUTION, THE,

NO. 21, Albemarle-street, Piccadilly, was founded in 1799, "for diffusing the knowledge, and facilitating the general introduction, of useful mechanical inventions and improvements; and for teaching, by courses of philosophical lectures and experiments, the application of science to the common purposes of life:" hence the motto of the Institution, *Illustrans commoda vita*. It was incorporated in 1800. The Institution has been worthily designated as "the workshop of the Royal Society;" for within its laboratory Sir Humphry Davy made those brilliant discoveries which were published through the medium of the *Transactions* of the Royal Society; and the example of Davy has been followed by Faraday. Sir Joseph Banks, Count Rumford, and Mr. Cavendish were among the founders of the Royal Institution. In the basement was an experimental kitchen, with Rumford stoves, roasters, and boilers; apparatus for heating water by steam, &c.; a workshop for coppersmiths and braziers. Above are a laboratory, lecture-theatre, museum, library (see p. 464), and model repository. Here Davy gave his first lecture, April 25, 1801; and in 1807 discovered by galvanism the composition of the fixed alkalis, and their metallic bases, potassium and sodium: his great voltaic battery consisted of 2000 double plates of copper and zinc, of 4 inches square, the whole surface being 128,000 square inches. Davy was succeeded by Brande; and Faraday was, in 1833, chosen for a second chair of Chemistry, the Fullerian, founded by John Fuller, Esq., whose bequests have amounted to 10,000*l*. The mineralogical collection in the museum was commenced by Davy.

The history of chemical science dates one of its principal epochs from the foundation of the laboratory of the Royal Institution. Here the researches of Davy and Faraday extended over nearly half a century: including the laws of electro-chemical decomposition, the decomposition of the fixed alkalis, the establishment of the nature of chlorine, the philosophy of flame, the condensibility of many gases, the science of magneto-electricity, the twofold magnetism of matter, and the magnetism of gases. Here Coleridge gave his celebrated Lectures on Poetry. Among the MSS. in the Library are fifty-six volumes of Letters, &c., respecting the American War; Papers of Lord Stanhope; and the Laboratory Note-Books of Sir Humphry Davy.

The Institution building, originally five houses, received its present architectural front, by L. Vulliamy, in 1839.

The institution owes much to the talent of Faraday, who, in the words of the Honorary Secretary, "has worked long and much for the love of the Institution, and little for its money. For forty years, from 1813 to 1853, his fixed income from the Institution was not more than 200*l*. per annum. In 1853, Professor Tyndall was elected to lecture on Natural Philosophy for 200*l*. per annum. In 1859, he received 300*l*. per annum." Mr. Brande succeeded Sir Humphry Davy as Professor of Chemistry, and was from 1820 associated with Mr. Faraday; he died in 1866, at the age of 81.

### ROYAL SOCIETY.

THIS is the oldest Society of its kind in Europe, except the Lyncean Academy at Rome, of which Galileo was a member. The Royal Society originated in London, about 1645, in the weekly meetings of "divers worthy persons inquisitive into natural philosophy, and other parts of human learning; and particularly the new philosophy, or experimental philosophy;" these meetings being first suggested by Theodore Haak, a German of the Palatinate, then resident in the metropolis. This is supposed to be the club which Mr. Boyle, in 1646, designated "the Invisible or Philosophical Society." They met at Dr. Goddard's lodgings in Wood-street; at the *Bull's Head Tavern*, Cheap-

side; and at Gresham College. About 1648-9, some of the members, including Dr. (afterwards Bishop) Wilkins, removed to Oxford, and were joined by Seth Smith, Ralph Bathurst, Sir William Petty, and the Hon. Robert Boyle, who met at Petty's lodgings in an apothecary's house, "because of the convenience of inspecting drugs." The members in London continued also to meet, until, in 1658, they were ejected from Gresham College, which was required for barracks. Evelyn, Cowley, and Sir William Petty proposed separate plans for a "philosophical college:" Sprat says that Cowley's proposition accelerated the foundation of the Royal Society, in praise of which he subsequently wrote an ode. At the Restoration, in 1660, the meetings were revived; and April 22, 1662, the Society was incorporated by royal charter, by Charles II. This charter is on four sheets of vellum, and has on the first sheet ornamental initials and flowers, and a finely executed portrait of Charles in Indian ink; appended is the Great Seal in green wax. The Charter empowers the President to *wear his hat* while in the chair, and the fellows addressed the President bareheaded till he made a sign for them to put on their hats; customs now obsolete. Next year the King granted a second charter, which is of greater importance than the first; and his Majesty presented the Society with the silver-gilt mace.

The Mace is about 4 feet in length, and weighs 190 oz. avoirdupois: its stem is chased with the thistle, and has an urn-shaped head, surmounted by a crown, ball, and cross. Upon the head are embossed figures of a rose, harp, thistle, and fleur-de-lis, and the initials C.R. four times repeated. Under the crown are chased the royal arms; and at the other extremity of the stem are two shields, one bearing the Society's arms, the other a Latin inscription denoting the mace to have been presented to the Society by Charles II. in 1663. It was long believed by numberless visitors to be the "bauble" mace turned out of the House of Commons by Cromwell when he dissolved the Long Parliament; but Mr. Weld, the assistant-secretary and librarian, in a communication to the Society, April 30, 1846, proved this to be a popular error, by showing the warrant for making this mace and delivering it to Lord Brouncker, the first President of the Society. Again, the "bauble" was altogether different in form from the Society's mace, and was nearly destitute of ornament, and without the crown and cross, as described in Whitelock's *Memorials*, and represented accordingly in West's picture of the Dissolution of the Long Parliament.

From this session, 1663, date the *Philosophical Transactions*, wherein the proceedings and discoveries of the Society are registered. This year the Society exercised their privilege of claiming the bodies of criminals executed at Tyburn, which were to be dissected in Gresham College. In 1664, the king signed himself in the charter-book as the founder; and his brother, the Duke of York, signed as a fellow. In 1667 Chelsea College was granted to the Society, for their meetings, laboratory, repository, and library; but the building was too dilapidated, "the annoyance of Prince Rupert's glass-house" adjoined it, and the property was purchased back for the king's use for 1300*l.* The Society then resumed their meetings in Gresham College, until they were dispersed by the Great Plague and Fire, after which they met in Arundel House in the Strand. The Fellows now (1667) numbered 200, and their subscription 1*s.* per week; from the payment of which Newton, who joined the Society in 1674, was excused, on account of his narrow finances.

In 1674 the Society returned to Gresham College. They were fiercely attacked: a Warwick physician accused them of attempting to undermine the Universities, to bring in popery and absurd novelties; but a severer satire was *The Elephant in the Moon*, by Butler. Among their early practices was the fellows gathering May-dew, and experimenting with the divining-rod; and the Hon. Robert Boyle believed in the efficacy of the touch of Greatrakes the Stroker for the evil. In 1686 Newton presented his *Principia* to the Society, whose clerk, Halley, the astronomer, printed the work. The MS., entirely in Newton's hand, is preserved in the library.

In 1703 Sir Isaac Newton was elected president. In 1710 the society purchased the house of Dr. Brown, at the top of Crane-court, Fleet-street, "being in the middle of the town and out of noise." This house was built by Wren, after the Great Fire of 1666, upon the site of the mansion of Dr. Nicholas Barbon. This new purchase was considered unfortunate for the society. The house required several hundred pounds' repairs; the rooms were small and inconvenient compared with those of Gresham College; and the removal led to the separation of the Society from the College Professors, after being associated for nearly fifty years. The house in Crane-court fronted a garden, where was a fishpond. There is a small hall on the ground floor, and a passage from the staircase into the garden, fronting which are the meeting-room, 25½ feet by

16 feet, and a smaller room. In the former apartment, the Society met from 1710 till 1782. It is intact, and is very interesting as the room in which Newton sat in the presidential chair, which is preserved. The Library and Museum were removed here: the latter numbered several thousand specimens, the list of which fills twenty pages of Hatton's *London*, 1708. The house formerly included the present No. 8, in which was kept the Society's library, in cedar-wood cases. In 1782 the Society removed to Somerset House, and sold the Crane-court house to the Scottish Hospital.

The Royal Society then transferred most of their older curiosities to the British Museum. For their meeting-room they had a noble apartment in the east wing of Somerset House; it has an enriched ceiling by Sir William Chambers, and here were given the *conversazioni* of the Presidents, Sir Joseph Banks, Dr. Wollaston, Sir Humphry Davy, Mr. Davies Gilbert, the Earl of Rosse, and Lord Wrottesley. The Duke of Sussex received the Fellows at Kensington Palace; and the Marquis of Northampton at his mansion on the Terrace, Piccadilly. In 1857 the Society removed to Burlington House, which had recently been purchased by the Government, their meeting-room at Somerset House being then given to the Society of Antiquaries, who had hitherto occupied the adjoining rooms.

In "Burlington's fair palace" a large apartment in the western wing of the mansion is fitted up as the Royal Society's meeting-room. In the elegant suite of rooms, with ceilings painted by Ricci, is the library; and in these apartments the President holds his annual *conversazioni*, at which novelties in science and art are shown.

The meeting-room at Burlington House is hung round with the Society's pictures, of which Mr. Weld has prepared an interesting *catalogue raisonnée*, privately printed: they include three portraits of Newton, by Jervas, Marchand, and Vanderbank; Viscount Brouncker (first president), by Lely; Sir Humphry Davy, by Lawrence; Davies Gilbert and the Marquis of Northampton, by Phillips; Sir John Pringle, by Reynolds; Sir Hans Sloane, Lord Somers, Sir J. Williamson, and Sir Christopher Wren, by Kneller; Dr. Wollaston, by Jackson; the Duke of Sussex, by Phillips, &c. The Society also possess marble busts of Charles II. and George III., by Nollekens; Sir Joseph Banks, by Chantrey; John Dollond, by Garland; Davies Gilbert, by Westmacott; Sir Isaac Newton, by Roubiliac; Laplace; Mrs. Somerville, by Chantrey; James Watt, after Chantrey; and Cuvier, in bronze. The Museum is described at page 600.

Here also are the Exchequer standard yard set off upon the Society's yard: it is of brass, and is of great value since the destruction of the parliamentary standard; the Society's standard barometer; also the water-barometer, made by Professor Daniell, whose last official service was the refilling of this instrument, in 1844.

The Royal Society distribute four gold medals annually—the Rumford, two Royal (value 50 guineas each), and the Copley; and from the donation-fund men of science are assisted in special researches.

The *Charter-book* is bound in crimson velvet, with gold clasps and corners, and inscription-plates—1. The Shield of the Society; 2. Crest: an eagle *or*, holding a shield with the arms of England. The leaves are fine vellum, and bear, superbly blazoned, the arms of England and the Society; next, the third charter and statutes (60 pages). Autographs (1st page): ornamented scroll-border and Royal shield, above the signatures, "CHARLES R. Founder" (written Jan. 9th, 1664-5); "JAMES, Fellow;" and "GEORGE RUPERT, Fellow." In the next page are the autographs of various foreign ambassadors; and the third and succeeding pages contain the signatures of the fellows beneath the obligation which holds each leaf: Clarendon, Boyle, Wallis, Wren, Hooke, Evelyn, Pepys, Norfolk, Flamsteed, and Newton, are here (the name beneath that of Newton is nearly obliterated by the sad habit of touching). Seventy-one pages are occupied by the autographs of the fellows (including those on the foreign list). Here are the autographs of the successive kings and queens of England, and many sovereigns of foreign countries who have visited England. Queen Victoria has signed her name as patron of the Society; and on the same richly illuminated page are the signatures of Prince Albert and the kings of Prussia and Saxony.—Weld's *History of the Royal Society*, vol. i. p. 177 (abridged).

See, also, CRANE-COURT, p. 296; ROYAL SOCIETY CLUB, p. 256.

### SAVOY (THE).

ON the spot, south side of the Strand, and which still bears the name of Savoy, but is now mostly occupied by Wellington-street and Lancaster-place, was anciently a noble palace, magnificently rebuilt by Henry, first Duke of Lancaster. Here was confined John King of France, taken prisoner by Edward the Black Prince, at Poitiers,

in 1356; "and thyder came to se hym the kyng and the quene often tymes, and made hym gret feest and chocere:" he was released in 1360; but returning to captivity, died in the Savoy, "his antient prison," in 1364. The demesnes descended to John of Gaunt: here the poet Chaucer was his frequent guest; some of his poems were written in the Savoy; and Chaucer's *Dream* allegorises his own marriage with Philippa, a lady of the duchess' household. But Gaunt, a staunch Wickliffite, had his palace attacked by the Londoners in 1377. In 1381 it was burnt by Wat Tyler's rebels: the costly plate and furniture were destroyed or thrown into the Thames, and the great hall and several houses were blown up. Shakspeare lays a scene of his *Richard II.* in a room of the Savoy, which, however, was then in ruins. Thus it lay until 1505, when was commenced building the Hospital of St. John the Baptist, the history of which, and its celebrated Chapel Royal, is narrated at pp. 142-144. Here Charles II. established "the French Church in the Savoy;"\* and here were churches for the Dutch, High Germans, and Lutherans; the German-Lutheran church has been rebuilt. (SAVOY PRISON, see p. 703.)

### SCHOOLS, PUBLIC.

THE great Schools of London are as follow: CHARTERHOUSE, described at pp. 86-88; CHRIST'S HOSPITAL (Blue-coat School), described at pp. 95-101. The CITY OF LONDON SCHOOL occupies the site of Honey-lane Market, in the rear of the houses facing Bow Church, and was designed by J. B. Bunning; the first stone laid by Lord Brougham, Oct. 21, 1835. The style is Elizabethan, with earlier and more enriched principal windows and entrance; the latter, a rich arched doorway, surmounted by a lofty gable pediment, and above, an open gallery of five trefoiled pointed arches on lofty pillars, flanked by buttress-turrets 76½ feet high, is novel and picturesque. The cost of the edifice, about 12,000*l.*, was defrayed by the Corporation of London, who gave the site, which produced a yearly rental of 300*l.* The school, for 400 scholars, is partly supported with 900*l.* a-year derived from certain lands and tenements bequeathed by John Carpenter, Town-Clerk and "Secretary" of London in the reign of Henry VI.; and who several times represented the City in Parliament, and was "executor of the will of Richard Whityngton." Carpenter's bequest, originally but 19*l.* 10*s.* per annum, was "for the finding and bringing up of four poor men's children with meat, drink, apparel, learning at the schools, in the universities, &c., until they be preferred, and then others in their places for ever." (*Stow.*) The bequest was thus appropriated in 1633, when the boys wore "coats of London russet," with buttons; and they were accustomed from time to time to show their copy-books to the Chamberlain, in proof of the application of the Charity. In 1827 it was extended to the education of four boys, sons of freemen, and nominated by the Lord Mayor, at the Tonbridge Grammar School; each boy, on quitting, received 100*l.*, thus increasing the annual expense to about 420*l.* In the lapse of nearly four centuries, the value of Carpenter's estates had augmented from 19*l.* 10*s.* to 900*l.*, or nearly five-and-forty fold, when the school was re-established as above. The form of admission must be signed by a member of the Corporation of London; the general course of instruction includes the English, French, German, Latin, and Greek languages. The school is mainly indebted to Mr. Alderman Hale (Lord Mayor 1864-5), for its re-establishment and great extension.

\* The first five churches in London appropriated to the Protestants of France were the old Temple in Threadneedle-street, and those of the Savoy, Marylebone, and Castle-street; and a church in Spitalfields, added upon the application of the consistory to James II. To these were successively added twenty-six others, mostly founded during the reigns of William III., Queen Anne, and George I.—That of Leicester-fields, founded in 1688, of which Saurin was minister; that of Spring-gardens, whose first pastor was Francis Flahaut; that of Glasshouse-square, formed in 1688; Swallow-street, Piccadilly, 1692; Berwick-street, 1689; Charenton, in Newport-market, 1701; West-street, Seven Dials, which the refugees called the Pyramid, or the Tremblade; the Carré, Westminster, 1689; the Tabernacle, 1686; Hungerford, 1689, which subsisted until 1832; the Temple of Soho, or the Patent, erected in 1689; Ryder's-court, 1700; Martin's-lane, City, 1686; St. James's, 1701; the Artillery, Bishopsgate, 1691; Hoxton, 1748; St. John, Shoreditch, 1687; the Patent, in Spitalfields, or the New Patent, 1689; Crispin-street, 1693; Peart-street, 1697; Bell-lane, Spitalfields, 1718; Swanfields, 1721; Wheeler-street, Spitalfields, 1703; Petticoat-lane, Spitalfields, 1694; Wapping, 1711; Blackfriars, 1716. Several of these churches ultimately adopted the Anglican ritual.—Weiss' *Hist. French Protestant Refugees*, 1854.

There are eight free foundation scholarships available as exhibitions to the Universities, in addition to the following: the *Times'* scholarship (see CHRIST'S HOSPITAL, p. 99), three Beaufoy scholarships, the Salomons scholarship, and the Travers' scholarship, and the Tegg scholarship ("Sheriff's Fine"), varying from 35*l.* to 50*l.* a year each; and there are other valuable prizes determinable by examination at Midsummer.

Upon the great staircase of the school is a statue, by Nixon, of John Carpenter, in the costume of his period; he bears in his left hand his *Liber Albus*, a collection of the City laws, customs, and privileges, compiled in 1419, and still preserved in the Corporation archives; translated 1861. The statue is placed upon a pedestal inscribed with a compendious history of the founder, and his many benevolent acts.\*

MERCERS' SCHOOL, College-hill, Dowgate, was founded and endowed by the Mercers' Company, for seventy scholars of any age or place. It is mentioned as early as 1447, and was then kept at the Hospital of St. Thomas of Acon; but was removed to St. Mary Colechurch, next the Mercers' Chapel. After the Great Fire of 1666, the school-house was rebuilt on the west side of the Old Jewry. In 1787 it was removed to 13, Budge-row; in 1804, to 20, Red Lion-court, Watling-street; and from thence, in 1808, to premises on College-hill. The present school, designed by George Smith, is an elegant stone structure (adjoining St. Michael's Church), on the site of Whittington's Almshouses, removed to Highgate to make room for it. The education, classical and general, is free; the boys being selected in turn by the Master and three Wardens of the Mercers' Company. Among the early scholars were Dr. Colet, Sir Thomas Gresham, and Bishop Wren.

MERCHANT TAYLORS' SCHOOL, Suffolk-lane, Cannon-street, was founded in 1561 by the Merchant Taylors' Company, principally by the gift of 500*l.*, and other subscriptions by members of the Court of Assistants, among whom was Sir Thomas White, sometime Master of the Company, and who had recently founded St. John's College, Oxford. With these funds was purchased part of "the Manor of the Rose," a palace originally built by Sir John Poultney, Knt., five times Lord Mayor of London, in the reign of Edward III.; the estate successively belonged to the De la Pole or Suffolk family (whence Suffolk-lane), and the Staffords, Dukes of Buckingham:

"The Duke being at the Rose, within the parish  
Saint Lawrence Poultney."—*Shakspeare, Henry VIII, act i. sc. 2.*

Hence, also, "Duck's-Foot-lane" (the Duke's foot-lane, or private way from the garden to the Thames), which is hard by. These ancient premises were destroyed in the Great Fire of 1666, and the present building was erected on the same site, in 1675, by Wren: it is a large brick edifice, with pilasters; the upper school-room, and library adjoining, supported by stone pillars, forming a cloister; there are also other rooms, and the head master's residence. The boys are admitted at any age, on the nomination of the forty members of the Court of the Company in rotation; and the scholars may remain until the Monday after St. John the Baptist's Day preceding their nineteenth birth. Hebrew, Greek, and Latin have been taught since the foundation of the school; mathematics, writing, and arithmetic were added in 1829, and French and modern history in 1846. The boys are entitled to thirty-seven out of the fifty fellowships at St. John's College, Oxford, and several other exhibitions at both the Universities; the election to which takes place annually on St. Barnabas' Day, June 11, when the school prizes are also distributed: there is another speech-day, "Doctors' Day," in December. Plays were formerly performed by the Merchant Taylors' boys, who, in 1664, acted Beaumont and Fletcher's *Love's Pilgrimage* in the Company's Hall, but under order that this "should bee noe precedent for the future."

Amongst the eminent scholars educated at Merchant Taylors' were, Bishops Andrewes, Dove, and Tomson, three of the translators of the Bible; Archbishop Juxon, who attended Charles I. to the scaffold; Bishop Hopkins (of Londouderry); Archbishops Sir William Dawes, Gilbert, and Boulter; Bishop Van Mildert, and eleven other prelates; Titus Oates, who contrived the "Popish Plot;" James

\* At the expense of John Carpenter was "artificially and richly painted" the *Dance of Death* upon the north cloister of St. Paul's, and thence called the "Dance at Paul's." It consisted of a long train of all orders of mankind; each figure having for a partner the spectral Death leading the sepulchral dance, and shaking the last sands from his hour-glass: intended as a moral memorial of the Plague and Famine of 1433. Among Carpenter's property is a lease of premises in Cornhill, granted by the City, for eighty years, at the annual service of a *red rose* for the first thirty years, and a yearly rent of 20*s.* for the remainder of the term.

Whitelock, Justice of the King's Bench; Bulstrode Whitelock, who wrote his *Memorials*; Shirley, the dramatic poet, contemporary with Massinger; Charles Wheatley, the ritualist; Neal, the historian of the Puritans; Edmund Calamy, and his grandson Edmund, the Nonconformists—the former died in 1666, from seeing London in ashes after the Great Fire; the great Lord Clive; Dr. Vicesimus Knox, one of the "British Essayists;" Dr. William Lowth, the learned classic and theologian; Nicholas Amhurst, associated with Bolingbroke and Pulteney in the *Craftsman*; Charles Mathews, the elder, comedian; Lieut.-Col. Denham, the explorer of central Africa; and J. L. Adolphus, the barrister, who wrote a *History of the Reign of George III.* Also, Sir John Dodson, Queen's Advocate; Sir Henry Ellis, and Samuel Birch, of the British Museum; John Gough Nichols, F.S.A.; Albert Smith, *littérateur*.

ST. OLAVE'S AND ST. JOHN'S FREE GRAMMAR-SCHOOL (originally St. Olave's) was founded by the inhabitants in 1561; and endowed, among other property, with the "Horseydowne" field, at the yearly rent of a red rose, which is paid by the Churchwardens and Overseers previously to the annual commemoration sermon on Nov. 17, by presenting to each of the School Governors a nosegay of flowers with a rose in it. The School originated in the bequest of a wealthy brewer named Leeke, who in 1561 left 8*l.* a-year for a free school in St. Savyor's, which bequest, however, was to go to St. Olave's, if within two years of his death a school should be built and established there. St. Olave's contrived to secure the legacy; and in 1567 the school was made free, and incorporated by Queen Elizabeth; charter extended by Charles II., 1674.

In 1579, Horseydowne (now Horselydown), was passed over by the parish to the use of the School. It was originally a large grazing field, *down*, or pasture, for horses and cattle, containing about sixteen acres; but having long since been covered with houses erected on building leases, which have fallen in, the yearly income of the School from this source is upwards of 2000*l.* The old school, in Churchyard-alley, was taken down about 1830, for making the approaches to the new London Bridge, when a piece of ground in Duke-street was granted by the City of London as a site for a new school; but this ground was exchanged with the London and Greenwich Railway Company for a site in Bermondsey-street, where the school was rebuilt, and opened Nov. 17, 1835. It was in the latest Tudor or Elizabethan style, of red brick, with an octangular embattled tower, lantern-roofed; James Field, architect. In 1849, this new building being required for the enlargement of the terminus of the London, Brighton, and South-Coast Railway Company, they paid a considerable sum of money for it, the Governors undertaking to find another site for the school, and rebuild the same; the tuition being in the meantime carried on in a temporary building in Maze Pond.

The School is free to "children and younglings," rich or poor, inhabitants of St. Olave's and St. John's parishes, admitted by presentation from the Governors. The Classical School consists of about 220 boys; and the branch or English School, in Magdalen-street, and built in 1824, contains about 260 boys. The Governors also award annually four exhibitions at Oxford or Cambridge University, besides apprentice-fees for poor scholars, and funds for other benevolent purposes. Commemoration-day, Nov. 17 (accession of Elizabeth).

"The seal of the corporation, dated 1576, and distinguished by a rose displayed, the ancient cognizance of Southwark, represents the master sitting in a high-backed chair at his desk, on which is a book, and the rod is conspicuously displayed, to the terror of five scholars standing before him."—*G. R. Corner, F. S. A.*

ST. PAUL'S SCHOOL, east end of St. Paul's Churchyard, was founded in 1512, by Dr. John Colet, son of Sir Henry Colet, mercer, and lord mayor in 1486 and 1495; and it is "hard to say whether he left better lands for the maintenance of his school, or wise laws for the government thereof" (*Fuller*). The school is for 153 boys of "every nation, country, and class," the 153 alluding to the number of fishes taken by St. Peter (*John* xxi. 2). The education is entirely classical; the presentations to the school are in the gift of the Master of the Mercers' Company; and scholars are admitted at fifteen, but eligible at any age. The original school-house was built 1508–12: this was destroyed in the Great Fire of 1666, but was rebuilt by Wren; this second school was taken down in 1824, and the present school built of stone from the designs of George Smith: it has a handsome central portico upon a rusticated base, projecting over the street pavement. The original endowment, and for several years the only endowment of the school, was 55*l.* 14*s.* 10½*d.*, the value of estates in Buckinghamshire, which now produce 1858*l.* 16*s.* 10½*d.* a-year; and with other property make the present income of the school upwards of 5000*l.* Lilly, the eminent grammarian, the friend of Erasmus and Sir Thomas More, was the first schoolmaster of St. Paul's, and "Lilly's Grammar" is used to this day in the school: the English rudiments were written by Colet, the preface to the first edition by Cardinal Wolsey; the Latin syntax

chiefly by Erasmus, and the remainder by Lilly. Colet directed that the children should not use tallow but wax candles in the school; 4*d.* entrance-money for each was to be given to the poor scholar who swept the school; and the masters were to have livery-gowns "delivered in clothe." The present teachers consist of a high-master, salary 61*8*l. per annum, with spacious house; sur-master, 307*l.*; under-master, or ancient chaplain, 227*l.*; assistant-master, 257*l.*: the last master only having no house. The scholars' only expense is for books and wax tapers. There are several very valuable exhibitions, decided at the Apposition, held in the first three days of the fourth week after Easter, when a commemorative oration is delivered by the senior boy, and prizes are presented from the governors. In the time of the founder, the "Apposition dinner" was "an assembly and a littell dinner, ordayned by the surveyor, not exceedyng the pryce of four nobles."

In the list of eminent Paulines are—Sir Anthony Denny and Sir William Paget, privy councillors to Henry VIII.; John Leland, the antiquary; John Milton, our great epic poet; Samuel Pepys, the diarist; John Strype, the ecclesiastical historian; Dr. Calamy, the High Churchman; the great Duke of Marlborough: R. W. Elliston, the comedian; Sir C. Mansfield Clarke, Bart.; Lord Chancellor Truro, &c.

On Apposition Day, June 4, 1851, were announced these three additional prizes: 1. "The Chancellor's Prize," by Lord Truro, 1000*l.*; the interest to be applied in awarding a gold medal, value ten guineas, and a purse of twenty guineas, or books to that amount, each yearly Apposition, to the author of the best English Essay. 2. "The Milton Prize," by Sir C. M. Clarke, Bart., for English Verses on a sacred subject, annually. 3. "The Thurston Memorial," an annual prize for a copy of Latin Lyries, given by the parent of a student named Thurston, recently deceased; the High Master to apply a portion of the endowment to keeping up the youth's gravestone in the Highgate Cemetery.

ST. SAVIOUR'S GRAMMAR-SCHOOL, Sumner-street, Southwark-Bridge-road, was rebuilt 1830-9, nearly adjoining St. Peter's Church. The school was founded by parishioners in 1562, and chartered by Queen Elizabeth; the original endowment being 40*l.* a-year. The scheme, approved by the Court of Chancery in 1850, provides six governors to manage the school property; the instruction to comprise religion, classical learning, English composition, grammar, arithmetic, history, geography, mathematics, &c., subject to the approval of the Bishop of Winchester; the head master to be a Master of Arts, and to be appointed in conformity with the statutes of 1614. Small prizes are adjudged yearly, and there are two University exhibitions. Among the olden rules for the choice of a master are the following:

The master to be "a man of a wise, sociable, loving disposition, not hasty or furious, or of any ill example; he shall be wise and of good experience, to discern the nature of every several child; to work upon the disposition for the greatest advantage, benefit, and comfort of the child; to learn with the love of his book." It was necessary then, as now, to add, "if such an one may be got."—The corporation seal represents a pedagogue seated in a chair, with a group of thickly-trussed pupils before him; date, 1573.

The original school-house, on the south side of St. Saviour's churchyard, was burned in 1676, but was immediately rebuilt: it had a richly-carved doorway-head. This building was taken down after the erection of the new school in Sumner-street. Among the donations is 500*l.* by Dr. W. Heberden, the celebrated physician, who is said to have been partly educated in the school.

WESTMINSTER SCHOOL (St. Peter's College), Dean's-yard, was originally founded by Henry VIII., on the remodelling of the Abbey establishment; but inadequately supported until 1560, when Elizabeth restored its revenues, and the foundation of an Upper and Lower Master, and 40 scholars, and gave the present statutes. The College consists of a Dean, 12 Prebendaries, 12 Ahmsmen, and the above 40 "Queen's Scholars," with a Master and Usher; maintained, since the Restoration, by the common revenues of St. Peter's Collegiate Church (the Abbey), at 12,000*l.* a year. These scholars wear a cap and gown; and there are four "Bishop's boys," educated free, who wear a purple gown, and have 60*l.* annually amongst them. Besides this foundation, a great number of sons of the nobility and gentry are educated here. Of the Queen's Scholars, an examination takes place on the first Tuesday after Rogation Sunday, when four are elected to Trinity College, Cambridge, and four to Christ Church, Oxford; scholarships about 60*l.* a year. The scholars from the 4th, 5th, and Shell Forms "stand out" in Latin, Greek, and grammatical questionings, to fill up the vacancies on the Wednesday before Ascension Day; when the "Captain of the Election" is chaired round Dean's-yard. There are other funds available to needy scholars.

Any boy may enter at Westminster School; the entire annual charges (including board and lodging) are from 76 to 83 guineas; or if he board and lodge at home, 25 guineas. From the boarders are elected the Queen's Scholars, who, after four years' residence, have the chance of obtaining good scholarships; they are charged about 40*l.* a year.

The entrance to the school-court, Little Dean's-yard, is under a low groined gateway: the school-porch is said to have been designed by Inigo Jones; and adjoining is the paved racket-court. The venerable School was once the dormitory of the monks: it is 96 feet long and 34 feet in breadth, and has a massive open chestnut roof; at one end is the Head Master's table, and four tiers of forms are ranged along the east and western walls.\* The Upper and Lower Schools are divided by a bar, which formerly bore a curtain: over this bar on Shrove Tuesday, at 11 o'clock, the College cook, attended by a verger, having made his obeisance to the Masters, proceeds to toss a pancake into the upper school, once a warning to proceed to dinner in the Hall. Upon the walls are inscribed many great names; in the library is preserved part of the form on which Dryden once sat, and on which his autograph is cut.

In the *Census Alumnorum*, or list of foundation scholars, are Bishops Overall and Ravis, translators of the Bible; Hakluyt, collector of Voyages; Gunter, inventor of the Scale; "Master George Herbert;" the poets Cowley and Dryden; South; Locke; Bishops Atterbury, Sprat, and Pearce; Prior and Stepney, poets and statesmen; Rowe and "Sweet Vinny Bourne," the poets; Churchill, the satirist; Warren Hastings; Colman the Elder; Everard Home, surgeon; Dr. Drury, of Harrow School, &c.

Among the other eminent persons educated here were Lord Burghley; Ben Jonson; Nat Lee; Sir Christopher Wren; Jasper Mayne, the poet; Barton Booth, the actor, Blackmore, Browne, Dyer, Hammond, Aaron Hill, Cowper, and Southey, the poets; Horne Tooke; Gibbon, the historian; Cumberland, the dramatist; Colman the Younger; Sir Francis Burdett; Harcourt, Archbishop of York; the third Marquis of Lansdowne; Lord John Russell; the Marquis of Anglesey; Sir John Cam Hobhouse (Lord Broughton), &c.

Among the eminent Masters are Camden, "the Pausanias of England," who had Ben Jonson for a scholar; and Dr. Busby, who had Dryden, and who, out of the bench of Bishops, taught sixteen. Between the years 1810 and 1856 only seven officers of the British army (royalty excepted) rose to the rank of Field Marshal. Of these seven, five were brought up at Westminster, one at Eton, and one at a private school. The five Westminster boys were—Thomas Grosvenor, Henry Paget, John Byng, Stapleton Cotton, and Fitzroy Somerset; the Etonian was Arthur Wellesley; and the seventh, Henry Hardinge.

The College Hall, originally the Abbot's refectory, was built by Abbot Litlington, *temp.* Edward III.: its dimensions are 47 feet by 27½ feet in width; the floor is paved with chequered Turkish marble; at the south end is a musicians' gallery, now used as a pantry, and behind are butteries and hatches; upon the north side, upon a dais, is the high table; those below, of chestnut-wood, are said to have been formed out of the wreck of the Armada; and the roof-timbers spring from carved corbels, with angels bearing shields of the Confessor's and Abbot's arms. A small louvre rises above the central hearth, upon which, in winter, a charcoal fire used to burn until 1850. The Library is a modern Italian room, and contains memorials of the attachment of "Westminsters." The old dormitory, built in 1380, was the granary of the monastery; and was replaced by the present dormitory in 1722, from the designs of the Earl of Burlington: it is 161 feet long by 25 feet broad, and its walls are inscribed with names. Here Latin plays are represented upon the second Thursday in December, and the Monday before and after that day; those acted of late years were the *Andria*, *Phormio*, *Eunuchus*, and *Adelphi*, of Terence, with Latin prologue and epilogue.† Warton mentions, "this liberal exercise is yet preserved, and in the spirit of true classical purity, at the College of Westminster." The scenery was designed by Garrick; the modern dresses formerly used were exchanged for Greek costume in 1839. Boating is a favourite recreation of the Westminsters, who have often contested the championship of the Thames with Eton. On May 4, 1837, the Westminsters won a match at Eton.

There exists to this day, at Chiswick, the house which was purchased as a retiring-place for the Master and scholars of Westminster: it was for many years well known as "The Chiswick Press," having been long occupied by Mr. Whittingham, and previously by his uncle, who there executed many works of remarkable typographical beauty. The present tenant is bound, as were Messrs. Whit-

\* The basement story beneath the school serves as an undercroft, has semicircular groined Saxon arches, considered to be of the time of Edward the Confessor, whose steward, Hugolin, was buried here. Here is deposited the standard money, which, when there is a new Master of the Mint, is taken out to be carried to the Exchequer, for a Trial of the Pix. The outer doors have seven locks, each lock a different key, and each key a different possessor; so that the seven holders assemble on the above occasion. The last trial of the Pix was in 1851, on the admission of Sir John F. W. Herschel, Bart., to the Mastership of the Mint, which office was held by Sir Isaac Newton from 1699 until 1728.

† These performances superseded the old Mysteries and Moralities in the reign of Queen Mary, when the boy-actors were chiefly the acolytes who served at mass.

ingham, to vacate it at a day's notice in the event of its being required for the "Sick scholars of Westminster." A large field at the back of the house, known as "The Home Field," is held upon the same condition.

(See *The Great Schools of England*, by Howard Staunton, 1865.)

### SEWAGE OR DRAINAGE.

A SEWER is, according to Lord Coke, a place where water issues; or as is said vulgarly, "suer," whence the word suera or sewer. Callis derives it from the Saxon *sæ-wæer*, that is—a sea fence, a protection against sea-tides; but this derivation is ill-founded. The subject is too large for treatment here; but we may note that the Institution of Civil Engineers recognise the Commissioners of Sewers as first instituted in the reign of Henry VI., when they acted in every part of the country, having jurisdiction on the borders of tidal rivers. Their duties were to repair sea or river banks, and to keep the main drains and outfalls of level districts in repair, and keep them clear for the passage of water.

The first general measure was the "Bill of Sewers," in 1531; superseded, in 1848, by the "Metropolitan Commission of Sewers," whose jurisdiction extended 12 miles round St. Paul's, and for whom a new block plan of the metropolis was prepared by the Ordnance Office. By this map, the sewerage amounted to upwards of 7 millions of cubic feet on the north side of the Thames, and nearly 2½ millions on the south side. The great receptacle was the Thames; and of the new system, from 1848 to 1854, there were constructed 80 miles of brick sewers, and 346 miles of pipe-drainage. The oldest and largest sewer is the Fleet Sewer, which drains, or drained, by collateral sewers, an area six or seven times the size of the City of London. (See p. 348.)

The new Main Drainage, by Mr. Bazalgette, engineer, has been executed by the Metropolitan Board of Works. As much as possible of the sewage is removed by gravitation; and for this purpose there are three lines of sewers at each side of the Thames, termed respectively High, Middle, and Low Level. The two former discharge by gravitation; but pumping is required for the third; and for this purpose double-acting rotative beam engines, with plunger and ram-pumps, have been adopted.

The *intercepting* plan, as its name implies, consists in cutting three great main drains on both sides of the river, and which, instead of running due north and south like the former system, run from west to east. These great main lines intercept and cut off all the existing lines of drains from the river, carry their contents away down below Barking Creek and Erith Marshes, where they are poured into gigantic reservoirs, and afterwards, when deodorized, turned into the river at high tide, and swept away by the ebb almost to sea. Thus, the sewage is not only turned out free from smell, but turned out into a body of water nearly thirty times as great as that into which it used to be poured, and becomes lost in the volume of water which rolls down between the marshes on each side of the river to far below Gravesend. The maximum quantity of sewage to be lifted by the engines at Crossness Point will ordinarily be about 10,000 cubic feet per minute; but during the night that quantity will be considerably reduced, while, on the other hand, it will be nearly double on occasions of heavy rainfall. These works were publicly opened by the Prince of Wales April 4, 1867. The *High Level*, on the north side, is about eight miles in length, and runs from Hampstead to Bow, being at its rise 4 ft. 6 in. in diameter, and thence increasing in circumference as the waters of the sewers it intercepts require a wider course, to 5 feet, 6 feet, 7 feet, 10 feet 8 inches, 11 feet 6 inches; and at its termination, near Lea River, to 12 ft. 6 in. in diameter. Its minimum fall is 2 feet in the mile; its maximum at the beginning, nearly 50 feet in the mile. It is laid at the depth of from 20 feet to 26 feet below the ground, and drains an area of fourteen square miles. The *Middle Level*, as being lower in the valley on the slope of which London is built, is laid at a greater depth, varying from 30 feet to 36 feet, and even more, below the surface. This extends from Kensal Green to Bow. The *Low Level* will extend from Cremorne to Abbey Mills, on the marshes near Stratford, and one portion of it will pass through the Thames Embankment. At Bow, the Low Level waters of the sewer will be raised by engines at a pumping station to the junction of the High and Middle Level ducts, thence descending by their own gravity through these tunnels to the main reservoir and final outfall at Barking. On the south side of the Thames the three great sewer arteries are constructed on similar plans—the High Level from Dulwich to Deptford; the Middle from Clapham to Deptford; and the Low Level from Putney to Deptford. At this point is a pumping station, which raises the water from the low to the high level, whence it flows away through a 10 feet tunnel to Crossness Point. One part of this tunnel, passing under Woolwich, is a mile and a half in length, without a break, and driven at a depth of 80 feet from the surface. At the outfall another pumping station lifts the water to the reservoir. The southern reservoir is only five acres in extent; that on the north is fourteen. In the reservoir takes place the deodorisation. The two culverts which carry the sewage to the east and west pumping stations are as large almost as railway tunnels. Before the entrance to the pumps are massive iron strainers, which keep out all the coarse refuse brought down the sewer, and which is afterwards dredged up by the filth hoist into the filth chamber, which is flushed into the river at low water.

There are now about 1300 miles of sewers in London, and 82 miles of main intercepting sewers. Three hundred and eighteen millions of bricks and 880,000 cubic

yards of concrete have been consumed, and three and a half million cubic yards of earth have been excavated in the execution of these main drainage works. The total pumping power employed is 2380 *nominal* horse-power; and if at full work night and day 44,000 tons of coal per annum would be consumed. The sewage, north of the Thames, at present (1867) amounts to 10,000,000 cubic feet a day, and on the south side to 4,000,000 cubic feet per day; but provision is made for an anticipated increase up to  $11\frac{1}{2}$  millions on the north side, and  $5\frac{3}{4}$  millions on the south side, in addition to  $28\frac{1}{2}$  million cubic feet of rainfall per diem on the north side, and  $17\frac{1}{2}$  million cubic feet per diem on the south side, or a total of 63 million cubic feet per diem, which is equal to a lake of 482 acres, 3 feet deep, or *fifteen times as large* as the Serpentine in Hyde Park. The cost of these stupendous works had, in 1867, only amounted to little more than 4,000,000*l.*

### SHERIFFS.

THAT London had its Sheriffs, or "Bailiffs," as they were originally styled (or Shire Reve, scygerefa, from the Saxon *reafan*, "to levy, to seize") prior to the Norman Conquest, is attested by William the Conqueror's second charter being addressed to William the Bishop and Sweyn the Sheriff. The union of the sheriffwick of London and Middlesex took place in the reign of Henry I., of whom the citizens purchased the power of electing the sheriff of Middlesex, "to farm for 300*l.*:"\* the mayor and citizens now hold the office in fee, and appoint two sheriffs for London, which by charters is both a city and a county, though they make but one sheriff jointly for the county of Middlesex. The third charter of King John and the first charter of Henry III. minutely describe the sheriff's office and duties. Any citizen is eligible, unless he swear himself not worth 15,000*l.*; and no alderman can be chosen lord mayor unless he has served as sheriff. A list of citizens is nominated on Midsummer-day, when two are elected by the Livery in Common Hall. Much of the pomp and circumstance of past times incident to the ceremony are still maintained, and there is a good deal about it that is sentimental and picturesque. The floor of the platform, as of old, is still strewn over with cut flowers and green herbs, *mint and thyme prevailing*, and each high City functionary, from the chief magistrate downwards, carries a bouquet of flowers; the persons chosen are obliged to serve, under a penalty of 400*l.* and 20 marks; and the fines paid within the present century have exceeded 70,000*l.* In 1734 there were fined 35 persons, and 11 excused. The fine is 413*l.* 6*s.* 8*d.*, with an additional 200*l.* if the lesser fine is not paid within a certain time. In 1806 the fines amounted to 10,306*l.* 13*s.* 4*d.*, and to 9466*l.* 13*s.* 4*d.* in the year 1815. But the election is sometimes contested, as in 1830, when there were six candidates. The sheriffs-elect were formerly presented for approbation to the Cursitor Baron of Exchequer, as the representative of the Sovereign: that being found most inconvenient, a short Act of Parliament was passed to do away with the ceremony of presentation, but reserving all the other ancient ceremonies, appointing the Barons, or their chief officer, the Queen's Remembrancer, to see the ceremony performed, on the morrow of St. Michael, as described at pp. 508-509. The numerous trusts of the sheriffs are mostly performed by the under-sheriffs, but the State-duties by the sheriffs themselves. They receive from the City about 1000*l.* during their year of office; but the State and hospitality they are expected to maintain usually cost each sheriff upwards of 2000 guineas: for State-chariot, horses, and State-liveries; the inauguration dinner. The mayor's banquet, at Guildhall, on the 9th of each November, throws on the lord mayor and corporation but *one-third* of its cost; the remaining two-thirds devolve on the unhappy sheriffs, although but eight of their private friends can be invited to the feast. The cost of this is generally 800*l.* to each of the sheriffs, being 200*l.* for each of their guests: the Old Bailey dinners (*see* p. 506); besides meat at the City prisons, which the sheriffs

\* This fee-farm rent has long since been given away by the Crown, is now private property, and is paid half-yearly by the sheriff. In the charters granted to the City of London by Henry II., Richard I., and in the first charter of King John, no mention whatever is made of the sheriffwick. There are many City ordinances for the office of sheriff, disobedience to which is in some cases marked by dismissal. A History of the Sheriffdom was published in 1723.

superintend. The sheriffs are always sworn in on the eve of Michaelmas-day, upon which the Livery-men meet at Guildhall to elect the Lord Mayor for the ensuing year, and their first duty is to take part in that ceremony. The first Jew sheriff was Mr. David (now Alderman) Salomons, 1835; and the first Roman Catholic sheriff was Mr. Richard Swift, M.P., 1851: the latter was attended in State by a Romish priest as his chaplain. A factious sheriff (Slingsby Bethel) is thus commemorated, as *Shimei*, by Dryden:

“No Rechabite more shunn'd the fumes of wine;  
Chaste were his cellars, and his shrieval board  
The grossness of a City feast abhorr'd;  
His cooks, with long disuse, their trade forgot—  
Cool was his kitchen, though his brains were hot.”

*Abelom and Achitophel.*

One of the oldest shrievalty customs was that of the Lord Mayor drinking to persons for nomination to the office: it was revived in 1682, at the request of Charles II., with a factious object; when Sheriffs Shute and Pilkington were committed by the King to the Tower, upon a false charge of riot. In 1685, Alderman and Sheriff Cornish, being implicated in the Rye-house Plot, was hanged, drawn, and quartered at the end of King-street, Cheapside, fronting his own house.

Sheriff Hoare has left a journal of his shrievalty, in 1740-41, in his own handwriting: describing his investiture in his scarlet gown, the gold chain taken off the former sheriff and put on him; the delivery of the prisoners and prison-keys, and the keeper's treat of sack and walnuts, Sept. 28th; how the sheriffs, April 6th, entertained the Exchequer officers with 52 calves' heads, dressed in different manners; how, Sept. 2nd (anniversary of the Fire of London), the sheriffs went to St. Paul's, in their “black gowns, and no chains, and heard a sermon;” how, Sept. 8th, they went with the lord mayor to proclaim Southwark Fair; the Christ's Hospital treat of *sweet cakes and burnt wine*, on St. Matthew's day (Sept. 21st); and sack and walnuts on Sept. 28th, when the sheriff returned home, to his “great consolation and comfort.” In the permission granted to sheriffs to keep condemned prisoners in the Sheriffs' own houses, as well as in the gaols, is thought to be traceable the origin of the “Sponging-house.”

*The Sheriffs' Fund* was established by Sir Richard Phillips, sheriff 1807-8, who, in his *Letter to the Livery of London*, tells us that, after a few visits to Newgate, he discovered so many well-founded claims of a pecuniary nature on his charity, that it became impossible to meet a tenth part of them. A Sheriff's Fund was therefore publicly announced, and the design was generally applauded, if not generally aided; though the Sheriff collected, in the course of the year, about 500*l.*, and assisted and relieved many thousands of distressed individuals and their families, a trifling balance was handed over to his successors in the Shrievalty. The Sheriffs' Fund, in 1867, amounted to nearly 13,000*l.*

In 1840, Sheriffs Evans and Wheelton were imprisoned by the House of Commons at Westminster, for an alleged breach of privilege.

### SHOREDITCH,

**A**N ancient manor and parish, extending from Norton Folgate to Old-street, and from part of Finsbury to Bethnal-green. It was originally a village on the Roman military highway, called by the Saxons Eald (*i.e.*, Old) Street. Stow declares it to have been called Soersditch more than 400 years before his time: and Weever states it to have been named from Sir John de Soerdich, lord of the manor *temp.* Edward III.,\* and who was with that king in his wars with France. The legend of its being called after Jane Shore dying in a *ditch* in its neighbourhood, is a popular error, traceable to a black-letter ballad in the Pepys Collection, entitled, *The Woful Lamentation of Jane Shore, a Goldsmith's Wife in London, some time King Edward IV. his Concubine*

“I could not get one bit of bread,  
Whereby my hunger might be fed;  
Nor drink, but such as channels yield,  
Or stinking ditches in the field.  
Thus, weary of my life at length,  
I yielded up my vital strength

\* The same family of Soerdich, or Shordich, it is believed, possessed the manor of Ickenham, near Uxbridge, and resided at Ickenham Hall, from the reign of Edward III. to our own time. The last of this family, Paul Ricant Shordiche, civil engineer, grandson of Michael Shordiche, of Ickenham Manor, died at Antigua, July 13, 1865.

Within a ditch of loathsome scent,  
Where carrion dogs did much frequent:  
The which now, since my dying daye,  
Is Shoreditch call'd, as writers saye."

But this ballad is not older than the middle of the 17th century; and no mention is made of Jane so dying in a ballad by Th. Churchyard, dated 1587. Dr. Percy erroneously refers *Shoreditch* to "its being a common sewer, vulgarly *shore*, or drain." It is sometimes called *Sorditch*, which is the most correct, according to the above explanation. An archer of this parish, named Barlo, was styled "Duke of Shoreditch" by Henry VIII., for having outshot his competitors in a shooting match at Windsor; and the Captain of the Company of Archers of London was long after styled "Duke of Shoreditch." In the Beaufoy Collection are four Shoreditch tokens, one with figures of Edward IV. and his mistress; and the sign of *Jane Shore* is extant at a public-house in the High-street.

Shoreditch is the scene of another apocryphal tragedy; the old ballad laying here the *locus in quo* of George Barnwell's dissipation, where lived Mrs. Millwood, who led him astray:—

"George Barnwell, then quoth she,  
Do thou to Shoreditch come,  
And ask for Mrs. Millwood's house,  
Next door unto the Gun."

Now, Shoreditch was formerly notorious for the easy character of its women; and to *die in Shoreditch* was not a mere metaphorical term for dying in a sewer. (*Cunningham*). See the story in *Romance of London*, vol. i. pp. 314—324. James Smith wrote the ballad of "George Barnwell *travestie*;" and Thackeray a famous caricature romance, entitled "George de Barnwell."

*Holywell Lane* and *Mount* ("heightening of the ground for garden-plots," *Stow*), and *Holywell Row*, in Shoreditch, are named from a holy well there; and a house of Benedictine nuns of that name, founded by a Bishop of London, and rebuilt, with the Church of St. John and the chapel, by Sir Thomas Lovel, of Lincoln's Inn, Treasurer of the Household to King Henry VII., K.G., &c.

Sir Thomas Lovel was buried there June 8, 1525, "in a tombe of whyte marbell, on the southe syde of the quyre of the saide church."—(*Book of the College of Arms*.) At his funeral there were present the Bishop of London, Lord St. John, Sir Richard Wyngfield, and many others, nobles and gentlemen. The Abbot of Waltham, the Prior of St. Mary Spital, four orders of friars, the Mayor and all the aldermen of London, gentlemen of the Inns of Court, the Lord Steward, and all the clerks of London attended. Part of the Chapel remains under the floor of the *Old King John*, and the stone doorway into the porter's lodge of the Priory still exists. (*Notes and Queries*, No. 179.) Shoreditch Cross is believed to have stood on the west side of Kingsland-road, and to have been demolished in 1642.

St. Leonard's Church, at the north end of Shoreditch, is described at p. 173. Near the altar is a tablet to the memory of a descendant of the royal house of Hungary; and in the crypt is the noble altar-tomb of a descendant of the great John Corvinus Huniades, whose son was elected King of Hungary. In the belfry are recorded several feats of bell-ringing, including 16 March, 1777, when the "College Youths" performed 11,000 changes in eight hours, adding that their names would be handed down to posterity, "insaturated with glory." In the churchyard is buried Gardner, the worm destroying doctor of Long Acre; his tombstone inscribed, "Dr. John Gardner's (intended) last and best bed-room." In 1811, a writ of arrest was served by a sheriff's officer upon a dead body, as it was being conveyed to this churchyard; which occasioned Lord Ellenborough to declare the process altogether illegal. In St. Leonard's Church is some painted glass from one of the Priory windows. "Neare thereunto are buildd two publike houses for the acting and shewe of comedies, tragedies, and histories, for recreation. Thereof one is called the Courtain, the other the Theatre, both standing on the south-west toward the field." (*Stow*, 1st edit. p. 349.) Hence the *Curtain Theatre*, built in Holywell-lane, and *Curtain-road*; in the latter, at the *Blue Last* public-house, porter is traditionally said to have been first sold, about 1730.

A Public Hall has been built for St. Leonard's, facing Old-street, of Corinthian and Doric architecture; in the basement are the parochial offices; and on the first-floor the Great Hall, to hold 1800 persons. In 1854 were erected almshouses in Brunswick-street, Hackney-road, for twenty aged women of the parish; the architecture is

Jacobean. The Great Eastern Railway crosses the main street, and near the station is the first of the buildings erected by the trustees to whom the disposal of Mr. Peabody's munificent gift to the City of London was referred. Hard by is Colombia Market, erected at the expense of Miss Burdett Coutts (*see* p. 558). Philanthropy has long been at work here, but much remains to be done.

The people of St. Philip's, Shoreditch, are types of a class which is no small one—the *quiet poor*, the people who struggle earnestly to obtain subsistence out of the workhouse, who abstain from beggary, and who are not brought under our notice by their crimes. This district of Bethnal-green seems to consist almost wholly of such persons. A small space of ground is there covered with about fourteen thousand of them, weavers, costermongers, and others, each family lodged in a single room. The mass of this population subsist upon earnings that average little more than threepence a-day, for the maintenance of each body, great and small, with shelter, food, and clothing. They are not squalid or vicious, they will work their hearts away for the most miserable hire, they work and help each other, they work and grieve and die. In this one district of St. Philip's, Shoreditch, which is but a little island in the world of sorrow, there is work for thousands of warm-hearted people, who with scanty aid may do great service.—*Examiner, abridged.*

### SKINNER-STREET AND SNOW-HILL.

SKINNER-STREET, extending from Newgate-street to Holborn-hill, was built about 1802, to avoid the circuit of *Snow-hill*, also called Snor, Snore, and Sorrow-hill; the projector of the improvement was Alderman Skinner. Here was a large seven-storied house, burnt down in 1813, estimated loss 25,000*l.* At No. 41, William Godwin, author of *Caleb Williams* kept a bookseller's shop, and published his juvenile works under the name of Edward Baldwin: over his shop-door is an artificial stone relief of *Æsop* narrating his fables to children. Opposite No. 58, in 1817, was hung Cashman the sailor, who had joined a mob in plundering the gunsmith's shop at the above house.

In a shop-window on Snow-hill, Vandyke saw the picture by Dobson, which led him to seek out the painter in a garret, and recommend him to Charles I. At the sign of the Star, on Snow-hill, at the house of his friend Mr. Strudwick, a grocer, died 12th August, 1688, John Bunyan, author of the *Pilgrim's Progress*, and was buried in that friend's vault in Bunhill-fields burial-ground. At No. 37, King-street, Snow-hill, was formerly the Ladies' Charity School, which was established in 1702, and remained in the parish 145 years. Mrs. Thrale and Dr. Johnson were subscribers to this school; and Johnson drew from it his story of Betty Broom, in *The Idler*. In the school minutes, 1763, the ladies of the committee censured the schoolmistress for listening to the story of the Cock-lane Ghost, and "desired her to keep her belief in the article to herself." The School-house is No. 30, John-street, Bedford-row. Great part of Skinner-street has been taken down in clearances for the Holborn-valley and the Metropolitan Railway works.

### SMITHFIELD,

ANCIENTLY just outside the City wall, was the great public walk of the citizens, their race-course, and live market (*see* p. 561; vulgo, *Smiffel*). It was a great field for quintain-matches, and was called "Ruffians' Hall," for its frays and common fighting with sword and buckler, superseded by the deadly fight of rapier and dagger. Ben Jonson, in his *Bartholomew Fair*, speaks of "the sword and buckler age in Smithfield" having but recently passed away; and in the *Two Angry Women of Abingdon*, 1599, complaint is made that "the sword and buckler fight begins to grow out of use." The town-green had its clump of trees, "the Elms," which was the place of public execution until the middle of the 13th century, when it was removed to Tyburn. At the Elms suffered William Fitzosbert (Longbeard); here "Mortimer was executed, and let hang two days and two nights, to be seen of the people;" and here perished the patriot Wallace, on St. Bartholomew's even, 1305—the place of blood being in Cow-lane, close to the end of St. John's-court. At Smithfield, on Saturday, June 15th, 1381, Richard II. met Wat Tyler and his "shoeless ribalds," the King towards the east, near St. Bartholomew's Priory, and the Commons towards the west; when Tyler, seizing the boy-king's horse, was stabbed by Walworth,

mayor of London; and a few days after, Jack Straw, the second rebel in command, was hanged at the Elms. But Smithfield has its sunnier epoch of jousts, tournaments, and feats of arms. Here Edward III. commemorated the brilliant realities of Cressy and Poitiers; and here the doting monarch feasted Alice Pierce ("the lady of the sun") with seven days' chivalric sports. Richard II. held "a great justing" here in 1390, when was "given first the badge of the White Hart, with golden chains and crowns;" and here, in 1396, the king celebrated his marriage by three days' tournament. In 1393 "certain lords of Scotland came into England, to get worship by force of arms in Smithfield" (*Froissart*). This was likewise the scene of ordeal combats, when the place of battle was strewn with rushes: here was fought the whimsical combat of Horner and Peter, as told by Holinshed, and dramatized by Shakspeare (*King Henry VI.*, Part II.)

The reality is thus recorded in the *Grey Friars' Chronicle*, Hen. VI.: "xxv° A° Thys yere was a fyghtynge in Smythfelde betwene ane armerer of fletstret and his servant, for worddes agens the kyng, whereof hys servant asseld hym; and the servant slew the master in the felde."

In the play of *Henry VI.* is the king's sentence:

"The witch in Smithfield shall be burn'd to ashes."

The martyrology of Smithfield forms a still more terrible page of its history. Here were burnt the martyrs, from John Rogers, "the protomartyr of the Marian persecution," in 1555, to Bartholomew Leggatt, in 1611, the last martyr who suffered at the stake in England. Of the 277 persons burnt for heresy in the reign of Mary, the great majority suffered in Smithfield: a large gas-light (in the middle of the pens) denoted the reputed spot; but the discovery in 1849 of some blackened stones, ashes, and charred human bones, at 3 feet from the surface, opposite the gateway of St. Bartholomew's Church, induces the belief that here was the great *hearth* of the bigot fires. Charred human bones and ashes were also discovered, at 5 feet from the surface, at the west end of Long-lane, in July, 1854. In Smithfield, likewise, poisoners were "boiled to death" by statute, in the reign of Henry VIII.

"xij° A° Thys yere was a man soddyne in a cantherne (boiled in a cauldron) in Smythfelde, and lett up and downe dyvers tymes tyll he was dede, for because he wold a poysynd dyvers persons."

"xxij° A° This yere was a coke boylyd in a cauderne in Smythfeld, for he wolde a powsynd the bishoppe of Rochester, Fycher, with dyvers of hys servanttes; and he was lockyd in a chayre, and pullyd up and downe with a gybytt, at dyvers tymes, till he was dede."

xxxij° A° The x day of March was a mayde boylyd in Smythfelde, for poysyng of dyvers persons."  
—*Chronicle of the Grey Friars of London*, edited by J. Gough Nichols, F.S.A. Printed for the Camden Society, 1852.

From this *Chronicle* we learn that the gallows was "set up at sent Bartylmewys gate." The entries of burnings for "errysee" are also very numerous. Burning for other crimes was, however, continued: Evelyn records, "1652, May 10.—Passing by Smithfield, I saw a miserable creature burning who had murdered her husband."

In Stow's time, the encroachments by "divers fair inns, and other buildings," had left but a small portion of Smithfield for the old uses. After the Great Fire, the houseless people were sheltered here in huts. Over against Pie-corner is *Cock-lane*: Goldsmith's pamphlet respecting the Cock-lane ghost was first included in his collected Works edited by Peter Cunningham, F.S.A., 1854. This ancient locality has been much disturbed by the removal of the old market, and by railway encroachments.

BARTHOLOMEW FAIR, held in Smithfield from the reign of Henry I. to our own time, is described at p. 32-36. The Fair was finally abolished in 1853. The Churches of St. Bartholomew and St. Bartholomew-the-Less are noticed at pp. 152, 153.

#### SMITHFIELD, EAST,

**B**ETWEEN Little Tower-hill and Ratcliff-highway, was, according to Stow, before the reign of King Stephen, made a vineyard by the Constables of the Tower, being forcibly taken by them from the Priory of the Holy Trinity, within Aldgate. Here Edward III. founded New Abbey, in 1359, called the White Order, and named Eastminster. Spenser the poet is said to have been born in East Smithfield; and here, 24th July, 1629, Charles I. killed a stag, which he had hunted from Wanstead, in Essex. (*Stow*.) A plan of East Smithfield in Elizabeth's reign shows the site of an ancient stone cross, and the stocks and cage.

## SOCIETY OF ANTIQUARIES.

THE early history of this Society, from 1707, when the few members first met, "upon pain of forfeiture of sixpence," is noted at page 530: the plan was drawn up by Humphrey Wanley; and the minutes date from Jan. 1, 1718, when the members brought to the weekly meetings, coins, medals, seals, intaglios, cameos, manuscripts, records, rolls, genealogies, pictures, drawings, &c. The first president was Martin Folkes, 1751. The Society occupy apartments in Somerset House, formerly the Royal Society's. The president is Earl Stanhope, the accomplished historian. Terms of admission reduced in 1853 from eight to five guineas entrance fee; and from four to two guineas annual subscription. The strict form of admission is by the president or presiding officer placing upon his head a cocked-hat; in one hand he holds the Society's iron gilt mace, and with the other hand he welcomes the new Fellow, saying: "By the authority and in the name of the Society of Antiquaries of London, I admit you a Fellow thereof." To the names of the members are usually appended F.S.A. The Obligation Book contains the signatures of the leading antiquaries, Fellows of the Society. The Society possess a LIBRARY, noticed at page 516; and a MUSEUM, *see* page 590. A synopsis of the contents of the Museum is presented to the Fellows. The old paintings and memorials in the Meeting-room are curious.

The Society's Transactions (*Archæologia*), published annually, date from 1770. Among their other publications are *Vetusta Monumenta*, vol. vi., illustrating the Bateux tapestry; Folkes's Tables of English Silver and Gold Coins; Wardrobe-book of Edward I.; Ordinances and Regulations of the Royal Households, from Edward III. to William and Mary; Roy's Military Antiquities of the Romans in Britain; Account of the Collegiate Chapel of St. Stephen, at Westminster; Accounts of the Cathedrals of Exeter, Durham, and Gloucester, and of Bath and St. Alban's Abbey Churches; Cædmon's Metrical Paraphrase of the Field of the Cloth-of-Gold, 1520; Francis I.'s attempt to invade England, 1545; the Procession of King Edward VI. from the Tower to Westminster; Aggas's Plan of London, &c.

## SOCIETY OF ARTS.

THE Society for the Encouragement of Arts, Manufactures, and Commerce," originated with William Shipley, a drawing-master, and brother to the Dean of St. Asaph. With the concurrence of Jacob Viscount Folkestone, Robert Lord Romney, and Dr. Maddox, Bishop of Worcester, the Society first met, March 29, 1754, at Rawthnell's Coffee-house, Henrietta-street, Covent-garden: Shipley acting as Secretary; and the plan of the Society being drawn up by William Baker, the microscopist. Oliver Goldsmith took great interest in the early proceedings of the Society, in a magazine published by Newbery; and the Doctor was a candidate for the secretaryship. Much attention was then bestowed upon "the polite arts:" among the first objects was the offer of premiums for drawings by girls and boys under 16 years of age. The Society next met, 1754-5, in apartments over a circulating-library in Crane-court, Fleet-street; next in Craig's-court, Charing-cross; at the corner of Castle-court, Strand; in 1759 they removed to a house (afterwards Dibdin's Sans Souci) opposite Beaufort-buildings; and next to their new house in John-street, Adelphi, in 1774. Presidents: Viscount Folkestone, 1755-1761; Lord Rodney, 1761-1793; the Duke of Norfolk, 1793-1815; the Duke of Sussex, 1815-1843; Prince Albert, 1843-1861; and the present President, the Prince of Wales.

*Early Awards of the Society.*—The first prize to Richard Cosway, then 15. In 1758, Bacon, the sculptor, for a small figure of Peace; and he gained 9 other high prizes; 1761, Nollekens, for an alto-relievo of Jephtha's Vow, and in 1771 for a more important piece of sculpture; in 1768, Flaxman, and in 1771 the Society's Gold Medal. Lawrence, when 13, received a silver-gilt palette and 5 guineas for his crayon-drawing of the Transfiguration. In 1807, to Sir William Ross, then 12, a silver-gilt palette for a drawing of Wat Tyler; in 1810, a similar reward to Sir Edwin Landseer for an etching; and to B. Wyon, in 1818, the Gold Medal for a medal die. Among the other recipients of prizes may be named Allan Cunningham, Mulready, and Millais.

The first public Exhibition of the works of British Artists was held at the Society's house in the Strand, in 1760: hence originated the Royal Academy, who, in 1776, with Sir Joshua Reynolds at their head, refusing to paint the Society's Great Council-room at the Adelphi, next year Barry, who had signed the refusal of the rest, volunteered

to decorate the room without any remuneration at all: the pictures are described at page 603: the room is 47 feet in length, 42 feet in breadth, and 40 in height. Among the prime objects of the Society were the application of Art to the improvement of Design in Manufactures, now developed in "Art Manufactures;" the improvement of Agriculture and Horticulture; and in 1783 a reward was offered for a reaping-machine. The Society has distributed more than 100,000*l.* in premiums and bounties. The growth of forest-trees was one of its early objects of encouragement; and among the recipients of its Gold Medal (designed by Flaxman) were the Dukes of Bedford and Beaufort, the Earls of Winterton, Upper Ossory, and Mansfield; and Dr. Watson, Bishop of Llandaff. Then came Agriculture, Chemistry, Manufactures, and Mechanics, including tapestry and the imitation of Turkey carpets, Marseilles and India quilting, spinning and lace-making, improved paper, catgut for musical instruments; straw bonnets and artificial flowers. Among the Society's colonial objects were the manufacture of potash and pearlsh, the culture of the vine, the growth of silk-worms, indigo, and vegetable oils. Very many rewards have been given by the Society to poor Bethnal-green and Spitalfields weavers for useful inventions in their manufacture.

The Society's LIBRARY is described at page 525; and its MUSEUM of Models, and the Pictures and Sculpture, at pp. 603. Dr. Johnson says of Barry's paintings, "There is a grasp of mind there which you will find nowhere else." The Society held the first regular Exhibition of Useful Inventions in 1761, when a Mr. Bailey explained the several articles to the visitors. The Premiums are annually presented in the Great Room, where have been held Exhibitions of Decorative Art unequalled in this country. The Society chiefly prepared the public mind for the Great Exhibition of 1851; and here Mr. Paxton first developed his plan of its stupendous building, Nov. 13, 1850. Annual Subscription to the Society, two guineas. Among the Special Prizes is the bequest of Dr. Swiney of 100 guineas, in a Silver Cup of the same value, to be given every fifth year for the best treatise on Jurisprudence; the Cup, designed by D. Maclise, R.A., is surmounted by figures of Justice, Vengeance, and Mercy; in the centre is a niello of a hall of justice; and at the base are four kneeling slaves. The Centenary of the Society of Arts was celebrated July, 1854, by a banquet in the Crystal Palace, Sydenham.

For many years the office of Secretary was filled by Arthur Aikin, eldest son of Dr. Aikin, the friend of John Howard, and brother of Lucy Aikin; and who published a *Manual of Mineralogy, Arts and Manufactures*, and a *Chemical Dictionary*. He died in 1854, aged 80. Among the Society's Vice-Presidents was Thomas Hope, author of some tasteful works on costume, furniture, and decoration; and whose house in Duchess-street was a model of artistic design (described at page 551): here was a piece of carved furniture, which, many years after it was executed, was specially noticed by Sir Francis Chantrey: on being asked the reason, he replied, "That was my first work."

### SOHO,

**A** DISTRICT north-east of Piccadilly, extending to Oxford-street. Mr. Cunningham has found the name "Soho" in the rate-books of St. Martin's as early as the year 1632; thus invalidating the tradition by Pegge and Pennant, that Soho\* being the watchword at the battle of Sedgemoor, in 1685, it was given to King-square, in memory of the Duke of Monmouth, whose mansion was upon the south side. The boundaries of Soho are Oxford-street, north; Crown-street, east; King-street, south; and Wardour-street and Princes-street, west. Soho-square and the adjoining fields passed by royal grants to the Earl of St. Albans, the Duke and Duchess of Monmouth, and the Earl of Portland; and the streets are named from this appropriation, or from their builders. The houses in Soho-square and the streets adjoining are remarkably well built, and were tenanted by nobility and gentry until our time. *Carlisle House and Street*, named from having been the residence of the Earls of Carlisle, are described at p. 446: here lived Bach and Abel, the musical composers. *Greek-street* and *Church-street* are named from the Greek Church in Crown-street. In Greek-street the elder Wedgwood had warerooms before he removed to St. James's; and Mr. (after Sir Thomas) Lawrence, R.A., was living here in 1806. In *Wardour-street* (Old Soho) French Protestants were early

\* "Soho is the same as 'pray stop'" (Booth's *Analytical Dict.*): hence it may have been applied, in the above instance, to the extension of building in this direction, more especially as it was prohibited by a proclamation in 1671.

settlers, and probably brought the trade in foreign art. *Berwick-street* is described by Hatton (1708) as "a kind of row; the fronts of the houses resting on columns, make a small piazza." In *Dean-street* lived Sir James Thornhill, at No. 75, which has the staircase-walls of his painting; and at No. 33 died young, in 1819, Harlowe, the painter of the Trial of Queen Katharine. *Gerard-street* is named from Gerard, Earl of Macclesfield, the owner of the site, formerly "the Military Garden" of Henry Prince of Wales, eldest son of James I. (see p. 458); and *Princes-street* is built upon part of the ground: here, in 1718, lived Halley the astronomer. The landlord's title is also preserved in *Macclesfield-street*. In Gerard House lived the profligate Lord Mohun. At No. 43, Gerard-street, John Dryden resided with his wife, Lady Elizabeth Howard: his study was the front parlour; Dryden died here in 1700. In Gerard-street lived Edmund Burke at the time of Warren Hastings' trial; and here at the *Turk's Head*, (removed from Greek-street, where met the Loyal Association of 1745), Johnson, Sir Joshua Reynolds, and Burke founded the Literary Club in 1764 (see p. 251). Here a Society of Artists met in 1753; and another Society, including West, Wilson, Wilton, Chambers, Sandby, &c., who, from the *Turk's Head*, petitioned George III. to patronize a Royal Academy of Art. In Gerard-street was formerly the chief receiving-house of the Twopenny Post. *Compton-street* was built in the reign of Charles II., by Sir Francis Compton; and *New Compton-street* was first named *Stiddolph-street*, after Sir Richard Stiddolph, the owner of the land.—Dr. Rimbault, in *Notes and Queries*, No. 15. (See SQUARES: Soho.)

The Lion Brewery, in Soho, was formerly the property of the uncle of Sir Richard Phillips, who was brought up in this establishment, to which he was heir. This prospective fortune did not, however, overcome his distaste for the business of a brewer; and a passion for literature, particularly mathematics and natural philosophy, led him, at the age of 17, to detach himself from his family connexions, and seek his own chance of life.

#### SOMERSET HOUSE, OLD,

OR, SOMERSET-PLACE, on the north side of the Strand, was commenced building about 1547, by the Protector Somerset, maternal uncle of Edward VI. To obtain space and materials, he demolished Strand or Chester's Inn, and the episcopal houses of Lichfield, Coventry, Worcester, and Llandaff, besides the church and tower of St. John of Jerusalem; for the stone, also, he pulled down the great north cloister of St. Paul's; St. Mary's Church too was taken down, and the site became part of the garden. The Duke's cofferer's account shows the building, in 1551, to have cost 10,091*l.* (present money, 50,000*l.*). The architect was John of Padua, contemporary with Holbein; and there is a plan of the house among Thorpe's drawings in the Soane Museum; it was the first building of Italian architecture erected in England. Stow describes it in 1603, as "a large and beautiful house, but yet unfinished." The Protector did not inhabit the palace; for he was imprisoned in the Tower in 1549, and beheaded in 1552. Somerset Place then devolved to the Crown, and was assigned by Edward VI. to his sister the Princess Elizabeth.

"Feb. 1566-7, Cornelius de la Noyne, an alchemist, wrought in Somerset House, and abused many in promising to convert any metall into gold."—*Lord Burghley's Notes*.

In 1570, Queen Elizabeth went to the Royal Exchange, "from her house at the Strand, called Somerset House;" it also occurs as "Somerset Place, beyond Strand Bridge." The Queen lent the mansion to her kinsman, Lord Hunsdon, whose guest she occasionally became. At her death, the palace was settled as a jointure-house of the queen-consort; and passed to Anne of Denmark, queen of James I., by whose command it was called *Denmark House*. Inigo Jones erected here "new buildings and enlargements." Here the remains of Anne and James I. lay in State. For Henrietta Maria, queen of Charles I., Inigo Jones built a chapel, with a rustic arcade and Corinthian columns, facing the Thames; and here the Queen established a convent of Capuchin friars; in the passage leading from east to west, under the quadrangle of the present Somerset House, are five tombstones of the Queen's attendants.

From a manuscript inventory in the library of Mr. Gough, "the chapel goods at Somerset House" were numerous and costly. Of the goods and furniture appraised in 1649, the *arras* hangings and tapestry were of great value; the state-beds, pavilions, canopies, cloths-of-state, carpets, mantles, table-linen, &c., were very rich: one of the beds of embroidered French satin was valued at 1000*l.* Among

the pictures were the Madonna by Raphael, valued at 2000*l.*; a Sleeping Venus by Correggio, at 1000*l.*; and many by Titian, And. del Sarto, Julio Romano, Guido, Correggio, Giorgione, Vandyke, &c.

Of the tenements "belonging unto Somerset House" (20 inns), the *Red Lion*, nearly opposite, in the Strand, is the only remaining one among the signs in the list: the sculptured sign-stone is built into the house No. 342, Strand.

Inigo Jones died here in 1652. During the Protectorate, the altar and chapel were ordered to be burnt; and in 1659 the palace was about to be sold for 10,000*l.*; but after the Restoration, the Queen-mother Henrietta returned to Somerset House, which she repaired; hence she is made to exclaim, in Cowley's courtly verse:—

"Before my gate a street's broad channel goes,  
Which still with waves of crowding people flows;  
And every day there passes by my side,  
Up to its western reach, the London tide,  
The spring-tides of the term. My front looks down  
On all the pride and business of the town."

Waller's adulatory incense rises still higher:

"But what new mine this work supplies?  
Can such a pile from ruin rise?  
This like the first creation shows,  
As if at your command it rose."

*Upon her Majesty's New Buildings at Somerset House.*

Here was introduced into England the inlaying of floors with coloured woods. Pepys gossips of "the Queen-mother's court at Somerset House, above our own Queen's; mass in the chapel; the garden; and the new buildings, mighty magnificent and costly," "stately and nobly furnished;" and "the great stone stairs in the garden, with the brave echo." The Queen-mother died abroad in 1669. In 1669-70 the remains of Monk, Duke of Albemarle, "lay for many weeks in royal state" at Somerset House; and thence he was buried with every honour short of regality. Thither the remains of Oliver Cromwell were removed from Whitehall in 1658, and were laid in State in the great hall of Somerset House, "and represented in effigy, standing on a bed of crimson velvet;" he was buried from thence with great pomp and pageantry, which provoked the people to throw dirt, in the night, on his escutcheon that was placed over the great gate of Somerset Place; his pompous funeral cost 28,000*l.* On the death of Charles II., in 1685, the palace became the sole residence of the Queen Dowager, Catherine of Braganza; and in 1678 three of her household were charged with the murder of Sir Edmund Berry Godfrey, by decoying him into Somerset House, and there strangling him. (See PRIMROSE HILL, p. 692.) The Queen had here a small establishment of Capuchins, who inhabited "the New Friary," as did the Capuchins in Henrietta Maria's time, "the Old Friary;" both are shown in a plan 1706.

Strype describes the palace about 1720; its front with stone pillars, its spacious square court, great hall or guard-room, large staircase and rooms of State, larger courts, and "most pleasant garden;" the water-gate with figures of Thames and Isis; and the water-garden, with fountain and statues. Early in the last century, court masquerades were given here: Addison, in the *Freeholder*, mentions one in 1716; and in 1763 a splendid fête was given here by Government to the Venetian Ambassador. In 1771, the Royal Academy had apartments in the palace, granted by George III. In 1775, Parliament settled upon Queen Charlotte Buckingham House, in which she then resided, in lieu of Old Somerset House, which was given up to be demolished, for the erection upon the site of certain public offices; the produce of the sale of Ely House being applied towards the expenses. The chapel, which had been opened for the Protestant service, by order of Queen Anne, in 1711, was not closed until 1777. The venerable court-way from the Strand, and the dark and winding steps which led down to the garden beneath the shade of ancient and lofty trees, were the last lingering features of Somerset Place, and were characteristic of the gloomy lives and fortunes of its royal and noble inmates. "The best view of the ancient house is preserved in the Dulwich Gallery."—*Charles Reed, F.S.A.*

#### SOMERSET HOUSE

OCCUPIES the site of the *old palace*, an area of 800 feet by 500, or a few feet less than the area of Russell-square. It is the finest work of Sir William Chambers:

the first stone was laid in 1776; and the Strand front, 7 stories high, was nearly completed in 1780.\* It consists of a rustic arcade basement of 9 arches, supporting Corinthian columns, and an attic in the centre, with a balustrade at each extremity; the whole in Portland stone. The key-stones of the arches are colossal masks of Ocean, and the eight great rivers of England,—the Thames, Humber, Mersey, Medway, Dee, Tweed, Tyne, and Severn—sculptured by Carlini and Wilton. In the frieze of the three middle windows are medallions of George III., his queen, and the Prince of Wales. In the attic are statues of Justice, Truth, Valour, and Temperance; the summit being surmounted by the British Arms, supported by Fame and the Genius of England. The vaultings of the vestibule are enriched with sculptures from the antique, and are supported by two ranges of coupled Doric columns. On the east side are the entrances to the apartments of the Royal Society, the Society of Antiquaries, the Royal Astronomical Society, and the Geological Society; and on the west were those of the Royal Academy, subsequently of the School of Design, next of the University of London Board. Over the central doorway, east, is a bust of Newton; west, of Michael Angelo; by Wilton, R.A.

Facing the vestibule is a massive bronze group of George III. leaning upon a rudder, backed by the prow of a Roman (!) vessel, and a couchant lion; and at the monarch's feet is a figure of the Thames, with an urn and cornucopia: the work of John Bacon, R.A.; cost 2000*l.*

The inner side of the Strand front has in the attic statues of the four quarters of the globe; and over the centre are the British Arms, supported by marine deities holding a festoon of netting filled with fish, &c. Ornaments of antique altars and sphinxes screen the chimneys; and on the key-stones are sculptured masks of tutelary deities.

The east, west, and south sides of the edifice are Government Offices, which occupy, besides the superstructure, two stories below the general level of the quadrangle, the passages to which are skilfully contrived. The centre of the south side is enriched with Corinthian columns and pilasters, and a pediment with a bas-relief of the arms of the navy of Great Britain, a sea-nymph, sea-horses, and tritons; trophies, vases, &c.

The Thames front, 800 feet in length, is in the Venetian style, and is enriched with columns, pilasters, pediments, &c.: at each extremity is an archway opening to Somerset-place on the west, and King's College on the east; the latter built by Sir Robert Smirke, in 1829, in accordance with Chambers's design. In each end a portico stands on the summit of a semicircular arch, the bases of two out of its four columns resting on the hollow part, giving an air of insecurity intolerable in architecture.

The Terrace is 50 feet in width, and raised 50 feet above the bed of the river, upon a massive rustic arcade, which has a central water-gate surmounted with a colossal mask of the river Thames. The side arches are flanked by rustic columns, and surmounted by stone couchant lions, between 8 and 9 feet in length. The terrace is skirted with a balustrade; and here again is a colossal figure of the Thames. The walk was formerly opened to the public on Sundays: the prospect includes the river, with its magnificent bridges and picturesque craft; the city, with its domes, towers, and spires; the forest of masts; and the Surrey hills on the south: recalling Cowley's lines:

“My other fair and most majestick face  
 (Who can the fair to more advantage place?)  
 For ever gazes on itself below,  
 In the best mirrour that the world can show;  
 And here behold, in a long bending row,  
 How two joynt cities make one glorious bow;  
 The midst, the noblest place, possessed by me;  
 Best to be seen by all, and all o'ersee.  
 Which way soe'er I turn my joyful eye,  
 Here the great Court, there the rich Town I spy.  
 On either side dwells safety and delight;  
 Wealth on the left, and Power on the right.”

In the quadrangle are the Admiralty Offices, where are the Model Room; the Audit Office, the Legacy Duty Office, and Inland Revenue Office (Stamps, Taxes, and

\* Upon a brick in the wall of the western terrace, or Somerset-place, is cut R.\* S. 1780.

Excise). The mechanical stamping is executed in the basement: the presses for stamping postage envelopes, by Edwin Hill, are the perfection of automatic machinery. In Somerset-place, west, is the office of the Tithe Commission and of the Registrar-General: to the latter are transmitted registers of a million births, deaths, and marriages in a year.

Over the entrance to the Stamps and Taxes Office, on the south side, is a watch-face, popularly believed to be the watch of a bricklayer, and placed there as a memorial of his life having been saved in his fall, when the wall was building, by his watch-chain catching in some portion of the scaffold. Such is the traditional story; but the watch-face was really put up some forty years since as a meridian-mark for a transit instrument in a window of the Royal Society's ante-room, in the inner face of the north front.

Mr. Cunningham, in his *Handbook of London*, relates the following interesting circumstance, which he was told by an old clerk on the establishment of the Audit Office, at Somerset House:—"When I first came to this building," he said, "I was in the habit of seeing, for many mornings, a thin, spare naval officer, with only one arm, enter the vestibule at a smart step, and make direct for the Admiralty over the rough, round stones of the quadrangle, instead of taking what others generally took, and continue to take, the smooth pavement of the sides. His thin, frail figure shook at every step, and I often wondered why he chose so rough a footway; but I ceased to wonder when I heard that the thin, frail officer was no other than Lord Nelson, who always took," continued my informant, "the nearest way to the place he wanted to go to."

Telford, the engineer, when he came to London in 1782, got employed on the quadrangle, then erecting by Sir William Chambers.

Somerset House is almost the only public building which distinguishes the reign of George III.: it cost half a million of money by the extant accounts. The style is Italian, "refined to a degree scarcely excelled by Palladio himself." (*Elmes*.) The exterior is the perfection of masonry. The Ionic, Composite, and Corinthian capitals throughout the building were copied from models executed at Rome, by Chambers, from antique originals: the sculptors employed in the decorations were Carlini, Wilton, Ceracci, Nollekens, Bacon, Banks, and Flaxman.

The west wing, left incomplete by Sir W. Chambers, was resumed in 1852 (for the Inland Revenue Office), Pennethorne architect: this wing, 300 feet in length, will face Wellington-street; its south end was completed in 1853: the details are copied from the main building; but the ornamental sculpture is very inferior. The central mass is composed of a pediment, the tympanum of which is filled with the Royal arms, surrounded with foliage, and the national emblems of the rose, thistle, and shamrock in high relief. On the apex of the pediment is a sitting statue of Britannia, 7 feet in height and 4 feet in width at the base; at the extreme ends are sea-horses. On the lower range of the façade, standing on pedestals, there are colossal statues, 7 feet 6 inches high, emblematic of Glasgow, Edinburgh, London, Manchester, Dublin, and Belfast; and over the principal entrance a group, the centre of which contains a medallion of Queen Victoria, surrounded by a wreath of laurel, and supported by recumbent female figures of Fame and History. Somerset House covers 12 acres.

#### SOUTH-SEA HOUSE, THE,

THREADNEEDLE-STREET and Old Broad-street, was the office of the South-Sea Company, originated by Harley, Earl of Oxford, and Sir John Blunt ("much injured Blunt"), in 1711, for the discharge of nearly ten millions of public debt; for which they were granted, in 1720, the monopoly of the trade to the South Seas and the mines of Spanish America. In April, 1720, the Company's stock rose to 319*l.* per cent.; and early in June it had risen to 890*l.* per cent. The Directors then opened fresh books for a subscription of 4,000,000*l.* at 1000*l.* per cent. Before the expiration of the month, the subscription was at 200*l.* per cent premium, and the stock at nearly 1100*l.* Newton, on being asked as to the continuance of the rising of the South-Sea Stock, answered, that "he could not calculate on the madness of the people." Prior writes: "I am tired of politics, and lost in the South Sea. The roaring of the waves and the madness of the people were justly put together." A journal of Aug. 5 says: "Our South-Sea equipage increases every day; the City ladies buy South-Sea jewels, hire South-Sea coaches, and buy South-Sea estates." With the connivance of the Government, the scheme reached this climax, when the frauds of the Directors transpired: within three months the stock fell to 86*l.* per cent, and "the South Sea-Bubble" burst. (*See EXCHANGE ALLEY*, p. 333.)

The South-Sea scheme was lampooned by Swift, and satirized by Pope:

“Statesmen and patriots plied alike the stocks,  
Peeress and butler shared alike the box;  
And judges jobbed, and bishops bit the town,  
And mighty dukes packed cards for half-a-crown:  
Britain was sunk in lucre's sordid charms.”

Among the victims was the poor maniac, “Tom of Ten Thousand” (Eustace Budgell), who lost his whole fortune and his reason. The Duke of Chandos lost 300,000*l.* Gay, the poet, possessed 20,000*l.* South-Sea Stock, which he neglected to sell, and thus lost profit and principal. (See Mackay's *Popular Delusions*.)

The Company has long ceased to be a trading body: and in 1853-4 the South-Sea Stock, to the amount of ten millions, was converted or paid off. The original office (formerly the Excise Office) was in Old Broad-street, and was known as “the Old South-Sea House.” The new building in Threadneedle-street had a Doric portico, and incloses a quadrangle, with a Tuscan colonnade and a fountain: but it had latterly “few or no traces of goers-in or comers-out—a desolation something like Balelutha's.” (C. Lamb.) The great hall for sales and the dining-room were hung with portraits of governors and sub-governors, huge charts, &c. Underneath are vaulted cellars, wherein were once deposited dollars and pieces of eight. The premises, sold for 53,000*l.*, are now let in suites of chambers.

### SOUTHWARK.

OF the etymology of this ancient suburb, Mr. Ralph Lindsay, F.S.A., has collected *ninety-seven authorities*, commencing with *Sudþepke*, during the Saxon Heptarchy: but there is abundant proof that it was an extensive station and cemetery of the Romans during an early period of their dominion in Britain, attested by the fictile vases and pavements (portions of Roman houses) found in Southwark.

In November, 1866, there were found in digging the foundation of a warehouse, between Southwark-square and Winchester-street, in a space of about 100 feet by 40 feet, sixteen pits, each disclosing Roman pottery above piles and puddled clay; and when this was removed, shells, pebbles, and refuse, such as is always seen along the water's-edge, although the spot in question is now full 300 yards from the Thames shore. The piles were of oak and beech, with pointed bases, and masses of Kentish rag, which Mr. Syer Cuming thinks these groups of piles once supported as *lake dwellings*, similar to those formerly in Finsbury and Moorfields; each group with a kitchen-midden; latest food relics, oyster-shells, may indicate the presence of Romans in the neighbourhood; and near the piles was found a pavement of red tessellæ, broken fictilia, piece of a Samian bowl, &c., the remains, probably, of a Roman villa. The evidence of the age of the piles is questionable; but these discoveries, made north and south of the Thames, manifest how appropriate and descriptive was the British name of our ancient metropolis, *Lyn Din*, the lake-town.—*Proc. British Archeological Association*.

It was embanked, contemporaneously with the three great Roman roads shown to have terminated in St. George's Fields, and to have communicated with the City by a *trajectus*, or ferry, over the Thames to Dowgate, from Stoney-street, Bankside; and another to the Tower, or *Arx Palatina*, from Stoney-lane, Tooley-street. To its fortification may be traced the Saxon name, *Sudwerche*, the south work of London. It is called *Surder-virke* in a Danish account of a battle fought here by King Olaf in 1008; and *Suth-weorce* in the narrative of Earl Godwin's attack in 1052, when here was a wooden bridge. Southwark was burnt by William the Conqueror. In Domesday-book the Bishop of Baieux hath here one monastery (Bermondsey), and one haven (St. Saviour's dock). On coins of William I. we find *Svethever*, or *Svetherk*; on pennies of William II., *Svthevk*, *Svthevi*, and *Svtheur*; and about 1086, the annual revenue derived from it was only 16*l.* In 1327, upon the complaint that Southwark was the refuge of felons and thieves, Edward III. sold the vill or town to the citizens of London,—the king still being lord of the manor, and appointing the bailiff. Edward IV. granted the citizens an annual Fair; by charter of Edward VI., the full control of Southwark was vested in the citizens; and by Act of Common Council, 1550, was constituted a ward of the City, by the name of Bridge Without,—the first alderman of which was Sir John Ayliffe, 1551. Southwark has sent members to parliament since *temp.* Edward I. It was formerly famous for its artists in glass, who, *temp.* Henry VIII., glazed the windows of King's College Chapel, Cambridge.

On July 1, 1450, Jack Cade arrived in Southwark; and on Feb. 3, 1554, Sir Thomas Wyatt and the “Kentishmen” appeared here; both, probably, in St. George's Fields.

"At this time was Wyat entered into Kent-street, and so by Saint George's Church into Southwarke. Himselfe and part of his company cam in goode array downe Barnesey-strete."—*The Chronicle of Queen Jane, Queen Mary, &c.*

In 1642, Southwark was defended by a fort with four half bulwarks, at the *Dog and Duck*, St. George's Fields; a large fort with four bulwarks, near the end of Blackman-street; and a redoubt with four flanks, near the Lock Hospital, Kent-street. The ancient town, however, was but a small portion of what we know as the *Borough*, and was the Guildable Manor, extending from St. Mary Overy's Dock westward to Hay's-lane; Tooley-street, eastward; south as far as the Town-hall, thence to Counter-street and St. Mary Overy's Dock. The other portions—viz., the King's Manor and the Great Liberty Manor, were not part of the Borough until they were purchased by the Corporation of London from King Edward VI.; the Corporation being the Lords.

Southwark was first called *the Borough* in the eighteenth century; it occupies an area nearly equal to that of the City of London itself. The principal street, from the south end of Old London Bridge to St. Margaret's Hill, was formerly called *Long Southwark* (Howell's *Londinopolis*), afterwards High-street, but is now *Wellington-street*; thence *St. Margaret's Hill*; and next *High-street*, *Blackman-street*, and *Newington Causeway*. The old High-street had many picturesque gabled houses in the present century, the last of which were removed for the approach to New London Bridge (see p. 450). On the east side remain several old inns (see p. 456); one of the taverns on the west side was the *Tumble-down-Dick*, in our time painted as a drunken toper, but originally a caricature of the downfall of Richard Cromwell, "the new Protector." Nearly opposite the east end of St. Saviour's Church and tower, and the Lady-chapel, was built in 1854 a clock-tower, resembling a market-cross, of Gothic design, with a canopied niche for a statue of the great Duke of Wellington. Adjoining the *Railway Station*, was *St. Olave's School*, taken down in 1849 (see p. 726). Here also was St. Thomas's Hospital, described at p. 435. *Tooley-street* (eastward of London Bridge) is corrupted from St. Olave's, or St. Olaff's, street. Here were the *Bridge House and Yard*, for the stowage of materials for the repairs of London Bridge; besides corn granaries, public ovens, and a public brew-house; the site is now Cotton's Wharf and Hay's Wharf. The site of the *Borough Compter*, a prison, in Mill-lane, was formerly occupied by the Inn of the Abbot of Battle, its mill, &c.

Southwark possessed two *Mints for coinage*, described at pages 508 and 509: the ancient mint is thought to have stood upon the site of the house of the Prior of Lewes, in Carter-lane, nearly opposite St. Olave's Church, in Tooley-street. (See CRYPTS, p. 302.) Here too was "the Abbot's Inn of St. Augustine" (deed 1280), afterwards belonging to the St. Leger family: and thence called *Sellinger* (i.e. St. Leger's), now Chamberlain's, Wharf. Next was the *Bridge-house*; and then, eastward, the Inn of the Abbot of Battle; and *Battle-bridge*, over a water-course pertaining to the Abbey. The Manor of the Maze, Sir John Burector's, *temp.* Henry VI., is kept in memory by Maze-lane and Maze-pond; and upon the site of "St. Thomas's Tents" the Protestant refugees of the Palatinate in Germany "pitched their tents" in the reign of Queen Anne. The Maze was built upon in Aubrey's time, 17th century.

*Horselydown* extends from Tooley-street to Dockhead: it was *temp.* Elizabeth, a grazing-field (Horselydowne.) Here was rebuilt, upon a handsome scale, St. Olave's Grammar-school for 600 boys (see p. 726.)

"This street, Horselydown, (as I was told by a sober counsellor-at-law, and who said he had it from an old record,) was so called, for that the water, formerly overflowing it, was so effectually drawn off, that the place became a plain green field, where horses and other cattle used to pasture and lye down, before the street was built."—*Hutton*, 1708.

On May 11, 1854, Mr. G. R. Corner, F.S.A., communicated to the Society of Antiquaries Notices of a Drawing in the Society's possession, being a copy of a picture at Hatfield House, representing a *fête* on Horselydown; and of a plan of Horselydown in 1544, belonging to the governors of St. Olave's and St. John's Grammar-School. The picture shows a view of the Tower of London in the distance. The foreground is occupied by holiday groups; cooks are preparing a large repast at a kitchen; and in the mid-distance are the stocks with a solitary tenant. Underneath a tree are two figures, supposed to represent Ben Jonson and Shakspeare, who are not unlikely to have been present at this *fête*. To Mr. Corner we are indebted for many valuable illustrations of the antiquities of Southwark.

*The Priory of St. Mary Overie, and Church of St. Saviour*, are described at

pp. 199–202: in the Cotton Collection is a book which formerly belonged to a Prior. The church was approached from High-street by “Chain Gate” (the Priory gates).

The restoration of the tower and choir, and the Lady Chapel, by George Gwilt, F.S.A., attest Mr. Gwilt's scrupulous accuracy in following the mouldings and detail of the former design, and the care and attention which he has bestowed on the restoration of those parts which had been entirely lost: of this the gables are instances. A beautiful drawing of the choir, by the architect's eldest son, George Gwilt, hangs in the vestry: for which this young and promising architect was presented with 100 guineas.

Suffolk House, which is prominent in the foreground of Wyngreder's view, was sumptuously built, almost directly over against St. George's Church, by Charles Brandon (Duke of Suffolk) early in the reign of Henry VIII.; but coming into the king's hands, it became Southwark Place, and a Mint of Coinage, as described in p. 569. After the death of King Henry VIII., Southwark Place became neglected. Edward VI. occasionally visited it, and feasted here the Lord Mayor and Sheriffs. Queen Mary granted Southwark Place to Nicholas Heath, Archbishop of York, as a recompense for York House at Westminster. The Archbishop disliking the situation of Suffolk Place, sold the buildings, and the estate. The purchasers had most of the buildings taken down, sold the materials, and a number of small houses were erected on the site. That part of the building left standing was purchased by Alderman Broomfield, Lord Mayor, whose son marrying the daughter of Thomas Lant, Esq., the estate devolved to the Lant family. Thus, Suffolk-street, Lant-street, the Mint, and other places in Southwark obtained their names from the owners or occupiers of Suffolk-place, and its extensive park. “Brandonne's Place, in Southwerke,” is mentioned in Sir John Howard's Expenses under the year 1465. One of the last of the barbers who let blood, and drew teeth, was Middleditch, of Great Suffolk-street, Southwark, in whose shop-window were displayed heaps of drawn teeth, and at his door the barber's pole.

Southwark is a Shakspearean locality. The site of the Globe Theatre is believed to be included in that of Barclay and Perkins's Brewery. All vestiges of times as old as Shakspeare and the playhouses there seem to have vanished, except a house which some think may be part of the original *Falcon Tavern*. This is situated not far from Pellatt's Falcon Glass-works. The register of the burials in St. Mary Overie's, 1607, has “Edmund Shakspeare, the Poet's brother, player, in the church.” Gerard Johnson, the sculptor of Shakspeare's bust on his tomb, in the church, at Stratford-on-Avon, lived in St. Thomas Apostle's parish, not far from the *Globe*, and he must often have seen Shakspeare, as Dugdale assures us. In the Vestry-room of St. Saviour's church long hung a presumed portrait of Shakspeare, which is now in the collection of pictures at the Foundling Hospital.

*Montague-close*, adjoining St. Saviour's Church, was the cloister of the monastery; and, after the Dissolution, appertained to the mansion built by Sir Anthony Browne (Viscount Montague), who obtained a grant of the site of the Priory of St. Mary Overie, and the messuages, wharfs, shops, &c.; and in St. Mary Overie's Dock was situated the Priory mill.

*Bankside*, “the Bank” (Thames-bank in Domesday-book), extends from near St. Saviour's Church to Blackfriars-bridge. Here were two “Beare-gardens, places wherein were kept beares, bulls, and other beasts, to be bayted; as also mastives, in several kenles, nourished to bayt them” (*Stow*). Here Edward Alleyn, the founder of Dulwich College, kept the Bear-garden, *temp.* Elizabeth and James I.; but “His Majesty's Bear-garden” was removed to Hockley-in-the-Hole, Clerkenwell, in 1686–7. Here also were the *Globe*, the *Rose*, the *Hope*, and the *Swan Theatres* (*see* THEATRES). The Stew-houses were put down by sound of trumpet, by Henry VIII. Before the Restoration the theatres had disappeared, and Bankside became the abode of dyers, for “the conveniency of the water.” Here are *Rose Alley* and *Globe Alley*, from the old theatres. Pike Garden is named in a parliamentary survey of 1649 as “late parcel of the possessions of Charles Stuart, late king of England;” and in another survey, made in 1652, occurs “the late king's barge-house on the Bankside.” (*See* also p. 31.)

*Winchester House*, or Palace, founded about 1107, by Bishop Walter Giffard, with its court, offices, and water-stairs, occupied great part of the “Bank;” and had, on the

south, gardens, statues, fountains, and a spacious park: hence *Park-street*. The decaying palace was let as warehouses and wharfs; and the venerable remains of its great hall, with a grand circular gable-window, of rare tracery, were laid open by a fire in August, 1814. The Vinegar-works of Messrs. Pott are upon a part of the park site, and are held of the see of Winchester. Adjoining was *Rochester House*, the residence of the Bishops of Rochester: it stood on the north side of the Borough Market-place, part of which was Rochester-yard; and Rochester-street still exists. This estate, anciently called Grimes Croft, was granted by William, second Earl of Warren, to the monks of Rochester, by placing his knife upon the altar of St. Andrew. Rochester House was taken down in the year 1604.

*Deadman's-place*, west of the Market, is said to be corrupted from Desmond-place, where dwelt the Earl of Desmond: here are the College founded by Thomas Cure, saddler to Edward VI., Mary, and Elizabeth; almshouses built by Edward Alleyn, 1616, and other almshouses.

*Southwark Tokens*.—In the Beanfof Collection, at Guildhall, are "the Bore's Head," 1649 (between Nos. 25 and 26, High-street): it was leased to the family of the author of the present volume, and was sublet in tenements, as "Boar's-Head-court," taken down in 1830. Next also is a "Dogge and Dycke" token, 1651 (St. George's Fields); "the Greene Man," 1651 (which remains in Blackman-street); "ye Bull Head Taverner," 1667, mentioned by Edward Alleyn, founder of Dulwich College, as one of his resorts; "Duke of Suffolk's Head," 1669; and the "Swan with Two Necks."

Southwark and the adjacent districts are noted for their manufactures: as rope-walks and tan-pits at Bermondsey; barge and boat-builders, sawyers and timber-merchants, at Rotherhithe; also, hat-making, brewing, vinegar-yards, and distilleries, glass-houses, potteries, and soap and candle works.

The High-street is crossed nearly opposite St. Saviour's church by an ugly railway bridge, and the line trends thence, anaconda-like, along the south bank of the Thames, which it crosses by three bridges. In the railway works were demolished some Elizabethan houses in Stoney-street, close to the palaces of the Bishops of Rochester and Winchester, between the bear-gardens of Bankside and the Clink Prison, chiefly occupied by the licensed keepers of houses of infamous resort, from the twelfth till the sixteenth century, when that nuisance was at length suppressed by law. Almost parallel extends *Southwark-street*, flanked with groups of lofty warehouses, banking-houses, Hop Exchange, &c.; eastward, the street is continued into Bermondsey and Rotherhithe, and is a noble improvement. A *subway*\* is formed in the centre of the road, and is thus described:—

This subway is an arched passage, 12 ft. wide and nearly 7 ft. high, from which are side passages leading to cellars built beneath the footwalks. In the subway the gas, water-mains, and telegraph-wires are laid, the side passages conveying the two former necessities direct into the cellars, and thence into the houses themselves. The object of this new work is, of course, to do away with the nuisances caused by the stoppage of thoroughfares to repair a gas or water main. This subway is wide and high enough to allow of any repairs of this kind being carried on. The drains from the houses are formed of strong stoneware pipes, passing at a rather steep incline beneath the subway into the main sewer, which is placed below the floor of the passage in the centre, but not so deep but that it can instantly be opened for repairs or removal of stoppages. Every part of the subway is ventilated in the most perfect manner.

The Southwark arms are, Arg., a rose displayed. The Bridge-house mark is usually, but erroneously, used to designate Southwark, because the manors form part of the Bridge-house estates. That mark is, Azure, an annulet ensigned with a cross patée, or, interlaced with a saltire conjoined in base, of the second. The City jurisdiction, according to the inscription upon the boundary-stone at the western extremity of Bethlehem Hospital wall, and other parts of the liberties, extends northward to the Thames, and eastward to St. Thomas-a-Watering in the Kent-road; comprehending the parishes of St. George, St. Saviour (exclusive of the Clink Liberty), St. Thomas, St. Olave, and St. John. Southwark occupies an area of 590 acres; the City of London 600 acres.

At No. 6, Blackman-street, Sir James South (eldest son of a dispensing chemist in the High-street) made several valuable astronomical observations. (See KENSINGTON, p. 488.) At No. 104, High-street, sign of the Golden Key (of which a Token exists), lived Mr. Elliotson, chemist and druggist, father of John Elliotson, M.D., F.R.S.

The historic Inns of Southwark are described at p. 456.

\* *Subways*, or passages beneath the streets of the metropolis, were advocated in 1828, by Mr. Williams, of Birch-in-lane, in a bulky octavo volume. In 1859, this great improvement was commenced by the Board of Works under the new street leading from Cranbourn-street to Covent-garden.

## SOUTHWARK FAIR,

ANCIENTLY called "Our Lady Faire in Southwark," was granted by Edward VI., in 1550, when the sum of 647*l.* 2*s.* 1*d.* was paid by the Corporation of London for the two manors and divers lands and tenements. The Fair, held on September 7th, 8th, and 9th, was opened by the Lord Mayor and Sheriffs riding to St. Magnus' Church after dinner, at two o'clock in the afternoon: the former vested with his collar of SS., without his hood; and all dressed in their scarlet gowns, lined, without their cloaks. They were attended by the Sword-bearer, wearing his embroidered cap, and carrying "the pearl sword;" and at the church were met by the aldermen, all of whom, after evening prayer, rode over the bridge in procession, passed through the Fair, and continued either to St. George's Church, Newington Bridge, or to the stones pointing out the City liberties at St. Thomas-a-Watering. They then returned over the bridge, or to the Bridge House, where a banquet was provided, when the aldermen took leave of the Lord Mayor; and all parties being returned home, the bridge-masters gave a supper to the Lord Mayor's officers. Sheriff Hoare thus describes the ceremony in 1741: On the 8th of September the Sheriffs waited on the Lord Mayor in procession, "the City music going before, to proclaim *Southwark Fair*, as it is commonly called; although the ceremony is no more than our going in our coaches through the Borough, and turning round by St. George's Church, back again to the Bridge House; and this is to signify the licence to begin the Fair." "On this day the Sword-bearer wears a fine *embroidered cap*, said to have been worked and presented to the City by a monastery." Evelyn and Pepys describe the Fair. Jacob Hall was one of its famous rope-dancers; and early in the last century, Crawley's puppet-show of the Creation, "with the addition of Noah's Flood," Squire and Sir John Spendall; Dancing Dogs, and "the Ball of Little Dogs," danced before Queen Anne; were Southwark Fair sights. Hogarth, in his plate of the Fair, shows Figg the prize-fighter, and Cadman the rope-flyer. In 1743 the Fair continued fourteen days, and extended to the Mint: an attempt was then made to put down the shows, but the Fair was not finally suppressed until 1763: the booth-keepers used to collect money here for Marshalsea prisoners.

## SPITALFIELDS

INCLUDES large portions of Bethnal-green, Shoreditch, Whitechapel, and Mile-end New-town. Part of the site was anciently *Lolesworth*, a cemetery of Roman London, in breaking up which, "for clay to make brick," about 1576, were found several urns full of ashes and burnt bones, and copper coins of Claudius, Vespasian, Nero, Antoninus Pius, Trajan, &c.; also fragments of Roman Pottery and glass. (*See Stow*, p. 64.) At the same time were found some stone coffins (British or Saxon), which are preserved in the vaults of Christchurch.

Spitalfields is named from its having been the site and property of the Priory and Hospital of St. Mary Spittle without Bishopsgate, founded in 1197, by Walter Brune, citizen of London, and Rosia his wife, for Augustine canons; at the Dissolution in 1534 it had 130 beds for the receipt of the poor of charity. Bagford, in Leland's *Collectanea*, mentions the priory, then standing, strongly built of timber, with a turret at one angle: its ruins were discovered early in the last century north of Spital-square. In one of the houses built here lived the celebrated Lord Bolingbroke. At the north-east corner of Spital-square was placed the Pulpit-cross, whence were preached, in the open air, the Spital Sermons\* (*see* p. 157): the pulpit was destroyed in the Civil Wars. In the Map executed in the reign of Elizabeth, the Spittle *fields* are at the north-east extremity of London, with only a few houses on the site of the Spital. The map of a century later shows a square field bounded with houses, with the old Artillery Ground on the west, which was let by the last prior to the Artillery Company, and is now the site of Artillery-street. "A Faire in Spittlefields" is described in a scarce pamphlet

\* Hatton relates of a Spital-sermon:—"In 1632, three brothers, named Wincope, were called from remote places, and preached on the three sermon-days, agreeing so nicely in their subject, that the second continued what the first began, and the third brought it to a conclusion."

in the British Museum, whereat William Lilly announces his astrological wares for sale; and Nicholas Culpepper, the herbalist, says:

“Bid money, tho’ but little;  
For night comes on, and we must leave the Spittle.”

Culpepper occupied a house then in the fields, and subsequently a public-house at the corner of Red-Lion-court. Hard by the priory site is Paternoster-row, where, and not in Paternoster-row, St. Paul’s (*see* p. 668), some antiquaries maintain, Tarlton, the player at the Curtain Theatre, “kept an ordinary in these pleasant fields.”

An Order in Council, 5th March, 1669, states, the inhabitants of the pleasant locality of Spitalfields petitioned the Council to restrain certain persons from digging earth, and making and burning bricks in these fields, which would not only render them “very noisome,” but “prejudice the cloathes which are usually dyed in two large grounds adjoining, and the rich stuffs of divers colours which are made in the same place, by altering and changing their colours,” &c.

Bethnal-green and Spitalfields were grassy open spaces in the last century; but Spital-square, at the south-east corner, has been the heart of the silk district since “the poor Protestant strangers, Walloons and French,” driven from France by the revocation of the Edict of Nantes, settled here, and thus founded the silk-manufacture in England; introducing the weaving of lustrings, alamodes, brocades, satins, paduasoyes, ducares, and black velvets: in 1713 it was stated that silks, gold and silver stuffs, and ribbons, were made here as good as those of French fabric; and that black silk for hoods and scarfs was made annually worth 300,000*l.* Tapestries and hangings of the interiors of English houses were manufactured in Spitalfields, even before the settlement of the French refugees in that district. In the Queen’s Bedchamber at Windsor Castle was a bed of state, of rich flowered velvet, made at Spitalfields in the reign of Queen Anne. About this time, bedchambers were hung with tapestry made in Spitalfields, where an artist, named Boyston, excelled in tapestries of harvest-fields and other ruralities. After the discontinuance of the use of tapestry, the skill of the weavers was confined mainly to the manufacture of silks and velvets. During the reigns of Anne, George I. and II., the Spitalfields weavers greatly increased: in 1832, 50,000 persons were entirely dependent on the silk-manufacture; and the looms varied from 14,000 to 17,000. Of these, great numbers are often unemployed; and the distribution of funds raised for their relief has attracted to Spitalfields a large number of poor persons, and thus pauperized the district. The earnings of weavers in 1854 did not exceed 10*s.* per week, working from 14 to 16 hours a day: the weaving is either the richest or the thinnest and poorest. In 1867, the Rev. Isaac Taylor, Incumbent of St. Matthias’, in a terrible and touching picture of the condition of his parish, stated:

“The great difficulty which confronts us is the dead level of excessive poverty. A skilful workman, making costly velvets or rich silks, and labouring from 12 to 16 hours a day, will only earn, on an average, about 12*s.* a week. There are many who do not earn above 7*s.* or 8*s.*; and the labour required to gain these miserable wages is great and excessive. To make a single inch of velvet, the shuttle has to be thrown 180 times, 180 times the treadles have to be worked, 60 times the wire has to be inserted, 60 times to be withdrawn, 60 times the knife has to be guided along the whole breadth of the work, and 60 times the pressure of the chest has to be exerted on a heavy beam, which is used to compress the work. 600 distinct operations are thus required to make one single inch of velvet, the average payment for making which is 1*d.* The women, whose strength does not enable them to move so heavy a beam with the chest, are employed in making velveteens, chenilles, silk and cotton trimmings, and bead trimmings. They earn about one-third the wages of the men. For fancy braid the payment is one halfpenny a yard. Even at these starvation wages work is very scarce; the men are often for weeks together out of employ, or, as it is termed by a wretched mockery, ‘at play.’ Yet these poor people, with all the burden of their poverty, are wonderfully uncomplaining and self-reliant.”

The weavers are principally English, and of English origin; but the manufacturers or masters are of French extraction; and the Guillebauds, the Desormeaux, the Chabots, the Turquands, the Merceron, and the Chauvets, trace their connexion with the refugees of 1635. Many translated their names into English, by which the old families may still be known: thus, the Lemaitres called themselves Masters; the Leroy, King; the Tonneliers, Cooper; the Lejeunes, Young; the Leblancs, White; the Lenoirs, Black; the Loiseaux, Bird. Many of the weavers still cherish proud traditions of their ancestry; though now, perhaps, only clad in rags, they bear the old historic names of France—names of distinguished generals and statesmen; names such as Vendome, Ney, Racine, De Foe, La Fontaine, Dupin, Bois, Le Beau, Auvache, Fontaineau, and Montier.

The weavers' houses, built in narrow streets, have wide latticed windows in the upper stories, which light the work-room. Upon the roofs are bird-traps and other bird-catching contrivances; for the weavers supply London with singing-birds, as linnets, woodlarks, goldfinches, greenfinches, and chaffinches; and many, in October and March, get their livelihood by systematic bird-catching; matches of singing or "jerk-ing" call-birds are determined by the burning of an inch of candle.

Spitalfields weavers have extremely small heads,  $6\frac{1}{2}$ ,  $6\frac{5}{8}$ , and  $6\frac{3}{4}$  inches being the prevailing widths; and the same fact is observable in Coventry; the medium size of the male head in England is 7 inches. The weavers' practice of *singing at their looms* was doubtless brought with them from the Continent, as was the custom of woollen-weavers.

"I would I were a weaver, I could sing all manner of songs."—*Falstaff*, in *Henry IV.* Part I. act ii.  
 "He got his cold with sitting up late, and singing catches with clothworkers."—*Cubbard*, in *Ben Jonson's Silent Woman*, act iii. sc. 4.

Spitalfields was a hamlet of Stepney until 1729, when it was made a district parish, and Christchurch was consecrated (*see* p. 157). Among the parochial charities is "cat and dog money," an eccentric bequest to be paid on the death of certain pet cats and dogs: a sickening bequest in such a locality of poverty and starvation.

The *Sisters of Charity* have been working in these districts since the winter of 1854; they visit an extent of several miles of habitations of the poor, tending, washing them, and nursing them, and supplying them with warm food, clothes, and other things necessary to sickness; and these ministering angels nurse the sick, who cannot be removed to hospitals, in their own houses.

In *Crispin-street* is the Government School of Design, where are awarded prizes for designs for fabrics, drawing and painting from nature, crayon-drawing, &c. Spitalfields Market is mentioned by Hatton, in 1708, as fine for "flesh, fowl, and roots." In the district are VICTORIA PARK (*see* p. 655), and the *City Consumption Hospital*.

In *Crispin-street*, until 1845, the *Mathematical Society* occupied large apartments, for their philosophical instruments and library of 3000 volumes. The Society, which also cultivated electricity, was established in 1717, and met at the *Monmouth's Head* in Monmouth-street, until 1725, when they removed to the *White Horse Tavern*, in Wheeler-street; from thence, in 1735, to *Ben Jonson's Head*, in Pelham-street; and next to *Crispin-street*. The members were chiefly tradesmen and artisans; among those of higher rank were Canton, Dollond, Thomas Simpson, and Crossley. The Society lent their instruments (air-pumps, reflecting telescopes, reflecting microscopes, electrical machines, surveying instruments, &c.), with books for the use of them, on the borrowers giving a note of hand for the value thereof. The number of members was not to exceed the square of seven, except such as were abroad or in the country; but this was increased to the squares of eight and nine. The members met on Saturday evenings: each present was to employ himself in some mathematical exercise, or forfeit one penny; and if he refused to answer a question asked by another in mathematics, he was to forfeit twopence. The Society long cherished a taste for exact science; but in 1845, when on the point of dissolution, the few remaining members made over their books, records, and memorials to the Royal Astronomical Society, of which these members were elected fellows.—Abridged from *Weld's History of the Royal Society*, vol. i. pp. 467-8. At Bethnal-green, in 1848, Sir Balthazar Gerbier established "The Academy for Foreign Languages, and all Noble Sciences and Exercises."

### SPRING GARDEN,

ORIGINALLY an appurtenance to the palace of Whitehall, and situate on the north-western verge of St. James's Park, is named from its water-spring or fountain, set playing by the spectator treading upon its hidden machinery—an eccentricity of the Elizabethan garden. Spring Garden, by a patent which is extant, in 1630 was made a bowling-green by command of Charles I. "There was kept in it an ordinary of six shillings a meal (when the King's proclamation allows but two elsewhere); continual bibbing and drinking wine all day under the trees; two or three quarrels every week. It was grown scandalous and insufferable: besides, my Lord Digby being reprehended for striking in the King's garden, he said he took it for a common bowling-place, where all paid money for their coming in."—(*Mr. Garrard to Lord Strafford.*)

In 1634 Spring Garden was put down by the King's command, and ordered to be hereafter no common bowling-place. This led to the opening of "a New Spring Garden" (Shaver's Hall), by a gentleman-barber, a servant of the lord chamberlain's. The old garden was, however, re-opened; for 13th June, 1649, says Evelyn, "I treated

divers ladies of my relations in Spring Gardens:" but 10th May, 1654, he records that Cromwell and his partisans had shut up and seized on Spring Gardens, "w<sup>ch</sup> till now had been y<sup>e</sup> usual rendezvous for the ladys and gallants at this season."

Spring Garden was, however, once more re-opened; for, in *A Character of England*, 1659, it is described as

"The inclosure not disagreeable, for the solemnness of the grove, the warbling of the birds, and as it opens into the spacious walks at St. James's. . . . It is usual to find some of the young company here till midnight; and the thickets of the garden seem to be contrived to all advantages of gallantry, after they have refreshed with the collation, which is here seldom omitted, at a certain cabaret in the middle of this paradise, where the forbidden fruits are certain trifling tarts, neat's tongues, salacious meats, and bad Rhenish."

"The New Spring Garden"\* at Lambeth (afterwards Vauxhall) was flourishing in 1661-3; when the ground at Charing Cross was built upon, as "Inner Spring Garden" and "Outer Spring Garden." Buckingham-court is named from the Duke of Buckingham, one of the rakish frequenters of Spring Garden; and upon the site of Drummond's banking-house was "Locket's Ordinary, a house of entertainment much frequented by gentry," and a relic of the Spring Garden gaiety:

"For Locket's stands where gardens once did spring"

Dr. King's *Art of Cookery*, 1709.

In Outer Spring Garden lived, 1661, Sir Philip Warwick, author of the *Memoirs* which bear his name: "*Warwick-street*, adjoining, was, I believe, named after him." (*Cunningham*.) Here, too, lived Philip, Earl of Chesterfield, 1667-1670. Prince Rupert resided here from 1674 to his death:

"1682, Nov. 29.—Died of a fever and plenrisy, at his house in the Spring Garden, Rupert, Prince Palatine of the Rhine, &c., in the 63rd year of his age."—*Historian's Guide*, 3rd edit. 1688.

Sir Edward Hungerford lived here in 1631, after he had parted with his estate for the site of *Hungerford Market*.

Milton, when first appointed Latin secretary, lodged at one Thomson's, at Charing Cross, opening into the Spring Garden. Here the witty and beautiful dramatist, Mrs. Centlivre, died, December 1, 1723, at the house of her third husband, Joseph Centlivre, "Yeoman of the Mouth" (head cook) to Queen Anne. Colley Cibber lived "near the *Bull-head Tavern*, in Old Spring Garden," from 1711 to 1714. George Canning, in 1800, resided at No. 13, right-hand corner at Cockspur-street.

Spring Garden was formerly noted for its sights: the Incorporated Society of Artists exhibited here; here, in 1806, at Wigley's Rooms, were shown Serres's Panorama of Boulogne; foreign cities and sea-pieces; also Maillardet's automatic figures, including a harpsichord-player, a rope-dancer, and a singing-bird. Here also was exhibited Marshall's *Peristrepthic* Panorama of the Battle of Waterloo, which the spectators viewed turning round.

Berkeley House, on the right as you enter by the Spring-garden-gate, St. James's Park, the mansion of the Berkeley family, was taken down in 1862, and upon its site has been erected the chief office of the Metropolitan Board of Works, of poor but pretentious design.

### SQUARES.

THE garden-spaces or planted Squares are the most recreative features of our metropolis; in comparison with which the *piazze*, *plazas*, and *places* of continental cities are wayworn and dusty areas, with none of the refreshing beauty of a garden or green field:

"Fountains and trees our wearied pride do please,  
Even in the midst of gilded palaces;  
And in our towns the prospect gives delight,  
Which opens round the country to our sight."

*Sprat*, quoted in *Wren's Parentalia*.

Yet the majority of the London Squares are the growth of the last century; and few

\* Named from the Garden at Charing Cross, as we do not trace any "water-spring" at Vauxhall. Sir John Hawkins says:—"Sir Samuel Morland having planted the large garden with stately trees, and laid it out in shady walks, it obtained the name of Spring Gardens. There was likewise a 'New Spring Garden' at Pimlico, the name having been applied to a public garden generally."

of the western Squares existed before 1770; their sites being then mostly sheep-walks, paddocks, and kitchen-gardens. It was at first attempted to name squares "quadrates:" in 1732 Maitland wrote, "the stately quadrate denominated King-square, but vulgarly Scho-square;" and the phrase is retained in Maitland's edition of 1756.

BEDFORD SQUARE, which appears in Harwood's Map, 1799, was formerly "St. Giles's ruins." The centre house on the east side used to be the official residence of the Lord Chancellor. Lord Loughborough lived there, and at the time of the Cornwall Riots it was occupied by Lord Eldon. The mob made an attack on the house at night, when Lord and Lady Eldon escaped over the back wall into the British Museum Gardens, and took refuge in the guard-house. Here it was that the Prince of Wales called upon the Chancellor, and got from him, as he lay in bed with gout, a vacant Mastership in Chancery for the Prince's friend, Jekyll. The keystone over the entrance doorway of some of the houses displays a very fine made head. (*Builder*, No. 651.) Some of the houses were designed by Sir William Chambers.

BELGRAVE, CHESTER, and EATON SQUARES, named from their ground-landlord, the Marquis of Westminster, are noticed at p. 37: the centres of the first and third were nursery-grounds. At No. 19, Chester-square died, in 1852, Dr. Mantell, F.R.S., the eminent geologist.

BERKELEY SQUARE, built 1698, is named from Berkeley House, which occupied the site of Devonshire House. On the south side of this square is Lansdowne House (*see* p. 551): the beehive upon the gate-piers is one of the family crests. At No. 11 died Horace Walpole in 1797. No. 44, built by Kent, has a noble staircase and saloon. At No. 45 Lord Clive destroyed himself in 1774. A few link-extinguishers remain flanking doorways: the trees in the centre are old and picturesque: here was formerly an equestrian statue of George III.

BLOOMSBURY, first named SOUTHAMPTON, SQUARE, from Southampton House upon its north side, was built by the Earl of Southampton, whose daughter, Lady Rachel Russell, dates her *Letters* from here. Evelyn, in 1665, notes it as "a noble square or piazza, a little town," with "good aire." The site formerly constituted the manor of Lomesbury, in which, according to Hughson, the kings of England anciently had their stables until removed to the Mews, near Charing-cross. Coming into the hands of the Russell family, by marriage with the Earl of Southampton, it was called first Southampton-square, and then Bloomsbury-square. Bedford House has been ascribed to Inigo Jones, but it would seem erroneously. It was built a few years after his death. Thornhill's copies of Raffaele's Cartoons were in one of the wings of this house. It was sold by auction in the year 1800, and immediately pulled down. Pope alludes to this once fashionable quarter of the town:—

"In Palace-yard, at nine, you'll find me there,  
At ten, for certain, sir, in Bloomsbury-square."

The Grand Duke Cosmo was taken to see Bloomsbury as one of the wonders of England. Baxter, the Nonconformist divine, lived here when he was persecuted by Judge Jeffreys. The Earls of Chesterfield had a mansion here. Sir Hans Sloane lived on the south side; and here Dr. Franklin came to see Sloane's *Curiosities*, "for which," says Franklin, "he paid me handsomely." Dr. Radcliffe lived here when he gave 520*l.* to the poor Nonjuring clergy. Lord Mansfield's house was at the north-east corner, when it was burnt to the walls by the rioters of 1780; and his books, papers, and furniture made into a bonfire in the square. Lord and Lady Mansfield escaped by a back door from the mob. On the north side is a bronze sitting statue of Charles James Fox, by Westmacott. Ralph describes this side as "one of the finest situations in Europe for a palace," with gardens and view of the country. Dr. Aken-side, and the elder Mr. Disraeli, resided in this square. The latter compiled the *Curiosities of Literature* in No. 6, which house was built in 1766, by Isaac Ware, the editor of *Palladio*, originally a chimney-sweep, and whose skin, it is said, was so engrained with soot, that he bore till his dying day the marks of his early calling.

BRIDGEWATER SQUARE, Barbican, was once the site of the mansion and gardens of the Earl of Bridgewater. "The middle is neatly enclosed with palisado pales and set round with trees, which renders the place very delightful."—*Strype*.

BRUNSWICK and MECKLENBURGH SQUARES, with the Foundling Hospital and grounds between them, form an airy group; northward is TORRINGTON SQUARE: No. 55, residence of Sir Harris Nicolas, the genealogist.

BRYANSTON and MONTAGUE SQUARES were built on Ward's Field, and the site of Apple Village, by David Porter, who was once chimney-sweeper to the village of Marylebone. At St. Mary's Church, Bryanston-square, June 7, 1838, Miss Landon (L. E. L.) was privately married, by her brother, to George Maclean, governor of Cape Coast Castle. The Rev. Dr. Dibdin was Rector (*see* p. 198).

CAVENDISH SQUARE (between two and three acres), named from the Lady Henrietta Cavendish Holles, the wife of Harley, Earl of Oxford, was planned on the north side of Tyburn-road in 1715, when the locality was infested by footpads, who often robbed and stripped persons in the fields between London and Marylebone. Margaret-street Chapel about seventy years since was an isolated building in Marylebone-fields: a shady "Lover's Walk" passed close by the chapel to Manchester-square; another walk led through the fields to Paddington. The Square was laid out about 1717; the whole of the north side being taken by "the Grand Duke" of Chandos, who proposed to build here a palatial residence, and to purchase all the property between Cavendish-square and his palace of Canons at Edgeware, so that he might ride from town to the country *through his own estate*. In the British Museum is a view of the mansion, designed by John Price: the wings only were built; one being the large mansion at the corner of Harley-street, which was occupied by the Princess Amelia, aunt to George III.; also by the Earl of Hopetoun, and the Hopes of Amsterdam; next by George Watson Taylor, Esq., who assembled here a very valuable collection of paintings. The other wing of the Duke's plan is the corresponding mansion at the corner of Chandos-street. The centre is principally occupied by two splendid mansions, with Corinthian columns, designed by James of Greenwich. At this period Hareourt House on the west side was the only other house here: "it presents, with its high court-walls and *porte-cochère*, more the appearance of a Parisian mansion than any other house in London." (*S. Angell*.) The ground was first sold at 2s. 6d. per foot. In the centre of the Square is an equestrian metal statue of William Duke of Cumberland; and on the south side a colossal standing bronze statue of Lord George Bentinck, third son of the Duke of Portland. Southward is *Holles-street*, where, at No. 24, Lord Pyron was born. Mr. Coke, in 1833, told Haydon, the painter, that he remembered a fox killed in Cavendish-square, and that where Berkeley-square now stands was an excellent place for snipes.

CHARTERHOUSE SQUARE is described by Hatton (1708) as "a pleasant place of good (and many new) buildings, the whole in the form of a pentagon." Here was Rutland House, in which the Venetian ambassadors lodged. Baxter the Nonconformist died in this square in 1691. It has been partly taken down. On the north side is the CHARTERHOUSE, *see* pp. 85-88.

COVENT GARDEN, *see* pp. 292-296.

DEVONSHIRE SQUARE, Bishopsgate Without, "a pretty though very small square inhabited by gentry and other merchants" (*Hatton*, 1708), was named from the Earls of Devonshire having lived there in a mansion previously possessed by the Earl of Oxford: "the Queen's majesty Elizabeth hath lodged there" (*Stow*.) The mansion was built in the midst of gardens and bowling-alleys, by Jasper Fisher, one of the six Clerks in Chancery, who thereby outrunning his income, the house was mockingly called "Fisher's Folly." It next became a conventicle; hence "Fisher's Folly congregation" (*Hudibras*.) Here Murray and Dockwra set up the Penny Post in 1680. Murray also introduced the Club of Commerce (one of a trade); and at Devonshire House he opened a Bank of Credit, where money-bills were advanced upon goods deposited.

EUSTON SQUARE, St. Pancras, is named from the ground-landlords, the Dukes of Grafton and Earls of Euston. Upon the site of the north side of the square, then a nursery-garden, Dr. Wolcot, the political satirist (Peter Pindar), ended his misspent life in blindness.

FINSBURY SQUARE was built in 1789, by George Dance, R.A., on the north side of Moorfields. At the north-east corner lived the estimable Dr. Birkbeck, the founder of Mechanics' Institutions: he died here December 1, 1841, the eighteenth anniversary of the establishment of the first Mechanics' Institution in London.

FITZROY SQUARE is named from Charles Fitzroy, second Duke of Grafton: the E. and S. sides were commenced by W. and J. Adam in 1790. On the south side lived Sir W. C. Ross, R.A., the celebrated miniature-painter; and at No. 7, Sir Charles L. Eastlake, President of the Royal Academy.

GOLDEN SQUARE, Westminster, "not exactly in anybody's way, to or from anywhere," was "so called from the first builder, a very new and pleasant square" (*Hatton*, 1708); contemporary evidence, more reasonable than Pennant's hearsay anecdote that the name was Gelding, altered from the sign of a neighbouring inn. One of its earliest inhabitants was Lord Bolingbroke, when secretary-at-war, 1704-8. In the centre of the square is a statue of George II., formerly at Canons, near Edgware. Golden-square is a locality of Smollett's *Humphrey Clinker*, and of Dickens's *Nicholas Nickleby*.

HAYDON SQUARE, Minories, is named from Alderman Haydon, the ground-lord. Close by were found, in 1852, sculptured gravestones and urns; and in 1853 a sarcophagus; all of Roman work. In Haydon-square lived Sir Isaac Newton when Master of the Mint: the house was taken down about 1852. Here is Allsopp's Burton Ale Depôt, occupying 20,000 square feet; cargoes of ale are sent here from Burton, by railway (140 miles), in the afternoon; and the platforms and wagons are lowered by hydraulic cranes into the vast cellars. Here also is the spring of pure water, which formerly supplied the priory of the Holy Trinity upon this spot.

GORDON SQUARE, New-road, has at the south-west angle the Catholic Apostolic Church: cathedral-like Early English exterior, and Decorated interior, with a triforium in the aisle-roof; the ceilings are highly enriched, and some of the windows are filled with stained glass; the northern doorway and porch, and the southern wheel-window, equal old examples; and gothic houses, with projections and gables, pointed-headed windows, and traceried balconies, group around the church: architects, Brandon and Ritchie. "Near the spot occupied by Gordon-square, a circular enclosure was constructed, about the year 1803, for the exhibition of the "first locomotive," the production of Trevithick. Its performance was *then* so satisfactory that a bet was offered by the proprietors to match the engine to run a greater number of miles in twenty-four hours than any horse that could be produced, but there were no takers.—Communicated to *The Builder*."

GOUGH SQUARE, between Fetter-lane and Shoe-lane, contains the house, No. 17, wherein Dr. Johnson compiled most of his Dictionary; his amanuenses working in the garrets.

GROSVENOR SQUARE, six acres, is named from Sir Richard Grosvenor, who died in 1732. The houses, some of rubbed bricks with stone finishings, are spacious. The centre landscape-garden was laid out by Kent, and the stone pedestal in the centre once bore an equestrian statue of George I.; the line of fortification during the Civil War ran across the space now the square. It is a place of high fashion; and Dr. Johnson once desired to be "Grosvenor of that ilk." Here lived Lord North and John Wilkes; and at No. 39 (the Earl of Harrowby's) his Majesty's Ministers were to have dined on the evening the Cato-street conspirators had planned to assassinate them, and to bring away the heads of Lords Liverpool and Castlereagh in two bags!

HANOVER SQUARE, built about 1718, was named in honour of George I., when it was proposed to change the place of execution from Tyburn elsewhere, lest the procession of malefactors might annoy the inhabitants of the new square. Here lived Field-Marshal Lord Cobham, the owner of princely Stowe. Admiral Lord Rodney died here in 1792. On the east side are the *Hanover Square Rooms*; the great room is 90 feet by 35 feet, and will hold 800 persons; the ceiling was painted by Cipriani. No. 11 is the *Zoological Society*; No. 12, the *Royal Agricultural Society*; and on the west side is the *Oriental Club* (see p. 196). In Tenterden-street is the *Royal Academy of*

*Music*, founded in 1822, incorporated 1830. Upon the south side of Hanover-square is a colossal bronze statue of William Pitt, by Chantrey.

"This square, in connexion with George-street, has always struck me as one of the most scenic architectural displays that London presents: the street expanding towards the square, the unique and elegant style of the surrounding mansions, the judicious mixture of red brick and stone, Chantrey's statue, and the successful ecclesiastical work of James (St. George's), altogether produce the most agreeable effect."—*S. Angell*.

ST. JAMES'S SQUARE, between Pall Mall and Jermyn-street, is built on part of St. James's Fields. Godfrey's print, from a drawing by Hollar, has a stone conduit near the centre of the present square. Mr. Cunningham found several of its tenants rated in the parish-books of St. Martin's-in-the-Fields in 1676; and among them, on the west side, Madame Churchill, mistress of the Duke of York; and Madame Davis (Moll Davis), mistress of Charles II. On the north side was Romney House, where, in 1695 and 1697, King William III. visited the Earl of Romney, to witness fireworks in the square; and in the latter year the Dutch Ambassador made before his house a bonfire of 140 pitch-barrels, and wine was "kept continually running among the common people." On the north side also was Ormond House, the mansion of the great Duke of Ormond; the duchess died here in 1684; in 1698 the house was let to Count Tallard, the French Ambassador, for 600*l.* per annum, then a large rent. In the rear of the present houses is *Ormond-yard*, now a mews. *Appletree-yard*, opposite, keeps in memory the apple-orchards of St. James's Fields. Hatton describes St. James's-square, in 1708, "very pleasant, large, and beautiful; all very fine spacious buildings (except that side towards Pall Mall), mostly inhabited by the prime quality." Sutton Nicholls's print, 1720, shows a fountain in the centre of the square, with a basin, "filled by contract, in 1727, with water from York-buildings." (*Malcolm*.) A pedestal for an equestrian statue of William III. was erected in the centre of the square in 1732; but the statue, cast in brass by the younger Bacon, was not set up until 1803, the bequest in 1724 for the cost having been forgotten, until the money was found in the list of unclaimed dividends. The Earl of Radnor had on the north side a mansion, painted by Vanson, over doors and chimney-pieces; the staircase by Laguerre; and the apartments hung with pictures by Edema, Wyck, Roestraten, Danckers, old Griffier, young Vandervelde, and Sybriht. At No. 7, lived Josiah Wedgwood, and here his stock of classic pottery was dispersed by auction. No. 2 is Lord Falmouth's: the street-posts are cannon captured by his ancestor, Admiral Boscawen, off Cape Finisterre. No. 4, Earl de Grey (*see p.* 548); the late Earl received here the Royal Institute of British Architects. No. 6, Marquis of Bristol. No. 11, Right Hon. William Windham; Lord Chief Justice Ellenborough in 1814; John Duke of Roxburghe; now the *Wyndham Club* (*see p.* 261). No. 12, *London Library* (*see p.* 522); here lived Lord Amherst when Commander-in-Chief. No. 13, *Lichfield House*, was built by Athenian Stuart for Lord Anson; from the balcony, on June 20, 1815, the Prince Regent displayed the trophies just received from Waterloo to the delighted populace. No. 15 (Sir Philip Francis's) was lent by Lady Francis to Queen Caroline, in 1820, who delighted to show herself at the drawing-room windows, and proceeded from thence daily, in State, to her trial in the House of Lords; at this time No. 16 was Lord Castlereagh's. No. 17, the Duke of Cleveland's: here is Lely's fine whole-length portrait of the Duchess of Cleveland. No. 19, the Bishop of Winchester. No. 21, *Norfolk House* (*see p.* 554), occupies the site of the mansion of Henry Jermyn, Earl of St. Albans, who died here in 1683. No. 22 is *London House*, rebuilt in 1820 for the Bishops of London. Upon the lower or Pall Mall side lived the father of H. R. Morland, and grandfather of George Morland, all three painters.

LEICESTER SQUARE (*see pp.* 511–515.)

LINCOLN'S INN FIELDS (*see pp.* 527–529).

LOWNDES SQUARE, Belgravia, was built 1837–1839, and named from the ground-lord, W. Selby Lowndes, Esq. The seven houses at the south end, by Lewis Cubitt, resemble an Italian palace, with embellished chimney-shafts, Tuscan cornice, and Venetian balconies. The site of the square was once a coppice, which supplied the Abbot and Convent of Westminster with wood for fuel.

MANCHESTER SQUARE was begun in 1776, by the building of Manchester House upon the north side (*see* p. 552). At the north-west corner of the square is Manchester-street, where died, in 1814, the impostor, Joanna Southcott, after imposing upon six medical men with the story of her being *enceinte* with the young "Shiloh."

MYDDELTON SQUARE, Islington, near the New River Head, is named from its originator, Sir Hugh Myddelton, the early engineer.

PORTMAN SQUARE, upon the estate of W. H. Portman, Esq., and once the property of the Knights of St. John of Jerusalem, was begun about 1764, but not completed until 1784; it is 500 feet by 400. The centre is laid out as a shrubbery wilderness; and here is a moveable kiosk, constructed for the Turkish Ambassador about 1808, when he resided at No. 18; his Excellency customarily took the air and smoked here, surrounded by a party of his retinue. At the north-west angle is Montague House (*see* p. 554): here were the feather-hangings sung by Cowper; here Miss Burney was welcomed, and Dr. Johnson grew tame. No. 15 (Duke of Leeds): the architectural embellishments of the staircase and principal rooms of this noble mansion, the rich mahogany doors, sculptured marble chimney-pieces, and the cornices and ceilings, are all in the fine taste of Robert Adam, who built the Adelphi-terrace.

PRINCE'S SQUARE.—"As St. Giles's parish contains the largest square (Lincoln's Inn Fields), so it also *may boast* of the smallest, which is situated near it—namely, Prince's Square, containing only one house" (*Dobie*), between Little Queen-street and Gate-street; a stone tablet is inscribed, "Prince's-square, 1736."

PRINCE'S SQUARE, Ratcliffe Highway.—Here is the Swedish Church, in which is interred Emanuel Swedenborg; in the vestry-room are a few portraits, including that of Dr. Serenius, Bishop of Stregnas. About the year 1816 the cranium of Swedenborg was taken from the coffin by a Swedish captain, but was replaced after his death.

QUEEN SQUARE, Bloomsbury, built in the reign of Queen Anne, has a railed garden for the north side. Jonathan Richardson, the painter, died here in 1745. At the north-west corner Dr. John Campbell, editor of the *Biographia Britannica*, gave his Sunday-evening conversation-parties, at which Dr. Johnson used to meet "shoals of Scotchmen." On the south-west side is the church of St. George-the-Martyr, of which Dr. Stukeley was rector (*see* p. 163); he lived in the square.

QUEEN SQUARE, Westminster, contains a statue of Queen Anne, mentioned in 1708. Here was born in 1684, Admiral Vernon, the hero of Portobello; here lived the Rev. C. M. Cracherode, who bequeathed his books, medals, and drawings to the British Museum. In this square died, in 1784, Dr. Thomas Francklin, the erudite Greek scholar. (QUEEN SQUARE CHAPEL, *see* p. 214). In 1832 died, aged 85, Jeremy Bentham, in Queen-square-place, where he had resided for nearly half a century.

RED LION SQUARE, "a pleasant square of good buildings, between High Holborn south, and the fields north" (*Hatton*, 1708), was named from the *Red Lion Inn*. In 1733, Lord Chief Justice Raymond lived here; Sharon Turner, the historian, lived many years at No. 13; the benevolent Jonas Hanway, the traveller, lived and died (1786) here, in a house, the principal rooms of which he had decorated with paintings and emblematical devices, "in a style peculiar to himself;" Hanway was honoured with a public funeral. Sir John Prestwick, in his *Republica*, tells us "Cromwell's remains were privately interred in a small paddock near Holborn, on the spot where the obelisk in Red Lion-square lately stood." Prestwick does not give his authority for this statement; it may be a blunder, caused by the bodies of Cromwell, Ireton, and Bradshaw being carried from Westminster Abbey to the *Red Lion Inn*, Holborn, and the next day dragged on sledges to Tyburn. (Wood's *Athen. Oxon.* art. "Ireton.") No. 13 is the *Mendicity Society*. The author of *A Tour through Great Britain* notes: "This present year, 1737, an Act was passed for beautifying Red Lyon-square, which had run much to decay, and no doubt but Leicester-fields and Golden-square will soon follow these good examples."

RUSSELL SQUARE, north of Bedford-square, occupies part of Southampton Fields

(1720), subsequently Long Fields. Its dimensions are 665 feet 6 inches north side, 665 feet 3 inches south; 672 feet 7 inches west; and 667 feet 1 inch east—2665·1 feet square, or about 140 feet less than Lincoln's Inn Fields. In 1800 Long Fields lay waste and useless, with nursery grounds northward; the Toxophilite Society's ground north-west; and Bedford House, with its lawn and magnificent lime-trees, south. At the north-east end of Upper Montague-street was "the Field of Forty Footsteps" (see p. 337). The east side of the square was the house and gardens of the dissolute Lord Baltimore; the mansion is now divided.

Bedford House stood across the present Woburn-place. At that time Bolton House, which occupied the north extremity of the single line of houses forming Southampton-row, was the extreme of London in that direction, for there was no building in the then clear open "Long-fields" between Bolton House and the *Southampton Arms* Tea-garden at Camden-town, to which there was a footpath crossing the New-road, leaving the *Boot*, immortalized by Dickens in *Barnaby Rudge* at some distance on the right. The view northward from Queen-square was then quite uninterrupted.—*Builder*.

Here, in No. 21, Sir Samuel Romilly died by his own hand. Lord Chief Justice Tenterden died in No. 28. Baltimore House, at the corner of Guilford-street, was long the residence of Wedderburn, Lord Chancellor Loughborough. Mr. Justice Talfourd was resident at No. 67. Sir Thomas Lawrence lived for a quarter of a century in No. 65. In the *Gentleman's Magazine*, the Rev. John Mitford notes: "We shall never forget the Cossacks, mounted on their small white horses, with their long spears grounded, standing sentinels at the door of this great painter, whilst he was taking the portrait of their general, Platoff" (1818). On the north side is the picturesque bronze sitting statue of Francis, Duke of Bedford, by Westmacott.

SALISBURY SQUARE (see FLEET-STREET, p. 349); at the north-west corner was the printing-office of Richardson, the novelist.

SOHO SQUARE, originally King's-square, was begun in the reign of Charles II.; the south side consisting of Monmouth House, built by Wren for the Duke of Monmouth, and after his death purchased by Lord Bateman; in 1717 it was an auction room; part of the site is now occupied by Bateman's-buildings.

J. T. Smith, in *Nollekens and his Times*, describes the pulling down of *Monmouth House*, which he witnessed: the gate entrance was of massive ironwork, supported by stone piers, surmounted by the crest of the Duke of Monmouth; and within the gates was a courtyard for carriages. The hall was ascended by steps. There were eight rooms on the ground-floor: the principal one was a dining-room towards the south, the carved and gilt panels of which had contained whole-length pictures. At corners of the ornamented ceiling, which was of plaster, and over the chimney-piece, the Duke of Monmouth's arms were displayed. The staircase was of oak, the steps very low, and the landing-places were tessellated with woods of light and dark colours. Upon ornamented brackets were busts of Seneca, Caracalla, Trajan, Adrian, &c. The principal room on the first-floor was lined with blue satin, superbly decorated with pheasants and other birds in gold. The chimney-piece was richly ornamented with fruit and foliage: in the centre, within a wreath of oak-leaves, was a circular recess for a bust. The beads of the panels of the brown window-shutters, which were very lofty, were gilt; and the piers between the windows had been filled with looking-glasses. The paved yard was surrounded by a red brick wall, with heavy stone copings, 25 feet in height.

Shadwell, in his plays (1661), mentions "Soho-square;" Maitland, 1739, "King's-square," then a sort of Court quarter: Evelyn wintered "at Soho, in the great square," in 1690. Bishop Burnet, the historian, lived here before he removed to Clerkenwell; his Curiosities included the supposed "original Magna Charta," with part of the Great Seal remaining. The shipwrecked remains of Sir Cloudesly Shovel lay in state in 1707. At the corner of Greek-street, No. 1, was the mansion of Alderman Beckford, now the House of Charity (see p. 211); and thither came the partisan City procession, who prevailed upon Beckford to serve his second mayoralty, in commemoration of which he feasted the poor of St. Anne's, Soho. At the corner of Sutton-street was Carlisle House, where Mrs. Cornelys gave her concerts, balls, and masquerades; the present Roman Catholic chapel in Sutton-street having been Mrs. Cornelys's banquetting-room (connected with the house by "the Chinese bridge"), and the gateway was the entrance for sedan-chairs. In 1772 the "furniture, decorations, china, &c.," of Carlisle House were sold by auction; but it was re-opened in 1774; Mrs. Cornelys returned here in 1776; and it was next an exhibition-place of "monstrosities," a "School of Eloquence," and an "Infant School of Genius;" it was closed in 1797, and taken down in 1803 or 1804; some of its curious paintings were preserved; and an account of Mrs. Cornelys's entertainments has been privately printed by Mr. T. Mackinlay. (*Dr. Rimbault; Notes and Queries*, No. 28.) No. 20, "D'Almaine's," with a banquetting-room ceiling, said to have

been painted by Angelica Kauffmann, was built for Earl Tilney by Colin Campbell, architect of Wanstead House. No. 32 was Sir Joseph Banks's, P.R.S., next the house of the Liunean Society (*see* p. 598), exempted from the poor-rate in 1854 on account of its being used for the purposes of science. (*Court of Queen's Bench Rep.* May 30.) At a house in Soho-square, Richard Payne Knight, the classic antiquary (died 1824), assembled his collection of ancient bronzes, and Greek coins, value 50,000*l.*, which he bequeathed to the British Museum. At the corner of Bateman's-buildings, left, lived George Colman the elder; and right, Samuel Beazley, the dramatist, and architect of the Lyceum and St. James's theatres. The Soho Bazaar (north-west corner) is described at p. 35. In the centre of the square is a pedestrian statue of Charles II. (*See* FOUNTAINS, p. 356.) In *Frith-street*, on the south side of the square, died of cholera, in 1830, William Hazlitt, the eloquent essayist: he was buried in St. Anne's churchyard, where is "a stone raised by one whose heart is with him in his grave." Frith-street is named "from Mr. Fryth, a great (and once rich) builder" (*Hatton*); Maitland calls it "Thrift-street."

TAVISTOCK SQUARE, Euston-road, is named from the ground-landlord, the Duke of Bedford, and Marquis of Tavistock.

Southward is *Tavistock-place*. At No. 31 lived Mary Ann Clarke, mistress of the Duke of York; at No. 32, Francis Douce, the illustrator of Shakspeare, and subsequently, in the same house John Galt when editor of the *Courier*; at No. 19, Sir Harris Nicolas, K.C.M.G., the peerage antiquary; and at No. 10, John Britton, before he removed to No. 17, Burton-street. In *Tavistock-place*, at No. 37, Francis Baily, F.R.S., President of the Royal Astronomical Society, lived from 1825 to 1840. The house stands isolated in a garden, so as to be free from any material tremor from passing carriages. A small observatory was constructed in the upper part; and herein Mr. Baily contrived a pair of scales that enabled him approximately to weigh the earth. The house and room are engraved and described in *Things not generally Known*, 1856. "The building in which the earth was weighed, and its bulk and figure calculated, the standard measure of the British nation perpetuated, and the Pendulum experiments rescued from their chief source of inaccuracy, can never cease to be an object of interest to astronomers of future generations."—*Sir John Herschel, Bart.*

TRAFALGAR SQUARE, Charing Cross, formed by the removal of the lower end of St. Martin's-lane, a knot of courts and alleys, the Golden Cross inn,\* and low buildings adjoining, was planned by Barry, and is named from the last victory of Nelson, to whom a column is erected on the south side (*see* p. 283): the four colossal bronze lions at the base of the pedestal, modelled by Sir E. Landseer, R.A., were added in 1867. The whole square is paved with granite, has two large tanks with fountains (*see* p. 357), and has on the north side a terrace, which imparts elevation to the National Gallery façade. At the north-east and north-west angles are granite pedestals; the former occupied by Chantrey's bronze equestrian statue of George IV., intended for the top of the marble arch at Buckingham Palace. The granite capstan posts in the area are characteristic; but the square has been condemned as "an artificial stone-quarry." The massive lanterns at the angles were originally designed by Barry for Bude-lights.

In 1831, upon the ground cleared for Trafalgar-square, was exhibited in a pavilion the entire skeleton of a Greenland Whale, taken off the coast of Belgium in 1827; total length, 95 feet; breadth, 18 feet; width of tail, 22½ feet; length of head, 22 feet; height of cranium, 4½ feet; length of fins, 12½ feet; weight of animal, 249 tons, or 480,000*lb.*; weight of skeleton, 35 tons, or 70,000*lb.*; oil extracted, 4000 gallons. The skeleton was raised upon iron supports, and visitors ascended within the ribs by a flight of steps. It had been previously exhibited at Paris, where Cuvier and others estimated the age of this whale at from 900 to 1000 years. (*See Mirror*, August 13, 1831.)

VINCENT SQUARE, Westminster, a portion of Tothill Fields, is named after Dr. Vincent, then Dean of Westminster. Here is the church of St. Mary the Virgin, consecrated 1837: style, Early Pointed, with lancet windows; architect, E. Blore.

WELLCLOSE SQUARE was originally called Marine-square, from its being a favourite residence of naval officers. "It is very near a geometrical square, whose area is about 2¾ acres; it is situated between Knockfergus north and Ratcliff Highway south." (*Hatton*, 1708.) Here is the Danish (now Sailors') Church. In Well-street, ad-

\* April 23, 1643, it was ordered by Parliament that the sign of the Golden Cross, at Charing-cross be taken down, as superstitious and idolatrous!

joining, was the Royalty Theatre, burnt down April 11, 1826; upon the site was built the Brunswick Theatre; it was performed in only three nights, and fell to the ground Feb. 28, 1828; within six months of which was built upon the same site the Sailors' Home.

WOBURN SQUARE, St. Pancras, named from a seat of the Duke of Bedford, has in the centre a Pointed church, by L. Vulliamy, built in 1834: the spire is 150 feet high.

### STATE COACHES.

THE "glistering coach" (*Shakspeare*) dates from the reign of Queen Elizabeth, who, April 2, 1571, at the meeting of Parliament, rode for the first time in a coach, drawn by two palfreys, covered with crimson velvet housings, richly embroidered: but this was the only carriage in the procession; the Lord Keeper, and the Lords spiritual and temporal, all attending on horseback. In 1588 the Queen went from Somerset Place to St. Paul's Cross, to return thanks after the destruction of the Spanish Armada, in a coach presented to her by Henry Earl of Arundel, and called by Stow "a chariot-throne." In a print in the Crowle Pennant, in the British Museum, representing Queen Henrietta-Maria doing penance beneath the gallows at Tyburn, Charles I. is seated in a large and ornamented coach; but this print is apocryphal.

The Coach of Queen Anne had its panels painted by Sir James Thornhill; and a friend of J. T. Smith possessed a portion of a panel. This coach was used by George I. and II., and by George III. when he first opened Parliament, and also at his marriage; after which it was broken up, and the State Carriage now used by the sovereign was built.

THE QUEEN'S STATE COACH, sometimes called the "Coronation Coach," was designed by Sir William Chambers, R.A., who recommended Joseph Wilton, R.A., and the sculptor Pigalle, to conduct the building of the carriage. The model was executed from Chambers's design by Laurence Anderson Holme, a Dane.

Wilton was appointed state-coach carver to the King, and erected workshops opposite Marylebone-fields, on the south side of what was afterwards named Queen Anne-street East, now called Foley-place, and occupying the large house now remaining at the south-east corner of Portland-street, adjoining. Here Geo. III.'s state-coach was built; the small model of which [in wax, by Capitsoldi and Voyers, the panels painted in water-colours by Cipriani], I, when a boy, was carried to see by Mr. Nollekens and my father, it being then preserved in a back shop, where it remained for many years.—J. T. Smith's *Nollekens and his Times*, ii. 172.

The carriage is composed of four tritons, who support the body by cables: the two placed on the front bear the driver on their shoulders, and are sounding shells; and those on the back part carry the imperial fasces, topped with tridents. The driver's footboard is a large scallop-shell, supported by marine plants. The pole resembles a bundle of lances; and the wheels are in imitation of those of ancient triumphal chariots. The body of the coach is composed of eight palm-trees, which, branching out at the top, sustain the roof: at each angle are trophies of British victories. On the centre of the roof stand boy-genii of England, Scotland, and Ireland, supporting the imperial crown, and holding the sceptre, the sword of state, and ensigns of knighthood; from their bodies festoons of laurel fall thence to the four corners of the roof. The intervals between the palm-trees, which form the body of the coach, are filled in the upper part with plate-glass, and the panels below with paintings as follow:

*Front Panel.*—Britannia on a throne, holding a staff of liberty, attended by Religion, Justice, Wisdom, Valour, Fortitude, Commerce, Plenty, and Victory, presenting her with a garland of laurel; background, St. Paul's and the Thames.

*Right Door.*—Industry and Ingenuity giving a cornucopia to the Genius of England. *Side Panels.*—History recording the reports of Fame, and Peace burning the implements of War.

*Back Panel.*—Neptune and Amphitrite in a car drawn by sea-horses, attended by the Winds, Rivers, Tritons, Naiads, &c., bringing the tribute of the world to Britain.

*Upper Part of Back Panel.*—The Royal Arms, ornamented with the order of St. George, the Golden Fleece, the rose, shamrock, and thistle entwined.

*Left Door.*—Mars, Minerva, and Mercury supporting the imperial crown. *Side Panels.*—The Arts and Sciences protected.

The body is lined with scarlet embossed velvet, superbly laced and embroidered with the star, encircled by the collar of the order of the Garter, and surmounted by the imperial crown, pendant the George and Dragon; in the corners, the rose, shamrock,

and thistle entwined. The badges of St. Michael, St. George, the Guelph and Bath, St. Andrew, and St. Patrick are also among the embroidery. The hammercloth is of scarlet velvet, with gold badges, ropes, and tassels. The length of the carriage and body is 24 feet; width, 8 feet 3 inches; height, 12 feet; length of pole, 12 feet 4 inches; weight, 4 tons. The carving was mostly executed by Nicholas Collett, a little man, whom Waldron the actor (originally a carver in wood) delighted to call "a Garrick of a carver." The panels were painted by Cipriani, who received for the same 800*l*. The chasing was executed by Coit, the coachwork by Butler, the embroidery by Barrett, the gilding (triple throughout) by Rujolas, the varnishing by Ansel, and the harness by Ringstead. The whole cost was as follows :

Coachmaker (including Wheelwright and Smith)	£1637	15	0
Carver	2500	0	0
Gilder	935	14	0
Painter	315	0	0
Laceman	737	10	7
Chaser	665	4	6
Harnessmaker	385	15	0
Mercer	202	5	10½
Beltmaker	99	6	6
Milliner	31	3	4
Saddler	10	16	6
Woollendrapery	4	3	6
Covermaker	3	9	6
	£7528	4	3½

The bill was 8000*l*.; but being taxed, was reduced as above, the odd pence arising from the ribbon-weaver's bill. The superb hammercloth, of scarlet silk Genoa velvet, with gold badges, fringes, ropes, and tassels, was renewed in 1838. The Royal State Coach was first used Nov. 16, 1762. Walpole writes to Sir Horace Mann :

"There is come forth a new state-coach, which has cost 8000*l*. It is a beautiful object, though crowded with improprieties. Its supports are Tritons, not very well adapted to land carriage; and formed of palm-trees, which are as little aquatic as Tritons are terrestrial. The crowd to see it, on the opening of the Parliament, was greater than at the coronation, and much more mischief done."

The Coach was kept in a shed at the King's Mews, Charing Cross; upon the taking down of which, it was removed to the Royal Mews, Pimlico, where also is kept the State Harness for the eight horses by which the carriage is drawn when used by the sovereign. The Coach and Harness may be inspected upon application. The new hammercloth in the reign of William IV. cost 500*l*. (*See MEWS, ROYAL, p. 565.*)

THE LORD MAYOR'S STATE COACH is kept at the City Green-yard, Whitecross-street, Cripplegate, opposite the Debtors' Door: the coach may be here inspected. It was built in 1757, by a subscription of 60*l*. from each of the junior aldermen, or such as had not passed the civic chair. Subsequently, each alderman, when sworn into office, contributed 60*l*. towards keeping the coach in repair; for which purpose also each Lord Mayor gave 100*l*. In a few years, the whole expense fell upon the Lord Mayor, and in one year it exceeded 300*l*. The coach was then transferred to the Corporation, and it has since been kept in repair by the Committee of General Purposes. Twenty years after its construction, the repairs in one year cost 335*l*.; and the average of seven years' repairs in the present century was 115*l*. The design of the coach is more magnificent than graceful: the carriage consists of a pair of grotesque marine figures, who support the seat of the driver, with a large scallop-shell as a foot-board; at the hind-standard are two children bearing the City arms, beneath which is a large pelican; the perch is double, and terminates in dolphins' heads; and the four wheels are richly carved and gilt, and resemble those of ancient triumphal chariots. The body is not hung upon springs, but upon four thick red leather straps, fastened with large gilt-brass buckles of spirited design, each bearing the City arms. The roof was originally ornamented with eight gilt vases; in the centre is a leafy crown, bearing the City arms, and from which small gilt flowers trail over the remainder of the roof, painted red: originally, a group of four boys supporting baskets of fruits and flowers occupied the centre. The upper intervals of the body, save at the back, are filled with plate-glass; and the several lower panels are painted as follow :

*Front Panel.*—Faith supporting a decrepit figure beside a flaming altar; Hope pointing to St. Paul's Cathedral.

*Back.*—Charity; a wrecked sailor, with a ship in the offing, and two females casting money and fruits into his lap.

*Upper Back.*—The City, attended by Neptune; Commerce introducing the Arab with his horse, and other traders with the camel, elephant, &c.

*Right Door.*—Fame, with her wreath, presenting a Lord Mayor to the City, who bears the sword and sceptre, the mace, &c., at her feet. In the very small panel beneath are fruit and flowers. *Side Panels.*—Beauty with her mirror; female with bridled horse, &c.

*Left Door.*—The City seated, and Britannia pointing with her spear to a shield inscribed with "Henri Fitz-Alwin, 1189" (the first Mayor). In the very small panels beneath are the scales of justice and sword of mercy, grouped. *Side Panels.*—Justice with her scales and sword; Prudence, &c.

The original heraldic paintings were executed by Catton, one of the foundation members of the Royal Academy. In shields at the lower angles of each door, and of the back and front panels, are emblazoned the arms of the Lord Mayor for the time being. The framework is richly carved and gilt: over each door is a scallop-shell; and at the lower angles of the body are dwarf figures emblematic of the four quarters of the globe. The smaller enrichments about the panels, as shells, fruits, and flowers, are admirably carved and grouped: over the upper back panel is an exquisite *bit*—a serpent and dove. The perch and wheels are painted red, picked out with gold; and massive gilt bosses cover the wheel-boxes: the wheels were renewed in 1828. The coach is lined with crimson corded silk and lace; and in the centre is a seat for the mace and sword bearers. The hammercloth is crimson cloth, but the original one was of gold lace.

This coach was repaired, new-lined, and regilt in 1812, at an expense of 600*l.*, when also a new seat-cloth was furnished for 90*l.*; and in 1821 the re-lining cost 206*l.* In 1812, Messrs. Houlditch agreed to keep the coach in fair wear-and-tear for ten years, at 48*l.* per annum. The total weight of the coach is 3 tons 16 cwt.: it is drawn by six horses, for whom a superb state harness was made in 1833, that for each horse weighing 106lb.

It is not positively known by whom this coach was carved, nor by whom the panels were painted. Cipriani is stated by some to be the painter; but others assert that after the present Royal State Coach was built in 1762, the old Royal State Coach was purchased by the City of London, and the panels re-painted by Dance: such is the statement of Smith, in *Nollekens and his Times*; but in the Report of the Municipal Corporation Commissioners, the City Coach is stated to have been built in 1757. The Lord Mayor rode in state upon horseback until 1712, when a state carriage, drawn by four horses, was first used. In 1741 the horses were increased to six. This State Coach is represented in Hogarth's print of the Industrious Apprentice, date 1747; it is somewhat plain, but has ornamental vases upon the roof. In 1762, Lord Mayor Beckford purchased the very fine set of Flanders mares of M. Boreel, Ambassador of the States General to the Court of St. James's; and they were used in Beckford's Mayoralties. Every time the City State Coach is used, it costs the Lord Mayor 20*l.*: Alderman Samuel Wilson used the coach twelve times in his Mayoralty, 1839-40. (See LORD MAYOR'S STATE, pp. 536-538.)

"Our Lord Mayor and his golden coach, and his gold-covered footmen and coachman, and his golden chain, and his chaplain, and his great sword of state, please the people, and particularly the women and girls, and when they are pleased the men and boys are pleased; and many a young fellow has been more industrious and attentive from his hope of one day riding in that golden coach."—*Cobbett*.

THE SPEAKER'S STATE COACH is traditionally said to have been Oliver Cromwell's; but it is more probably of the time of William III. It is elaborately carved and heavily gilt. Figures of naval and military prowess, Plenty, &c., support the body; the box is held by two larger figures of Plenty; the hammercloth is of crimson velvet, trimmed with silver fringe; and the footboard is borne by two lions, and surmounted with a large grotesque mask. The hind-standard is richly carved with figures and devices of antique and modern design. The framework of the panels is finely carved; and the roof has a pierced parapet or gallery. The upper, side, and front panels are filled with splendid Vauxhall plates of glass. The lower panels are painted with emblematic subjects: the door-panel has a seated figure of Britannia, to whom female figures are bringing fruits, the horn of plenty, &c. The opposite door has also a seated figure, and another presenting the Bill of Rights, with Liberty, Fame, and Justice. Beneath each door and panel are sculptured maces, surmounted with a cap, emblematic of the Speaker's authority. In the four side panels are emblematic figures of Literature, Architecture, Science, and Plenty. The back panel has a better composi-

tion of Britannia, wearing a mural crown; St. Paul's Cathedral, shipping, &c., in the distance. The front panel also bears several allegorical figures. In the lower part of the pictures in the principal panels are emblazoned the Speaker's arms, and in the side-panel pictures his crest. The coach is lined and trimmed with dark crimson velvet; it has two seats, and a centre one: on the latter sit the Speaker's Mace-bearer and Sword-bearer; and his Chaplain and Train-bearer sit facing the Speaker. This coach is used by the Speaker on opening Parliament, presenting addresses to the sovereign, attending levees, &c., when it is drawn by a pair of horses in state harness. The coach is kept at the Speaker's stables, Millbank.

## STATUES.

THE following are the principal *out-door* Statues in the Metropolis:

Statues.	Sites.	Sculptors.
"ACHILLES" . . . . .	Hyde Park . . . . .	Westmacott.

This group is strangely miscalled "Achilles," it being copied from one of the statues on Monte Cavallo, at Rome, which are called Castor and Pollux by the Italian antiquaries Venuti and Vasi, and by Flaxman named Bellerophon. The inscription bronze letters have been stolen!

ALBERT, PRINCE . . . . .	Lloyd's, Royal Exchange . . . . .	Lough.
ALFRED, KING . . . . .	Trinity-square, Newington.	
ANNE, QUEEN OF JAMES I. . . . .	Temple Bar . . . . .	Bushnell.
ANNE, QUEEN . . . . .	Queen-square, Bloomsbury.	
ANNE, QUEEN . . . . .	Queen-square, Westminster.	
ANNE, QUEEN . . . . .	St. Paul's Churchyard . . . . .	F. Bird.
ASKE, ROBERT . . . . .	Hospital, Hoxton.	
BEDFORD, DUKE OF . . . . .	Bedford-square . . . . .	Westmacott.
BENTINCK, LORD GEORGE . . . . .	Cavendish-square . . . . .	Campbell.
CANNING, GEORGE . . . . .	New Palace-yard . . . . .	Westmacott.
CARTWRIGHT, MAJOR . . . . .	Burton-crescent . . . . .	Clarke.
CHARLES I. . . . .	Charing Cross . . . . .	Le Sœur.

"This noble equestrian statue," says Walpole, "in which the commanding grace of the figure and the exquisite form of the horse are striking to the most unpractised eye, was cast in 1633, on a spot of ground near the church in Covent Garden; and not being erected before the commencement of the Civil War, it was sold by the Parliament to John Rivet, a brazier, living at the Dial, near Holborn Conduit, with strict orders to break it in pieces. But the man produced some fragments of old brass, and concealed the statue and horse underground till the Restoration." M. d'Archenholz relates "that he cast a vast number of handles of knives and forks in brass, which he sold as made of the broken statue. They were bought with eagerness by the Royalists, from affection to their monarch—by the rebels as a mark of triumph over their murdered sovereign." Walpole adds that "they had been made at the expense of the family of Howard-Arundel;" but Mr. Cunningham refers to a memorandum in the State-Paper Office, from which he concludes this statue to have been ordered by the Lord Treasurer Weston, afterwards Earl of Portland, of Hubert Le Sœur, "for the casting of a horse in brass, bigger than a great horse by a foot; and the figure of his Majesty King Charles proportionable, full six foot;" to be set up in the Lord Treasurer's gardens at Roehampton, in Surrey (see *Hand-Book of London*, 2nd edit. p. 106). At the Restoration,\* an order of replevin was issued by the House of Lords, upon the information of the Earl of Portland (son of the Lord Treasurer), for the recovery of the statue from Rivet; but it was not set up until 1674, when Waller wrote his courtly lines "On the Statue of King Charles I. at Charing Cross." There is an idle story that Le Sœur, having finished the statue, defied any one to point out a defect in the work; when, on a person denoting the absence of the girth, the sculptor, in a fit of indignation, destroyed himself. The assertion of the horse not having a girth is quoted by Malcolm from *The Medley* for August, 1719; but there is a girth, which passes over a very strong rein on the right. In 1810, the sword, buckles, and straps fell from the statue; and about the coronation of Queen Victoria in 1838, when seats were erected round the group, the sword (a rapier of Charles's period), was stolen. The George pendent from the ribbon has also been taken away, as denoted by the vacant hole in the metal where the George should hang.

The stone pedestal, sculptured with the royal arms, trophies, &c., was long admired as the work of Gibbons; but a written account proves it to be by Joshua Marshall, Master Mason to the Crown. On the 29th of May (Restoration Day) this statue was formerly decorated with boughs of oak. In the spring of 1853 a cast of the statue and pedestal was taken by Brucciani, for the Crystal Palace at Sydenham: for the moulds and casts, 37 tons of plaster and 15 tons of iron were used. The following measurements were also then taken: *Pedestal*, 13 ft. 8 in. high; 9 ft. 11 in. long; 5 ft. 7 in. wide. *Statue*: height from foot to top of horse's head, 7 ft. 8 in.; plinth to top of figure, 9 ft. 2½ in.; plinth to neck of horse, 6 ft.; plinth to top of hind-quarters, 5 ft. 10 in.; length from head to tail, 7 ft. 9 in.; circumference of horse from back of saddle-cloth, 8 ft. 2 in.; round chest and hind-quarters, 16 ft. The metal casting around the left fore-foot of the horse bears HVEER(r) LE SVEVR (FR)CIT 1633.

"Although taken soon after Charles's accession, and at a time when sorrow could hardly have been put upon him, yet the character of melancholy is deeply impressed on the countenance. The horse is superb: the action is that which is taught in the *ménage*, the motion of the legs showing the spirit of the animal; yet the action is not that of progressing,—it is a movement that would not communicate motion to the body, but leaves the rider perfectly undisturbed; the bridle falls almost loose upon the

\* In this year a statue of the King was restored in the City: "May 7, 1690. Charles the First his Statue set up again in Guildhall-yard."—*Histor. Guide*, 1688.

neck; nor does the well-taught steed disturb the reverie of thought expressed in the countenance of its master."—*Times*, Sept. 1, 1833.

<i>Statues.</i>	<i>Sites.</i>	<i>Sculptors.</i>
CHARLES I. . . . .	Temple Bar . . . . .	Bushnell.
CHARLES II. . . . .	Temple Bar . . . . .	Bushnell.
CHARLES II. . . . .	Soho-square.	
CHARLES II. . . . .	Chelsea Hospital . . . . .	Gibbons.
CLAYTON, SIR ROBERT . . . . .	St. Thomas's Hospital.	
CORAM, CAPT. . . . .	Foundling Hospital . . . . .	Calder Marshall.

The worthy founder of this institution appears in the same style of dress that he wore in life—the flowing wig, the long waistcoat, and broad-tailed open coat: in one hand he holds the charter of the hospital. The countenance is most animated and expressive, as if talking to Hogarth, or some others who worked with him in establishing this foundation. No one will say that the costume of this statue is unpicturesque as treated; and the circumstance ought to encourage us at the present day boldly to delineate our great men in the form in which they appeared on the stage of life.

CROSBY, SIR JOHN . . . . .	Crosby Hall (front) . . . . .	Nixon.
CUMBERLAND, DUKE OF . . . . .	Cavendish-square . . . . .	Chew.
ELIZABETH, QUEEN . . . . .	St. Dunstan's, Fleet-street.	
EDWARD VI. . . . .	Christ's Hospital.	
EDWARD VI. . . . .	St. Bartholomew's Hospital.	
EDWARD VI. . . . .	St. Thomas's Hospital . . . . .	Scheemakers.
ELDON, EARL OF . . . . .	School, Wandsworth-road.	
C. J. FOX . . . . .	Bloomsbury-square . . . . .	Westmacott.
FRANKLIN, SIR JOHN . . . . .	Waterloo-place . . . . .	Noble.

The statue, 8 ft. 4 in. high, bronze; pedestal, polished granite. The likeness has been pronounced by Lady Franklin and others who knew her husband best, to be characteristic and excellent. The moment selected for representation in the statue is when Franklin was addressing his officers and crew, and telling them that the North-west Passage had at last been discovered.

The bas-relief on the front of the pedestal represents the funeral of Franklin, at which Captain Crozier reads the burial service. He is surrounded by the other sorrowing officers and crew of the two ships, the *Erebus* and *Terror*. It is well known that not one of the whole number of these brave fellows ever returned. Their names, with the name of Franklin himself, are recorded on bronze panels at the side of the memorial. In the panel at the back of the tribute there is an embossed bronze chart of the Arctic regions, showing the position of the two ships and their crews at the time of the death of Franklin. The pedestal is further adorned with bronze cable cornice moulding at the plinth, enriched with oak-leaves and acorns.

GEORGE I. . . . .	St. George's Church, Bloomsbury.	
GEORGE II. . . . .	Golden-square.	
GEORGE II. . . . .	Leicester-square . . . . .	Buchard.

For the strange history of this statue, see LEICESTER-SQUARE, pp. 511–515.

GEORGE III. (equestrian) . . . . .	Berkeley-square . . . . .	Beaupré.
GEORGE III. . . . .	Somerset House . . . . .	Bacon.
GEORGE III. . . . .	Cockspur-street . . . . .	Wyatt.
GEORGE IV. . . . .	Trafalgar-square . . . . .	Chantrey.

In modelling the horse standing still on all four legs, Chantrey has given the sanction of his name to a bold and judicious innovation on the old custom of representing horses in statues either curvetting or ambling. The horse was modelled for the statue of Sir Thomas Munro.

GUARDS MEMORIAL . . . . .	Waterloo-place . . . . .	Bell.
---------------------------	--------------------------	-------

A granite pedestal: three guardsmen, bronze; figure of Honour distributing coronals, bronze; pyramid of cannon; inscription: "To the memory of 2162 officers and men of the Brigade of Guards who fell during the war in Russia, 1854, 1855, 1856."

GUY, THOMAS . . . . .	Guy's Hospital . . . . .	Scheemakers.
HANDEL, G. F. . . . .	Sacred Harmonic Society . . . . .	Roubillac.
HENRY VIII. . . . .	St. Bartholomew's Hospital.	
HERBERT, LORD . . . . .	War Office, Pall Mall . . . . .	Foley.

A bronze statue 9 ft. in height, on a carved granite pedestal, the lower grey and the upper portion a beautiful specimen of red granite. Let into the granite on three of its sides are three *bas-reliefs*, also in bronze, illustrative of subjects to which Lord Herbert chiefly devoted his attention whilst filling the office of Secretary of State for War. On the face of the pedestal, beneath the words "Sidney Herbert" cut deeply into the granite, are the armorial bearings of the family in bronze (with the old French motto, "*Ung je servirai*"), and on the sides are the dates of his birth and death—viz., "Born 16th Sept., 1810," on the east side, and on the west, "Died August 2, 1861." On the southern side is a bronze tablet, inscribed, "Erected by public subscription, 1867." The tablet in front of the statue or northern side, facing Pall-mall, represents an incident in the "Herbert Hospital," Woolwich, Miss Nightingale instructing nurses in their duties of tending wounded and sick soldiers—very good. On the east side is a *bas-relief*, representing the volunteer movement, in which a battalion of volunteers are seen marching; whilst that on the west side exhibits the process of casting and testing the first Armstrong gun at Woolwich, which event occurred during the administration of Lord Herbert in the post of War Minister.

HAVELOCK, SIR HENRY . . . . .	Trafalgar-square . . . . .	Behnes.
-------------------------------	----------------------------	---------

Statue bronze: inscription upon pedestal: "To Major-General Sir Henry Havelock, K.C.B., and his brave companions during the campaign in India. 'Soldiers—Your labours, your privations, your sufferings, and your valour will not be forgotten by a grateful country!—H. Havelock.'" The inscription on the back of the pedestal is as follows:—"The force commanded by Havelock consisted of the Staff, cavalry, Volunteers, 12th and 13th Irregulars, 3rd Oude Irregulars; Royal Artillery—3rd

Company, 8th Battalion; Bengal Artillery—2nd Company, 3rd Battalion; 1st Company, 5th Battalion; 6th Company, 9th Battalion; Bengal Engineers; Infantry—5th Fusiliers, 84th Regiment, 64th Regiment, 90th Light Infantry, 78th Highlanders, 1st Madras Fusiliers, Ferozepore Regiment of Sikhs.—Behnes, sculptor."

<i>Statues.</i>	<i>Sites.</i>	<i>Sculptors.</i>
HUNTER, JOHN . . . . .	College of Surgeons . . . . .	Weekes.
HUSKISSON, WILLIAM . . . . .	Lloyd's, Royal Exchange . . . . .	Lough.
JAMES I. . . . .	Temple Bar . . . . .	Bushnell.
JAMES II. . . . .	Whitehall Gardens . . . . .	Gibbons.

The doubt which long prevailed respecting the artist of this statue has been cleared up by the following passage in the *Autobiography of Sir John Bramston*, printed by the Camden Society. "On New Year's day, 1686, a statue in brass was to be seen (placed the day before) in the yard at Whitehall, made by Gibbons, at the charge of Toby Rustick, of the present king, James II." Thus Walpole had a correct impression of the truth when he wrote, "I am the rather inclined to attribute the statue at Whitehall to Gibbons, because I know of no other artist of that time capable of it." The likeness is extremely fine, as is the easy attitude of the figure. Many verses were made on this statue at the time of its erection. The figure looking towards the river, which was then open, was said to prognosticate the king's fight; this, however, is not more probable than that he is pointing to the spot where his father was executed, which has long been proved a vulgar error. At the accession of William III., the statue was not removed.

JENNER, DR. . . . .	Kensington Gardens . . . . .	Calder Marshall.
KENT, DUKE OF . . . . .	Portland-place . . . . .	Gahagan.
MILLINGAN, ROBERT . . . . .	West India Docks.	
MOORE, SIR JOHN . . . . .	Christ's Hospital.	
MYDDELTON, SIR HUGH . . . . .	Islington-green . . . . .	Thomas.

The figure of the knight is 8 ft. 6 in. in height. It is carved in white Sicilian marble, and represents Sir Hugh clothed in the costume of the latter portion of the 16th century, with badge and chain, holding in his left hand a scroll containing the plan of his great and useful work, labelled with the words "New River." The statue is placed upon a pedestal of gray Devonshire granite, on the front face of which is carved the following inscription: "Sir Hugh Myddelton, born 1555, died 1631." The base beneath the pedestal is of Portland stone, and on the right and left of the pedestal are two figures of boys partly draped, with hair entwined with bulrushes, and seated on pitchers, from which latter the water pours into the basins. The figures and basins are of carved Sicilian marble. The statue itself, was given by Sir S. M. Peto, and the rest provided for by subscription, the New River Company having given 50*l.* towards the cost. The whole is 21 feet high, the principal statue 8½ feet.

NELSON, LORD . . . . .	Trafalgar-square . . . . .	Baily.
------------------------	----------------------------	--------

Baily's statue of Nelson has been likened to a Greenwich pensioner. The four bronze lions, by Sir Edwin Landseer, were added to the base of the pedestal in 1867. Only one lion was modelled. A slight variation in treatment enabled the artist to adapt this one design to his four pedestals. The completed statue is not much above the size of a large full-grown lion, as we know the king of beasts in confinement. The action is the simplest, but grandest; one natural to the animal and right royal; he is couchant, with his massive arms extended straight before him; his huge head, calm in the consciousness of might, erect, and watchful, but with no anger nor defiance, except that which is inseparable from such strength. The modelling of the head will at once strike every one who sees this noble design. Into this Sir Edwin has thrown all his unequalled power as a master of animal physiognomy, and his rapid pencil never rendered the subtle curvatures of bony and muscular surface, the delicacies of light and shadow, and the secrets of expression with more consummate skill on the canvas than they are here given by modelling tool and hand together in the clay. The difficulties of the mane and the shaggy fringe which extends along the fore part of the animal have been managed with great judgment. They are treated in broad and simple masses. (*Times*.) Even this memorial was not commenced until three-and-thirty years had elapsed from the day on which were borne in mournful pomp, past this very spot, all that was mortal of him

"Whose sacred splendour, and whose deathless name,  
Shall grace and guard his country's naval fame."

NAPIER, SIR C. J. . . . .	Trafalgar-square . . . . .	Adams.
PEEL, SIR ROBERT . . . . .	Cheapside . . . . .	Behnes.
PITT, WILLIAM . . . . .	Hanover-square . . . . .	Chantrey.
RICHARD CŒUR DE LION . . . . .	Old Palace-yard . . . . .	Marochetti.

Midway between the Peers' entrance to the Houses of Parliament and the end of Westminster Hall, and in a line with the centre of the great window in the Hall. It is placed on a pedestal of granite about 8 feet 6 inches high; in which two panels are occupied by bronze *relievi*. The group is picturesque; but the hind-quarters of the horse and the fatiguing attitude of the man unsuccessful—that the king appears to be sitting on his horse *quietly*, just as a groom does when without a saddle; whereas, as the attitude is supposed to be a *momentary* one, the figure should, with uplifted arm, have been raised in the stirrups. This would have given life to the figure, and would have connected it, as it were, better with the horse. No man on a prancing charger would be lifting up his sword in a supposed dignified position with his feet dangling carelessly in the stirrups. Yet this work has been authoritatively pronounced by the *Edinburgh Review* as "by far the noblest equestrian statue in England!" The pedestal is insignificant.

SHAKESPEARE, WILLIAM . . . . .	Drury-lane Theatre portico . . . . .	Schemakers.
--------------------------------	--------------------------------------	-------------

Executed in lead by Cheere, "the leaden figure-man at Hyde-park Corner." It was presented to the theatre by Mr. Whitbread, M.P.

SLOANE, SIR HANS . . . . .	Chelsea . . . . .	Rysbraeck.
VICTORIA, QUEEN . . . . .	Royal Exchange . . . . .	Lough.
VICTORIA, QUEEN . . . . .	New Record Office . . . . .	Durham.
WATTS, DR. ISAAC . . . . .	Abney Park Cemetery . . . . .	Baily.

<i>Statues.</i>	<i>Sites.</i>	<i>Sculptors.</i>
WELLINGTON, DUKE OF . . .	Green Park Arch . . . . .	Wyatts.

This stupendous statue was modelled by Matthew Cotes Wyatt, and his son James Wyatt, at Dudley-grove House, Harrow-road; it was commenced in 1840, and occupied three years, and took more than 100 tons of plaster. It represents the Duke of Wellington upon his horse "Copenhagen," at the field of Waterloo: the Duke sat for the portrait, and the head and likeness are fine. The group is cast in about eight pieces, which are fastened with screws and fused together, 30 men being often employed at one time upon the bronze. It was conveyed upon an immense car, drawn by 40 horses, to the Green Park Arch, Sept. 23, 1846; it was raised by crabs. The entire group weighs 40 tons: is nearly 30 feet high; and within half of the horse eight persons have dined. The girth of the horse is 22 ft. 8 in.; nose to tail 26 feet; length of head 5 feet; length of each ear 2 ft. 4 in. The erection of this group, which cost about 30,000*l.*, originated from the close contest for the execution of the Wellington statue in the City; and the execution of both statues emanated from a suggestion of Mr. T. B. Simpson, of the Court of Common Council, Lime-street Ward.

WELLINGTON, DUKE OF . . .	Woolwich . . . . .	Milnes.
WELLINGTON, DUKE OF . . .	Royal Exchange . . . . .	Chantrey.
WESTMINSTERS, OLD . . . . .	Westminster Broadway . . . . .	Scott.

This monument before the west end of Westminster Abbey, to the "old Westminsters" who perished in the Crimean war is effective and picturesque.

WILLIAM III. . . . .	St. James's-square . . . . .	Bacon, jun.
WILLIAM IV. . . . .	King William-street . . . . .	Nixon.

The several Statues in the East India House, Guildhall, British Museum, Parliament Houses, St. Paul's Cathedral, Westminster Abbey, Royal Exchange, and other public buildings, are described under their respective names.

At Newgate Prison, in exterior niches, are meritorious statues of Concord and Liberty, Mercy and Truth, Peace and Plenty,—from the Old Gate.

YORK, DUKE OF . . . . .	York Column . . . . .	Westmacott.
-------------------------	-----------------------	-------------

*STOCK EXCHANGE*, fully described at pp. 331–333.

### *STRAND (THE)*

**E**XTENDS from Charing Cross to Temple Bar (1369 yards, or  $\frac{3}{4}$  of a mile 49 yards), and was "probably so called as being at the brink of the Thames, before the space now built on was gained by raising the ground" (*Hatton*), which is in some places 20 feet deep. In early ages this was the great thoroughfare between the Court and City, and the Inns of Court and Westminster. The site of St. Clement's Danes is recognised in tradition as "the Danes' churchyard," the burial-place of the son of Canute the Great, Harold Harefoot. Here, close by the Thames, and outside the City walls, dwelt together as fellow-countrymen the Danish merchants and mariners; and their church, like that at Aarhus in Jutland, and Trondjeun in Norway, was dedicated to St. Clement, the seaman's patron-saint. (*J. J. A. Worsaae, For. F.S.A.*) Another early building was the Hermitage of St. Catherine at Charing, and adjoining or opposite, the Hospital of St. Mary Ronnceval (*temp.* Henry III.); also, the palace of the Savoy, and the first church of St. Mary, were built before the 14th century. A petition to Edward II. (1315) describes the footway interrupted by thickets and bushes; and in 1383 tolls were granted for paving the Strand from the Savoy to Temple Bar. The south side was occupied by the mansions of the nobility and prelates, with gardens, terraces, and water-stairs down to the Thames; but the spaces between the mansions showed the river: whilst on the north side were the gardens of the Convent of Westminster, bounded by lanes and open ground; the village of St. Giles, and the church of St. Martin *in the fields*; and Charing Cross, without a house near it. One of Canaletto's pictures shows Charing Cross, Northumberland House, and the Strand, with the signs in front of the houses. Van der Wyngrede's View, 1543, shows straggling lines of houses from *the bar* (now Temple Bar) to the Savoy, and beyond it on the south side; but the north is open to Convent Garden; and in the roadway are St. Clement's and St. Mary's churches, and the Maypole, near upon the site of the Strand Cross, where "the justices itinerants sate without London" (*Stow*). Of the Thames-bank palaces are shown Somerset-place, the Savoy, and Durham House. At this time the Strand was crossed by three water-courses running from the north to the Thames, over which were bridges; the sites of two are denoted by Ivy-bridge-lane and Strand-bridge-lane; and the remains of a third bridge were uncarted in 1802, a

(By a Correspondent.)

When, some twenty years ago, the London County Council effected their great demolition scheme for the Kingsway and Aldwych improvements they left a few buildings standing amidst the lovestrife and coltsfoot, in a semi-ruinous condition. There was Matcham's Hotel, the proscenium of a theatre (the Olympic, I believe), a section of New Inn, and so on. All gradually disappeared, with a solitary exception. This was the stark, untidy-looking structure, which for years has stood on the Strand almost opposite St. Mary's Church. The upper floors have been hidden behind advertisement hoardings. The ground-floor shop has been used as a fountain-pen depôt. It stands on land which is to be used in the setting up of the Bush Building western extension. This week it is coming down, and with it will vanish the very last of a "quarter" which stood on a great area of London, breathing the atmosphere of the seventeenth and early eighteenth centuries. Its passing seems worth recalling briefly.

This building was once, I believe, part of the White and Horses Inn, in the Strand. When the London County Council clearance began it was necessary to find temporary quarters for Short's Wine House, which to-day is settled in the east corner of what is known as the Coni House, but was built as the new City Restaurant. Short's had originally occupied premises a few yards west of where it is to-day. At the time of the clearance it was accommodated by the L.C.C. in the building which is now, at last, to disappear. The Council decorated the front with a sham timbered façade, and the place suited its purpose well enough. The mystery is that it has been allowed to remain standing so long, in its ruinous condition.

It did not, however, return to York House after his release from the Tower, being forbidden to come within the verge of the court. The house was next lent to Villiers, Duke of Buckingham, who, in 1624, obtained the estate by grant from James I. The mansion was then taken down, and a temporary house built for State receptions, and sumptuously fitted with "huge panes of glass" (mirrors), of the manufacture of which in England Buckingham was an early patron. Near the middle of a long embattled wall, fronting the Thames, he caused to be erected, in 1626, a rustic Water-gate. After the Duke's death, in 1628, York House was leased to the Earl of Northumberland. Here was a fine collection of pictures, among which is supposed to have been the lost portrait of Prince Charles, by Velasquez. Here also was the collection of sculptures which belonged to Rubens; and in the garden was John de Bologna's Cain and Abel. The "superstitious pictures" were sold by order of Parliament in 1645; and the house was given by Cromwell to General Fairfax, by the marriage of whose daughter and heiress with George, second Duke of Buckingham, it was reconveyed to the Villiers family. The Duke resided here subsequent to the Restoration: but in 1672

the Ivy-bridge stream formed the boundary between, and the City of Westminster.

York House is described at page 554. Next to it is the official residence of the Secretary of State, in the reign of Charles I. *Northumberland's Lodgings:* here Nelson lodged. *St. Mary's Lane:* here, with his mother and step-mother when he went to "a private school in St. Dunstons School, under Camden, then junior to Benjamin Franklin, in 1771. At No. 27, the authors of the *Rejected Addresses*. At No. 1, Mathews, the comedian: his father was a Dr. Adam Clarke, Rowland Hill, and other

*York House Hotel*, described at pp. 442-3. The early history, 1559-560: it was part of the Hungerford House and costly failure.

about 100 yards east of the site of Charing-cross, the site of the production, by Edward M. Barry, A.R.A., from scanty remains, Pennant, in the British Museum; a second drawing of the Society of Antiquaries. The height to the top surmounted is about 70 feet; the materials Portland stone and sculptor, Thomas Earp. In the upper story are eight figures of the queen, with royal insignia, and the other figures are copied from those existing on the crosses of the feet of the statues are eight figures of kneeling figures consist of three varieties. The first displays three figures of England by King Henry II. in 1154, and which are in Victoria. The second is that of Ponthieu, which only consists of three bendlets within a bordure. The third is arranged quarterly; and the representation of the castle is a castle, triple towered; and those of Leon's accords with the arrangement at Northampton, the tracery in the lowest stage of the monument is commencing alternately the castle of Castile and the lion having a similar design. The carving generally of the monument agrees with the best remains of English thirteenth-century sculpture, effectively engraved in the *Illustrated London News*,

*Statues.* . . . . . *Sit*  
WELLINGTON, DUKE OF . . . Green P

This stupendous statue was modelled by Matthew Gurney, of Grove House, Harrow-road; it was commenced in 1826 and cost 100 tons of plaster. It represents the Duke of Wellington as he sat for the portrait, and the statue is composed of about eight pieces, which are fastened with screws and are put on one time upon the bronze. It was conveyed upon a cart to Park Arch, Sept. 23, 1846; it was raised by crabs, and is 100 feet high; and within half of the horse eight persons had to be employed to nose to tail 26 feet; length of head 5 feet; length of neck 10 feet; which cost about 30,000*l.*, originated from the close of the City; and the execution of both statues emanated from the Court of Common Council, Lime-street Ward.

STOCK EXCHANGE, full

STRAND

**E**XTENDS from Charing Cross to Temple Church, and was "probably so called as being a narrow street now built on was gained by raising the ground 20 feet deep. In early ages this was the greatest thoroughfare of the City, and the Inns of Court and Westminster were recognised in tradition as "the Danes' church." Here, Canute the Great, Harold Harefoot. Here, the Danes dwelt together as fellow-countrymen in their church, like that at Aarhus in Jutland. The first building was the seaman's patron-saint. The early building was the Hermitage of St. Catherine. The site, the Hospital of St. Mary Rounceval (the Savoy), and the first church of St. Mary, were founded by Edward II. (1315) describes the foundation and in 1383 tolls were granted for paving the Strand. The south side was occupied by the mansions of the nobility and prelates, with gardens, terraces, and water-stairs down to the Thames; but the spaces between the mansions showed the river: whilst on the north side were the gardens of the Convent of Westminster, bounded by lanes and open ground; the village of St. Giles, and the church of St. Martin *in the fields*; and Charing Cross, without a house near it. One of Canaletto's pictures shows Charing Cross, Northumberland House, and the Strand, with the signs in front of the houses. Van der Wyngreerde's View, 1543, shows straggling lines of houses from *the bar* (now Temple Bar) to the Savoy, and beyond it on the south side; but the north is open to Convent Garden; and in the roadway are St. Clement's and St. Mary's churches, and the Maypole, near upon the site of the Strand Cross, where "the justices itinerants sate without London" (*Stow*). Of the Thames-bank palaces are shown Somerset-place, the Savoy, and Durham House. At this time the Strand was crossed by three water-courses running from the north to the Thames, over which were bridges; the sites of two are denoted by Ivy-bridge-lane and Strand-bridge-lane; and the remains of a third bridge were unearthed in 1802, a

little eastward of St. Clement's church. The Ivy-bridge stream formed the boundary between the Liberty and Duchy of Lancaster, and the City of Westminster.

STRAND: SOUTH SIDE.—*Northumberland House* is described at page 554. Next door, upon the site of No. 1, Strand, was the official residence of the Secretary of State, where Sir Harry Vane the elder lived, in the reign of Charles I. *Northumberland-court* was once known as "Lieutenants' Lodgings;" here Nelson lodged. *Northumberland-street*, formerly *Hartshorne-lane*: here, with his mother and step-father, a bricklayer, lived Ben Jonson when he went to "a private school in St. Martin's Church;" and next to Westminster School, under Camden, then junior master. *Craven-street*: at No. 7 lived Dr. Benjamin Franklin, in 1771. At No. 27 died, in 1839, James Smith, one of the authors of the *Rejected Addresses*. At No. 18, Strand, was born, 1776, Charles Mathews, the comedian: his father was a bookseller; and his shop was the resort of Dr. Adam Clarke, Rowland Hill, and other Dissenting ministers.

*Charing Cross Railway Terminus and Hotel*, described at pp. 442-3. The early history of this spot is glanced at in pp. 559-560: it was part of the Hungerford estate: it was long a site of sorry speculations and costly failure.

The beautiful Gothic cross in the court-yard is about 100 yards east of the site of Charing-cross, the Eleanor memorial, of which the new cross is a reproduction, by Edward M. Barry, A.R.A., from scanty authorities, namely, a rough drawing in the Crowle Pennant, in the British Museum; a second drawing in the Bodleian Library; and a third in the library of the Society of Antiquaries. The height to the top of the gilt copper cross by which the memorial is surmounted is about 70 feet; the materials Portland stone, red Mansfield stone, and Aberdeen granite; sculptor, Thomas Earp. In the upper story are eight crowned statues of Queen Eleanor, four representing her as queen, with royal insignia, and the other four with the attributes of a Christian woman. At the feet of the statues are eight figures of kneeling angels in prayer. The shields in the lower stage are copied from those existing on the crosses of Waltham and Northampton, and on the tomb, and consist of three varieties. The first displays three lions passant guardant, first assumed as the Royal arms of England by King Henry II. in 1154, and which still forms part of the Royal arms as borne by Queen Victoria. The second is that of Pontieun, which Queen Eleanor bore in right of her mother, and simply consists of three bendlets within a bordure. The third shield represents the arms of Castile and Leon, arranged quarterly; and the representation of the earliest known quartering of arms. The arms of Castile are a castle, triple towered; and those of Leon represents a lion rampant. The order of the shields accords with the arrangement at Northampton, Waltham, and Westminster. The diaper above the tracery in the lowest stage of the monument is composed of octagonal panels, richly undercut, representing alternately the castle of Castile and the lion rampant of Leon: the pillow and couch of the effigy have a similar design. The carving generally of the crockets, capitals, canopies, diapers, gargoyles, &c., agrees with the best remains of English thirteenth-century art. The cost has not exceeded 1800*l*. It is effectively engraved in the *Illustrated London News*, Dec. 9, 1865.

No. 31, Strand, occupies part of the site of York House, originally the inn of the Bishop of Norwich; and being obtained in exchange for Suffolk House, Southwark, by Heath, Archbishop of York, *temp.* Queen Mary, the name was changed to York House. It was let to the Lord Keepers of the Great Seal: here lived Sir Nicholas Bacon; and here was born his son, Lord Chancellor Bacon, 22nd January, 1560-1. At York House he kept his 60th birthday. Here the Great Seal was taken from him: when importuned by the Duke of Lennox to part with the mansion, Bacon replied, "For this you will pardon me: York House is the House where my father died, and where I first breathed; and there will I yield my last breath, if so please God and the king." He did not, however, return to York House after his release from the Tower, being forbidden to come within the verge of the court. The house was next lent to Villiers, Duke of Buckingham, who, in 1624, obtained the estate by grant from James I. The mansion was then taken down, and a temporary house built for State receptions, and sumptuously fitted with "huge panes of glass" (mirrors), of the manufacture of which in England Buckingham was an early patron. Near the middle of a long embattled wall, fronting the Thames, he caused to be erected, in 1626, a rustic Water-gate. After the Duke's death, in 1628, York House was leased to the Earl of Northumberland. Here was a fine collection of pictures, among which is supposed to have been the lost portrait of Prince Charles, by Velasquez. Here also was the collection of sculptures which belonged to Rubens; and in the garden was John de Bologna's Cain and Abel. The "superstitious pictures" were sold by order of Parliament in 1645; and the house was given by Cromwell to General Fairfax, by the marriage of whose daughter and heiress with George, second Duke of Buckingham, it was reconveyed to the Villiers family. The Duke resided here subsequent to the Restoration: but in 1672

sold the estate for 30,000*l.*, when the mansion was pulled down, and upon the grounds and gardens were erected houses named from the last possessor of the mansion: *George-street* (now *York-buildings*), *Villiers-street*, *Duke-street*, *Of-alley*, *Buckingham-street*. The whole estate was also called *York-buildings*.

The *York Buildings Waterworks Company*, for supplying the West-end of London with water, was one of the bubbles of 1720. For this purpose, however, a veritable steam-engine was constructed, which is thus described in the *Foreigner's Guide to London*, 1720:

"Here you see a high wooden tower and a water-engine of a new invention, that draws out of the Thames above three tons of water in one minute, by means of the steam arising from water boiling in a great copper, a continual fire being kept to that purpose; the steam being compressed and condensed, moves, by its evaporation, and strikes a counterpoise, which counterpoise striking another, at last moves a great beam, which, by its motion of going up and down, draws the water from the river, which mounts through great iron pipes to the height of the tower, discharging itself there into a deep leaden cistern; and thence falling through other large iron pipes, fills them that are laid along the streets, and so continuing to run through wooden pipes as far as *Mar-bone fields*, falls there into a large pond or reservoir, from whence the new buildings near *Hanover-square* and many thousand houses, are supplied with water. This machine is certainly a great curiosity; and though it be not so large as that of *Marly* in France, yet, considering its smallness in comparison with that, and the little charge it was built and is kept with, and the quantity of water it draws, its use and benefit is much beyond that."

The Company ceased to work this "fire-engine" in 1731; but it was shown for several years as a curiosity. In *All Alive and Merry, or the London Daily Post*, April 18, 1741, it is stated that the charge of working the machine, "and some other reasons concurring, made its proprietors, the *York Buildings Company*, lay aside the design; and no doubt but the inhabitants in this neighbourhood are very glad of it; for its working, which was by sea-coal, was attended with so much smoke, that it not only must pollute the air thereabouts, but spoil the furniture." The failure is the subject of an amusing *jeu d'esprit*, entitled "The *York Buildings Dragons*," reprinted in *Wright's England under the House of Hanover*, vol. i. Appendix. Many of the wooden water-pipes have been taken up in excavations in *Brook-street*, *Grosvenor-square*, and in other places along the line. In *Buckingham-street*, in 1818, were "the *Sea-water Baths*," which were supplied by a vessel with water from below *Southend*. See *James's View on the Thames*, in the *Hampton Court Picture Gallery*.

*Evelyn* notes: "17th Nov. 1683.—I took a house in *Villiers-street*, *York-buildings*, for the winter, having many important concerns to dispatch, and for the education of my daughters."—*Diary*.

*Buckingham-street*: at the last house on the west side (since rebuilt) lived *Samuel Pepys* from 1684 to 1700; and No. 15, on the east side opposite, was hired for *Peter the Great* in 1693: the house has some noble rooms facing the river: here the *Institution of Civil Engineers* once met. At No. 14, in the top chambers, lived *William Etty*, R.A., the painter, from 1826 to 1849. At the south end of *Buckingham-street* remains the *Water-gate* built for *York House*, which stood a short distance westward.

The Gate is of *Portland-stone*: on the northern or street side are three arches, flanked with pilasters, supporting an entablature and four balls; above the keystones of the arches are shields, those at the sides sculptured with anchors, and that in the centre with the arms of *Villiers* impaling those of the family of *Manners*. Upon the frieze is the *Villiers motto*: FIDEI COTICULA CRUX (the Cross is the Touchstone of Faith). The southern or river front has a large archway, opening upon steps to the water; on each side is an aperture, divided by a small column, and partly closed by balustrades. Four rusticated columns support an entablature, ornamented with scallops, and crowned with an arched pediment, and two couchant lions holding shields, on which are sculptured anchors. In the pediment, within a scroll, are the arms of *Villiers*, viz., on a cross, five escallops, encircled by a garter, and surmounted by a ducal coronet; at the sides are pendent festoons. This Gate has been ascribed to *Inigo Jones*; but in the library of the *Soane Museum*, in an "Account Book of Workes done by *Nicholas Stone*, sen., Master-mason to *King James I.* and *King Charles*," the ninth article in the list is, "The *Water-gate* at *Yorke House* hee *designed and built*, and *ye right hand Lion* hee did fronting *ye Thames*. *Mr. Kearne*, a *Jarman*, his brother by marrying his sister, did *ye Shee Lion*."

The Gate is approached by an inclosed terrace-walk, planted with lime-trees.

The *Adelphi*, east of *York-buildings*, is described at page 1. *John-street* occupies the site of *Durham House*, which extended from the river to the Strand. It was built by *Thomas Hatfield*, Bishop of *Durham*, 1345–1381, and continued to be inhabited by the see until *Bishop Tunstall* exchanged the house for *Coldharborough*, in *Thames-street*. *Durham Place* was used as a mint by the *Seymours*. *Edward VI.* granted the place to his sister *Elizabeth*. It next became the residence of *Dudley*, Earl of *Northumberland*; and here was celebrated his son's marriage with *Lady Jane Grey*, who, on assuming the crown, was lodged in *Durham Place*, and thence escorted to the Tower. The estate was restored by *Queen Mary* to *Bishop Tunstall*; but *Elizabeth*, on her

accession, claimed Durham Place as one of the royal palaces, and granted it to Sir Walter Raleigh, who possessed it for twenty years, but surrendered it in 1603 to the then Bishop of Durham. Aubrey well remembered Raleigh's "study, which was on a little turret that looked into and over the Thames, and had the prospect, which is as pleasant, perhaps, as any in the world." The stables fronting the Strand were next taken down, and upon the ground was built the New Exchange (*see* pp. 330-331), demolished in 1737: the site is now occupied by the houses Nos. 54 to 64 inclusive, the banking-house of Coutts and Co. being the centre: the name survives in *Durham-street*. At Coutts's (No. 59), formerly in St. Martin's-lane, the sovereign and the royal family have banked (kept cash), commencing with Queen Anne: the series of accounts is preserved entire.

*Beaufort-buildings* occupy the site of a mansion named from its successive owners, *Carlisle House* (Bishops of Carlisle); *Bedford* and *Russell House* (Earls of Bedford); *Worcester House*, from its next occupant, the Marquis of Worcester, who wrote the *Century of Inventions*; and from the Marquis's eldest son, created Duke of Beaufort, *Beaufort House*. Lord Clarendon lived here while his house was building at the top of St. James's-street; and here, in 1660, was married Anne Hyde, the Chancellor's daughter, to the Duke of York, according to the Protestant rites. The mansion was taken down, and a smaller house built; which being burnt down, with some others, in 1695, upon the ground were erected the present Beaufort-buildings. In a house on the site was born Aaron Hill, the dramatist, 1685. At the east corner, upon the site of No. 96, Strand, lived Charles Lillie, who sold snuffs, perfumes, &c.; and took in letters for the *Tatler*, *Spectator*, &c., directed to him at the desire of Steele.

Mr. Rimmel has published a clever book on Perfumery, in which he mentions, besides Lillie, "one Perry, residing also in the Strand, at the corner of Burling-street. He was, however, reduced to 'blow his own trumpet,' and in a paper called the *Weekly Packet*, bearing the date of 23rd December, 1713, he vaunts, besides his perfumes, an oil drawn from mustard-seed, which, at the moderate price of 6d. per ounce, is warranted to cure all diseases under the sun."

Nos. 101 and 102, Strand, *Ries's Divan*, a large decorated room for cigars, chess, and coffee, occupies the site of the *Fountain Tavern*, noted for its political club, and described by Strype; of a drawing academy, at which Conway and Wheatley were pupils; and of the lecture-room of John Thelwall, the political elocutionist. At No. 101, lived Rudolph Ackermann, the printseller, who introduced lithography and "the Annuals" from Germany: here he illuminated his gallery with Cannel coal, when gas-lighting was a novelty.

*Adam-street* presents a handsome specimen of the embellished street-architecture introduced by the Brothers Adam.

*Salisbury-street* and *Cecil-street* are built upon the site of Salisbury House, erected in 1602 by Sir Robert Cecil, Lord High Treasurer to James I., and created Earl of Salisbury in 1605. His successor divided the mansion into Great Salisbury House and Little Salisbury House: part of the latter was taken down, and upon the site was erected Salisbury-street, rebuilt as we now see it by Paine the architect; another portion was converted into the Middle Exchange, with shops and stalls, and a flight of steps to the river; the latter was taken down in 1696, with Great Salisbury House, and upon their site was erected Cecil-street. In Little Salisbury House lived the third Earl of Devonshire, the pupil and patron of Hobbes, who, when standing at the gate a few days after Restoration-day, was kindly recognised by Charles II. as he was passing in his coach through the Strand. In Cecil-street, and at the Globe in Salisbury-street, lived Partridge, cobbler, astrologer, and almanack-maker, whom Swift humorously killed in 1708, though he actually lived till 1715; but Partridge's Almanack (*Merlinus Liberatus*) continued to be published; and in 1723 advertised "Dr. Partridge's night-drops, night-pills, &c., sold as before, by his widow, at the Blue Ball in Salisbury-street." Opposite *Southampton-street* lived the Vaillants, foreign booksellers, from 1686 until late in the last century. *Fountain-court* is named from the above tavern; at No. 3 in this court died, August 27, 1827, Blake, the epic painter, whose love of religion supported him through a life of uniform poverty, and cheered his death-bed.

*Savoy-steps* and *Savoy-street*, *see* SAVOY, pp. 142-144, 722.

At No. 132, Strand (site of Wellington-street) was established in 1740 the first circulating library in London, by Wright, who had for his rivals Samuel Bathoe and John Bell. Upon the site of No. 141 lived Jacob Tonson, the bookseller, "at Shakspeare's head, over against Catherine-street, in the Strand." The house was successively occupied by the publishers, Andrew Millar, Alderman Thomas Cadell, and Cadell and Davies: Millar, being a Scotchman, adopted the sign of Buchanan's Head, a painting of which continued in one of the window-panes to our day. No. 142 occupies the site of the *Turk's Head Coffee-house*, which Dr. Johnson encouraged; "for the mistress of it is a good civil woman, and has not much business." No. 143 (now Southgate's Fine Arts Auction gallery), site of the first office of the *Morning Chronicle* (see NEWSPAPERS, p. 616). At No. 147 was published the *Sphinx*; and Jan. 2, 1828, No. 1 of the *Athenæum*, edited by James Silk Buckingham, the traveller in the East.

At No. 149, long known to the collectors of shells, minerals and fossils, John Mawe kept shop: here have been sold shells at 5*l.*, 10*l.*, and 20*l.* each, now to be bought for a few shillings. Mr. Mawe published his *Travels in the Diamond District of Brazil*, 1812; *A Treatise on Diamonds*; and several elementary works on Mineralogy, Conchology, &c. His widow was succeeded by James Tennant, F.G.S., Professor of Mineralogy and Geology in King's College, London.

SOMERSET HOUSE (see pp. 735, 6). KING'S COLLEGE GATEWAY (see p. 276). No. 162, Strand, *Somerset Hotel*: at the bar letters were left for the author of *Junius*. No. 165, *Inglis's Warehouse for Scots Pills* until 1865: "Dr. Anderson's pills, sold by J. Inglis, now living at the Golden Unicorn, over against the Maypole in the Strand."—*Advertisement*, 1699.

*Strand-lane*, leading to the Roman Bath (see pp. 37 and 716), is the site of Strand Bridge, "and under is a lane or way down to the landing-place on the bank of the Thames" (*Stow*). Eastward were Chester's Inn, Strand Inn, and the Inn of the Bishop of Llandaff.

No. 169, *Strand Theatre*, previously Barker's Panorama (see THEATRES).

*Arundel House*, eastward, originally the town-house of the Bishops of Bath, was wrested from them in the reign of Edward VI. by Lord Thomas Seymour, High Admiral. After his execution, the house, with messuages, tenements, and lands adjoining, was purchased by Henry Fitz-Alan, Earl of Arundel, according to Strype, for 4*l.* 6*s.* 8*d.*; hence it was called Arundel Palace. Here died, 25 Feb., 1603, the Countess of Nottingham, after her interview with Queen Elizabeth to implore forgiveness for having withheld from her Essex's ring. Here Thomas Earl of Arundel began to assemble the celebrated Arundelian Marbles: the statues and busts in the gallery of the mansion; the inscribed marbles inserted in the garden-walls; and the statues placed in the garden: altogether, 37 statues, 128 busts, and 250 inscribed marbles; besides sarcophagi, altars, and fragments, and the inestimable gems. The sculpture and picture galleries are seen in the backgrounds of Van Somer's portraits of the Earl and his Countess.

To the Earl's "liberal charges and magnificence this angle of the world oweth the first sight of Greek and Roman statues, with whose admired presence he began to honour the gardens and galleries of Arundel House, and hath ever since continued to transplant old Greece into England."—*Compleat Gentleman*.

"March 1, 1664.—I went to Arundel House, where I saw a great number of old Roman and Grecian statues, many as big again as the life, and divers Greek inscriptions upon stones in the gardens. . . . March 2.—I went to Mr. Foxe's chamber in Arundel House, where I saw a great many pretty pictures and things cast in brasse, some limnings, divers pretions stones, and one diamond valued at eleven hundred pound."—*Journal of Mr. E. Browne*: MS. Sloan. 1906.

To Arundel House the Earl brought Hollar, who here engraved some of his finest plates. Thomas Parr ("Old Parr") was conveyed here from Shropshire by the Earl, to be shown to Charles I.: becoming domesticated in the family of the Earl of Arundel, his mode of living was changed; he fed high, drank wine, and died Nov. 14, 1635, after he had outlived nine sovereigns, and during the reign of the tenth, at the age of 152 years and nine months: his body, by the king's command, was dissected by Harvey, who attributed Parr's death to peripneumony, brought on by the impurity of a London atmosphere and sudden change in diet.—*Philosophical Transactions*, 1669.

The evidence of Parr's extreme age is not, however, documentary; and the birth dates back to a period before Parish Registers were instituted by Cromwell.—*Census Report*, 1851.

Arundel House and Marbles were given back at the Restoration, in 1660, to the

grandson of the earl, Mr. Henry Howard, who, at the recommendation of Selden and Evelyn, gave the inscribed marbles to the University of Oxford; and the library to the Royal Society, who met at Arundel House 9 Jan., 1666-7. Evelyn records "how exceedingly the corrosive air of London impaired" the marbles. The mansion was taken down, 1678; and upon its site were erected Arundel, Surrey, Howard, and Norfolk streets. Hollar's print\* shows the courtyard of Arundel House, with the great hall, and gabled buildings with dormer windows, but mostly low and mean. Sully was lodged here at the accession of James I. *Surrey-street*: here, on the east side, in a large garden-house fronting the Thames, lived the Hon. Charles Howard, the eminent chemist, who discovered the sugar-refining process *in vacuo*. In *Surrey-street* died William Congreve, the dramatist, Jan. 19, 1728-9.

*Norfolk-street*: here, in a house near the water-side, lodged Peter the Great in 1698, and was visited by King William; and thence he went in a hackney-coach to dine with his majesty at Kensington Palace. At the south-west corner lived William Penn, the quaker; and subsequently, in the same house, Dr. Birch, the historian of the Royal Society. At No. 8, Samuel Ireland, originally a Spitalfields silk-merchant, whose son, William Henry Ireland, then eighteen, forged the Shakspeare Papers in 1795: here Dr. Parr and Dr. Warton fell upon their knees and kissed the Mss.,—"great and impudent forgery," as Parr subsequently called it. In *Norfolk-street* also lived Mountfort, the player; and in *Howard-street* lodged Mrs. Bracegirdle, the fascinating actress, out of an attempt to carry off whom arose a bloody duel between Mountfort and Lord Mohun, when the former was killed.

Between *Arundel* and *Norfolk streets*, in 1698, lived Sir Thomas Lyttleton, Speaker of the House of Commons; and next door, the father of Bishop Burnet; and the house within memory was Burnet's, the bookseller, a collateral descendant of the bishop.

*Arundel-street*, "a pleasant and considerable street" (*Hatton*, 1708):

"Behold that narrow street which steep descends,  
Whose building to the shining shore extends;  
Here Arundel's fam'd structure rear'd its frame,—  
The street alone retains an empty name:  
Where Titian's glowing paint the canvas warm'd,  
And Raphael's fair design the judgment charm'd,  
Now hangs the bellman's song, and pasted here,  
The coloured prints of Overton appear;  
Where statues breath'd, the work of Phidias' hands,  
A wooden pump or lonely watch-house stands."—*Gay'sTrivia*.

On the east side was the *Crown and Anchor Tavern*, now the WHITTINGTON CLUB (see p. 260); the sign was, probably, in part taken from the anchor of St. Clement's, opposite. Strype mentions it as "a large and curious house." Here was instituted the Academy of Ancient Music, in 1710. The great room was 84 ft. by 35 ft. 6 in.: here, on Fox's birthday, in 1798, took place a banquet to 2000 guests. Dr. Johnson and Boswell occasionally supped here; and the Royal Society dinners were held here. The very handsome Italian-fronted houses at the east and west corners of Arundel-street were designed by H. R. Abraham.

No. 191, Strand, was the shop of William Godwin, bookseller, and author of *Caleb Williams*, the *Life of Chaucer*, &c.: he removed here from Snow-hill.

*Milford-lane* is named from a *ford* over the Thames at the extremity, and a wind-mill in the Strand, near the site of St. Mary's Church, and shown in a print temp. James I. (See *Chron. London Bridge*, p. 395): there is also a token of "the Wind-mill, without Temple Bar." Sir Richard Baker, the chronicler, lived in *Milford-lane*, 1632-9. (*Cunningham's Handbook*, p. 337.) The picturesque tenements on the east side, Strand end of the lane, principally of wood, with bay-windows, are described in a deed, date 1694: they were taken down in 1852, and the site is now occupied by "Milford House," the office of *The Illustrated London News*. The site of the Infants' Schools lower down in the lane was that of the old Rectory-house.

\* Hollar's View of London from the roof of Arundel House is very rare: an impression at Sir Mark Masterman Sykes's sale, in 1824, sold for 11l. In a Household Book of Lord William Howard (Belted Will) are "his expenses whilst living at Arundel House; and amongst them a payment to Mr. 'Shakspeare,' the parish scavenger."—*Athenaeum*, No. 1403.

In Milford-lane is the Printing-office of H. D. Woodfall, whose grandfather, in Paternoster-row, first printed *Junius's Letters*. The business was first established about the year 1720, in Grocers' Hall-court and in Angel-court, Skinner-street, George Woodfall printed his edition of *Junius's Letters*, 3 vols. 8vo., the first book printed there. The latter office was taken down in 1866.

*Essex-street* and *Devereux-court*, formerly the Outer Temple, are named from Robert Devereux, Earl of Essex, Queen Elizabeth's last favourite. The ground was leased by the Knights of St. John of Jerusalem to the Bishops of Exeter, who built here a town-house, in which they lived till the Reformation, when it passed to William Lord Paget; next to Thomas Howard, Duke of Norfolk, son of the poetic Earl of Surrey; to Dudley, Earl of Leicester; and then to his step-son, the Earl of Essex: hence it was successively called Exeter House, Paget House, Norfolk House, Leicester House, and Essex House. But the chief memory of the place is associated with Essex and his abortive project for the overthrow of Elizabeth's government: he fortified the house, but was hemmed in on all sides, artillery being planted against the mansion, and a gun mounted upon the tower of St. Clement's, when Essex and his followers surrendered. Here was born and married his luckless son, whose infamous countess was implicated in the poisoning of Sir Thomas Overbury. Pepys describes Essex House as "large but ugly:" it was tenanted by persons of rank till after the Restoration, when it was subdivided and let. The Cottonian Library was kept here from 1712 to 1730, in the portion of the house upon the site of the present Essex-street Chapel (*see* p. 220). At the *Essex Head Tavern*, now No. 40, Dr. Johnson established, the year before he died, a club called "Sam's," from the landlord, Samuel Greaves, who had been servant to Mr. Thrale. In this street also was held the Robin Hood Society, a debating club, the scene of Burke's earliest eloquence; Goldsmith was also a member.

At the bottom of the street is the archway of the water-gate of Essex House. In a view of the Thames, showing the Frost Fair, in the reign of Charles II., the King, Queen, and others of the court, are seen coming down the Temple Garden stairs, to witness the sports on the ice; and in part of the background is the archway, and beyond the archway are the gables and other parts of Essex House. A garden, with terraces, is between the arch and the river.

No. 213, Strand, was *George's Coffee-house* (*see* p. 264). *Devereux-court*: here was the *Grecian Coffee-house* (*see* p. 264). No. 217, Strand, was the house of Snow, the wealthy goldsmith:

"Disdain not, Snow, my humble verse to hear;  
Stick thy black pen awhile behind thy ear.

\* \* \* \* \*

O thou, whose penetrative wisdom found  
The South-sea rocks and shelves, where thousands drown'd!  
When credit sunk, and commerce gasping lay,  
Thou stood'st, nor sent one bill unpaid away.  
When not a guinea chink'd on Martin's boards,  
And Atwell's self was drain'd of all his hoards,  
Thou stood'st (an Indian king in size and hue):  
Thy unexhausted shop was our Peru."—*Gay*.

The firm, originally Snow and Walton, was one of the oldest banking-houses in London, second only to Child and Co., who date from 1640. At the period of the Commonwealth, Snow and Co. carried on the business of pawnbrokers, under the sign of the "Golden Anchor." The firm possessed a book, dated 1672, showing that the mode of keeping accounts was then in decimals. The banking-firm, subsequently Strahan (Sir John Dean), Paul, and Bates suspended payment in 1855.

*Palsgrave-place* was the site of *Palsgrave Head Tavern*, set up in compliment to the Palsgrave Frederic, afterwards King of Bohemia, affianced to the Princess Elizabeth in the old banqueting-house at Whitehall, Dec. 27, 1612. Hard by was Heycock's Ordinary, much frequented by Parliament-men and gallants.

TEMPLE BAE will be described hereafter. The west side, until numbered with the Strand, was called on tokens, "Without Temple Barr."

STRAND: NORTH SIDE.—No. 238 was the last of the "Bulk shops," and was kept by Crockford, the fishmonger; removed in 1846 (*see* a sketch of him, at p. 247).

*Ship-yard* was the site of the *Ship Inn*, mentioned in a grant to Sir Christopher Hatton in 1551. There is a token of the tavern, date 1649; and it was standing in 1756. John Reynolds, a cook, issued a token (a fox stealing a goose) in Ship-yard in 1666. An old house, engraved in Wilkinson's *Londina Illustrata*, is stated to have

been the residence of Elias Ashmole, the antiquary. Faithorne published his *Art of Graving and Etching* "at his shop next to y<sup>e</sup> signe of the Drake, without Temple barr, 1662." In the Strand, besides the *Ship*, were the *Swan*, the *Crown*, the *Robin Hood*, the *White Hart*, the *Bear and Harrow*, the *Holy Lamb*, and the *Angel*. Sir John Denham, the poet, when a student at Lincoln's Inn, in 1635, in a drunken frolic, with a pot of ink and a plasterer's brush, blotted out all the signs between Temple Bar and Charing Cross, which cost Denham and his comrades "some monies."—*J. H. Burn*.

From opposite Ship-yard extended an obtuse-angled triangle of buildings, the eastern line formed by the vestry-room and almshouses of St. Clement's, and the sides by shops; the whole called *Butcher-row*, from a flesh market granted here 21 Edward I., at first shambles, but subsequently houses of wood and plaster; one of these, a five-storied house, *temp.* James I., was inhabited by Count Beaumont, the French court ambassador: here the Duke de Sully was lodged for one night in 1603, until "the palace of Arundel" could be prepared for him. Beaumont's house-front bore roses and crowns and fleurs-de-lis, and the date 1581. From a Bear and Harrow orgy, Nat Lee, the dramatic poet, was returning to Duke-street, when he fell, "overtaken with wine," in Clare-market, and died. Here also was Clifton's eatinghouse, a dining-place of Dr. Johnson. Butcher-row was removed in 1802, when were built the opposite crescent-like houses, named Picket-street from the projector of the improvement, Alderman Picket. During the sewers' works, eastward of the church, at several feet depth, was discovered an ancient stone bridge of one arch. The almshouses were removed in 1790; here is a well 190 feet deep.

In a house in Butcher-row, east of Clement's Inn, by the confession of Winter, he, with Catesby, Wright, and Guy Fawkes, met, and there administered the oath of secrecy to the conspirators, and afterwards received the sacrament in the next room.—*The Gunpowder Treason*, reprinted 1679.

*The Foregate* led to CLEMENT'S INN and *Clement's-lane*, where lived Sir John Trevor, cousin to Lord Chancellor Jeffreys, and twice Speaker of the House of Commons. *Boswell-court* occupied the site of a mansion of a Mr. Boswell; here lived Lady Raleigh, the widow of Sir Walter; Lord Chief Justice Lyttleton, and Sir Richard and Lady Fanshawe. In *New-court* was the Independents' chapel of Burgess, Bradbury, and Winter. The houses from Temple Bar to beyond Clement's Inn were taken down in 1867 for the site of the New Law Courts (*see* p. 510).

*St. Clement's Vestry-hall*, Picket-street, contains the altar-piece (St. Cecilia) painted by Kent for St. Clement's Church, whence it was removed, in 1725, by order of Bishop Gibson, on the supposition that the picture contained portraits of the Pretender's wife and children: it was first removed to the *Crown and Anchor tavern*, and next to the old vestry room (*see* ST. CLEMENT'S DANES, p. 158.)

*Wyck-street*, leading to Drury-lane (*see* p. 315): the south side retains some picturesque house-fronts. Opposite is NEW INN (p. 473).

*Holywell-street* is named from one of the holy springs which Fitzstephen described as "sweete, wholesome, and cleere; and much frequented by schollars and youth of the citie in summer evenings, when they walk forth to take the aire." The "holy well" is stated to be that under the *Old Dog tavern*, No. 24. Here was the old entrance to Lyon's Inn. Holywell-street was, in Strype's time, inhabited by "divers salesmen and piece-brokers," who have nearly deserted it: two of their signs long remained; the Indian queen, said to have been painted by Catton, R.A.; and a boldly-carved and gilt crescent moon. The street is now tenanted by dealers in old clothes, keepers of book-stalls, and publishers and vendors of cheap and low books: a few lofty gabled and bayed house-fronts remain. *Newcastle-street* (formerly Magpye-alley) was named from the ground-landlord, John Holles, Duke of Newcastle. No. 313 Strand, was formerly the One Bell livery-stables. The *Tatler*, March 9, 1710, announced a stage-coach "twice a week from the One Bell in the Strand to Dorchester, the proper time for writing pastorals now drawing near."

No. 317, corner of Drury-court, is thought to be the locality of "the Forge in St. Clement's Danes," referred to in the account of the Shrievalty Tenure custom, at pp. 508-509; namely, the site of the forge of a farrier, the father of Nan Clarges, afterwards Duchess of Albemarle. Aubrey (*Life of Monk*, 1680), says: "The shop is still of that trade; the corner-shop, the first turning on ye right hand as you come out

of the Strand into Drury-lane; the house is now built of brick." To this Mr. Brayley, in his *Londiniāna*, 1829, adds a conjectural MS. note: "the house alluded to is, probably, that at the right hand corner of Little Drury-lane, now a butcher's, and whitened over." Curiously enough, the house in the court, next the corner house, No. 317, has been for very many years that of a whitesmith, with its forge.

"Where Drury-lane descends into the Strand"

"the Maypole in the Strand," was raised by the farrier to commemorate his daughter's good fortune.

The *Maypole* set up at the Restoration was conveyed to this spot, April 14, 1661, with great ceremony, a steamer flourishing before it, and drums and trumpets, and the acclamations of the people. This Maypole, 134 feet high, was in two pieces, which being joined together and hooped with iron, the crown and vane, and the king's arms, richly gilded, were placed on the head of it; and a large top, like a balcony, about the middle of it. It was raised by twelve seamen, "by cables, pulleys, and other tacklins, with six great anchors;" and "in four hours' space it was advanced upright, as near hand as they could guess where the former one stood; but far more glorious, bigger, and higher than ever any one that stood before it." It was, however, broken by a high wind about 1672; and the remaining portion, being grown old and decayed, was taken down in 1713.

Several traders' and tavern tokens bear on the reverse this Maypole, with a small building at the foot. Where St. Mary's Church now is, was the first stand for hackney-coaches, erected in 1634; after the church was built, the stand was removed a short distance westward, and lasted until March, 1853.

No. 332, *Morning Chronicle Office*, was formerly the *White Swan tavern*. Here, in a lodging, to be near his patron, the Earl of Clarendon, in Somerset House, lived Dr. William King, who wrote the *Art of Cookery*, a poem, &c. He was the friend of Swift. King was luxurious and improvident, and died in poverty in 1712, in the above house. There is a token of the White Swan in the Beaufoy collection, and the sign post, with its swinging sign-board, with a decorated iron frame, is shown in June's ludicrous, but scarce, print of the *Lady's Disaster*, 1746. At No. 340, Strand, July 15, 1845, died John Augustine Wade, the popular lyric poet and musical composer.

*Catherine-street*: on the west was New Exeter 'Change, designed by Sydney Smirke, with house-fronts *temp.* James I. (see p. 20); now the site of the STRAND MUSIC HALL (see p. 608). *Brydges-street*, Drury-lane Theatre. No. 346 Strand, Doily's Warehouse, rebuilt in fanciful Italian style, by Beazley, in 1838, occupies the site of Wimbledon House, built by Sir Edward Cecil, and burnt down in 1628. Dryden names "Doily petticoats;" Steele had "a Doily suit" (*Guardian*, No. 102); and Gay a "Doily habit" (*Trivia*, book i.); and Doily introduced the small wine-glass napkin which still bears his name.

*Wellington-street North*: on the west side is the Lyceum Theatre, rebuilt by Beazley. In *Exeter-street*, at a staymaker's, was the first London lodging of Dr. Johnson (1737), where he lived upon 4½*d.* per day. When Dr. Johnson first came to London with his pupil Garrick, they borrowed five pounds, on their joint note, of Mr. Wilcocks, the bookseller, Strand.\* "Near the Savoy in the Strand," east of Exeter 'Change, was the Canary House, probably also Cary House, noted for its sack "with abricot flavour" (Dryden's *Wild Gallant*, 1669); and Pepys mentions "Cary House, a house of entertainment." At No. 352 Strand was born, Jan. 29, 1798, Henry Neele, the poet, the son of the able map and heraldic engraver. At No. 355, John Limbird commenced publishing the *Mirror*, No. 1, Nov. 2, 1822. Westward was EXETER 'CHANGE, described at p. 335.

"On the demolition of the building in 1830, the writer saw, cut in the stone architrave above the window at the east end, 'EXETER CHANGE. 1670,' a date much earlier in its adaptation than is generally supposed."—*J. H. Burn*.

In one of the offices abutting on the 'Change was published the *Literary Gazette*, No. 1, Jan. 25, 1817. *Exeter-street* and *Burleigh-street* are named from their being

\* The following were Dr. Johnson's places of residence in and near London: 1. Exeter-street, off Catherine-street, Strand (1737). 2. Greenwich (1737). 3. Woodstock-street, near Hanover-square (1737). 4. Castle-street, Cavendish-square, No. 6 (1738). 5. Strand. 6. Boswell-court. 7. Strand again. 8. Bow-street. 9. Holborn. 10. Fetter-lane. 11. Holborn again (at the Golden Anchor, Holborn Bars, 1748). 12. Gough-square, No. 17 (1748). 13. Staple Inn (1758). 14. Gray's Inn. 15. Inner-Temple-lane, No. 1 (1760). 16. Johnson's-court, Fleet-street, No. 7 (1765). 17. Bolt-court, Fleet-street, No. 8 (1776).—See Boswell's *Life*.

parts of the site of Burleigh and Exeter House. No. 372, Strand, EXETER HALL, is described at p. 334.

*Southampton-street* was named in compliment to Lady Rachel, daughter of Thomas Wriothesley, Earl of Southampton, and wife of William Lord Russell. Near the foot of the street stood Bedford House, the town mansion of the Earl of Bedford: it was principally built of wood, and remained till 1704; the garden extended northward, its wall bounding Covent Garden Market. In *Southampton-street* is a bar-gate; the Duke of Bedford having power to erect walls and gates at the end of every thoroughfare on his estate. *Bedford-street* occupies part of the site. Between these streets, east and west, is *Maiden-lane*, where, in a second floor, lodged Andrew Marvell, M.P. for Hull, when he refused a treasury-order for 1000*l.* brought to him by Lord Danby from the King. At a perruquier's, with the sign of the White Peruke, lodged Voltaire during part of his three years' residence in England. Some of his correspondence with Swift is dated from this house.

At No. 26, *Maiden-lane*, corner of *Hand-court*, was born, in 1773, J. M. W. Turner, R.A., the landscape-painter. His father was a hair-dresser; and the painter, when a boy, coloured prints for John R. Smith, of *Maiden-lane*, a mezzotinto engraver. Turner removed to apartments in *Hand-court*, in the Lane, and during his residence here he exhibited at the Royal Academy fifty-nine pictures.

Opposite was the Cyder Cellar, opened about 1730: a curious tract, *Adventures Underground*, 1750, contains strange notices of this "midnight concert-room" (*Notes and Queries*, No. 28): it was a haunt of Professor Porson's. At No. 367, Strand, lived Deville, the lamp-manufacturer, and student of phrenology: when young he was employed by Nollekens, the sculptor, to make for him casts from moulds; which shows the *phrenologist* to have early developed his abilities in this direction. At No. 485, the *Queen's Head* public-house, lodged Thomas Parr, when he was brought to London to be shown to Charles I.; as stated to J. T. Smith, in 1814, by a person then aged 90, to whom the house was pointed out by his grandfather, then 88.

No. 411, Strand, the *Adelphi Theatre*, Beazley architect (*see* THEATRES). No. 429, built for the Westminster Fire and Life Insurance Office, by Cockerell, R.A., had a façade of great originality: the figures (*aquarii*) over the principal windows beautifully characteristic. No. 430, *West Strand* commences: *King-William-street* denotes the reign in which the improvements were made (*see* CHARGING CROSS HOSPITAL, p. 436). No. 437, LOWTHER ARCADE (*see* p. 20).

No. 448, *Electric Telegraph Office*. Upon the roof is the *Electric Time Signal Ball*, completed in June, 1852, when the following were its details:—

The signal consists of a zinc ball, 6 feet in diameter, supported by a rod, which passes down the centre of the column, and carries at its base a piston, which, in its descent, plunges into a cast-iron air-cylinder; the escape of the air being regulated so as at pleasure to check the momentum of the ball, and prevent concussion. The raising of the ball half-mast high takes place daily at 10 minutes to 1; at 5 minutes to 1 it is raised to its full height; and at 1 precisely, and simultaneously with the fall of the ball at Greenwich, it is liberated by the galvanic current sent from the Observatory through a wire laid for that purpose. The same galvanic current which liberates the ball in the Strand, moves a needle upon the transit-clock at the Observatory: the time occupied by the transmission being about 1-3000th part of a second; and by the unloosing of the machinery which supports the ball, less than one-fifth part of a second. The true moment of 1 o'clock is, therefore, indicated by the first appearance of the line of light between the dark cross over the ball and the body of the ball itself. In the event of accidental failure at 1 o'clock, the ball is raised half-mast high, and dropped at 2 o'clock. When fully raised the ball is 129 feet above the level of the Thames, and falls 10 feet.

No. 452, the *Golden Cross Hotel*: the old coaching inn stood further west. "I often," says Lamb, "shed tears in the motley Strand, for fulness of joy at so much life." (*Letters*, vol. i.)

### TATTERSALL'S,

THE celebrated sporting rendezvous and auction mart for horses, known as the "Corner" (*i.e.*, at Hyde Park Corner), in the rear of St. George's Hospital, and approached from Grosvenor-place, was established by Richard Tattersall, in 1766, who leased the ground, then an open place between Piccadilly and the hamlet of Knightsbridge, from Earl Grosvenor. Tattersall, who had been stud-groom to the second and last Duke of Kingston, in 1779, founded his fortune by purchasing from Lord Bolingbroke, then in difficulties, the celebrated stud-horse, Highflyer. Tattersall had previously sold off the Duke of Kingston's stud; and an injunction was applied for

December 14, 1774, to restrain payment of the money to the Duchess, then under indictment. Tattersall is alluded to in the *Belle's Stratagem*, first performed 1782: "Flutter: Oh, yes! I stopped at Tattersall's as I came by, and there I found Lord James Jessamy, Sir William Wilding," &c. The Prince of Wales was a constant patron of Tattersall's, where was a bust of his Royal Highness in his eighteenth year. Here the Jockey Club erected their club-house, elaborately decorated by Italian artists: the Duke of Queensbury ("Old Q.") and Selwyn were members of the club. Richard Tattersall, of whom two portraits exist, died January 20, 1795, aged 72; he was succeeded in his business by his only son Edmund, who carried it on until his death, Jan. 23, 1810: his son, Edmund, who founded the foreign trade, then succeeded; who, dying Dec. 11, 1851, the business came to its present proprietor. In 1852, Tattersall's annual average of horses brought to the hammer was estimated at 45,000*l.*; there were 97 stalls and 13 loose boxes, or standing for 110. In the counting-house hung the regulations, dated 1780. The owner of a Derby winner some few years back had to receive about 70,000*l.* from the Ring, and on the settling-day it was in the hands of his bankers, with the exception of very few hundreds. On show and sale days the display of horses was often very fine. The "Book-making" before the Derby or St. Leger was crowded with peers and plebeians, butchers and brokers, betting-list keepers, insurers, guardsmen and prize-fighters, Manchester manufacturers, Yorkshire farmers, sham captains, *ci-devant* gentlemen, &c. In "the Room," which was regulated by the Jockey Club, was a cartoon of the race-horse "Eclipse." We have seen a clever painting, by Alken, of the horse-auction at Tattersall's. The lease of the old premises expired in 1865; fine fruit had been grown in the gardens, whence were supplied, for many years, the grapes and pines for the Waterloo Banquet, at Apsley House.

In 1864, Tattersall's was removed to newly-erected premises between the junction of the Brompton and Knightsbridge roads, which is much nearer to the great quarter of fashion and wealth than Hyde Park-corner was at the beginning of the present century. The New Tattersall's is described at p. 491.

Tattersall's is the greatest mart for horses in the world. Sales take place here every Monday throughout the year, and in the height of the season on Thursday also. As many as 150 lots have been offered in one day; the average number 100. The proprietors, the Messrs. Tattersall's, also sell annually the produce of the Royal Breeding Establishment at Hampton Court Paddocks, and other thoroughbred produce; also studs of race-horses at York, Doncaster, and Newmarket during the racing season; and to them are usually entrusted the sale of packs of hounds. The highest price ever paid for a horse at Messrs. Tattersall's of late years was 3100 *gs.* for Orlando; and the highest price for a pack of hounds, the property of G. Osbaldeston, Esq., 3000 *gs.*

### TELEGRAPHS, ELECTRIC.

THE Electro-telegraphic system in London has been carried out by the Electric Telegraph Company, at their Central Office in Lothbury, which has thus become the metropolis of stations. Here the whole system was first clearly exhibited; the Company having purchased all Cooke and Wheatstone's patents, and adopted their peculiar features,—the suspended conducting-wire and the Double Needle Telegraph; and, in certain cases, Mr. Bain's chemical Printing Telegraph. The Office is in Founders'-court, on the north side of the Bank of England; where anciently dwelt founders "that cast candlesticks, chafing-dishes, spice-mortars," &c., and "turned them bright with the feet, making a loathsome noise, whence the name of *Loth-berie*, or court" (*Stow*); all which is strikingly contrasted with the wonder-working silence of the Electric Telegraph operations.

The entrance to the office is bold and picturesque: above the doorway is a balcony; and between two enriched Ionic pilasters, carrying an arched pediment, is the large transparent dial of an electric clock. You first enter a hall 42 by 32 feet, entirely lighted from the coved roof of plate-glass in panels. At the east and west ends is a screen of two stories; both communicating with the apartments in which are the electric-telegraph machines, and the two ends are connected by side-galleries, there being thus two railed stories or galleries throughout the hall; at each end, below, are counters, where clerks, who receive the messages, enter them, and pass them to another set of clerks, who transmit them to those employed at the machines above by lifts or small trays, working by cords in square tubes,—a lift and bell to each desk.

Behind the counter is the "translating office," where all messages are transferred into the abbreviated code arranged by the Company. Such messages as descriptions of persons suspected of dishonesty are not translated, but sent in full: only the lists of prices in corn, share, and other markets are so abbreviated.

Several wires are laid to each terminus, lest any of them become defective, when the connexion can be carried on by other wires, as the expense of taking up the pavement would be enormous for so slight a cause. The wires are of copper, and are covered with gutta-percha, India-rubber, or some resinous substances, which, being non-conductors, prevent the escape of the electricity. The wires from the several railway termini are brought through iron pipes laid down under the pavement of the streets; and meeting in Founders' court, are continued through the south wall of the basement of the station, and descending into the "test-box," are fastened there to pegs fitted into the back of the box. At the bottom run a corresponding number of "house-wires," and these go to the machines in the galleries. Connexion is maintained between the line and house-wires by small wires running perpendicularly from one to the other. All the wires are numbered at the desks to correspond from batteries to machines, and from machines to the test-box, that the electric circle may thus be complete. In the galleries the wires are carried along the ceilings from the respective machines to the battery-chambers and the test-box; the battery-wires running east and west, and the house-wires to test-box north and south. Several long and narrow chambers are devoted to the batteries, which are so numbered and arranged in reference to the wires, that any defect can be immediately rectified. Each railway has a division to itself, and thus all risk of confusion is avoided. The communications are spelt through letter by letter, and each word is verified by the receiver to the sender as the message proceeds.

In 1851, the Admiralty Semaphores were removed, and the Electric Telegraph substituted for them. By this means, despatches can be sent off and received by night or day, and in any kind of weather; whereas, the Semaphores could only work by day, and that in fine weather: this was a great inconvenience to Government, especially the naval department, which had only one line, from the Admiralty, Whitehall, to Portsmouth; whilst now, orders can be transmitted in a moment to the Royal arsenals. In 1851, the Needle Telegraph of Wheatstone was carried round the Great Exhibition Building in Hyde Park, and thence to the Police Station, Great Scotland-yard, Whitehall. And in 1852, the exact Greenwich time was first conveyed by the Electric Telegraph to various parts of England.

Besides the private message department, there is a general intelligence office, in which the news published in the morning journals is condensed and transmitted to the Exchanges of Liverpool, Bristol, Manchester, Glasgow, and other chief provincial centres of business. During the day the London and other news is collected, condensed, and transmitted to the offices of upwards of 400 provincial papers, which thus receive, during the night before their publication, the most recent intelligence of every sort received by telegraph from all parts of Europe, besides the current news of the United Kingdom to the latest moment.

There are also curious special arrangements: thus, a wire is exclusively appropriated to communications between the Octagon Hall of the Houses of Parliament and the telegraphic station in St. James's-street, the centre of the West-end clubs. This is a *call-wire* for Members. The Company employ reporters during the sitting of Parliament to make an abstract of the business of the two Houses as it proceeds; this is forwarded, at very short intervals, to the office in St. James's-street, where it is *set up and printed*; and this flying-sheet is sent to the principal clubs and to the Royal Italian Opera. The Government wires go from Somerset House to the Admiralty, and thence, in one direction, to Portsmouth and Plymouth by the South Western and Great Western Railways; and in the other to the naval establishments at Deptford, Woolwich, Chatham, Sheerness, and to the Cinque Ports of Deal and Dover. They are worked by a staff provided by the telegraph companies, and the more important messages are usually sent in cipher, the meaning of which is unknown even to the telegraphic clerks employed in transmitting it. In addition to the wires already spoken of, street branches run from Buckingham Palace to Scotland-yard (the head police-office), to the station at Charing Cross, and thence to the City; whilst the Post-office, Lloyd's, Capel-court, and the Corn Exchange communicate directly with the central offices.—Abridged from Lardner's *Electric Telegraph*, by Bright, 1867.

"The Nerves of London" is Wheatstone's system of wires which may be seen stretching across the sky-line of great thoroughfares, and visibly triangulating the town in every direction; and along which, by a simplified apparatus, messages are sent at the rate of 100 letters a minute. The system of fine copper is hung on the iron wires, strained from poles from the house-tops. At intervals carefully selected, the area of London is divided by a system of triangulation, the posts that form the meeting-points of three series of cables becoming the points at which all these wires have to be distributed.

TEMPLE, INNER AND MIDDLE. (See pp. 461-464.)

TEMPLE BAR,

**B**ETWEEN the east end of the Strand and the west end of Fleet-street, divides the City of London from the liberty of Westminster; or rather, "it opens not immediately into the City itself (which terminated at Ludgate), but into the liberty or freedom thereof" (*Hutton*, 1708). The original division from the county (hence Shire-lane) was by posts and rails, a chain, and a *bar* (as at Holborn, Smithfield, and Whitechapel bars) placed across the street, and named from its immediate vicinity to the *Temple*. The bar gave place to "a house of timber" raised across the street, with a narrow gateway underneath, and an entrance on the south side under the house above. At the coronation of Queen Mary, "the Temple-barre was newly painted and hanged" (*Stow*). This was taken down after the Great Fire, and it is shown in Hollar's seven-sheet Map of London; and in the Bird's-eye View, about 1601. After the Great Fire, Charles II. insisted upon the citizens taking down the Bar, when they, pleading their "weak state and inability," on account of the great expense of rebuilding public edifices consumed in the Great Fire, the King promised to assist them with funds; the Corporation undertook the work; the old Bar was accordingly taken down, and the present Bar erected by Sir Christopher Wren, of Portland-stone, but the royal promise was not performed. The Bar basement is rusticated; it has a large flattened arch in the centre for the carriage-way, and a smaller semicircular arch on each side for foot-passengers. Each façade has four Corinthian pilasters, an entablature, and arched pediment. On the west, in two niches, are statues of Charles I. and Charles II. in Roman costume; and over the keystone of the centre arch were the royal arms: on the east, in similar niches, are statues of James I. and his queen, Anne of Denmark (often described as Elizabeth); and over the keystone were the City arms. Inscription:

"Erected in the year 1670, Sir Samuel Starling Mayor; continued in the year 1671, Sir Richard Ford Lord Mayor; and finished in the year 1672, Sir George Waterman Lord Mayor."

The upper portion has two bold cartouches, or scrolls, as supporters; but the fruit and flowers sculptured in the pediment, and the supporters of the royal arms, which were placed over the extremities of the posterns (now widened), have disappeared; the inscription is scarcely legible; and the stone-work of the whole is weather-worn: in 1852 the Common Council refused to spend 1500*l.* to restore the bar as Wren left it. The statues are by John Bushnell, who died in 1701; that of Charles I. has lost the baton. A scarce print shows the bar, and the adjoining gabled houses at the commencement of the 18th century. In the centre of each façade is a semicircular-headed window, lighting an apartment now held of the City, at the annual rent of 50*l.*, by Messrs. Child, the bankers, as a depository for their account-books. Above the centre of the pediment, upon iron spikes, were formerly placed the heads and limbs of persons executed for treason. The first of these revolting displays was one of the quarters of Sir Thomas Armstrong, implicated in the Rye-House Plot; and next the quarters of Sir William Perkins and Sir John Friend, and Perkins's head, who had conspired to assassinate William III.

"April 10, 1696.—A dismal sight, which many pitied. I think there never was such a Temple Bar till now, except in the time of King Charles II., viz. Sir Thomas Armstrong."—*Evelyn's Diary*.

After the Rebellions of 1715 and 1745, the heads of some of the victims were placed upon the Bar; and in 1723, the head of Counsellor Layer, who had conspired for the restoration of the Pretender; Layer's head remained here for 30 years, till blown down in a gale of wind, when it was picked up in the street by an attorney. But the heads last set up here were those of Townley and Fletcher, the rebels, in 1746. Walpole writes, August 16, 1746: "I have been this morning at the Tower, and passed under the new heads at Temple Bar, where people make a trade of letting spying-glasses at a halfpenny a look;" and in 1825, a person, aged 87, remembered the above heads being seen with a telescope from Leicester Fields, the ground between which and Temple Bar was then thinly built over. (*J. T. Smith*.) In 1766 a man was detected discharging

musket-balls, from a steel cross-bow, at these two heads; which, however, remained there until March 31, 1772, when one of the heads fell down; and shortly after, the remaining one was swept down by the wind.\* The Bar was painted by Rooker in 1772. The last of the iron poles, or spikes, was not removed from the Bar until the commencement of the present century. Mr. Rogers, the banker-poet, who died December 18, 1855, remembered "one of the heads of the rebels upon a pole at Temple Bar, a black, shapeless lump. Another pole was bare, the head having dropped."

The old gates of Temple Bar remain: they are of oak, panelled, and are surmounted by a rudely carved festoon of fruit and flowers. These gates were originally shut at night, and guarded by watchmen; and in our time they have been closed in cases of apprehended tumult. Upon the visit of the Sovereign to the City, and upon the proclamation of a new Sovereign, or of Peace, it was formerly customary to keep the gates closed, until admission was formally demanded; the gates were then opened; and upon the Royal visit, the Lord Mayor surrendered the City sword to the Sovereign, who re-delivered it to his Lordship.

At Temple Bar the above ceremony was observed when Queen Elizabeth proceeded to St. Paul's to return thanks for the defeat of the Spanish Armada; when Fairfax and Cromwell and the Parliament went in state to dine with the City; when Queen Anne went to St. Paul's to return thanks for the Duke of Marlborough's victories; when Queen Victoria dined at Guildhall in the year of her accession, 1837; and when her Majesty went to open the New Royal Exchange in 1844; but on the Queen's visit in 1851, the ceremony at Temple Bar was entirely dispensed with. The custom at the Proclamation of Peace, or the Accession of the Sovereign, had been for a herald, attended by trumpeters, to knock with his baton at the closed gate, when the City Marshal inquired "Who comes there?" and the herald having replied, was admitted, and conducted to the Lord Mayor, who directed that the whole of the cavalcade should be admitted; and the proclamation was read opposite Chancery-lane. Such was the observance upon the accession of George IV., William IV., and Queen Victoria. In 1844 the ceremony consisted merely of closing the gates just before the royal procession reached the Bar, and re-opening them upon the announcement of the Queen's arrival.

At the funeral of the Duke of Wellington, November 18, 1852, Temple Bar was entirely covered with draperies of black cloth and velvet, and cloth-of-gold; decorated with the armorial bearings and orders of the Duke in proper colours; silvered cornices, fringe, urns, and a circle of flambeaux upon the pediment; the whole presenting an impressive effect of solemn triumph and gloomy grandeur. The Bar was appropriately decorated and illuminated at the marriage of the Prince of Wales and the Princess Alexandra of Denmark, March, 1863.

### THAMES EMBANKMENT.

TO the Romans we are indebted for the first embankment of the Thames; and, according to Tacitus, they pressed the Britons into the work. The maintenance and repair of these embankments have been traced to the reign of Edward I.; but the encroachments of wharfs and other buildings have materially contracted the water-way immediately through the centre of the metropolis; so that the only relic of the old line is to be seen adjoining Waterloo Bridge. For example: the distance of the river front from Westminster Hall, in an old plan, is 100 feet; it is now 300 feet. Several plans were proposed for the embankment of the Thames; some including railways, arcades, terraces, promenades, &c. The portions already embanked are the terraces of the Custom House, Somerset House, the Adelphi, the New Houses of Parliament, Thames Bank; although, more than a century and a half since, Wren designed "a commodious quay on the whole bank of the river, from Blackfriars to the Tower." A showy architectural plan was published by Colonel Trench; and in 1845, John Martin, the painter, designed a railway along both sides of the Thames, with an open walk from Hungerford to the Tower, and from Vauxhall to Deptford. The next portion was the embankment above Vauxhall Bridge, to be continued to Battersea Bridge.

The Embankment, J. W. Bazalgette, engineer, is now in course of construction by the Metropolitan Board of Works, on the north side.

The foundations are laid upon a connected line of iron caissons and concrete, upon which is built the brick granite-faced embankment-wall; behind which, and underneath the roadway, it is proposed to con-

\* See *Temple Bar, the City Golgotha*, by a Member of the Middle Temple, sm. 4to, 1853, for a narrative of these occurrences, in illustration of the revolting effects of capital punishments and public executions.

struct the subways and sewers, an arrangement which will add much to the stability of the embankment-wall. The total length of the embankment is about 7000 ft., but it is completely divided by the bridges into three sections: the first section from Westminster to Hungerford bridge, the second from Hungerford bridge to Waterloo, and the third from Waterloo to Blackfriars bridge.

At Westminster-bridge the roadway, which rises at an inclination of 1 in 80 to the level of the bridge, is set back some 30 or 40 feet from the face of the embankment-wall, and the intervening space reserved as a promenade and steamboat-pier, having access from the bridge by a wide and imposing flight of steps opposite the Houses of Parliament. Between Westminster and Hungerford bridges will be landing-stairs for smaller craft, and here it is proposed to introduce the beautiful water-gate now situate at the end of Buckingham-street. On either side of Hungerford and Waterloo bridges, will be steam-boat landing-places, massive granite piers with moulded pedestals rising about 30 ft. above the roadway, to be enriched with bas-reliefs and surmounted by groups of statuary. Half way between Hungerford and Waterloo bridges, will be a flight of landing steps 60 ft. wide, projecting into the river, and flanked at each end with massive piers, rising to the level of a few feet above the roadway, and to be surmounted with colossal figures of river deities, or other appropriate groups. The central feature will be an approach for foot-passengers from the high level roadway to the river by a second flight of steps, descending to the level of the lower or embankment roadway. On either side of this approach a line of shops is to be erected on the land side of the embankment roadway, the backs of which would form a retaining wall to the ornamental crescent and promenade above them. Between Waterloo and Blackfriars bridges, and in front of Arundel-street, a steamboat pier will be constructed, in lieu of the present Essex-street pier, designed upon the same principle as those adjoining the bridges. The embankment-wall itself is to be enriched with mouldings of a simple character down to the level of high-water mark, the continuous line of moulding being broken by the introduction, at intervals, of massive blocks of granite to carry ornamental lamps, and by occasional recesses for promenade seats.

The section between Temple Gardens and Blackfriars bridge will be constructed on arches, so as to admit of the passage under it to docks between the roadway and the shore of barges and lighters; besides a subway for gas and water pipes and electric telegraphs. The embankment will pass by an easy curve to the level of Bridge-street, Blackfriars, where the line of roadway will be continued by the new street to the Mansion House.

The Embankment on the south side, between Westminster bridge and Vauxhall, was commenced in 1865; the foreshore of the first section being the site of the new St. Thomas's Hospital; the new embankment here redeeming six acres from the Thames. There will also be a new road, 60 feet wide, in the rear of the Hospital, continuing Stangate to Lambeth Palace.

### THAMES RIVER, THE.

THE metropolis, extending about 15 miles along the Thames, although occupying little more than one-thirtieth of its entire course, renders it the most important commercial river in the world. The name is inferred to be of British origin: Cæsar writes it *Tamesis*, evidently *Tames* or *Thames* with a Latin termination. The river rises in the south-eastern slopes of the Coteswold Hills; for a short distance it divides Gloucestershire from Wiltshire; next Berkshire from Oxfordshire, and then from Buckinghamshire; it then divides Surrey and Middlesex, separating the cities of Westminster and London from Lambeth, Southwark, Bermondsey, and Rotherhithe; thence to its mouth, it divides Kent and Essex, and falls into the sea at the Nore, about 110 miles nearly due east from the source, and about twice that distance measured along the windings of the river. From having no sand-bar at its mouth, it is navigable for sea-vessels to London Bridge, about 45 miles from the Nore, or nearly one-fourth of its entire length! In its course through the metropolis, it varies from 800 to 1500 feet in breadth; gradually expanding, as it approaches the Nore, to seven miles broad.

Drayton describes, as renowned for "ships and swans, Queen Thames." Cowley thus refers to Old London Bridge impeding the prospect:

"Stopp'd by the houses of that wondrous street,  
Which rides o'er the broad river like a fleet."

"London with Westminster, by reason of the turning of the river, much resembles the shape (including Southwark) of a great whale: Westminster being the under jaw; St. James's Park the mouth; the Pall Mall, &c., northward, the upper jaw: Cock and Pye Fields, or the meeting of the seven streets, the eye; the rest of the City and Southwark to East Smithfield, the body; and thence eastward to Limehouse, the tail: and 'tis, probably, in as great a proportion the largest of towns, as that is of fishes."—*Hutton, 1708.*

The very bold reach made by the Thames adds greatly to the effect of the prospect; and by this means, before the addition of the present front of Buckingham Palace, the Sovereign, when seated upon her throne, commanded a view of the dome of St. Paul's, and the spires and towers of the City churches.

The *Tide* ascends about 15 miles above London Bridge to Teddington (Tide-end-town): here an immense volume of fresh water, derived from the arc of the drainage of the Thames (calculated at 800,000,000 gallons a day, or about 16 square miles, 90 feet deep), flows over Teddington Lock, and mixes with the water below. Even at ebb-tide there are 12 or 13 feet of water in the fair way of the river above Greenwich; the mean range of the tides at London Bridge is about 17 feet; of the highest spring-

tides about 22 feet. Up to Woolwich the river is navigable for ships of any burden; to Blackwall for those of 1400 tons.

*Thames Sports and Pageants.*—Fitzstephen chronicles the water tournament and quintain. Richard II. was rowed in his tapestried barge, probably the first royal barge upon the Thames: and here the king, seeing the poet Gower, called him on board, and commanded him "to make a book after his best," which was the origin of the *Confessio Amantis*. In the 15th and 16th centuries, and onward to very recent days, each palace on the north bank of the Thames had its water-gate, and its retinue of barge and wherries. The Thames was the royal road from Westminster and Whitehall to the Tower, and from thence to Greenwich. State prisoners were conveyed by the Thames to the Traitors' Gate at the Tower, and the Star-Chamber victims to a similar gate at the Fleet. The landing-places on the Thames appear to have been even less changed than the thoroughfare itself; for in the account of the penance of Eleanor Cobham, Duchess of Gloucester, in 1440, we find named Temple-bridge (stairs), the Old Swan, and Queenhithe; and in early maps of London, are Broken Wharf, Paul's Wharf, Essex Stairs, and Whitehall Stairs; all which exist by the same names to the present day. Cardinal Wolsey, when he delivered up York Place, "took his barge at his privy stairs, and so went by water to Putney," on his way to Esher. Sir Thomas More kept his great barge at Chelsea, which he gave to Sir Thomas Audley, his successor in the chancellorship, with whom he placed his eight watermen. In the *Aqua Triumphalis*, in 1662, the City welcomed Charles II. from Hampton Court to Whitehall, the barges of the Twelve Companies being carried as far as Chelsea; and mostly all ended with a pageant. James II., 1688, embarked at Whitehall: "I saw him take barge," says Evelyn; "a sad sight." The last private who kept his state barge at Lambeth was Archbishop Wake, who died 1737. Early in the 17th century, Howel numbered among the river glories, "forests of masts which are perpetually upon her; the variety of smaller wooden bottoms playing up and down;" and Stow computes that there were in his time 2000. In 1630, the river had its own laureat, John Taylor "the Water-poet," who thus sings:—

"But, noble Thames, whilst I can hold a pen,  
I will divulge thy glory unto men;  
Thou, in the morning, when my coin is scant,  
Before the evening doth supply my want."

Taylor knew Ben Jonson; and the Water-poet "probably had the good fortune to ferry Shakspeare from Whitehall to Paris Garden."—(*C. Knight*.)

*The Folly on the Thames* was a floating "musical summer-house" usually moored between Somerset-stairs and the Savoy; the Queen of William III. once visited it.

The existing sports on the Thames consist of rowing, boat-racing, and yachting, or sailing, throughout the summer and autumn; by clubs, numbering several members of the Universities of Oxford, Cambridge, and London; the scholars of Westminster, St. Paul's, and other academic foundations. The match for Dogget's coat and silver badge is rowed for every 1st of August under the direction of the Fishmongers' Company, of which Dogget was a member, as described at page 400.

The *Thames Watermen* formerly had their cant dialect, of which Ned Ward and Tom Brown give specimens; and the "Thames ribaldry" (*Spectator*) has lasted to our time, in which watermen's disputes have been settled by Joe Hatch, "the Thames Chancellor." Strype was told by a member of the Watermen's Company, that there were in his day, about 110 years ago, 40,000 watermen on the rolls of the Company, and that upon occasion they could furnish 28,000 men for the fleet, and that there were then 8000 in service; but these numbers are questionable.

*State Barges.*—The first water pageant of the City of London dates from 1454, when John Norman, the Mayor, was rowed to Westminster in his barge; but the Companies had their barges for water processions half a century before this; and the Grocers' accounts, *temp.* Henry VI., mention the hiring of barges to attend the Sheriffs' show by water. Hall chronicles the Mayor and citizens accompanying Anne Boleyn at her coronation, in 1533, from Greenwich to the Tower, in their barges. The barge was retained in the Lord Mayor's state until our time, and included the Water-bailiff, one of his lordship's esquires, with a salary of 500*l.* a year, a shallop and

eight men; and in the suite were a barge-master, and thirty-two City watermen. The Lord Mayor's barge was richly carved and gilt, and cost in 1807, 2579*l.* A few of the City companies maintained their state-barges "to attend my Lord Mayor:" as the Fishmongers, Vintners, and Dyers, Stationers, Skinners, and Watermen. The Goldsmiths' Company sold their barge in 1850, and have not replaced it. A capacious barge, built in 1816, named the "Maria Wood" (from the then Lord Mayor's eldest daughter), cost 5000*l.* The Queen long maintained her river state; and one of the royal barges, built more than a century and a quarter since, is a curious craft: the rowers wore scarlet state-liveries. The Lords of the Admiralty had likewise their state barge; and in the Museum of the Society of Antiquaries is one of their old massive silver badges. This river-state has, however, been abolished; and excursions are now made in steamers. The Dyers' and Vintners' Companies still keep *swans* on the river.

*State Funerals* by the Thames are rare: the remains of Anne of Bohemia, and Henry VII., who died at Richmond, were conveyed with great pomp by the river to Westminster; and the body of Queen Elizabeth was "brought by water to Whitehall." The remains of Lord Nelson, after lying in state in the Painted Hall of Greenwich Hospital, were conveyed by the Thames\* to the Admiralty, Jan. 8, 1806, and next day were deposited in St. Paul's Cathedral.

THE PORT OF LONDON is described at pp. 685-687.

THE BRIDGES across the Thames at the metropolis are described at pp. 65-75.

The two churches immediately below London bridge attest the occupation of London by the Danes and Northmen: St. Olave's Southwark, originally dedicated to the Norwegian king, Olaf the Saint; and St. Magnus the Martyr, from St. Magnus, a Norwegian jarl, killed in the 12th century in Orkney, where the cathedral in Kirkwall is also dedicated to him.

THE DOCKS (which have cost more than 8,000,000*l.* in the present century) are described at pp. 309-312.

The earliest Water-supply was derived from the Thames, by direct carriage, or from the bournes or streams which flowed through the town, but are now covered sewers. The water was laid from these springs in leaden pipes, as early as the reign of Henry III., to CONDUITS in various parts of the town (see pp. 287-289), whence it was conveyed in buckets and carts: from Tyburn in 1236; from Highbury in 1438; from Hackney in 1535; from Hampstead in 1543; and from Hoxton in 1546. Lilly, the astrologer, when a youth, went to the Thames, accompanied at times by City apprentices, to carry water in buckets from the river, for domestic purposes. In 1535, water was brought from six fountains in the town of Tyburn, this being the first instance on record of water being conveyed to the city by means of pipes. In 1581, Peter Morice threw a jet of the Thames over old St. Magnus' steeple, before which "no such thing was known in England as this raising of water." Next year were formed London Bridge Waterworks, described at p. 67. In 1613 was opened the NEW RIVER (see pp. 609-612), when commenced the modern systems of supply, now executed by eight Companies.

*Fish.*—Fitzstephen describes the Thames, at London, as "a fishful river;" and its fishermen were accustomed to present their tithe of *salmon* at the high altar of St. Peter, and claim on that occasion the right to sit at the Prior of Westminster's own table. At this period the river, even below the site of the present London Bridge, abounded with fish. In 1376-77, a law was passed in parliament for the saving of salmon and other fry of fish; and in 1381-82, "swannes" that came through the bridge, or beneath the bridge, were the fees of the Constable of the Tower. Howel says:—"When the idler was tired of bowls, he had nothing to do but to step down to Queen-hithe or the Temple," and have an afternoon of angling. "Go to the river: what a pleasure it is to go thereon in the summer time, in boat or barge, or to go a-floundering among the fishermen!" In the regulations, too, of the "Committee of Free Fishermen" is a provision that fishermen were not to come nearer London than the *Old Swan*, on the north bank of the river, and St. Mary Overies, on the south. Pennant describes the catch of lamprey of the greatest importance, immense quantities being exchanged with the Dutch fishermen for other descriptions of fish. Formerly Blackfriars and Westminster bridges were anglers' stations; but the fish disappeared from the Thames at London. Blackwall is, however, still famed for its whitebait (see pp. 57-58), and fish are taken in the docks below London Bridge.

\* The Author of this volume, born August 17, 1801, has a distinct recollection of having seen this Funeral Procession upon the Thames from a back window of a house at the south foot of London Bridge.

1749, June 7.—Two of the greatest draughts of salmon were caught in the Thames, below Richmond, that have been known for some years; one net having thirty fine large salmon in it, and the other twenty-two, which lowered the price of fresh salmon at Billingsgate from 1s. to 6d. per lb.—*Gentleman's Magazine*.

Strange fish have strayed here. In 1391, a dolphin, "ten feet in length," played himself in the Thames at London to the bridge. Evelyn tells of a whale, fifty-eight feet in length, killed between Deptford and Greenwich in 1658; and nearer the mouth of the river (at Grays) a whale of the above length was taken in 1809, and another in 1819. "In 1783, a two-toothed cachalot, 21 ft. long, was taken above London Bridge."  
—*Pennant*.

The Steam Navigation of the Thames exceeds that of any other river in the world. The first steam-boat left the Thames, for Richmond, in 1814; the next for Gravesend, in 1815; and in the same year for Margate. The Gravesend steamers soon superseded the sailing-boats with decks, which, in 1737, had displaced the tilt-boats mentioned *temp.* Richard II. The Margate steamers, in like manner, superseded the sailing "hoy." The steam traffic attained vast numbers. In the year 1861, 3,207,558 passengers landed and embarked at Old Shades-pier on board the penny boats of the London and Westminster Steamboat Company. This number has, however, been considerably reduced by railway competition.

*Water*.—In 1858, the water had become very impure by the sewer-water emptying itself into the Thames, and the sulphate of lime in it causing an insufferable stench, the chloride of sodium denoting its origin among the human habitations on the banks of the river; added to which were the organic matters. Man pours into the Thames the refuse of a hundred towns and villages, besides the washings of manured lands, before it gets to Teddington Lock. The water, already impure, is taken at the rate of 100,000,000 of gallons a day, and after washing London and its inhabitants, inside and out, is again returned to the Thames, bearing with it the vegetable and animal refuse of dwelling-houses, mews, cow and slaughter-houses, and all sorts of manufactories in which organic matters are used.—(*Dr. Lankester*). In the following year, 1859, the cleansing of the Thames by disinfectants was commenced; and during the season there were employed about 4281 tons of chalk-lime, 478 tons of chloride of lime, and 56 tons of carbolic acid, at a cost of 17,733*l*.

Notwithstanding the many early measures to purify the Thames, we read in the London chronicles of frequent and terrible ravages by the Plague, Sweating Sickness, and other disorders. The Thames was then a pure and pleasant stream: still the Plague raged, and carried off thousands, and that at a time when the population of London was probably under 300,000 persons—not many more than the population of St. Pancras at present. This shows that the purity of the Thames alone did not prevent the pestilence.

The Conservancy of the Thames by the Corporation of London dates from 1st Edward IV.; the Mayor acting as bailiff over the waters (in preserving its fisheries and channels), and as meter of marketable commodities—fruit, garden-stuff, salt, and oysters, corn and coal—from Staines to Yantlett Creek (80 miles). The Admiralty also claimed a certain jurisdiction; and the Corporation of the Trinity House had authority to remove shoals, to regulate lastage and ballastage, to provide lighthouses and beacons, to license pilots, mariners, &c. The powers of the Corporation were neither large nor well defined, and the result not being satisfactory, a Board of Conservancy was, in 1857, created by Act of Parliament, consisting of 12 members, of whom the City nominated six in addition to the Lord Mayor, who was *ex officio* chairman; and the Admiralty, Board of Trade, and Trinity House nominated the other five members. This Board has greatly improved the river, and done much to develop its capabilities.

FROSTS AND FROST FAIRS ON THE THAMES, *see pp.* 360–363.

THE ISLE OF DOGS, the horse-shoe curve between Limehouse and Blackwall, is described at p. 475.

### THAMES-STREET,

IN Stow's time called *Stockfishmonger's Row*, extends from Puddle Dock, Blackfriars, to the Tower. The line abounds with archæological interest.

UPPER THAMES-STREET.—*Puddle Dock* was the wharf of one Puddle, and next

Puddle Water, from horses watered there. Ben Jonson calls it "our Abydos." Shadwell, in his comedy of *Epsom Wells*, 1676, has "the Countess of Puddle Dock," and Hogarth, in 1732, met "the Duke of Puddle Dock," at the Dark-house, Billingsgate. Upon the site of old Puddle Dock is built the *City Flour Mill*, by far the largest flour-mill in the world, and a gigantic example of mechanical skill. It is constructed entirely upon piles, and occupies rather more than an acre, or 250 feet long by 60 feet wide. The mill consists of eight stories; two steam-engines, of the consecutive power of 300 horses, drive 60 pairs of enormous mill-stones, and work the Archimedean screws and buckets, by which the flour is conducted through the different processes. This mill has stowage for 40,000 quarters of grain; can prepare 4000 quarters per week, and requires only one-sixth of the number of hands which were employed by the old system.

*Castle Baynard Wharf* denotes the site of Baynard's Castle, described at p. 40. Nearly opposite is *Adel* or *Addle Hill*, where stood the palace of the Anglo-Saxon kings, erected by Athelstan. *Boss-court* is so called (says Stow) from a spring-water *boss*, or mouth, put up by the executors of Sir Richard Whittington. From *Lambeth-hill* to Queenhithe have been excavated portions of the river-wall mentioned by Fitzstephen. QUEENHITHE, see p. 704. *Garlick-hill* was of old the garlick *hithe*.

*Dowgate*, or *Downgate*, was named from its steep descent to the river; or from its being the *Dowr* or *Water* gate to Watling-street (*Maitland*); near the church of St. Mary Bothaw (destroyed in the Great Fire, and not rebuilt), was the mansion of Sir Francis Drake. Here is the City Terminus of the South-Eastern Railway, described under WATLING STREET.

*The Steelyard* is named from its having been the place where the King's steelyard, or beam, was set up for weighing goods imported into London (*T. Hudson Turner*). See a good account of the Steelyard, with historic details, by T. C. Noble, in the *Builder*, September 5, 1863.

*Coldharbour-lane* denotes the site of *Coldharbour*, a magnificent mansion, 13 Edward II. (Rymer's *Fœdera*). It was next the property of Sir John Poultney; in 1397, John Holland, Duke of Exeter, entertained here Richard II.; Henry V. possessed it when Prince of Wales; Richard III., in 1485, granted it to the College of Heralds; Henry VIII. exchanged it for Durham House, Strand: it is shown in ruins, in Holland's View of London after the Great Fire. The etymology of Coldharbour is a *quæstio vexata*. Sir John Poultney received for his mansion, yearly, a rose at midsummer, whence, or from the wars of York and Lancaster, the estate was named "the Manor of the Rose." Upon Laurence Pountney-hill are two elaborately carved doorways; and some of the houses have stone-groined vaults. Upon Laurence Pountney-hill lived Dr. William Harvey, with his brothers Daniel and Eliab, merchants; here Harvey made his researches on the circulation of the blood.

In *Suffolk-lane* is MERCHANT TAYLORS' SCHOOL (see p. 725).

*Old Swan Stairs* was a Thames landing-place in the 15th century. Here were the *Old Wine Shades*, established in 1697, beneath the terrace of the former Fishmongers' Hall; the present Shades is the house built for Lord Mayor Garratt, who laid the first stone of London Bridge in 1825.

At Old Swan House, facing the river, three successive heads of the mercantile concern served the offices of Sheriff and Lord Mayor; and it is stated that no such succession in the list of magistrates is to be found in the City. Here traded Mr. Richard Thornton, who died June 20, 1865, leaving more than two millions and three quarters of money, which he disposed of as follows:

To his nephew, Mr. Thomas Thornton, the testator left all his freehold, copyhold, and leasehold property for his absolute use. To his sister, 100,000*l.*; to his nephew, Mr. William Thornton West, 300,000*l.*; to two of his clerks, 20,000*l.* each; to his nurse, for her faithful services and attention to him in his illness, 1000*l.*; to each of his other domestic servants, 500*l.*; to the Leathersellers' Company, 5000*l.*; to Christ's Hospital, 5000*l.*; and 10,000*l.* to Hetherington's Charity for the Blind. To 24 other charities in London, 2000*l.* each; to the schools at Merton, 10,000*l.*; and to the poor of Merton, 1000*l.* To the schools at Burton and Thornton, 10,000*l.*; and to the poor of Merton, 500*l.* To Mr. R. N. Lee, one of the executors, the munificent legacy of 400,000*l.*, on condition of his obtaining a licence within twelve months to take and use the surname of "Thornton." To the wife of another executor, a life interest is devised in the sum of 300,000*l.* To the Misses Margaret and Eliza Lee, of Ventnor, Isle of Wight, there is a life interest in the sum of 200,000*l.* There are also liberal bequests to others of the testator's nephews, nieces, and other persons.

At the upper end of *Martin's-lane*, Cannon-street East, has been built a Rectory-house, with a handsome campanile, 110 feet high.

Some idea of the ancient commercial wealth of England may be gathered from a glance at the rapid increase of trade from about the middle of the 14th century. Thus, in 1363, Picard, who had been mayor some years before, entertained Edward III. and the Black Prince, the Kings of France, Scotland, and Cyprus, at his own house in the Vintry (Upper Thames-street), and presented them with handsome gifts. Philpot, an eminent citizen in the reign of Richard II., when the trade of England was greatly annoyed by privateers, hired 1000 armed men and despatched them to sea, where they took 15 Spanish vessels with their prizes: Philpot-lane, in Lower Thames-street, is "so called of Sir John Philpot (one of this family), "that dwelt there, and was owner thereof."—*Stow*.

The south side of Upper Thames-street is mostly occupied by wharfs, once the site of river-side palaces. In the lanes, upon the north side, are several merchants' mansions, "which, if not exactly equal to the palaces of stately Venice, might at least vie with many of the hotels of old Paris. Some of these, though the great majority have been broken up into chambers and counting-houses, still remain intact."—*B. D'Israeli*.

Upper Thames-street retains some old signs: as, a bas-relief of a Gardener with a spade, 1670; the Doubt (upon iron, once gilt), at Crawshay's iron-wharf, No. 36 (originally the "Sir John Anvill" of the *Spectator*, No. 299). Upon Lambeth-hill, over Crane-court, is a crane carved in stone.

Thames-street has long been noted for its cheese-factors' warehouses: "Thames-street gives cheeses."—(*Gay's Trivia*.)

LOWER THAMES-STREET: Fish-street Hill; THE MONUMENT (see pp. 570-571) Here was the entrance to *Crooked-lane*, noted for its old fishing-tackle shops, handy for the anglers at London Bridge. At *Pudding-lane* (from butchers scalding hog's puddings there) commenced the GREAT FIRE (see pp. 338-340).

Next is BILLINGSGATE (p. 54). COAL EXCHANGE (p. 329).

In *Water-lane* was the Old Trinity House, built by Wren; and at the lower end of the lane was the finely-carved door-headway of the *Ship Tavern*. THE CUSTOM HOUSE is described at pp. 305-306.

At the east end of the street, in Stow's time, were the remains of a stone mansion, said to have been the lodging of the Princes of Wales; hence this part of the street was called Petty Wales. It was also called *Galley Quay*, from the galleys formerly lading and landing there. Tradesmen's tokens in the seventeenth century were struck here, and were hence called, *vulgo*, "Galley-quay halfpence."

### THAMES TUNNEL,

A BRICK arched double roadway, under the Thames, between Wapping and Rotherhithe, is one of the grandest achievements of engineering skill.

In 1799 an attempt was made to construct an archway under the Thames, from Gravesend to Tilbury by Ralph Dodd, engineer; and in 1804 the "Thames Archway Company" commenced a similar work from Rotherhithe to Limehouse, under the direction of Vasey and Trevethick, two Cornish miners; and the horizontal excavation had reached 1040 feet, when the ground broke in, under the pressure of high tides, and the work was abandoned; 54 engineers declaring it to be impracticable to make a tunnel under the Thames of any useful size for commercial progression.

The Thames Tunnel was planned by M. I. Brunel, in 1823: among the earliest subscribers to the scheme were the late Duke of Wellington and Dr. Wollaston; and in 1824 the "Thames Tunnel Company" was formed to execute the work. A brickwork cylinder, 50 feet in diameter, 42 feet high, and 3 feet thick, was first commenced by Mr. Brunel at 150 feet from the Rotherhithe side of the river; and on March 2, 1825, a stone with a brass inscription-plate was laid in the brickwork. Upon this cylinder, computed to weigh 1000 tons, was set a powerful steam-engine, by which the earth was raised, and the water was drained from within it; the shaft was then sunk into the ground *en masse*, and completed to the depth of 65 feet; and at the depth of 63 feet the horizontal roadway was commenced, with an excavation larger than the interior of the old House of Commons. The plan of operation had been suggested to Brunel, in 1814, by the bore of the sea-worm, *Teredo navalis*, in the keel of a ship; showing how, when the perforation was made by the worm, the sides were secured, and rendered impervious to water, by the insect lining the passage with a calcareous secretion. With the auger-formed head of the worm in view, Brunel employed a cast-iron "Shield," containing 36 frames or cells, in each of which was a miner who cut down the earth; and a bricklayer simultaneously built up from the back of the cell the brick arch, which was pressed forward by strong screws. Thus were completed, from Jan. 1, 1826, to April 27, 1827, 540 feet of the Tunnel. On May 18 the

river burst into the works; but the opening was soon filled up with bags of clay, the water pumped out of the Tunnel, and the work resumed. At the length of 600 feet, the river again broke in; six men were drowned; and the rush of the water carried Mr. Brunel, jun., up the shaft. The Tunnel was again emptied; but the work was now discontinued, for want of funds, for seven years.

Scores of plans were next proposed for its completion, and above 5000*l.* were raised by public subscription. By aid of a loan sanctioned by Parliament (mainly through the influence of the Duke of Wellington), the work was resumed, and a new shield constructed, March, 1836, in which year were completed 117 feet; in 1837, only 29 feet; in 1838, 80 feet; in 1839, 194 feet; in 1840 (two months), 76 feet; and by November, 1841, the remaining 60 feet, reaching to the shaft which had been sunk at Wapping. On March 24, 1843, Brunel was knighted by Queen Victoria; on August 12 he passed through the Tunnel from shore to shore; and March 25, 1843, it was opened as a public thoroughfare, lighted with gas, to passengers, day and night, at one penny toll; in each passage a carriage-road and footway. The opening was celebrated annually by a Fair held in the Tunnel.

The Tunnel cost about 454,000*l.*; to complete the carriage-descents would require 180,000*l.*; total, 634,000*l.* The dangers of the work were many: sometimes portions of the shield broke with the noise of a cannon-shot; then alarming cries told of some irruption of earth or water; but the excavators were much more inconvenienced by fire than water; gas explosions frequently wrapping the place in a sheet of flame, strangely mingling with the water, and rendering the workmen insensible. Yet, with all these perils, but seven lives were lost in making the Thames Tunnel; whereas nearly forty men were killed during the building of New London Bridge. In 1833 Mr. Brunel submitted to William IV., at St. James's Palace, "An Exposition of the Facts and Circumstances relating to the Tunnel;" and Brunel has left a minute record of his great work: it is well described and illustrated in Weale's *Quarterly Papers on Engineering*. A Visitor's Book is kept at the Tunnel, wherein are the signatures of the many illustrious persons who have inspected the works. It was visited by Queen Victoria, July 26, 1843. In 1838 the number of visitors was 23,000; in 1839, 34,000. A fine medal was struck at the completion of the work: *obv.* head of Brunel; *rev.* interior and longitudinal section of the Tunnel.

Width of the Tunnel, 35 feet; height, 20 feet; each archway and footpath, clear width, about 14 feet; thickness of earth between the crown of the Tunnel and the bed of the river, about 15 feet. At full tide, the foot of the Tunnel is 75 feet below the surface of the water.

The Tunnel has been paralleled, as an engineering triumph, by Stephenson's Tubular Railway-bridge.

### THEATRES.

**A**DELPHI THEATRE, No. 411, Strand, was commenced in 1802 by John Scott, a colourman, and opened Nov. 27, 1806, as the *Sans Pareil*, with musical entertainments, and next year with dramas. In 1820-1 Scott sold the theatre to Rodwell and Jones, who named it the *Adelphi*; in 1825 it was sold to Terry and Yates; and after Terry's secession, Yates was joined by Charles Mathews the elder, who gave here his later "At Homes." The compo front of the theatre was designed by Beazley, in 1840. Yates was succeeded by Webster, with Madame Celeste as directress. One of its chief attractions was the comic humour of John Reeve. The theatre was rebuilt in 1858 upon an enlarged plan, by Wyatt (from the Opera Comique in Paris) for Mr. Webster; style, Italian; decoration, French Renaissance; illuminated by a sunlight.

ASTLEY'S AMPHITHEATRE, Bridge-road, Lambeth, is the fourth theatre erected upon this site. The first was one of the 19 theatres built by Philip Astley, and was opened in 1773, burnt in 1794; rebuilt 1795, burnt 1803; rebuilt 1804, burnt June 8, 1841, within two hours, from the house being principally constructed with old ship-timber. It was rebuilt, and opened April 17, 1843, and has since been enlarged. The theatre was built for equestrianism; and the stud of trained horses usually numbered from 50 to 60. It has since been cleverly remodelled by Mr. Boucicault, for performances of the regular drama.

Philip Astley, originally a cavalry soldier, commenced horsemanship in 1763, in an open field at Lambeth: he built his first theatre partly with 60*l.*, the produce of an unowned diamond ring which he found on Westminster Bridge. Andrew Ducrow, subsequently proprietor of the Amphitheatre, was born at the "Nag's Head," Borough, in 1793, when his father, Peter Ducrow, a native of Bruges, was "the Flemish Hercules" at Astley's. The fire in 1841 arose from ignited wadding, such as caused the destruction of the old Globe Theatre in 1613, and Covent Garden Theatre in 1808. Andrew Ducrow died Jan. 26, 1842, of mental derangement and paralysis, produced by the catastrophe of the burning of his theatre and several favourite horses.

**BANKSIDE THEATRES.** The earliest was the Circus built for bull-baiting and bear-baiting, about 1520, in *Paris Garden*. In this theatre, plays were also performed *temp.* James I., when Henslowe and Alleyn were lessees. Nash, in his *Strange News*, 1590, mentions the performance of puppets there; and Dekker asserts that Ben Jonson had acted there (*Satiromastix*). Aggas's Map, drawn about 1560, shows two *circi* lower down on "the Bank;" but still lower were the *Globe*, the *Hope*, and the *Rose*. The *Globe* was built by agreement, dated Dec. 22, 1593, for Richard Burbage, the famous actor. In 1603 James I. granted a licence to Shakspeare and others to act "at their now usual house, called the *Globe*." It was of wood, hexagonal in exterior form, and was occupied by Shakspeare as a summer theatre. At Dulwich College, in a paper, occurs "Mr. Shaksper," in a list of "Inhabitants of Sowtherk, July, 1596;" he was assessed in the liberty of the Clink in 1609, though his occupation as an actor at the *Globe* did not continue after 1604:\* his brother, Edmond Shakspeare, was buried in St. Saviour's church, 1607. The *Globe* was destroyed by fire June 29, 1613, when Ben Jonson was present; it was rebuilt in 1614, but is not mentioned after 1648: it was built on the site of *Globe-alley*, which led from Maid-lane to "the Bank," and is now included in the premises of Barclay and Perkins's Brewery (*see* the Map in Strype's *Stow*, 1720). The *Hope*, used both for bear-baiting and as a playhouse, was situated near the *Rose*: in 1614 Ben Jonson's *Bartholomew Fair* was first acted here; later it was used for prize-fighting, and in 1632 again for bear-baiting. The *Rose*, probably the oldest theatre upon Bankside, except *Paris Garden* (*Collier*), was built long before 1597: it was held for some years by Philip Henslowe, afterwards Alleyn's partner; it occupied the site of *Rose-alley*, west of *Globe-alley* (*see* Strype's Map). The *Swan* was in repute anterior to 1598. Both the *Rose* and *Swan*, after 1620, were only occupied occasionally by gladiators and fencers; and about 1648 all theatres were suppressed. (*See* the *Antwerp View of London*.)

**BLACKFRIARS THEATRE** was built in 1575, upon part of the site of the monastery of Blackfriars, between Apothecaries' Hall and Printing-house-square, and upon *Play-house-yard*. The first proprietors were James Burbage and his fellows, who, with other players, had been ejected from the City by an act of Common Council: it was a winter theatre, arranged like an inn-yard (the earliest theatre), but with a roof over it. Shakspeare was a sharer in the Blackfriars playhouse in 1589; it was rebuilt in 1596; and was leased by Edward Alleyn in 1618 (*see* his *Diary*, at Dulwich College). It was taken down in 1655 (*Collier's Life of Shakspeare*), and dwelling-houses were built upon the ground (*see* BLACKFRIARS, p. 56.)

**BRITANNIA THEATRE**, High-street, Hoxton, was commenced building soon after the destruction by fire, of the Rosemary Branch Equestrian Theatre, Islington Fields, July 27, 1853, when seven horses and eleven dogs were burnt. The *Britannia* (Finch and Paraire, architects), is provided with promenades and refreshment saloons. The auditory is very spacious, and elegantly decorated. The pit is nearly 80 feet wide and 60 feet deep. The stage is 76 feet wide by 50 feet deep; opening at proscenium 34 feet wide by 37 feet high. The house is effectively ventilated by openings left in ornamental portions of the ceiling, in immediate communication with the internal area of the roof, and thence with the open air, by means of louvres extending from one extremity of the building to the other. The provisions against fire are well planned, and the extent of the theatre is considerable.

**BRUNSWICK THEATRE** was built upon the site of the Royalty Theatre, within seven months, by Stedman Whitwell, C.E. The façade resembled that of San Carlos

\* The *Globe* Theatre stood upon a spot of ground now occupied by four houses contiguous to the present *Globe-alley*, Maid-lane.—(*Mirror*, March 31, 1832). We remember a large tavern, the *Globe*, in Chingate, destroyed by fire about 1812. Pennant was told that the door of the *Globe* Theatre was very lately (1790) standing.—*See* Knight's *Stratford Shakspeare*, vol. i, 1854.

at Naples. It was opened Feb. 25, 1828; but within three nights, on Feb. 28, during a day rehearsal, the whole theatre fell to the ground, and killed ten persons, among whom was a proprietor, D. S. Maurice, the tasteful printer, of Fenchurch-street. The catastrophe was caused by the unsafe iron roof and the great weights attached to it: the fall of the theatre was well described at the time by one of the company.

CITY OF LONDON THEATRE, 36, Norton Folgate, was built 1837, for Mrs. Honey, the pretty actress, and first called the Norton Folgate-street Theatre.

CITY THEATRE, Milton-street (Grub-street), was opened about 1830, with operatic performances. "A new theatre has here arisen, where boards have been graced with a Tree and an Ayton; and within these few months, its boxes have been graced with the presence of my Lords Brougham and Grey."—(*Mirror*, Nov. 19, 1831.) The theatrical concern did not succeed, and the premises next became a chapel.

COCKPIT or PHENIX THEATRE (from its sign), Drury-lane, occupied the site of Cockpit-alley, now Pitt-place, opposite the *Castle Tavern*, St. Giles's-in-the-Fields. It was altered from a cockpit, and when a theatre it was twice nearly destroyed by the London apprentices; and was pulled down in 1649 by soldiers, instigated by sectarian bigots. At the Restoration, Rhodes, a bookseller, rebuilt the theatre, but soon vacated it; and Sir W. Davenant, with Betterton and Kynaston in his company, performed here till 1662, when they removed to Portugal-row (see p. 687). At the Cockpit was performed the first play in print, *The Wedding*, by Shirley, printed in 1629, and expressly said to have been acted at Drury-lane.

COVENT GARDEN THEATRE, Bow-street, is the third theatre built here. The first theatre was built upon part of the Convent site, by Shepherd, architect of Goodman's Fields Theatre. Covent Garden was opened Dec. 7, 1732, by Rich, the celebrated harlequin; and Hogarth's caricature of "Rich's Glory, on his Triumphant Entry into Covent Garden," refers to his removal here: it shows one entrance, a magnificent Ionic archway, at the end of the eastern arcade of the Piazza. Here the Beefsteak Society was formed in 1735, by Rich, and Lambert the scene-painter. In 1746 Garrick played here for the season. In 1803 John Kemble became a proprietor and stage-manager. On Sept. 20, 1808, the theatre was burned to the ground, and twenty persons killed in the ruins. It was rebuilt by R. Smirke, R.A. The first stone was laid by the Prince of Wales, Dec. 31, 1808; and the theatre was opened Sept. 18, 1809, when the "new prices" caused the O. P. (old prices) riot of seventy-seven nights, since which "a London audience has been found more captious than they previously had been" (*C. Dibdin*). In 1817 John Kemble here took leave of the public; and in 1840 retired his brother, Charles Kemble. The theatre was subsequently leased to Mr. C. Mathews and Madame Vestris, and Mr. Macready. In 1843-45 it was let to the Anti-Corn-Law League, who held a bazaar here in 1845 (see p. 42). In 1847 the auditory was entirely reconstructed, at a cost of 40,000*l.*, by Albano, and opened as an Italian Opera House April 6. The exterior retained Smirke's Grecian-Doric portico, copied from the Temple of Minerva at Athens; statues of Tragedy and Comedy; and two panels of bas-relief figures, by Flaxman.

The *northern panel* has figures of Æschylus, Aristophanes, and Mæander; Thalia, Polyhymnia, Enterpe, and Clio; Minerva and Bacchus; Melpomene, two Furies, and Apollo. In the *southern panel* are figures of Shakspeare summoning Caliban, Ferdinand, Miranda, Prospero, and Ariel; Heate and Lady Macbeth. Also Milton, with Urania and Samson Agonistes, an incident from *Comus*, &c.

This theatre was destroyed by fire, March 5, 1856, at the close of a masked ball. The ruins lay uncleared for nearly fifteen months. The façade was saved, and Flaxman's statues and bas-reliefs were adapted in the design for a new theatre, by E. M. Barry, which was opened as an Italian Opera House, in 1858. It is externally nearly 100 feet high by 120 feet broad, and 240 feet long, has a grand Corinthian portico, facing Bow-street, about one-fifth larger than the late theatre, and the same size as the celebrated La Scala of Milan, hitherto the largest theatre in the world. The interior decorations are white and gold, and pale azure. Adjoining the theatre is the Floral Hall, of "Crystal Palace" design. (See ROYAL ITALIAN OPERA, p. 789.)

*First Appearances*.—Incedon, the singer, 1790; Charles Kemble, 1794; Mrs. Glover, 1797; G. F. Cooke (Richard III.), Oct. 31, 1800; Miss Stephens (Countess of Essex), 1812; Miss O'Neill (Lady Beecher), 1814; Macready, 1816; W. Farren, 1818; Fanny Kemble, 1829; Adelaide Kemble, 1841. Here Edmund Kean last acted, 1833.

CURTAIN THEATRE (THE), Holywell, is mentioned in 1577. Stow, speaking of the priory of St. John Baptist, says: "Near thereunto are builded *two publique houses* for the acting and shoue of comedies, tragedies, and histories for recreation; whereof the one is called *The Courtein*, the other *The Theatre*, both standing on the south-west side, towards the field" (Stow, 1st edit. 1599). Both theatres are mentioned in Northbrook's *Treatise against Diceing, Dancing, Vain Plays or Interludes*, 1577; by Stubbes in his *Anatomic of Abuses*, 1583; in a black-letter ballad, in the Pepysian collection, occurs "the Curtain at Holywell;" and in an epigram by Heath, 1610. Sir H. Herbert's office-book shows that in 1622 the Curtain was occupied by the servants of Prince Charles. Aubrey (1678) describes it as "a kind of nursery or obscure playhouse, called the Greene Curtain, situate in the suburbs towards Shoreditch." After it was abandoned as a playhouse, prize-fighters exhibited here. Sir Henry Ellis (*Hist. Shoreditch*, 1798) quotes from the parish books several entries of the marriage, burial, &c., of players. Maitland (*Hist. London*, 1772) mentions some remains of the Curtain standing at or near his time. It is said to have occupied the site of the curtain close of the priory, and is conjectured to have been named from its being the first theatre to adopt that necessary appendage of the stage, the curtain. The name survives in *Curtain-road*.

DRURY-LANE THEATRE, between Drury-lane and Brydges-street, forms the east side of Little Russell-street. The first theatre here was built precisely upon this site for Thomas Killigrew, and opened April 8, 1663; the company being called "the King's Servants," as Davenant's were "the Duke's Servants," both under patents granted by Charles II. in 1660. Drury-lane, "the King's Theatre," had the chief entrance in Little Russell-street. Pepys's *Diary* records many of his visits to "the King's House," and other London theatres, from 1660-1670. "The King's House" was burnt down Jan. 1671-72. It was rebuilt by Sir Christopher Wren, and opened March 26, 1674, with a prologue and epilogue by Dryden. Mr. Collier has printed in the *Shakspeare Society's Papers*, vol. iv. p. 147, an indenture showing Dryden to have been joined with Killigrew, Hart, Mohun, and others, in the speculation of this "new playhouse." In 1682 the King's and Duke's companies played here together. Rich, Steele, Dogget, Wilks, Cibber, and Booth were successively patentees; and Garrick in 1747, when he opened the theatre, Sept. 15, with the well-known prologue written by Dr. Johnson, and commenced the revival of Shakspeare's plays. On June 10, 1776, Garrick here took leave of the stage. Sheridan then became part-proprietor; and, in 1788, John Kemble manager. In 1791 the old theatre was taken down, rebuilt by Holland, and the new theatre opened March 12, 1794.

It was called by Mrs. Siddons "The Wilderness." The opening for the curtain was 43 feet wide and 38 feet high, or nearly seven times the height of the performers. There were seats for 3600 persons; but upwards of 5000 persons are known to have been squeezed into this theatre.

It was burnt down Feb. 24, 1809. The present house, built by B. Wyatt, from the plan of the great Bordeaux theatre, was opened Oct. 12, 1812, with a prologue by Lord Byron. In 1818 the theatre was let, at 10,200*l.* per annum, to Elliston, for whom Beazley reduced the auditory, added the Doric portico in Brydges-street, and the cast-iron colonnade in Little Russell-street in 1831. In the hall is a cast of Scheemakers's statue of Shakspeare, and a statue of Edmund Kean by S. Joseph. The staircases and rotunda are magnificent, and the interior circular roof of the auditory is geometrically fine.

*First Appearances*.—Nell Gwynne, at "the King's House," 1666; Barton Booth, 1701; Mrs. Siddons, 1775; John P. Kemble, 1783; Harriet Mellon (Duchess of St. Albans), 1795; Edmund Kean, 1814. Here Macready took leave of the stage, Feb. 26, 1851.

The first Drury-lane Theatre was sometimes called Covent Garden Theatre; and the late Mr. Richardson, the Coffee-house keeper, possessed a ticket inscribed, "For the Music at the Playhouse in Covent Garden, Tuesday, March 6, 1704."—*J. T. Smith*.

DORSET-GARDENS THEATRE was built at the extremity of Salisbury-court, Fleet-street, and had a handsome front and flight of stairs to the Thames. It was opened in 1671, under the management of Lady Davenant. Dryden, in his prologue to *Marriage à-la-Mode*, 1672, leaves contemptuously to the citizens "the gay shows and gaudy scenes" of Dorset-gardens. Here Shadwell's operatic version of Shakspeare's *Tempest* was produced with great splendour in 1673. After 1697 the theatre was let to wrestlers and fencers, but was taken down about 1720, and the site is now occupied by

the City Gas-works. The theatre was designed by Wren, and the sculpture by Gibbons, included figures of Comedy and Tragedy surmounting the balustrade.

DUKE'S THEATRE, "the Opera," Lincoln's-inn-fields. (See PORTUGAL-STREET, p. 687.) Here, May 10, 1735, Macklin killed his brother-actor Hallam, by accident, in a quarrel.

EFFINGHAM THEATRE (modern), in the rear of the *Earl of Effingham Tavern*, 235, Whitechapel-road, was, in part, taken down in 1867, and rebuilt to hold 4000 persons.

FORTUNE THEATRE—named from its sign,

"The picture of Dame Fortune  
Before the Fortune playhouse" (*Heywood*)—

was built for Philip Henslowe and William Alleyn, in 1599–1600, on the east side of Golding-lane, without Cripplegate. It cost 1320*l.*, and was opened May, 1601. It was a square timber and lath-and-plaster building, and was burnt Dec. 9, 1621 (*Alleyn's Diary*); but was rebuilt on a circular plan, of brick, and tiled. The interior was burnt in 1649—Pryne says by accident, but it was fired by sectarians. In the *Mercurius Politicus*, Feb. 14–21, 1661, the building, with the ground belonging, were advertised "to be lett to be built upon;" and it is described as standing between "Whitecross-street and Golen-lane," the avenue now Playhouse-yard.

GARRICK THEATRE, Leman-street, Goodman's Fields, was built in 1830, and named from its proximity to the scene of Garrick's early fame. The theatre was burnt down November 4, 1846, when it belonged to Messrs. Conquest and Gomersall, the latter remembered for his impersonation of Napoleon Bonaparte. The theatre has been rebuilt.

GIBBON'S-COURT THEATRE, Clare Market. (See p. 558.)

GOODMAN'S FIELDS THEATRE was first opened as a silk-throwster's shop, in 1729, by Thomas Odell, and was rebuilt by Henry Giffard; both of whom were, however, compelled to close the theatre by the puritanical clamour raised against it. Giffard returned to Goodman's Fields in 1737; and here, Oct. 19, 1741, David Garrick first appeared in London as Richard III. He drew an audience of the nobility and gentry, whose carriages filled the whole space from Temple Bar to Whitechapel. Gray, in a letter to Chute, writing respecting these performances, says, "Did I tell you about Mr. Garrick, that the town are horn mad after? There are a dozen dukes of a night in Goodman's Fields sometimes." The theatre was taken down about 1746. Garrick's first appearance here arose from the proprietor being also manager of the Ipswich company, in which Garrick first appeared on the stage.

GRECIAN THEATRE, adjoining the garden of the *Eagle Tavern*, City-road, was built by Thomas Rouse for regular dramatic entertainments. The establishment has been enlarged and improved by Mr. Conquest, the present proprietor: it has a spacious ball-room, elegantly decorated, open without extra charge; and the garden is illuminated in the Vauxhall taste, with the advantages of gas-lighting, open-air orchestra, lights among the shrubs, &c.

HAYMARKET THEATRE, the "Little Theatre," was originally built by one Potter, and opened Dec. 29, 1720, by "the French comedians:" it was first called "the New French Theatre." In 1723 it was occupied by English actors; 1726, Italian operas, rope-dancing, and tumblers, by subscription; in 1727 the *Beggar's Opera* was produced here; 1731, gladiators and backswordsmen; 1732, English opera upon the Italian model; 1734–5, Fielding opened the theatre with "the Great Mogul's Company of Comedians," for whom he wrote his *Pasquin*, the satire of which upon the Walpole administration gave rise to the Licensing Act (10th of Geo. II. cap. 28). In 1738 a French company reopened the theatre, but were driven from the stage the first night. In 1741, English operas were played here; 1744, Samuel Foote first appeared here as Othello; 1747, Foote became manager, and continued so for thirty years, commencing with his own Entertainments. Jan. 16, 1748–9, the Bottle Conjuror hoax and riot. 1762, the Haymarket was established as a regular summer theatre. 1777, it became a Theatre Royal, when Foote sold his interest to George Colman for a life annuity of 1600*l.*, and Foote died in the following October. In the green-room is a gilt clock, which belonged to Foote. Colman died in 1795, and was succeeded by his son, George Colman the younger, licenser of plays. Feb. 3, 1794, sixteen persons

were trodden to death, or suffocated, in attempting to gain admission on a royal visit. The "Little Theatre" was taken down in 1820; the present theatre was built, at a few feet distant, with a lofty Corinthian portico, by Nash, and opened July 14, 1821: here was produced *Paul Pry*, with Liston, in 1825. In 1853, Mr. B. Webster concluded here a leasehold of 16 years; the theatre was then let to Mr. Buckstone, who has rendered the Haymarket famous for its excellent performance of the legitimate drama; and this while one of our great national theatres was devoted to Italian opera.

*First Appearances.*—Henderson, Pannister, Mathews, Elliston, Liston, and Young; Miss Fenton (Duchess of Bolton), Miss Farren (Countess of Derby); Edmund Kean, in "little business," 1806; Miss Paton (Lady W. Lennox). Here Maeready gave his final performances.

HOLBORN AMPHITHEATRE occupies the site of the Metropolitan Horse Bazaar, opposite the Inns of Court Hotel. Its length is 130 feet, width 68 feet from box to box. The private boxes form a semicircle in front of the house, a row of stalls, called the "Grand Balcony," being ranged immediately before them on the same tier. Above them is a gallery called the Amphitheatre. The performances are chiefly equestrian, and the ring is surrounded by pit-stalls.

HOLBORN THEATRE, built 1866, nearly upon the site of Warwick House. (*See* p. 431.)

ST. JAMES'S THEATRE, King-street, St. James's, was designed by Beazley, for John Braham, the singer, and cost 50,000*l.*, independently of the site, which cost 8000*l.* The façade is Roman, of the Middle Ages; and the interior, by Crace, originally resembled the theatre of the Palace of Versailles. The St. James's Theatre was opened in 1835; and next year was produced here an operatic burletta written by Charles Dickens, the music by John Hullah. Here French plays are occasionally performed.

LYCEUM THEATRE, Wellington-street, Strand, was originally built by James Payne, architect, in 1765, as an academy (or *lyceum*) for a society of artists; of whom, on the re-establishment of the Royal Academy, Garrick bought the lease of the premises, to prevent their becoming a theatre. They were next purchased by Mr. Lingham, a breeches maker, in the Strand, and opened about 1790 for musical performances; in 1794 or 1795 Lingham leased the adjoining ground to Dr. Arnold, who built here a theatre, the licence for which was suppressed, and it was let for music, dancing, and horsemanship, exhibition of paintings, &c.: a foreigner gained a large fortune by showing here the first phantasmagoria seen in England; and here, in 1803-4, Winsor exhibited his experimental gas-lighting. In 1809, the theatre was enlarged by Mr. S. A. Arnold, and opened as the *English Opera-house*: it was rebuilt, in 1816, by Beazley; was destroyed by fire, Feb. 16, 1830; and again rebuilt by Beazley somewhat further west, the site of the former theatre being included in Wellington-street, then formed from the Strand northward. The new theatre cost 35,000*l.*; it has an elegant Corinthian portico: it was opened with English opera, July 14, 1834; and was re-decorated in rich Italian taste, for Madame Vestris, in 1847. Here were given the best performances of the Keeleys; and the admirable Shakesperean and melodramatic impersonations of Mr. Charles Fechter.

MARIONETTE THEATRE, Adelaide-street, Strand, was originally the Adelaide Gallery, and was altered for the clever performances of *Marionettes*, or puppets, in 1852.

MARYLEBONE THEATRE, Church-street, Paddington, was built and opened in 1842, as "a penny theatre:" it was enlarged in 1854, to hold 1200 persons.

MILTON-STREET THEATRE, *see* GRUB-STREET, p. 782.

NEWINGTON BUTTS: here was a theatre built before the Globe at Bankside: it is mentioned in the Diary of Philip Henslowe, which shows that from June, 1594, the performances were jointly by the Lord Admiral's men and the Lord Chamberlain's men: here were acted *Titus Andronicus*, *Hamlet*, and the *Taming of a Shrew*.

NURSERY (the), in Golding-lane, was built by a patent of Charles II. as a school for the education of children for the stage:

"Near these a Nursery erects its head,  
Where queens are formed, and future heroes bred,  
Where unfledged actors learn to laugh and cry,  
Where infant punks their tender voices try,  
And little Maximins the gods defy."—Dryden's *Mac Flecknoe*.

Bayes, in the *Rehearsal*, speaks of "the service of the Nursery;" and Pepys first went there 24th Feb. 1667-8. The house, with the royal arms and a figure of Charity, in plaster, on the front, existed to our time, and has been erroneously described as the Fortune Theatre. There was a similar *Nursery* in Hatton-garden, at which Joe Haynes, the dancer, performed.

OLYMPIC THEATRE, Wych-street, was originally erected by Philip Astley, upon the site of old Craven House, and was opened with horsemanship, Sept. 18, 1806; it was principally built with the timbers of *La Ville de Paris*, the ship in which William IV. served as midshipman; these materials were given to Astley, with a chandelier, by George III. The theatre was leased in 1813 to Elliston, who removed thence to Drury-lane; and subsequently to Madame Vestris, before she became lessee of Covent-garden; both which changes were ruinous. The Olympic Theatre was destroyed by fire, within an hour, March 29, 1849: it was rebuilt the same year, and opened Dec. 26. Here William Farren was sometime lessee.

First and last at the Olympic Théâtre have appeared Elliston and Mrs. Edwin; Oxberry and Power; Keeley and Fitzwilliam; Charles Kean and Ellen Tree; Madame Vestris, Mrs. Nesbitt (Lady Boothby), Mrs. Keeley, and William Farren; Charles Mathews first appeared here; and Miss Foote (Countess of Harrington), Mrs. Orger, and Liston, last played here. In Craven-buildings, adjoining the theatre, have resided "three favourite actresses, from the time of Dryden to our own—Mrs. Bracegirdle, Mrs. Pritchard, and Madame Vestris."

PANTHEON THEATRE, Oxford-street (*see* p. 639).

PAVILION THEATRE, Whitechapel, one of the largest theatres in the metropolis, covers nearly an acre of ground: it is nearly 60 feet high, yet has but two tiers of boxes and one gallery; depth and width, nearly 50 feet each; decorations, dead-white, gold, and crimson.

PRINCESS'S THEATRE, Oxford-street, originally built as the Queen's Bazaar (*see* p. 41), was designed by Nelson, and opened Sept. 30, 1841, with promenade concerts. It cost 47,000*l.*; but the unique character of its Renaissance decoration, by Crace, has been spoiled: originally it consisted entirely of four tiers of boxes. This theatre, under the management of Mr. Charles Kean, became famous for his reproduction of Shakspeare's historic plays, excellently acted, with scenic accessories hitherto unprecedented. For these efforts to improve the tone, and elevate the character of our stage, Mr. Charles Kean was, in 1862, presented with a costly service of plate, by public subscription.

QUEEN'S THEATRE (now the PRINCE OF WALES'S) Tottenham-street, Tottenham-court-road, was originally Francis Pasquali's Concert-room, enlarged for the Concerts of Ancient Music by Novosielski, who built here a superb box for George III. and Queen Charlotte (Dr. Rimbault, *Notes and Queries*, No. 10). In 1802 Colonel Greville fitted it up for the performances of the "Pic-nic Society," a body of distinguished amateurs, whose celebrity rendered them objects of alarm to the professional actors of the day, and exposed them to the attacks of the caricaturist Gilray. In 1808 it was an equestrian establishment under the management of Saunders. Two years afterwards it was opened as a theatre, but Mr. Paul, the first manager, proved unsuccessful. About 1821, it passed into the hands of Mr. Brunton, whose daughter, afterwards so justly celebrated as Mrs. Yates, was one of its chief attractions. In the first bill issued by Mr. Paul, the first theatrical lessee, it is simply called the "New Theatre, King's Ancient Concert Rooms, Tottenham-street." Afterwards it became the Regency, the Theatre of Variety, and the West London; and on the accession of William IV. was designated the Queen's, in compliment to Queen Adelaide. An attempt to render the theatre a sort of English opera-house was made in 1831 by Mr. Macfarren (father of the popular composer), and in 1833 it acquired a temporary brilliancy under the new name of the Fitzroy. Here the burlesques, chiefly written by Mr. Gilbert à Beckett, gained considerable fame in their day; and still more celebrated were Mr. H. Mayhew's *Wandering Minstrel*, and his local drama of the *Field of Forty Footsteps*. Here French plays were first performed after the Peace of 1815. Frederick Lemaître appeared; Mademoiselle George played in Voltaire's tragedy *Merope*; and M. Laporte, afterwards manager of Covent-garden and Her Majesty's Theatres, was a principal comedian. In 1835 it was reopened by Mrs. Nesbitt, who formed a really powerful company, comprising the most noted comic performers of the time, and revived the name of the "Queen's." It received its present designation under the management

of Miss Marie Wilton. Here Young, the tragedian, first appeared on the stage, in 1807, at a private performance.

QUEEN'S THEATRE, formerly St. Martin's Hall, Long Acre, opened 1867.

RED BULL THEATRE (the), upon the site of Red Bull-yard, St. John-street, Clerkenwell, was originally an inn-yard, but rebuilt about 1633: here the King's Company, under Killigrew, acted until Drury-lane was ready for them. During the Interregnum, "Drolls" were performed here, and afterwards published by Kirkman, one of the players, with a frontispiece of the interior of the theatre. (See CLERKENWELL, p. 236.) There is a well-compiled account of the Red Bull Theatre in Pinks's *History of Clerkenwell*, pp. 190-196.

Sir William Davenant, to whom Charles I. granted a patent in 1639, continued recreation and music, after the manner of the ancients, at Rutland House, Bridgewater-square, and subsequently at the Cock-pit, till the Restoration, when the few players who had not fallen in the wars or died of poverty assembled under Davenant at the *Red Bull*: the actors' clothes were "very poore, and the actors but common fellows."—*Pepys*, 1661.

ROYALTY THEATRE, Well-street, Wellclose-square (named from *Goodman's Field Wells*, 1735), was built by subscription, and opened in 1787, when John Braham first appeared on the stage, as Cupid, and John Palmer was manager; Lee Lewis, Bates, Holland, and Mrs. Gibbs, were also of the company. It was purchased about 1820 by Mr. Peter Moore, M.P.; was burnt down April 11, 1826; and upon the site was erected the Brunswick Theatre, noticed at p. 781.

SADLER'S WELLS, the oldest theatre in London, is on the S.W. side of Islington, and named in part from a mineral spring, which was superstitiously dispensed by the monks of the Priory of St. John of Jerusalem, probably from the time of Henry I. or Stephen. In the reign of Charles II., one Sadler built here a music-house, and in 1683 re-discovered in the garden the well of "excellent steel waters," which in 1684 was visited and drunk by hundreds of persons every morning. Evelyn, on June 11, 1686, went to "the New Spa Well, near Myddelton's receptacle of water at the New River." The entertainments were rope-dancing, tumbling, and gluttonous feats. The well, ceasing to attract, was covered over; and in 1764 the old music-house (engraved in the *Mirror*, No. 971) was taken down, and the present theatre built by Rosoman King (of Drury-lane) was long a partner and stage-manager; and Charles Dibdin and his sons, Thomas and Charles, were proprietors. Grimaldi, father, son, and grandson, were famous clowns at this theatre; and Belzoni was a posture-master here before he travelled to the East. In 1804 the New River water was introduced in a tank under the stage, where also is a mineral well; but the old well is between the stage-door and the New River. Wine was sold and drunk on the premises until 1807: under the old regulation, "for an additional sixpence, every spectator was allowed a pint of either port, Lisbon, mountain, or punch." But the more honourable distinction of Sadler's Wells Theatre is its admirable representations of Elizabethan plays, under the management of Mr. Phelps, who has been efficiently succeeded by Miss Marriott.

SALISBURY-COURT THEATRE (see p. 349).

SANS SOUCI THEATRE, Strand, was built by Dibdin, the song-writer, in the rear of his music-shop, and opened Feb. 16, 1793. Dibdin planned, painted, and decorated this theatre; wrote the recitations and songs, composed the music, and sang and accompanied them on an organized pianoforte of his own invention. He built another *Sans Souci* theatre in Leicester-place.

SOHO THEATRE, now the NEW ROYALTY, was built for Frances Kelly, in 1840, as a school for acting, in the rear of No. 73, Dean-street. It will hold 600 persons.

STANDARD THEATRE, Shoreditch, occupies the site of the former theatre, burnt Oct. 28, 1866, and is larger than any one in London, excepting the Italian Opera-house, Covent-Garden. The main building is 149 feet long and 90 wide. The extreme height of the auditorium part is 84 feet, and that of the stage 94 feet, to give room for drawing up the scenery, which will not any of it be used from the sides. The stage from the footlights to the back is 61 feet, and the widest part of the horseshoe is 56 feet. All the passages and staircases are of stone, with iron rails. The outlets are numerous, and the auditorium is lighted by five sun burners above a ground-glass ceiling painted in oil.

STRAND THEATRE, No. 169, Strand, originally Barker's Panorama, was altered in 1831 for Rayner, the low comedian, and Mrs. Waylett, the singer. Here were produced Douglas Jerrold's early plays. The theatre has since become famous for its burlesques.

SURREY THEATRE, St. George's-fields, was first built by Charles Hughes and Charles Dibdin, the song-writer, and was opened Nov. 4, 1782, as the *Royal Circus*, for equestrianism. John Palmer was acting manager in 1790, when he was living within the Rules of the King's Bench. (See p. 702.) The theatre was destroyed by fire Aug. 12, 1805, but was rebuilt in 1806 by Cabanel, in Blackfriars-road. Among its lessees were Elliston and Thomas Dibdin. Here Buckstone first appeared. This theatre was destroyed by fire, Jan. 30, 1865, but was rebuilt upon an enlarged plan, and opened within eleven months.

"THE THEATRE" was built, in 1576, on the site of the Priory of St. John Baptist, at Holywell, Shoreditch; and is conjectured by Malone to have been "the first building erected in or near the metropolis purposely for scenic exhibitions." It is noticed in John Stockwood's sermon at Paul's Cross, in 1578, as "the gorgeous playing-place erected in the fields." It was a wooden building; and in the Star-Chamber records is proof that, in 1598, "the Theatre" was taken down, and the wood removed to Bankside for rebuilding or enlarging the Globe Theatre.

VICTORIA THEATRE, New Cut, Lambeth, was originally named "the Cobourg," from the first stone having been laid by proxy for Prince Leopold of Saxe-Cobourg, Oct. 15, 1817: it has in its foundation part of the stone of the old Savoy Palace. The theatre was designed by Cabanel, a carpenter from Liege, who also constructed the stage of old Drury-lane Theatre, and invented<sup>1</sup> a roof known by his name. The Cobourg Theatre was first opened May 13, 1818: for its *répertoire*, Clarkson Stanfield, subsequently R.A., painted scenery; and here was constructed a *looking-glass curtain*, of large plates of glass, enclosed in a gilt frame. The house was leased to Egerton and Abbott in 1833, when the name was changed to "Victoria," and the Princess (her present Majesty) visited the theatre.

WHITEFRIARS THEATRE (the) was originally the hall of Whitefriars monastery, outside the garden-wall of Dorset House. From a survey in Mr. Collier's possession, we learn that the theatre was fitted up in 1586; it was taken down in 1613. Howes, in his continuation of *Stow*, describes, "the erection of a new fair playhouse near the Whitefriars," 1629: this was "the Private House in Salisburie-court."

OPERA HOUSES, ITALIAN.—HER MAJESTY'S THEATRE.—The first theatre for the performance of Italian operas in England was built by subscription, by Sir John Vanbrugh, at the south-west corner of the Haymarket, and was opened April 9, 1705: but operas were not performed here wholly in Italian until 1710, when *Almahide* was produced; and next year Handel's *Rinaldo*, in Italian, and by Italian singers. On June 17, 1789, the theatre was burnt down; and upon the same site, enlarged, April 3, 1790, was laid the first stone of the present Opera House, designed by Novosielski, who introduced the horse-shoe form of auditory, from the Italian theatres. In 1820 the exterior was altered by Nash and Repton in the Roman-Doric style, as we now see it, fronted with arcade and colonnade: each of the iron columns is a single casting. The Haymarket front bears a basso-relievo, by Bubb, of lithargolite, or artificial stone, illustrating the progress of Music; Apollo and the Muses occupying the centre. The interior, at the time of its erection, was larger than that of La Scala at Milan, or the Théâtre Italien at Paris. The audience and stage ground are held on two distinct leases. The whole theatre is lined with thin wood in very long pieces, as the best conductor of sound. It was entirely re-decorated in the Raphaellesque and Roman style in 1846. Horace Walpole's box was No. 3, on the grand tier. There are 177 boxes, the freehold of some of which has been sold for 7000 and 8000 guineas: the season-rent is 300 guineas; a small box, fourth tier, has been let for one night at 12 guineas. When Mr. Lumley purchased the theatre in 1844, he realized 90,000*l.* by selling boxes in perpetuity. The house will accommodate about 3000 persons. The drop-scene was painted by Stanfield, R.A. The decorations, after ancient masters, are extremely beautiful. Here is a model of the theatre, 10 feet high. Part of the scenery is deposited at "the Barn," James-street, Haymarket.

The Italian Opera House in the Haymarket has ever been a costly speculation. In 1720 George I.

headed a subscription of 50,000*l.* for its support. Ebers lost 44,080*l.* (see his *Seven Years of the King's Theatre*, 1829). For two seasons he paid 15,000*l.* rent per annum. One season's expenses:—Opera, 863*l.*; ballet, 10,678*l.*; orchestra, 3261*l.*; scene-painting and wardrobes (50,000 dresses), 5372*l.*; lighting, 1281*l.*; salaries, 2578*l.*; servants, 403*l.*; military guard at the doors, 150*l.*; fittings of the king's box, in 1821, 300*l.*; nightly expenses from 700*l.* to 1000*l.* The largest receipts were in the seasons when Jenny Lind sang. Her Majesty's is stated to be the only theatre which has no lease. It claims the exclusive right to produce foreign operas, from a deed made in 1792, covenanting that "the patents of Drury Lane and Covent Garden shall never be exercised for the purpose of Italian operas." See an able account of Her Majesty's Theatre, by Shirley Brooks, *Morning Chronicle*, March 20, 1851. Mr. Lumley's greatest seasons were those in which Millé. Jenny Lind gave her matchless performances in opera.

ROYAL ITALIAN OPERA, Covent Garden Theatre, was opened April 6, 1847, with *Semiramide* (Grisi), and M. Costa as musical director. The originator of this second Italian Opera House was Mr. C. L. Grüneisen, with Mr. T. F. Beale as director. In the seasons of 1848 and 1849 were expended 60,000*l.*; and the salaries of Alboni, Viardot, Grisi, and Mario, were between 4000*l.* and 5000*l.* each. (See p. 782.)

The Act 6th and 7th of Victoria, cap. 68 (1843), which is the most important of all, authorizes the Lord Chamberlain to license houses for stage-plays in London, Westminster, Brighton, and New Windsor, and wherever the precincts of the Court may for a time be; also authorizes justices of the peace to license houses beyond the Lord Chamberlain's jurisdiction; also authorizes the Lord Chamberlain to license stage-plays throughout Great Britain. This Act was looked upon at the time as a most liberal measure. It abolished the privileges of the patents, and allowed the Lord Chamberlain to license within certain districts as many theatres as he pleased, all endowed with equal rights, thus depriving the expression "minor theatre" of its distinctive signification.

The number of London Theatres licensed by the Lord Chamberlain for the performance of any kind of drama whatever in 1866 was 23. Of these we give a list, together with the number of persons which each will contain, extracted from one of the statements laid before Parliament:—

Her Majesty's . . . . .	2200	Surrey . . . . .	2000
Drury-lane . . . . .	2500	Pavilion . . . . .	2300
Covent-garden . . . . .	2500	Grecian . . . . .	2000
Haymarket . . . . .	1500	Britannia . . . . .	2400
Princess's . . . . .	2000	City of London . . . . .	1400
St. James's . . . . .	1000	Standard . . . . .	2000
Adelphi . . . . .	1800	Garrick . . . . .	1100
Lyceum . . . . .	1700	New Royalty . . . . .	600
Marylebone . . . . .	1200	Queen's . . . . .	900
Olympic . . . . .	1000	Sadler's Wells . . . . .	1300
Strand . . . . .	700		
Astley's . . . . .	2200		
Victoria . . . . .	2000		
		23 theatres, containing	33,300

Besides 3 theatres since opened, and the Standard and Effingham rebuilt.

### THREADNEEDLE-STREET,

OR *Three-Needle-street* (*Stow*), originally extended from Bishopsgate-street to Stocks Market, but now terminates at the Bank of England. The name is from three needles, the charge on the shield of the Needlemakers' Company's arms; but Pennant traces the final cause to the Hall of the Merchant-Tailors, Tailors, and Linen-armourers in this street. Hatton refers it to "such a sign." (See MERCHANT-TAILORS' HALL, SOUTH-SEA HOUSE, and HALL OF COMMERCE.) Upon part of the site of the latter lived Sir William Sidney, one of the heroes of Flodden Field; and his son, Sir Henry Sidney, in whose arms died Edward VI. Sir Henry then retired to Penhurst, where was born, in 1554, his son, the famed Sir Philip Sidney. Upon the site of the present chief entrance to the Bank of England, in Threadneedle-street, stood the *Crown Tavern*, "behind the 'Change;" it was much frequented by Fellows of the Royal Society, when they met at Gresham College, hard by. The *Crown* was burnt in the Great Fire, but was rebuilt; and a century since, at this tavern, "it was not unusual to draw a butt of mountain, containing 120 gallons, in gills, in a morning." (*Sir John Hawkins*.) At No. 20 lived Alderman (now Sir Francis Graham) Moon, F.S.A., the eminent print-publisher: he was Lord-Mayor in 1854-5, when he received his patent of baronetcy.

### TOKENS.

IN the reign of Elizabeth (1558), the great want of halfpence and farthings led to private *Tokens*, or farthings, of lead, tin, latten, and leather, being *struck* for ale-house-keepers, chandlers, grocers, vintners, and other traders; the figure and devices being emblematical of the various trades, victuallers especially adopting their signs. They were made without any form or fashion; and some of them (as the leaden tokens of Elizabeth's reign) are now of extreme rarity. Every one issuing this useful specie

was compelled to take it again when offered; and this practice continued until 1672, when Charles II. struck halfpence and farthings. Within the present century, however, many tokens obtained general circulation in London, by which means tradesmen advertised their business: such tokens also recorded great events, portraits of public men, views of places and of entertainments, which might otherwise have been lost. They mostly disappeared on Watt's new copper coinage of George III. The great national collection of tokens in the British Museum is the finest we possess. Mr. Roach Smith's collection, now in the British Museum, contains about 500 mediæval leaden tokens, and many tradesmen's tokens in brass, from about 1648 to 1674. (*See Catalogue*, 1854.) The Beaufoy Cabinet, presented to the Corporation Library, consists exclusively of *London* traders', tavern, and coffee-house Tokens current in the 17th century, 1174 in number: they are well described and annotated in a Catalogue by Jacob Henry Burn, printed for the Corporation, 1853; and reprinted 1855. *See* also the work on *Tradesmen's Tokens current in London*, 1648 to 1672, by J. Y. Akerman, F.S.A., 4to, 1849.

*Tokenhouse-yard*, on the north side of Lothbury, is named from the Mint-house, or office for the issue and change of these farthings or tokens: it was built in the reign of Charles I., and occupied the site of the house and garden of the Earl of Arundel; and from its proximity to the brassfounders of Lothbury, they are thought to have minted the Tokens.

#### TOTTENHAM-COURT-ROAD,

FROM Oxford-street to the Hampstead-road, was the old way from the village of St. Giles's to the prebendal manor of Totham, Totten, or Totten Hall (named in Domesday), and *temp.* Henry III. the mansion of William de Tottenhall. It stood at the north-west extremity of the present road, and is mentioned as a house of entertainment in the parish-books of St. Giles's, in 1645, when Mrs. Stacey's maid and two others were fined "for drinking at Tottenhall Court, on the Sabbath daie, xij*d.* a-piece." It was then altered to the *Adam and Eve* public-house, which, with the *King's Head* and Tottenham Court turnpike, is shown in Hogarth's "March to Finchley," at the Foundling Hospital. At the *Adam and Eve* were a music-room and tea-gardens; here Lunardi ascended in his balloon, May 16, 1785. A portion of the old court-house remained to our time; the gardens were built upon between 1806 and 1810, and the public-house has been rebuilt. J. T. Smith, in his *Book for a Rainy Day*, remembers, in 1773, Capper's Farm, behind the north-west end of Russell-street, noted for its garden-houses in Strype's time. From Capper's Farm were straggling houses, but Tottenham-Court-road was then "unbuilt upon." The first house (No. 1) in Oxford-street bore on its front, cut in stone, "Oxford-street, 1725." *The Blue Posts*, corner of Hanway-street, was once kept by Sturges, the famous draught-player, author of a *Treatise on Draughts*. The site of Gresse-street (named from Gresse, the painter) was then gardens, recommended by physicians for the salubrity of the air. Stephen-street was then built: George Morland the painter, lived here, at No. 14, in 1780. Whitefield's chapel was built in 1754, upon the site of "the Little Sea" pond; and a turnstile opened into Crab-tree Fields, which then extended to the *Adam and Eve*.

"Totten-Court, a mansion in the fields," is a scene in Ben Jonson's *Tale of a Tub*: and the scene of Thomas Nash's *Tottenham-Court*, a pleasant comedy (1639), is laid in "Marrowbone Park."

#### TOWER HILL

IS described by Hatton (1708) as "a spacious place extending round the west and north parts of the Tower, where are many good new buildings, mostly inhabited by gentry and merchants. Upon this hill such persons as are committed to the Tower and found guilty of high treason are commonly executed. And Stow says "the scaffolds were built at the charge of the City, but in the reign of Edward IV. the same was erected at the charge of the King's officers; and that many controversies have been between the City and Lieutenant of the Tower touching their liberties." A century previous the spot was noted for its salubrity:

"The Tower Hill,  
Of all the places London can afford,  
Hath sweetest ayre."—Haughton's *Englishmen for my Money*, 1616, 4to.

The "bounds" of the Tower Liberties are perambulated triennially, when, after service in the church of St. Peter, a procession is formed upon the parade: including a headsman, bearing the axe of execution; a painter to mark the bounds; yeomen warders, with halberds; the Deputy Lieutenant and other officers of the Tower, &c.: the boundary-stations are painted with a red "broad arrow" upon a white ground, while the chaplain of St. Peter's repeats, "Cursed be he who removeth his neighbour's landmark." Another old custom of lighting a bonfire on Tower Hill on Nov. 5th was suppressed in 1854.

Lady Raleigh lived on Tower Hill after she had been forbidden to lodge with her husband in the Tower. William Penn was born April 14th, 1644, in a court on the east side of Tower Hill. At the *Bull* public-house died, April 14th, 1685, Otway the poet, it is said of hunger. "In a by cutler's shop of Tower Hill," says Sir Henry Wotton, "Felton bought a tenpenny knife (so cheap was the instrument of this great attempt)," with which he assassinated the Duke of Buckingham.

*Postern-row*, with a few posts set across the footpath (opposite about the middle of the Tower moat), denotes the site of the Postern-gate, at the south-eastern termination of the City Wall. Here is the rendezvous for enlisting sailors and soldiers, which formerly had its press-gangs. The shops display odd admixtures of marine stores, pea-jackets and straw-hats, "rope, hour-glasses, Gunter's scales, and dog-biscuits."

*The Place of Execution*, on Great Tower Hill, is shown in the old plan of the Tower at p. 793; the space eastward is *Little Tower Hill*.

*Notable Persons Executed on Tower Hill.*—June 22, 1535, Bishop Fisher. July 6, 1535, Sir Thomas More. July 28, 1540, Cromwell, Earl of Essex. Jan. 21, 1547, Earl of Surrey, the poet. March 20, 1549, Thomas Lord Seymour of Sudeley, the Lord Admiral, by order of his brother, the Protector Somerset, who was beheaded Jan. 22, 1552. Feb. 12, 1553-4, Lord Guildford Dudley, husband of Lady Jane Grey. April 11, 1554, Sir Thomas Wyatt. May 12, 1641, Earl of Strafford. Jan. 10, 1644-5, Archbishop Laud. Dec. 29, 1690, William Viscount Stafford, "insisting on his innocence to the very last." Dec. 7, 1683, Algernon Sidney. July 15, 1685, the Duke of Monmouth. Feb. 24, 1718, Earl of Derwentwater and Lord Kenmuir. Aug. 18, 1746, Lords Kilmarnock and Balmerino. Dec. 8, 1746, Mr. Radcliffe, who had been, with his brother Lord Derwentwater, convicted of treason in the Rebellion of 1715, when Derwentwater was executed; but Radcliffe escaped, and was identified by the barber who, 31 years before, had shaved him in the Tower. Chamberlain Clark, who died in 1831, aged 92 years, well remembered (his father then residing in the Minorities) seeing the glittering of the executioner's axe in the sun as it fell upon Mr. Radcliffe's neck. April 9, 1747, Simon Lord Lovat, the last beheading in England, and the last execution upon Tower Hill, when a scaffolding built near Barking-alley fell with nearly 1000 persons on it, and 12 were killed.

On the west side of Tower Hill is *Great Tower-street*: No. 48, on the south side, is the *Czar's Head*, built upon the site of the former tavern, where Peter the Great (Czar of Muscovy) and his companions, after their day's work, used to meet, to smoke pipes and drink beer and brandy. In *Little Tower-street*, No. 12, was Watt's Academy, where Thomson was tutor when he wrote his *Summer*.

At the south-west corner of the Hill is *Tower Dock*, where Sir Walter Raleigh, disguised, embarked in a boat for Tilbury; but being betrayed, he was arrested on the Thames, and committed to the Tower.

### TOWER OF LONDON, THE,

"THE citadel to defend or command the City" (*Stow*), stands on the north bank of the Thames, about a mile below London Bridge, and in the oldest part of the metropolis; "between the south-east end of the City Wall and the river, though the west part is supposed within the City,\* but with some uncertainty; and in what county the whole stands is not easy discovered." (*Hatton*, 1708.) It comprises within the walls an area of 12 acres 5 roods. Tradition has assigned its origin to Julius Cæsar, and our early poets have adopted this antiquity:

"Prince Edward. I do not like the Tower of any place.  
Did Julius Cæsar build that place, my lord?

*Buckingham.* He did, my gracious lord, begin that place,  
Which since succeeding ages have re-edified.

*Prince Edward.* Is it upon record, or else reported

\* "It was proved in the case of Sir Thomas Overbury, upon a question as to whether his murder was committed within the boundaries of the City or in the county of Middlesex, that the City Wall traversed the buildings contained within the Tower; and his apartment being on the west of it, the criminals came accordingly under the jurisdiction of the City."—*Archer's Vestiges*, part iii.

Successively from age to age, he built it?  
*Buckingham. Upon record, my gracious lord."*

Shakspeare's *Richard III.*, act iii. sc. 1.

This, however, is unsupported by records; but that the Romans had a fortress here in a subsequent age is probable, from the discovery of Roman remains upon the site; and a Roman wall is still visible near the ditch. The *Saxon Chronicle* leads to the belief of there having been a Saxon fortress upon the spot.

The oldest portion of the present fortress is the Keep, or *White Tower*, so named from its having been originally whitewashed, as appears from a Latin document of the year 1241. This tower was built about 1078, for William the Conqueror, by Gundulph, bishop of Rochester, who also erected Rochester Castle; and the two fortresses have points of resemblance. William Rufus greatly added to the Tower. At the close of his reign was sent here the first prisoner, Ralph Flambard, or Firebrand, who contrived to escape by a window which is shown. Henry I. strengthened the fortress; and Stephen, in 1140, kept his court here.

Fitzstephen describes it as "the Tower Palatine, very large and very strong, whose court and walls rise up from a deep foundation. The mortar is tempered with the blood of beasts. On the west are two castles, well fenced."

About 1190, the Regent Bishop Longchamp surrounded the fortress with an embattled stone wall and "a broad and deepe ditch:" for breaking down part of the City wall he was deposed, and besieged in the Tower, but surrendered after one night. King John held his court here. Henry III. strengthened the White Tower, and founded the Lion Tower and other western bulwarks; and in this reign the palace-fortress was alternately held by the king and the insurgent barons. Edward I. enlarged the moat, and on the west made the last additions of military importance prior to the invention of cannon. Edward II. reïred here against his subjects; and here was born his eldest daughter, Joan of the Tower. Edward III. imprisoned here many illustrious persons, including David king of Scotland, and John king of France with Philip his son.\* During the insurrection of Wat Tyler, King Richard II. took refuge here, with his court and nobles, 600 persons: Richard was deposed whilst imprisoned here, in 1399. Edward IV. kept a magnificent court here. In 1460 Lord Scates was besieged here by the Yorkists, and was taken and slain in endeavouring to escape by water. Henry VI., twice imprisoned in the fortress, died here in 1471; but the tradition that George Duke of Clarence was drowned here in 1478, in a butt of malmsey-wine, is of little worth. The beheading of Lord Hastings, in 1483, by order of the Protector Gloucester (on a log of timber in front of the Chapel); the seizure of the crown by Richard; and the supposed murder of his nephews, Edward V. and the Duke of York,—are the next events in the annals of the fortress. Henry VII. frequently resided in the Tower, where also his queen sought refuge from "the society of her sullen and cold-hearted husband:" the king held a splendid tournament here in 1501; his queen died here in 1503. Henry VIII. often held his court in this fortress: here, in great pomp, Henry received all his wives previous to their espousals; here were beheaded his queens Anne Boleyn and Catherine Howard. About this time (1548) occurred a great fire in the Tower:

"ij A° (Edw. VI.) Item the xxij day of November was in the nyghte a grete fyre in the tower of London, and a gret pesse burnyd, by menes of a Frencheman that sette a barrelle of gonnepoder a fyere, and soo was burnyd hymselfe, and no more persons, but moche hurte besyde."—*Chron. Grey Friars of London.*

Edward VI. kept his court in the Tower prior to his coronation: here his uncle, the Protector Somerset, was twice imprisoned before his decapitation on Tower Hill, in 1552. Lady Jane Grey entered the fortress as queen of England, but in three weeks became here a captive with her youthful husband: both were beheaded. Queen Mary, at her court in the Tower, first showed her Romish resolves: her sister, the Princess Elizabeth, was imprisoned here on suspicion of favouring Sir Thomas Wyatt's design; she was compelled to enter at the *Traitors' Gate*, when she exclaimed, "Here landeth as true a subject, being a prisoner, as ever landed at these stairs; and before Thee, O God, I speak it." Queen Elizabeth did not keep her court in the Tower, but at no period was the state prison more "constantly thronged with delinquents." James I.

No person was allowed *temp.* Edward III. to bathe in the Tower, or in the Thames near the Tower; *under penalty o death.*

resided here, and delighted in combats of the wild beasts kept here. In Charles I.'s reign many leading partisans were imprisoned here; and under the government of Oliver Cromwell, and in the reigns of Charles II. and James II., the Tower was filled with prisoners, the victims of state policy, intrigue, tyranny, or crime. The Courts of Justice, the King's Bench and Common Pleas were held here; the former in the Lesser Hall, beneath the east turret of the White Tower; the latter in the Great Hall, by the river. Almost from the Conquest, our sovereigns, at their coronations, went in great state and procession from the Tower, through the City, to Westminster; the last observance being at the coronation of Charles II. All the domestic apartments of the ancient palace within the Tower were taken down during the reigns of James II. and William and Mary. In 1792 the garrison was increased.

"Several hundred men were employed in repairing the fortifications, opening the embrasures, and mounting cannon; and on the western side of the fortress a strong barrier was formed with old casks filled with earth and rubble; the gates were closed at an early hour, and no one but the military allowed to go on the ramparts."—*Bayley*.

The *Tower Palace* occupied the south-eastern portion of the inner ward, as shown (p. 793) in the plan of the fortress in the reign of Elizabeth, within a century from which period much of its ancient character was obliterated by small buildings between its towers and courts. Northward of the White Tower was built, *temp.* James II. and William III., the *Grand Storehouse* for the Royal Train of Artillery, and the *Small Armoury* for 150,000 stand of arms: this building, 345 feet in length, was destroyed by fire October 30, 1841;\* since which the Tower has been "remodelled," many small dwelling-houses have been cleared away, and several towers and defences have been rebuilt. The houses of Petty Wales and the outworks have been removed, with the Menagerie buildings at the entrance from the west.

The *Lion Tower* was built by Henry III., who commenced assembling here a menagerie with three leopards sent to him by the Emperor Frederic II., "in token of his regal shield of arms, wherein those leopards were pictured." Here, in 1255, the Sheriffs built a house "for the King's elephant," brought from France, and the first seen in England. Our early sovereigns had also a mews in the Tower:

"Merry Margaret, as Midsomer flowre,  
Gentyll as faucon and hawke of the Towre."—*Skelton*.

To the Lion Tower was built a semicircular enclosure, where lions and bears were baited with dogs, in which James I. and his court much delighted. A lion was named after the reigning king; and it was popularly believed that "when the king dies, the lion of that name dies after him" (see also Addison's *Freeholder*, No. 47). "Washing the Lions on the first of April" was another popular hoax. The menagerie greatly declined until 1822, when it revived under the management of Mr. Cops; the last of the animals were, however, transferred to the Zoological Society's Gardens, in the Regent's Park, in 1834: but the buildings were not entirely removed until 1853; the Refreshment-room and ticket-office occupy part of the site of the Lion Tower. See *The Tower Menagerie*, with woodcut portraits drawn by Harvey.

The *Tower Moat or Ditch* was drained in 1843, filled up, and turfed, for the exercise of the garrison: occasionally sheep feed here. The banks are clothed with thriving evergreens; and on the north-east is a pleasant shrubbery-garden.†

"In draining the moat were found several stone shot, which had probably been projected against the fortress during the siege of 1460, when Lord Scyles held the Tower for the king, and the Yorkists cannonaded him from a battery on the Southwark side of the river."—*Hewitt's Tower and its Armouries*.

The land entrance to the fortress is by the *Middle Tower*, and a stone bridge, anciently a drawbridge, crossing the Moat, at the south-west angle, to the *Byward Tower*: these towers were strongly fortified, and provided each with a double portcullis. On the right, a small drawbridge crosses the Moat, and leads to the wharf fronting the Thames. Here is *St. Thomas's Tower*: Ings, the Cato-street conspirator, was the last person confined in this Tower. Beneath it is *Traitors' Gate*, with a cut which until lately connected the ditch with the river: by this entrance state prisoners were formerly brought into the Tower; and through it

"Went Sidney, Russell, Raleigh, Cranmer, More."—*Rogers*.

"When it was found necessary, from any cause, to carry a prisoner through the streets, the Sheriffs received him from the king's lieutenants at the entrance to the City, gave a receipt for him, and took another on delivering him up at the gates of the Tower. The receipt of the Governor for the body of the Duke of Monmouth—his living body—is still extant."—*Dixon's Prisons of London*, 1850.

*Traitors' Gate* is now a modernized sham. Eastward is the basement-story of the *Cradle Tower*, in good condition; the *Well Tower* is used as a warder's residence.

\* There were 94,500 stands of arms, of which 4000 were saved: loss by the fire, about 250,000. Among the objects destroyed and lost were a cannon of wood, and the state swords of Justice and Mercy carried before the Pretender when he was proclaimed in Scotland in 1715.

† In 1830 the Tower Ditch was filled with water, and cleansed, by order of the Duke of Wellington, as Constable; which measure was gravely described at the time as putting the fortress into a state of security against the Reform Bill agitation!

The front wall is embattled, and mounted with cannon; and on the wharf were formerly fired the "Tower Guns." Hatton describes them, in 1708, as "62 guns, lying in a range, fast in the ground, always ready to be discharged on any occasion of victories, coronations, festivals, days of thanksgiving, triumphs, &c." The guns are now fired from a new "Saluting Battery," facing Tower-hill.

Between the outer and inner wards extends a narrow street, in part formerly occupied by the buildings of the Mint, removed to Tower Hill in 1810. The towers of the inner ward are—commencing from the south-east, the *Bell Tower*, containing the alarm-bell of the garrison; it is said to have been the prison-lodging of Fisher, Bishop of Rochester, and subsequently of the Princess Elizabeth: "at this point, in former times, were other gates, to prevent an enemy getting possession of the lines, and to guard the approaches to the inner ballium."—*Hewitt*.

Between the *Bell Tower* and the *Beauchamp Tower* was formerly a passage by the leads, used as a promenade for prisoners, of whom the walls bear memorials; among them is "*Respice finem, W. D.*" Next, northward, is the *Beauchamp* or *Cobham Tower*, a curious specimen of the military architecture of the 12th and 13th centuries.

This tower is named from Thomas Beauchamp, Earl of Warwick, being confined here in 1397, and the Cobhams in 1554. It was restored by Anthony Salvin in 1854; when lithographed copies of the Inscriptions, Memorials, and Devices cut on the walls of the rooms and cells, were published by W. R. Dick.

It is much to be regretted that these records in stone have been removed from their original places into the large room.

Upon the wall is a rebus of Dr. Abel, chaplain to Catherine of Aragon; a bell inscribed TA, and Thomas above. Couplets, maxims, allegories, and spiritual truths are sometimes added: of these we can only select a few:

"Thomas Willyngar, goldsmith. My hart is yours tel dethe." By the side is a figure of a bleeding "hart," and another of "dethe;" and "T. W." and "P. A."

"Thomas Rose,  
Within this Tower strong  
Kept close  
By those to whom he did no wrong. May 8th, 1666."

The figure of a man, praying, underneath "Ro. Bainbridge" (1587-8).

"Thomas Bawdwin, 1584, Jvly. As vertve maketh life, so sin cawseth death."

"Walter Paslew, dated 1569 & 1570. My hope is in Christ." Devices of the Peverels; and crucifix and bleeding heart. "J. C. 1538." "Learne to feare God." "Reprrens . le . sage . et . il . te armera.—Take wisdom, and he shall arm you."

Over the fireplace is inscribed:

"Quanto plus afflictionis pro Christo in hoc sæculo,  
Tanto plus gloriæ cum Christo in futuro.  
Arundell, June 22, 1597."

"Gloria et honore eum coronasti Domine:  
In memoria æterna erit justus. Atuch . . . ."

One of the most elaborate devices is that of John Dvdle, Earl of Warwick, tried and condemned in 1553 for endeavouring to deprive Mary of the crown; but being reprieved, he died in his prison-room, where he had wrought upon the wall his family's cognizance, the lion, and bear and ragged staff, underneath which is his name; the whole surrounded by oak-sprigs, roses, geraniums, honeysuckles, emblematic of the Christian names of his four brothers, as appears from this inscription:

"Yow that these beasts do wel behold and se,  
May deme with ease wherefore here made they be  
Withe borders eke wherein (there may be found)  
4 brothers' names, who list to serche the ground."

The names of the four brothers were Ambrose, Robert, Guildford, and Henry: thus, A, acorn; R, rose; G, geranium; H, honeysuckle: others think the rose indicates Ambrose, and the oak Robert (*robur*). In another part is carved an oak-tree bearing acorns, signed R.D.; the work of Robert Dudley, Earl of Leicester.

"Ihs 1571, die 10 Aprilis. Wise men ought circumspectly to see what they do, to examine before they speake, to prove before they take in hand, to beware whose company they use, and above all things, to whom they truste. Charles Bailly." Another of Bailly's apophthegms is: "The most vnhapy man in the world is he that is not patient in adversities; for men are not killed with the adversities they have, but with ye impacione which they svffer."

"O . Lord . whic . art . of . heavn . King . Graunt . gras . and . lyfe . everlastig . to . Miagh . thy . servant . in . prison . alon . with \* \* \* Thomas Miagh." Again :

"Thomas Miagh, whiche lieth here alon,  
That fayne wovld from hens be gon,  
By tortyre straunge mi troth was  
tryed, yet of my libertie denied. 1581, Thomas Myagh."

(A prisoner for treason, tortured with Skeffington's irons and the rack.)

"Hit is the poynt of a wyse man to try and then trvste, for hapy is he whome fyndeth one that is ivst. T. C." Again : "T. C. I leve in hope and I gave credit to mi frinde in time did stande me moste in hande, so wovlde I never do againe, excepte I hade him sver in bande, and to al men wiche I so vnles, ye svvssteine the leke lose as I do. Vnhappie is that mane whose actes doth procvre the miseri of this hovs in prison to indvre. 1576, Thomas Clarke."

In the State Prison Room occurs twice the name of "JANE" (Lady Jane Grey), probably inscribed by one of the Dudleys, who were all imprisoned here in 1553, and one of whom, Guildford, was the lady's husband : this is the only memorial preserved of Lady Jane in the Tower. Wallace, the Scottish hero, is erroneously named among the prisoners here; for Wallace was not confined in any part of the Tower, as proved in a paper by Mr. W. Sydney Gibson, F.S.A., *Notes and Queries*, No. 213, p. 509.

The memorial of Thomas Salmon, 1622, now let into the wall of the middle room, was formerly in the upper prison-lodging :

A shield surrounded by a circle; above the circle the name "T. Salmon;" a crest formed of three salmons, and the date 1622; underneath the circle the motto *Nec temere, nec timore*—"Neither rashly nor with fear." Also a star containing the abbreviation of Christ, in Greek, surrounded by the sentence, *Sic vive ut vivas*—"So live that thou mayest live." In the opposite corner are the words, *Et morire ne morieris*—"And die that thou mayest die not." Surrounding a representation of Death's head, above the device, is the enumeration of Salmon's confinement : "Close prisoner 8 moneths, 32 wekes, 224 dayes, 5376 houres."

On the ground-floor is incised :

"The man whom this house can not mend,  
Hath evill becom, and worse will end."

"Round this (Beauchamp) chamber a secret passage has recently been discovered in the masonry, in which spies were, no doubt, set to listen, and report the conversation or soliloquies of prisoners, when they, poor souls, believed themselves alone. The men who live in the Tower have christened this passage the Whispering Gallery."—Dixon's *Prisons*, 1850, p. 70.

Raleigh was thrice imprisoned in the Tower; in 1592 (eight weeks), for winning the heart of Elizabeth Throgmorton, one of Elizabeth's maids of honour; "not only a moral sin, but in those days a heinous political offence." In 1604 he was again committed to the Tower, and in the frenzy of despair attempted to stab himself to the heart; he remained here a captive nearly thirteen years, part of the time with Lady Raleigh: here, 1605, was born Carew, their second son. Sir Walter's prison-lodging is thought to have been the second and third stories of the Beauchamp Tower; here he devoted much time to chemistry and pharmaceutical preparations. "He has converted," says Sir William Wade, Lieutenant of the Tower, "a little hen-house in the garden into a still-house, and here he doth spend his time all the day in distillations; . . . he doth show himself upon the wall in his garden to the view of the people:" here Raleigh prepared his "rare cordial,"\* wrote his political discourses, and commenced his famous *History of the World*. He was at length liberated, but again committed to the Tower, about two months before his execution at Westminster.

Raleigh's constant study was in the pages of that Divine book, by which, as he told the clergyman who rebuked him for his seeming lightness, on the eve of his beheading, he had prepared himself to look fearlessly on death. His last hours were each an episode, and his acts and words have been carefully recorded. On the morning of his execution, his keeper brought a cup of sack to him, and inquired how he was pleased with it? "As well as he who drank of St. Giles's bowl as he rode to Tyburne," answered the knight, and said, "it was a good drink, if a man might but tarry by it." "Prithce, never fear, Beeston," cried he to his old friend Sir Hugh, who was repulsed from the scaffold by the sheriff, "I shall have a place!" A bald man, from extreme age, pressed forward "to see him," he said, "and pray God for him." Raleigh took a richly-embroidered cap from his own head, and placing it on that of the old man, said, "Take this, good friend, to remember me, for you have more need of it than I." "Farewell, my lords," was his cheerful parting to a courtly group, who affectionately took their sad leave of him, "I have a long journey before me, and I must e'en say good-bye." "Now I am going to God," said that heroic spirit, as he trod the scaffold; and, gently touching the axe, added, "This is a sharp medicine, but it will cure all diseases." The very headsman shrank from beheading

\* Raleigh's "Rare Cordial," with other ingredients introduced by Sir Kenelm Digby and Sir A. Frazer, is the *Confectio aromatica* of the present London Pharmacopœia.

one so illustrious and brave, until the unquailing soldier addressed him, "What dost thou fear? Strike, man!" In another moment, the mighty soul had fled from its mangled tenement.

Raleigh's shifting imprisonments must have been very irksome. Thus, in 1603,

"In the course of a few months Raleigh was first confined in his own house, then conveyed to the Tower, next sent to Winchester Gaol, returned from thence to the Tower, imprisoned for between two and three months in the Fleet, and again removed to the Tower, where he remained until released thirteen years afterwards, to undertake his new expedition to Guiana." (Mr. J. Payne Collier; *Archæologia*, vol. xxxv. p. 218.) Mr. Collier possesses a copy of that rare tract, "A Good Speed to Virginia," 4to. 1609, with the autograph on the title-page, "W. Raleigh, Tur. Loud.;" showing that at the time this tract was published, and read by Raleigh, he recorded himself as a prisoner in the Tower of London.

We learn from the *Memorials of the Tower*, by Lord De Ros, the Lieutenant-Governor, that the late Prince Consort interested himself to preserve the remains of the original building, and caused it to be declared that "no edifice within the Tower walls should be built, altered, or restored until the plans and elevations should have been submitted for the Queen's personal approval."

North of the Beauchamp Tower is the *Devereux Tower*, which has been rebuilt under the direction of the Ordnance. The original tower, with walls 11 feet thick, was the prison-lodging of Robert Devereux, Earl of Essex; in the lower chambers were passages leading to the adjoining CHAPEL OF ST. PETER, described at p. 198.

Eastward are the *Flint*, *Bowyer*, and *Brick Towers*, which have also been rebuilt by the Ordnance. In the Bowyer Tower resided the Master and Provider of the King's Bows; and in a work-room over this tower originated the fire which destroyed the Grand Storehouse in 1841: the basement, strongly groined and vaulted, has been restored. Beneath the floor is a still more dreary vault, with a trap-door opening upon a flight of steps. The Brick Tower, the reputed prison-house of Lady Jane Grey, had its modernized superstructure destroyed in the fire of 1841; but the original basement and a dungeon beneath remained.

The *Martin Tower*, at the north-east angle, was formerly a prison-lodging, and next the Jewel Tower. Anne Boleyn was imprisoned here: on the walls is a coat-of-arms and "Boullen:" she slept in the little upper room. Robert Devereux, Earl of Essex, and Lord Southampton (Shakspeare's friend), were also prisoners in the Martin Tower; and here were confined, by James II., Archbishop Saneroft and the six bishops. The Keeper of the Regalia resides here. Thence, southward, is the *Constable Tower*, rebuilt by the Ordnance. Next is the *Broad Arrow Tower*, in its original condition: Lady Jane Grey was a prisoner here: the Latin couplet which Fox states Jane scratched with a pin upon the walls of her chamber, can nowhere be found. The *Salt(petre) Tower* is called "Julius Cæsar Tower" in a survey *temp.* Henry VIII., and is supposed to be actually of the reign of William Rufus. It is circular, and has a vaulted dungeon: in the first-story chamber, among the devices and inscriptions cut in the wall, is a sphere with the signs of the zodiac, and

"Hew : Draper : of : Bristol : made : thys : spheer : the : 30 : daye : of : Maye : anno 1561."

Draper was a wealthy tavern-keeper at Bristol, and was committed here "as suspect of a conjuror or sorceror," practising against "Sir William St. Lowe and my ladie;" but he affirmed that "longe since he soe misliked his science, that he burned all his books." A view of the Salt Tower, taken in 1846, is etched in Archer's *Vestiges*, part iii.: it has been restored by Salvin.

Next the Salt Tower, westward, was the *Lantern Tower*, removed for the *Ordnance Office*, greatly heightened in 1854. Further west is the *Record Tower*, also called *Wakefield*, from the imprisonment of the Yorkists here after the battle of Wakefield, 1460: this was also anciently the *Hall Tower*, from its proximity to the great hall of the palace: the basement is Norman, probably of the reign of William Rufus; the walls are 13 feet thick. The upper chamber has been a Record-room since the reign of Henry VIII.: here are the *cartæ antiquæ* and chancery rolls, chronologically ranged in presses. Opposite the chamber in which Henry VI. is supposed to have been murdered, is the Record-keeper's room, where hang some of the Keepers' portraits: William Lambarde, the topographer; the learned Selden; the Puritan, William Prynne; and William Petyt, Samuel Lysons, and Henry Petrie, were distinguished Record-keepers. The Octagon is "Edward the Confessor's Room."

Adjoining the Record Tower, westward, is the *Bloody Tower*: here, in a dark windowless room, in which one of the portcullises was worked, George Duke of Clarence is said to have been drowned in malmsey; in the adjoining chamber, the two princes are said to have been "smothered;" whence the name of Bloody Tower. This has been much disputed; but in a tract *temp.* James I. we read that the above "turret our elders termed the *Bloody Tower*; for the bloodshed, as they say, of those infant princes of Edward IV., whom Richard III., of cursed memory (I shudder to mention it), savagely killed, two together at one time." In the latter chamber was imprisoned Colonel Hutchinson, whose wife, daughter of Sir Allen Apsley, Lieutenant of the Tower, where she was born, related the above traditions. This portion was formerly called the *Garden Tower*; it was built *temp.* Edward III., and is the only ancient place of security, as a state prison, in the Tower: it is entered through a small door in the inner ballium; it consists of a day-room and a bed-room, and the leads on which the prisoner was sometimes allowed to breathe the air. The last person who occupied these apartments was Arthur Thistlewood, the Cato-street conspirator. Westward are the *Lieutenant's Lodgings* (the Lieutenant's residence), chiefly timber-built, *temp.* Henry VIII.; in 1610 was added a chamber having a prospect to all the three gates of the Tower, and enabling the lieutenant to call and look to the warders. In the "Council Chamber" the Commissioners examined Guy Fawkes and his accomplices, as commemorated in a Latin and Hebrew inscription upon a parti-coloured marble monument; and elsewhere in the building there was discovered, about 1845, "an inscription carved on an old mantelpiece relating to the Countess of Lenox, grandmother of James I., 'commytede prysner to thys Logyngge for the Marige of her Sonne my Lord Henry Darnle and the Queen of Scotlande.'" (*Hewitt's Tower, &c.*) Here a bust of James I. was set up, in 1608, by Sir William Wade, then Lieutenant; the walls are painted with representations of men inflicting and suffering torture; and the room is reputed to be haunted! The last person confined in the lodgings here was Sir Francis Burdett, committed 1810, for writing in Cobbett's *Weekly Register*.

"Besides the 'prison lodgings,' there were other still more terrible chambers in the Tower; chambers especially constructed with a view to the torture of their inmates. One of these was called 'Little Ease,' a cell so small in its dimensions, that it was impossible for the prisoner to stand erect or to lie down except in a cramped position (*Holinshed*, vol. iii. p. 825). Another was named 'The Pit.' Others are said to have been full of vermin, especially rats, which at high water were driven up in shoals from the Thames. The Devil's Tower probably took its name from some *contrivance of this kind*."—*Hewitt*.

"An inscription recently found in an adjoining room tells us a State secret, that Margaret Douglas, Countess of Lennox, mother of unhappy Darnley, was confined in these lodgings by Elizabeth, on suspicion of being concerned in the marriage of her son with Mary Queen of Scots. Margaret lived in London for many years."—*Mr. Hepworth Dixon's Paper read to the Archaeological Institute, 1866.*

*The Place of Execution within the Tower on the Green* was reserved for putting to death privately; and the precise spot, nearly opposite the door of St. Peter's Chapel, is denoted by a large oval of dark flints: hereon perished Anne Boleyn and Catherine Howard, Margaret Countess of Salisbury, and Lady Jane Grey.

The *Bloody Tower gateway*, built *temp.* Edward III. (opposite *Traitors' Gate*), is the main entrance to the Inner Ward: it has massive gates and portcullis, complete, at the southern end; but those at the north end have been removed.

"The gates are genuine, and the portcullis is said to be the only one remaining in England fit for use. The archway forms a noble specimen of the Doric order of Gothic. For a prison entrance we know of no more perfect model."—*Weale's London*, p. 160.

Westward of the White Tower, between the Chapel and Lieutenant's Lodgings, was the "Tower Green," now the parade-ground of the garrison. Northward, upon the site of the Grand Storehouse,\* are the *Waterloo Barracks* (to receive 1000 men), in the "modern castellated style," its only ancient features being battlements and machicolations: the first stone was laid June 14, 1845, by the Duke of Wellington, of whom here was a pedestrian stone statue; by Milnes; upon a pedestal, now removed to Woolwich Arsenal.

North-east of the White Tower is another "modern castellated" range of buildings for the officers of the garrison. South-eastward are the unsightly piles of the *Ordnance Office* and *Store-houses*.

\* The large pediment of the Storehouse, filled with bold sculptures of the royal arms, guns, and military trophies, was preserved, and has been set up opposite the Martin Tower.

THE WHITE TOWER, citadel, or keep (for many years of itself "the Tower of London," the other buildings having been added as outworks), was begun by Bishop Gundulph, in 1078, on the site of a work said to have been destroyed by floods. The external dimensions of the White Tower are 176 feet north and south by 96 feet east and west, with an eastern semicircular projection, the apsis of the chapel. The elevation is 92 feet; it is embattled; and its angles are finished with turrets, the vanes of which are surmounted with the royal crown. The north and south-western turrets are square, with a slight projection; the south-eastern turret is built upon the summit of the wall; and that at the north-eastern angle is an irregular circle, and was pierced to receive four clock-dials in 1854. This tower was called the *Observatory*, and was employed by the "Astronomical Observer, John Flamsteed," who had "an hundred poundes yearly paid him out of this office (of Ordnance):" it contains a staircase which communicates with each of the floors, from the vaults to the roof, which is covered with lead, and was once a promenade for the prisoners. Traces of a large archway on the north side indicate the original grand entrance, shown in the oldest views; the present entrances, north and south, are modern. The external walls are from 10 to 12 feet thick, and the internal walls 7 feet; of these there are only two, which divide each floor into three apartments. The White Tower was first considerably repaired about the middle of the 13th century; next, with Caen stone, in 1532; "it was almost new erected in 1637 and 1638, being built of boulder and square stone" (*Hatton*); and windows and other ancient features were obliterated in the reign of William III. On the eastern side is a wing occupied for Ordnance books and papers. Here, *circ.* 1708, were "3000 barrels of gunpowder at a time, with vast quantities of match; also swords and gin for mounting great guns; and on the east side is a place where the powder is proved before the surveyor and other officers."

On the first floor is *Queen Elizabeth's Armoury*, with a vaulted roof: on the north side a door opens to a cell, 10 feet by 8, in the thickness of the wall; this is said to have been the prison-lodging of Sir Walter Raleigh; near the cell entrance are inscribed Rudstone, Fane, and Culpeper, all implicated in Sir Thomas Wyatt's rebellion.

"He that indvretth to the ende shal be savid  
M: 10 R. Rvdston. Dar. Kent. Ano. 1553."

"Be faithfvl vnto the deth and I wil give thee a crowne of Life,  
T Fane 1554."

"T Cvlpeper of Ailsford, Kent."

On the second floor, reaching to the roof, is the *Chapel of St. John the Evangelist*, the most perfect specimen of Norman architecture in the metropolis; it has an apsis, and a gallery supported by 12 massive round columns, united by semicircular arches: here our early sovereigns knelt before the King of kings. Three stained-glass windows were added to this chapel by Henry III.: it was long used as a record depository. In the third floor is the Council Chamber, a state apartment, with a massive timber roof: here the Protector Gloucester ordered Lord Hastings to be led to instant execution in front of St. Peter's Chapel; and commanded the arrest of the Archbishop of York, the Bishop of Ely, and Lord Stanley. King John of France was lodged in the White Tower in 1357. The vaults underneath were occupied as prisons: among their inscriptions is one carved by Fisher, Bishop of Rochester. Throughout the building there is no trace of a fireplace or of a well. The Council Chamber and Banqueting Hall are now filled with rifles ready for use. Hitherto, they had been used as store-rooms, and the present alteration was made at the suggestion and from the designs of the late Prince Consort. They now form two splendid armouries, the Council Chamber containing 20,000 and the Banqueting Hall 31,000 Enfield and short rifles, ready at any time for immediate use. The passages, walls, ceilings, beams, &c., are richly ornamented with swords, bayonets, lances, pistols, and various other weapons, some of them now obsolete.

A paper drawn up by a yeoman-warder, in 1641, shows the White Tower to have then been the Office of Ordnance; the Martin Tower was assigned to the Porter of the Mint; the Byward and Water-gate Towers to the warders; and eleven other towers were "prison-lodgings."

Mr. Hepworth Dixon's paper, elsewhere quoted, is a very attractive *précis* of the

history of the Tower, narrated with poetic *verve*, and archaeological identification. Of Charles of Orleans, the brave soldier and poet-prince, who was captured at Agincourt, and remained prisoner in the Tower five-and-twenty years, Mr. Dixon tells us, there is in the MS. department of the British Museum a copy of the prince's French poems, nobly illuminated. "One of the drawings in this MS. is of peculiar interest: in the first place, as being *the oldest view of the Tower extant*; in the second place, in fixing the exact chamber in the White Tower in which the poet was confined, and displaying dramatically the life which he led. First we see the prince at his desk, composing his poems, with his gentlemen in attendance, and his guards on duty. Next we observe him on a window-sill looking outwards into space. Then we have him at the foot of the White Tower, embracing the messenger who brings him the ransom. Again, we see him mounting his horse. Then we have him and his friendly messenger riding away from the Tower. Lastly, he is seated in a barge, which lusty rowers are pulling down the stream, for the boat which is to carry him to France." Mr. Dixon's paper is printed in the *Athenæum*, No. 2021.

*Imprisonments.*—Upwards of 1000 prisoners have been confined in the chambers and cells of the Tower at one time. Among the celebrated persons imprisoned here, besides those already named, were: A.D. 1100. Ralph Flambard, the militant Bishop of Durham. 1296. Balliol, King of Scotland, and Scottish chieftains. 1307. Lady Badlesmere, for refusing the queen of Edward II. lodging in her castle of Leeds, Kent. 1347. Charles of Blois, and the twelve citizens of Calais with the governor. 1386. Geoffrey Chaucer, said to have here written his *Testament of Love*. (Chaucer was appointed clerk of the works, July 13, 1389, 13th Richard II.) 1415. The Duke of Orleans, father of Louis XII., composed here a volume of English poems, which contains the earliest view of the Tower. 1534. John Fisher, Bishop of Rochester; and Sir Thomas More. 1540. Thomas Cromwell, Earl of Essex. 1547. The Duke of Norfolk and his son, the poet Earl of Surrey.

"xxxviij<sup>o</sup> A<sup>o</sup> (Hen. VIII.) Thys yere the xij<sup>th</sup> day of December the dewke of Norffoke and the yerle of Sorré hys sonne ware comyttyd unto the tower of London, and the dewke went be watter from the lorde chauncelers place in Holborne that was sometyme the byshoppe of Ely's, and soo downe un to the watter syde, and so be watter un to the tower; and hys sonne the yerle of Sorré went thorrow the cytte of London, makyngre grete lamentaion. \* \* Item the 13. day of Januarij was the yerle of Sorrey browte from the tower of London un to the yelde halle of London, and there he was from ix. unto yt was v. at nyght, and there had hys judgement to be heddyd; and soo the xix. day of the same month it was done at the Towre hylle."—*Chron. Grey Friars of London*.

1553. Cranmer, Latimer, and Ridley. Latimer was also a prisoner here from 1541 to 1547. 1554. Sir Thomas Wyatt. 1562. The Earl of Southampton, the friend of Shakspeare. 1606. Guy Fawkes and his fellow-conspirators. 1622. Lord Chancellor Bacon, "a broken reed;" Sir Edward Coke, a close prisoner. 1613. Sir Thomas Overbury, supposed to have been poisoned by his gaoler. 1616. The Countess of Somerset,\* for Overbury's murder. 1626. "Mr. Moor was sent to the Tower for speaking (in Parliament) out of season; and Sir William Widdrington and Sir Herbert Price for bringing in candles against the desire of the House." (*Dwarris, on Statutes*, p. 83.) 1628. Felton, the assassin of the Duke of Buckingham; Sir John Elliot, second imprisonment; John Selden. 1641. Thomas Wentworth, Earl of Stafford; Archbishop Laud, and Bishop Hall. 1648. The pious Jeremy Taylor. 1651. Sir William Davenant, whose life was saved by Milton and Whitelock. 1656. Lucy Barlow, mother of the Duke of Monmouth: she was liberated by Oliver Cromwell. 1661. Harrington, who wrote the *Oceana*. 1679. Viscount Stafford, beheaded 1680. 1679. Samuel Pepys, the diarist, suspected of connexion with the Popish Plot; liberated on bail for 30,000*l*. 1681. The Earl of Shaftesbury. 1683. William Lord Russell and Algernon Sidney. 1685. James Duke of Monmouth. 1688 (the Revolution). The infamous Lord Jeffreys; William Penn, for street preaching; the Seven Bishops. 1692. The great Duke of Marlborough. 1712. Sir Robert Walpole, for receiving bribes. 1715. Harley, Earl of Oxford; the Earls of Derwentwater and Nithsdale. 1717. William Shippen, "downright Shippen" (*Pope*). 1722. Bishop Atterbury and the Earl of Orrery. 1746. Lords Kilmarnock, Balmerino, and Lovat. 1760. Earl

\* The Countess of Somerset's "only child, born in the Tower during her imprisonment, and named Anne, after the name of the Queen, in the hopes thereby of propitiating her majesty, was afterwards married to the Duke of Bedford, and was the mother of William Lord Russell."—*Amos*.

Ferrers, hanged for murder. 1762. John Wilkes; no charge specified. 1780. Lord George Gordon (Riots). 1794. John Horne Tooke, Hardy, Thelwall, Holcroft, and others. 1810. Sir Francis Burdett. 1820. Cato-street conspirators.

The *Constable of the Tower* was formerly styled the *Constable of London*, the *Constable of the Sea*, and the *Constable of the Honour of the Tower*; which post was conferred by William I. upon Geoffry de Mandeville, in reward of his services at the battle of Hastings. The Constable, besides his salary, privileges, and perquisites, *temp.* Edward II. received a custom of 2*d.* from each person going and returning by the Thames, on a pilgrimage to St. James's shrine. In the reign of Richard II. the Constable received yearly 100*l.*, with fees from his prisoners, according to their rank, "for the suit of his irons:" of every duke committed, 20*l.*: and for irons, earl, 20 marks; baron, 10*l.*; knight, 100 shillings. The Constable's salary is now a little under 950*l.*, with an official residence. The great Duke of Wellington was Constable from 1820 to his death in 1852, and was succeeded by Viscount Combermere, at whose death Sir John Fox Burgoyne received the appointment. On taking possession, the new Constable is by the Lord Chamberlain presented with the keys of the fortress, in the name and on behalf of Her Majesty the Queen; the Yeomen Warders, following an ancient custom on such occasions, respond "Amen" in chorus, the troops give a Royal salute and present arms, and the band plays the National Anthem. The Constable is then formally presented to the officers of the garrison, and conducted over the armoury. The *Lieutenant of the Tower* is next in rank to the Constable; but the duties of both offices are performed by the *Deputy-Lieutenant* and the *Tower Major*. Colonel Gurwood, editor of the Duke of Wellington's *Despatches*, was long Deputy-Lieutenant. The *Gentleman Gaoler* had the custody and locking-up of the state prisoners. The *Yeomen Warders*, of whom there were forty-five, originally kept watch over the prisoners: in the reign of Edward VI., the Duke of Somerset, in return for the attention and respect they paid him whilst in confinement, procured them, after his liberation, "to be sworn extraordinary of the guard, and to wear the same livery they doe." The old uniform is now only worn on State occasions. The new dress was made in 1858. The old cut is retained, the alterations being in the colour of the cloth and the trimmings. The tunic or frock is of dark blue cloth, with a crown in red cloth on the breast, and V.R. underneath; two bands of red cloth round the sleeves, the same as the skirt. A cloak is supplied for inclement weather. The Yeomen at present number forty-eight: they are old and deserving non-commissioned officers.

*Locking-up the Tower* is an ancient, curious, and stately ceremony. A few minutes before the clock strikes the hour of eleven—on Tuesdays and Fridays, twelve—the Head Warder (Yeoman Porter), clothed in a long red cloak, bearing a huge bunch of keys, and attended by a brother warder carrying a lantern, appears in front of the main guard-house, and loudly calls out, "Escort keys!" The sergeant of the guard, with five or six men, then turns out and follows him to the "Spur," or outer gate; each sentry challenging as they pass his post, "Who goes there?"—"Keys." The gates being carefully locked and barred, the procession returns, the sentries exacting the same explanation, and receiving the same answer as before. Arrived once more in front of the main guard-house, the sentry there gives a loud stamp with his foot, and asks, "Who goes there?"—"Keys." "Whose keys?"—"Queen Victoria's keys." "Advance Queen Victoria's keys, and all's well." The Yeoman Porter then exclaims, "God bless Queen Victoria!" The main guard respond, "Amen." The officer on duty gives the word, "Present arms!" the firelocks rattle; the officer kisses the hilt of his sword; the escort fall in among their companions; and the Yeoman Porter marches across the parade alone to deposit the keys in the Lieutenant's Lodgings. The ceremony over, not only is all egress and ingress totally precluded, but even within the walls no one can stir without being furnished with the countersign.

The Tower has a separate coroner; and the public have access to the fortress only by sufferance. When Horwood made his Survey of London, 1799, he was denied admission to the Tower; and the refusal is thus recorded upon the map:—"The Tower: the internal parts not distinguished, being refused permission to take the survey."

The Tower is extra-parochial ; and in 1851 the population was 882, and the military in barracks 606.

**THE ARMOURIES.**—The fortress has been the depository of the national arms and accoutrements from the earliest ages of our monarchy ; and writs of various dates enumerate warlike stores contained in or issued from the Tower by “the Keeper of the Arms.” In an inventory *temp.* Edward VI. are mentioned many of the articles in the present collection ; and Hentzner describes the Armouries in the reign of Elizabeth as one of the sights of London.

*The Horse Armoury*, 150 feet long, is on the south side of the White Tower, and was built in 1826, when it was arranged by Sir Samuel Meyrick. In the centre is a line of twenty-two equestrian figures, in the armour of various reigns from Edward I. to James II. Over each figure is a crimson banner bearing the name and time of the king or knight represented by the effigy below ; but only a few of the armours have been actually worn by the persons to whom they are assigned. Around the room are ranged other figures in armour, interspersed with military trophies and emblems ; besides other mounted figures ; arms of different ages ; helmets, cuirasses, shields, &c. ; and on the ceiling are displayed obsolete arms and accoutrements in fanciful devices. The equestrian figures are of the time of

*Edward I.* (1272).—Suit of a hauberk, with sleeves and chausses, and a hood with camail ; square-topped shield ; prick-spurs ; surcoat and baudric, modern.

*Henry VI.* (1450).—Back and breast plates of flexible armour ; chain-mail sleeves and skirt ; fluted gauntlets ; helmet à la Cade, with a frontlet and surmounting crest ; the horse housing emblazoned with the arms of France and England ; fluted chauffron.

*Edward IV.* (1465).—Tournament suit, with tilting lance ; war-saddle, somewhat later ; horse housings, black, powdered with the king’s badges—the white rose and sun ; a spiked chauffron on horse’s head.

*Knight, temp.* Richard III. (1483-1485).—Ribbed German armour ; tilting apparel and original tilting lance : this suit was worn at the Eglington Tournament by the Marquis of Waterford.

*Knight, temp.* Henry VII. (1485-1509).—Fluted (German) suit ; burgonet helmet. Suit of fluted armour of the same reign ; ancient sword, battle-axe, and war-saddle ; horse armour fluted, and only wanting the flanchards.

*Henry VIII.* (1520).—Damasked armour actually worn by this king. Two suits of the same reign, worn by Charles Brandon, Duke of Suffolk, and Edward Clinton, Earl of Lincoln. In a recess is “one of the most curious suits of armour in the world,” of German workmanship, once gilt, and made to commemorate the marriage of Henry VIII. and Katherine of Arragon : it is most elaborately engraved with the rose and pomegranate, portucullis, fleurs-de-lis, and red dragon ; “H. K.,” united by a true-lover’s-knot ; saintly legends, mottoes, &c.

*Edward VI.* (1552).—Russet armour, covered with beautiful flagree-work ; burgonet helmet ; horse armour complete, embossed with the combined badges of Burgundy and Granada.

*Francis Hastings, Earl of Huntingdon* (1555).—Richly gilt suit, with indented slashes ; weight of body armour exceeds 100 lbs.

*Robert Dudley, Earl of Leicester* (1560).—Tilting suit actually worn by Leicester, *temp.* Elizabeth : it bears the initials “R. D.,” and the earl’s cognizance of the bear and ragged staff : this suit “was kept in the tilt-yard, where it was exhibited on particular days” (*Meyrick*).

*Sir Henry Lea* (1570).—Suit of plate.

*Robert Devereux, Earl of Essex* (1581).—Suit of armour, richly engraved and gilt ; burgonet helmet. This armour was worn by the King’s Champion at the coronation of George II.

*James I.* (1605).—Plain suit of tilting armour. Of the same period are the suits of cap-à-pie armour assigned to Sir Horace Vere, and Thomas Howard, Earl of Arundel.

*Henry Prince of Wales* (1612).—Richly-gilt suit made for the prince ; engraved with battles, sieges, &c.

*George Villiers, Duke of Buckingham* (1618).—Full suit of plate.

*Charles Prince of Wales* (1620).—Suit made for the prince when about twelve years old.

*Thomas Wentworth, Earl of Strafford* (1635).—Armour continued only to the knees.

*Charles I.* (1640).—Magnificent suit presented to Charles, when Prince of Wales, by the Armourers’ Company of the City of London : it is richly gilt and arabesqued ; face is carved by Gibbons. This suit was laid on the coffin of the great Duke of Marlborough, in his funeral procession.

*James II.* (1685).—Cuirass over a velvet coat ; casque and pierced visor : the head was carved by Gibbons, as a portrait of Charles II.

Here also are : a swordsman (*Henry VII.*). A man-at-arms and foot-soldier (*Henry VIII.*). “Armour cap-a-pe, rough from the hammer, said to be King Henry y<sup>e</sup> 8ths.” Suits belonging to the Princes Henry and Charles, sons of James I. Cavaliers and pikemen (*temp.* Charles I.). A fragment of “penny plate armour.” Magnificent suit of Italian armour, engraved and gilt. Cuirasses from Waterloo. Ancient suits of chain-mail. Halbards,\* shields, and helmets. “The Norman Crusader,” really an Asiatic suit of mixed chain and plate. Very curious helmets. Pieces of a

\* The halbard remained in use among our troops till within 60 years, and may still be seen as an official weapon in our courts of justice. The warders of the Tower are still armed with the partisan : it is still carried by the watchmen in Denmark.

puffed and engraved suit of armour (*temp.* Henry VIII.), extremely rare. Ancient German bone saddle, with Teutonic inscription. The "Anticke Headpiece with rames Hornes and speckakels on it of Will Somers," jester to Henry VIII. Specimens of hand firearms. Ancient warder's horn, of carved ivory. Chinese military dresses from Chusan. Helmet, belt, straight sword, and scimitars of Tippoo Saib. Concave rondelle with spiked boss, such as is seen in the picture of "Henry the Eighth's Embarkation at Dover," at Hampton Court.

Part of a horse armour of *cuir bouilli*, extremely rare and curious. On the columns are groups of arms now in use among continental powers; arms employed in England from the time of James II. to the present reign; and projects for the improvement of war implements.

Here are celts; ancient British axes, swords, and spears, of bronze (one axe found near Hastings, supposed *temp.* Harold); a British battle-axe found in the Thames in 1829; Roman spear-head; Saxon daggers and battle-axes.

At the top of the stairs are two rudely-carved wood figures, "Gin" and "Beer," from over the buttery of the old palace at Greenwich. A very curious Indian suit of armour, sent to Charles II. by the Great Mogul. Ten small cannon, presented by the brass-founders of London to Charles II. when a boy.

*Queen Elizabeth's Armoury*, cased with wood in the Norman style, is entered at the eastern side of the White Tower: the windows are filled with stained glass, in part ancient. Here is an equestrian figure of Elizabeth, in a *fac simile* of the robe worn by her on going to St. Paul's to return thanks. The weapons collected here were brought originally from "The Spanish Weapon House," and were long called "The Spanish Armoury," misinterpreted as the spoils of the Spanish Armada. These weapons were mostly used *temp.* Henry VIII. and Elizabeth. The collection of spears is interesting. Here is the Morning-star, or Holy-water (blood) Sprinkle, a spiked ball on a pole, used by infantry from the Conquest till *temp.* Henry VIII. The walls are hung with early shields. Two bows of yew, from the wreck of the *Mary Rose*, 1545; early kite shield; two cross-hilted swords, *temp.* Crusaders, authentic and rare. Thumb-screws, or thumbikins; the "Iron Coller of Torment, taken from y<sup>e</sup> Spanyard in y<sup>e</sup> yeare 1588;" the iron Cravat, "Scavenger's or Skeffington's Daughter." Ancient Cresset, with spear-head. Mace-cannon, carried at the saddle-bow. Long-pikes and boar-spears, in the Tower *temp.* Edward VI. Large pavoise, or archer's shield. "Great Holly-water Sprinkle, with three gones in the top." Spontoon of the guard of Henry VIII. Guisarmes and glaives, partisans, lances, pikes, and halberds. On the floor is the heading-axe with which the Earl of Essex was executed, *temp.* Elizabeth. Heading-block on which Lords Balmerino, Kilmarnock, and Lovat were decapitated on Tower-hill, in 1746. The money received for admission to the Armouries is expended in adding to the collection; thus, in 1853, a beautiful suit of Greek armour, found in a tomb at Cumæ, was purchased for 200*l.*: it is shown in the Horse Armoury.

Among the *Curiosities* mentioned by Hatton, 1708, is the sword which Lord Kingsale took from a French guard, for which he and his posterity have the favour of being covered in the king's presence. On the stairs is part of the keel of the *Royal George*, sunk in 1782.

In the *Ante-room* added to Queen Elizabeth's Armoury, fitted up in 1581, from the plan of Mr. Stacey, Ordnance Storekeeper, are a group of cannon from Waterloo, two kettle-drums from Blenheim; and specimens, ancient and modern, of every description of weapon now in the Tower. Here are also the sword and sash of Field Marshal the Duke of York; and General Wolfe's cloak, on which he died before Quebec. In the centre of the room is a beautifully ornamented bronze gun. Here are two large brass guns taken at Quebec by General Wolfe, a stand of cross-bows, and four figures in armour. In the western compartment are chiefly oriental arms and armour: suit of chain-mail (reputed Bajazet, 1401); Asiatic iron boot; Saracenic and Indian armour; memorials from Tippoo Saib's armour; collection of Chinese armour; brass gun taken from the Chinese in 1842, inscribed, "RICHARD: PHILLIPS: MADE: THIS: PECE: AN: DNI: 1601;" arms from Kaffraria; hempen armour from the South Seas; New Zealand implements, and chief's robe; rich Indian and Moorish arms and accoutre-

ments, from the Great Exhibition of 1851: and a cabinet of oriental armour, weapons, horse-furniture, &c., presented by the Hon. East India Company. Here is the large anchor taken at Camperdown by Admiral Duncan. In 1854 were added 2000 stands of arms from Bomarsund, the first spoils of the Russian war.

Outside the White Tower, on the south-east, are: an ancient gun for stone-shot; two brass guns, *temp.* Henry VII. and Henry VIII.; French, Spanish, and Chinese guns; guns from the wreck of the *Royal George*; and several mortars, including one of 18 inches, used at the siege of Namur by William III.

Mr. Hewitt's work, already mentioned, is by far the most accurate and illustrative Guide-book to the Tower Armouries.

THE REGALIA, OR CROWN JEWELS, have been exhibited to the public for a fee since the Restoration of Charles II. They had been previously kept sometimes in the Tower, in the Treasury of the Temple or other religious house, and in the Treasury at Westminster. The Royal Jewels were several times pledged to provide for the exigencies of our monarchs: by Henry III., Edward III., Henry V., Henry VI.; and Richard II. offered them to the merchants of London as a guarantee for a loan. The office of Keeper of the Regalia, conferred by the king's letters patent, became in the reigns of the Tudors a post of great emolument and dignity, and "the Master of the Jewel-house" took rank as the first Knight Bachelor of England: the office was sometime held by Cromwell, afterwards Earl of Essex. During the civil war under Charles I. the Regalia were sold and destroyed.\* On the Restoration of Charles II. new Regalia were made, for which was paid to the king's goldsmith, Sir Robert Vyner, 21,978*l.* 9*s.* 11*d.* (*Treasury Order*, 20th June, 1662.) The emoluments of the Master of the Jewel-house were now so reduced, that Sir Gilbert Talbot obtained permission to show the Regalia to strangers for a fee; which proved so profitable, that Sir Gilbert, upon the death of his servant who showed the jewels, was offered 500 gold broad-pieces for the place. In this reign, May 9, 1671, Colonel Blood made his daring attempt to carry off "the crown, globe, and sceptre." The Regalia were then kept in a strong vaulted chamber of the Martin Tower, and were shown behind strong iron bars: through these, in 1815, a woman forced her hands and tore the royal crown to pieces. The Regalia were next shown at one view by the light of six argand lamps, with powerful reflectors.

In 1842, a new Jewel-house was built in the late Tudor style, south of the Martin Tower: where the Regalia are shown upon a pyramidal stand, enclosed within plate-glass; and over the whole is an open iron frame, or cage, of Tudor design, surmounted by a regal crown of iron.

The *Regalia* are:—*St. Edward's Crown*, or the ancient Imperial Crown, made *temp.* Charles II., to replace that said to have been worn by Edward the Confessor: and with which the Sovereign is crowned at the altar. This is the crown which Blood stole: the arches, flowers, and fillets are covered with large multi-coloured jewels; and the purple velvet cap is faced with ermine.

Prof. Tennant, F.G.S., thus describes her Majesty's State Crown:—

"The Imperial State Crown of Her Majesty Queen Victoria was made by Messrs. Rundell and Bridge in the year 1838, with jewels taken from old Crowns, and others furnished by command of her Majesty. It consists of diamonds, pearls, rubies, sapphires, and emeralds, set in silver and gold; it has a crimson velvet cap, with ermine border, and is lined with white silk. Its gross weight is 39 oz. 5 dwts. Troy. The lower part of the band, above the ermine border, consists of a row of one hundred and twenty-nine pearls, and the upper part of the band a row of one hundred and twelve pearls, between which, in front of the Crown, is a large sapphire (partly drilled), purchased for the Crown by His Majesty King George the Fourth. At the back is a sapphire of smaller size, and six other sapphires (three on each side), between which are eight emeralds. Above and below the seven sapphires are fourteen diamonds, and around the eight emeralds one hundred and twenty-eight diamonds. Between the emeralds and sapphires are sixteen trefoil ornaments, containing one hundred and sixty diamonds. Above the band are eight sapphires surmounted by eight diamonds, between which are eight festoons consisting of one hundred and forty-eight diamonds. In the front of the Crown, and in the centre of a diamond Maltese cross, is the famous ruby said to have been given to Edward Prince of Wales, son of Edward III., called the Black Prince, by Don Pedro, King of Castile, after the battle of Najera, near Vittoria, A.D. 1367. This ruby was worn in the helmet of Henry V. at the battle of Agincourt, A.D. 1415. It is pierced quite through after the Eastern custom, the upper part of the piercing being filled up by a small ruby. Around this ruby, to form the cross, are seventy-five brilliant diamonds. Three other Maltese crosses, forming the two sides and back of the Crown, have emerald centres, and contain respectively one

\* The State Crown of Charles I., found in the upper Jewel-house, contained 7 lbs. 7 oz. of gold: in one of the *fleurs-de-lis* was "a picture of the Virgin Mary."

hundred and thirty-two, one hundred and twenty-four, and one hundred and thirty brilliant diamonds. Between the four Maltese crosses are four ornaments in the form of the French fleur-de-lis, with four rubies in the centres, and surrounded by rose diamonds, containing respectively eighty-five, eighty-six, eighty-six, and eighty-seven rose diamonds. From the Maltese crosses issue four imperial arches composed of oak leaves and acorns; the leaves containing seven hundred and twenty-eight rose, table, and brilliant diamonds; thirty-two pearls forming the acorns, set in cups containing fifty-four rose diamonds and one table diamond. The total number of diamonds in the arches and acorns is one hundred and eight brilliant, one hundred and sixteen table, and five hundred and fifty-nine rose diamonds. From the upper part of the arches are suspended four large pendant pear-shaped pearls, with rose diamond caps, containing twelve rose diamonds, and stems containing twenty-four very small rose diamonds. Above the arch stands the mound, containing in the lower hemisphere three hundred and four brilliants, and in the upper two hundred and forty-four brilliants; the zone and arc being composed of thirty-three rose diamonds. The cross on the summit has a rose-cut sapphire in the centre, surrounded by four large brilliants, and one hundred and eight smaller brilliants.—Summary of Jewels comprised in the Crown: 1 large ruby irregularly polished; 1 large broad-spread sapphire; 16 sapphires; 11 emeralds; 4 rubies; 1363 brilliant diamonds; 1273 rose diamonds; 147 table diamonds; 4 drop-shaped pearls; 273 pearls."

There are correct woodcuts of the crown, by S. Williams, in Britton's *Dictionary of Architecture*, and Sharp's *Peerage*. Haydon, in his *Autobiography* (1830), vol. ii. p. 236, has this odd entry as to the crown of George IV. :—

"The Crown at the Coronation was not bought, but borrowed. Rundell's price was 70,000*l.*; and Lord Liverpool told the King he could not sanction such an expenditure. Rundell charged 7000*l.* for the loan; and as some time elapsed before it was decided whether the crown should be bought or not, Rundell charged 3000*l.* or 4000*l.* more for the interval."

*The Prince of Wales's Crown*, of pure gold, plain, without jewels: it is placed upon a velvet cushion, in the House of Lords, before the seat of the Heir Apparent, when Her Majesty opens or prorogues Parliament; for which occasions it is conveyed with the imperial crown of the sovereign from the Tower, by the Keeper of the Jewel-office, attended by warders, in a coach.—*The Queen Consort's Crown*, of gold, set with diamonds, pearls, and other jewels; made for the queen of William III.—*The Queen's Diadem, or Circlet of Gold*, made for the coronation of Maria d'Este, consort of James II., at the cost of 111,000*l.* (*Sandford*): it is set with diamonds, and surmounted with a string of pearls.—*St. Edward's Staff*, of beaten gold, 4 feet 7 inches in length; surmounted by an orb and cross, and shod with a steel spike; the orb is said to contain a fragment of the true Cross. The staff weighs 9 lbs.—*The Royal Sceptre, or Sceptre with the Cross*, of gold: the pommel is set with rubies, emeralds, and diamonds; the *fleurs-de-lis* have been replaced by the rose, shamrock, and thistle, in gold; and the cross is covered with jewels, and has a large centre table-diamond.—*The Rod of Equity, or Sceptre with the Dove*, of gold, 3 feet 7 inches long, is set with diamonds, &c., and is surmounted with an orb, banded with rare diamonds, supporting a Jerusalem cross, on which is a gold dove with expanded wings.—*The Queen's Sceptre and Cross*, ornamented with large diamonds; made for the coronation of Mary, Queen of William III.—*The Queen's Ivory Sceptre*, made for Maria d'Este, mounted in gold, and bearing a golden cross, and a dove of white onyx: it is sometimes miscalled Queen Anne Boleyn's.—*An ancient Sceptre*, found behind the wainscoting of the old Jewel-office in 1814: it is set with jewels, and is supposed to have belonged to Mary, Queen of William III.—*The Orb*, of gold, 6 inches in diameter; the bands are set with precious stones and roses of diamonds, and edged with pearls; a very large amethyst supports the gold cross, set with diamonds, &c.—*The Queen's Orb*, resembling the former, but of smaller dimensions.—*The Sword of Mercy, or Curtana*, of steel, but pointless; ornamented with gold.—*The Swords of Justice, Ecclesiastical and Temporal*.—*The Armilla, or Coronation Bracelets*, of gold, chased with the rose, fleur-de-lis, and harp, and edged with pearls.—*The Royal Spurs*, of curiously wrought gold: they are used at the coronation of king or queen.—*The Ampulla*, of pure gold, in the form of an eagle; is used at coronations for the holy oil, which is poured from the beak into the *Gold Anointing Spoon*, supposed to be the only relic of the ancient Regalia; its date is about the 12th century. The Ampulla is said to have been brought from Sens Abbey, in France, by Thomas à Becket.—*The Gold Saltcellar of State*, set with jewels, and chased with grotesque figures, is in the form of a round castle, and has been miscalled "a Model of the White Tower:" it has a central turret, and four at the angles, the tops of which are removed for the salt; around the base are curious figures. It was presented to the crown by the City of Exeter, and was last used at the coronation banquet of George IV.—*The Baptismal*

*Font*, silver-gilt, elaborately chased, and formerly used at the christening of the Royal Family, but superseded by a new font of picturesque design. A large *Silver Wine Fountain*, presented by the Corporation of Plymouth to Charles II.; 12 *Golden Saltcellars*, chased; two massive gold "Coronation Tankards;" the Banqueting Dish, Gold Spoons, and other Coronation Plate. Also, a Service of Sacramental Plate, one dish bearing a fine *alto relievo* of the Last Supper; used at Coronations, and in the chapel of St. Peter in the Tower.

Admission daily (Sundays excepted), to the *Armouries*, 6d. each person; and to see the *Regalia*, 6d. each; in parties of twelve, conducted by a warder, every half-hour, from 12 to 4 o'clock inclusive.

### TOWER ROYAL,

A SHORT street or lane between St. Antholin's Church, Watling-street, and the south end of St. Thomas Apostle, was removed in 1853-4, in forming New Cannon-street West. It occupied the site of a building stated by Stow to have anciently belonged to the kings of England, as early as Stephen; but it was subsequently discastled, and held as a tenement by one Simon of Beauvais, surgeon to Edward I. Mr. Hudson Turner states it to be invariably called in early records *la Real*, *la Riote*, or *la Ryle* or *Ryole*, but not a tower; and he could not find it occupied by royalty until Edward III., in 1331, granted it to his queen Philippa as a depository for her wardrobe; by whom *la Real* was externally repaired, if not rebuilt. In 1370, Edward bestowed it upon the canons of St. Stephen's, Westminster; but it reverted to the Crown, and was called "the Queen's Wardrobe" in the reign of Richard II. It was a place of strength; and the king's mother fled here for shelter when Wat Tyler had seized the Tower of London. Leon III., King of Armenia, when driven from his kingdom by the Turks, was lodged and entertained in Tower Royal by Richard II., in 1386. It was granted by Richard III. to the first Duke of Norfolk of the Howard family, as entered in that king's ledger-book. In Stow's time, Tower Royal had become stabling for the king's horses, and was let in tenements: the whole was destroyed in the Great Fire of 1666. In removing the modern houses upon the site, in 1852, were found the remains of a Roman villa: the earth was interspersed with horns, bones, teeth of goats and oxen; tusks of boars; fragments of flanged tiles, scored flue-tiles, amphoræ, mortaria, urns, glass vessels, and Samian pottery. Some of these relics are engraved in the *Illustrated London News*, No. 554.

### TREASURY AND OTHER GOVERNMENT OFFICES.

ON the west side of Whitehall are the Government Offices: the ADMIRALTY (see p. 2); HORSE GUARDS (p. 434). In 1724, 600 planks of mahogany were brought from Jamaica for the inner doors and tables of the Admiralty; and, judging by the way in which the wood is mentioned in the public papers, it was evidently far from well known.

THE TREASURY occupies a portion of the site of Whitehall Palace. To make way for the north wing, the last portion of old York House was taken down in 1846: it had been refronted, but the Tudor doorway was ancient. The principal Treasury building, however, faces the parade-ground, St. James's Park: it was built by Kent, in 1733, and consists of three stories, Tuscan, Doric, and Ionic. The Whitehall front consists of the Treasury, Board of Trade, and Privy Council Offices; designed by Barry, R.A., in 1846-8, partly in place of Sir John Soane's façade (the centre and south wing), decorated with three-quarter columns from those of the Campo Vaccino at Rome. Soane's exterior, exposed to the criticism of every passenger, was much censured; "whilst the interior, in which the skill and taste of the architect are most manifest, and particularly the Council Chamber, is but little seen, and known only to a few persons." (*Britton*.) Barry's design consists of a long series of attached Corinthian columns on rusticated piers, and carrying a highly-enriched entablature and frieze; the attics have carved drops of fruit and flowers, and the balustrade carries urn-shaped vases: the

whole façade is 296 feet long. The Council Office occupies the site of the old Tennis-court of the Palace.—See the print (*temp.* Charles II.) in Pennant's *London*, 5th edit.

At the Cockpit died General Monk, Duke of Albemarle, 4th Jan. 1670; and in the same month his duchess, Nan Clarges. Queen Anne, when Princess of Denmark, fled down the back stairs, in 1688, to join her father's enemies, Lord Dorset and Bishop Compton riding on each side of the hackney-coach as an escort. Hatton, in 1708, describes the Treasury Office kept at the Cockpit, "where the Lord High Treasurer sits to receive petitions, and give orders, warrants, &c." Here, March 8, 1711, Guiscard attempted to stab with a penknife Harley, Earl of Oxford, but was struck down by the swords of Lord Paulet and Mr. St. John. The Cockpit itself occupied nearly the site of the present Board of Trade Office, and it existed early in the present century: the King's speech was read "at the Cockpit" on the day before it was delivered at the opening of the Session of Parliament; and the discontinuance of this practice was much complained of by the Opposition. The term "Given at the Cockpit at Westminster" was in use within the writer's recollection. The Lord High Treasurer formerly carried a staff of office (see the portrait of the great Lord Burghley); and he sat in a needlework chair, which is preserved at the Office of the Comptroller of the Exchequer, Whitehall-yard. "The sovereign occasionally presided at the Board of Treasury until the accession of George III.; and the royal throne still remains at the head of the table." (*Notes by F. S. Thomas*, Record Office.) The Board of Treasury has long ceased to manage the revenue. An interesting series of Treasury Minutes, from 1667 to 1834, is appended to the "Seventh Report of the Deputy-Keeper of the Public Records."

Some curious relics of the ancient Royal Treasury at Westminster are preserved. Among these are a *skippet*, or turned box, of the time of Edward III., and a smaller hamper, or *hanaper* of *twyggs*, of the succeeding reign. Both were used for the preservation of title-deeds of the Crown. The skippets were packed away in an outside chest, or *forcer*, a cist, or coffer, of all which specimens have been found in the Pyx Chamber, at Westminster; the storehouse of the Royal Treasury, from the period when the reigning Sovereign occupied the palace close at hand. The *forcer* is nearly round, made of stout leather, bound with small bars of iron; the cist is also iron-bound. The Royal plate and jewels were usually deposited in the former. In the reign of Edward I. the Treasury was plundered of these valuables, in addition to 100,000*l.*, upwards of 2,000,000*l.* of our present money.

Next is *Downing-street*, "between King-street E. and no thorrow fair West." (*Hatton*). It was named from Sir George Downing, Bart., a political "sider with all times and changes," who, after serving Cromwell, became Secretary to the Treasury under Charles II., 1667. At the Revolution, the property, then belonging to Lee, Lord Lichfield, was forfeited to the Crown. The largest house was, *temp.* George I., the office of the Hanoverian minister, Baron Bothmar, at whose death the mansion was given by the King to Sir Robert Walpole, who, in 1735, would only accept it for his office of First Lord of the Treasury, to which post he got it annexed for ever." (*Ædes Walpolianæ*.) It has accordingly since been the official residence of successive prime ministers: here Lady Hester Stanhope received Mr. Pitt's guests: but the rooms are ill adapted for State assemblies. The adjoining house was purchased within the present century, for the Foreign Office, Colonial Office, and Office of the Chancellor of the Exchequer. To this *cul-de-sac* a street of smaller houses was added: the south side was taken down in 1828: at the corner next King-street was the noted *Cat and Bagpipes*, used as a chop-house in early life by George Rose, subsequently Secretary of the Treasury, and the originator of Savings-banks.—See "The Last Days of Downing-street," in *Walks and Talks about London*, 1865.

In one of the above mansions, in 1763, died Aubrey de Vere, last Earl of Oxford. In the street lived, in 1723, John Boyle, Earl of Orrery, the friend of Swift, and contributor to *The World* and *Connoisseur*. Here resided Boswell, the biographer of Johnson; and Lord Sheffield, the friend of Gibbon, the historian. In the Colonial Office, No. 14 in the street, in a small waiting-room on the right hand as you entered, the Duke of Wellington—then Sir Arthur Wellesley—and Lord Nelson, both waiting to see the Secretary of State, met—the only time in their lives. The Duke knew Nelson from his pictures; Lord Nelson did not know the Duke, but was so struck with his conversation, that he stepped out of the room to inquire who he was. Mr. Cunningham relates this meeting, which has been painted and engraved.

The new Government Offices, commenced in 1863, are in course of erection, and are to include the Foreign Office, the India Office, the Colonial Office, and the Navy Office; the whole to form a large quadrangle, fronting St. James'-park, and Parliament-street. The architecture will be of Italianized character; the various

fronts will display a large amount of characteristic sculpture. The India Office was so far completed as to have been the site of a magnificent fête given to the Sultan of Turkey, in the summer of 1867.

### TRINITY HOUSE,

TRINITY-SQUARE, on the north side of Tower Hill, was built by Samuel Wyatt, 1793-5, for the ancient guild founded by Sir Thomas Spert, commander of the great ship *Harry Grace de Dieu*, and Comptroller of the Navy to King Henry VIII., and incorporated 1515. It was then a guild or fraternity of mariners of England for the encouragement of the science of Navigation; and was first empowered to build lighthouses and erect beacons by an Act passed in the reign of Queen Elizabeth. Before the charter of Henry VIII. the society was of a purely monastic character, and had been established for kindred but comparatively limited purposes. The office of the Master of the Corporation at various times has been held by princes and statesmen. From 1816, when Lord Liverpool occupied the office of Master, it was held in succession by the Marquis Camden, the Duke of Clarence, afterwards William IV.; Marquis Camden again, the Duke of Wellington, the Prince Consort, and Viscount Palmerston; the present Master, the Duke of Edinburgh—a period of half a century. The Corporation has in charge the lighthouses and sea-marks, and the licensing of pilots, tonnage, ballastage, beaconage, &c., producing about 300,000*l.* a year; the net revenue, about one-fourth, is principally expended in maintaining poor disabled seamen and their widows and orphans, by pensions, in the Corporation hospitals at Deptford-Strond; which the Master, Deputy-Master, and Brethren visit in their state-yacht, in grand procession, on Trinity Monday. A state banquet has been given annually since the Restoration, when there is a fine display of the ancient plate, some more than 250 years old. The Trinity House is of the Ionic order; upon its principal front are sculptured the arms of the Corporation, medallions of George III. and Queen Charlotte; genii with nautical instruments; the four principal lighthouses on the coast, &c. The interior has busts of Vincent, Nelson, Howe, and Duncan; W. Pitt and Capt. J. Cotton, by Chantrey; George III., by Turnerelli, &c. The Court-room is decorated with impersonations of the Thames, Medway, Severn, and Humber; and among the pictures is a large painting, 20 feet long, by Gainsborough, of the Elder Brethren of the Trinity House. In the Board-room are portraits of James I. and II., Elizabeth, Anne of Denmark, Earl Craven, Sir Francis Drake, Sir J. Leake, and General Monk; King William IV., the Prince Consort, and the Duke of Wellington, three of the past Masters; and George III., Queen Charlotte, and Queen Adelaide. The Museum is noticed at p. 605. The arms of the Corporation are, a cross between four ships under sail.

The present is the *third* House built for the Corporation: the first was destroyed in the Great Fire of 1666. Pepys records: "Sept. 4, I after supper walked in the dark down to Tower-street, and there saw it all on fire; at the Trinity House on that side, and the *Dolphin Tavern* on this side." The second House was erected in Water-lane in 1671, and is described by Hatton as "a stately building of brick and stone, and adorned with ten bustos."

### TYBURN AND "TYBURN TREE."

TYBURN was anciently a manor and village west of London, on the *Tybound* or brook, subsequently the *Westbound*, the western boundary of the district, now incorporated in the parish of Paddington. This stream (within memory a favourite resort of anglers) is shown descending from the high ground about Hampstead in the maps by Saxton, 1579; Speede, 1610; Seller, 1733; in Morden's and Seales's, and in Rocque's surveys. Upon its bank was the place of execution for criminals convicted in London and Middlesex as early as 1196, when William Fitzosbert, or Longbeard, was executed at Tyburn, as we learn from Roger de Wendover. In 1330, Roger de Mortimer was "drawn and hanged" at "the Elms," described by Holinshed as "now

Tiborne;" and Elms-lane, Bayswater, is pointed out to this day where the fatal elm grew, and the gentle Tiborne ran:

"Then fatal carts through Holborn seldom went,  
And Tyburn with few pilgrims was content."—Oldham's *Satire*, 1682.

Elms-lane is the first opening on the right hand after getting into the Uxbridge-road from the Grand-Junction-road, opposite the head of the Serpentine; the Serpentine itself being formed in the bed of the ancient stream, first called Tybourn, then Westbourn, then Ranelagh Sewer; while the stream which crossed Oxford-street, west of Stratford-place, first bore the name of Eyebourn, then Tybourn, then King's Scholars' Pond.—Robins's *Paddington*, 1853, p. 8.

The gallows, "Tyburn-tree," was a triangle upon three legs, and is so described in the 16th and 17th centuries. If Mr. Robins's location of the gibbet be correct, it was subsequently changed; for in the lease of the house No. 49, Connaught-square (granted by the Bishop of London), the gallows is stated to have stood upon that spot.

In 1811, Dr. Lewis, of Half Moon-street, Piccadilly, was about to erect some houses in Connaught-place (Nos. 6 to 12, I think), and during the excavation for foundations a quantity of human bones was found, with parts of wearing apparel attached thereto. A good many of the bones, say a cart-load, were taken away by order of Dr. Lewis, and buried in a pit dug for the purpose in Connaught-mews.—*Communication, by Mr. Charles Lane, to the Times*, May 16, 1860.

Smith (*Hist. St. Mary-le-Bone*) states the gallows to have been for many years a standing fixture on a small eminence at the corner of the Edgware-road, near the turnpike, on the identical spot where a tool-house was subsequently erected by the Uxbridge-road Trust. Beneath this place lie the bones of Bradshaw, Ireton, and other regicides, which were taken from their graves after the Restoration, and are stated to have been buried under the gallows.

On May 7, 1860, in the course of some excavation connected with the repair of a pipe in the roadway, close to the foot pavement along the garden of Arklow House, the residence of Mr. A. J. B. Beresford Hope, at the extreme south-west angle of the Edgware-road, the workmen came upon numerous human bones, obviously the remains of the unhappy persons buried under the gallows.—*Communicated by Mr. Hope to the Times*, May 9, 1860.

The gallows subsequently consisted of two uprights and a cross-beam, erected on the morning of execution across the roadway, opposite the house at the corner of Upper Bryanston-street and the Edgware-road, wherein the gibbet was deposited after being used; and this house had curious iron balconies to the windows of the first and second floors, where the sheriffs attended the executions. After the place of execution was changed to Newgate in 1783, the gallows was bought by a carpenter, and made into stands for beer-butts in the cellars of the *Carpenters' Arms* public-house, hard by. Formerly, when a person prosecuted for any offence, and the prisoner was executed at Tyburn, the prosecutor was presented with a ticket which exempted him from serving either on juries or any parochial business; by virtue of the Act 10 and 11 Will. III. This Act was repealed by 58 Geo. III. Mr. George Phillips, of Charlotte-street, Bloomsbury, was the last individual who received the Tyburn ticket, for a burglary committed by two housebreakers on his premises. In the autumn of 1856, however, Mr. Pratt, armourer, of Bond-street, claimed and obtained exemption from serving on an Old Bailey jury by reason of his possession of a Tyburn ticket; the judge probably not remembering the Act which repealed the privileges of the holders of Tyburn tickets.

Around the gibbet ("the fatal retreat for the unfortunate brave") were erected open galleries like a race-course stand, wherein seats were let to spectators at executions: the key of one of them was kept by Mammy Douglas, "the Tyburn pew-opener." In 1758, when Dr. Henesey was to have been executed for treason, the prices of seats rose to 2s. and 2s. 6d.; but the doctor being "most provokingly re-prieved," a riot ensued, and most of the seats were destroyed. The criminals were conveyed thither from Newgate:

"thief and parson in a Tyburn cart."—*Prologue by Dryden*, 1682.

The oldest existing representation of the Tyburn gallows is in a German print in the *Crowle Pennant*, in the British Museum; wherein Henrietta-Maria, queen of Charles I., is kneeling in penance beneath the triple tree: it is moonlight; the confessor is seated in the royal coach, drawn by six horses; and at the coach-door is a servant bearing a torch. The "pore queene," it is stated, walked afoot (some say

barefoot) from St. James's to Tyburn, to do homage to the saintship of some recently executed papists: but this is denied by the Marshal de Bassompierre; the above print is of later date than 1628, the year of the reputed pilgrimage, and its authenticity is disbelieved.

*Memorable Executions at Tyburn.*—1330 (4th Edw. III.), Roger de Mortimer, for treason; 1388 (12th Richard II.), Judge Tresilian and Sir N. Brembre, treason; 1499 (14th Hen. VII.), Perkin Warbeck was executed here for plotting his escape from the Tower; 1534 (24th Hen. VIII.), the Holy Maid of Kent and her confederates; 1535, the last Prior of the Carthusian Monastery (Charter House); 1595, Robert Southwell, Elizabethan sacred poet; 1615, Mrs. Turner, hanged in a yellow-starched ruff, for the poisoning of Sir Thomas Overbury; 1628, John Felton, assassin of Villiers, Duke of Buckingham; 1660-1 (Jan. 30), the first anniversary of the execution of Charles I. after the Restoration: the disinterred bodies of Oliver Cromwell, Ireton, and Bradshaw hung in their shrouds and cerecloths at each angle of Tyburn gallows till sunset, when they were taken down and beheaded, and the bodies buried under the gallows, the heads being set on Westminster Hall; 1660-62, five persons who had signed the death-warrant of Charles I.; 1684, Sir Thomas Armstrong (Rye House Plot); 1705, John Smith, a burglar, having hung above a quarter of an hour, when a reprieve arrived, he was cut down, and being let blood, came to himself (*Hatton*, 1708). 1724, Jack Sheppard, housebreaker; 1725, Jonathan Wild, thief and thief-taker; 1726, Catherine Hayes, for the murder of her husband: she was burnt alive, for the indignant mob would not suffer the hangman to strangle her, as usual, before the fire was kindled. 1760, Earl Ferrers, for the murder of his steward: he rode from the Tower, wearing his wedding-clothes, in his landau drawn by six horses; he was indulged with a silken rope, and "the drop" was first used instead of the cart; the executioners fought for the rope, and the mob tore the black cloth from the scaffold as relics; the landau stood in a coach-house at Acton until it fell to pieces; and the bill for the silken rope has been preserved. 1767, Mrs. Brownrigg, for murder; 1774, John Rann (Sixteen-Stringed Jack), highwayman; 1775, the two Perreaus, for forgery; 1777, Rev. Dr. Dodd, forgery; 1779, Rev. James Hackman, assassination of Miss Reay: he was taken from Newgate in a mourning-coach; 1783, Ryland, the engraver, for forgery; 1783, John Austin, the last person executed at Tyburn.

The road between St. Giles's Pound and Tyburn gallows was first called *Tyburn-road*, now *Oxford-street*; the lane leading from which to Piccadilly was called *Tyburn-lane*, now *Park-lane*. The original turnpike-gate stood close to St. Giles's Pound; then at Tyburn, removed in 1825; then at Winchester-row; next at Pine-apple-place; and next at Kilburn. Strange have been the mutations in which the rural Tybourn "welled forth away" through pleasant fields to the Town, there became linked with the crimes of centuries, and lost in a murky sewer; but left its name to *Tyburnia*, the newly-built city of palaces north-west of Hyde Park. (*See PADDINGTON*, p. 563.)

In 1785, William Capon made a sketch of Tyburn gallows; and at the foot of a drawing made by him from this sketch, in 1818, are the following notes:

"View looking across Hyde Park, taken from a one-pair-of-stairs window at the last house at the end of Upper Seymour-street, Edgware-road, facing where Tyburn formerly was. The eastern end of Connaught-place is now built on the very plot of ground, then occupied by a cow-lair, and dust and cinder heaps. The shadow on the right of the Edgware-road is produced by one of the three galleries which were then standing, from which people used to see criminals executed. They were standing in 1785, at which time the original sketch was made from which the picture is done."

A portion of Tyburn gate exists:

"The arch and door, forming the centre portion of the gate, which was removed about 1825, with the old clock, are still standing at the entrance to a wooden cowshed, on the premises of Mr. Baker, a farmer at Cricklewood, who bought them at the time when the gate was taken down."—*Curiosities of Clocks and Watches*, p. 163. 1866.

### UNIVERSITY OF LONDON, THE,

SOMERSET HOUSE, was instituted Nov. 28, 1836, for "rendering academical honours accessible, without distinction, to every class and every denomination." The University consists of a chancellor, vice-chancellor, and senate; and graduates. It is solely an examining body, and confers degrees on the graduates of University College and King's College, London; and the colleges not belonging to the other universities; besides all the medical schools in the empire, and most of the colleges of the Roman Catholics, Baptists, Independents, and Wesleyans. The degrees are conferred, and the honours bestowed, in public; and the senate first met for this purpose on May 1, 1850, in the large hall of King's College, Somerset House; the Earl of Burlington, Chancellor of the University, presiding. A new edifice was, in 1867, commenced building for the University in the rear of Burlington House.

## VAUXHALL GARDENS,

FOR nearly two centuries a place of public amusement, was named from its site in the manor of "La Sale Faukes," mentioned in the charter of Isabella de Fortibus, Countess of Aunale and Devon, and Lady of the Isle of Wight, dated in 1293, by which she sold her possessions to King Edward I. In the *Testa de Nevill* we read, under Surrey: "Baldwin, son and heir of the Earl of the Isle, is in the custody of Fulke de Breauté; he should be in the ward of the lord the king; also his lands in the hundred of Brixton, and they are worth 18*l.* per annum." Fulke de Breauté, the celebrated mercenary follower of King John, married Margaret, Earl Baldwin's mother, and thus obtained the wardship of her son. He appears to have built a hall, or mansion-house, in the manor of South Lambeth, during his tenure of it; and from this time it was called indifferently Faukeshall, or South Lambeth, and is so termed in the tenth year of Edward I. The capital message, with its garden, named "Faukeshall," was valued in the twentieth of the same reign at 2*s.* yearly. We have therefore satisfactory evidence that Vauxhall owes its origin and name to an obscure Norman adventurer, who became suddenly rich during the turbulent reign of John, and was ignominiously driven from the country in the minority of Henry III. (*Archæological Journal*, vol. iv.) The land on which Fulke erected his hall now belongs to Canterbury Cathedral. The manor of Fulkeshall fell, by attainder, to the Crown. It was successively held by the Despencers and the Damories; but the latter exchanged it with Edward III. for an estate in Suffolk; and the manor was conferred on Edward the Black Prince, who piously left it to the Church of Canterbury; and the bequest was spared by Henry VIII. to the Dean and Chapter.

The old manor-house had its name of Faukeshall changed to Copped, or Copt, Hall. Here Lady Arabella Stuart was held captive, under the guardianship of Sir Thomas Barry. The tradition that it ever belonged to Guido or Guy Fawkes only rests upon the coincidence of names. The estate in the manors of Lambeth and Kennington belonged to a family named Faucke, or Vaux, in the reigns of Elizabeth and James I.; and, in 1615, Jane Vaux, widow, held property of that description here, and the mansion-house connected with it. Mr. Nichols, in his *History of Lambeth Parish*, mistakenly affirms that Guy Vaux had a mansion here, and that it was named from him Vauxhall: he then conjectures that Jane Vaux was the relic of the infamous Guy, who was executed the 31st of January, 1606; but, as Mr. Bray, who was a lawyer as well as the county historian, remarks, Guy Vaux could not have been the owner of the copyhold belonging to Jane Vaux in 1615; for if she had been his widow, it would have been forfeited as the estate of a traitor. Besides, his father's name was Fawkes, and had long spent his estate; and Jane was the widow of a much better man—John Vaux, an honest vintner of London, who bequeathed property for the erection of seven almshouses in this parish. Nevertheless, the house in which the conspirators stored their powder and other combustibles, during the digging of the mine, was certainly at Lambeth, and near the river-side; but that house did not belong to any one of them, it being merely hired for the purpose in the summer of 1604. Neither history nor tradition has recorded the exact site of the conspirators' storehouse; but we have the following evidence of its destruction by fire. In an anniversary sermon, preached at Lambeth Church by Dr. Featley, on November 5, 1635, is this passage:—"You have heard the miracles of God's providence in the discovery of this powder-plot: behold now the mirrour of His justice. The first contriver of the fire-works first feelth the flame; his powder-sin upbraids him, and feeth in his face." It is added, in a note:—"This last year, the House where Catesby plotted this treason in Lambeth was casually burnt downe to the ground by powder."—Featley's *Clavis Mystica*, p. 824; 1636.

*Vauxhall Gardens* were first laid out about 1661. Evelyn records: "2 July, 1661, I went to see the *New Spring Gardens*\* at Lambeth, a pretty contrived plantation;" and Balthasar Monconys, early in the reign of Charles II., describes the gardens well frequented in 1663.

Sir Samuel Morland "built a fine room at *Vaux-hall* anno 1667, the inside all of looking-glass, and fountains very satiate to behold, which is much visited by strangers; it stands in the middle of the Garden." (Mr. Bray thought this room to have been erected by Morland for the entertainment of Charles II. when he visited this place with his ladies.) "Without the *New Spring Garden* is the remainder of a kind of horn-work, belonging to the lines of communication made about 1643-4." (*Aubrey's Surrey*, vol. i. pp. 12, 13.)

Morland's room is believed to have stood where the orchestra was afterwards built; and in 1794 a leaden pump was removed bearing Sir Samuel's mark as annexed:

I S 6
9 M 4

A large mound of earth, said to have been thrown up for defence, remained to our time near the firework-shed. North of the Gardens is believed to have stood a Roman

\* To distinguish it from Spring Garden, Charing Cross.

fort or camp; and Roman pottery has been found here. Canute's Trench has been traced through the Gardens to its influx into the Thames (*Maitland*).

In a plan dated 1681 the place is named Spring Garden, and "marked as planted with trees and laid out in walks." Pepys's *Diary* has entries in 1665-8 of his visits to *Fox-hall* and the Spring Garden; and of "the humours of the citizens, pulling off cherries, and God knows what;" "to hear the nightingale and the birds, and here fiddlers, and there a harp, and here a Jew's trumpet; and here laughing, and there fine people walking, is mighty diverting." Pepys also tells of "supper in an arbour," ladies walking "with their masks on," &c.; and—

"July 27, 1668. So over the water, with my wife and Deb, and Mercer, to Spring Garden, and there eat and walked; and observed how rude some of the young gallants of the town are become, to go into people's arbours where there are not men, and almost force the women, which troubled me to see the confidence of the vice of the age; and so we away by water with much pleasure home."

Tom Brown, a dozen years later, speaks of the close walks and little wildernesses, which "are so intricate that the most experienced mothers have often lost themselves in looking for their daughters."

Wycherley refers to a cheesecake and a syllabub at New Spring Garden. And in the *Spectator*, No. 383 (May 20, 1712), Addison describes his going with Sir Roger de Coverley on the water from the Temple Stairs to Spring Garden, "which is exquisitely pleasant at this time of year:" a mask tapped Sir Roger upon the shoulder and invited him to drink a bottle of mead with her. The usual supper of that period was "a glass of Burton ale, and a slice of hung beef." Cheesecakes and syllabubs were the earlier fare in Wycherley's day; and punch and ham were not yet heard of.

In 1728, Spring Gardens were leased by Elizabeth Masters, for 30 years, to Jonathan Tyers, of Denbies, Surrey, at the yearly rent of 250*l.* Tyers's lease enumerates the Dark Room, Ham Room, Milk-house, Pantry-room; and among the arbours, covered and paved with tiles, are the names of Checker, King's Head, Dragon, Oak, Royal Arbour, York, Queen's Head, Royal George, Ship, Globe, Phoenix, Swan, Eagle, and the Barge. The hatch at the Water-gate was of Tyers's time.

The Gardens were opened by Tyers, June 7, 1732, with a *Ridotto al fresco*. Frederick, Prince of Wales, was present, and the company wore masks, dominoes, and lawyers' gowns. The admission was one guinea: 400 persons were present; and there were 100 Foot-Guards posted round the Gardens to keep order. The admission-ticket was designed by the younger Laguerre.

The author of *A Touch at the Times, or a Trip to Vauxhall, 1737*, sings—

"Sail'd triumphant on the liquid way,  
To hear the fiddlers of Spring Garden play."

Tyers set up an organ in the orchestra; and in the Garden, in 1738, a fine statue of Handel, as Orpheus playing a lyre, by Roubiliac, his first work in England.\* Here was also a statue of Milton, by Roubiliac, cast in lead, and painted stone-colour. The season of 1739 was for three months, and the admission only by silver tickets, at 2*s.* each, to admit two persons. These silver tickets were struck after designs by Hogarth: the obverse bore the number, name of the holder, and date; and the reverse a figure of Euterpe, Erato, or Thalia.

Hogarth, who was then lodging in Lambeth-terrace,† suggested to Tyers the embellishment of the Gardens with paintings; in acknowledgment of which Tyers presented Hogarth with a *Gold Ticket* of perpetual admission: it bears on its obverse, "Hogarth," and beneath it, "*In perpetuam beneficium memoriam*;" on the reverse are two figures surrounded with the motto, "*Virtus voluptas felices una*." This ticket (for the admission of six persons or "one coach") was last used in the season of 1836; it was purchased for 20*l.* by Mr. Frederick Gye. Hogarth designed for the pavilions in the Gardens the Four Parts of the Day, which Hayman copied; besides other pictures. In 1745, Tyers added vocal to his instrumental music, and Dr. Arne composed ballads, duets, &c.; Mrs. Arne, Lowe, Beard, and the elder Reinhold, were singers.

\* This statue was sold, in 1854, to the Sacred Harmonic Society for 200*l.*, and is now in their committee-room at Exeter Hall, Strand.

† The house which Hogarth occupied is still shown; and a vine is pointed out which he planted.—Allan Cunningham, *Lives of British Painters, &c.*, 1829.

Horace Walpole, in June, 1750, went with a large party to the Gardens; and their visit is admirably described in one of Walpole's *Letters*.

Fielding, in his *Amelia*, 1751, describes the Vauxhall of that date: "the coaches being come to the water-side, they all alighted, and getting into one boat, proceeded to Vauxhall. The extreme beauty and elegance of the place is well known to almost every one of my readers; and happy is it for me that it is so, since to give an adequate idea of it would exceed my power of description."

In England's *Gazetteer*, 1751, the entertainments are described as "the sweet song of numbers of nightingales, in concert with the best band of musick in England. Here are fine pavilions, shady groves, and most delightful walks illuminated with above 1000 lamps."

In 1751, the walks are described as illuminated with above 1000 lamps; but the print of this date shows glass vase-shaped lamps on posts, and suspended in the music-house, though in no great profusion. The walks are wide and open; the straggling groups of company are in happy ease: the ladies in their hoops, sacques, and caps, as they appeared in their own drawing-rooms; and the gentlemen in their grotesque hats, and wearing swords and bags.

"At Vauxhall the artificial ruins are repaired: the cascade is made to spout with several additional streams of block-tin; and they have touched up all the pictures which were damaged last season by the fingering of those curious connoisseurs who could not be satisfied without feeling whether the figures were alive."—*Connoisseur*, May 15, 1755.

Then follows the story of a parsimonious old citizen going there with his wife and daughters, and grumbling at the dearness of the provisions and the wafer-like thinness of the slices of ham. At every mouthful the old fellow exclaims: "There goes twopence! there goes threepence! there goes a groat!" Then there is the old joke of the wafery slices of ham, and the expert carver who undertook to cover the Gardens—eleven acres—with slices from one ham!

It is curious to find Sir John Fielding commending the Garden of 1757 for "its elegant eatables and drinkables, in which particular Vauxhall differs widely from the prudent and abstemious Ranelagh, where one is confined to tea and coffee."

In 1752, Tyers purchased a moiety of the estate for 3800*l.*; and a few years afterwards, as Lysons informs us from the records in the Duchy of Cornwall Office, "he bought the remainder,"—probably at the expiration of his original lease, in 1758.

Goldsmith thus describes the Vauxhall of about 1760:—

"The lights everywhere glimmering through scarcely moving trees; the full-bodied concert bursting on the stillness of night; the natural concert of the birds in the more retired part of the grove, vying with that which was formed by art; the company gaily dressed, looking satisfied; and the tables spread with various delicacies,—all conspired to fill my imagination with the visionary happiness of the Arabian lawgiver, and lifted me into an ecstasy of admiration. 'Head of Confucius,' cried I to my friend, 'this is fine! This unites rural beauty with courtly magnificence.'"—(*Citizen of the World*, Letter lxxi.) "The last gay picture in Goldsmith's life is of himself and Sir Joshua (Reynolds) at Vauxhall. And not the least memorable figures in that sauntering crowd,—though it numbered princes and ambassadors then; and on its tide and torrent of fashion floated all the beauty of the time: and through its lighted avenues of trees glided cabinet ministers and their daughters, royal dukes and their wives, agreeable Young ladies and gentlemen of eighty-two,' and all the red-heeled macaronies,—were those of the President and the Ancient History Professor of the Royal Academy."—*Forster's Goldsmith*, p. 676.

Miss Burney also lays scenes of her *Evelina* and *Cecilia* in Vauxhall Gardens. Tyers subsequently bought the property: he died in 1767: "so great was the delight he took in this place, that, possessing his faculties to the last, he caused himself to be carried into the Gardens a few hours before his death, to take a last look at them." They were called Spring Garden until 1785; and the licence, every season, was to the last obtained for "Spring Garden, Vauxhall." The property remained with Tyers's family until it was sold in 1822, for 28,000*l.*, to Bish, Gye, and Hughes (the London Wine Company), who retained it till 1840. Their most profitable season was in 1823; 133,279 visitors, 29,590*l.* receipts: the greatest number of persons in one night was Aug. 2, 1833, the second night of the revival of the shilling admission, when 20,137 persons paid for admission. In 1827, Charles Farley, of Covent-garden Theatre, produced in the gardens a representation of the Battle of Waterloo, with set-scenes of La Belle Alliance and the wood and château of Hougomont; also horse and foot soldiers, artillery, ammunition-waggons, &c. In July, 1841, the estate (about eleven acres), with its buildings, timber, covered walks, &c., was offered for sale by

auction, but bought in at 20,200*l.* The Gardens were open from 1732 to 1840 without intermission; in the latter year they were closed, but were re-opened in 1841. At the close of this season there was a sale of moveable property, when twenty-four pictures by Hogarth and Hayman produced small sums; they had mostly been upon the premises since 1742; the canvas was nailed to boards, and much obscured by dirt.

Among these pictures were:—By Hogarth: Drunken Man, 4*l.* 4*s.*; a Woman pulling out an Old Man's Grey Hairs, 3*l.* 3*s.*; Jobson and Nell in the *Devil to Pay*, 4*l.* 4*s.*; the Happy Family, 3*l.* 15*s.*; Children at Play, 4*l.* 11*s.* 6*d.* By Hayman: Children Birds'-nesting, 5*l.* 10*s.*; Minstrels, 3*l.*; the Enraged Husband, 4*l.* 4*s.*; the Bridal Day, 6*l.* 6*s.*; Blindman's Buff, 3*l.* 8*s.*; Prince Henry and Falstaff, 7*l.*; Scene from the *Rake's Progress*, 9*l.* 15*s.*; Merry-making, 1*l.* 12*s.*; the Jealous Husband, 4*l.*; Card-party, 6*l.*; Children's Party, 4*l.* 15*s.*; Battledore and Shuttlecock, 1*l.* 10*s.*; the Doctor, 4*l.* 14*s.* 6*d.*; Cherry-bob, 2*l.* 15*s.*; the Storming of Seringapatam, 8*l.* 10*s.*; Neptune and Britannia, 8*l.* 15*s.* Four busts of Simpson, the celebrated Master of the Ceremonies, were sold for 10*s.*; and a bust of his royal shipmate, William IV., 19*s.*

The Gardens were finally closed July 25, 1859; and in the following month were sold the theatre, orchestra, dancing-platform, firework-gallery, fountains, statues, vases, paintings, &c., which brought small sums. The most attractive lot was the Gothic orchestra, built by a carpenter named Maidman, and which, in 1738, had replaced Tyers's music-house. This Gothic orchestra produced 99*l.*

The price of admission to the Gardens was 1*s.* until 1792, except on particular nights, as on the celebration of the fiftieth anniversary, when it was 10*s.* 6*d.* After 1792 the admission was raised to 2*s.*, including tea and coffee; in 1809 to 3*s.* 6*d.*; in 1850 reduced to 1*s.*; and since various. At the Vittoria Fête, July 1814 (admission one guinea), 1350 visitors dined in the rotunda, the Duke of York presiding; there were also present the Dukes of Clarence, Kent, Sussex, and Gloucester; the Princess of Wales, and the Duchess of York. The fireworks were by Colonel Congreve.

The Gardens are well described in the *Ambulator*, 12th edition, 1820; where the paintings in the supper-pavilions, by Hogarth and Hayman, are enumerated. Very little alteration was made in the arrangement of the walks or the position of the buildings since they were originally laid out or constructed by the elder Tyers, as may be seen by comparing the different views of the Gardens. One of the earliest representations, dated 1737, shows the seats and supper tables in the quadrangle surrounding the orchestra, together with a perspective of the Long Walk, and an Herculean statue at its extremity.

The general plan of the Gardens was a quadrangular grove, with the orchestra near its centre, surrounded by broad covered walks, from the roofing of which were suspended, by wires, illumination "bucket-lamps;" the earlier lamps resembled the street-lamps of the last century. At the head of the quadrangle was the Prince's Pavilion, originally built for the accommodation of Frederick Prince of Wales. To the right and left of the grove were semicircular sweeps of supper-boxes. The rotunda, seventy feet in diameter, had part of its area enclosed as a ride for equestrian performances. At some distance northward of the quadrangle was the theatre, where for many years were exhibited a mechanical cascade, water-mill, and moving figures; but latterly this theatre had been used for ballets and dramatic pieces. The number of lamps upon extra gala-nights exceeded 20,000. The fireworks were discharged from a lofty tower, at the end of a long walk; whence Madame Saqui descended along a rope several hundred feet in length in a shower of fire, or Il Diavolo Antonio swung by one foot on the slack-rope, playing a silver trumpet as he swung.

\*See! the large, silent, pale blue-light  
Flares, to lead all to where the bright,  
Loud rockets rush on high,  
Like a long comet roaring through  
The night, then melting into blue,  
And starring the dark sky;  
And Catherine-wheels, and crowns, and names  
Of great men, whizzing in blue flames;  
Lights, like the smiles of hope;  
And radiant, fiery palaces,  
Showing the tops of all the trees;  
And Blackmore on the rope.\*

*London Magazine*, 1824.

Balloons were celebrated exhibitions of late. The first ascent was made from the Gardens in 1802. Green made several ascents from here, the most memorable of which was his voyage from Vauxhall to Weilburg, in the Duchy of Nassau, in 1836, in the stupendous balloon constructed in the Gardens, at the cost of 2100*l.*; height, 80 feet; circumference, 157 feet. This balloon was subsequently sold to Green for 500*l.*

*Music*.—Among the Vauxhall composers were Arne, Boyce, Carter, Mountain, Signor Storace, and Hook (organist upwards of 40 years, father of Theodore Hook, and uncle of Dr. Hook, Dean of Chichester). Male singers: Beard, Lowe, Webb, Dignum, Vernon, Inledon, Braham, Pyne, Sinclair, Tinney, Robinson, Bedford, and Sharp. Females: Miss Brent, Mrs. Wrighten, Mrs. Weischel (mother of Mrs.

Billington), Mrs. Mountain, Signora Storace, Mrs. Crouch, Mrs. Bland, Miss Tryrer (afterwards Mrs. Liston), Miss Graddon, Miss Love, Miss Tunstall, &c. Italian operas were performed here in 1829. The band were the last to wear the semicircular or cocked hat.

*Fireworks* were first occasionally exhibited at Vauxhall in 1798. The late Mr. John Fillinham, of Walworth, possessed a large collection of Vauxhall bills of entertainment, engravings, and other interesting records of the Gardens.

The site was cleared, and a church, dedicated to St. Peter, was built upon a portion of the ground; this church being memorable as the first example in London, in the present revival, of a church vaulted throughout. Here, too, have been erected a School of Art; and roads, called Auckland-street, Burnett-street, Brunel-street, Leopold-street, Gye-street, and Italian-walk."—*See Walks and Talks about London*, 1865.

### WALBROOK,

**A** NARROW street named from the stream or brook which, rising on the north of Moorfields, entered the City *through the walls*, between Bishopsgate and Moorgate, and proceeded nearly along the line of the new street of that name; thence, according to Stow, across Lothbury, beneath the kitchen of Grocers' Hall and St. Mildred's Church, through Bucklersbury, past the sign of the "Old Barge" (from Thames barges being rowed up there); and thence through the present Walbrook-street, under which it still runs as a sewer, and discharges itself, by a part of Elbow-lane, down Greenwich-lane, into the Thames at Dowgate. The Walbrook was crossed by a bridge connecting Budge-row and Cannon-street, and several other bridges, but was vaulted over with brick, and its banks built upon, long since: so that in Stow's time the course of Walbrook was "hidden under ground, and thereby hardly known." The brook was navigable not merely to Bucklersbury but as far as Coleman-street, where a Roman boat-hook has been found; and with it was found a coin of Alectus, who ruled in Britain towards the close of the third century. In forming Prince's-street, the workmen came upon the course of the brook, which the Romans had embanked with wooden piles; and the bed was thickly strewn with coins, brass scales, styli, knives, tools, pottery, &c. In Walbrook was one of the three taverns in London licensed to sell sweet wines in the reign of Edward III. Walbrook gives name to the ward: at its north-east corner is *St. Stephen's Church*, described at p. 204. Lower down, upon the brook, at Dowgate-hill, was the church of Allhallows the Less, destroyed in the Great Fire, and not rebuilt; but its burial-ground, with a solitary altar-tomb, remains. Nearly opposite London Stone, in June, 1852, was unearthed part of the cloister of the church of St. Mary Bothaw, which stood near Walbrook bank at Dowgate, and was named Boat-haw from being near a yard where boat-building was carried on: in the church was interred Fitzalwin, first Mayor of London. The writer of a quarto *History of London*, 1805, states that, in 1803, he saw the Walbrook "still trickling among the foundations of the new buildings at the Bank."

### WAPPING,

**A** HAMLET of Stepney, is now a long street extending from Lower East Smithfield, on the north bank of the Thames, to New Crane. It was commenced building in 1571, to secure the manor from the encroachments of the river, which made the whole site a great wash; the Commissioners of Sewers rightly thinking that "the tenants would not fail being attentive to their lives and property." Stow calls it "Wapping in the Wose," or Wash.

Here was *Execution Dock*, "the usual place for hanging of pirates and sea-rovers, at the low-water mark, and there to remain till three tides had overflowed them; but since the gallows being after removed farther off, a continual street or filthy strait passage, with alleys of small tenements or cottages built, inhabited by sailors' victuallers, along by the river of Thames almost to Radeliffe, a good mile from the Tower."—*Stow*.

Pennant notes: "Execution Dock still remains at Wapping, and is in use as often as a melancholy occasion requires. The criminals are to this day executed on a temporary gallows placed at low-water mark; but the custom of leaving the body to be overflowed by the sea tides has long been omitted."—*London*, 5th edit.

In 1703 a destructive fire took place at Execution Dock, by which the sufferers, mostly seamen, sea-artificers, and poor seamen's widows, lost 13,040*l.* And in 1794, a great fire occurred at Wapping, burning 630 houses, and an East India warehouse containing 35,000 bags of saltpetre—the loss was 1,000,000*l.*

To Wapping, in 1688, Lord Chancellor Jeffreys fled in the disguise of a coal-porter, and was captured in the *Red Cow* ale-house, in Anchor and Hope-alley, near King Edward's Stairs. He was identified by a scrivener he had formerly insulted, lolling out of window in all the confidence of misplaced security. (*Cunningham.*) But at Leather-head, where Jeffreys had a mansion, it is traditionally asserted that he was betrayed by the butler who accompanied him in his flight, for the sake of the reward.

Joseph Ames, F.R.S., author of the *Typographical Antiquities*, and Secretary to the Society of Antiquaries, was a ship-chandler at Wapping, where he died in 1758: "he was a person of vast application and industry in collecting old printed books, prints, and other curiosities, both natural and artificial." (*Cole.*) John Day, with whom originated "Fairlop Fair," in Hainault Forest, was a block and a pump maker at Wapping. Here the first Fuchsia brought to England from the West Indies, being seen by Mr. Lee, the nurseryman, became, in the next flowering season, the parent of 300 fuchsia-plants, which Lee sold at one guinea each.

Wapping is noted, as in Stow's time, for its nautical signs, its ship and boat builders, rope-makers, biscuit-bakers and provision-dealers; mast, oar, and block makers; ship-chandlers and sail-makers: and the name *Wapping* was probably derived from the ship's rope called a *wapp*; or from *wapin-schaw*, a periodical exhibition of arms, which may formerly have been held upon this open ground. In the list of subscribers to Wren's *Parentalia*, 1750, is "The Mathematical Society of Wapping;" and nautical instrument makers are said to have abounded here.

Among the thirty-six taverns and public-houses in Wapping High-street and Wapping Wall, we find the signs of the Ship and Pilot, Ship and Star, Ship and Punch-bowl, Union Flag and Punch-bowl, the Gun, North American Sailor, Golden Anchor, Anchor and Hope, the Ship, Town of Ramsgate, Queen's Landing, Ship and Whale, the Three Mariners, and the Prospect of Whitby.

Between Nos. 288 and 304 are "Wapping Old Stairs," in Wapping-street, on the western side of the church; but the wood-built wharf and house fronts towards the river are fast disappearing.

Strype relates that "on Friday, the 24th of July, 1629, King Charles having hunted a stag or hart from Wanstead, in Essex, killed him in Nightingale-lane, in the hamlet of Wapping, in a garden belonging to one —, who had some damage among his herbs, by reason of the multitude of people there assembled suddenly."

The village of Radcliffe, to which Wapping joins, is of some antiquity. From hence the gallant Sir Hugh Willoughby, on May the 20th, 1553, took his departure on his fatal voyage for discovering the north-east passage to China. He sailed with great pomp by Greenwich, where the Court then lay. Mutual honours were paid on both sides. The council and courtiers appeared at the windows, the people covered the shores. The young King alone lost the noble and novel sight; for he then lay on his death-bed; so that the principal object of the parade was disappointed.—*Hakluyt*, i. 239. Pennant's *London*, 5th edit.

#### WATLING-STREET,

COMMENCING at the north-east corner of St. Paul's-churchyard, and formerly extending through Budge-row and Cannon-street, is considered to have been the principal street of Roman London, and "one of the four grand Roman ways in Britain;"\* as well as a British road before the arrival of the Romans: "with the Britons it was a forest-lane or trackway; with the Romans it became a stratum, street, or

\* The Watling-street Thistle (*Eryngium campestre*) is named from this ancient road being its only known habitat in England.—Baker's *Northamptonshire Glossary*, ii. 386. Watling-street, part of which remains, is one of the narrowest and most inconvenient streets in the metropolis:

"Who would of Watling-street the dangers share,  
When the broad pavement of Cheapside is near?"

—Gay's *Trivia*.

raised road, constructed according to their well-known manner." (A. J. Kempe, *Archæologia*, xxvi. 467.) This is corroborated by the discovery of British remains on the line, in Cannon-street. The Romans made it part of their grand route from the point of their invasion, through a portion of Kent and the north-eastern corner of Surrey, and thence from Stoney-street over the Thames to Dowgate, north of the river, by the present Watling-street, to Aldersgate; where, quitting the City, it ran along Goswell-street to the west of Islington, through Hagbush-lane (the road in part remains), to Verulamium, or St. Albans. Dr. Stukeley, however, maintains that the old Watling-street did not enter London, but, in its course from Verulam, crossed the Oxford-road at Tyburn, and thence ran over part of Hyde Park, and by May Fair through St. James's Park, to the Wool-staple at Westminster, and crossed the Thames by Stanogate-ferry, through St. George's Fields, and south of the Lock Hospital; Kent-street, to Deptford and Blackheath. Stukeley adds: "as London increased, passengers went through the City by Cannon-street, Watling-street, and Holborn, this being a vicinal branch of Watling-street." Wren, however, considers it to have been the centre or Prætorian way of the old Roman station; the principal gate being at Eastcheap. In 1853, in excavating Budge-row, there was discovered a fragment of Roman wall.

In a folio Map of Middlesex, by Bowen, 1709, a Roman road appears from the corner of the Tottenham-court-road, where the Hampstead-road and the Euston-road now meet, running through what must now be the Regent's Park, until it reaches Edgware, and thence to Brockley Hills, called Sulloniæ, an ancient city in Antonine's *Itinerary*. In this Map, or in another with the same route, Watling-street is printed upon the highway that leads to Tyburn Turnpike, in a manner to show the whole of that distance is meant. The Roman road from Tottenham Court, after making its appearance in a variety of other maps, up to a certain date, about 1780, is nowhere to be found since in any of the Middlesex Maps. It is, however, certain that the part of Watling-street crossing Oxford-street at Tyburn, must have led to Edgware.

"Watling-street crossed the Walbrook by a bridge at the junction of Cannon-street and Budge-row, and then branching off at London Stone, in Cannon-street, ran along the Langbourne to Aldgate; whilst a smaller road ran from the ferry at Dowgate towards Cripplegate, one of the three City gates during the Roman rule. Enough of remains of houses have been found in Budge-row and Watling-street to show that the rudiments of a street, in continuation of the line from Aldgate, existed on the west side of the brook."—*National Miscellany*, No. 6.

This street, says Iceland, was formerly called *Atheling* (or *Noble*) street, from being near the Old Change, where the Mint formerly was; and afterwards, corruptly, *Watheling* and *Watling* street: but from this Stow dissents. By another, Watling is traced to the ancient British words, *gwaith*, work, and *lea*, legion, whence *gwaith-lea*—i.e., legion work (*Gent. Mag.* 1796). Dr. Jamieson states it to have been "called by the Romans *Via Lactea* (Milky Way), from its fancied resemblance to a broad street, or causeway, being as it were paved with stars." Moxon, in his *Tutor to Astronomy*, 1670, describing the Milky Way, observes: "some, in a sporting manner, call it Watling-street; but why they call it so I cannot tell, except it be in regard to the narrowness it seemeth to have," which narrowness is now contrasted with the fine broad thoroughfare of Cannon-street West. We must make room for a few more etymons of this much disputed word:

"The two words Watling Street are compounded of three English roots, which are identical with the Anglo-Saxon roots *waetling-street*. No etymology hitherto advanced approximates so near, or is so significant or appropriate as this. We have to bear in mind that long before embankment and drainage were attended to in this country, the meadows (*ings*) were flooded after rain; and the mode of passing along the streets (the *straight* or direct ways), where such impediment occurred, was by wattles or hurdles, called by the French *fascines*, and which are now used for the same purpose in military operations. With so clear an etymological deduction, we can dispense with Hoveden's *strata quam filii regis Wethlæ straverunt* (*Annales*, 342), with Camden's *Vitellianus*, in British *Guetalin*, and even with Thierry's *Gwydd-elin-sarn*, Road of the Gaels or Irish (*Norman Conquest*, i. 165), which are the only other etymologies deserving attention. It is to be noted that Anglo-Saxon names were given to works already ancient, when such names were imposed."—T. J. Buckton, *Notes and Queries*, 2nd S., vii.

The following is considered a good derivation: the name a Saxon corruption of the Cymric *Gwyddelinsarn* (the way of the Gael), so called because it led to the country of the Gwyddyl—Ireland. It is much more probable that it was the work of that people during its dominancy in South Britain; just as were the houses whose ruins, two centuries ago, were called by the Welsh the houses of the Gael. (Thierry's *Norman Conquest*, vol. i. p. 2, note. *Notes and Queries*, 2nd S., No. 40.) It is also suggested to have been called by corruption only *Vitellin*, or *Watling-street*, from the name of *Vitellianus*.

Mr. T. Reveley, of Kendal, suggests that the Romans probably employed brushwood in forming the foundations of their roads,\* and may have wattled it to give it greater consistency; and that the name had been given to the several roads so called by the Anglo-Saxons from the *watling*, the remains of which they had found. It would thus be synonymous with the name Wicker-street, which occurs in the tenth Antonine *Itinerary*.—*Proc. Soc. Antiq.*, vol. iv. p. 256.

\* Fagots are, to this day, used in making our roads.

Watling-street has been, since Stow's time, inhabited by "wealthy drapers, retailers of woollen cloths, both broad and narrow, of all sorts." Hatton describes it as "much inhabited by wholesale grocers, tobacconists, and other great dealers." Several of the new buildings in Cannon-street are mansion-like warehouses. At the east end are immense warehouses of the Manchester and silk trades; the German bronze and Bohemian glass trades; the pin and needle trade; and about the centre the paper trade. Near St. Swithin's-lane, are the wholesale tea and grocery and spice trades. Here, too, are leading houses of the shipping-trade, and Colonial Banks and Assurance Companies. Messrs. Lawrence and Sons (Alderman W. Lawrence, Lord Mayor, 1863-4) are the builders of several of these noble piles, and are the ground-landlords. Here is the City station of the South-Eastern Railway.

The water-front towers of the Station have gilded metal finials, with weather-vanes and arms. The edifice, with its vast arch, its spacious platforms, its ten lines of rails, its broad carriage-way, and, at the end, the handsome inner front of the hotel, and the flank erections, is probably the finest station in London. The elaborate apparatus of the Cannon-street signal-box stretches across nearly the entire width of the roadway, and has above the roof 24 semaphore arms, and 16 lamps showing red, green, and white lights. The switches which work the points and signals are adjusted in a metal frame in one straight line, and are an admirable and elaborate piece of mechanism. The levers, 67 in number, are coloured yellow, white, black, blue, and red, and numbered progressively by circular brass plates on their fronts. The yellow levers work the distance signals, and are nine in number; the white, of which there are three, are indicators, and relate to the station; the black levers, of which there are 30, work the points, which appear very complicated, there being as many as 12 pairs of rails passing under the signal box. The blue levers work the semaphore arms for trains outward; and the red levers, 16 in number, signal the train inwards.

LONDON STONE, the famous Roman relic of Watling-street, is described at pp. 533-534.

#### WAX-WORK SHOWS.

THE oldest Exhibition of Wax-work in England of which we have any record was that at *Westminster Abbey*, called "the Play of the Dead Volks," and "the Ragged Regiment," shown by the keeper of the tombs. From a passage in a rhyming account of the tombs in Westminster Abbey, in the *Mysteries of Love and Eloquence*, 1658, it would appear that at that time the following were the waxen figures exhibited in the presses:—

"Henry the Seventh, and his fair Queen,  
Edward the First, and his Queen;  
Henry the Fifth here stands upright,  
And his fair Queen was this Queen.

"The noble prince, Prince Henry,  
King James's eldest son;  
King James, Queen Anne, Queen Elizabeth,  
And so this chapel's done."

In Peacham's *Worth of a Penny*, 1667, we read: "For a penny you may hear a most eloquent oration upon our English kings and queens, if, keeping your hands off, you will seriously listen to David Owen, who keeps the monuments in Westminster."

Of the wax-work (which is mentioned at p. 128) we find the following account in a description of the Abbey, "its monuments and curiosities," "printed for J. Newbery, at the Bible and Sun, in St. Paul's Churchyard, 1754:—"

"Over this chapel (Islip, otherwise St. Erasmus) is a chantry in which are two large wainscot presses full of the effigies of princes and others of high quality, buried in this Abbey. These effigies resembled the deceased as near as possible, and were wont to be exposed at the funerals of our princes and other great personages in open chariots, with their proper ensigns of royalty or honour appended. Those that are here laid up are in a sad mangled condition; some stripped, and others in tattered robes, but all maimed or broken. The most ancient are the least injured, by which it would seem as if the costliness of their clothes had occasioned this ravage; for the robes of Edward VI., which were once of crimson velvet, but now appear like leather, are left entire; but those of Q. Elizabeth and K. James the First are entirely stript, as are all the rest, of every thing of value. In two handsome wainscot presses are the effigies of K. William and Q. Mary, and Q. Anne, in good condition, and greatly admired by every eye that beholds them." The figure of Cromwell is not here mentioned; but in the account of his lying-in-state, the effigies is described as made to the life, in wax, apparelled in velvet, gold lace, and ermine. This figure was laid upon the bed-of-state, and carried upon the hearse in the funeral procession; both were then deposited in Westminster Abbey: but at the Restoration, the hearse was broken in pieces, and the effigies was destroyed after hanging from a window at Whitehall.

Under date of 1761, Horace Walpole complains that "the Chapter of Westminster sell their church over and over again: the ancient monuments tumble upon one's head through their neglect, as one of them did, and killed a man, at Lady Elizabeth Percy's funeral; and they erect new waxen dolls of Queen Elizabeth, &c., to draw visits and money from the mob."

In the *Picture of London*, 1806, the collection is described as "a variety of figures in wax, in cases with glass doors, which are shown as curious to the stranger;" their exhibition was continued until 1839.

Nollekens, the sculptor, used to describe the collection as "the wooden figures, with wax masks, all in silk tatters, that the Westminster boys called 'the Ragged Regiment;' and carried before the corpse formerly; kept in narrow closets between the wax figures of Queen Elizabeth and Lord Chatham in his robes; in Bishop Islip's Chapel, where you have seen the stained glass of a boy slipping down a tree, a slip of a tree, and the eye slipping out of its socket."

NEW EXCHANGE, Strand, was also noted for its Wax-work shows.

MRS. SALMON'S WAX-WORK, in Fleet-street, is described at p. 350. The minor Exhibitions of wax-work are too numerous to mention; but we may instance a collection of figures shown at the Queen's Bazaar, Oxford-street, in 1830; and Dubourg's Mechanical Exhibition, in Windmill-street, Haymarket; as admirable specimens of foreign ingenuity in wax-modelling. To these may be added the lifelike and spirited figures of costumed natives of Mexico, and American Indians, modelled in wax with surprising minuteness and artistic feeling both in the position and grouping, varied expression, and anatomical development; these figures, at the Great Exhibition of 1851, gained for their artist, N. Montanari, a prize medal.

MADAME TUSSAUD AND SON'S Collection, Baker-street, Portman-square, is stated to be the oldest exhibition in Europe. It was commenced on the Boulevard du Temple at Paris in 1780, and was first shown in London, at the Lyceum, Strand, in 1802. It now consists of upwards of 300 figures in wax, in the costume of their time, and several in the dresses which they actually wore; besides a large collection of paintings and sculpture, arranged in superb saloons.

Madame Tussaud was born at Berne, in Switzerland, in 1760. When a child she was taught to model figures in wax, by her uncle M. Curtius, at whose house she often dined with Voltaire, Rousseau, Dr. Franklin, Mirabeau, and La Fayette, of whose heads she took casts. She taught drawing and modelling to the Princess Elizabeth, and many of the French noblesse, just before the Revolution of 1789. She also modelled in wax Robespierre, Marat, and Danton; and often took models of heads severed on the scaffold. Thus she commenced her collection of royalists, revolutionists, generals, authors and men of science, and distinguished ladies; with which she came to London in 1802. She has left her *Memoirs and Reminiscences*, published in 1838; a very curious narrative of the old French Revolution, and its leading characters *en costume*. Madame Tussaud died in London, 15 April, 1850, aged 90; her mother lived to the same age, her grandmother to 104, and her great-grandmother to 111.

The Tussaud Collection not only contains fine specimens of modelling in wax, but a curious assemblage of costume and personal decoration, memorials of celebrated characters, historical groups, &c. Among the most noteworthy are the costumed recumbent effigies of the Duke of Wellington; a group of Henry VIII. and his six queens; Edward VI. and Henry VII.; Queen Victoria and Prince Albert; the Prince and Princess of Wales; the Prince and Princess of Hesse; and the rest of the Royal Family; Alexander Emperor of Russia, taken from life, in England, in 1814; Napoleon Bonaparte, from life, in 1815; Louis XVI., his queen and children, modelled from life, in 1790, and exhibited at La Petite Trianon; Lord Nelson, the cast taken from his face; the beautiful Madame l'Amaranthe; Madame Tussaud, taken by herself, William Cobbett, very like; Madame Grisi as Lucrezia Borgia; Richard III., from the portrait at Arundel Castle; Voltaire (taken from life a few months before his death), and a Coquette of the same period, both admirably characteristic; Loushkin, the Russian giant, 8 feet 5 inches high; Jenny Lind, very like; Sir Walter Scott, modelled by Madame Tussaud, in Edinburgh, in 1828; the Empress Eugénie and the Prince Imperial of France; Maximilian, Emperor of Mexico; Garibaldi, Count Cavour, Poerio, Antonelli, and Count Bismarck; Presidents Lincoln and Johnson (United States); Queen Victoria (recently added). The sovereigns of the world, heroes and statesmen, are well-timed additions.

*Hall of Kings.*—Kings and Queens of England, since the Conquest, thirty-six in number; the costumes and ornaments worn at the various periods, copied from historical authorities, by Mr. Francis Tussaud and assistants. This series has proved an especially attractive addition. The celebrities of the reigns are added; as Wickliffe, Wykeham, Chaucer, Caxton, Shakspeare, &c. The ceiling of the Hall of Kings is painted by Sir

James Thornhill. Here are portraits of Queen Victoria (Hayter); Prince Albert (Patten); George IV. (Lawrence); William IV. (Simpson); George III. and Queen Charlotte (Reynolds); George II. (Hudson); Louis XIV. (Parosel). Also a group of figures of Queen Victoria (the throne from Carlton Palace); the Queen Dowager, the Dukes of Sussex and Cambridge, and the Princess Augusta, in Coronation robes; George III. taken from life in 1809; William IV. as Lord High Admiral.

In the richly-gilt chamber adjoining is George IV. in his Coronation Robe, which, with two other robes, contain 567 feet of velvet and embroidery, and cost 18,000*l.*: the chair is the homage-chair, used at the Coronation; and the crown and sceptre, orb, orders, &c., are copies from the actual regalia. Here is a large picture of the Birth of Venus, by Boucher; and of the Marriage of George IV., with many portraits.

*Napoleon Relics.*—The camp-bedstead on which Napoleon died; the counterpane stained with his blood. Cloak worn at Marengo. Three eagles taken at Waterloo. Cradle of the King of Rome. Bronze posthumous cast of Napoleon, and hat worn by him. Whole-length portrait of the Emperor, from Fontainebleau; Marie Louise and Josephine, and other portraits of the Bonaparte family. Bust of Napoleon, by Canova. Isaby's portrait table of the Marshals. Napoleon's three carriages: two from Waterloo, and a landau from St. Helena. His garden chair and drawing-room chair. "The flag of Elba." Napoleon's sword, diamond, tooth-brush, and table-knife; dessert knife, fork, and spoons; coffee-cup; a piece of willow-tree from St. Helena; shoe-socks and handkerchiefs, shirt, &c. Model figure of Napoleon in the clothes he wore at Longwood; and porcelain dessert-service used by him. Napoleon's hair and tooth, &c.

*Miscellaneous Relics.*—Nelson's Order of the Bath, and coat worn at the Nile. Snuff-box of James II. Shirt worn by Henry IV. of France when stabbed by Ravallac (from Cardinal Mazarin's collection). Coat and waistcoat of the Duke of Wellington, given to Haydon, the painter. Model of Longwood, St. Helena.

*The Chamber of Horrors* contains portrait figures of the murderers Rush and the Mannings, Good and Greenacre, Courvoisier and Gould, Burke and Hare; Dumollard and his wife, believed to have murdered seventeen or eighteen persons; Nana Sahib; George Townley. Pierri, Pianori, and Orsini, who attempted to assassinate the Emperor of the French. William Palmer and Catherine Wilson, the poisoners. Oxford and Francis, who shot at Queen Victoria. Franz Müller, murderer; Fieschi and the infernal-machine; Marat, taken immediately after his assassination; heads of French Revolutionists; the knife and lunette used in decapitating 22,000 persons in the first French Revolution, purchased from M. Sanson, the grandson of the original executioner, now residing in Paris. Also a model of the guillotine, &c.; this being a class of models in which Madame Tussaud excelled in her youth. Admission to the general collection, 1*s.*; Chamber of Horrors, 6*d.* Music, instrumental, in the evening.

THE ORIENTAL AND TURKISH MUSEUM, Knightsbridge, opened 1854, contained models from Eastern life, with costumes, arms, and implements; set scenes of Turkish baths, coffee-shops and bazaars, a wedding, repasts, and councils; the palace, the harem, and the divan; street scenes, &c.; the figures were modelled in wax, by James Boggi, with wonderful variety of expression and character.

#### WESTMINSTER.

THE general title of the western portion of the metropolis, but properly applying only to the City of Westminster, or "the parish of St. Margaret, including the ecclesiastical district of St. John the Evangelist; the other parishes constituting the Liberties of Westminster." (*Rev. M. E. C. Walcott.*) It is named from the founding of St. Peter's Minster on Thorney Island in the seventh century, which was called West Minster to distinguish it from St. Paul's, the church of the East Saxons: thus the town grew up around the monastery from which it took its name. The island site, "formed by the rude channel worn by the river tides," in a charter of King Offa, A.D. 785, is called "Torneia in loco terribili, quod dicitur æt. Westmunster." King Edgar's charter describes Westminster to extend from Fleet Ditch, next the City of London, to the Military Way, now the Horseferry-road; and from Tybourn and

Holbourne to the Thames. Subsequently, the boundary of the City of London was extended from Fleet Ditch to Temple Bar.

*Thorney Island*, 470 yards long and 370 yards broad, was insulated by a small stream, called in modern times Long Ditch, which has been traced from the Thames at Manchester-buildings, across King-street by Gardener's-lane, by Prince's-street (where it is the common sewer), to Tothill-street, and thence to the Thames at the end of Abingdon-street.

"This island comprised the precinct of the Abbey and Palace, which were further defended by lofty stone walls: those on the east and south of the College gardens being the last remains of such defences of a later date. They were pierced with four gateways: the first in King-street; the second near New Palace-yard, the foundations of which were seen in December A.D. 1833, in excavating for a sewer; the third opening into Tothill-street; and the fourth near the mill in College-street. The precinct was entered by two bridges: one crossed the water of Long Ditch, at the east end of Gardener's-lane, having been built by Queen Matilda, the consort of King Henry I., for foot passengers; the other still exists at the east end of College-street, underneath the pavement,—it connected Millbank with Dirty-lane."—Walcott's *Westminster*, p. 3.

Westminster, like Chelsea, Lambeth, and all the low-lying western districts of London, stands upon gravels and sands of a depth of 25 to 30 feet, with a breadth of from two to two and a-half miles, overlying a thick stratum of London clay. In the Westminster gravels mammalian remains are frequently found. From the sandy beds abutting against the abrupt line of London clay in excavations for sewers in St. James's-square, and for the foundations of the Junior United Service Club, Charles-street, Haymarket, tusks, teeth, and bones of the elephant, hippopotamus, rhinoceros, ox, &c., were obtained, specimens of some of which are preserved carefully at the above-named club.—*R. W. Mylne, F.G.S.*

In Domesday-Book, Westminster is designated a village, with about 50 holders of land, and "pannage for a hundred hogs," probably in part of the forest of Middlesex, on the north-west; so that the Liberty of Westminster thus early extended northward to Tyburn: the whole of the Abbey and Palace precinct, south of Pall Mall, was called by the Normans, "Thorney Island and tout le champ." In Domesday, also, occurs "the vineyard lately made by Baynard," a nobleman that came in with William the Conqueror. Westward, the parish of St. Margaret's extends to Chelsea, and includes Kensington Palace. In 1174, Fitzstephen describes the Royal Palace as about two miles westward of the City of London, with an intervening suburb of gardens and orchards. Around the Old Palace the courtiers and nobility fixed their town residences. The establishment of the Woolstaple at Westminster made it the early resort of merchants; the Law Courts were fixed here, and thenceforth Parliaments were more frequently held; and in the reign of Henry VIII., Westminster obtained the title of City, from its having been for a short time the residence and see of a bishop. St. Martin's-in-the-Fields became a parish 1353-61.

Early in the reign of Queen Elizabeth, about 1560, a plan shows Westminster united to London by a double line of buildings, extending from the palace of Whitehall (built by Henry III.), by Charing Cross and along the Strand. Around Westminster Abbey and Hall, the buildings formed a town of several streets; and at the close of Charles II.'s reign they had extended westward along the south side of St. James's Park; and southward along Millbank to the Horseferry opposite Lambeth Palace. In the reign of Elizabeth, Westminster was the abode of great numbers of felons, masterless men, and cutpurses; and in the next reign, "almost every fourth house was an alehouse, harboring all sorts of lewd and badde people." To the church of St. Margaret (originally built by Edward the Confessor) was added, in 1728, St. John's near Millbank; and in 1747 was completed Westminster Bridge. The old streets were so narrow, that "opposite neighbours might shake hands out of the windows;" and a knot of wretched lanes and alleys were called "the desert of Westminster." Among the old Westminster signs, mentioned in the parish-books, are *The Rose* (the Tudor badge); *The Lamb and the Saracen's Head* (Crusades); and *The White Hart* (Richard II.), to this day the sign of Elliot's Brewery at Picnico. Westminster is governed by a High-Steward and a High-Bailiff. The first High-Steward was the great Lord Burghley. The City has returned two members to Parliament since 1 Edward VI.

*Abingdon-street* has been built in place of Dirty-lane. *Almonry*, the (see p. 6), has disappeared. *St. Anne's-lane*, named from the Chapel of the Mother of Our Lady, was part of the orchard and fruit-gardens of the Abbey. Henry Purcell and Dr. Heather, the famous musicians, lived here. *Artillery-place* was the ground for the men of Westminster's shooting at "the butts;" and early in the last century it was "made use of by those who delight in military exercises."

*Barton-street* was built by Barton Booth, the celebrated actor; and *Cowley-street* is named from Cowley, in Middlesex, where Booth resided. *Broadway*, west of Tothill-street, was granted as a hay-market by James I. and Charles II. Here were "the *White Horse* and *Black Horse* Inns; there being none in the parish of St. Margaret at Westminster for stage-coaches, waggons, or carriers." (*Survey, circ. 1700.*) In one of the Broadway courts lodged Turpin, the highwayman; and from his mare, Black Bess, a tavern took its sign. In the Broadway lived Sir John Hill, the empiric, of physic-garden fame. (See CHRISTCHURCH, Broadway, p. 156.)

*Canon-row* formerly extended from the Woolstaple northward to the south wall of the orchard of Whitehall. It is named from the dean and canons of St. Stephen's Chapel lodging there.

"'Twas the old way when the King of England had his house, there were canons to sing service in his chapel; so at Westminster is St. Stephen's Chapel (where the House of Commons sits) from which canons the street called Canon-row has its name, because they lived there."—Selden's *Table-talk*.

It has been vulgarly called Channel-row, and in our time Cannon-row. Upon the site of the canon's houses were built several mansions, the gardens of which reached to the Thames: for one of these the Comptroller of the Household of Edward VI. paid only 30s. annually. Here Anne Duchess of Somerset, sister-in-law to Queen Katherine Parr, built a stately house, wherein Anne Clifford, Countess of Dorset, was born in 1590: upon this site is Dorset-court. In 1618, William Earl of Derby built here a mansion, which was surrendered to Parliament *temp.* Charles I.; and here died, in 1643, John Pym, their patriotic leader: the house was temporarily, in the reign of Charles II., the Admiralty Office; it occupied the site of Derby-court. In Canon-row lived Lady Wheler, to whom Charles I., two days before his execution, sent, by his attendant Herbert, a token-ring: the lady handed him a cabinet, with which he returned to the King, who opened it on the morning of his execution; it contained diamonds and jewels, most part broken Georges and garters: "You see," said he, "all the wealth now in my power to give my children." Here is the *Office of the Board of Control for the Affairs of India*, originally built for the Ordnance Office, by William Atkinson: "the Ionic portico of this chaste and fine building is one of the best proportioned and best applied in the metropolis" (*Elmes*). *Manchester-buildings* occupy the site of a mansion of the Montagues, Earls of Manchester. *Charles-street*: at No. 19 lived Ignatius Sancho, a negro, who had been butler to the Duke of Montague, and gave his last shilling to see Garrick play Richard III. Here Garrick and Sterne visited him; and Mortimer, the painter, often consulted him.

*Dean's-yard*, south-west of the Abbey, has a *green*, or playground, for the Westminster Scholars, whereon have played, in "careless childhood," Ben Jonson, George Herbert, Cowley, Dryden, Nat. Lee, Rowe, Prior, Churchill, Dyer, Cowper, and Southey; Hakluyt, the voyager; Sir Christopher Wren, Locke, South, Atterbury, Warren Hastings, and Gibbon. In Dean's-yard lived Sir Symonds d'Ewes, the antiquary, who delighted in bell-ringing. Bishop Wilcocks, whom Pope Clement VIII. called "the blessed heretic," was born in Dean's-yard in 1673; in the cloisters, in 1708, died the excellent Bishop Beveridge; Carte, the Jacobite historian, lived in Dean's-yard, where Mrs. Porter, Gibbon's aunt, built and occupied a boarding-house. In *Little Dean's-yard* is ASHBURNHAM HOUSE, described at p. 444. *Downing-street* is described at p. 807. *Duke-street*, "a spacious and pleasant street between St. James's Park N., and Long Ditch S., mostly (especially the W. side) inhabited by persons of quality" (*Hatton*, 1708). In a house facing Charles-street lived the poet Prior. Bishop Stillingfleet, author of *Origines Britannicæ*, died here 1699; Archbishop Hutton, 1758; and Dr. Arnold, the musical composer, 1802. DUKE-STREET CHAPEL is described at p. 210.\* At the corner of the south end of Delahay-street and Great George-street lived Lady Augusta Murray, "Duchess of Sussex."

\* The chapel was a portion of the magnificent house built for Lord Chancellor Jeffreys, upon a plot of ground which he obtained by grant from Charles II., on the east side of St. James's Park. "As soon as the building was completed, the architect, of course, called upon him for payment, but was put off; he called again and again, but never could see him, and was often repulsed from his gate by the porter, with rudeness and ill language. The general character and despotic power of Jeffreys prevented the architect from taking any legal steps in the business, till Jeffreys' power began to wane

*Fludyer-street*, between King-street and St. James's Park, was named from Sir Samuel Fludyer, Bart., the ground-landlord, who, when lord-mayor in 1761, entertained George III. and Queen Charlotte at Guildhall. Fludyer-street occupied the site of Axe-yard, from the Axe brewhouse, named in a document 23 Hen. VIII. Pepys had a house here. Fludyer-street has been taken down for the site of the new Government offices.

*Gardener's-lane* extends from Duke-street to King-street: here died, in 1677, Wenceslaus Hollar, the celebrated engraver, aged 70, at the moment when he had an execution in his house; he desired of the sheriff's officers "only the liberty of dying in his bed, and that he might not be removed to any other prison but his grave" (*Oldys*). He was buried in the New Chapel yard, near the place of his death; and no monument was erected to his memory. Hollar engraved 2400 prints, and worked for the book-sellers at 4d. per hour; yet his finest prints bring rare prices. The GATEHOUSE is described at p. 373. *Great George-street*, named from the House of Hanover, was completed in 1750: the site was an arm of the Thames, when the tide flowed up from Bridge-street to the canal in St. James's Park. Here was Storey's Gate, named from Edward Storey, who constructed the decoys in St. James's Park for Charles II., and who lived upon the site: this gate was taken down in 1854. At No. 15, Great George-street, died Lord Chancellor Thurlow, 1806. At No. 25 (then Sir Edward Knatchbull's) the body of Lord Byron lay in state two days, before it was removed, July 12, 1824, for interment at Hucknall, Notts. No. 25, Great George-street, has a handsome architectural front, and is now the *Institution of Civil Engineers* (see LIBRARIES, p. 517; and MUSEUMS, p. 592). At No. 24 the Reform Club was commenced; and here subsequently lived Alderman Sir Matthew Wood, Bart., M.P. At the corner of the street, facing St. Margaret's Churchyard, is the magnificent Buxton Memorial Drinking Fountain, described at p. 358.

*Horseferry* (the) is described at p. 433.

*James-street* is described at p. 479. It was partly taken down in 1854 for the Pimlico improvements, and the offices of the Duchy of Cornwall.

In 1763 there were but few houses in James-street, and none behind it; nor any filthy courts between Petty France and the Park; nor any buildings in Palmer's Village, or in Tothill-fields, or on the Artillery-ground, or to the south of Market-street.—*Bardwell*.

*King-street* was the principal street of Westminster *temp.* Henry VIII., with Cockpit-gate at the north end, and High-gate south. Here the poet Spenser died "for lake of bread," in an obscure lodging, Jan. 16, 1599; here also died Sir Thomas Knevelt, who seized Guy Fawkes. Cromwell lived here when member of Parliament, north of Blue Boar's Head-yard. Dr. Sydenham lived upon the site of Ram's Mews. Near the south end, on the west side, was *Thieven-* (Thieves) *lane*,\* the passage for thieves to the Gatehouse prison, so that they might not escape into the Sanctuary. The roadway was so bad, that faggots were thrown into the ruts to facilitate the passage of the state-coach when the Sovereign went to Parliament. Here, at the *Bell Tavern*, met the October (Queen Anne) Club. Here lodged the poet Carew, who wrote the masque of *Cœlum Britannicum* for Charles I. Through King-street, Elizabeth and James and Charles I. proceeded to the Houses of Parliament in their state-coaches; and the republicans of Cromwell's days on foot and horseback. After the burning of Whitehall Palace, a broader road was made by Parliament-street. Cromwell, when he went to Ireland in 1649, took horse at his house in King-street.

Cromwell lived on the west side of the street, in a house, the precise situation of which is thus preserved in a communication to Cunningham's *Handbook of London*, 1850:—

upon the first flight of King James. He then made his way into Jeffreys' study, saw him, and pressed for his money in very urgent terms. Jeffreys appeared all humble and much confused, made many apologies for not settling the matter before, said he had many weighty affairs pressing on his mind at that time; but if he would call the Tuesday following it should be finally settled. The architect went away after this promise: but between that and Tuesday, Jeffreys, in endeavouring to make his escape from England, was found out, reviled, and much bruised by the populace.—*European Magazine*, 1795, p. 243. Part of the then "magnificent house" is No. 23, Duke-street, with passage and steps leading to the chapel and park. There, after the terrible judge's sudden fall, as Macaulay tells us, the exultant rabble congregated, and read on the door, with shouts of laughter, the bills which announced the sale of his property.

\* *Thieven* or *Thieving-lane* was also called Bow-street, from its bowed line; and Bow-street, Covent Garden, to this day the terror of thieves.

“Shortly before the great Trial, in 1838, between the parish of St. Margaret and the inhabitants of Privy-gardens, a very rigid examination of the old parochial rate-books took place; and in one of them Lieutenant-General Oliver Cromwell was found rated for a house in King-street, which was ascertained, with as much certainty as the extensive alterations in the vicinity would admit, to be one of two very ancient tenements lying between the north side of the gateway entrance to Blue Boar’s Head-yard and the wall of Rams’-mews; and there was strong ground for believing that the two ancient tenements had originally been one. These tenements, as well as the *Blue Boar’s Head* public-house, situated on the south side of the gateway, and a portion of the stable-yard behind, for a distance of about two or three hundred feet from King-street, are the property of one of the colleges at Oxford. The public-house (*Blue Boar’s Head*), as rebuilt about 1750, is now (1850) standing.”—*George H. Malone.*

In the Cole MSS. in the British Museum is a copy of a letter of Cromwell to his wife from Dunbar, Sept. 4, 1650, addressed to her in this street.

At the north end of King-street was built, by Henry VIII., the Westminster or King’s Gate, of stone, as a communication, by a passage over it, of Whitehall Palace with the Park: it was of Tudor design, with four round-capped turrets: each front was enriched with Ionic pilasters and an entablature, roses, the portcullis, and the royal arms, and glazed biscuit-ware busts. In this Gatehouse lived the Earl of Rochester and Herr von Auls: it was taken down in 1723.

*Millbank-street*, in 1745 called the High-street at Millbank, was named from the Abbey water-mill, built by Nicholas Litlington, at the end of the present College-street, and turned by the stream which flowed by the Infirmary garden-wall eastward into the Thames (*Walcott*). Upon the site of the mill was built Peterborough House, by the first Earl of Peterborough, in the reign of Charles I., and shown in Hollar’s Map of London, 1708. Stow describes the mansion with a large front court, and fine gardens behind; “but its situation was bleak in winter, and not over-healthful.” The house was purchased by the Grosvenor family, and rebuilt: it was taken down in 1809. In the middle of Millbank lived Mr. Vidler, the Government contractor: hence the mail-coach procession started annually on the king’s birthday. The *Penitentiary*, at Millbank, is described at p. 697. In *New-way*, adjoining, was a chapel where Romaine preached.

*Palace-yard, New*, is named from William Rufus’s intended new palace, of which the hall only was built; here was a beautiful Conduit, removed *temp.* Charles II. Opposite Westminster Hall gate, *temp.* Edward I., Lord Chief-Justice Hengham built a large stone clock-tower, taken down 1698. In this yard King Edward I. appealed to the loyalty of his people, from a platform erected against the front of Westminster Hall, in 1297; here Perkin Warbeck was set in the stocks, in 1498; Stubbs, the Puritan attorney, and his servant, had their hands cut off in New Palace-yard, in 1580, for a libel against Queen Elizabeth; and William Parry was here hung and quartered for high treason, in 1578; here Lord Sanquhar was hanged for murder, 1612; Archbishop Leighton’s father was pilloried and publicly whipped for libel, 1630; William Prynne was pilloried here, and his *Histrio-Mastix* burned, 1634; here the Duke of Hamilton, the Earl of Holland, and Lord Capel, were put to death for treason, in 1649; Titus Oates was pilloried here in 1685; and John Williams, in 1765, for publishing No. 45 of Wilkes’s *North Briton*. Here was the *Lark’s Head*, Miles’s Coffee-house, where the noted Rota Club met, whose republican opinions Harrington has glorified in his *Oceana*. The Tudor buildings of the old Palace were principally taken down in 1793; but a range, including the *Star Chamber*, on the eastern side of the court, were not removed until 1836: they are described at p. 450. At his official residence, east of Westminster Hall porch, died William Godwin, the novelist, April 7, 1836, aged 81. *Palace-yard, Old*, south-west of the Houses of Parliament, had on the west the old Lady Chapel of the Abbey, and abutting upon it the *White Rose Tavern*, and the house of Chaucer, in which he died (the site is now occupied by the mausoleum of Henry VII.); and in a house between the churchyard and the Old Palace died Ben Jonson; so that two of England’s greatest poets died almost upon the same spot. At the south-east corner of Old Palace-yard stood the house through which the conspirators in the Gunpowder Plot carried their barrels into the vault; and in the Yard, Guy Fawkes, Winter, Rookwood, and Keyes, suffered death in 1606. Here, 29th Oct. 1618, Sir Walter Raleigh was executed at eight in the morning of Lord Mayor’s Day, “so that the pageants and fine shewes might draw away the people from beholding the tragedie of one of the gallantest worthies that ever England bred.” In the Pepysian Collection at Cambridge is a Ballad with the following title: “Sir Walter Rauleigh his Lamentation, who was beheaded in the Old Pallace of Westminster the 29 of October 1618. To the tune of Welladay.”

*Palmer's Village*, west of the Almonry, was a low-lying district (12½ inches below high-water mark), consisting of straggling cottages around the twelve almshouses built in 1566 by the Rev. Edward Palmer, B.D., with a chapel and school attached. Forty years since, here was an old wayside inn (the *Prince of Orange*), rows of cottages with gardens, and the village-green, upon which the Maypole was annually set up: this rurality has now disappeared, and with it from maps and plans the name of "Palmer's Village." *Park-street*, built *circ.* 1708, northward from *Carteret-street*, making it like a T, contains the house of Mr. Charles Townley, who, in 1772, assembled here his first collection of marbles, terra-cottas, bronzes, &c., commenced in 1768 at Rome. (See BRITISH MUSEUM, p. 579.) Mr. Townley died here 3rd January, 1805. The house and collections are well described by J. T. Smith, in *Nollekens and his Times*, vol. i. pp. 261–266. "The late Royal Cockpit, which afforded Hogarth an excellent scene for his humour, remained a next-door noisy nuisance to Mr. Townley for many years." *Petty France* (*Petit France*, Hatton, 1708), and now *York-street*, from Frederick Duke of York, son of George II., having temporarily resided here, extends from Tothill-street to James-street. In Petty France was Milton's pleasant garden-house, described at p. 654. *Prince's-street* was formerly *Long Ditch*: here was an ancient conduit, the site of which is now marked by a pump; at the bottom of the well is a black marble image of St. Peter, and some marble steps. The southern extremity of this street was called *Broken Cross*: here, about the middle of last century, was the most ancient house in Westminster. Upon the east side of the street was built *Her Majesty's New Stationery Office*, in neat Italian style, in 1854, upon the site of the Westminster Mews. In *Prince's-court*, at the south end of the street, lived the notorious politician, John Wilkes, in 1788.

*Queen-square* is described at p. 751. In Queen-street was born, in 1642, James Tyrrell (a grandson of Archbishop Ussher); he wrote a *History of England*, 3 vols. folio, valuable for its exact references to the ancient chronicles.

*Rochester-row* is named from the Bishops of Rochester, who were also Deans of Westminster. Here are Emery Hill's Almshouses; and opposite are the Church of St. Stephen, and Schools, built and endowed by the munificence of Miss Angela Burdett Coutts. (See p. 203.)

*Sanctuary* (the) of Westminster Abbey is described as the space by St. Margaret's churchyard, between the old Gatehouse S.W., and King-street N.E. The right of sanctuary—*i.e.*, protection to criminals and debtors from arrest—was retained by Westminster after the Dissolution in 1540; and "sanctuary men" were allowed to use a whittle only at their meals, and compelled to wear a badge. The privilege of sanctuary caused the houses within the precinct to let for high rents; but it was totally abolished by James I. in 1623: it is called by Fahyan, "the Seyntwary before the Abbey." Here were two cruciform churches, built one above the other, the lower a double cross; the upper, the Rev. Mr. Walcott thinks, for the debtors and inhabitants of the *Broad* and the *Little Sanctuaries*; the lower for criminals. "They could not leave the precinct without the Dean's licence, or between sunset and sunrise." In Little Sanctuary was the *Three Tuns Tavern*, built upon part of the church vaults, which served as the inn-cellar. The tower of the church, rebuilt by Edward II., contained three bells, the ringing of which "sowered all the drinke in the town." The church was demolished in 1750. Fifty years later was removed from Broad Sanctuary the old market-house, built in 1568; and upon the site was erected, in 1805, the present Guildhall, with a Doric vestibule, S. P. Cockrell architect. Here also are the *Office and Central Schools of the National Society*; the *Westminster Hospital*, built 1833. The Sanctuary churches are described by Dr. Stukeley, who remembered their standing (*Archæologia*, i. p. 39). There were other sanctuaries in London; but the Westminster site alone retains its ancient name.

Here Judge Tresilian (*temp.* Richard II.) fled, but was dragged to Tyburn and hanged. In 1441, Eleanor Cobham, Duchess of Gloucester, accused of witchcraft and treason, was denied refuge. In 1460, Lord Scales, as he was seeking sanctuary here, was murdered on the Thames. Elizabeth Woodville, queen of Edward IV., and her family, escaped from the Tower, and registered themselves "sanctuary women;" and here, "in great penury, forsaken of all friends," she gave birth to Edward V. More describes her sitting "alow on the rushes," in her grief. The Register of the Sanctuary, Gough states, was bought out of Sir Henry Spelman's Collection, by Wanley, the antiquary, for Lord Weymouth, and is preserved in the library at Longleat.

The vacant ground was let, in 1821, to speculators in seats to view the coronation-procession of George IV., upon a raised platform, from Westminster Abbey to Westminster Hall. In 1854 was built, adjoining the west end of the Abbey, a block of houses in the Mediæval style, G. G. Scott, R.A., architect; the centre opening being the entrance to Dean's-yard. Here is the same architect's picturesque Memorial to the "Old Westminsters" who perished in the Crimean War.

*Tothill Fields*, between Pimlico and the Thames, anciently the manor of Tothill, belonged to John Maunsel, chancellor, who, in 1256, entertained here Henry III. and his court, at a vast feast in tents and pavilions. The Normans called this district *tout le champ*, which is thought to have been clipped into *tout le*, and then corrupted into *toutle* and *Tot-hill*. (*Bardwell*.) It occurs, however, in an ancient lease as Toot-hill or Beacon Field,\* which Mr. Hudson Turner suggested to Mr. Cunningham as the probable origin. The Rev. Mr. Walcott restricts it within the Sanctuary of the Abbey. At the Tothill were decided wagers of battle and appeals by combat, Necromancy, sorcery, and witchcraft were punished here; and "royal solemnities and goodly jousts were held here." In Culpepper's time the fields were famous for parsley. In 1642 a battery and breastwork were here erected. Here were built the "Five Houses," or "Seven Chimneys," as pest-houses for victims to the Plague; and in 1665 the dead were buried "in the open Tuttle Fields." The Fields are described as of great use, pleasure, and recreation to the king's scholars and neighbours; and in 1672 the parish made here a new Maze, which was "much frequented in summer time in fair afternoons." (*Aubrey*.) In Queen Anne's reign, here was William Well's bear-garden, upon the site of Vincent-square. St. Edward's fair was removed from St. Margaret's churchyard to Tothill Fields, 34 Hen. III., who granted the Abbot of Westminster "leave to keepe a markette in the Tuthill every Munday, and a faire every yeare for three days;" and Edward III. granted a fair of thirty-one days. Both fairs were suppressed by James I. Here, in 1651, the Trained Bands were drawn out; and in the same year, Heath's *Chronicle* records the Scotch prisoners "driven like a herd of swine through Westminster to Tuthill Fields, and there sold to several merchants, and sent to the Barbadoes." One of "the Civil War Tracts of Lancashire," printed by the Chetham Society, states there were "4000 Scots, Highlands, or Redshanks," many with their wives and bairns, of whom 1200 were buried in Tuttle Fields. The fields next became a noted duel-ground: here, in 1711, Sir Cholmeley Dering, M.P., was killed by the first shot of Mr. Richard Thornhill, who was tried for murder and acquitted, but found guilty of manslaughter, and was burnt in the hand. Here also was an ancient Bridewell (*see p. 704*).

*Tothill-street*, extending from Broad Sanctuary to York-street, has lost most of its picturesque old houses. In Tothill-street lived the Bishop of Chester, 1488; William Lord Gréy of Wilton, "the greatest soldier of the nobility," died 1563; Sir George Carew, at Caron House, 1612; and Lincoln House was the Office of the Revels, 1664. Southerne, the dramatic poet, lived ten years at No. 56, then as now, an oilman's: it bears the date 1671. Betterton, the actor, was born in this street. In the reign of Elizabeth, the houses on the north side had gardens extending to the Park; and those on the south to Orchard-street, once the orchard-garden of the Abbey. Here, in 1789, died, aged 97, Thomas Amory, who wrote the *Memoirs of John Buncl*. Of the *Fleece* public-house, No. 70, a token exists, date 1666. The old *Cock* public-house, taken down in 1853, is described at p. 453. *Tufton-street* was built by Sir Richard Tufton (d. 1631): here was a cock-pit, which existed long after that in St. James's Park was deserted.

*Victoria-street*, commenced by the Westminster Improvement Commission in 1845, extends across the sites of the Almonry, Orchard-street, Duck-lane, New Pye-street, and part of Old Pye-street (named from Sir Robert Pye, who resided here), to Strutton-ground, named from Stourton-house, the mansion of the Lords Daere of the South. Thence the new street crosses Artillery-place, through Palmer's Village, on the north side of Westminster Bridewell, past Elliot's Brewery, to Shaftesbury-terrace, Pimlico. Victoria-street is above 1000 yards, or nearly five furlongs in length, and 80 feet wide:

\* Others refer it to Toote Hill, shown in Rocque's map (1746), just at a bend in the Horseferry-road, but now lost in the adjacent made ground

the houses are 82 feet in height; Henry Ashton architect. The ornamentation of the house-fronts, worked in cement, is extremely artistic: the interiors are mostly arranged in flats, as in Edinburgh and Paris. In the line of street are the three churches of St. Mark, the Holy Trinity, and Christchurch; and at the north-west rear is St. Andrew's Church, in the Geometrical style; the nave aisles showing five gables on each side, filled with large and lofty windows; architect, G. G. Scott, R.A.

*Vine-street* denotes the site of a vineyard, probably that of the Abbey. In the overseer's book, 1565, is rated "the vyne-garden" and "myll," next to Bowling-alley; the vine-garden called "because, perhaps, vines anciently were there nourished, and wine made." (*Stow*.) In Edward VI.'s time it was inclosed with buildings. *Bowling-street* and *alley* denote the site of the green where the members of the convent played at bowls. Opposite *Bowling-alley* is a house where the notorious Colonel Blood died, Aug. 24, 1680: upon the house-front was a shield with a coat of arms. (*Walcott*.)

*Wood-street*, described in 1720 as "very narrow, being old boarded hvecls ready to fall," has disappeared. Here lived John Carter, the diligent antiquary. At 13, *North-street*, lived Elliston, the comedian, who dearly loved his art: "wherever Elliston walked, sat, or stood still, there was the theatre."—*C. Lamb*.

*Woolstaple* (the) was, in 1353, appointed for weighing all the wool brought to London. The Long Staple (upon the site of *Bridge-street*) consisted of a strong round tower and a water-gate, which was destroyed to make room for the western abutment of Westminster Bridge, in 1741. Here was St. Stephen's Hospital, founded by Henry VIII. in 1548, and removed in 1745, when eight almshouses were rebuilt in St. Anne's-lane, inscribed "Woolstaple Pensioners, 1741." In 1628, in the overseers' books of St. Margaret's, is rated in the Woolstaple, "Orlando Gibbons, ijd."

WESTMINSTER ABBEY.—In 1867, a Parliamentary return showed that the Dean and Chapter of Westminster devote to the maintenance of the fabric of the Abbey one-fifteenth part of the whole divisible income of the capitular body, together with the fees received for monuments placed in the Abbey, and the profits derived from the sale of timber on the capitular estates. In the last six years the funds thus devoted to the fabric averaged 3412*l.* a year. In the same six years the money taken at the Abbey for the admission of persons to view the Royal tombs and private chapels averaged 1292*l.* a year. This has been applied first in payments to the High Constable and to the guides who show the tombs and chapels, and there has been an average annual surplus of 725*l.* a year, which has been applied to ornamental improvements of the Abbey. The charge for viewing the tombs and chapels is 6*d.* for each person. The transepts and the great nave of the Abbey are open free to the public all day.

WESTMINSTER ABBEY is described at pp. 117-140.

### WESTMINSTER HALL

WAS originally added to the ancient Palace at Westminster by William Rufus, who held his first court herein, 1099. In 1394-9 Richard II. had its walls heightened two feet, the windows altered, and a new timber roof constructed, from the design of Henry de Yeveley, who was master-mason to three successive kings, and to Westminster Abbey. During the repairs of 1835 the work of the two kings (William II. and Richard II.) was distinguishable, including a Norman arcade connecting the clerestory windows. The exterior is of modern design, except the north porch and window, which, with the internal stone-work (except the south end), is one of our earliest specimens of the Perpendicular style, and is thought to have been the work of William of Wykeham. The original walls (chiefly rubble and grout-work) were then cased 1 foot 7 inches thick with stone, flying buttresses were erected as abutments on the east and west sides, and the embattled flanking towers and porch of the north front added: the towers were restored 1819-22. The roof was originally covered with lead; for which, on account of its immense weight, slates were substituted. The lantern, of cast-iron, is an exact copy of the original one erected near the end of the 14th century: it is glazed.

The interior dimensions of Westminster Hall are 239 feet by 68, and 42 feet high. The immense timber-framed roof is one of the finest existing examples of scientific construction in carpentry; its only bearing being at the extremities of the great ribs, which abut against the side walls, and rest upon twenty-six sculptured stone corbels. At half this height the timber arches spring from the stone string-course, sculptured with the white hart couchant under a tree, and other devices of Richard II.; so that

the upper half of the height of the edifice is entirely of timber (oak), unrivalled for its accurately moulded detail.

A record in St. Michan's Church, verified by Hanmer's *Chronicle*, in the library of Trinity College, Dublin, states that the roof over Westminster Hall was constructed with timber procured from the site of this church; and clumps of trees have been found during recent excavations. The record states: "The faire greene or commune, now called Ostomontowne-greene, was all wood, and hee that diggeth at this day to any depth shall finde the grounde full of great rootes. From thence, anno 1093, King William Rufus, by license of Murchard, had that frame which made up the roofes of Westminster Hall, where no English spider *webbeth or breedeth to this day.*"—*Proc. Royal Institute Irish Architects*. Loudon, however, states the roof to be of British oak, *quercus sessiflora*, which is so deficient in grain as not to be distinguishable, at first sight, from chestnut.

The hammer-beams are sculptured with angels bearing shields of the arms of Richard II. or Edward the Confessor, which show the excellence that sculpture in wood had attained in England so early as the fourteenth century. From the roof were formerly hung "guidons, colours and standards, ensigns and trophies of victory;" in Hatton's time (1708), 138 colours and 34 standards, from the battles of Naseby and Worcester, Preston and Dunbar, and Blenheim: Hatton describes fourteen, with their mottoes Englished. The roof was thoroughly repaired in 1820–21, when forty loads of oak, from old ships broken up in Portsmouth Dockyard, were used in renewing decayed parts, and completing the portion at the north end, where it had been left unfinished; the roof was also greatly strengthened by tension-rods added to the principals in 1851. Abutting on the southern end was the Galilee, finished by Edward III., and adapted by Richard II. with a flight of steps to the approach from the Great Hall to the Chapel of St. Stephen and the principal chambers of the Palace. Above the side line of windows are dormers (added in 1820–21), which improve the chiaroscuro; and above are apertures, opened in 1843, to aid the effect of an Exhibition of Cartoons. The Hall now forms the vestibule to the new Houses of Parliament; which Sir Charles Barry effected by removing the large window from the south end to form an archway to St. Stephen's Porch, wherein he fixed the Hall window, with an additional transom and row of lights. (See *St. Stephen's Porch*, p. 662.)

The statues by John Thomas, flanking the archway in the Hall, are:

WILLIAM II.  
HENRY I.  
STEPHEN.

HENRY II.  
RICHARD I.  
JOHN.

Sir Charles Barry contemplated raising the roof fourteen feet, closing the doors of the Law Courts, and decorating the walls with frescoes, &c. The heraldic decorations of the corbels and string-course are described by Mr. Willement in the *Collectanea Topogr. et Gen.* vol. iii. p. 55; and the architectural discoveries in 1835 are detailed by Mr. Sydney Smirke in *Archæologia*, vols. xxvi. and xxvii.

The floor of the Hall, from its low level, was occasionally flooded by the Thames. Holinshed mentions two floods in the reign of Henry III., in 1237, when he says boats might have been rowed up and down; and in 1242, when no one could get into the Hall except they were set on horseback. He records another, 1555, when the Hall was flooded "unto the stairfoot, going to the Chancery and King's Bench, so that when the Lord Maior of London should come to present the Sheriffs to the Barons of the Exchequer, all Westminster Hall was full of water." Also, in 1579, when the water rose so high in the Hall "that, after the fall thereof, some fishes were found there to remain."—*Stow*. These visitations were repeated in the last century, in 1735 and 1791, and to some extent even so lately as 1841.

The kings held their courts, or, as it was called, "wore their crowns," at the time of the Conquest, and long after, but not in Westminster Hall until the reign of Henry II. By a clause in Magna Charta, 15th June, 1215, it was declared that "Common Pleas shall not follow the Court, but shall be held in some certain place," doubtless Westminster Hall; and when the Aula Regia was abolished, the present arrangement of the Courts of Chancery, King's Bench, and Exchequer, as well as the Common Pleas, was established, with separate Judges appointed to preside over each Court. (*Foss.*)

"In the reign of Charles I., the King's Servants, by his Majesty's special order, went to Westminster Hall in Term-time, to invite gentlemen to eat of the King's Acates or Viands; and in Parliament-time, to invite the Parliament men thereunto."—*Delaune's Angliæ Metropolis*, 1690.

"The Hall itself was also occasionally used as a high court of criminal justice for the solemn trials before the peers of great delinquents, impeached by the House of Commons. One of the earliest, of which there is a particular account, is that against Michael de la Pole, Earl of Suffolk, Chief Justice Tresilian, and others, in the reign of Richard II., which king himself was deposed by the Parliament in this same Hall. In subsequent times these trials often took place before commissioners appointed from among the peers, assisted by some of the judges and other commoners. Sir Thomas More and Bishop Fisher were tried in this manner; but it is doubtful whether the Great Hall was used on these occasions, or only the Court of King's Bench. Queen Anne Boleyn's trial took place in the hall on a 'scaffold' there erected. There is a print of Westminster Hall as it was prepared for the trial of the Earl of Strafford in 1640, in which the Queen is portrayed as looking out of her cupboard upon a scene in which her royal consort was a few years after to appear as a condemned prisoner."—*W. Foss; Paper read to the Archæological Institute*, 1866.

*Memorable Trials in Westminster Hall.*—1305, Sir William Wallace condemned for treason (in Rufus's Hall); 1417, Sir John Oldcastle the Wickliffite; 1522, Stafford, Duke of Buckingham, for treason; 1535, Sir Thomas More arraigned here; 1551, the Protector Somerset brought to trial, with "bills, halberts, and pole-axes attending him," the clamour of the people "heard to the Long Acre beyond Charing Crosse;" 1554, Sir Thomas Wyatt; 1557, Lord Stourton, for murder; 1600, Robert Devercux, Earl of Essex; 1606, Guy Fawkes and his fellow-conspirators; 1616, the profligate Earl and Countess of Somerset, for the murder of Sir Thomas Overbury; 1640 (18 days' trial), Wentworth, Earl of Strafford, before Charles I. and his queen; 1649, King Charles I. (in 1661, the Act for the King's Trial was burned by the common hangman in the Hall while the court was sitting); 1688, the Seven Bishops; 1710, Dr. Sacheverell; 1716, Viscount Kenmare and the Earl of Derwentwater; 1746–47, the rebel Lords Kilmarnock, Balmerino, and Lovat; 1760, Earl Ferrers, for murder; 1776, the Duchess of Kingston, for bigamy; 1788 to 1795, Warren Hastings's seven years' trial; 1806, Lord Melville.

*Parliaments* assembled in this Hall as early as 1248 (33 Henry III.) and 1265 (49 Henry III.), the latter being the first representation of the people in its present form.

By a curious conjunction, one and the same person in the early reigns held the two offices of Warden of the Palace of Westminster and Warden of the Fleet Prison. Two records, of the 12th and 24th Edward III., show that there were then stalls for merchandize in, and stables under, Westminster Hall; and that the holder of those offices was allowed to take for his profit 8*d.* per annum for each stall and stable, and 4*d.* for each stall only. By a "rental" of 38 Henry VI., the rents of shops varied from 2*s.* to 3*s.* 4*d.* a term; and the "goers in the Halle," as they were called, were charged from 4*d.* to 12*d.* for the same period. The shops or stalls (resembling those in Exeter Change) are shown in the picture by Gravelot, painted in the reign of George II.

"Ranged along the left side, as you enter, are shops of booksellers, mathematical instrument makers, haberdashers, and sempstresses. At the further end of the Hall are the two Courts of King's Bench on the left, and of the Chancery on the right, divided by a flight of steps which led to the entrances of both. In the print these Courts are inclosed to a certain height, but not covered, so that the noise in the Hall, and the flirtations of the barristers and attorneys with the sempstresses, must have occasionally disturbed the arguments of the counsel, and disarranged the gravity of the Judges. On the right side is the same array of shops, except where it is interrupted by the Court of Common Pleas, which projects into the Hall, and is similarly inclosed and uncovered. On both sides of the Hall, above the shops and the Court of Common Pleas, was a continuous display of banners, which at the date of the picture were probably those taken at the battle of Blenheim, and the other victories of Marlborough. The Court of Common Pleas was subsequently removed to the outside of the Hall, and the inclosure of the two other Courts was completed and carried up to the roof, and thus divided from the exterior noise and racket. Counters and stalls for books (at one time sold by poor scholars of Westminster between school-hours), as well as other merchandize, were to be seen here in term-time, and during the session of Parliament, even in the beginning of the reign of George III. The Courts of Chancery and King's Bench are removed, with the other courts, to more convenient sites on the western exterior of the Hall, with entrances into it. Thus, the edifice is now little more than a magnificent vestibule to them and to the two Houses of Parliament, and a place of congregation for lawyers and their clients when attending the Courts during term time."—*Mr. Foss, ut supra.*

Archbishop Laud, in his *Diary*, records that on Sunday, February 20, 1630–1, the Hall was found on fire, "by the burning of the little shops or stalls kept therein. It was soon extinguished, and the damage quickly repaired." In the Great Fire of 1834, by which the Parliament Houses were destroyed, the noble hall was saved by the favourable direction of the wind. At the Great Fire of 1666, the Hall was filled with "the people's goods," for safety.

After great part of the Palace was burnt in 1512, only the Great Hall was kept in repair; "and it serveth, as before it did, for feasts of coronations, arraignments of great persons charged with treasons, keeping of the courts of justice, &c." (*Stow.*) Hither came 411 of the rioters of Evil May-day, 1517, each with a halter about his neck, crying to the king upon his throne for mercy; when "the general pardon being pronounced, all the prisoners showed at once, and cast their halters towards the roof of the Hall." (*Stow.*)

Here Cromwell was inaugurated Lord Protector, 26th June, 1657, upon an elevated platform at the south end of the Hall, in the ancient coronation-chair, "under a princelike canopy of state," with the Bible, sword, and sceptre of the Commonwealth before him: the Protector entering the Hall, with the Lord Mayor bearing the City sword before him. On May 8th, 1660, King Charles II. was proclaimed at "Westminster Hall Gate." Upon the south gable were set up the heads of Cromwell, Ireton, and Bradshaw: Cromwell's head remained 20 years.

"Abutting on the west side of Westminster Hall, and in part beneath it, were "certain places designated Hell, Purgatory, and Paradise, names that seem to indicate that they were appropriated, as two of them certainly were, to the confinement of delinquents, according to the varied degrees of punishment for their respective offences. We see from the illuminations of the Courts lately published in the 39th volume of the *Archæologia*, which are attributed to the reign of Henry VI., that at the bars of the three Courts of King's Bench, Common Pleas, and Exchequer, certain prisoners are represented, and their place of incarceration might probably be in one or the other of these cells. Some have thought that these extraordinary names were suggested by the titles of the three parts of Dante's *Divina Commedia*; but at least one of the names occurs in the reign of Henry III., before Dante was born. In the original accounts of the expenses in that reign, occurs: 'Door of Hell, in the Exchequer.' This is followed by another, to which the former probably applies: 'House called Helle under the Exchequer.' A third place named in the list may perhaps be the same which afterwards went by the name of Paradise or Heaven: 'Le Godeshouse, in the receipt of the Exchequer.' Whatever were the uses to which these places were originally applied, the custody of them was made a source of emolument, and was granted to the 'squires of the king's body,' and other favourites."—*Paper by Mr. Foss, ut ante, abridged.*

Hell, Purgatory, and Paradise, and another building called "Heaven," were subsequently converted from cells of confinement into taverns, which were much frequented by lawyers' clerks. In Ben Jonson's *Alchemist*, Dapper is forbidden to "break his fast in *Heaven* and *Hell*."

"False Heaven at the end o' th' Hall."—*Hudibras.*

Pepys records dining at Heaven, and spending the evening in one of these taverns with Lock and Purcell, and hearing Lock's new canon, *Domine salvum fac Regem*. "The prison-keys of Purgatory, attached to a leather girdle, are still preserved." (*Walcott's Westminster*, p. 221.) Here were kept the "ducking-stools," with which the burgeses of Westminster (by statute 27 Elizabeth) were empowered to punish common scolds, &c. Heaven and Purgatory were taken down about 1741, and Hell about 1793.

For the preparation of the Coronation banquets, the courts, when within the Hall, were removed, and the shops and stalls boarded over. A petition of the shopkeepers in the reign of George I. prays that, as their shops are boarded up for the ceremony of the Coronation, the leads and the outsides of the windows of the west side of the Hall may be granted for their use and advantage. Strype describes, at the upper end of the Hall, a long marble stone, 12 feet in length and three feet in breadth; also a marble chair, where the Kings of England formerly sat at their Coronation dinners, and at other solemn times the Lord Chancellor; but not to be seen, being built over by the two Courts of Chancery and King's Bench.

Edward I. held here his Coronation feast, for which the Hall was whitewashed.

At the Coronation feast of Richard II. (July 16, 1377), Sir John Dymock, as successor of the Marmions, and in right of his wife, Margaret de Ludlow, claiming the privilege by his tenure of the manor of Scrivelsby, in Lincolnshire, having chosen the best charger save one in the king's stables, and the best suit of armour save one in the royal armoury, rode in, armed to the teeth, and challenged, as the king's champion, all opposers of the young monarch's title to the crown; this picturesque ceremony was last performed at the coronation of George IV.

Haydon, the historical painter, describes the Coronation Festival of George IV. (*Autobiography*, vol. ii.), which he witnessed from the Chamberlain's box: "The Hall doors were opened, and the

flower-girls entered, strewing flowers. The distant trumpets and shouts of the people, the slow march, and at last the appearance of the King, crowned and under a golden canopy, and the universal burst of the assembly at seeing him, affected everybody. . . . After the banquet was over came the most imposing scene of all, the championship. Wellington, in his coronet, walked down the Hall, cheered by the officers of the Guards. He shortly returned, mounted, with Lords Anglesea and Howard. They rode gracefully to the foot of the throne, and then backed out. The Hall doors opened again; and outside, in twilight, a man in dark-shadowed armour appeared against the shining sky. He then moved, passed into darkness under the arch, and suddenly Wellington, Howard, and the champion stood in full view, with doors closed behind them. This was certainly the finest sight of the day. The herald then read the challenge: the glove was thrown down. They all then proceeded to the throne."

The coronation of George IV., in the Abbey, is described at p. 133; and the ceremony and the banquet in the admirable letter by Sir Walter Scott. The bill of fare of the banquet in the Hall is printed in Mr. Kirwan's very interesting *Host and Guest*, and is as follows:—

*Hot Dishes.*—160 tureens of soup; 80 of turtle; 40 of rice; 40 of vermicelli; 80 dishes of turbot; 40 of trout; 40 of salmon; 80 dishes of venison; 40 of roast beef; 3 barons of beef; 40 dishes of mutton and veal; 160 dishes of vegetables; 480 sauce boats; 240 lobsters; 120 of butter; 120 of mint.—*Cold Dishes.*—80 of braised ham; 80 of savoury pies; 80 of geese, *d la daube*, two in each dish; 80 of savoury cakes; 80 of braised beef; 80 of braised capons, two in each dish; 1190 side dishes; 320 of mounted pastry; 400 of jellies and creams; 80 of lobsters; 80 of cray-fish; 161 of roast fowls; 80 of house lamb.

*Total Quantities.*—Beef, 7442 lbs.; veal, 7133 lbs.; mutton, 2474 lbs.; house lamb, 20 quarters; legs of ditto, 20; lamb, 5 saddles; grass lamb, 55 quarters; lamb sweetbreads, 160; cow-heels, 389; calves' feet, 400; suet, 250 lbs.; geese, 160; pullets and capons, 720; chickens, 1610; fowls for stock, 520; bacon, 1730 lbs.; lard, 550 lbs.; butter, 912 lbs.; eggs, 8400.

*The Wines.*—Champagne, 100 doz.; Burgundy, 20 doz.; claret, more than 200 doz.; hock, 50 doz.; Moselle, 60 doz.; Madeira, 60 doz.; sherry and port, about 350 doz.; iced punch, 100 gallons.

*Dessert.*—The glut of fruit was unprecedented: a gentleman of Lambeth cut 60 ripe pine-apples on the occasion; and many hundreds of pines, remarkable for size and flavour, were sent from all parts of the country; one from Lord Cawdor's weighed 10 lbs., and formed part of the royal dessert. The expenses of the above Banquet and the Coronation together amounted to more than 268,000*l.* The Coronation (crowning only—no banquet) of William IV. did not cost 50,000*l.*

Besides the Coronation Banquets, we have record of many others from the earliest time. On New Year's Day, 1236, King Henry the Third feasted 6000 poor men, women, and children. In 1241 the same King sumptuously entertained there the Pope's Legate and his nobility; and again in 1243 he celebrated there the nuptials of his brother, Richard, Earl of Cornwall, with a banquet, at which it is said there were no less than 30,000 dishes, though where room was found for them it is difficult to imagine. When the repairs of the Hall were completed in 1399, King Richard the Second is recorded to have plentifully entertained 10,000 in it: it is cautiously noted, "in other rooms of the palace;" for it is clear that the guests would not otherwise have had elbow-room. Fabian relates in his *Chronicle* that Henry the Seventh, in the ninth year of his reign, kept a royal feast there; and the same King used the Hall for certain entertainments under the name of "disguisings," which were exhibited to the people at Christmas; and we have the following proof that they were provided or assisted by the Government. An entry occurs in the Issue Roll of a payment of 2*l.* 3*s.* 5*d.* (a large sum in those days) to Richard Doland, "for providing certain spectacles or theatres, commonly called scaffolds," for these performances.

Westminster Hall is called the *Great Hall*, to distinguish it from the *Little* or *Lesser Hall*, the House of Commons after the fire of 1834. The Great Hall is erroneously stated to be the widest in Europe without any intermediate support, for there are two roofs in Italy which surpass it. The next largest ancient apartment in England is the dormitory attached to the great monastery of Durham.

In the hall have been found, in a crevice of the masonry of the old walls, the leather sheath of a knife, stamped with fleurs-de-lis and with lions passant, together with a quantity of bones, &c., remnants of the royal feasts held in the hall, and which had probably, together with the sheath, been dragged into the holes and crevices by rats and mice.

### WHITECHAPEL,

"A VERY extraordinary spacious street, between Whitechapel Bars (to which the freedom reaches) W., and the road to Mile-end E." (*Hatton*, 1708). It was, until the construction of the Eastern Counties Railway, the great Essex road: hence its numerous inns, some with old galleried yards. Upon the south side, west end, among the butchers' shops, is No. 76, a picturesque house-front, bearing the Prince of Wales's feathers and H. S. (Henry Stuart), the arms of Westminster, the fleur-de-lis of France, and the thistle of Scotland. On the north side was a prison for debtors, in the manor of Stepney, under the sum of 5*l.*, of which there is in the Beaufoy Collection a Token, 1656; also a Whitechapel pawnbroker's Token, thought to be unique Defoe lived here in safety during the Great Plague year; and he describes the richer sort

of people thronging out of town from the City by this road, with their families and servants. Whitechapel has been sanitarily improved by the furnaces of the factories consuming their own smoke. In Wentworth-street are the *Model Baths and Wash-houses*, established 1815. *St. Mary's Church*, Whitechapel, is described at p. 146. Here was the offensive altar-piece, painted by W. Fellowes, in which Judas the traitor greatly resembled Dean Kennet (*see* the print in the Society of Antiquaries' Library); the picture, now in St. Albans Abbey-church, is attributed to Sir James Thornhill. In Colchester-street, Leman-street, in 1854, was burnt the house No. 1, built 1637, and noted as the rendezvous of Claude Duval, the highwayman. Near the lower end of Whitechapel-lane was a Roman cemetery, in which was found, in 1776, a monumental stone inscribed to a soldier of the 24th legion. In 1854, there was living in the Whitechapel-road a corn-dealer aged 107, active in business as a man of 60. At No. 267, Whitechapel-road, is the Bell-foundry of Chas. and Geo. Mears, where have been cast many thousands of single bells: they have often 30 tons of molten metal in their furnaces. Here were cast, in 1835, "the New Great Tom of Lincoln," 5 tons 8 cwt.; the Great Bell of Montreal, 13 tons 10 cwt.; Great Peter of York, 11 tons; the bells of the New Royal Exchange, &c. And here was re-cast the Great Bell for Westminster clock, "St. Stephen," described at p. 44.

#### WHITEFRIARS,

THE streets, lanes, and alleys between Water-lane (now Whitefriars-street) and the Temple, and Fleet-street and the Thames; formerly the site of the house and gardens of a convent of Carmelites, or White Friars, founded by Sir Richard Gray in 1241, upon ground given by King Edward I. The church was rebuilt by Hugh Courtenay, Earl of Devon, about 1350; and Robert Marshall, Bishop of Hereford, about 1420, added the steeple, as shown in the Sutherland View of London, 1543. Stow gives a long list of benefactors and nobles buried in the church. At the Reformation, the chapter-house was given by Henry VIII. to his physician, Dr. Butts. In the next reign, the church, with its stately tombs, was demolished; and in its place were "many fair houses built, lodgings for noblemen and others" (*Stow*). Here lived Sir John Cheke, Tutor and Secretary of State to Edward VI. The hall or refectory of the dissolved monastery was used as the Whitefriars Theatre. The precinct had long possessed the privileges of Sanctuary, which were confirmed by charter of James I. in 1608; hence it became the asylum of characterless debtors, cheats, and gamblers, here protected from arrest: it acquired the cant name of "Alsatia," and is the scene of Shadwell's *Squire of Alsatia*, the characters of which "dare not stir out of White-fryers:" one of its cant-named portions, *Lombard-street* (its "lewd women" were complained of by the Friars in the reign of Edward III.), exists to this day; as does *Lombard-street* in the Southwark Mint. Poets and players were attracted to Whitefriars by the contiguous theatre in Dorset Gardens: dancing-masters and fencing-masters flocked here; and here, in the reign of James I., Turner the fencing-master was assassinated by two ruffians hired by Lord Sanquhar, whose eye Turner had put out during a fencing lesson several years before, but he had been forgiven the accident. The two assassins were hanged opposite Whitefriars gates in Fleet-street; and Lord Sanquhar was hanged in Old Palace-yard. In the Friary-house, Selden lived with Elizabeth, Countess-dowager of Kent, who bequeathed him the mansion: he died here, Nov. 30, 1654, and was buried in the Temple Church. The finest edition of Selden's works, by Wilkins, 3 vols. folio, was printed in Whitefriars by William Bowyer, father and son; their printing-office was the *George Tavern*, Dogwell-court, a scene in Shadwell's *Squire of Alsatia*; in this house, William Bowyer, jun., was born in 1699. The premises are now the printing-office of Bradbury, Evans, and Co., who maintain the excellence of their predecessors. Few other traces of old Whitefriars remain. *Hanging-Sword-Alley*, east of Water-lane, is named from "a house called the Hanging Sword," mentioned by Stow. In Temple-lane are the *Whitefriars Glass-works*, established *circ.* 1700.

The White Friars spared no cost to procure books for their monastery: no book was to be sold, but they had their emissaries provided with money to buy it.

## WHITEHALL,

THAT part of Westminster which extends from near Charing Cross to Canon-row, and from the Thames to St. James's Park, was the site of the royal Palace of Whitehall from 1530 to 1697. It was formerly called *York-place*, from having been the town residence of the Archbishops of York: one of whom, Walter de Grey, purchased it in 1248 from the Convent of Black Friars of Holborn, to which it had been bequeathed by Hubert de Burgh, the Justiciary of England, and famous minister of Henry III., who had bought the inheritance from the monks of Westminster for 140 marks of silver. The property was conveyed by Walter de Grey to his successors in the see of York. Cardinal Wolsey was the last Archbishop of York by whom the palace was inhabited: he built extensively, and "lived a long season" here, in sumptuous state:

"Where fruitful Thames salutes the learnèd shore  
Was this grave prelate and the muses plac'd,  
And by those waves he *buildd* had before  
A royal house with learnèd muses grac'd,  
But by his death imperfect and defac'd."

Storer's *Metrical History of Wolsey*, 1599.

Upon the fall of Wolsey, in 1529, York Place was taken from him by Henry VIII., and the broken-hearted prelate left in his barge on the Thames for Esher. The name of the palace was then changed to White Hall,\* possibly from some new buildings having been constructed of white stone, at a time when bricks and timber were generally used,—

"You must no more call it York Place—that is past:  
For since the Cardinal fell, that title's lost;  
'Tis now the King's, and call'd White Hall."

Shakspeare's *King Henry VIII.*, act iv. sc. 1.

Here Henry and Anne Boleyn were married in a garret of the palace, says Lingard; Stow says, in a closet. Henry built a noble stone gallery, from which, in 1539, he reviewed 15,000 armed citizens: from this gallery also the court and nobility witnessed the jousts and tournaments in the Tilt-yard, now the parade-ground of the Horse Guards. The King "most sumptuously and curiously buildd many beautiful, costly, and pleasant lodgings, buildings, and mansions;" and added a tennis-court, bowling-alleys, and a cock-pit, "for his pastime and solace."

Whitehall was seven years in building; and in 1536 (the old palace of Edward the Confessor having been in utter ruin and decay since the fire in 1512), it was enacted by Parliament that all the ground, mansion and buildings, the park, and the entire space between Charing Cross and the Sanctuary at Westminster, from the Thames on the east side to the park-wall westward, should be cleared and called the King's Palace of Westminster. Here Henry VIII. assembled many pictures, which afterwards became the nucleus of the splendid collection of Charles I. Henry made munificent proposals to Raphael and Titian, and the former painted for him a "St. George." The King also took into his service Hans Holbein, and gave him apartments at Whitehall, with a pension, besides paying him for his pictures. Holbein built, opposite the entrance to the Tilt-yard, a magnificent Gate-house, of small squared stones and flint boulder, glazed and tessellated: on each front were four terra-cotta busts, naturally coloured, and gilt. This gate was removed in 1750, when it was begged by William Duke of Cumberland, son of George II., with the intention of rebuilding it in the Great Park at Windsor; the stones were numbered for this purpose, which was never fulfilled. Three of the busts, Henry VII. and VIII. and Bishop Fisher, are now at Hatfield Priory, Essex. The Gate-house was used as a State-paper Office many years before its removal, and was known as the Cockpit Gate. At Whitehall, on December 30, 1546, Henry signed his will, and on January 28 expired. Edward VI. held a Parliament at Whitehall:

1553. "And this yere the furst day of (March was the) parliament, and kepte wythin the kyngcs pallys at Westmyster, Whythalle."—*Chron. Grey Friars Lond.*

\* The "White Hall" was a name not unfrequently given by our ancestors to the festive halls of their habitations: there was a White Hall at Kenilworth; and the Hall formerly the House of Lords was the White Hall of the royal Palace of Westminster, and is so called by Stow.

Bishop Latimer preached before the Court in the Privy Garden, the King sitting at one of the palace windows. Queen Mary went from Whitehall by water to her coronation at Westminster, Elizabeth bearing the crown before her. Whitehall palace was attacked by Sir Thomas Wyatt's rebels, who "shotte divers arrowes into the courte, the gate beyng open;" and looking out over the gate, the Queen pardoned the Kent men, with halters about their necks. From the palace the Princess Elizabeth was taken captive to the Tower on Palm Sunday, 1554. At Whitehall, November 13, 1555, died Gardiner, Bishop of Winchester and Lord Chancellor of England, at midnight, exclaiming: "I have sinned, I have not wept with Peter." Hentzner describes, in 1598, Elizabeth's library of Greek, Latin, Italian, and French books; a little one, in her own handwriting, addressed to her father; and a book of prayers written by Elizabeth in five languages, with her own miniature and that of her suitor, the Duc d'Anjou. In her 67th year, "she appoints a Frenchman to doe feates upon a rope in the conduit court. To-morrow she hath commanded the bear, the bull, and the ape to be bayted in the tilt-yard. Upon Wednesday she will have solemn dawncing." (*Rowland White*.) Elizabeth revived the pageants and joustings at Whitehall; and here she built "the Fortress or Castell of perfect Beautie," a large wooden banquetting-house on the north-west side of the palace. In 1561 Sackville and Norton's tragedy of *Ferrex and Porrex* was acted here by gentlemen of the Inner Temple. In the great gallery, Elizabeth received the Speaker and Commons House, when they came "to move her grace to marriage." On March 24, 1603, "then deceased," from Richmond, "the Queen was brought by water to Whitehall."

In the Orchard of Whitehall the Lords in Council met; and in the Garden, James I. knighted 300 or 400 judges, serjeants, doctors-at-law, &c. Here the Lord Monteagle imparted to the Earl of Salisbury the warning letter of the Gunpowder Plot; Guy Fawkes was examined in the King's bedchamber, and carried hence to the Tower. In 1617, when James visited Scotland, Lord Keeper Bacon resided at Whitehall. James I., in 1608, had "the old, rotten, slight-builde Banqueting House" removed, and next year rebuilt; but it was destroyed by fire in 1619. In this reign were produced many "most glorious masques" by Inigo Jones and Ben Jonson; and Inigo designed a new palace, the drawings for which are preserved in Worcester College, Oxford.

In magnitude, Inigo Jones's plan would have exceeded that of the palace of Diocletian, and would have covered nearly 24 acres. It was to have consisted of seven courts, to have extended 874 feet fronting the Thames, and the same length along the foot of St. James's Park: presenting one front to Charing Cross, of 1200 feet long; and another, the principal, of similar dimensions towards Westminster Abbey. (*See Fourdrinier's large print*.) A more distinct idea may be formed of this extent by comparing it with that of other palaces: thus, Hampton Court covers 8 or 9 acres, St. James's 4, Buckingham 2½ acres.

Of Jones's magnificent design, only the *Banqueting-house* was completed. Charles I. commissioned Rubens to paint the ceiling, and by his agency obtained the Cartoons of Raphael. In the Cabinet-room of the palace, built also by Inigo Jones, fronting westward to Privy Garden, Charles assembled pictures of almost incalculable value; the royal collection containing 460 paintings, including 28 by Titian, 11 by Correggio, 16 by Julio Romano, 9 by Raphael, 4 by Guido, and 7 by Parmegiano. Upon the Civil War breaking out, Whitehall was seized by the Parliament, who, in 1645, had "the boarded masque-house" pulled down, sold great part of the paintings and statues, and burnt the "superstitious pictures." Here, Jan. 30, 1649, in the Cabinet-room Charles last prayed; in the Horn-chamber he was delivered to the officers, and thence led out to execution upon a scaffold in front of the Banqueting-house.

The King was taken on the first morning of his trial, Jan. 20, 1649, in a sedan-chair, from Whitehall to Cotton House, where he slept pending his trial in Westminster Hall; after which the king returned to Whitehall; but on the night before his execution he slept at St. James's. On Jan. 30 he was "most barbarously murdered at his own door, about two o'clock in the afternoon." (*Histor. Guide*, 3d imp., 1688.) Lord Leicester and Dugdale state that Charles was beheaded at Whitehall gate. The scaffold was erected in front of the Banqueting-house, in the street now Whitehall; and Herbert states that the king was led out by "a passage broken through the wall," on to the scaffold; but Ludlow states that it was out of a window, according to Vertue, of a small building north of the Banqueting-house, whence the king stepped upon the scaffold. A picture of the sad scene, painted by Weesop, in the manner of Vandyke, shows the platform, extending only in length, before two of the windows, to the commencement of the third casement. Weesop visited England from Holland in 1641, and quitted England in 1650, saying "he would never reside in a country where they cut off their king's head, and were not

ashamed of the action."—(See painful inquiries upon the identity of the place of execution, in *Notes and Queries*, 3rd s. iii. 213, 292; iv. 195.)

Cromwell, by vote of Parliament in 1650, had "the use of the lodging called the Cockpit, of the Spring Garden, and St. James's House, and the command of St. James's Park," for some time before he assumed the supreme power. To Whitehall, in 1653, April 20th, he returned with the keys in his pocket, after dissolving the Long Parliament, which he subsequently explained to the Little or Barebones Parliament assembled in the Council-chamber of Whitehall. Here the Parliament desired Cromwell to "magnify himself with the title of King;" here Milton was Cromwell's Latin Secretary, Andrew Marvell his frequent guest, with Waller his friend and kinsman, and sometimes the youthful Dryden. Cromwell repurchased the Cartoons and many other pictures, and in 1656 Evelyn found the palace "very glorious and well-furnished." Here Cromwell expired, Sept. 3, 1658, "the double day of victory and death." Richard Cromwell resided here. Charles II., at the Restoration, came in grand procession of seven hours from the City to Whitehall. To the Lords Commissioners of the Treasury Charles assigned the Cockpit; and in this locality their chambers have ever since remained. Charles collected by proclamation the plate, hangings, and paintings, which had been pillaged from the palace: he also built a stone gallery to flank Privy Garden, and below it suites of apartments for his "Beauties." Evelyn describes the Duchess of Portsmouth's apartment, "twice or thrice pulled down and rebuilt to satisfy her prodigal and expensive pleasures;" its French tapestry, "Japan cabinets, screens, pendule clocks, great vases of wrought plate, table-stands, chimney-furniture, scones, branches, brasenas, &c., all of massive silver, and out of number." Evelyn also sketches a Sunday evening in the palace:

"The king sitting and toying with his concubines, Portsmouth, Cleveland, and Mazarin, &c.; a French boy singing love-songs in those glorious galleries; whilst about twenty of the great courtiers and other dissolute persons were at Basset round a large table, a bank of at least 2000*l.* in gold before them. Six days after all was in the dust."

In Vertue's plan are shown the buttery, bakehouse, wood and coal yards, charcoal-house, spicery, cider-house; and, beneath the Banqueting-house, the king's privy cellar. Owing to its low level, Whitehall was liable to floods from the Thames. Pepys, in 1663, records a high tide having drowned the whole palace; and Charles II., when he received the Lords and Commons in the Banqueting-hall at the Restoration, desires them to mend the ways, so that his wife "may not find Whitehall under water."

At Whitehall Charles collected about 1000 volumes, dedicated or presented to him: including an illuminated Breviary given by Henry VII. to his daughter, Margaret Queen of Scots, with his autograph; a curious MS. in high Dutch on the Great Elixir; a French MS. 300 years old, with paintings of plants in miniature; and a journal, &c. in the handwriting of Edward VI. Charles II. died at Whitehall, Feb. 6, 1685; and his successor was immediately proclaimed at the palace-gate. James II. resided here: he washed the feet of the poor with his own hands on Maundy Thursday in the Chapel Royal: here he admitted Penn, the Quaker, to his private closet; and he rebuilt the chapel for Romish worship, with marble statues by Gibbons, and a fresco by Verrio. The King also erected upon the Banqueting-house a large weathercock, that he might calculate by the wind the probable arrival of the Dutch fleet. (See Canaletti's view.) On Dec. 18, 1688, James left Whitehall in the state-berge, never to return. In 1691 a destructive fire reduced the palace to "nothing but walls and ruins:" 150 houses were burned down, and twenty blown up with gunpowder. In 1697 a fire broke out in the laundry; all the pictures in the palace were destroyed, and twelve persons perished. The remaining portions of the site of Whitehall were given away by the Crown. Charles Duke of Richmond had a mansion on the south-east side of Privy Garden: it was rebuilt from a plan by the Earl of Burlington, and was burnt down in 1791; its site is now occupied by Richmond-terrace.

His Grace was a liberal patron of the fine arts, and in 1758 ordered a room to be opened at his house in Whitehall, containing a large collection of original plaster casts, from the best antique busts and statues at Rome and Florence, to which all artists, and youths above twelve years of age, had ready access: he also bestowed two medals annually on those who executed the two best models.

In Privy Garden was also built *Pembroke House*; and subsequently, *Gwydir House*, now the Office of the Poor-Law Board.

*Gardens and Dials.*—Whitehall gardens were laid out in terraces and parterres, and ornamented with marble and bronze statues, a few of which are now at Hampton Court and Windsor. In Privy Garden was a dial set up by Edward Gunter, professor of astronomy at Gresham College (and of which he published a description), by command of James I.; in 1624. A large stone pedestal bore four dials at the four corners, and "the great horizontal concave" in the centre; besides east, west, north, and south dials at the sides. In the reign of Charles II. this dial was defaced by an intoxicated nobleman of the Court:

"This place for a dial was too unsecure,  
Since a guard and a garden could not defend;  
For so near to the Court they will never endure  
Any witness to show how their time they misspend."—*Marvell*.

In the court-yard facing the Banqueting-house was another curious dial, set up in 1669 by order of Charles II. It was invented by one Francis Hall, *alias* Lyne, a Jesuit, and professor of mathematics at Liège. This dial consisted of five stages rising in a pyramidal form, and bearing several vertical and reclining dials, globes cut into planes, and glass bowls; showing "besides the heures of all kinds," "many things also belonging to geography, astrology, and astronomy, by the sun's shadow made visible to the eye." Among the pictures were portraits of the King, the two Queens, the Duke of York, and Prince Rupert. Father Lyne published a description of this dial, which consisted of seventy-three parts: it is illustrated with seventeen plates. (The details are condensed in No. 400 of the *Mirror*.) About 1710, William Allingham, a mathematician in Canon-row, asked 500*l.* to repair this dial: it was last seen by Vertue at Buckingham House.

Remains of ancient Whitehall have been from time to time discovered. In 1831, Mr. Sydney Smirke, F.S.A., in the basement of "Cromwell House," Whitehall-yard, found a stone-built and groined Tudor apartment—undoubtedly a relic of Wolsey's palace, and corresponding with the wine-cellar in Vertue's plan,—which is remarkably larger than the chapel. Mr. Smirke also found a Tudor arched doorway, with remains of the arms of Wolsey and the see of York in the spandrels; a portion of the river-wall and circular bastions; and two stone mullioned Tudor windows, at the back of the Almonry-office, corresponding with the back wall of the apartments of "the Yeomen of the Wood-yard," in Vertue's plan. In 1847 were removed the last remains of York House, a Tudor embattled doorway, which had been built into a later façade of the Treasury. (*Archæologia*, vol. xxv.)

Among the relics, comparatively but little known, is a range of chambers, with groined roofings of stone, at the Rolls Offices in Whitehall-gardens, which, probably, are a portion of the ancient palace of Whitehall. Part of the external wall of these remains is still visible opposite the statue of James II.—*H. Mogford, F.S.A.*

Upon the site of the small-beer cellar (engraved in No. 4 of Hollar's prints of Whitehall) is the house of the Earl of Fife. Here were some fine Gobelins tapestry; a marble picture of Mary Stuart, with her infant; and in Pennant's time here was a head of Charles I. when Prince of Wales, said to have been painted at Madrid by Velasquez, in 1625.\* The mansion was sold, in 1809, for 12,000*l.* to the Earl of Liverpool, who possessed it until his death in 1823. In an adjoining wall is the Tudor arched entrance to the palace water-stairs. In Privy Garden was the celebrated Museum formed by the Duchess of Portland: here Pennant was shown a rich pearl surmounted with a crown, which was taken out of the ear of Charles I. after his head was struck off: here also was the Barberini or Portland Vase, purchased by the Duchess of Sir William Hamilton for 1800 guineas. The museum was sold by auction, in lots, April 24, 1786, when the vase was bought by the Duke of Portland for 1029 guineas, and deposited by his grace in the British Museum in 1810.

In *Whitehall Yard* is the UNITED SERVICE INSTITUTION MUSEUM, described at page 545. No. 3 is the Office of the Comptroller General of the Exchequer, where is held "the Trial of the Pyx."

\* In 1845, Mr. Snare, of Reading, bought at a sale of pictures at Radley Hall a painting which he believed to be "the lost portrait" of Prince Charles by Velasquez, and so denoted by the Earl of Fife in a catalogue of his pictures at Fife House, in 1798. (*See Account of the Picture, &c. Reading, 1847.*)

Observant persons in Whitehall have been puzzled by the quaint wind vane which has lately surmounted the flagstaff of the Royal United Service Institution. It is an importation from Ireland, and represents a field gun being fired by a gunner of the Royal Artillery in the uniform of 1800.

For 120 years it swung over the roof of the Dublin Ship-street Barracks, and, with the passing of the old order of things, was presented to the Institution by the G.O. Commanding-in-Chief in Ireland.

In its present position it will keep company with the vane on the adjoining historic Banqueting House, which was so anxiously watched by James II. to see how stood the wind for the Prince of Orange's expedition.

om, and takes place every five, six, or seven years, at t of trial of the Masters and Officers of the Mint, to is pure and standard gold and silver, fair weights, t goldsmiths being sworn, the Master of the Mint quires six men to carry it, contains several thousand illings, sixpenny, and threepenny pieces—the results soon as the chest is full the trial must take place. containing "the pyx," that is, a plate of gold and pyx is always kept in the ancient chapel at West- lator of the Exchequer, and Treasury, each possessing t. After the usual formalities, the Lord Chancellor e from the gold and the other from the silver, and hs, by whom the assay is to be made. After this the ed up, while the jury and the chief clerk, with the ere the coins from the Mint pix box are assayed by e actual process are well described in the *Times*,

called by the old name, *Privy Garden*) is s SIR ROBERT PEELE'S (see p. 555). No. 7 Harrington's): in 1854, it was fitted up for

d, named from its having been the site of otland, when they came to the Parliament has been objected that Scotland has always of possession under the Edwards excepted. the Palace to have been built by Kenneth iven him by King Edgar, for his making the kingdom of Scotland: but this account

"The Scottish Kings appear to have been anciently regarded as members of the English Parliament; and there are instances, among the Tower records, of the issuing of writs to summon their attendance. In Pinkerton's *Iconographia Scotica* is engraved Edward I. sitting in Parliament, with Alexander, King of Scots, on his right, and Llewellyn, Prince of Wales, on his left hand: this is stated to have been taken from a copy of an ancient limning, formerly in the English College of Arms. When the Scottish Sovereigns, in later times, attended to do homage for their fiefs of Cumberland and Westmoreland, they usually lodged in their palace, in Scotland-yard."—NOTE: in Brayley's *Londoniana*, ii. 277-8.

Scotland-yard is now the head-quarters of the Metropolitan Police. See pp. 681—683.

Here are *Palace-row*, and a large Conduit-house. Milton, when Latin Secretary to Cromwell, had apartments in Scotland-yard, where died the poet's infant son. The Crown Surveyor had his official residence in Scotland-yard; and here lived Inigo Jones, Sir John Denham, and Sir Christopher Wren, who successively filled the above office.

Near his house in Scotland-yard, Inigo Jones, uniting with Nicholas Stone, the sculptor, buried his money in a private place. "The Parliament published an order encouraging servants to inform of such concealments; and as four of the workmen were privy to the deposit, Jones and his friend removed it privately, and with their own hands buried it in Lambeth Marsh."—*Life* by Cunningham.

Here Sir John Vanbrugh built himself a house out of the ruins of Whitehall Palace: Swift has ridiculed the house of "brother Van" for its resemblance to a goose-pie: Vanbrugh died here in 1726.

#### WINDOWS OF PAINTED AND STAINED GLASS.

THE more noteworthy specimens in the Metropolis are incidentally noticed in describing the edifices which contain them. The following are recent additions:—

*St. Paul's Cathedral.*—One of a series of windows is that presented by Mr. Thomas Brown, late of the house of Longman and Co.—the subjects depicted being from the Life of St. Paul. The cartoons were designed by Schnorr, and Professor Strähuber is the artist, who was asked by Schnorr himself to carry his designs into effect. Inspector von Ainmiller was requested in like manner to take in hand the architectural accessories. The window is divided into two parts. The upper and principal part represents the "Vision" seen by the Apostle, and in the lower portion Ananias is seen coming to St. Paul when blind. To the right and left, the donor and his wife are represented in a kneeling posture, and beneath are their coats of arms and other decorations. The composition and the architectural portion—chiefly from *motifs* by the English architect, Penrose, who superintended the works of restoration—arc excellent.

*Gardens and Dials.*—Whitehall gardens ornamented with marble and bronze statues in Court and Windsor. In Privy Garden was a dial of astronomy at Gresham College (and of command of James I.; in 1624. A large stone dial and "the great horizontal concave" in the south dials at the sides. In the reign of Charles II. the celebrated nobleman of the Court:

"This place for a dial was too unsuitable.  
Since a guard and a garden could be had  
For so near to the Court they will be  
Any witness to show how they were used."

In the court-yard facing the Banqueting-house, built in 1669 by order of Charles II. It was invented by a Jesuit, and professor of mathematics at Liège, in a pyramidal form, and bearing several vertical planes, and glass bowls; showing "besides the dial, belonging to geography, astrology, and astrology, the eye." Among the pictures were portraits of King Charles of York, and Prince Rupert. Father Lyne, a mathematician in Canon-row, asked 500*l.* to repair Buckingham House.

Remains of ancient Whitehall have been found in Mr. Sydney Smirke, F.S.A., in the basement of "Cromwell House," Whitehall-yard, found a stone-built and groined Tudor apartment—undoubtedly a relic of Wolsey's palace, and corresponding with the wine-cellar in Vertue's plan,—which is remarkably larger than the chapel. Mr. Smirke also found a Tudor arched doorway, with remains of the arms of Wolsey and the see of York in the spandrels; a portion of the river-wall and circular bastions; and two stone mullioned Tudor windows, at the back of the Almonry-office, corresponding with the back wall of the apartments of "the Yeomen of the Wood-yard," in Vertue's plan. In 1847 were removed the last remains of York House, a Tudor embattled doorway, which had been built into a later façade of the Treasury. (*Archæologia*, vol. xxv.)

Among the relics, comparatively but little known, is a range of chambers, with groined roofings of stone, at the Rolls Offices in Whitehall-gardens, which, probably, are a portion of the ancient palace of Whitehall. Part of the external wall of these remains is still visible opposite the statue of James II.—*II. Mogford, F.S.A.*

Upon the site of the small-beer cellar (engraved in No. 4 of Hollar's prints of Whitehall) is the house of the Earl of Fife. Here were some fine Gobelins tapestry; a marble picture of Mary Stuart, with her infant; and in Pennant's time here was a head of Charles I. when Prince of Wales, said to have been painted at Madrid by Velasquez, in 1625.\* The mansion was sold, in 1809, for 12,000*l.* to the Earl of Liverpool, who possessed it until his death in 1828. In an adjoining wall is the Tudor arched entrance to the palace water-stairs. In Privy Garden was the celebrated Museum formed by the Duchess of Portland: here Pennant was shown a rich pearl surmounted with a crown, which was taken out of the ear of Charles I. after his head was struck off: here also was the Barberini or Portland Vase, purchased by the Duchess of Sir William Hamilton for 1800 guineas. The museum was sold by auction, in lots, April 24, 1786, when the vase was bought by the Duke of Portland for 1029 guineas, and deposited by his grace in the British Museum in 1810.

In *Whitehall Yard* is the UNITED SERVICE INSTITUTION MUSEUM, described at page 545. No. 3 is the Office of the Comptroller General of the Exchequer, where is held "the Trial of the Pyx."

\* In 1845, Mr. Snare, of Reading, bought at a sale of pictures at Radley Hall a painting which he believed to be "the lost portrait" of Prince Charles by Velasquez, and so denoted by the Earl of Fife in a catalogue of his pictures at Fife House, in 1798. (*See Account of the Picture, &c. Reading, 1847.*)

The ceremony of the Pyx is a very ancient custom, and takes place every five, six, or seven years, at the above offices, or in Old Palace-yard. It is a sort of trial of the Masters and Officers of the Mint, to ascertain if the coinage which they have issued is pure and standard gold and silver, fair weights, and proper quantities of alloy. A jury of eminent goldsmiths being sworn, the Master of the Mint produces the great pyx box. The chest, which requires six men to carry it, contains several thousand sovereigns and some silver—principally florins, shillings, sixpenny, and threepenny pieces—the results of the accumulation since the previous trial. As soon as the chest is full the trial must take place. The chief clerk of the Exchequer produces the box containing “the pyx,” that is, a plate of gold and one of silver, made in the time of George III. The pyx is always kept in the ancient chapel at Westminster; the Controller of the Exchequer, Chancellor of the Exchequer, and Treasury, each possessing a separate key of the box in which the pix is kept. After the usual formalities, the Lord Chancellor cuts off two strips of metal from the pix plates, one from the gold and the other from the silver, and hands them to the foreman of the jury of goldsmiths, by whom the assay is to be made. After this the pix is taken back to the Chapter-house and locked up, while the jury and the chief clerk, with the standard weights, proceed to Goldsmiths’ Hall, where the coins from the Mint pix box are assayed by the acid test and weight. The ceremony and the actual process are well described in the *Times*, Jan. 20, 1866.

In *Whitehall Gardens* (till our time called by the old name, *Privy Garden*) is MONTAGUE HOUSE (see p. 553); No. 4 is SIR ROBERT PEEL’S (see p. 555). No. 7 is *Pembroke House* (formerly the Earl of Harrington’s): in 1854, it was fitted up for the War Minister.

WHITEHALL commences at *Scotland-yard*, named from its having been the site of the palace “for receipt of the Kings of Scotland, when they came to the Parliament of England:” to this statement by Stow, it has been objected that Scotland has always been an independent nation—a short period of possession under the Edwards excepted. Strype, quoting a pamphlet of 1548, states the Palace to have been built by Kenneth III., King of Scotland, in 959, on ground given him by King Edgar, for his making thither an annual journey to do homage for the kingdom of Scotland: but this account is less credited than Stow’s.

“The Scottish Kings appear to have been anciently regarded as members of the English Parliament; and there are instances, among the Tower records, of the issuing of writs to summon their attendance. In Pinkerton’s *Iconographia Scotica* is engraved Edward I. sitting in Parliament, with Alexander, King of Scots, on his right, and Llewellyn, Prince of Wales, on his left hand: this is stated to have been taken from a copy of an ancient limning, formerly in the English College of Arms. When the Scottish Sovereigns, in later times, attended to do homage for their fiefs of Cumberland and Westmoreland, they usually lodged in their palace, in Scotland-yard.”—NOTÆ: in Brayley’s *Londiniana*, ii. 277-8.

Scotland-yard is now the head-quarters of the Metropolitan Police. See pp. 681—683.

Here are *Palace-row*, and a large Conduit-house. Milton, when Latin Secretary to Cromwell, had apartments in Scotland-yard, where died the poet’s infant son. The Crown Surveyor had his official residence in Scotland-yard; and here lived Inigo Jones, Sir John Denham, and Sir Christopher Wren, who successively filled the above office.

Near his house in Scotland-yard, Inigo Jones, uniting with Nicholas Stone, the sculptor, buried his money in a private place. “The Parliament published an order encouraging servants to inform of such concealments; and as four of the workmen were privy to the deposit, Jones and his friend removed it privately, and with their own hands buried it in Lambeth Marsh.”—*Life* by Cunningham.

Here Sir John Vanbrugh built himself a house out of the ruins of Whitehall Palace: Swift has ridiculed the house of “brother Van” for its resemblance to a goose-pie: Vanbrugh died here in 1726.

## WINDOWS OF PAINTED AND STAINED GLASS.

THE more noteworthy specimens in the Metropolis are incidentally noticed in describing the edifices which contain them. The following are recent additions:—

*St. Paul’s Cathedral*.—One of a series of windows is that presented by Mr. Thomas Brown, late of the house of Longman and Co.—the subjects depicted being from the Life of St. Paul. The cartoons were designed by Schnorr, and Professor Strähuber is the artist, who was asked by Schnorr himself to carry his designs into effect. Inspector von Ainmiller was requested in like manner to take in hand the architectural accessories. The window is divided into two parts. The upper and principal part represents the “Vision” seen by the Apostle, and in the lower portion Ananias is seen coming to St. Paul when blind. To the right and left, the donor and his wife are represented in a kneeling posture, and beneath are their coats of arms and other decorations. The composition and the architectural portion—chiefly from *motifs* by the English architect, Penrose, who superintends the works of restoration—are excellent.

*The Guildhall.*—Amongst the enrichments of the Hall are several windows, one of which, presented by Mr. Cornelius Lea Wilson, is of fine historical design, by Gibbs. It is in four compartments, the subjects being the presentation of the four principal charters of the City; the figures are richly coloured and jewelled on diapered backgrounds, and are surmounted by canopies on a rich ruby ground; the arms of the City and those of the donor are introduced in the tracery lights. The first subject is William the Conqueror holding in his hand the first charter granted to the City. The second subject is Henry I. presenting the charter granting to the City to hold Middlesex with London, and the right of hunting in the forests. The third subject is Richard I. granting the charter to the City of the conservancy of the river Thames, in order that the fishery might be nurtured and preserved, and the navigation encouraged and protected. The fourth and last subject is Edward VI. presenting the charter of the four Royal Hospitals.

A large specimen of Glass-painting was exhibited at No. 15, Oxford-street, in 1830.

The subject was the Tournament of the Field of Cloth-of-Gold, between Henry VIII. and Francis I., at Ardres; the last tourney, June 25, 1520: painted by Thomas Wilmshurst (the horses by Woodward), from a sketch by R. T. Bone. This window was 432 square feet, or 18 by 24 feet; and consisted of 350 pieces, fitted into metal astragals, falling with the shadows, so that the whole picture appeared an entire sheet of glass; it was exhibited in a first-floor room, decorated in the taste of the time of Henry VIII. The picture was composed from the details of Hall's Chronicle, and contained upwards of 100 life-sized figures (40 portraits, mostly after Holbein): including the two Queens, Wolsey, Anne Boleyn, and the Countess of Chateaubriant; Charles Brandon, Duke of Suffolk; Queen Mary, Dowager of France; the ill-fated Duke of Buckingham, &c. The gorgeous assemblage of costume, gold and jewels, waving plumes, glittering arms, velvet, ermine, and cloth-of-gold, with heraldic emblazonry, picturesquely managed. The work cost the artist 3000*l.* On the night of Jan. 31, 1832, the house was destroyed in an accidental fire, and with it the picture; not even a sketch or study was saved, and the property was wholly uninsured.

#### ZOOLOGICAL SOCIETY'S GARDENS,

UPON the north-west side of the Regent's Park, consist of a triangular garden south of the outer road, and a northern garden upon the banks of the Regent's Canal: they are connected by a tunnel beneath the road, and their extent is about 17 acres. The soil being originally the London clay very near the surface, was cold and damp, and, for a time, caused great mortality among the animals of the Menagerie; but the whole has been thoroughly drained and tastefully planted.

The Zoological Society was instituted in 1826, "for the general advancement of zoological science." It had been proposed

"The great objects should be, the introduction of new varieties, breeds, and races of animals, for the purpose of domestication or for stocking our farm-yards, woods, pleasure-grounds, and wastes; with the establishment of a general zoological collection, consisting of prepared specimens in the different classes and orders, so as to afford a correct view of the Animal Kingdom at large, in as complete a series as may be practicable; and at the same time point out the analogies between the animals already domesticated, and those which are similar in character, upon which the first experiments may be made. \* \* \* \* Should the Society flourish and succeed, it will not only be useful in common life, but would likewise promote the best and most extensive objects of the Scientific History of Animated Nature, and offer a collection of living animals such as never yet existed in ancient or modern times."—*Prospectus*, privately circulated, 1824.

Among the founders of the Society were Sir Stamford Raffles, Sir Humphry Davy, Earl Darnley, Sir Everard Home, Mr. Davies Gilbert, Dr. Horsfield, the Rev. W. Kirby, Mr. Sharpe Macleay, and Mr. N. A. Vigors; and into the new Society merged the Zoological Club. At the same time was commenced the formation of a Museum, at No. 33, Bruton-street, with the magnificent collection of Sir S. Raffles. A plot of ground in the Regent's Park was granted to the Society by the government, and laid out by Decimus Burton, who also built the first houses and inclosures for the animals. Sir Francis Chantrey took great interest in the Society, and the embellishment of the Gardens. In 1827, the lake in the Park, with its islands and water-fowl, and a site for breeding and rearing, were likewise granted to the Society. The Gardens were first opened to the public in 1828, by members' orders, and one shilling each person; and during seven months there were upwards of 30,000 visitors: there were then in the Menagerie 430 animals; and the year's expenses were 10,000*l.*

Among the earliest tenants of the Menagerie were a pair of emus from New Holland; two Arctic bears and a Russian bear; a herd of kangaroos; Cuban mastiffs and Thibet watch-dogs; two llamas from Peru; a splendid collection of eagles, falcons,

and owls; a pair of beavers; cranes, spoonbills, and storks; zebras and Indian cows; Esquimaux dogs; armadilloes; and a collection of monkeys. To the collection have since been added an immense number of species of *Mammalia* and *Birds*, lists of which are appended to the several annual Reports. To these was added, in 1849, a collection of *Reptiles*; and in 1853, a collection of *Fish*, *Mollusca*, *Zoophytes*, and other *Aquatic Animals*. Among the royal donors to the collection are the Emperor of Russia, the late Queen of Portugal, the Viceroy of Egypt, and Queen Victoria. In 1830, the menagerie collected by George IV. at Sandpit-gate, Windsor, was removed to the Society's Gardens; and 1834 the last of the Tower Menagerie was received here. It is now the finest public Vivarium in Europe.

The following are some of the more remarkable animals which the Society have possessed, or are now in the Menagerie:—

*Antelopes*, the great family of, finely represented. The beautiful *Elands* were bequeathed by the late Earl of Derby, and have bred freely since their arrival in 1851. The *Leucoryx* is the first of her race born out of Africa. *Ant-eater*, *Giant*, brought to England from Brazil in 1853, and was exhibited in Broad-street, St. Giles's, until purchased by the Zoological Society for 200*l.* (See the admirable paper by Professor Owen.) *Apteryx*, or *Kiwi* bird, from New Zealand; the first living specimen brought to England of this rare bird. The *Fish-house*, built of iron and glass, in 1853, consisting of a series of glass tanks, in which fish spawn, zoophytes produce young, and algæ luxuriate; crustacea and mollusca live successfully, and ascidian polypes are illustrated, together with sea anemones, jelly-fishes and star-fishes, rare shell-fishes, &c.: a new world of animal life is here seen as in the depths of the ocean, with masses of rock, sand, gravel, corallines, sea-weed, and sea-water; the animals are in a state of natural restlessness, now quiescent, now eating and being eaten. *Aurochs*, or *European Bisons*: a pair presented by the Emperor of Russia, in 1847, from the forest of Bialowitzca: the male died in 1848, the female in 1849, from pleuro-pneumonia. *Bears*: the collection is one of the largest ever made. *Elephants*: including an Indian elephant calf and its mother. In 1847 died here the great Indian elephant Jack, having been in the gardens sixteen years. Adjoining the stable is a tank of water, of a depth nearly equal to the height of a full-grown elephant. In 1851 the Society possessed a herd of four *Elephants*, besides a hippopotamus, a rhinoceros, and both species of tapir; being the largest collection of pachydermata ever exhibited in Europe. *Giraffes*: four received in 1836 cost the Society upwards of 2300*l.*, including 1000*l.* for steamboat passage: the female produced six male fawns here between 1840 and 1851. *Hippopotamus*, a young male (the first living specimen seen in England), received from Egypt in May, 1850, when ten months old, seven feet long, and six and a half feet in girth; also a female hippopotamus, received 1854. *Humming-birds*: Mr. Gould's matchless collection of 2000 examples was exhibited here in 1851 and 1852. *Iguanas*, two from Cuba and Carthagenæ, closely resembling, in everything but size, the fossil *Iguanodon*. The *Lions* number generally from eight to ten, including a pair of cubs born in the gardens in 1853. *Orang-utan* and *Chimpanzee*: the purchase-money of the latter sometimes exceeds 300*l.* The orang "*Darby*," brought from Borneo in 1851, is the finest yet seen in Europe, very intelligent, and docile as a child. *Parrot-houses*, the, sometimes contain from sixty to seventy species. *Rapacious Birds*: so extensive a series of eagles and vultures has never yet been seen at one view. The *Reptile-house* was fitted up in 1849; the creatures are placed in large plate-glass cases: here are pythons and a rattle-snake, with a young one born here; here is also a case of the tree-frogs of Europe: a yellow snake from Jamaica has produced eight young in the gardens. *Cobra de Capello*, from India: in 1852, a keeper in the gardens was killed by the bite of this serpent. A large *Boa* in 1850 swallowed a blanket, and disgorged it in thirty-three days. A *one-horned Rhinoceros*, of continental India, was obtained in 1834, when it was about four years old, and weighed 26 *ewt.*; it died in 1850: it was replaced by a female, about five years old. *Satin Bower-Birds*, from Sydney: a pair have built here a bower, or breeding-place. *Tapir* of the Old World, from Mount Ophir; the nearest existing form to the *Paleotherium*. *Tigers*: a pair of magnificent specimens, presented by the Gnicowar of Baroda in 1851; a pair of clouded tigers, 1854. The *Wapiti Deer* breeds every year in the Menagerie.

The animals in the Gardens, although reduced in number, are more valuable and interesting than when their number was higher. The missions of the Society's head-keeper, to collect rare animals for the Menagerie, have been very profitable. The additional houses, from time to time, are very expensive: the new monkey-house, fittings, and works cost 4842*l.*; and in 1864, the sum of 6604*l.* was laid out in permanent additions to the establishment. In 1863, the income amounted to 20,284*l.* 12*s.* 11*d.*—a sum unexampled, except in the two Exhibition years; but the income of 1864 reached 21,713*l.* 13*s.* 10*d.* The visitors of all classes to the Gardens during the year 1864 were 507,169—a number falling little, if at all, short of that of the visitors to the British Museum, which is open to the public gratuitously. The yearly income of the Society may now be reckoned, under ordinary circumstances, to reach the amount of 20,000*l.*; and the ordinary expenses of the present large establishment, 17,000*l.* The greater part of the above large sum is produced by the shillings and sixpences taken at the gates of the Society's Gardens for the admission of visitors. In 1864, upwards of 12,700*l.* accrued to the Society's revenues in this way, and the corresponding amount in each year generally exceeds 10,000*l.* Visitors on Mondays and holidays, who pay only sixpence a head, contribute by far the larger pro-

portion of this sum—their numbers being much more than double those of the visitors on the other days of the week who pay one shilling each.

The number of Fellows and Annual Subscribers at the close of 1866 was 2459. Income, 24,379*l.* Visitors, 527,349. Animals in the Menagerie, 2013; Quadrupeds, 535; Birds, 1305; Reptiles, 173. Expenditure, 22,418*l.*; cost and keep of Animals, 1409*l.* Menagerie expenses, 1058*l.* Provisions, 3837*l.*—New Buildings and Works, 3983*l.*

The Society's Museum, which is in the South Garden, is described at p. 606. An excellent *Guide to the Gardens* is published.

#### ZOOLOGICAL GARDENS, SURREY,

WERE established in 1831, by Mr. Edward Cross, upon the demesne which had been attached to the manor-house at Walworth. Thither Cross removed his menagerie from the King's Mews, where it had been transferred from Exeter Change. The Gardens were laid out by Henry Phillips, author of *Sylva Florifera*; when a glazed circular building, 100 feet in diameter, was built for the cages of the carnivorous animals (lions, tigers, leopards, &c.); and other houses for mammalia, birds, &c. Here, in 1834, was first exhibited a young Indiau one-horned rhinoceros, for which Cross paid 800*l.*; it was the only specimen brought to England for twenty years: in 1836 were added three giraffes, one fifteen feet high. To the zoological attraction was added a large picture-model, upon the borders of the lake, three acres in extent: the first picture, Mount Vesuvius (with the natural lake for the Bay of Naples), was produced in 1837, when fireworks were also first introduced, for the volcanic eruption; in 1839, Iceland and its volcanoes; 1841, the City of Rome; 1843, Temple of Ellora; 1844, London and the Great Fire of 1666; 1845, Edinburgh; 1846, Vesuvius, reproduced; 1848, Rome, reproduced; 1849, Storming of Badajoz. These picture-models, mostly painted by Danson, were of great extent; that of Rome occupying five acres, and a painted surface of 260,000 square feet. They probably originated in the Ranelagh spectacles of the last century; for in 1792 was exhibited there Mount Etna, 80 feet high, with the flowing lava, and altogether a triumph of machinery and pyrotechnics. Balloon-ascents, flower-shows, and other sights, with out-door concerts, were added to the attractions of these Gardens. In 1856, the property was sold, the Menagerie removed, and there was built upon the site the Surrey Music Hall, described at p. 609.

#### THE CRYSTAL PALACE, SYDENHAM.

ALTHOUGH this stupendous structure is not, like its prototype, the 1851 Great Exhibition building in Hyde Park, placed within the limits of the town, the "Curiosities of London" would scarcely be complete without some notice of the contents of the Crystal Palace at Sydenham. It occupies the summit of a hill between the Brighton Railway and the Dulwich Wood, the fall from its site to the railway being 200 feet; the main floor of the Palace being on a level with the cross at the top of St. Paul's Cathedral. In its construction the materials of the 1851 Exhibition building have been employed; but it is larger than its predecessor by 1628 feet, and by nearly one-half in cubic contents. It is almost entirely of iron and glass, covers nearly 16 acres of ground; and its height from the garden-front to the top of the louvres is 208 feet, or 6 feet higher than the Monument. The nave is covered with an arched roof, raising it 44 feet higher than the nave in Hyde Park; and the centre and two end transepts have similar roofs. From there Windsor Castle may be seen on the one side, Knockholt beeches (near Seven Oaks) on the other. Nearly 10,000 tons of iron have been used in the main building and wings; and the superficial quantity of glass is 25 acres.

The Nave is entered at the south end, through an ornamental screen of niches filled with statues of kings and queens by John Thomas. In the area, statues are picturesquely grouped with stupendous pines, palms, and other tropical plants of luxuriant beauty, backed by the brilliant façades of the various Industrial and Fine Arts Courts. East and west are groups illustrating the ethnology, zoology, and botany of the Old and New Worlds; and at each end is a spacious basin, for a fountain to throw up water from 70 to 200 feet. In the Courts, and dispersed throughout the building, are the

works of French and Italian, German and English, Roman and Greek sculptors; and models of celebrated ancient and modern edifices. Throughout the whole Palace are galleries devoted to the exhibition of pictures, sculpture, and other objects of fine art and industry. The most beautiful works are the Courts representing the architecture and sculpture of each nation: Egyptian, Greek, Roman, Pompeian, Alhambra, Assyrian, Byzantine, and Romanesque; German, English, French, and Italian mediæval; Renaissance, Elizabethan, Italian, &c.

The great Orchestra in the centre Transept, erected for the Handel Festivals, is capable of containing four thousand performers. The Handel Festivals are held triennially. The four festivals held in 1857, 1859, 1862, and 1865, were attended by 254,234 persons, the receipts being upwards of 100,000*l.* The large Organ crowning the great Orchestra was built expressly for these festivals by Messrs. Gray and Davison. In width this enormous Orchestra is double the diameter of the dome of St. Paul's.

Up to this time—a period of between thirteen and fourteen years—the Palace has been visited by upwards of twenty-one millions of visitors. On holiday and great fête days it is no uncommon occurrence to find from 40,000 to 60,000 persons attending. On one occasion (a Forester's fête) 83,721 visitors passed the stiles in one day.

The income of the Company annually varies from 120,000*l.* to 140,000*l.* per annum. Of this large sum about 20,000*l.* arises from season tickets, a nearly similar amount from royalties on refreshments, and about 15,000*l.* from exhibitors' rental.

Descending across the terraces, decorated with marble vases filled with flowers and figures emblematical of all nations, to the Italian and English Landscape-Garden and the Park, we find Science and Philosophy teaching their sublime truths in a geological illustration of the Wealden formation, "so well known in Kent, Surrey, and Sussex, and formerly the great metropolis of the Dinosaurian orders, or the largest of gigantic lizards:" the various strata are here represented; and here Mr. Waterhouse Hawkins, under the guiding eye of Professor Owen, has built up gigantic animals of a former world, and in some instances restored them from fossil remains.

The series of fountains are a great attraction and are unrivalled in extent. The two largest jets throw water 240 feet in height, being in volume and extent equal to the great steeple of Bow Church, Cheapside.\* The Palace, Park, Gardens, and Fountains, &c., were designed and laid out by the late Sir Joseph Paxton, M.P.

The Palace is approached by a branch from the Brighton Railway, and also by a high level railway connected with the London, Chatham and Dover Railway main stations, Victoria and Ludgate. By the latter, the entire system of the Metropolitan (Underground) Railway communicates with the Palace. Similar communication also exists by Kensington with the North London Railway. On the completion of the East London (Tunnel) Railway, the Palace will be in direct communication with all the great railways entering London, and excursions may be run from all parts of the country thereto. The building was opened by her Majesty, June 10, 1854. It has cost nearly a million and a half of money; and in grandeur of purpose is a marvel of enlightened enterprise.

The contents of the Palace are all that its magic-suggestive name promises. For picturesque effects we have fountains and fishpools, flowers and plants; for art-teaching purposes we have statues and paintings, with nooks of Spain, Pompeii, Nineveh, and Egypt; for examples of industrial arts, manufactures from all the civilized nations. In this building we can again take art from its cradle in Assyria or Egypt, and trace, after its long sojourn on the banks of the Nile, its progress through Greece and Rome, and during the Middle Ages, to the Renaissance. No need to draw upon the imagination. Here are casts and faithful representations of the most important objects that modern research has discovered. The English artisan, with little time for study, and less hope of travel, is, by this means, made acquainted with the works of races whose names were unknown to his forefathers, and familiar with antediluvian monsters, whose pre-Adamite existence was but faintly shadowed out in the griffins and dragons of romance.†

\* A portion of the north end of the Palace was destroyed by fire caused by the explosion of gas in the flues heating the 50 miles of hot-water pipes within the Palace, on Sunday, December 30, 1866: a considerable portion of the damaged part has, however, already been reconstructed.

# INDEX.
