

Merlinus Liberatus.

A N

A L M A N A C K

For the Year of our Redemption,
1819,

Being the Third after Bissextile, or Leap-Year;

And from the Creation of the WORLD, according
to the best History, 5766,

AND THE

131st of our Deliverance by K. WILLIAM

From Popery and Arbitrary Government;

But the 141st from the

Horrid, Popish, Jacobite Plot.

Wherein are contained all Things fitting and useful for such a Work ; as
an Ephemeris of the daily Motions of the Planets, with their various
Configurations, Aspects, Conjunctions ; Lunations, Eclipses, Astronomical,
Astrological, Meteorological Observations, the rising and setting
of the Sun, Moon, Planets, and fixed Stars, illustrated with Tables of
the Tides, Terms, and daily Equation of Clocks ; Length and Break,
Increase and Decrease of Days, Semidiurnal and Seminocturnal Arches
for several Latitudes ; a Chronology ; Remarks on the Divisions of the
Heavens, with Judgments of the Eclipses and Seasons, handled according
to the Rules of the Ptolomean Astrology, with many other
Things relating to the Truth of Astrology.

Calculated for the Meridian of LONDON.

By JOHN PARTRIDGE.

— *Etiam Mortuus loquitur.* —

London.

Printed for the **COMPANY of STATIONERS**

By WILLIAM THORNE, Red Lion Court, Fleet Street.

And Sold by GEORGE GREENHILL, at their Hall, Ludgate Street.

[Price, stitched, Two Shillings and Three Pence.]

2 January hath XXXI Days.

Want ye a Servant, Sirs? Behold me here,
 Prest at your Back, to serve you all the Year.
 No Wages will I ask, Earnest will do;
 When others will have that and Wages too.

4 February hath XXVIII Days.

The Coat wherewith you will me to be clad
 Shall not offend me, be it good or bad :
 Outlandish Silks, or English tanned Leather,
 Come all alike to me—I do not value whether.

Venus is a Morning Star till October 9; and then an Evening Star to the End.

6 March hath XXXI Days.

What Quiet in your Houses might it cause,
 Would but your Wives conform unto your Laws;
 But whither am I going? (silly Book!)

I shall be cast into a dusty Nook.

The Cuckoo, though her Notes are old and plain,
Is with much Pleasure heard to sing again :
For Country People constantly do prize,
Not what she saith, but what she signifies.

D	&	fets	South	bef. ☉	☉	☿	♂	♀	♂	♀	
1	1	m 34	5 a 22	4' 11"	☐			Δ	*		Variety of Affairs are now upon the Anvil. Some Ger- man and Italian Princes are under great Troubles, as appears by the ☿ of ♂ and ♀ now com- ing forward at the End of the Month. This is an Aspect of wicked and pern- icious Signification. Its Influence will be eminently evil and injurious to those it may concern.

10

May hath XXXI Days.

Welcome most pleasant Season of the Year,
 The little Lambs now frisk it without Fear:
 The Woods look Green; Birds whistle out their Notes,
 And banish Sorrow by their chirping Throats.

Now Sol, out-throned in Cancer's Claws,
By lucid Beams proclaims his glorious Laws:
All shall be Day this Month, no proper Night;
Twilights at Ev'n shall reach the Morning Light.

July from Julius Cæsar had its Name;

As August from Augustus also came:

Names which, the Roman Monarchy renown'd,

For sunday Ages, through the World did sound.

16 August hath XXXI Days.

The churlish Dog, that nigh the last Month's close
 Began to yelp, now much more furious grows ;
 He snarls, he shews his Teeth, he barks outright,
 And, like a currish Whelp, doth snap and bite.

Observations.

The Square of
Saturn and *Mars*,
and the 8 of the
Sun and $\frac{1}{2}$, may
put Persons into very
strange Heats, from
whence must neces-
sarily follow pas-
sionate Debates, as
many Persons labour
under much Discon-
tent of Spirit. Very
ridiculous and scur-
rilous Pamphlets are
thrown up and down
in the Nation.

3 Cromwell died 1658
5 Bp. Bonner died 1569
8 Geo. III. and
Char. wedded 1761
11 Wm. the Con-
queror died 1087
16 Geo. I. landed 1714
21 Edw. II. mur-
dered - 1327
29 Richard II. de-
posed - 1399
A great Comet ap-
peared in this
Month, and in
Oct. Nov. and
Dec. - 1814

20 October hath XXXI Days.

Our Country Dolt, who hath his Suits depending,
 Impatient waits the Long Vacation's ending;
 Crams all into a Purse, and up he hies,
 Where he is welcom'd in this Cunning wise:—

A TABLE of TERMS and RETURNS.

Hilary Term begins *January 23*, ends *February 12*.

Returns or Effoign Days.

	Exc.	Ret.	App.	W. D.
In eight Days of St. Hilary, - - <i>January 20</i>	21	22	23	<i>Saturd.</i>
In fifteen Days of St. Hilary, - - - <i>27</i>	28	29	30	<i>Saturd.</i>
On the Morrow of the Purif. of bl. V. M. <i>Feb. 3</i>	4	5	6	<i>Saturd.</i>
In eight Days of the Purif. of bl. V. Mary, <i>9</i>	10	11	12	<i>Friday</i>

Easter Term begins *April 28*, ends *May 24*.

In 15 Days of Easter, - - - <i>April 25</i>	26	27	28	<i>Wednesf.</i>
From the Day of Easter in 3 Weeks, <i>May 2</i>	3	4	5	<i>Wednesf.</i>
From the Day of Easter in 1 Month, - <i>9</i>	10	11	12	<i>Wednesf.</i>
From the Day of Easter in 5 Weeks, - <i>16</i>	17	18	19	<i>Wednesf.</i>
On the Morrow of the Ascension, - - <i>21</i>	22	23	24	<i>Monday</i>

Trinity Term begins *June 11*, ends *June 30*.

On the Morrow of the holy Trinity, <i>June 7</i>	8	9	11	<i>Friday</i>
In eight Days of the holy Trinity, - - <i>13</i>	14	15	16	<i>Wednesf.</i>
In fifteen Days of the holy Trinity, - - <i>20</i>	21	22	23	<i>Wednesf.</i>
From the holy Trinity in 3 Weeks, - - <i>27</i>	28	29	30	<i>Wednesf.</i>

Michaelmas Term begins *Nov. 6*, ends *Nov. 29*.

On the Morrow of All Souls, - - - <i>Nov. 3</i>	4	5	6	<i>Saturd.</i>
On the Morrow of St. Martin, - - - <i>12</i>	13	14	15	<i>Monday</i>
In eight Days of St. Martin, - - - <i>18</i>	19	20	22	<i>Monday</i>
In fifteen Days of St. Martin, - - - <i>25</i>	26	27	29	<i>Monday</i>

N. B. No Sittings in *Westminster-Hall* on the 2d of February, *Ascension Day*, and *Midsummer Day*.

The Exchequer opens Eight Days before any Term begins, except Trinity, before which it opens but Four Days.

Note, That the first and last Days of every Term are the first and last Days of Appearance.

OXFORD and CAMBRIDGE TERMS.

OXFORD TERMS.

Lent Term - - begins <i>January 14</i> - - ends <i>April 3</i> .	
Easter Term - begins <i>April 21</i> , - - ends <i>May 28</i> .	
Trinity Term - begins <i>June 2</i> , - - ends <i>July 10</i> .	
Michaelmas Term begins <i>October 11</i> , - - ends <i>Dec. 17</i> .	

The Act is *July 6*.

CAMBRIDGE TERMS.

Lent Term - - begins <i>January 13</i> , - - ends <i>April 2</i> .	
Easter Term - - begins <i>April 21</i> , - - ends <i>July 9</i> .	
Michaelmas Term begins <i>October 11</i> , - - ends <i>Dec. 16</i> .	

The Commencement will be *July 6*.

A Table of the Moon's Age for every Day throughout this Year, whereby, with the Help of the next General Tide Table, the Times of High Water at all the Places mentioned above it are shewn by Inspection.

An Explanation of this and the following Table.

First find the Month on the Head of the Table, and the Day in the first Column on the left Hand, and in the Angle of Meeting you have the Day of the Moon's Age, with which enter the following Table, and find your said Number in the left Hand Column, and over against it in the other Column is the Time of High Water at all the Places above mentioned, by Inspection.—*Example, Mar. 9,* I find the Moon to be 13 Days old, and over against 13 in the 1st Column I find, 10 h. 2m. in the 2d Column, and 11 h. 54m. in the 3d; which are the Times of High Water at all those Places mentioned above in the 2d and 3d Columns on that Day. *Et sic de cæteris.*

N. B. In the Calendar Part you will find the Planets Southing inserted to several Days in each Month; and by this Table you may easily find their Rising and Setting: First, find the Longitude for the Day proposed, with which enter this Table, and take out the Semidiurnal Arch thereof, which being added to the Time of Southing, gives the Setting, but subtracted the Rising.

A Compendious Chronology of the most principal Epochas and Æras, with their Beginnings, reduced and fixed to the Years of the Julian Period, the Creation of the World, and to the Years before and after Christ.

	Julian Period	Anno Mundi	Ante Christ
T HE Creation of the World after			
the Jews - - -	952	1	3760
The Common Epocha of the Creation	765	1	3950

ECLIPSES

OF THE

SUN and MOON

That will happen this Year, 1819.

IN the course of this year, there happen no less than four Eclipses; namely, two of the Sun and two of the Moon; and they fall in order as follows. They are computed from New and correct Astronomical Tables, founded on the Newtonian System of Gravitation and Attraction, and are found, by Observations, to agree with the Heavens very exactly.

The first of these Eclipses is a total one of the Moon, and happens on Saturday the 10th day of April about noon; the Eclipse will begin about 14 min. after our 11 o'clock in the forenoon, and it will be over at about 57 min. past our 2 o'clock in the afternoon, apparent time. Digits eclipsed at the middle $21^{\circ} 7'$ from the north side of the Earth's shadow. The duration of the total darkness will continue 1 hour and 42 minutes. The middle time of this Eclipse will be about 6 minutes past our one o'clock in the afternoon; on which account this Eclipse must of course be invisible to us, and not to us only, but even to all Europe; for that part of the world where the Moon will be vertical at the time of the middle, lieth in 163 degrees and 31 minutes of east longitude from London, and under 7 degrees 30 min. of south latitude. From this statement it appears, that this Eclipse will be visible to the southern parts of the world, quite up to the south Pole itself, and even to 7 degrees beyond. It will be visible in New Zealand, New Holland, and all along its eastern coasts called New South Wales; and to all, or most of the little islands scattered and dispersed throughout the great Pacific Ocean, even as far as the coast of California, upon the western borders of North America, where I find the Moon will set eclipsed. It also will be visible to the Sandwich Islands in the North Pacific Ocean, discovered by Captain Cook in his last voyage round the world, and at one of those islands, called Owhyhee, he lost his life, the 14th of February in the year 1779. This Eclipse will also be visible to the Society Islands, the Friendly Islands, the Island of Borneo, together with the Philippian Islands, and also those of Japan; but the Moon

will rise eclipsed in China, and also in the Bay of Bengal; the end will extend itself into the Indian Sea, almost as far as the Sandy Deserts of Arabia in Asia.

The second is a small Eclipse of the Sun, upon Saturday the 24th day of April; the conjunction of the Sun and Moon is at 48 min. past 11 o'clock in the morning, in longitude $8^{\circ} 3' 26''$, Moon's latitude $1^{\circ} 11' 48''$ North; this great north latitude of the Moon will cause the Eclipse not to be seen here, or even in any part of Europe, notwithstanding its happening with us at the middle of the day.

The third is another small Eclipse of the Sun, upon Sunday the 19th of September; and the conjunction of the Sun and Moon will be at 52 min. past 12 o'clock at noon, in longitude $12^{\circ} 25' 43''$, when the Moon's latitude will be $1^{\circ} 24' N.$: therefore this Eclipse will be invisible to us, and even to all Europe, on account of the Moon's great north latitude, as was the case with the last.

The fourth Eclipse is another total one of the Moon, upon Sunday the 3d day of October, in the afternoon; the middle of this Eclipse will be at 24 minutes past our three o'clock; therefore, it must be invisible to us, as the Eclipse will be over long before the Moon rises in these parts. The Eclipse will begin at 36 min. past 1 o'clock in the afternoon; and will end at 12 min. past 5 o'clock, apparent time. Digits eclipsed at the middle, will be $19^{\circ} 3'$ from the south side of the Earth's shadow. The duration of total darkness will be 1 hour 36 minutes. At the middle time of this Eclipse, the Moon is vertical in $129^{\circ} 5'$ of east longitude from London; under $3^{\circ} 39'$ of north latitude, which place falls on the Globe in the North Pacific Ocean, near the Pelew Islands. From this statement it appears, that this Eclipse will be visible in New Zealand, New Holland, and all along its eastern coast, called New South Wales; on which coast Botany Bay and Port Jackson are situated, where some of our convicts are sent. This Eclipse will be visible in New Britain, New Guinea, the Philippian Islands, and also those of Japan; it also will be visible quite throughout the East Indies, and most parts of Asia, and those Islands pertaining to the Indian and Eastern Seas, even to the island of Madagascar, where the Moon will rise eclipsed; though it will set eclipsed at the Sandwich Islands, and also at the Society Islands; but the whole Eclipse will be visible at the Friendly Islands, at

the New Hebrides, New Caledonia, and Queen Charlotte's Islands. The Moon will be seen to rise eclipsed in the eastern parts of Africa, and also in Arabia, Persia, and as far as the Caspian Sea; also in Siberia, in the eastern parts of Russia, the Moon will be seen to rise before the Eclipse is over; I expect the Moon will rise eclipsed in Poland.

Other APPEARANCES in the HEAVENS.

I. That beautiful star, the Planet JUPITER, is now fast returning from the southern signs, and is coming forward for the northern signs, where he will appear more conspicuous to behold. This Planet comes to an opposition of the Sun this year, on the 5th of August, in the 12th degree of the celestial sign Aquarius; hence, for that month, and the month after, this Planet will appear bigger and shine with greater lustre; and then is the best time, when the evenings are clear, for viewing his belt-like appearances, and the configurations of his four Moon's or satellite, and their eclipses; but it will require a good telescope to do it to advantage.

II. That dull star, the Planet SATURN, is also now fast returning into the northern signs, where he will appear to more advantage and will be more beautiful to behold, as he will be nearer to us and to the Earth, especially during the months of September, October, and November, and then may be seen at all times of the night, when the air is clear. His beautiful ring, to our view, is now becoming very open; but it requires a more powerful telescope than Jupiter to see him to advantage. This Planet comes to an opposition of the Sun this year, about the 21st of September.

Upon JUDICIAL ASTROLOGY.

The learned Mr Butler, in his *Hagiastrologia*, very honestly tell us, that he was once an enemy to the noble science of Astrology, and buffeted in the dark he knew not what. This is the real case of several other learned men in this age, who have in their writings cavilled at this science, as vain and jejune stuff, having no foundation in the nature of things, without understanding what it is they cavil at, their ill opinion being the effects of prejudice, and not of any experimental knowledge they have

in these studies ; but even the wise and learned cannot be competent judges of what themselves are not read in. *Ars vera est, sed pauci artifices reperiuntur*, says our learned Burton : The science of itself is true, but not truly understood by many that pretend to practise it ; so that it is but seldom used without abuse, but that is the fault of the pretended artists, and not of the Art.

Would but the learned adversaries pursue the method which Mr. Butler took to confute Astrology, namely, read some of the best authors who have written upon the subject ; and by making judicious and honest experiments, they would certainly rectify their prejudicated opinions, and probably, from enemies, become friends and patrons thereof. Mr. Butler says, that he purposely read books upon this subject, with a serious design to take up the apter occasion to throw dirt at it ; by which means attaining to understand what Astrology was, it begat in him a reverence for that science, which, as unjustly as ignorantly, he had before despised. So much have I learned, says he, as shews me the great glory of my Creator, written in the sacred frame of the heavens ; while I behold their admirable operations and productions, and how the frame of Nature hangs upon them, and is contrived from the beginning, continuing and going on, as if all things came to pass by chance ; and yet is there a dependance of all things one upon another, and of all sublunary things upon the heavens, and of the heavens upon God ; as if Nature itself were nothing else but an artificial fabric, made by God from the beginning.

Now Astrology is nothing else but that study, whereby a man perceiveth the secret virtue of the heavens and the shining bodies therein contained, and is induced, by the more he knows of His handy-work, to spend the more time in wondering at the most immense and infinite Wisdom and Power of God. For the more a man attains to know of these heavenly virtues, the more he sees of the reason and manner of Nature's operations in things that are past ; and the more he sees of this reason, the more it makes him to admire him that made and laid the frame of it. And as he attains to see the reason of things past, by the same skill he attains to see things to come ; and by the birth of a Native, he reads in the heavens most part of that Native's whole life and the story thereof, with his gains and losses, sickness and health, &c. even as if he had seen them acted in their several times and seasons.

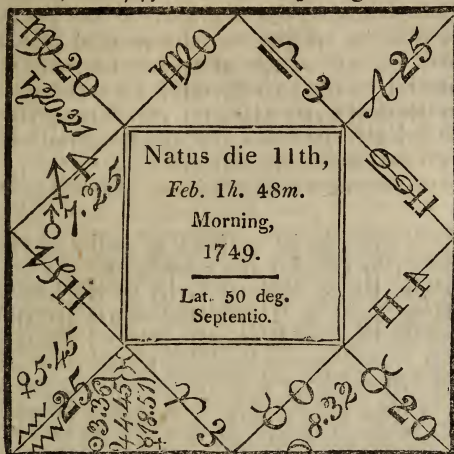

For this God hath given unto the wise man to know the time and the judgment. Eccles. i. v. 5.

The influences of the Sun and Moon on terrene bodies, are acknowledged by many learned men, who deny any such properties in the other Planets. The Sun, it is true, is the fountain of heat, and that is the nurse of life; and the Moon seems to be as much the fountain of moisture, (which is the hand-maid unto life) as the Sun is of heat. We find by experience, that there is a *ver perpetuum*, as Lord Verulam well observes, and something or other also is constantly dying and decaying. If it were the alone province of the Sun, or the joined influence of the Sun and Moon only, to work these increases and decays of Nature, how comes it that some men and vegetables die, when the Sun hath most power to preserve life? and, on the contrary, others to have greatest vigour, and to abound most with heat and moisture, when the Sun and Moon have the least energy and power to support them?

If the Sun alone causes the several variations and changes which happen in the several seasons of the year, without the influence of the other Planets; how comes it to pass, that those seasons are not always the same? for daily experience proves, that they differ very much in one year from another; which could not be, if the Sun alone were the cause of the seasons; or, if the Sun and Moon, jointly of themselves, constituted and disposed of the several seasons, their disposition and temperament would be the very same after eighteen years. But neither is this the case; therefore, the intention and remission of their influences must be from some superior cause, namely, the conjunctions, dispositions, and aspects of the other Planets with the Sun, or amongst themselves. Experience teacheth us, that the Planets, Saturn and Mars, arising before the Sun in the months of February, March, and April, do mostly keep the Spring backward, except some other causes intervene; and that the orientality of the Planets, Jupiter and Venus, makes mostly an early Spring; why then should not these affections and dispositions of the primary Planets, be owned and reputed as ordinary secondary causes of these diversities of seasons, as co-operating with the Sun? God hath endowed the stars with such motions, power and influence, to act on and alter terrene Bodies, that they cannot but obey; and it is an irresistible truth, that the celestial clock-work never moves contrary to original appointment.

AN ASTROLOGICAL EXAMPLE.

The following is the Horoscope of a Native, born the 11th of February, at 48 min. past 1 o'clock in the morning, in the year 1749, in latitude 50 degrees North.

In the year 1750, a worthy and ingenious person desired me to give my opinion of the preceding nativity, of the child's affairs in general, as length of life, riches, preferment, marriage, &c. but the most particular was, concerning the *terminus vite*; after I had seriously considered the figure, and wrote the directions, I sent him the following lines. — “ Sir, I shall make a short judgment on the nativity you desired me to consider; for, according to my skill in Astrology, the child will not live to above four years of age, or thereabouts, if the time you gave me be the true time of birth; and my judgment is from the following directions :

	D. M	Y. M.	A. C.	
Ascendes ad corpus marte -	3 42	3 11	1753	Death.
Luna ad sesq; ♂ in mundo dd.	4 10	4 7	—	
Luna ad paral. ♂ in Zodiaco	7 2	7 6	—	

“ You may observe, by the table above, the direction that I look upon to shew the time of death, toucheth at three years and eleven months, as you see marked; and as to the distemper, I judge it will be a very bad sort of a fever. I am, with all deference to your better judgment,

“ Your most humble servant,

W. H.”

The consequent of this affair is thus ; some time after I received the following lines :

“ SIR,

“ This is to acquaint you, that your judgment of that nativity (I desired you to inspect) is now proved surprisingly true, for the child is just now dead of a malignant fever, and at the age of four years, within a few days ; and this (with your leave) I am ready to justify, upon any occasion that requires it ; excuse my present brevity, but in a little time you may expect a small dissertation on the genethliacal part of astrology.

“ From your most obliged servant and well-wisher,

“ G. R.”

I hope I shall not be censured as guilty of vanity or presumption, by inserting this example, having no other view therein, but to shew the verity of this science, and to restore (as much as I can) that regard for Astrology which the most learned in preceding ages justly conceived of it, and in some part to vindicate myself from the ill-grounded reflections of some (would-be thought) learned gentlemen, who take a pride to ridicule a science which themselves have taken no pains to comprehend.

Judicium Astrologicum, pro Anno 1819;

Or, an Astrological Judgment upon the Four Quarterly Ingresses of the present Year; and First, of the Brumal Ingress, or Winter Quarter.

I shall begin, as usual, with the Winter Quarter, as it all falls within the new year, excepting a few days.

THIS Winter Quarter takes place when the Sun enters the Tropic of Capricorn, which he will do on Tuesday the 22d of December 1818, at 17 minutes past 9 o'clock in the morning ; at which time 17 degrees of Capricorn are ascending in the east, and the 22d degree of Scorpio is on the Meridian, or where the Sun is at mid-day ; at this time the Moon is in an exact Square aspect of the Planet Jupiter, and next applying to the same aspect of Mercury, and Sextile aspect of Mars ; the Sun and Venus have just risen, and the Moon is going down in the western Quarter ; but Jupiter and Mercury are posited in the eastern angle of the Horoscope ; the Planet Saturn is lower down, but under the Earth, posited in the 2d House, having just

past a Sextile aspect of Jupiter; the Planet Mars is in the 11th, and has lately passed a Square aspect of Saturn; the Moon at the same time occupies the 8th House in Libra, and near the cusp of the 9th; in this manner were the Planets distributed in the heavens at the time of this ingress. From these configurations of the Planets it appears to me, that this Quarter will be attended with eminent councils and consultations, but especially more so in the Spring of the year following, which I have reason to hope to the satisfaction of the people and the nation at large; though they still will have their fears and anxieties about many things, as the heavy burden of taxes still remains upon us, with some other imposts, on which account there will be murmuring and repining among many; some also for want of trade and some for want of employment, and the like, which I doubt the growing evil of making over large farms have been the principal cause of, to the ruin of many individuals; for it is a fact, that in some villages, where there used formerly to be three or four farms or more, there is now but one farm; one person holds all the land in the parish, to the ruin of all the rest—this is the bane and ruin of poor old England, let some say what they please. But to return, I have reason to conjecture, from the aforesaid influences of the Planets, that the actions and designs now on foot, both at home and abroad, will be carried on and prosecuted with great secrecy, and no less prudence, by the most political and wise senators of this country, and some other parts of Europe; but time must produce the particulars. I have some hopes, that our own nation will begin to flourish, and that trade and commerce will improve amongst us, as this Quarter is attended with many friendly aspects of the Planets amongst themselves; so that we have reason to hope well, since there are no bad influences depending over our heads. It appears to me, that during this year the Turks may become a little troublesome to some of their neighbours, as also the corsairs of Tunis and Algiers; but it seems a check will be put upon them, as it will concern all the European Powers so to do, and to keep them under. I have reason to fear that, during the ensuing year, the small-pox will break out in different parts of the country, and I am sorry to find, that in London above a thousand died of the small-pox last year, through the prejudices of the common people, (and I fear some others too) against the cow-pox inoculation, which

is one of the greatest of all human discoveries for the benefit of mankind, and is now successfully adopted by all enlightened nations of the earth. The small-pox, it is thought, formerly destroyed every year, about forty thousand inhabitants of this kingdom; even in London alone, nearly three thousand individuals have been annually cut off by this single disease; therefore now, as I have often done, I recommend to the people of England, in the strongest manner, the COW-POX INOCULATION, as the best security against that dreadful scourge of the human race, the Small-pox. There are, I do assure my readers, many well authenticated instances upon record of persons who were affected with the casual cow-pox in their youth, by milking cows, to whom the small-pox could never afterwards be communicated, either by inoculation or contagion, and who lived to an advanced old age, in the most perfect health, and perfectly secure from the small-pox infection.

Of the SPRING QUARTER ;

Or, the Sun's Transit through ♈, ♉, and ♊.

THE Spring Quarter begins when the Sun enters the Equinoctial sign Aries, which this year takes place, on Sunday, the 21st day of March, at 34 minutes past 10 o'clock in the morning, when 7 deg. of ♈ culminate, and 10 deg. of ♉ ascend in the east. By looking over the Scheme, set for the Sun's entering into Aries, I find the Moon to be in an exact Sextile aspect of the Sun, and then hastening to a Sextile aspect of Mercury, and ☿ of ♊. The Sun, Mercury, and the Planet Saturn, are in the upper angle of the Figure, the Planet Mars is posited in the 9th House, the Moon and Jupiter are in the 8th, as also is Venus, but that Planet is upon the cusp of the 9th House. Here you see all the Planets, at this Vernal Ingress, are above the Earth. In looking over the Figure, I find the positions of the Planets shew, that the public affairs of Europe, with respect to us, and the great powers of the Continent, are in a more quiet and settled posture than they have been for some years past; as most of the Princes and Crowned Heads of Europe are more inclined to live in peace with their neighbours, and to avoid all wars, so that ambassadors or agents will be at work to procure new alliances by marriages, as well as other political methods. This Quarter, and indeed the whole year, as far as may

be rationally conjectured, still give hopes of a continuance of the blessing of Peace, rather than of war; and though I am satisfied the Heavens shew only the natures and inclinations of men, and not positive conclusions, yet now they are inclined to peace and tranquillity so strongly, we may rationally hope and conclude, that peace will still continue, as the Planetary configurations are mostly of a healing nature. There is only one thing I am sorry to observe, that is, on the 26th of April, there happens a \odot of ♂ and ♂ in ♋ , which will in some degree affect all those places under those signs, which will be Portugal, Spain, and even France, and perhaps we in England may feel a little of the effects thereof some way or other, during this and the next Quarter, if not in a political way, it may be in the state of the air, causing tempests with thunder and lightening, in several parts of this kingdom.

Of the SUMMER QUARTER;

Or, The Sun's Transit through ♋ , ♌ , and ♍ .

THIS pleasant Quarter begins when the Sun enters the Tropic of Cancer, affording us his greatest light and heat, which I hope may be more propitious unto us, with respect to the season, than what we have experienced for several years back; this Quarter then takes place on Tuesday, the 22d day of June, at 59 min. past 7 o'clock in the morning; at which time 18 deg. of ♌ ascend in the east, and the second degree of ♋ is on the mid-heaven, or where the Sun passes at noon-day; at this time the Moon is hastening to a Conjunction of the Sun, and also to a Square aspect of Saturn, and this Planet and the Sun are also at this time forming a Square aspect one with the other; all the Planets at this Ingress are above the Earth, excepting Jupiter, who is retrograde, and on the cusp of the 7th House, in a Trine aspect of the Planet Mercury, who with the Sun and the Moon are in the 11th, Mars and Venus are posited in the 10th, and the Planet Saturn in the 9th. These are the configurations of the Planets at the Sun's entrance into Cancer, which appear to be of eminent signification to us, the people of England, denoting honour and prosperity in general; therefore, thou, O England, by good management, shall prosper again, thou, and thy impoverished towns and cities, shall in time rise again, and improve in trade and commerce; it will be a gradual work of time, therefore we must have patience. It also

appears to me, that the Turks may be somewhat alarmed, and some other powers near hand, one of which may be France, for it seems they are not very contented, either in a political or religious sense, for superstition and bigotry must give way, even in our own country, with both tyranny and oppression also, to the great benefit of mankind, even in the north as well as in the southern parts of the globe, but it will be a gradual work of time.

Of the AUTUMNAL QUARTER;

Or, the Sun's Transit through ♎, ♍, and ♋.

THIS Quarter takes place when the Sun enters the Equinoctial sign Libra; he then crosses the line in his way to the South, until he arrives at the southern Tropic, when the Winter Quarter begins. This Autumn Quarter then commences on the 23d day of September, at 56 min. past 9 o'clock at night; at which time 27 deg. of ♋ are upon the mid-heaven, and the second deg. of ♎ is on the Ascendant; the Moon is applying to a Sextile aspect of Venus, and a Trine aspect of the Planet Saturn; all the Planets at this time are under the Earth, excepting Saturn and Jupiter; Mars is posited in the Ascendant, Mercury and Venus are in the lower angle of the Figure; the Sun is located in the 5th, and the Moon is posited in the 6th House. These are the configurations of the Planets at the time of this Ingress, which appears to me to be of a peaceable tendency, both to us and most of the powers of Europe, though it seems the Spaniards are somewhat perplexed with fears and jealousies, and there seems to be some cause for it, as the affairs in South America are not yet settled to their satisfaction; and Portugal appears to be under uneasiness also from the same cause.

I conclude my Predictions for this Year, with praying the Divine Being to avert all calamities from this our land: and whatever disturbances may be abroad, may we be blessed with peace and unity at home; and approve ourselves good and loyal subjects of our King, whom God defend and preserve.

FINIS.

6181
